COMMONWEALTH BUREAU OF CENSUS AND STATISTICSCANBERRA, AUSTRALIA

To be treated as strictly **CONFIDENTIAL** and **NOT** to be published, broadcast or cabled before 6 p.m. on **FRIDAY, 22ND JULY, 1966**.

CENSUS OF THE COMMONWEALTH OF AUSTRALIA30TH JUNE, 1966FIELD COUNT STATEMENT NO. 1. - POPULATION : AUSTRALIAN CAPITAL TERRITORY

This statement contains preliminary results of the Census of 30th June, 1966. It shows details of the population of the Australian Capital Territory and the City of Canberra.

The figures for 1966 have been compiled during the taking of the Census by census field personnel, and as such are subject to amendment on completion of processing and subsequent tabulation. However, extensive changes to the details in this statement are not expected.

TABLE 1. - POPULATION : AUSTRALIAN CAPITAL TERRITORY AND CITY OF CANBERRA

	Census 30th June, 1961 Persons	Population Count			Census 30th June, 1966		
		1st July 1963 Persons	30th June 1964 Persons	30th June 1965 Persons	Males	Females	Persons
		City of Canberra	56,462	70,775	77,644	85,690	48,237
Total Australian Capital Territory	58,828	(a)73,453	(a)80,413	(a)88,571	49,910	46,003	95,913

(a) Partly estimated.

TABLE 2. - POPULATION : NUMERICAL AND PERCENTAGE INCREASES

	30th June, 1961 to 1st July, 1963 Persons	1st July, 1963 to 30th June, 1964 Persons	30th June, 1964 to 30th June, 1965 Persons	30th June, 1965 to 30th June, 1966 Persons	30th June, 1961-1966 Persons
City of Canberra - Increase - No. %	14,313 25.35	6,869 9.71	8,046 10.36	7,507 8.76	36,735 65.06
Total Australian Capital Territory - Increase - No. %	(a) 14,625 (a) 24.86	(a) 6,960 (a) 9.48	(a) 8,158 (a) 10.15	7,342 8.29	37,085 63.04

(a) Partly estimated.

**NOTE.** - Statistics of the City of Canberra and its Divisions (Suburbs) for periods prior to 1966 relate to boundaries existing in June 1965. Divisional boundary changes which have been made since June 1965 are an extension of the northern boundary of the Division of Watson and the transfer of the area of Acton south of Lake Burley Griffin to the Division of Yarralumla. Additionally the City of Canberra has been extended to include part of the A.C.T. rural District of Woden to form the new Divisions of Isaacs, Mawson, O'Malley, Phillip and Torrens.

Diplomatic personnel of oversea countries and their families are not included. The number of persons involved is approximately 1,200.

Field Count Statement No. 2, issued simultaneously with this statement contains details of the population of the Australian external Territories of Nauru, Norfolk Island, Christmas Island and Cocos (Keeling) Islands. It is expected that preliminary statistics of the population of each State and internal Territory of Australia will be issued in September, 1966.

30TH JUNE, 1966

FIELD COUNT STATEMENT NO. 4. - POPULATION : PRINCIPAL URBAN CENTRES OF AUSTRALIA

CONTENTS

<u>Table</u>	<u>Page</u>
Explanatory Notes on the delimitation of urban boundaries for statistical purposes	2.
1. Population : Six Capital City Statistical Divisions, 1961 and 1966	6.
2. Population : Statistical Districts of Canberra, Newcastle, Wollongong and Geelong, 1961 and 1966 .. ..	8.
3. Population : Principal Urban Centres of Australia, 1961 and 1966	9.
APPENDIX A. Criteria for the Delimitation of Urban Boundaries : Resolutions of the Twenty-seventh Conference of Statisticians - August, 1965	
APPENDIX B. Outline Maps : Capital City Statistical Divisions and Statistical Districts.	

This statement contains preliminary results of the Census of 30th June, 1966. It shows details of the population of the principal urban centres of Australia.

The figures have been compiled by field personnel during the taking of the Census and are subject to amendment. This statement excludes particulars of full-blood Aborigines.

New criteria for the delimitation of urban boundaries have been developed and implemented for the 1966 Census. These are fully explained in the following pages, and have been adopted generally for statistical purposes.

EXPLANATORY NOTES ON THE DELIMITATION OF URBAN BOUNDARIES FOR STATISTICALPURPOSES1. INTRODUCTION

For the purpose of presenting population and dwelling statistics obtained at the Census of 30th June, 1966, new methods have been used in the delimitation of metropolitan and certain other urban centres. Briefly, these are as follows:-

- (i) Around each capital city and each town with a population of 75,000 or more two boundaries have been drawn.

The outer boundary, which is fixed, circumscribes the area in close economic and social contact with the main city or town. These areas are designated Statistical Divisions (for capital cities) or Statistical Districts (for Canberra, Newcastle, Wollongong and Geelong).

The inner boundary indicates the area within which, at the time of the Census, there was a density of at least 500 persons per square mile. This density is determined for each Census collector's district (the smallest geographical area available). From Census to Census as urbanization proceeds this inner boundary will move outwards to encompass peripheral development. Some specified areas of lower density (e.g. industrial areas) are classified as urban on other grounds.

- (ii) The principal urban centre within each capital city Statistical Division has been designated the "Metropolitan Area".
- (iii) Population clusters of 1,000 or more persons having a minimum density of 500 persons per square mile have been designated "Urban Centres".

Because of practical difficulties (notably lack of time to carry out an extensive examination of each area in order to re-design suitable collector's districts and the absence of suitable topographic boundaries around small towns) the "density" criterion has at present been uniformly applied only to urban centres within the capital city Statistical Divisions and the Statistical Districts, to other urban centres with a population of 30,000 or more and to a few smaller centres including Darwin. It is proposed to extend the application of the "density" criterion progressively to smaller centres.

2. REASONS FOR CHANGE

The understanding and measurement of the process of urbanization have long been recognized as fundamentally important to considerations of economic and social change. For this reason Census information has traditionally been published separately for "metropolitan", "other urban", and "rural" areas. However, the criteria used in the past for making this dissection (criteria which are still used in many countries) did not provide comparable data for different areas or for different points of time.

3. BACKGROUND

In Australian Censuses up to and including the Census of 1947 complete local government areas were classified as either urban or rural, and "urban" areas therefore usually consisted of whole local government areas, or multiples of them. However, many local government areas, particularly at the fringe of large urban complexes, contain both urban and rural components. In some cases it was necessary to split local government areas for statistical purposes in order to eliminate large rural expanses from the metropolitan areas. Boundaries were also subject to variation by local authorities for reasons unrelated to (and often conflicting with) statistical requirements, and consequently this method became increasingly unsatisfactory.

In the Censuses of 1954 and 1961 all localities of 1,000 population and over (750 and over in Tasmania) were classified as "urban". Boundaries were delineated either from local advice, inspection in the field, or from aerial photographs. However, although these procedures were an improvement on the earlier ones, the boundary decisions made for different urban centres, being highly subjective, did not provide sufficient comparability.

#### 4. PRE-CENSUS RESEARCH

For the 1966 Census it was decided to develop new criteria for the delimitation of metropolitan and other urban boundaries. In November, 1963 preliminary discussions were held with Professor A.T.A. Learmonth, M.A., Ph. D. (Edin.), Professor of Geography at the School of General Studies and G.J.R. Linge, B.Sc. (Econ.), Ph. D., Fellow, Institute of Advanced Studies, both of the Australian National University, Canberra. As a result, Dr. Linge was commissioned to examine and report on "the delimitation of metropolitan and other boundaries, together with suggestions as to nomenclature, boundaries, mapping and any other aspects considered pertinent". The results of his research, which included detailed investigation overseas and extensive field work (in conjunction with officers of the Bureau) in Australia, were published in "The Delimitation of Urban Boundaries" (publication G/2, Research School of Pacific Studies, Australian National University) issued in August, 1965. His report led to the adoption by the Twenty-seventh Conference of Statisticians (August, 1965) of a series of objective criteria for the delimitation of urban boundaries which vary only in minor ways from Dr. Linge's recommendations. These criteria are detailed in Appendix A hereto.

#### 5. SUMMARY OF CRITERIA ADOPTED FOR THE 1966 CENSUS

INVESTIGATION OF OVERSEA PRACTICE reveals that a wide range of criteria has been used by various countries in attempting to delimit urban boundaries. Amongst these criteria are such things as occupation, commuting patterns, commercial relationships (as revealed by stores accounts, telephone calls, etc.) and population density. In general these efforts have resulted in systems which are highly complex (because of the use of a combination of criteria) and subjective (because of the lack of adequate information for particular criteria). Some of the required information has to be gathered from external sources, adding greatly to the cost of determining boundaries, whilst much of the information which becomes available from the Census itself (e.g. commuting or occupational patterns) is of a complex nature and, even with computer processing, would not be available until a year or more after the Census.

THE BASIC CRITERION ADOPTED IN AUSTRALIA for the delimitation of urban boundaries is population DENSITY as applied to small areas. As urbanization increases, the change from rural to urban uses is accompanied by increasing population density. Extensive field investigations have shown that areas at the fringe which have largely lost their rural characteristics and are developing towards urbanization have densities which vary over only a relatively small range. The adoption of a specific density from within that range therefore provides a criterion which adequately delimits urban boundaries and which can be applied objectively and uniformly without undue difficulty or delay.

A density of 500 persons per square mile has been adopted as the criterion.

THE GEOGRAPHIC UNITS to be classified according to the density criterion are collector's districts, the smallest units available. These areas vary in size and shape, but as far as possible they have been designed to ensure that significant urban development in large rural collector's districts is split off as a separate collector's district. Particular rules apply to contiguous areas which have special functions but which do not meet the density criterion, such as airports, sporting areas and industrial areas. In addition, a dwelling density criterion is applied to holiday areas which may be below population density because the Census is taken in mid-week and during the winter.

THE BOUNDARY OF AN URBAN CENTRE is, therefore, the peripheral boundary of an aggregate of contiguous urban collector's districts. The boundary is a moving one which reflects the process of urbanization. The use of objective criteria enables valid comparisons to be made between one urban centre and another, and between the population for an urban centre at one Census with the populations at succeeding Censuses. Comparable information for the 1961 Census has also been prepared, although, because 1961 collector's districts were not especially designed for this purpose, some estimations have had to be made.

FIXED OUTER BOUNDARIES FOR CAPITAL CITIES and some other principal centres have also been delineated. The moving urban boundary, which is useful for the purposes outlined above, has limitations due to the difficulty of compiling other statistical information, much of which is not obtained on a collector's district basis. The fixed boundaries meet the need for areas which (i) fit into the pattern of existing Statistical Divisions (which are used for many statistical purposes), (ii) remain stable over a long period, and (iii) are related economically and socially to the major centre.

For this reason each urban centre of 75,000 population or greater has been circumscribed by a fixed outer boundary. This encloses the area which is considered to be economically and socially oriented towards the major urban centre, and which is large enough to contain the anticipated growth of the major urban centre for a period of from twenty to thirty years. In determining these outer boundaries, the views of State planning authorities have been taken into account. For these areas it is proposed that, at each Census, population information will be prepared for the major urban centre, for individual minor urban centres (population 1,000 or greater), and for the residual rural area. Intercensally, statistics will, in general, relate to the whole area within the fixed outer boundary.

#### 6. NOMENCLATURE

In the case of State capital cities, the total area enclosed by the fixed outer boundary will be designated (using Sydney as an example) "Sydney Statistical Division". The principal urban centre within it will be designated "Sydney Metropolitan Area". Minor urban centres will be designated (using Camden as an example) "Urban Camden".

In the case of other urban centres over 75,000 population, the total area enclosed by the fixed boundary will be designated (using Newcastle as an example) "Newcastle Statistical District". The principal urban centre within it will be designated "Urban Newcastle" (with the exception of the capital city of Canberra which is designated "Canberra Metropolitan Area"). Minor urban areas will be designated (using Avondale as an example) "Urban Avondale".

Other urban centres below 75,000 population will be designated (using Broken Hill as an example) "Urban Broken Hill".

#### NOTES

- (i) Because of technical difficulties a few collector's districts are included within the following metropolitan areas, even though they did not meet the criteria:

Melbourne Metropolitan Area -

one collector's district in the City of Nunawading;

Adelaide Metropolitan Area -

five collector's districts, one in the City of Burnside, two in the Corporate Town of Campbelltown, and two in the City of Enfield.

The additional population thus included in these metropolitan areas is in no case more than a few hundred.

- (ii) Because the new criteria for the delimitation of urban boundaries were adopted only shortly prior to the 1966 Census a few collector's districts containing urban growth were not split into their rural and (potentially) urban components, with the result that significant urban population remained included in large, predominantly rural, collector's districts which did not meet the density criterion. Such cases occurred mainly around the Sydney Metropolitan Area and Urban Toowoomba. The effect on the Sydney Metropolitan Area is small, probably not more than 5,000 urban population having been omitted. In Toowoomba the effect is proportionately much greater, the urban population probably being understated by up to 3,000 persons.

