# ACCUMULATION.

#### PRIVATE WEALTH.

The returns of the Probate Office provide a means whereby an weath of approximate estimate may be made of the private wealth of the the people. people. Of course the estimate must only be taken as a rough approximation, but it will be shown how far the method can be relied on, and what are its defects. The property left by persons who died during the five years, 1898 to 1902, is the basis whereby the property owned by the people living, as shown by the census of 1901, is estimated. A period of five years is taken, because the returns for a single year may be unduly inflated by the falling in of one or several very large estates. The average amount left by each adult who died during the period named is assumed to be the average amount owned by each adult alive at the census of 1901. The accumulated wealth of an individual is believed to be greater at a more advanced than at a less advanced age, and is probably greatest at death. Whatever advantage there may be is probably counterbalanced by some items which cannot be brought into the com-In Victoria, for instance, deposits in Savings Banks putation. up to  $\pounds_{100}$ , and life insurance policies up to  $\pounds_{200}$ , may be divided amongst those entitled without taking out probate or administration. Notwithstanding the provisions of the Probate and Administration Act, making chargeable with probate duty settlements and deeds of gift intended to evade payment of the duty, it is probable that some of these escape detection, and would also be unaccounted for in the calculation. The following is a statement on the basis explained, of the private wealth in several Australian States and New Zealand :----

PRIVATE WEALTH: AVERAGE DURING 1898 TO 1902 IN VICTORIA, New South Wales, South Australia, and New Zealand.

State of	Estates of De- ceased Persons.	Deaths	Average Amount	Adults at	Private Wealth.‡		
	Net Amount Sworn to.	of Adults.	lef <b>t</b> by each Adult.	Census, 1901.‡	Total.	Per Head.	
Victoria New South Wales South Australia Dominion of New Zealand	£ 25,633,200* 24,027,400 6,383,000* 11,329,700	53,213 46,710 12,591 24,645†	£ 482 514 507 459	651,143 700,480 186,327 437,208†	£ 313,851,000 360,047,000 94,468,000 200,678,000	£ 261 266 260 246†	

\* Estimated.

† Including Maoris.

t It is only at the time of a census that the adult population is accurately known in the different States, consequently it is only at such a period that the amount of private wealth can be reasonably estimated on the basis adopted.

4395.

 $\mathbf{L}$ 

It must be remembered that the wealth represented by this estimate is the private wealth "in" the State, and not that "of" the State. Probates, &c., of persons dying out of the State leaving property in the State are included in the figures quoted; but on the other hand, many Victorians have large interests, pastoral, mining, and other, in the other States. Taking the net incomes from property of absentees at the same date as the estimate, and capitalizing the same on a 4 per cent. basis, the income-returning property owned by outside investors in Victoria would appear to be about  $f_{.26,340,000}$ .

It has been found impossible to give a similar estimate of wealth for Queensland, Western Australia, and Tasmania, owing to the probate returns for those States being incomplete or apparently not accounting for anything like the whole of the property left by persons dying. In regard to New Zealand also it is probable that the wealth thereof has been somewhat under-estimated, as it is stated in the New Zealand Official Year-Book that certain estates upon which no duty is payable are not included in their returns. The Registrar-General of New Zealand estimates the average wealth during 1898-1902 on a somewhat similar basis to that above adopted, to be  $\pounds 227,326,000$  or  $\pounds 279$  per head, which is slightly higher than in the three Australian States for which estimates are given. At the 31st December, 1906, the estimate determined from the five years ended with that date was  $\pounds 304,654,000$ , or an average of  $\pounds 335$  per head, excluding Maoris; but it has been explained that some exceptionally valuable estates came into the probate accounts during 1906.

Diffusion of wealth. The diffusion of wealth appears to be tar wider in Victoria and South Australia than in New South Wales or New Zealand, according to the proportion of adults who die leaving property in respect of which probate or administration is taken out. For the reason previously mentioned, the comparison must be restricted to these three States and New Zealand. The following are the number of persons who died leaving property, as shown by the probate returns, the number of adult deaths, and the proportion of the former to the latter during the five years, 1898-1902:—

DIFFUSION OF WEALTH IN SEVERAL AUSTRALIAN STATES AND NEW ZEALAND, 1898-1902.

		Estates Proved.			
	Deaths of Adults.	Numbe <b>r</b> .	Number per 1,000 Deaths of Adults.		
Victoria	53,213	19,014	357		
New South Wales	46,710	12,627	269		
South Australia	12,591	4.422	351		
New Zealand	24,645	6,855	278		

It is thus shown that more than one-third of the adults who died in Victoria and South Australia during the five years, 1898-1902, was possessed of accumulated property in respect of which it was found necessary to obtain probate or letters of administration. An allowance should be made for the number of probates sealed of persons dying out of the State; but it is estimated that 5 per cent. would cover this.