Such defects will be remedied before the 1971 Census.

- (iii) In this statement, Canberra Metropolitan Area differs from the proclaimed Canberra City District, for which statistics were shown in Field Count Statement No. 1 as City of Canberra.

TABLE 1. - POPULATION : SIX CAPITAL CITY STATISTICAL DIVISIONS, 1961 AND 1966

**NOTE.** - For Metropolitan and other urban centres, which are delimited by moving boundaries (see Explanatory Notes), the intercensal increase or decrease between 1961 and 1966 reflects (i) population changes within the original 1961 boundaries, (ii) urban growth beyond the original boundaries, and (iii) the merging of other urban areas, one with another, or with the Metropolitan Area. Metropolitan and other urban boundaries for 1961 have been redrawn according to the new criteria. The urban populations (partly estimated) within these boundaries are shown in this table for comparison with 1966 population.

TABLE 1. - POPULATION : SIX CAPITAL CITY STATISTICAL DIVISIONS, 1961 AND 1966 - Continued

**NOTE.** - For Metropolitan and other urban centres, which are delimited by moving boundaries (see Explanatory Notes), the intercensal increase or decrease between 1961 and 1966 reflects (i) population changes within the original 1961 boundaries, (ii) urban growth beyond the original boundaries, and (iii) the merging of other urban areas, one with another, or with the Metropolitan Area. Metropolitan and other urban boundaries for 1961 have been redrawn according to the new criteria. The urban populations (partly estimated) within these boundaries are shown in this table for comparison with 1966 population.

COMMONWEALTH STATISTICIAN

COMMONWEALTH BUREAU OF CENSUS AND STATISTICS

CANBERRA, A.C.T.

14TH NOVEMBER, 1966.

NOTE.- Inquiries concerning these statistics may be made in Canberra by telephoning 41971 Extension 27, or, in each State Capital, by telephoning the office of the Bureau of Census and Statistics.

APPENDIX A.

CRITERIA FOR THE DELIMITATION OF URBAN BOUNDARIES

RESOLUTIONS OF THE TWENTY-SEVENTH CONFERENCE OF STATISTICIANS - AUGUST, 1965

- Resolution 1 (a) That the concept of an inner and an outer boundary around each of the State capitals and other cities with an urban population of at least 75,000 and a regional population of at least 100,000 be adopted, and
- (b) That the inner boundary be drawn to delimit the extent of urban development at each Census and it would, therefore, be a moving boundary to be adjusted after each Census, except that any State may extend the inner boundary during inter-censal years to encompass significant and well-defined peripheral population growth, and
- (c) That the outer boundary be designed to contain the anticipated urban development of the city for a period of at least twenty to thirty years.
- Resolution 2 (a) That an urban boundary be defined as soon as possible for all other settlements with a population of 1,000 or more, and
- (b) That State, Statistical Division, Local Government Area, and other boundaries be ignored in delimiting these urban areas.
- Resolution 3 (a) That urban boundaries be defined so as to include all contiguous census collector's districts which have a population density of 500 or more per square mile, but that in applying this basic criterion, the following additional criteria and rules shall be taken into account:-
- (i) Land used for factories, airports, small sports areas, cemeteries, hostels, institutions, prisons, military camps and certain research stations shall be treated as being used for urban purposes if such land is contiguous with collector's districts which conform with density and other criteria;
- (ii) Any area which does not conform with the population density criterion, and in which land is used for large sporting areas, explosives handling and munitions areas, large parks, holding paddocks and reservoirs, must be excluded from the urban area, unless it is bordered on three sides by collector's districts forming part of the urban area;
- (iii) Any area which does not conform with the population density and land-use criteria, but which is completely surrounded by land included in an urban area, must be included in that urban area;
- (iv) If a collector's district, which would have been excluded from an urban area under other criteria, forms an indentation into an urban area which is less than one mile wide at the open end, it must be included in the urban area if a suitable boundary can be defined across the open end;
- (v) Where there is a gap in urban development which is less than two miles (by the shortest rail or road distance) between the edge of one area of urban development and another, the gap is to be ignored and the urban areas treated as contiguous; if there is a gap of two or more miles between two urban areas, those urban areas are to be treated as separate urban areas even if the gap comprises mainly reserved land or a natural barrier;
- (vi) Holiday resorts shall be recognised as urban on a dwellings rather than population density criterion, but care must be taken to omit decaying mining towns and the like in applying this criterion. Such resorts should be classed as urban if they have 250 or more dwellings (with at least 100 occupied dwellings) on Census night and have a recognisable core, except that where a holiday resort adjoins an urban area, it shall be encompassed by the urban boundary if it has a density of 125 or more dwellings per square mile; and
- (b) That the following additional rule shall apply in delimiting the inner boundary where a dual boundary concept is employed:-
- \* (See Footnote).

Irrespective of population density and land use, if the addition of collector's districts with a total area of not more than five square miles would bring the whole of a Local Government Area within an inner urban boundary, then the boundary shall embrace them.

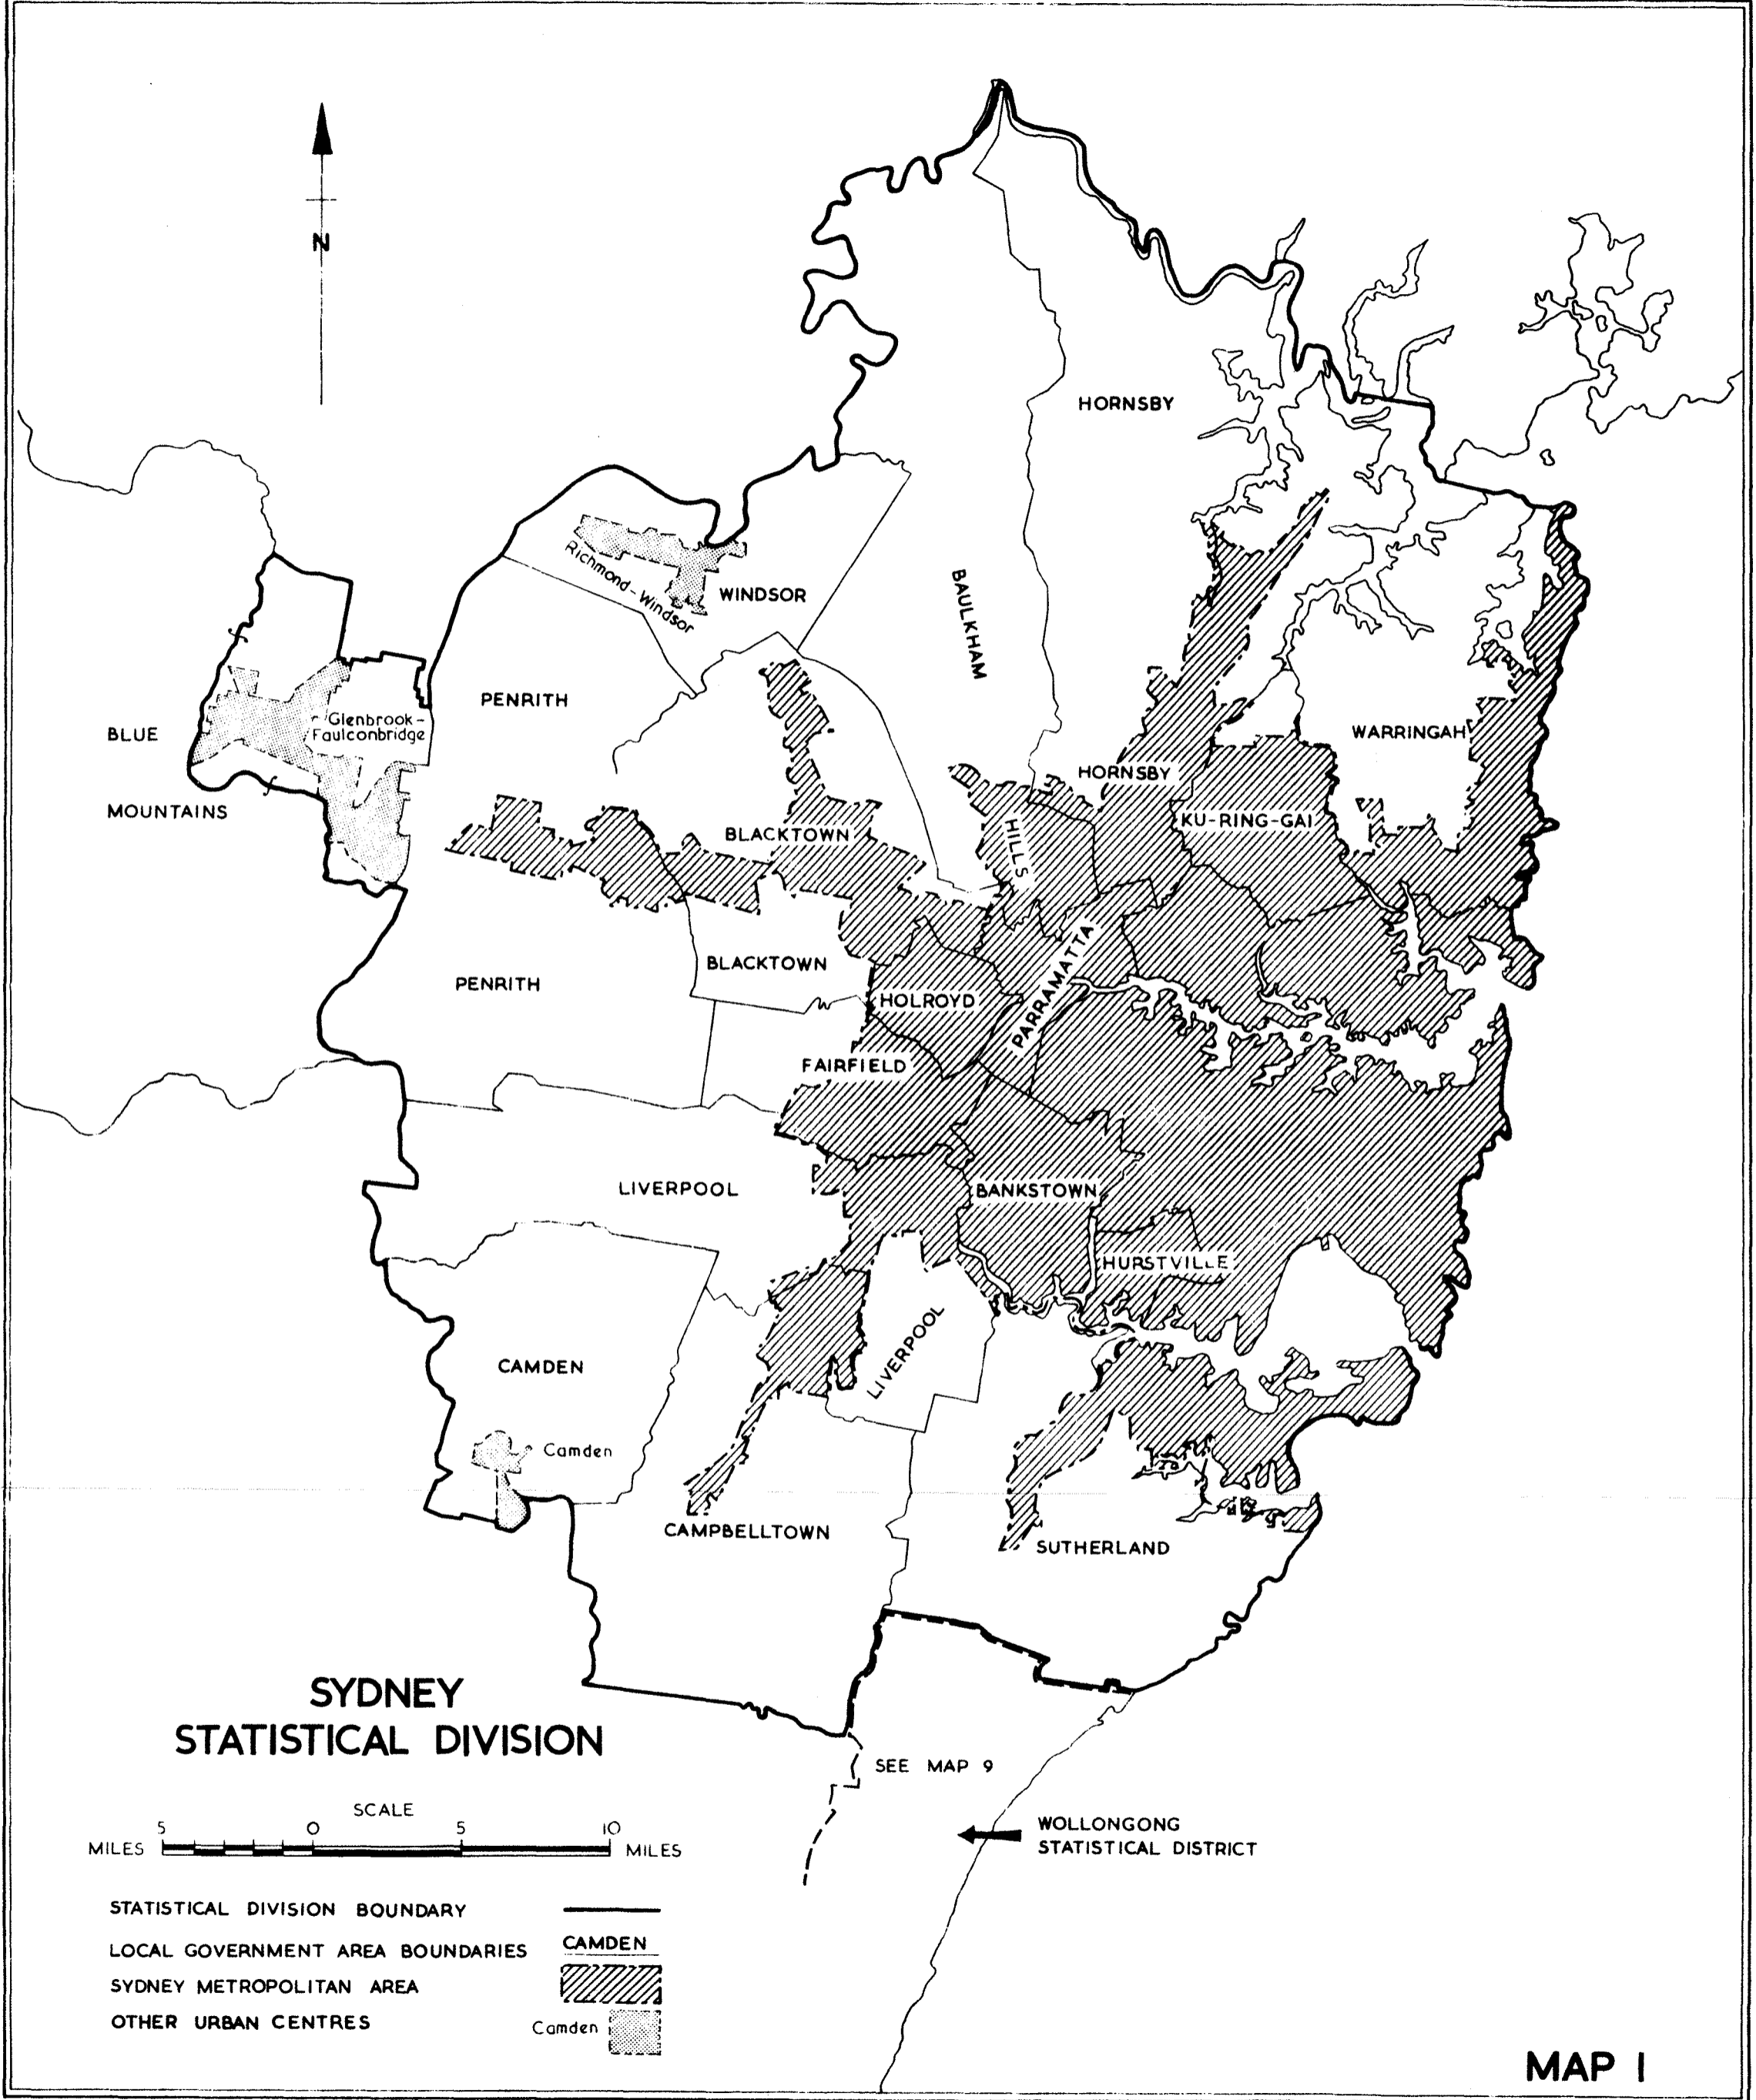

- Resolution 4 (a) That in order to define an urban boundary in terms of the criteria specified in Resolution 3, it is first necessary to make a pre-census examination of collector's districts and set a tentative boundary, and
- (b) That in setting the tentative boundary, collector's districts shall, where necessary, be split according to rules which must (i) preserve continuity with previous collector's districts (ii) not result in formation of districts which would exceed the maximum workload for a census collector, and (iii) enable an approximate urban boundary to be defined at the ensuing Census, the rules for splitting collector's districts and setting the tentative boundary to be:-
- (i) Irrespective of population density, a collector's district on the periphery of an urban area shall be split if it has a population of 500 or more living in a part of the collector's district contiguous with the urban area and there is a gap of more than one mile between the outer edge of this area and the furthest edge of the collector's district; as far as possible, such collector's districts should be split parallel with rather than at right angles to the perimeter of the urban area;
- (ii) Boundaries selected for the splitting of collector's districts shall conform, as closely as possible, with boundaries of land-use zones;
- (iii) Where there is a gap of less than two miles between two areas of urban development, a collector's district shall be defined to bridge the gap between the two urban areas, so as to ensure that large areas of non-urban land will not be included within the urban boundary, and
- (c) That after the Census, the urban boundary shall be delimited by examining each collector's district on the periphery of the urban area in the light of the Census results, and including them in, or excluding them from, the area to be encompassed by the urban boundary according to the criteria and rules specified in Resolution 3.

Resolution 5 That where a dual boundary concept is employed, the outer boundary shall be designed to delimit, for at least two or three decades, the region expected to be in close contact with the inner urban area, after making allowances for further urban development, including satellite towns, improvements in transport, and other factors. As far as possible, this region should be composed of complete Local Government Areas, have well defined boundaries, and have a sensible shape. It should take into account the needs of planners. Where the outer boundary follows Local Government Area boundaries, and the latter are altered, the outer boundary shall, where considered appropriate, be adjusted accordingly.

- Resolution 6 (a) That for capital cities, nomenclature for the area delimited by (i) the inner, and (ii) the outer boundary shall be (using Melbourne as the example) -
- (i) Melbourne Metropolitan Area, and
- (ii) Melbourne Statistical Division, and
- (b) That in other cases where a dual boundary concept is employed, the nomenclature shall be (using Newcastle as the example) -
- (i) Urban Newcastle, and
- (ii) Newcastle Statistical District, and
- (c) That in cases where an urban area alone is delineated, the nomenclature shall be (using Wagga Wagga as the example) -
- Urban Wagga Wagga, and
- (d) That where urban areas are formed by the coalescence of two or more towns, such urban areas shall be assigned a name agreed upon after consultation with the Deputy Commonwealth Statisticians of the States concerned.

\* Pending further consideration by Conference of Statisticians, the implementation of Part (b) of Resolution 3 has been deferred.

To be treated as strictly CONFIDENTIAL and NOT to be published, broadcast or cabled before NOON on FRIDAY, 2ND DECEMBER, 1966.

CENSUS OF THE COMMONWEALTH OF AUSTRALIA

30TH JUNE, 1966

FIELD COUNT STATEMENT NO. 5. - POPULATION : ADMINISTRATIVE DIVISIONS

AUSTRALIAN CAPITAL TERRITORY

CONTENTS

	Page
Explanatory Notes .. .. .	2.
List of Field Count Statements issued .. .. .	2.
Population : Administrative Divisions (showing Metropolitan and rural components), Australian Capital Territory, 1961 and 1966 ..	3.
APPENDIX A. Outline Map : Canberra Statistical District	

---

This statement contains preliminary results of the Census of 30th June, 1966. The figures have been compiled by field personnel during the taking of the Census and are subject to amendment. The statement excludes particulars of full-blood Aborigines.

Similar information for the six States and for the Northern Territory will be published progressively.

A detailed description of the procedures used in the delimitation of metropolitan and other urban centres, statistical divisions and statistical districts is contained in Field Count Statement No. 4. A brief comment on the application of the procedures in the Australian Capital Territory is contained herein.

NOTE. - Persons having diplomatic immunity (diplomatic and home-based staff of diplomatic missions, and their families) are not included. The number of such persons is approximately 1,200 in the Australian Capital Territory.

EXPLANATORY NOTES ON THE DELIMITATION OF URBAN BOUNDARIES FOR STATISTICAL PURPOSES

For the purposes of presenting population and dwelling statistics obtained at the Census of 30th June, 1966, new methods have been used in the delimitation of metropolitan and certain other urban centres in Australia. A detailed statement on the concepts and criteria adopted is contained in Field Count Statement No. 4. - Population; Principal Urban Centres of Australia. Briefly, the methods are as follows:-

- (i) Around each capital city and each town with a population of 75,000 or more two boundaries have been drawn. The outer boundary, which is fixed, circumscribes the area in close economic and social contact with the main city or town. These areas are designated Statistical Divisions (for the State capital cities) or Statistical Districts (for Canberra, Newcastle, Wollongong and Geelong). The inner boundary indicates the area within which, at the time of the Census, there was a density of at least 500 persons per square mile. This density is determined for each Census collector's district (the smallest geographical area available). From Census to Census, as urbanisation proceeds, this inner boundary will move outwards to encompass peripheral development. Some specified areas of lower density (e.g. industrial areas) are classified as urban on other grounds.
- (ii) The principal urban centre within each State capital city Statistical Division and within the Canberra Statistical District has been designated the "Metropolitan Area".
- (iii) Population clusters of 1,000 or more persons having a minimum density of 500 persons per square mile have been designated "Urban Centres".

Application of the criteria in the Australian Capital Territory

Both inner and outer boundaries have been determined around Canberra in accordance with the methods outlined above. The inner boundary circumscribes the area of Canberra which, at the time of the Census, had a population density of at least 500 persons per square mile; this area has been designated the "Canberra Metropolitan Area". The outer boundary circumscribes the "Canberra Statistical District" which includes the Canberra Metropolitan Area, the Municipality of Queanbeyan in New South Wales and part of the rural area of the Australian Capital Territory. The population of the Canberra Statistical District, which extends into New South Wales, has already been published in Field Count Statement No. 4, and is not repeated in this statement which refers only to the Australian Capital Territory.

It should be noted that the Canberra Metropolitan Area (based on the density criterion) differs from the Canberra City District (a proclaimed administrative area) for which statistics were published in Field Count Statement No. 4, and for which detailed figures are shown in this statement. The extent of the difference is clearly shown by the map in Appendix B. of this statement. The boundary of the Canberra Statistical District is also shown.

Apart from the Canberra Metropolitan Area, the Australian Capital Territory has no population clusters of 1,000 or more persons and therefore no "urban centres" have been designated.

Field Count Statements issued :-

- No. 1. - Population : Australian Capital Territory.
- No. 2. - Population : Nauru, Norfolk Island, Christmas Island and Cocos (Keeling) Islands.
- No. 3. - Population : States and Territories of Australia.
- No. 4. - Population : Principal Urban Centres of Australia.

POPULATION: ADMINISTRATIVE DIVISIONS: AUSTRALIAN CAPITAL TERRITORY, 1961 AND 1966

NOTE. - For Metropolitan and other urban centres, which are delimited by moving boundaries (see Explanatory Notes), boundaries for 1961 have been redrawn according to the new criteria. The urban populations (partly estimated) within these boundaries are shown in this table for comparison with 1966 population. The intercensal increase or decrease between 1961 and 1966 may therefore reflect (i) population changes within the original 1961 boundaries, (ii) urban growth beyond the original boundaries, and (iii) the merging of other urban centres, one with another, or with the Metropolitan Area.

Minus sign (-) denotes decrease in population.

(a) Includes R.A.A.F. Base, Fairbairn and Canberra Airport which are situated beyond the Canberra City District boundary.

(b) Not proclaimed in 1961.

(c) Non-metropolitan in 1961.