Estimates of private wealth in various countries have been pub-Private lished by Mulhall, from which the following table has been taken. wealth in The figures relate to the year 1895, and no later information is countries. available.

INCOME PER HEAD OF POPULATION.

It will be seen from these figures that although the accumulated wealth per head was 44 per cent. more in the United Kingdom than in Canada, and 50 per cent. more than in Australasia, yet the average income was greater in the latter countries by 19 per cent. and  $9\frac{1}{2}$  per cent. respectively than in the United Kingdom These results are perfectly consistent when comparing old and new communities—the older community showing a greater accumulated wealth, whilst the newer—for obvious reasons—show a greater income per head.

The property left in Victoria by deceased persons has, for the first time, been tabulated according to age at death. In this tabulation for 1908, care has been taken to ascertain the net as well as the gross value of such property. By dealing similarly with the records of the next three or four years, it is anticipated that a fairly accurate estimate will be obtained of the average property left by persons dying at specified ages during these years. It is proposed to apply this average to the numbers living at each age as disclosed at the census in 1911, and it is hoped that by this means it will be possible to obtain a reliable estimate of the private wealth of the people. The accompanying table shows, in various age groups, the number and value of estates of deceased persons of either sex in connexion with which probate or letters of administration were granted during 1908, also the proportions borne by such values to the number of estates and total deaths, and the amount of duty collected on the estates.

In addition to providing data for estimating the wealth of the community, the figures in this table disclose some interesting facts. The resident adults who left property at death in 1908 numbered 2,614 males, or 41 per cent. of the deaths over the age of 21 years, and 1,429 females, or 29 per cent. of adult female deaths. The average value of property left by males is about two and a half times that left by females, and the statement previously made that the accumulated wealth of an individual is greatest at advanced ages is proved by the figures up to age 90. It appears that the average wealth, both of those leaving property and of all deceased persons,

Property left by deceased persons. reaches its maximum in the age group 80 to 90. In the case of females, the ratio of estates to deceased persons is highest for the age group 60 to 70 (37 per cent.), while the ratio for males at each age group between 50 and 90 is practically uniform at about 44 per cent., and is higher than that for other periods of life. The precaution of making a will is adopted by a larger proportion of males than of females, and in the case of males by a steadily increasing proportion as age advances.

RATEABLE PROPERTY: TOTAL AND GROUND VALUES.

Rateable property. mi

The whole of Victoria, with the exception of about 650 square miles—600 in the county of Wonnangatta and the whole of French Island—or  $\frac{3}{4}$  per cent. of the area of the State, being divided into municipalities for the purposes of local government, the value of real property, based on the municipal valuations, can be given with some degree of accuracy. Returns are obtained annually from each city, town, borough, and shire; and the following figures show the net annual rateable value and the capital value estimated by the municipalities over a series of years:—

RATEABLE PROPERTY: ANNUAL AND CAPITAL VALUES, 1880 TO 1909.

It will be observed from the table that there has been a steady increase each year since 1899 in the annual value of rateable property, as estimated by the municipalities. The capital values given are not to be relied upon for purposes of accurate comparison. The great bulk of the municipalities capitalize the

net annual value on a 5 per cent. basis; but about 28 per cent. of them assume the capital value to be much less in proportion to the annual value, some estimating 19, 16. 15, 12, 10, down to as low as 8 years' purchase, whilst in one case 7 years' purchase is given as the capital value. Twenty years' purchase is adopted by thirteen of the metropolitan municipalities, one adopting 17, one 13 years', two 15 years', and four 12 years'; whilst of thirty-nine country towns, twenty adopt from 7 to 12 years' purchase as the basis, one returning figures showing 14 years', five 15 years', one 16 years', one 17 years', and eleven 20 years' purchase as the capital value. Of the 146 shires, 124 adopt 20 years' purchase in estimating the capital value, the others adopting from 19 to 8 years'.

The following is an estimate for the last six years of the capital Landed value of land with and without improvements, the latter of which is capital and commonly called the unimproved value, but should more correctly ground values. be termed the ground value :---

# Victorian Year-Book, 1908-9.

Improvements are estimated at one-half in the case of urban and one-third in the case of rural properties, which are about the proportions that are found to prevail in New Zealand, according to the valuations of the Valuer-General, revised to 1908. If the Victorian estimate were based upon the New Zealand proportion, without distinguishing urban and rural, the ground value in 1908-9 would be about  $\pounds_{154,500,000}$ , which is approximate to the These proportions have also been checked by an above estimate. examination of the census returns, which give the number of rooms in each house, and the materials of which same were built. In Melbourne city an average of  $\pounds$ 100, and in suburbs and country towns £70 per room for brick, &c., houses was allowed; whilst in urban districts £45 per room, and in rural £40 per room, was allowed for wooden houses. On this system the above estimates were verified as being remarkably close, allowing for other improvements, besides houses, in rural districts.