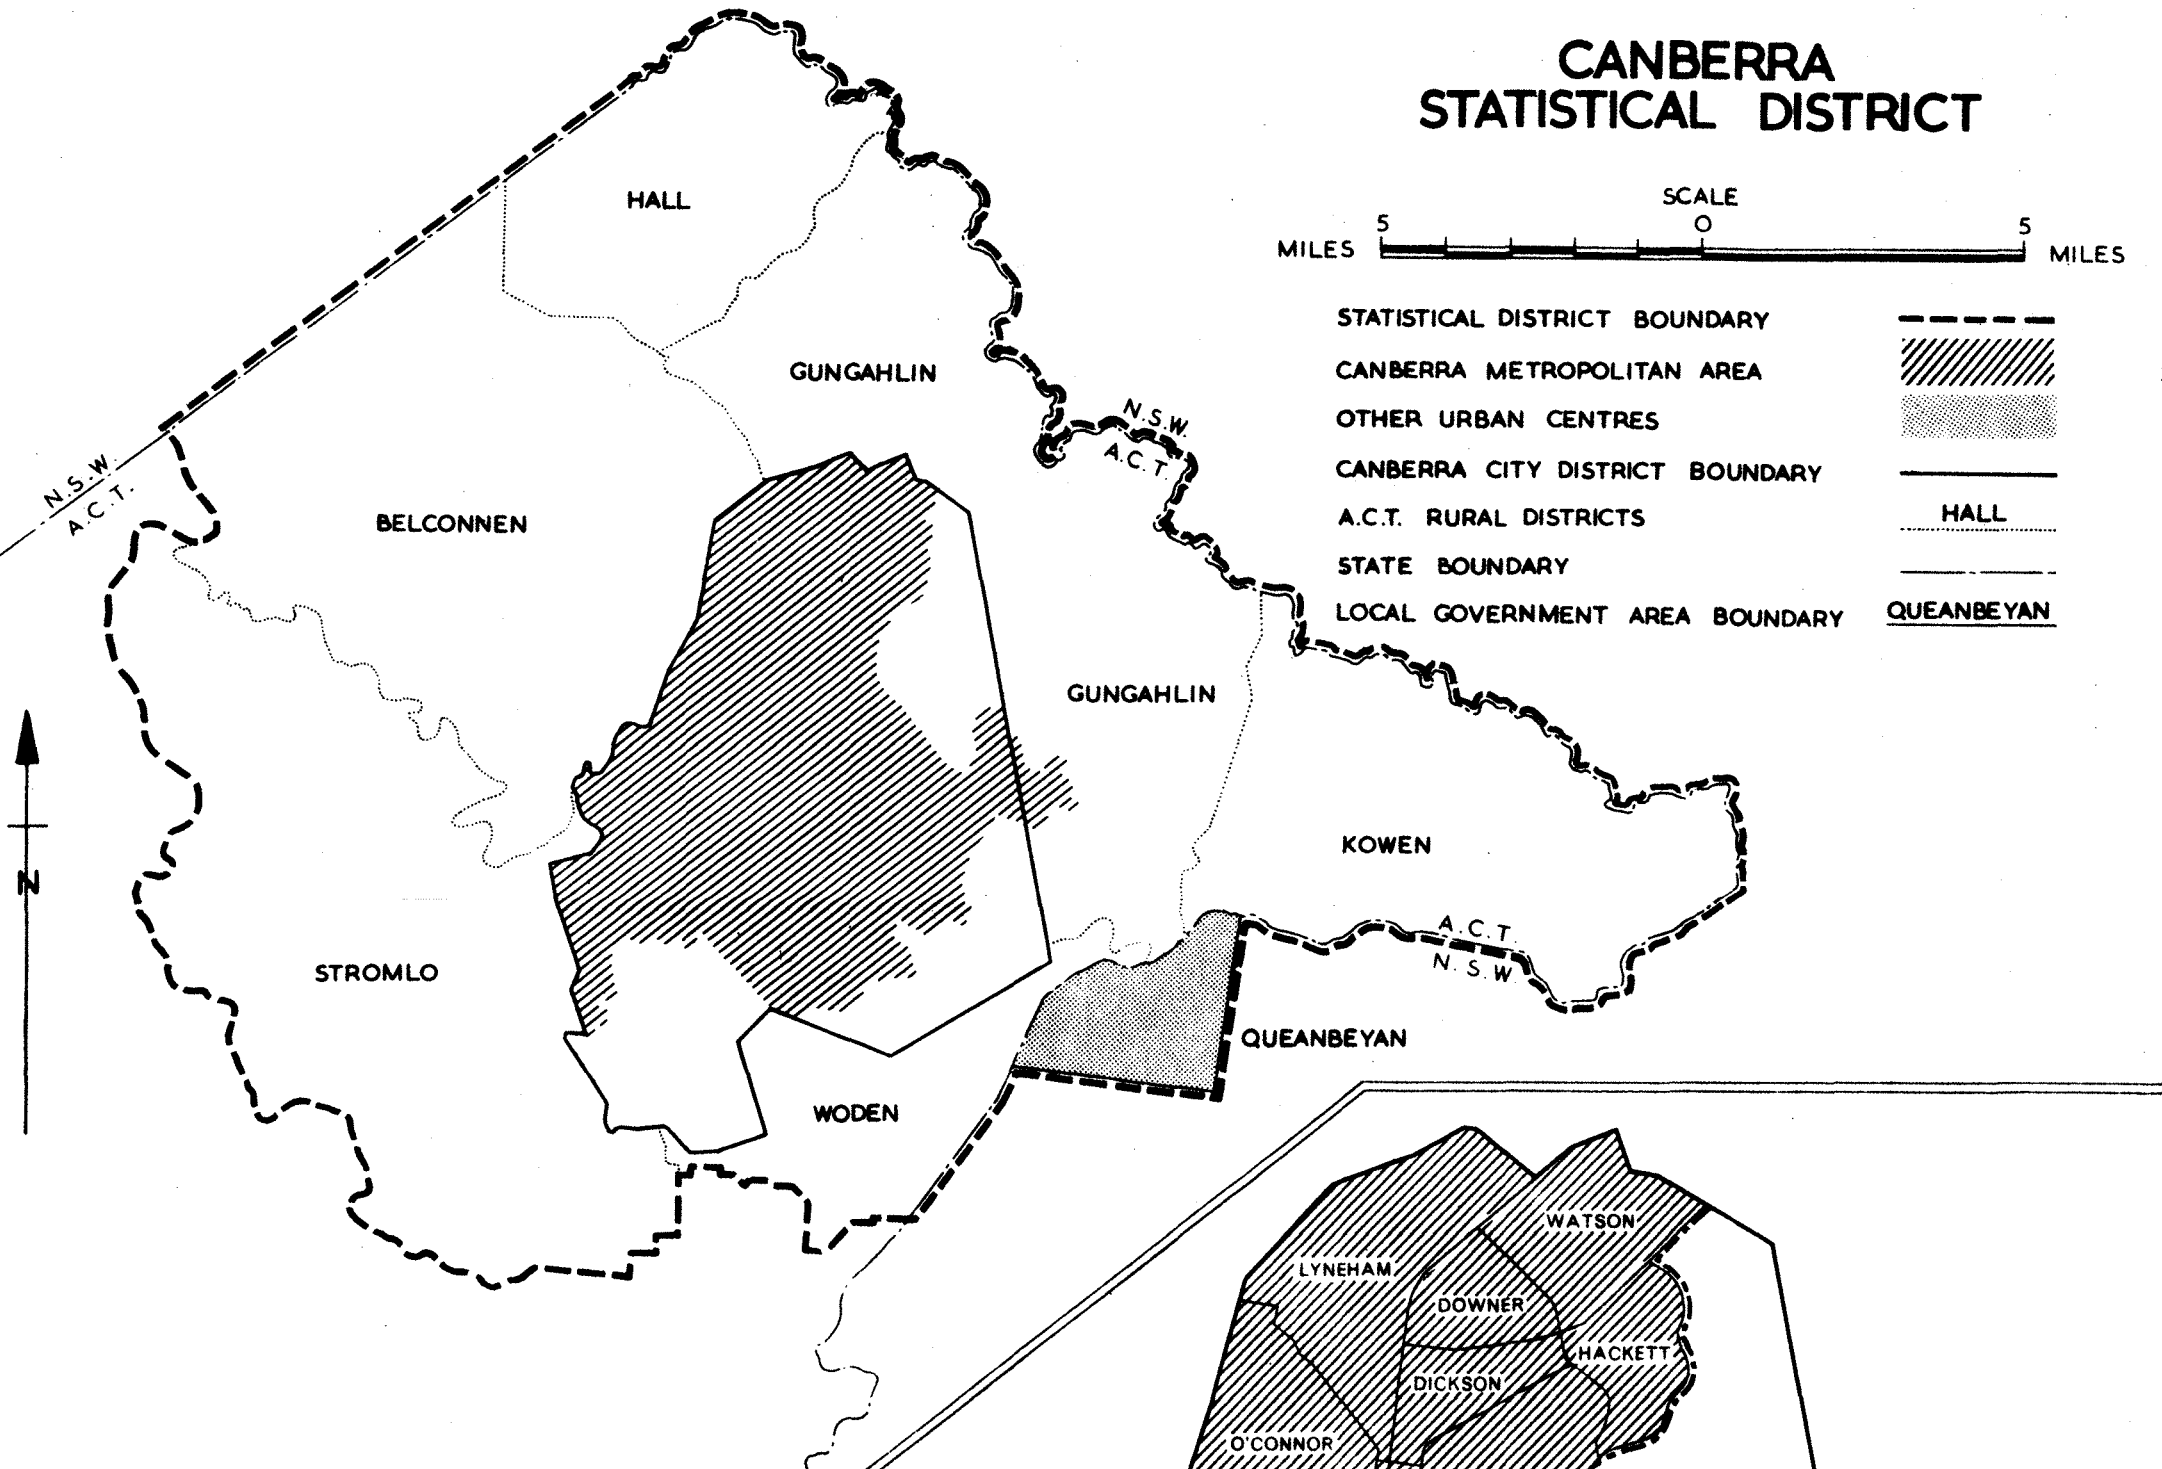

(d) Non-rural in 1966.

NOTE. - "Rural" includes all areas which did not meet the criteria used in the delimitation of urban centres. It therefore includes, for example, new residential areas in an early stage of development which have not yet reached the required minimum urban density of 500 persons per square mile.

	APPENDIX A. Field Count Statements issued	
	APPENDIX B. Outline Maps : Sydney Statistical Division, Newcastle Statistical District and Wollongong Statistical District	

This statement contains preliminary results of the Census of 30th June, 1966. The figures have been compiled by field personnel during the taking of the Census and are subject to amendment. The statement excludes particulars of full-blood Aborigines.

Similar information for all States and Territories of Australia is being published progressively. A list of 1966 Field Count Statements issued to date is contained in Appendix A to this statement.

A brief explanatory comment on the procedures used in the delimitation of metropolitan and other urban centres, capital city statistical divisions and statistical districts is contained herein. A detailed description of the procedures is contained in Field Count Statement No. 4.

EXPLANATORY NOTES ON THE DELIMITATION OF URBAN BOUNDARIES FOR  
STATISTICAL PURPOSES

For the purpose of presenting population and dwelling statistics obtained at the Census of 30th June, 1966, new concepts have been adopted for the delimitation of metropolitan and other urban centres. These are described in detail in Field Count Statement No. 4 - Population : Principal Urban Centres of Australia. Because of practical difficulties (notably lack of time to carry out an extensive examination of each area in order to re-design suitable collector's districts and the absence of suitable topographic boundaries around small towns) the new criteria have at present been uniformly applied only to urban centres within the capital city statistical divisions and the statistical districts, to other urban centres with a population of 30,000 or more and to a few smaller centres (Katoomba-Wentworth Falls, Lawson-Hazelbrook and urban centres in the Shires of Wyong and Gosford in New South Wales; Moe-Yallourn in Victoria; Cairns in Queensland and Kalgoorlie in Western Australia). It is proposed to extend the application of the new criteria to smaller centres in future Censuses.

Briefly the new concepts, which as explained above, have in general only been applied to the larger urban centres, are as follows:-

- (i) Population clusters of 1,000 or more persons having a minimum density of 500 persons per square mile shall be designated "Urban". This density shall be determined for each census collector's district (the smallest geographical area available). Additionally, some areas of lower population and/or density shall be classified as "Urban" on other grounds (e.g. holiday areas, industrial areas).
- (ii) Around each principal urban centre with a population of 75,000 or more two boundaries shall be drawn. The outer boundary shall circumscribe the area which is expected to be in close economic and social contact with the principal urban centre for the next two or three decades. These areas shall be designated STATISTICAL DIVISIONS (for State capital cities) or STATISTICAL DISTRICTS (for Canberra, Newcastle, Wollongong and Geelong).  
The inner boundary shall delimit the principal urban centre itself. It shall be a moving boundary, which from Census to Census, as urbanisation proceeds, will move outwards to encompass peripheral development. For capital cities, the principal urban centre encompassed by the inner boundary shall be designated the "METROPOLITAN AREA".
- (iii) Urban centres of less than 75,000 population shall be described by name as "URBAN \_\_\_\_\_".

2. For urban centres not yet delimited by the new criteria, the following procedures were used:-

- (i) Municipalities, cities, towns and boroughs of over 1,000 population have been classified as urban (except where they contain a very large rural component, in which case the urban centres have been delimited from aerial photographs or by field inspection). Where extensive urban development is known to extend beyond the boundary the extension has been regarded as an integral part of the urban centre and so included.
- (ii) Other urban centres have been intensively examined on the most recent aerial photographs available and the boundaries set as closely as possible to the periphery of the built-up area without regard to local government boundaries. The greater availability of recent aerial photographs in 1966 than in 1961 has enabled more meaningful boundaries to be delineated for many small urban centres.

3. Comparable information for the 1961 Census has been prepared using the new concepts although, because 1961 collector's districts were not especially designed for this purpose, some estimations have had to be made.