### ROYAL MINT.

Royal Mint returns. The Melbourne branch of the Royal Mint was established in 1872, the date of opening being the 12th June. In the following table particulars are given, for the period 1872 to 1904 and for each of the last four years, showing the quantity of gold received at the Mint, where the same was raised, and its coinage value; also gold coin and bullion issued during the same periods :---

# ROYAL MINT RETURNS, 1872 TO 1908.

Since the opening of the Mint 31,885,228 ounces of gold have been received thereat, the coinage value, at  $\pounds_3$  17s. 10<sup>1</sup>/<sub>2</sub>d. per ounce standard, being £125,642,834, thus averaging £3 18s. 10d. per ounce gross. Of the total quantity of gold received at the Mint 23,424,220 ounces were raised in Victoria, 3,254,414 ounces in New Zealand, and 2,837,332 ounces in Western Australia. The average value of Victorian gold received at the Mint during the year 1908 was £3 195. 2d. per ounce gross, £3 195. 1d. being the value of the gold and 1d. the value of the silver contained therein. The output of the Mint since its establishment comprises 115,227,568 sovereigns, 1,581,759 half-sovereigns, and 2,315,580 ounces of gold bullion; the total value of coin and bullion being  $\pounds_{125,642,126}$ .

Since the establishment of the Melbourne Mint, the gold coin Interchange exported from Victoria, less that imported, has amounted to £98,084,154, or less by £17,934,293 than the total gold coin issued from the Mint. The following particulars are given of the value of gold and silver coin and bullion imported and exported during each of the last five years :----

Imports of-		1904.	1:05.	1906.	1907.	1908.
Gold Coin ,, Bullion Silver Coin ,, Bullion	••• ••• •••	£ 79,100 896,528 5,427 1,356	£ 26,500 894,237 17,998 676	£ 100,900 818,007 36,403 968	£ 124,600 714,985 123,925 113,756	£ 258,086 661,989 50,825 75,339

INTERCHANGE OF COIN AND BULLION, 1904 TO 1908.

The imports and exports of gold and silver display considerable The net exports of gold coin and bullion in 1906 fluctuations. amounted to £3,991,270, exceeding the value of the total production of gold in Victoria during the same year by £710,792; in 1904 and 1908 also the net exports exceeded the production, but in 1907 the production was 62 per cent. more than, and in 1905 three times, the net exports. The Victorian production of gold for 1908 was valued at £2,849,838.

of coin and bullion.

### BANKING.

On 31st December, 1908, there were eleven banks of issue in Victoria, possessing 614 branches or agencies, being an increase of 6 on the number of branches for the previous year. The financial position of these banks, on 31st December in each of the last five years, is shown by the following return:—

In Victoria.	1904.	1905.	1906.	1907.	1908.

VICTORIAN BANK RETURNS, 1904 TO 1908.

\* Including perpetual inscribed stocks which, in 1908, amounted to  $\pounds$ 1,003,277.----† Excluding  $\pounds$ 1,000,000 guaranteed by the Government of New Zealand, but which was included prior to 1906.-----‡ Half-yearly dividend in the case of nine banks.

Although the Victorian liabilities of the banks, at the close of the year 1908, show a decrease when compared with 1907, yet they have increased to the extent of  $\pounds 5,055,721$  since 1904. During the same interval the Victorian assets have increased by  $\pounds 5,285,407$ . In the course of the same period (1904-8) there have been considerable fluctuations in the excess of assets over liabilities, such excess being in 1904  $\pounds 5,374,249$ , in 1906  $\pounds 2,071,792$ , and in 1908  $\pounds 5,603,935$ . It must be borne in mind that the figures represent only the assets and liabilities *within* the State, of which sworn returns are rendered to the Government quarterly as required by law.

Finances of banks.

An indication of the recovery in banking business is revealed by the annual increase in dividends paid and reserved profits. Compared with 1904, the average rate of dividend had increased in 1908 by 22 per cent., and the amount of reserved profits by 37 per cent.

The amount of Government deposits with banks in Victoria dur- Government deposits in banks. ing each of the last fifteen years was as follows :---

There are twenty-two banks in Australasia, many of which do Banks in business in several States. Eleven do business in Victoria and and New Queensland, thirteen in New South Wales, seven in South Australia, six in Western Australia, and five in Tasmania and New Zealand. The amounts of deposits, advances, notes in circulation, and coin and bullion for the quarter ended 31st December, 1908, are as follows :----

AUSTRALASIAN BANKING BUSINESS, 31ST DECEMBER, 1908.

State, &c.		Deposits.*	Advances, &c.	Notes in Circulation.	Coin and Bullion.
		£	£	£	£
Victoria		35,631,716	33,711,188	841,604	7,310,729

\* Excluding perpetual inscribed stocks, which amount to £1,003,277 in Victoria, £649,987 in New South Wales, £78,828 in Queensland, and £313,272, in South Australia.

These figures have been taken from the Australasian Insurance and Banking Record. In Queensland Treasury notes have taken the place of bank notes. Except in Western Australia, and New Zealand deposits exceed advances outstanding.

Zealand.

As compared with the previous year, deposits have decreased by  $\pounds 2,360,125$  in the whole of Australasia, decreases occurring in Victoria  $\pounds 1,630,746$ , Western Australia  $\pounds 233,180$ , Tasmania  $\pounds 30,498$ , and New Zealand  $\pounds 2,423,991$ , but increases in New South Wales  $\pounds 1,199,942$ , Queensland  $\pounds 320,743$ , and South Australia  $\pounds 437,605$ . Advances, compared with the previous year, show an increase in Australia of  $\pounds 3,498,229$ , each State showing an increase, which, in the case of New South Wales, amounted to  $\pounds 1,991,367$ . In New Zealand the advances of 1908 exceed those of the previous year by  $\pounds 1,272,980$ . Notes in circulation have decreased by  $\pounds 56,027$  in Australia; in New Zealand there has been also a decrease of  $\pounds 34,636$ . Coin and bullion decreased by  $\pounds 993,598$  in Australia, and by  $\pounds 398,811$  in New Zealand.

Melbourne Clearing House. The following table shows the particulars respecting the clearances through the Melbourne Clearing House for the twelve years, 1897-1908:---

Year.		Clearances.	Payments in	Average Weekly	
I car.	Notes.	Cheques, Bills, &c.	Total.	Coin.	(learances.

1908	11,211,842	210,141,833	221,353.675	26,226,196	4,256,801

MELBOURNE CLEARING HOUSE-TRANSACTIONS, 1897-1908.

From this table it is seen that there has been a large increase in the transactions of the Clearing House since 1897. Compared with that year, the weekly average for 1908 shows an increase of 54 per cent.

Savings Banks. The two classes of Savings Banks which formerly existed in Victoria, viz., the Post Office and the Trustees, were, in 1897, merged into one institution controlled by the Savings Banks Commissioners, and guaranteed by the Government. The interest allowed to depositors at 30th June, 1908, was at the rate of 3 per cent. on sums up to  $\pounds_{100}$ ; and  $2\frac{1}{2}$  per cent. on sums over  $\pounds_{100}$  up to  $\pounds_{250}$ ; but

no interest was allowed on any excess over  $\pounds_{250}$ . On 1st January, 1909, the rate of interest was increased to  $3\frac{1}{4}$  per cent. on amounts up to  $\pounds_{100}$  and to 3 per cent. on amounts between  $\pounds_{100}$  and  $\pounds_{250}$ . The following are the particulars of depositors and deposits for a number of years :---

SAVINGS BANKS: DEPOSITORS AND DEPOSITS, 1875 TO 1908.

		Number of 1	Depositors.	Amount remaining on Deposit.			
On 30th June	•	Total.	Per 1,000 of Population.	Total.	Average to each Depositor.		
				£	£sd.		
1875 .		65,837	81	1,469,849	22 6 6		
1880		92,115	108	1,661,409	18 0 9		
1885		170.014	174	3.337.018	19 12 7		
1890		281,509	252	5,262,105	18 13 10		
1895		338,480	286	7,316,129	21 12 3		
1900		375,070	314	9,110,793	24 5 9		
1901		393,026	327	9,662,006	24 11 8

1903		418,511	347	10.341.857	24 14 3		
1904		432,867	358	10,582,808	24 9 0		
1905		447,382	369	10,896,741	24 7 2		
1906		466,752	380	11,764,179	25 4 1		
1907		491,318	394	12,792,590	26 0 0		
1908		511,581	404	13,428,676	26 5 9		

The best evidence of the growing habit of thrift, as well as of the wide diffusion of wealth amongst the middle and poorer classes in Victoria, is contained in the Savings Banks returns, the number of depositors in proportion to population, having increased by 29 per cent. since 1900, and by 60 per cent. since 1890. On 30th June, 1908, more than two persons out of every five in the State (including children and infants, who themselves number more than one-third of the population) were depositors with a credit balance, on the average, of over £26. Of the amount on deposit in 1908, 35 per cent. belonged to depositors with accounts up to £100 each, 40 per cent. with accounts over £100 and up to £250, and 25 per cent. with accounts over £250. The aggregate of the excess over £250 the money on deposit for which interest is not allowed—was, on 30th June, 1908, £692,802.