4. Where, through growth or decline, an urban centre at one Census was non-urban at the other, figures for both Censuses have been shown where available for comparison, the non-urban figure being in brackets.
5. In some instances, urban centres may extend across State boundaries. Examples are Gold Coast which includes Tweed Heads, Albury-Wodonga and a number of smaller urban centres along the River Murray. In such cases, State tables include only that part of the urban centre situated within the State, the population of the whole urban centre being shown in a footnote.
6. Throughout this statement the following abbreviations have been used:-  
(C) - City; (M) - Municipality; (S) - Shire; n.a. - not available.

TABLE 2. - POPULATION : URBAN CENTRES, NEW SOUTH WALES, 1961 AND 1966

NOTE. - For Metropolitan and other urban centres which are delimited by moving boundaries (see Explanatory Notes), boundaries for 1961 have been redrawn according to the new criteria. The urban populations (partly estimated) within these boundaries are shown in this table for comparison with 1966 population. The intercensal increase or decrease between 1961 and 1966 may therefore reflect (i) population changes within the original 1961 boundaries, (ii) urban growth beyond the original boundaries, and (iii) the merging of other urban areas one with another or with the Metropolitan Area.

TABLE 2. - POPULATION : URBAN CENTRES, NEW SOUTH WALES, 1961 AND 1966 - Continued

NOTE. - For Metropolitan and other urban centres which are delimited by moving boundaries (see Explanatory Notes), boundaries for 1961 have been redrawn according to the new criteria. The urban populations (partly estimated) within these boundaries are shown in this table for comparison with 1966 population. The intercensal increase or decrease between 1961 and 1966 may therefore reflect (i) population changes within the original 1961 boundaries, (ii) urban growth beyond the original boundaries, and (iii) the merging of other urban areas one with another or with the Metropolitan Area.

FOOTNOTES TO TABLE 2.

- (a) Includes Lavington. That part of Urban Albury-Wodonga in New South Wales. Population of Urban Albury-Wodonga - 1961, 28,796; 1966, 32,019.
- (b) Non-urban in 1966.
- (c) Includes Batehaven.
- (d) That part of Urban Barham-Koondrook in New South Wales. Population of Urban Barham-Koondrook - 1961, 1,736; 1966, 1,740.
- (e) Includes Yattalunga.
- (f) That part of Urban Echuca-Moama in New South Wales. Population of Urban Echuca-Moama - 1961, 7,253; 1966, 8,014.
- (g) Includes Blaxland, Warrimoo, Valley Heights, Springwood and N. Springwood.
- (h) That part of Urban Gold Coast in New South Wales. Population of Urban Gold Coast - 1961, 34,764; 1966, 53,044.
- (i) Includes Point Clare and Narara.
- (j) Includes Leura.
- (k) Includes Bombo and Minnamurra.
- (l) Includes Abermain.
- (m) Includes Bullaburra and Woodford.
- (n) Includes North Avoca.
- (o) Includes Bateau Bay, Berkeley Vale, Chittaway Point (part), Killarney Vale, Long Jetty, The Entrance North, Toowoan Bay and Tumbi Umbi.
- (p) Includes Buff Point, Charmhaven, Kanwal, Norahville, Norah Head, Tuggerawong and Wyongah.
- (q) Includes Mollismook.
- (r) Includes Arcadia Vale, Balmoral, Fishing Point and Lake View.
- (s) Includes Blackwall, Booker Bay, Ettalong and Pearl Beach.
- (t) That part of Urban Yarrawanga-Mulwala in New South Wales. Population of Urban Yarrawonga-Mulwala - 1961, 3,770; 1966, 3,991.

NOTE. - (i) Minus sign (-) denotes decrease in population.  
(ii) Only 1966 urban centres are included.

TABLE 3. - POPULATION : LOCAL GOVERNMENT AREAS, NEW SOUTH WALES, 1961 AND 1966

NOTE. - For Metropolitan and other urban centres, which are delimited by moving boundaries (see Explanatory Notes), boundaries for 1961 have been redrawn according to the new criteria. The urban populations (partly estimated) within these boundaries are shown in this table for comparison with 1966 population. The intercensal increase or decrease between 1961 and 1966 may therefore reflect (i) population changes within the original 1961 boundaries, (ii) urban growth beyond the original boundaries and (iii) the merging of other urban areas, one with another, or with the Metropolitan Area.

TABLE 3. - POPULATION : LOCAL GOVERNMENT AREAS, NEW SOUTH WALES, 1961 AND 1966 - cont'd.

NOTE. - For Metropolitan and other urban centres, which are delimited by moving boundaries (see Explanatory Notes), boundaries for 1961 have been redrawn according to the new criteria. The urban populations (partly estimated) within these boundaries are shown in this table for comparison with 1966 population. The intercensal increase or decrease between 1961 and 1966 may therefore reflect (i) population changes within the original 1961 boundaries, (ii) urban growth beyond the original boundaries and (iii) the merging of other urban areas, one with another, or with the Metropolitan Area.

TABLE 3. - POPULATION : LOCAL GOVERNMENT AREAS, NEW SOUTH WALES, 1961 AND 1966 - cont'd.

NOTE. - For Metropolitan and other urban centres, which are delimited by moving boundaries (see Explanatory Notes), boundaries for 1961 have been redrawn according to the new criteria. The urban populations (partly estimated) within these boundaries are shown in this table for comparison with 1966 population. The intercensal increase or decrease between 1961 and 1966 may therefore reflect (i) population changes within the original 1961 boundaries, (ii) urban growth beyond the original boundaries and (iii) the merging of other urban areas, one with another, or with the Metropolitan Area.

NOTE. - For Metropolitan and other urban centres, which are delimited by moving boundaries (see Explanatory Notes), boundaries for 1961 have been redrawn according to the new criteria. The urban populations (partly estimated) within these boundaries are shown in this table for comparison with 1966 population. The intercensal increase or decrease between 1961 and 1966 may therefore reflect (i) population changes within the original 1961 boundaries, (ii) urban growth beyond the original boundaries and (iii) the merging of other urban areas, one with another, or with the Metropolitan Area.

(a) Indicates those local government areas where a boundary change occurred between the 1961 and 1966 Censuses. In some cases such boundary changes resulted in a change in the population of the local government area. In order to provide a comparison with the 1966 population, the 1961 local government area populations shown in this table have been adjusted, where necessary, to the boundaries existing at 30th June, 1966. (b) Merged with Metropolitan Area. (c) Non-urban in 1966. (d) New South Wales part of Urban Gold Coast. Population of Urban Gold Coast - 1961, 34,764; 1966, 53,044. (e) Non-urban in 1961. (f) The separate urban centres of Bundgewoi and Toukley-Gorokan merged in 1966 to form the urban centre of Toukley-Gorokan-Budgewoi. (g) Merged with Urban Wollongong. (h) New South Wales part of Urban Albury-Wodonga. Population of Urban Albury-Wodonga - 1961, 28,796; 1966, 32,019. (i) New South Wales part of Urban Yarrawonga-Mulwala. Population of Urban Yarrawonga-Mulwala - 1961, 3,770; 1966, 3,991. (j) New South Wales part of Urban Echuca-Moama. Population of Urban Echuca-Moama - 1961, 7,253; 1966, 8,014. (k) New South Wales part of Urban Barham-Koondrook. Population of Urban Barham-Koondrook - 1961, 1,736; 1966, 1,740. (m) Refers to persons not elsewhere included who, at midnight between 30th June, 1966 and 1st July, 1966 were on ships in New South Wales' waters, or were travelling on long-distance trains, motor coaches or aircraft.

r - Revised since issue of Field Count Statement No. 3.

**NOTE.** - Minus sign (-) denotes decrease in population.

TABLE 4. - POPULATION : URBAN CENTRES OF OVER 5,000 POPULATION, NEW SOUTH WALES,  
1961 AND 1966

NOTE. - For Metropolitan and other urban centres, which are delimited by moving boundaries (see Explanatory Notes), boundaries for 1961 have been redrawn according to the new criteria. The urban populations (partly estimated) within these boundaries are shown in this table for comparison with 1966 population. The intercensal increase or decrease between 1961 and 1966 may therefore reflect (i) population changes within the original 1961 boundaries, (ii) urban growth beyond the original boundaries and (iii) the merging of other urban areas, one with another, or with the Metropolitan Area.

	APPENDIX A. Field Count Statements issued.	
	APPENDIX B. Outline Maps : Melbourne Statistical Division, Geelong Statistical District.	

This statement contains preliminary results of the Census of 30th June, 1966. The figures have been compiled by field personnel during the taking of the Census and are subject to amendment. The statement excludes particulars of full-blood Aborigines.

Similar information for all States and Territories of Australia is being published progressively. A list of 1966 Field Count Statements issued to date is contained in Appendix A to this statement.

A brief explanatory comment on the procedures used in the delimitation of metropolitan and other urban centres, capital city statistical divisions and statistical districts is contained herein. A detailed description of the procedures is contained in Field Count Statement No. 4.

EXPLANATORY NOTES ON THE DELIMITATION OF URBAN BOUNDARIES FOR STATISTICAL PURPOSES

For the purpose of presenting population and dwelling statistics obtained at the Census of 30th June, 1966, new concepts have been adopted for the delimitation of metropolitan and other urban centres. These are described in detail in Field Count Statement No. 4 - Population : Principal Urban Centres of Australia. Because of practical difficulties (notably lack of time to carry out an extensive examination of each area in order to re-design suitable collector's districts and the absence of suitable topographic boundaries around small towns) the new criteria have at present been uniformly applied only to urban centres within the capital city statistical divisions and the statistical districts, to other urban centres with a population of 30,000 or more and to a few smaller centres (Katoomba-Wentworth Falls, Lawson-Hazelbrook and urban centres in the Shires of Wyong and Gosford in New South Wales; Moe-Yallourn in Victoria; Cairns in Queensland and Kalgoorlie in Western Australia). It is proposed to extend the application of the new criteria to smaller centres in future Censuses.

Briefly the new concepts, which as explained above, have in general only been applied to the larger urban centres, are as follows:-

- (i) Population clusters of 1,000 or more persons having a minimum density of 500 persons per square mile shall be designated "Urban". This density shall be determined for each census collector's district (the smallest geographical area available). Additionally, some areas of lower population and/or density shall be classified as "Urban" on other grounds (e.g. holiday areas, industrial areas).
- (ii) Around each principal urban centre with a population of 75,000 or more two boundaries shall be drawn. The outer boundary shall circumscribe the area which is expected to be in close economic and social contact with the principal urban centre for the next two or three decades. These areas shall be designated STATISTICAL DIVISIONS (for State capital cities) or STATISTICAL DISTRICTS (for Canberra, Newcastle, Wollongong and Geelong).  
The inner boundary shall delimit the principal urban centre itself. It shall be a moving boundary, which from Census to Census, as urbanisation proceeds, will move outwards to encompass peripheral development. For capital cities, the principal urban centre encompassed by the inner boundary shall be designated the "METROPOLITAN AREA".
- (iii) Urban centres of less than 75,000 population shall be described by name as "URBAN \_\_\_\_\_".

2. For urban centres not yet delimited by the new criteria, the following procedures were used:-

- (i) Municipalities, cities, towns and boroughs of over 1,000 population have been classified as urban (except where they contain a very large rural component, in which case the urban centres have been delimited from aerial photographs or by field inspection). Where extensive urban development is known to extend beyond the boundary the extension has been regarded as an integral part of the urban centre and so included.
- (ii) Other urban centres have been intensively examined on the most recent aerial photographs available and the boundaries set as closely as possible to the periphery of the built-up area without regard to local government boundaries. The greater availability of recent aerial photographs in 1966 than in 1961 has enabled more meaningful boundaries to be delineated for many small urban centres.

3. Comparable information for the 1961 Census has been prepared using the new concepts although, because 1961 collector's districts were not especially designed for this purpose, some estimations have had to be made.

4. Where, through growth or decline, an urban centre at one Census was non-urban at the other, figures for both Censuses have been shown where available for comparison, the non-urban figure being in brackets.

5. In some instances, urban centres may extend across State boundaries. Examples are Gold Coast which includes Tweed Heads, Albury-Wodonga and a number of smaller urban centres along the River Murray. In such cases, State tables include only that part of the urban centre situated within the State, the population of the whole urban centre being shown in a footnote.

6. Throughout this statement the following abbreviations have been used:-

(B) = Borough; (C) = City; (S) = Shire; (T) = Town; n.a. = not available.