It should, however, be pointed out that about 141,000 of the accounts remaining open were small sums under  $\mathcal{L}_{I}$  left by depositors who had ceased to operate their accounts, and the total amount at their credit was about  $\mathcal{L}_{20,400}$ . If these figures be withdrawn from those in the preceding table it would appear that there were 370,581 active accounts with  $\mathcal{L}_{I3,408,276}$  at credit — an average of  $\mathcal{L}_{36}$  3s. 7d. per depositor; and the number of depositors per thousand of the population becomes reduced to 293.

The next statement shows the assets and liabilities of savings banks in Victoria, the former indicating the manner in which deposits are invested or held:—

Savings Banks loans to farmers.

For the purpose of making advances to farmers an advance department was established in 1896 by the Act amalgamating the Post Office and Commissioners' Savings Banks. Funds for this purpose are raised by sale of mortgage bonds for  $\pounds_{25}$  each, and by debentures in denominations of  $\pounds_{100}$  and over, redeemable at fixed dates not more than fifteen years from date of issue. The total issues up to 30th June, 1908, amounted to £2,304,622, of which mortgage bonds for £,873,750 have been redeemed or repurchased, leaving £1,430,872 outstanding; of this amount  $\pounds651,882$  is held by the public, and the balance by the Commissioners themselves out of Savings Banks The amount advanced during the year 1907-8 was funds. £143,180, making, with the amounts previously advanced, a total of £2,254,488, of which £1,029,057 has been repaid, leaving the amount outstanding on 30th June, 1908, at £1,225,431, representing 3,030 loans, which thus averaged  $\pounds$ ,404. As a measure of the

safety with which the advance department has been conducted, it may be mentioned that the instalments of principal in arrear amounted on 30th June, 1908, to only £136, and the interest in arrear to £,210.

Australasia.

The number of depositors in proportion to population in Victoria is greater than in the other States (excepting South Australia) and New Zealand, although the average amount standing to the credit of each depositor is not so large. It has already been shown that the diffusion of wealth, as evidenced by the proportion of persons dying and leaving property, is wider in Victoria than elsewhere, and this is corroborated by the above figures. More than one-third of the population of Victoria, South Australia, and New Zealand are depositors, more than one-fourth in New South Wales, Western Australia, and Tasmania, and more than one-sixth in Queensland.

Savings Banks in various countries.

The following table shows the number and proportion to population of depositors, amount of deposits, and average to each depositor in Savings Banks in Great Britain, other European countries, and the United States :---

SAVINGS BANKS IN GREA	T BRITAIN AND	FOREIGN COUNTRIES.

# World's Coinage during the Year 1907.

(a) Financial Year, 1906-7
(b) Inclusive of coins struck at Calcutta and Bombay (during the Financial Year, 1906-7) and at the "Mint," Birmingham.

#### Victorian Year-Book, 1908–9.

#### PRICES, ETC., OF GOVERNMENT STOCKS.

Selecting one of the leading 4 per cent. and one of the leading tive prices  $\frac{1}{2}$  per cent. Victorian stocks, and finding the highest prices quoted in 1885 and each subsequent year, an adequate idea may be formed of the general course of prices in London during the last twentyfour years. These are shown in the following table, together with the equivalent returns to the investor.

### PRICES OF VICTORIAN REPRESENTATIVE STOCKS IN LONDON, 1885 TO 1908.

MEAN PRICES OF AUSTRALASIAN STOCKS IN LONDON, 1894 TO 1908.

The earlier years in this table are marked by a series of rapid rises in the prices of all the stocks quoted, but in 1898 prices began to recede and this process continued until 1904. In 1905 they hardened, and they were generally sustained in 1906, but in 1907 a fall took place on which a partial recovery was made in 1908. The prices in 1908 are on about the same level as those of 1894, in the case of the four per cent. stock, and are slightly higher in the case of the three-and-a-half per cents. These figures, however, as they stand, do not afford an indication of the real values of the stocks concerned; the table simply shows the mean between the highest and lowest prices for the year.

#### Victorian Year-Book, 1908–9.

Investors' return from Australasian stocks.

The best method of comparing the value of stocks over a series of years, or of comparing the different values placed upon the stocks of different States by investors, is to show the actual or effective rate of interest the investor is satisfied with, as evidenced by the mean between the highest and lowest quotations during the year. This is done in the following table, allowance being made for an average of three months' accrued interest, which is deducted from the market price before the computation is made. In computing the yield to the investor, the gain or loss incurred by redemption at par at maturity is taken into account:—

INVESTORS' INTEREST RETURN FROM AUSTRALASIAN STOCKS, 1894, 1897, 1900, 1902, AND 1904 TO 1908.

Nore.—Where the date of redemption is optional, the earliest date has been adopted for the calculation.

Taking the  $3\frac{1}{2}$  per cents. as being the representative stocks, it appears that, almost without exception, those of New South Wales, South Australia, and New Zealand, vield least to the investor, being practically alike, and returning of late years little more than the nominal rate of interest, and that those of Western Australia yield most, the net return to the investor being  $4\frac{1}{8}$  per cent. in 1907, and just under 4 per cent. in 1908.

# 218

The following is a statement of the interest return to the investor Representa-tive British in the principal issues of Colonial stocks and in British Consols, and Coloas indicated by the mean between the highest and lowest market in London. prices quoted during the years 1900 and 1908:---

\* Consols carried  $2\frac{3}{4}$  per cent. interest until 1903; but the rate of interest to a permanent investor in 1900 is only reckoned at  $2\frac{1}{2}$ , which is now the permanent rate.

It would appear from this table as if the Australian and other Colonial 3 per cent. stocks were not viewed with approbation by the British investor; but as most of these stocks are payable at the option of the Governments between extremes of 20 or 25 years, and the

219

computation of returns to investors has been made on the assumption of redemption of the loans at the earliest dates, such returns are higher than the probabilities warrant. Since the market rate of interest is about  $3\frac{1}{2}$  per cent., it is not at all likely that the Governments will endeavour to redeem at the earliest date, unless under the unlikely condition of a fall in interest below 3 per cent. Therefore, in the case of these stocks, it would be a fairer comparison to calculate the return to the investor on the assumption of redemption at the latest optional date. Under these circumstances, the interest realized by the purchasers of the various 3 per cent. Australian and other Colonial stocks in 1900 and 1908 would be as follows :—

			Return to Investor.—Per cent.					
Stocks.		1900.	1908.	Increase.				
South Australia, 1916 or later Victoria, 1929-49 Queensland, 1922-47 Western Australia, 1916-36 British Guiana, 1923-45 Trinidad, 1922-44 Natal, 1929-49		$\begin{array}{cccccccccccccccccccccccccccccccccccc$	$\begin{array}{c} \pounds \ s. \ d. \\ 3 \ 10 \ 5 \\ 3 \ 11 \ 8 \\ 3 \ 13 \ 6 \\ 3 \ 15 \ 6 \\ 3 \ 16 \ 5 \\ 3 \ 17 \ 5 \\ 3 \ 17 \ 5 \\ 3 \ 17 \ 5 \end{array}$	$\begin{array}{cccccccccccccccccccccccccccccccccccc$				

It is thus seen, on comparison with the yields of the  $3\frac{1}{2}$  and 4 per cents. shown in the previous tables, that there was no real preference exhibited in favour of any particular stock in 1908.

Prices of stock and debentures in Melbourne. The amount of Victorian Government stock and debentures, under certain loans payable in Melbourne, outstanding on 30th June, the price in January, and the return to the investor per cent. for recent years, are as follows. The market prices are taken from the Australasian Insurance and Banking Record:---

PRICES OF STOCK AND DEBENTURES IN MELBOURNE : 1899 TO 1909.

PRICES OF STOCK AND DEBENTURES IN MELBOURNE: 1899 TO 1909-

The prices quoted in this table do not include any allowance for accrued interest, the practice on the Melbourne Stock Exchange differing from that on the London Exchange, where accrued interest is included in prices quoted.

In computing the returns to investors, the 3 per cent. stock has been regarded as interminable, since it is at the option of the Government whether it be redeemed in 1917, or at any time thereafter; and, as before explained, with reference to other Colonial stock, it is extremely unlikely that redemption will take place at the earliest date. For the 3 per cent. debentures it has been assumed that redemption will be made at the latest optional date, viz., 1930. For the 4 per cent. debentures the earliest date has been assumed, since the nominal interest is in excess of the market rate. For the years 1901, 1902, and 1903, the 4 per cent. debentures gave the highest vield per cent., but since then the investor in the 3 per cent. debentures has had the highest return each year. In 1909 the 4 per cent. debentures gave a lower return to the investor than either the 3 per cent. stock or 3 per cent. debentures. It appears that the vields realized by the investor in Victoria from 3 per cent. stock and 4 per cent. debentures in January, 1909, were considerably lower than those generally realized by the investor in Colonial stocks on the British market during 1908.