TABLE 1. - INDEX OF LOCAL GOVERNMENT AREAS, VICTORIA, 1966

Local Government Area	Area (Sq. miles)	Population, Census, 30th June, 1966	Page Reference Table 3

TABLE 2. - POPULATION : URBAN CENTRES, VICTORIA, 1961 AND 1966

**NOTE.** - For Metropolitan and other urban centres, which are delimited by moving boundaries (see Explanatory Notes), boundaries for 1961 have been redrawn according to the new criteria. The urban populations (partly estimated) within these boundaries are shown in this table for comparison with 1966 population. The intercensal increase or decrease between 1961 and 1966 may therefore reflect (i) population changes within the original 1961 boundaries, (ii) urban growth beyond the original boundaries, and (iii) the merging of other urban areas, one with another, or with the Metropolitan Area.

Urban Centre (with L.G.A. components)	Census, 30th June, 1961	Census, 30th June, 1966			Intercensal Increase or Decrease		Page Ref. Table 3

TABLE 3. - POPULATION : LOCAL GOVERNMENT AREAS, VICTORIA, 1961 AND 1966 - Continued

NOTE. - For Metropolitan and other urban centres, which are delimited by moving boundaries (see Explanatory Notes), boundaries for 1961 have been redrawn according to the new criteria. The urban populations (partly estimated) within these boundaries are shown in this table for comparison with 1966 population. The intercensal increase or decrease between 1961 and 1966 may therefore reflect (i) population changes within the original 1961 boundaries (ii) urban growth beyond the original boundaries, and (iii) the merging of other urban areas, one with another, or with the Metropolitan Area.

TABLE 3. - POPULATION : LOCAL GOVERNMENT AREAS, VICTORIA, 1961 AND 1966 - Continued

**NOTE.** - For Metropolitan and other urban centres, which are delimited by moving boundaries (see Explanatory Notes), boundaries for 1961 have been redrawn according to the new criteria. The urban populations (partly estimated) within these boundaries are shown in this table for comparison with 1966 population. The intercensal increase or decrease between 1961 and 1966 may therefore reflect (i) population changes within the original 1961 boundaries (ii) urban growth beyond the original boundaries, and (iii) the merging of other urban areas, one with another, or with the Metropolitan Area.

TABLE 3. - POPULATION : LOCAL GOVERNMENT AREAS, VICTORIA, 1961 AND 1966 - Continued

NOTE. - For Metropolitan and other urban centres, which are delimited by moving boundaries (see Explanatory Notes), boundaries for 1961 have been redrawn according to the new criteria. The urban populations (partly estimated) within these boundaries are shown in this table for comparison with 1966 population. The intercensal increase or decrease between 1961 and 1966 may therefore reflect (i) population changes within the original 1961 boundaries, (ii) urban growth beyond the original boundaries, and (iii) the merging of other urban areas, one with another, or with the Metropolitan Area.

Other Urban	579,936	319,617	322,689	642,306	62,370	10.75
Rural	487,034	245,525	217,924	463,449	-23,585	-4.84
Migratory	4,609	2,887	691	3,578	-1,031	-22.37
<u>TOTAL VICTORIA</u>	2,930,113	1,613,286	1,604,546	3,217,832	287,719	9.82

(a) Indicates those local government areas where a boundary change occurred between the 1961 and 1966 Censuses. In many cases this boundary change resulted in a change in the population of the local government area. In order to eliminate population changes due to boundary changes and to provide a comparison with the 1966 population figures. The 1961 local government area populations shown in the table have been adjusted, where necessary, to the boundaries used in 1966. (b) Merged with Metropolitan Area. (c) Non-Metropolitan in 1961. (d) Non-urban in 1961. (e) Merged with Urban Geelong.

**NOTE.** - Minus sign (-) denotes decrease in population.

TABLE 4.- POPULATION : URBAN CENTRES OF OVER 5,000 POPULATION, VICTORIA, 1961 AND 1966

NOTE. - For Metropolitan and other urban centres, which are delimited by moving boundaries (see Explanatory Notes), boundaries for 1961 have been redrawn according to the new criteria. The urban populations (partly estimated) within these boundaries are shown in this table for comparison with 1966 population. The intercensal increase or decrease between 1961 and 1966 may therefore reflect (i) population changes within the original 1961 boundaries, (ii) urban growth beyond the original boundaries and (iii) the merging of other urban areas, one with another, or with the Metropolitan Area.

	APPENDIX A. Field Count Statements issued	
	APPENDIX B. Outline Map : Brisbane Statistical Division	

This statement contains preliminary results of the Census of 30th June, 1966. The figures have been compiled by field personnel during the taking of the Census and are subject to amendment. The statement excludes particulars of full-blood Aborigines.

Similar information for all States and Territories of Australia is being published progressively. A list of 1966 Field Count Statements issued to date is contained in Appendix A to this statement.

A brief explanatory comment on the procedures used in the delimitation of metropolitan and other urban centres, capital city statistical divisions and statistical districts is contained herein. A detailed description of the procedures is contained in Field Count Statement No. 4.

EXPLANATORY NOTES ON THE DELIMITATION OF URBAN BOUNDARIES FOR STATISTICAL PURPOSES

For the purpose of presenting population and dwelling statistics obtained at the Census of 30th June 1966, new concepts have been adopted for the delimitation of metropolitan and other urban centres. These are described in detail in Field Count Statement No. 4 - Population : Principal Urban Centres of Australia. Because of practical difficulties (notably lack of time to carry out an extensive examination of each area in order to re-design suitable collector's districts and the absence of suitable topographic boundaries around small towns) the new criteria have at present been uniformly applied only to urban centres within the capital city statistical divisions and the statistical districts, to other urban centres with a population of 30,000 or more and to a few smaller centres (Katoomba-Wentworth Falls, Lawson-Hazelbrook and urban centres in the Shires of Wyong and Gosford in New South Wales; Moe-Yallourn in Victoria; Cairns in Queensland and Kalgoorlie in Western Australia). It is proposed to extend the application of the new criteria to smaller centres in future Censuses.

Briefly the new concepts, which as explained above, have in general only been applied to the larger urban centres, are as follows:-

- (i) Population clusters of 1,000 or more persons having a minimum density of 500 persons per square mile shall be designated "Urban". This density shall be determined for each census collector's district (the smallest geographical area available). Additionally, some areas of lower population and/or density shall be classified as "Urban" on other grounds (e.g. holiday areas, industrial areas).
- (ii) Around each principal urban centre with a population of 75,000 or more two boundaries shall be drawn. The outer boundary shall circumscribe the area which is expected to be in close economic and social contact with the principal urban centre for the next two or three decades. These areas shall be designated STATISTICAL DIVISIONS (for State capital cities) or STATISTICAL DISTRICTS (for Canberra, Newcastle, Wollongong and Geelong).  
The inner boundary shall delimit the principal urban centre itself. It shall be a moving boundary, which from Census to Census, as urbanisation proceeds, will move outwards to encompass peripheral development. For capital cities, the principal urban centre encompassed by the inner boundary shall be designated the "METROPOLITAN AREA".
- (iii) Urban centres of less than 75,000 population shall be described by name as "URBAN \_\_\_\_\_".

2. For urban centres not yet delimited by the new criteria, the following procedures were used:-

- (i) Municipalities, cities, towns and boroughs of over 1,000 population have been classified as urban (except where they contain a very large rural component, in which case the urban centres have been delimited from aerial photographs or by field inspection). Where extensive urban development is known to extend beyond the boundary the extension has been regarded as an integral part of the urban centre and so included.
- (ii) Other urban centres have been intensively examined on the most recent aerial photographs available and the boundaries set as closely as possible to the periphery of the built-up area without regard to local government boundaries. The greater availability of recent aerial photographs in 1966 than in 1961 has enabled more meaningful boundaries to be delineated for many small urban centres.

3. Comparable information for the 1961 Census has been prepared using the new concepts although, because 1961 collector's districts were not especially designed for this purpose, some estimations have had to be made.

4. Where, through growth or decline, an urban centre at one Census was non-urban at the other, figures for both Censuses have been shown where available for comparison, the non-urban figure being in brackets.

5. In some instances, urban centres may extend across State boundaries. Examples are Gold Coast which includes Tweed Heads, Albury-Wodonga and a number of smaller urban centres along the River Murray. In such cases, State tables include only that part of the urban centre situated within the State, the population of the whole urban centre being shown in a footnote.

Throughout this statement the following abbreviations have been used:

(C) = City; (T) = Town; (S) = Shire; n.a. = not available.

TABLE 2. - POPULATION : URBAN CENTRES, QUEENSLAND, 1961 AND 1966

**NOTE.** - For Metropolitan and other urban centres, which are delimited by moving boundaries (see Explanatory Notes), boundaries for 1961 have been redrawn according to the new criteria. The urban populations (partly estimated) within these boundaries are shown in this table for comparison with 1966 population. The intercensal increase or decrease between 1961 and 1966 may therefore reflect (i) population changes within the original 1961 boundaries, (ii) urban growth beyond the original boundaries, and (iii) the merging of other urban areas, one with another, or with the Metropolitan Area.

Urban Centre (with L.G.A. components)	Census, 30th June, 1961	Census, 30th June, 1966			Intercensal Increase or Decrease		Page Ref. Table 3

TABLE 2. - POPULATION : URBAN CENTRES, QUEENSLAND, 1961 AND 1966 - Continued

NOTE. - For Metropolitan and other urban centres, which are delimited by moving boundaries (see Explanatory Notes), boundaries for 1961 have been redrawn according to the new criteria. The urban populations (partly estimated) within these boundaries are shown in this table for comparison with 1966 population. The intercensal increase or decrease between 1961 and 1966 may therefore reflect (i) population changes within the original 1961 boundaries, (ii) urban growth beyond the original boundaries, and (iii) the merging of other urban areas, one with another, or with the Metropolitan Area.

Urban Centre (with L.G.A. components)	Census, 30th June, 1961	Census, 30th June, 1966			Intercensal Increase or Decrease		Page Ref. Table 3
		Males	Females	Persons	Numerical	Percentage	
Texas	1,266	653	577	1,230	-36	-2.84	16

TABLE 3. - POPULATION : LOCAL GOVERNMENT AREAS, QUEENSLAND, 1961 AND 1966 - Continued

NOTE. - For Metropolitan and other urban centres, which are delimited by moving boundaries (see Explanatory Notes), boundaries for 1961 have been redrawn according to the new criteria. The urban populations (partly estimated) within these boundaries are shown in this table for comparison with 1966 population. The intercensal increase or decrease between 1961 and 1966 may therefore reflect (i) population changes within the original 1961 boundaries, (ii) urban growth beyond the original boundaries, and (iii) the merging of other urban areas, one with another, or with the Metropolitan Area.

TABLE 3. - POPULATION : LOCAL GOVERNMENT AREAS, QUEENSLAND, 1961 AND 1966 - Continued

**NOTE.** - For Metropolitan and other urban centres, which are delimited by moving boundaries (see Explanatory Notes), boundaries for 1961 have been redrawn according to the new criteria. The urban populations (partly estimated) within these boundaries are shown in this table for comparison with 1966 population. The intercensal increase and decrease between 1961 and 1966 may therefore reflect (i) population changes within the original 1961 boundaries, (ii) urban growth beyond the original boundaries, and (iii) the merging of other urban areas, one with another, or with the Metropolitan Area.

(a) Non-Metropolitan in 1961. (b) Merged with Metropolitan Area. (c) Non-urban in 1961. (d) Indicates those local government areas where a boundary change occurred between the 1961 and 1966 Censuses. In many cases this boundary change resulted in a change in the population of the local government area. In order to eliminate population changes due to boundary changes and to provide a comparison with the 1966 population figures, the 1961 local government area populations shown in the table have been adjusted, where necessary, to the boundaries used in 1966. (e) Non-urban in 1966. (f) Refers to persons not elsewhere included who, at midnight between 30th June, 1966 and 1st July, 1966 were on ships in Queensland waters, or were travelling on long-distance trains, motor coaches or aircraft.

NOTE. - Minus sign (-) denotes decrease in population.

**TABLE 4. - POPULATION : URBAN CENTRES OF OVER 5,000 POPULATION, QUEENSLAND  
1961 AND 1966**

**NOTE.** - For Metropolitan and other urban centres, which are delimited by moving boundaries (see Explanatory Notes), boundaries for 1961 have been redrawn according to the new criteria. The urban populations (partly estimated) within these boundaries are shown in this table for comparison with 1966 population. The intercensal increase or decrease between 1961 and 1966 may therefore reflect (i) population changes within the original 1961 boundaries, (ii) urban growth beyond the original boundaries, and (iii) the merging of other urban areas, one with another, or with the Metropolitan Area.

	APPENDIX A. Field Count Statements issued	
	APPENDIX B. Outline Map : Adelaide Statistical Division	

This statement contains preliminary results of the Census of 30th June, 1966. The figures have been compiled by field personnel during the taking of the Census and are subject to amendment. The statement excludes particulars of full-blood Aborigines.

Similar information for all States and Territories of Australia is being published progressively. A list of 1966 Field Count Statements issued to date is contained in Appendix A to this statement.

A brief explanatory comment on the procedures used in the delimitation of metropolitan and other urban centres, capital city statistical divisions and statistical districts is contained herein. A detailed description of the procedures is contained in Field Count Statement No. 4.