# INSURANCE.

There are eighteen companies transacting life assurance business in Victoria. Six of these companies have their head offices in Victoria, four in New South Wales, four in America, and four in the United Kingdom. The returns are not required to be lodged with the Registrar-General before the end of September, consequently returns for 1908 have been obtained direct from all the companies except one, for which the figures of the preceding year have been given. This does not affect the comparison of 1908 with previous years, as the number of policies of this office was inconsiderable in comparison with the total. The following are the number and amount of policies in force in Victoria in companies whose head offices are inside, and in those whose head offices are outside Victoria during the years 1900 to 1908; the figures include industrial business amounting to  $\pounds_{2,2,71,520}$  in 1908:—

1908	••	10,836,282	20,674,898	344,859	2,201,808	34,057,847

The policies dealt with in the preceding table include ordinary life assurance, endowment assurance, and pure endowment. The companies are required to distinguish between assurance and endowment in their returns to the Registrar-General; but it would appear that some have included endowment assurance as well as endowment under the latter head, thus rendering impossible a comparison between the three classes of policy referred to above.

Life assur-

The increase in the number and amount of policies since 1900 has been most satisfactory—an increase of 47.5 per cent. in the number of policies, and 29.4 per cent. in the amount. It will be seen that 97.3 per cent. of the policies, and 92.5 per cent. of the amount assured, are in Australian offices, of which there are ten doing business in Victoria.

The percentage of policies held in Australian and foreign offices Life policies. in Victoria in 1908, and the percentage increase or decrease since business, 1900, are as follows :---

Growth of Australián and foreign companies.

LIFE AS	SURANCE POLIC	ies: Percent <i>i</i>	ige and Growti	H OF VICTORIAN
	BUSINESS IN .	AUSTRALIAN AN	ND FOREIGN OF	FICES.

Companies with Head		Percentage	in 1908 of	Increase per cent. in 1908 as compared with 1900.

United Kingdom	••	$\cdot_3$	1.0	-37.6*	- 37 · 8*	
America	••.	2.4	6.2	8.5	- 14 • 5*	
Total		100.0	100.0	47.5	29.4	

\* The minus sign denotes a decrease.

Thus, while there has been a very large increase in the business of the Australian offices, there has been a large falling off in the business of the British companies, which, however, have for many years ceased to accept new business. There has also been a marked decline in the amounts assured with American companies, of which only one is now competing for new business. Compared with 1905, when these companies attained their maximum business, there has been a falling off of 31.9 per cent. in the number of policies, and of 31.5 in the amount, whilst the Australian offices exhibit increases of 14.1 and 12.8 per cent. respectively in the same interval.

The business transacted by the different offices comprise many Classificavarieties of assurance, but these may be grouped into three large tion of classes-(1) simple assurance payable only at death, which may be policies. termed ordinary assurance; (2) endowment assurance, payable at the end of a specified term or at previous death; (3) endowments payable only should a person named survive a specified term. endeavour has been made to obtain direct from each office the business under each of these classes. In the cases of two of the offices -one, an American, and the other a New South Wales office-the separation between ordinary assurance and endowment assurance could not be effected. The following table shows the available information on the subject-distinguishing between ordinary and

assurance

industrial business, and also between those offices whose headquarters are situated respectively as shown in previous tables :----

LIFE ASSURANCE POLICIES IN FORCE IN VICTORIA, 1908.

An analysis of this table shows that 56.7 per cent. of the policies and 93.3 per cent. of the amount assured in Victoria belong to the "ordinary" business, and 43.3 per cent. of the policies and 6.7 per cent. of the amount belong to the "industrial" business. The average amount of policy in the former category is £,220, whilst-calculated from the returns of those societies which distinguish between ordinary assurance and endowment assurancethe average amount of the ordinary assurance policy is  $\pm$ , 329, that of the endowment assurance policy  $\pounds_{174}$ , and that of the pure endowment f.95. In these companies the total amounts of the policies in the two forms of assurance were very similar, viz., £,15,419,364 for ordinary assurance, and £,14,971,124 for endowment assurance, the figures for pure endowment being £850,275. In the industrial branch of the business the average amount of policy is £20.6, and there is not much variation in the average policies of the three classes, viz., ordinary assurance  $\pounds$ , 19.6. assurance  $\pounds$ , 22.4, and pure endowment  $\pounds$ , 17.7; endowment the total amounts of the several policies being  $\frac{1}{2,807,248}$ . £1,133,610 and £330,662 respectively. Taking these figures in

conjunction with those of the ordinary business (with the restriction before mentioned) it would seem that there is a preference slightly in favour of ordinary assurance. But a better test, perhaps, of popularity would be furnished by the number of policies in the respective classes. In the ordinary business there are 46,730 simple assurance, and 86,242 endowment assurance policies, and in the industrial 41,067 and 50,536 policies respectively. Judged by these figures, endowment assurance must be regarded as the popular form.

The following are the number and amount of annuity policies Annuity in force in Victoria at the end of each of the last nine years, distinguishing between those in force in companies whose head offices are inside, and those whose head offices are outside Victoria :---

	F		lead Offic	es in Victoria.		tices outside et <b>or</b> ia.	Total.