EXPLANATORY NOTES ON THE DELIMITATION OF URBAN BOUNDARIES FOR STATISTICAL PURPOSES

For the purpose of presenting population and dwelling statistics obtained at the Census of 30th June, 1966, new concepts have been adopted for the delimitation of metropolitan and other urban centres. These are described in detail in Field Count Statement No. 4 - Population : Principal Urban Centres of Australia. Because of practical difficulties (notably lack of time to carry out an extensive examination of each area in order to re-design suitable collector's districts and the absence of suitable topographic boundaries around small towns) the new criteria have at present been uniformly applied only to urban centres within the capital city statistical divisions and the statistical districts, to other urban centres with a population of 30,000 or more and to a few smaller centres (Katoomba-Wentworth Falls, Lawson-Hazelbrook and urban centres in the Shires of Wyong and Gosford in New South Wales; Moe-Yallourn in Victoria; Cairns in Queensland and Kalgoorlie in Western Australia). It is proposed to extend the application of the new criteria to smaller centres in future Censuses.

Briefly the new concepts, which as explained above, have in general only been applied to the larger urban centres, are as follows:-

- (i) Population clusters of 1,000 or more persons having a minimum density of 500 persons per square mile shall be designated "Urban". This density shall be determined for each census collector's district (the smallest geographical area available). Additionally, some areas of lower population and/or density shall be classified as "Urban" on other grounds (e.g. holiday areas, industrial areas).
- (ii) Around each principal urban centre with a population of 75,000 or more two boundaries shall be drawn. The outer boundary shall circumscribe the area which is expected to be in close economic and social contact with the principal urban centre for the next two or three decades. These areas shall be designated STATISTICAL DIVISIONS (for State capital cities) or STATISTICAL DISTRICTS (for Canberra, Newcastle, Wollongong and Geelong).  
The inner boundary shall delimit the principal urban centre itself. It shall be a moving boundary, which from Census to Census, as urbanisation proceeds, will move outwards to encompass peripheral development. For capital cities, the principal urban centre encompassed by the inner boundary shall be designated the "METROPOLITAN AREA".
- (iii) Urban centres of less than 75,000 population shall be described by name as "URBAN \_\_\_\_\_".

2. For urban centres not yet delimited by the new criteria, the following procedures were used:-

- (i) Municipalities, cities, towns and boroughs of over 1,000 population have been classified as urban (except where they contain a very large rural component, in which case the urban centres have been delimited from aerial photographs or by field inspection). Where extensive urban development is known to extend beyond the boundary the extension has been regarded as an integral part of the urban centre and so included.
- (ii) Other urban centres have been intensively examined on the most recent aerial photographs available and the boundaries set as closely as possible to the periphery of the built-up area without regard to local government boundaries. The greater availability of recent aerial photographs in 1966 than in 1961 has enabled more meaningful boundaries to be delineated for many small urban centres.

3. Comparable information for the 1961 Census has been prepared using the new concepts although, because 1961 collector's districts were not especially designed for this purpose, some estimations have had to be made.

4. Where, through growth or decline, an urban centre at one Census was non-urban at the other, figures for both Censuses have been shown where available for comparison, the non-urban figure being in brackets.

5. In some instances, urban centres may extend across State boundaries. Examples are Gold Coast which includes Tweed Heads, Albury-Wodonga and a number of smaller urban centres along the River Murray. In such cases, State tables include only that part of the urban centre situated within the State, the population of the whole urban centre being shown in a footnote.

Throughout this statement the following abbreviations have been used:

(C) = City; (T) = Town; (D.C.) = District Council; n.a. = not available.

TABLE 2. - POPULATION : URBAN CENTRES, SOUTH AUSTRALIA, 1961 AND 1966

**NOTE.** - For Metropolitan and other urban centres, which are delimited by moving boundaries (see Explanatory Notes), boundaries for 1961 have been redrawn according to the new criteria. The urban populations (partly estimated) within these boundaries are shown in this table for comparison with 1966 population. The intercensal increase or decrease between 1961 and 1966 may therefore reflect (i) population changes within the original 1961 boundaries, (ii) urban growth beyond the original boundaries, and (iii) the merging of other urban areas, one with another, or with the Metropolitan Area.

**NOTE.** - For Metropolitan and other urban centres, which are delimited by moving boundaries (see Explanatory Notes), boundaries for 1961 have been redrawn according to the new criteria. The urban populations (partly estimated) within these boundaries are shown in this table for comparison with 1966 population. The intercensal increase or decrease between 1961 and 1966 may therefore reflect (i) population changes within the original 1961 boundaries, (ii) urban growth beyond the original boundaries, and (iii) the merging of other urban areas, one with another, or with the Metropolitan Area.

TOTAL SOUTH AUSTRALIA	969,340	547,802	542,921	1,090,723	121,383	12.52

(a) Merged with Metropolitan Area. (b) Non-Metropolitan in 1961. (c) Indicates those local government areas where a boundary change occurred between the 1961 and 1966 Censuses. In many cases this boundary change resulted in a change in the population of the local government area. In order to eliminate population changes due to boundary changes and to provide a comparison with the 1966 population figures, the 1961 local government area populations shown in the table have been adjusted, where necessary, to the boundaries used in 1966. (d) Non-urban in 1961. (e) Urban in 1966. (f) Non-urban in 1966. (g) Refers to persons not elsewhere included who, at midnight between 30th June, 1966 and 1st July, 1966 were on ships in South Australian waters, or were travelling on long-distance trains, motor coaches or aircraft.

NOTE. - Minus sign (-) denotes decrease in population.

TABLE 4. - POPULATION : URBAN CENTRES OF OVER 2,500 POPULATION, SOUTH AUSTRALIA,  
1961 AND 1966

NOTE. - For Metropolitan and other urban centres, which are delimited by moving boundaries (see Explanatory Notes), boundaries for 1961 have been redrawn according to the new criteria. The urban populations (partly estimated) within these boundaries are shown in this table for comparison with 1966 population. The intercensal increase or decrease between 1961 and 1966 may therefore reflect (i) population changes within the original 1961 boundaries, (ii) urban growth beyond the original boundaries, and (iii) the merging of other urban areas, one with another, or with the Metropolitan Area.

APPENDIX A. Field Count Statements issued.	
APPENDIX B. Outline Map : Perth Statistical Division.	

This statement contains preliminary results of the Census of 30th June, 1966. The figures have been compiled by field personnel during the taking of the Census and are subject to amendment. The statement excludes particulars of full-blood Aborigines.

Similar information for all States and Territories of Australia is being published progressively. A list of 1966 Field Count Statements issued to date is contained in Appendix A to this statement.

A brief explanatory comment on the procedures used in the delimitation of metropolitan and other urban centres, capital city statistical divisions and statistical districts is contained herein. A detailed description of the procedures is contained in Field Count Statement No. 4.

EXPLANATORY NOTES ON THE DELIMITATION OF URBAN BOUNDARIES FOR STATISTICAL PURPOSES

For the purpose of presenting population and dwelling statistics obtained at the Census of 30th June, 1966, new concepts have been adopted for the delimitation of metropolitan and other urban centres. These are described in detail in Field Count Statement No. 4 - Population : Principal Urban Centres of Australia. Because of practical difficulties (notably lack of time to carry out an extensive examination of each area in order to re-design suitable collector's districts and the absence of suitable topographic boundaries around small towns) the new criteria have at present been uniformly applied only to urban centres within the capital city statistical divisions and the statistical districts, to other urban centres with a population of 30,000 or more and to a few smaller centres (Katoomba-Wentworth Falls, Lawson-Hazelbrook and urban centres in the Shires of Wyong and Gosford in New South Wales; Moe-Yallourn in Victoria; Cairns in Queensland and Kalgoorlie in Western Australia). It is proposed to extend the application of the new criteria to smaller centres in future Censuses.

Briefly the new concepts, which as explained above, have in general only been applied to the larger urban centres, are as follows:-

- (i) Population clusters of 1,000 or more persons having a minimum density of 500 persons per square mile shall be designated "Urban". This density shall be determined for each census collector's district (the smallest geographical area available). Additionally, some areas of lower population and/or density shall be classified as "Urban" on other grounds (e.g. holiday areas, industrial areas).
- (ii) Around each principal urban centre with a population of 75,000 or more two boundaries shall be drawn. The outer boundary shall circumscribe the area which is expected to be in close economic and social contact with the principal urban centre for the next two or three decades. These areas shall be designated STATISTICAL DIVISIONS (for State capital cities) or STATISTICAL DISTRICTS (for Canberra, Newcastle, Wollongong and Geelong).  
The inner boundary shall delimit the principal urban centre itself. It shall be a moving boundary, which from Census to Census, as urbanisation proceeds, will move outwards to encompass peripheral development. For capital cities, the principal urban centre encompassed by the inner boundary shall be designated the "METROPOLITAN AREA".
- (iii) Urban centres of less than 75,000 population shall be described by name as "URBAN \_\_\_\_\_".

2. For urban centres not yet delimited by the new criteria, the following procedures were used:-

- (i) Municipalities, cities, towns and boroughs of over 1,000 population have been classified as urban (except where they contain a very large rural component, in which case the urban centres have been delimited from aerial photographs or by field inspection). Where extensive urban development is known to extend beyond the boundary the extension has been regarded as an integral part of the urban centre and so included.
- (ii) Other urban centres have been intensively examined on the most recent aerial photographs available and the boundaries set as closely as possible to the periphery of the built-up area without regard to local government boundaries. The greater availability of recent aerial photographs in 1966 than in 1961 has enabled more meaningful boundaries to be delineated for many small urban centres.

3. Comparable information for the 1961 Census has been prepared, using the new concepts, although because 1961 collector's districts were not especially designed for this purpose, some estimations have had to be made.

4. Where, through growth or decline, an urban centre at one Census was non-urban at the other, figures for both Censuses have been shown where available for comparison, the non-urban figure being in brackets.

5. In some instances, urban centres may extend across State boundaries. Examples are Gold Coast which includes Tweed Heads, Albury-Wodonga and a number of smaller urban centres along the River Murray. In such cases, State tables include only that part of the urban centre situated within the State, the population of the whole urban centre being shown in a footnote.

6. Throughout this statement the following abbreviations have been used:

(C) = City; (T) = Town; (S) = Shire; n.a. = not available.

TABLE 2. - POPULATION : URBAN CENTRES, WESTERN AUSTRALIA, 1961 AND 1966

**NOTE.** - For Metropolitan and other urban centres, which are delimited by moving boundaries (see Explanatory Notes), boundaries for 1961 have been redrawn according to the new criteria. The urban populations (partly estimated) within these boundaries are shown in this table for comparison with 1966 population. The intercensal increase or decrease between 1961 and 1966 may therefore reflect (i) population changes within the original 1961 boundaries, (ii) urban growth beyond the original boundaries, and (iii) the merging of other urban areas, one with another, or with the Metropolitan Area.

TABLE 3. - POPULATION : LOCAL GOVERNMENT AREAS, WESTERN AUSTRALIA, 1961 AND 1966 - Cont'd.

NOTE. - For Metropolitan and other urban centres, which are delimited by moving boundaries (see Explanatory Notes), boundaries for 1961 have been redrawn according to the new criteria. The urban populations (partly estimated) within these boundaries are shown in this table for comparison with 1966 population. The intercensal increase or decrease between 1961 and 1966 may therefore reflect (i) population changes within the original 1961 boundaries, (ii) urban growth beyond the original boundaries, and (iii) the merging of other urban areas, one with another, or with the Metropolitan Area.

TABLE 3. - POPULATION : LOCAL GOVERNMENT AREAS, WESTERN AUSTRALIA, 1961 AND 1966 - Cont'd.

**NOTE.** - For Metropolitan and other urban centres, which are delimited by moving boundaries (see Explanatory Notes), boundaries for 1961 have been redrawn according to the new criteria. The urban populations (partly estimated) within these boundaries are shown in this table for comparison with 1966 population. The intercensal increase or decrease between 1961 and 1966 may therefore reflect (i) population changes within the original 1961 boundaries, (ii) urban growth beyond the original boundaries, and (iii) the merging of other urban areas, one with another, or with the Metropolitan Area.

(a) Indicates those local government areas where a boundary change occurred between the 1961 and 1966 Censuses. In many cases this boundary change resulted in a change in the population of the local government area. In order to eliminate population changes due to boundary changes and to provide a comparison with the 1966 population figures, the 1961 local government area populations shown in the table have been adjusted, where necessary, to the boundaries used in 1966. (b) Non-Metropolitan in 1961. (c) Non-urban in 1966. (d) Non-urban in 1961. (e) Refers to persons not elsewhere included who, at midnight between 30th June, 1966 and 1st July, 1966 were on ships in Western Australian waters, or were travelling on long-distance trains, motor coaches or aircraft.

**NOTE.** - Minus sign (-) indicates decrease in population.

**TABLE 4. - POPULATION : URBAN CENTRES OF OVER 2,000 POPULATION,  
WESTERN AUSTRALIA, 1961 AND 1966**

**NOTE.** - For Metropolitan and other urban centres, which are delimited by moving boundaries (see Explanatory Notes), boundaries for 1961 have been redrawn according to the new criteria. The urban populations (partly estimated) within these boundaries are shown in this table for comparison with 1966 population. The intercensal increase or decrease between 1961 and 1966 may therefore reflect (i) population changes within the original 1961 boundaries, (ii) urban growth beyond the original boundaries, and (iii) the merging of other urban areas, one with another, or with the Metropolitan Area.

	APPENDIX A. Field Count Statements issued.	
	APPENDIX B. Outline Map : Hobart Statistical Division.	

This statement contains preliminary results of the Census of 30th June, 1966. The figures have been compiled by field personnel during the taking of the Census and are subject to amendment. The statement excludes particulars of full-blood Aborigines.

Similar information for all States and Territories of Australia is being published progressively. A list of 1966 Field Count Statements issued to date is contained in Appendix A to this statement.

A brief explanatory comment on the procedures used in the delimitation of metropolitan and other urban centres, capital city statistical divisions and statistical districts is contained herein. A detailed description of the procedures is contained in Field Count Statement No. 4.

EXPLANATORY NOTES ON THE DELIMITATION OF URBAN BOUNDARIES FOR STATISTICAL PURPOSES

For the purpose of presenting population and dwelling statistics obtained at the Census of 30th June, 1966, new concepts have been adopted for the delimitation of metropolitan and other urban centres. These are described in detail in Field Count Statement No. 4 - Population : Principal Urban Centres of Australia. Because of practical difficulties (notably lack of time to carry out an extensive examination of each area in order to re-design suitable collector's districts and the absence of suitable topographic boundaries around small towns) the new criteria have at present been uniformly applied only to urban centres within the capital city statistical divisions and the statistical districts, to other urban centres with a population of 30,000 or more and to a few smaller centres (Katoomba-Wentworth Falls, Lawson-Hazelbrook and urban centres in the Shires of Wyong and Gosford in New South Wales; Moe-Yallourn in Victoria; Cairns in Queensland and Kalgoorlie in Western Australia). It is proposed to extend the application of the new criteria to smaller centres in future Censuses.

Briefly the new concepts, which as explained above, have in general only been applied to the larger urban centres, are as follows:-

- (i) Population clusters of 1,000 or more persons having a minimum density of 500 persons per square mile shall be designated "Urban". This density shall be determined for each census collector's district (the smallest geographical area available). Additionally, some areas of lower population and/or density shall be classified as "Urban" on other grounds (e.g. holiday areas, industrial areas).
- (ii) Around each principal urban centre with a population of 75,000 or more two boundaries shall be drawn. The outer boundary shall circumscribe the area which is expected to be in close economic and social contact with the principal urban centre for the next two or three decades. These areas shall be designated STATISTICAL DIVISIONS (for State capital cities) or STATISTICAL DISTRICTS (for Canberra, Newcastle, Wollongong and Geelong).

The inner boundary shall delimit the principal urban centre itself. It shall be a moving boundary, which from Census to Census, as urbanisation proceeds, will move outwards to encompass peripheral development. For capital cities, the principal urban centre encompassed by the inner boundary shall be designated the "METROPOLITAN AREA".

- (iii) Urban centres of less than 75,000 population shall be described by name as "URBAN \_\_\_\_\_".

2. For urban centres not yet delimited by the new criteria, the following procedure was used:-

Urban centres have been intensively examined on the most recent aerial photographs available and the boundaries set as closely as possible to the periphery of the built-up area without regard to local government boundaries. The greater availability of recent aerial photographs in 1966 than in 1961 has enabled more meaningful boundaries to be delineated for many small urban centres.

3. Comparable information for the 1961 Census has been prepared, using the new concepts, although because 1961 collector's districts were not especially designed for this purpose, some estimations have had to be made.

4. Where, through growth or decline, an urban centre at one Census was non-urban at the other, figures for both Censuses have been shown where available for comparison, the non-urban figure being in brackets.

5. Throughout this statement the following abbreviations have been used:

(C) = City; (M) = Municipality; n.a. = Not available.

TABLE 2. - POPULATION : URBAN CENTRES, TASMANIA, 1961 AND 1966

**NOTE.** - For Metropolitan and other urban centres, which are delimited by moving boundaries (see Explanatory Notes), boundaries for 1961 have been redrawn according to the new criteria. The urban populations (partly estimated) within these boundaries are shown in this table for comparison with 1966 population. The intercensal increase or decrease between 1961 and 1966 may therefore reflect (i) population changes within the original 1961 boundaries, (ii) urban growth beyond the original boundaries, and (iii) the merging of other urban areas, one with another, or with the Metropolitan Area.

CENSUS OF THE COMMONWEALTH OF AUSTRALIA

30 JUNE 1966

FIELD COUNT STATEMENT NO. 11 - TASMANIA

CORRIGENDA

The enclosed four pages are issued as amendments to Field Count Statement No. 11 issued on 27 January 1967. They present 1966 Census information for local government areas and urban centres grouped according to the Statistical Divisions, which, since the previous Census, have been adopted in Tasmania for all statistical series.

2. No amendments have been made to the statistics of local government areas and urban centres themselves.

3. Amendments to the page references in tables 1 and 2 of the Statement will be required as a result of the enclosed revisions.

K. M. ARCHER  
COMMONWEALTH STATISTICIAN

COMMONWEALTH BUREAU OF CENSUS AND STATISTICS

CANBERRA, A.C.T.

14 FEBRUARY 1967

NOTE. - Inquiries concerning these statistics may be made in Canberra by telephoning 4-1971, extension 25 or, in each State capital, by telephoning the office of the Bureau of Census and Statistics.

TABLE 3. - POPULATION : LOCAL GOVERNMENT AREAS, TASMANIA, 1961 AND 1966

NOTE. - For Metropolitan and other urban centres, which are delimited by moving boundaries (see Explanatory Notes), boundaries for 1961 have been redrawn according to the new criteria. The urban populations (partly estimated) within these boundaries are shown in this table for comparison with 1966 population. The intercensal increase or decrease between 1961 and 1966 may therefore reflect (i) population changes within the original 1961 boundaries, (ii) urban growth beyond the original boundaries, and (iii) the merging of other urban areas, one with another, or with the Metropolitan Area.

(a) Indicates those local government areas where a boundary change occurred between the 1961 and 1966 Censuses. In many cases this boundary change resulted in a change in the population of the local government area. In order to eliminate population changes due to boundary changes and to provide a comparison with the 1966 population figures, the 1961 local government area populations shown in the table have been adjusted, where necessary, to the boundaries shown in 1966. (b) Non-urban in 1961.  
(c) Refers to persons not elsewhere included who, at midnight between 30th June, 1966 and 1st July, 1966 were on ships in Tasmanian waters, or were travelling on long-distance trains, motor coaches or aircraft.

**NOTE.** - Minus sign (-) denotes decrease in population.

**TABLE 4. - POPULATION : URBAN CENTRES OF OVER 2,000 POPULATION, TASMANIA,  
1961 AND 1966**

**NOTE.** - For Metropolitan and other urban centres, which are delimited by moving boundaries (see Explanatory Notes), boundaries for 1961 have been redrawn according to the new criteria. The urban populations (partly estimated) within these boundaries are shown in this table for comparison with 1966 population. The intercensal increase or decrease between 1961 and 1966 may therefore reflect (i) population changes within the original 1961 boundaries, (ii) urban growth beyond the original boundaries, and (iii) the merging of other urban areas, one with another, or with the Metropolitan Area.

FIELD COUNT STATEMENT NO. 12. - POPULATION : POLICE DISTRICTS,

NORTHERN TERRITORY

CONTENTS

	<u>Page</u>
Explanatory Notes .. .. .	2
Population : Police Districts (showing urban and rural components), Northern Territory, 1961 and 1966 .. .. .	4
APPENDIX A. Field Count Statements issued	
APPENDIX B. Outline Map : Urban Darwin	

---

This statement contains preliminary results of the Census of 30th June, 1966. The figures have been compiled by field personnel during the taking of the Census and are subject to amendment. The statement excludes particulars of full-blood Aborigines.

Similar information for the six States and for the Australian Capital Territory has been published previously.

A detailed description of the procedures used in the delimitation of metropolitan and other urban centres, statistical divisions and statistical districts is contained in Field Count Statement No. 4. A brief comment on the application of the procedures in the Northern Territory is contained herein.

EXPLANATORY NOTES ON THE DELIMITATION OF URBAN BOUNDARIES FOR STATISTICAL PURPOSES

For the purpose of presenting population and dwelling statistics obtained at the Census of 30th June, 1966, new concepts have been adopted for the delimitation of metropolitan and other urban centres. These are described in detail in Field Count Statement No. 4 - Population : Principal Urban Centres of Australia. Because of practical difficulties (notably lack of time to carry out an extensive examination of each area in order to re-design suitable collector's districts and the absence of suitable topographic boundaries around small towns) the new criteria have at present been uniformly applied only to urban centres within the State capital city statistical divisions and the statistical districts, to other urban centres with a population of 30,000 or more and to a few smaller centres (Katoomba-Wentworth Falls, Lawson-Hazelbrook and urban centres in the Shires of Wyong and Gosford in New South Wales; Moe-Yallourn in Victoria; Cairns in Queensland; Kalgoorlie in Western Australia and Darwin in the Northern Territory). It is proposed to extend the application of the new criteria to smaller centres in future Censuses.

2. Briefly the new concepts, which as explained above, have in general only been applied to the larger urban centres, are as follows:

- (i) Population clusters of 1,000 or more persons having a minimum density of 500 persons per square mile shall be designated "Urban". This density shall be determined for each census collector's district (the smallest geographical area available). Additionally, some areas of lower population and/or density shall be classified as "Urban" on other grounds (e.g. holiday areas, industrial areas).
- (ii) Around each principal urban centre with a population of 75,000 or more two boundaries shall be drawn. The outer boundary shall circumscribe the area which is expected to be in close economic and social contact with the principal urban centre for the next two or three decades. These areas shall be designated STATISTICAL DIVISIONS (for State capital cities) or STATISTICAL DISTRICTS (for Canberra, Newcastle, Wollongong and Geelong).  
The inner boundary shall delimit the principal urban centre itself. It shall be a moving boundary, which from Census to Census, as urbanisation proceeds, will move outwards to encompass peripheral development. For capital cities, the principal urban centre encompassed by the inner boundary shall be designated the "METROPOLITAN AREA".
- (iii) Urban centres of less than 75,000 population shall be described by name as "URBAN \_\_\_\_\_".

3. For urban centres not yet delimited by the new criteria, the following procedure was used:

Urban centres have been intensively examined on the most recent aerial photographs available and the boundaries set as closely as possible to the periphery of the built-up area without regard to local government boundaries. The greater availability of recent aerial photographs in 1966 than in 1961 has enabled more meaningful boundaries to be delineated for many small urban centres.

4. Comparable information for the 1961 Census has been prepared, using the new concepts, although because 1961 collector's districts were not especially designed for this purpose, some estimations have had to be made.

5. Where, through growth or decline, an urban centre at one Census was non-urban at the other, figures for both Censuses have been shown where available for comparison, the non-urban figure being in brackets.

Application of the Criteria in the Northern Territory

6. Application of the new criteria in the Northern Territory has been limited, for the 1966 Census, to Urban Darwin. The map in Appendix B of this statement shows the relationship of Urban Darwin as delimited under the new criteria, to the administrative areas of the City of Darwin and the proposed area of Greater Darwin. Separate data are shown in this statement for the Darwin Police District, for the

City of Darwin and for Urban Darwin. The distribution of the population of Urban Darwin within the Darwin Police District and the City of Darwin is shown.

7. Other urban centres have been intensively examined as outlined in paragraph 2 above and boundaries have been drawn around urban centres with a population of 1,000 persons or more. With regard to Tennant Creek the 1966 population, including full-blood Aborigines, is over 1,000 and therefore has been classified as "urban".

## POPULATION : POLICE DISTRICTS AND URBAN CENTRES, NORTHERN TERRITORY, 1961 AND 1966

**NOTE.** - For Metropolitan and other urban centres, which are delimited by moving boundaries (see Explanatory Notes), boundaries for 1961 have been redrawn according to the new criteria. The urban populations (partly estimated) within these boundaries are shown in this table for comparison with 1966 population. The intercensal increase or decrease between 1961 and 1966 may therefore reflect (i) population changes within the original 1961 boundaries, (ii) urban growth beyond the original boundaries, and (iii) the merging of other urban areas, one with another, or with the Metropolitan Area.