ANNUITY POLICIES IN FORCE IN VICTORIA, 1900 TO 1908.

The annuities at the close of 1908 exceed those at the close of 1900 by 89 per cent. in number and 42 per cent. in amount.

Of the  $3^{24}$  annuities held in 1908 in companies whose head offices were outside Victoria,  $23^{22}$  for  $\pounds 9,907$  per annum were in New South Wales offices, 2 for  $\pounds 347$  in English offices, and 90 for  $\pounds 3,909$  in American offices. It is noteworthy that there was only one annuity in the industrial branch, and that for only  $\pounds 6$  per annum.

### Victorian Year-Book, 1908-9.

Insurance other than Life.

The following table shows the transactions of insurance companies doing other than life business and operating in Victoria in 1904, 1905, 1906, and 1907:—

INSURANCE-OTHER THAN LIFE: 1904 TO 1907.

Nore.-Premiums exclude Re-insurances and Returns. Losses also exclude Re-insurances.

The total amount at risk is not available, but it is obvious, from the extent of the premiums, that the amount covered must be very considerable. In 1907 the fire premiums received amounted to £496,667, and the losses to  $f_{227,871}$ ; the marine premiums and losses to £136,534 and £109,474 respectively; the accident premiums and losses to £57,190 and £20,343, the guarantee premiums and losses to £11,047 and £2,129, the live stock premiums and losses to £16,109 and £9,102, the burglary premiums and losses to  $\pounds$ ,2,563 and  $\pounds$ 1,027, and the plate glass premiums and losses to £5,428 and £1,778 respectively. The total amount of premiums on all these classes of insurance for the four years 1904 to 1907 was  $\pounds_{2,612,324}$ , and the losses  $\pounds_{1,167,750}$ , or 44 per cent. of the premiums. It will be observed that there has been a large and steady increase in accident and guarantee business during the four years dealt with, while the premium income for 1907 in connexion with live stock, burglary, and plate glass insurance was more than three times the amount for the year 1904.

### 226

#### BUILDING SOCIETIES.

Building societies in Victoria date from an early period in the Building Societies. history of the State, and up to 1892 their business was extensive. Since then it has been comparatively small, although the figures of recent years show that an improvement has taken place in building society business. The following table gives particulars of the principal items of business during the last five years :---

*	1904.	1905.	1906.	1907.	1908.
Number of societies	$32 \\ 6,970 \\ 6,275$	28	31	30	29

#### BUILDING SOCIETIES: 1904 TO 1908.

A glance at the above figures will show the substantial improvement in building society business between 1904 and 1908. Although, compared with 1904, there were three societies less in 1908, vet there has been an advance of 107 per cent. in the advances made and of 43 per cent. in the repayments, whilst the liabilities to depositors have been reduced by about 8 per cent. It will also be noticed that this form of liability has been continuously reduced since 1904. Under ordinary circumstances a reduction of deposits might be taken as an indication of want of confidence in the societies, but in the present instance it means the release of temporarily locked-up deposits. The total assets of the building societies on 31st December, 1908, amounted to  $\pounds_{2,505,249}$ , of which  $\pounds_{1,363,060}$  consisted of loans on mortgage, and £1,088,922 of properties in possession or surrendered. Of the total liabilities, viz., £2,361,351, £1,249,888 was due to shareholders, £292,090 to debenture holders, and £,665,295 to depositors. The total reserved funds at the same date amounted to  $\pounds$ ,218,806.

#### MORTGAGES, LIENS, ETC.

A statement of the number and amount of registered mortgages Land mortand releases of land in each of the last five years is hereunder. gages and releases. Generally, in about 13 per cent. of the mortgages the amount of the loan is not stated, so that the amounts appearing in the following table may be taken as understating the total by about that proportion. No account is taken of unregistered or equitable mortgages to banks

and individuals, as there is no public record of these dealings; nor are building society mortgages over land held under the *Transfer* of Land Act included, they being registered as absolute transfers. Besides releases registered as such, some mortgages are released or lapse in other ways, e.g., by a transfer from mortgagor to mortgagee, by sale by mortgagee, or by foreclosure.

LAND MORTGAGES AND RELEASES: 1904 TO 1908.

Stock mortgages, liens on wool and crops.

The number and amount of stock mortgages, liens on wool, and liens on crops registered during each of the last five years were as follow. Releases are not shown, as releases of liens are not required to be registered, the latter being removed from the register after the expiration of twelve months; and very few of the mortgagors of stock trouble to secure themselves by a registered release.

The large number of liens on crops in 1904, is due to the fact that 1,286 were liens to the Board of Land and Works, under the Seed Advances Act 1903. There were 1,095 such liens in 1905, 624 in 1906, 174 in 1907, and 208 in 1908.

Two forms of security are taken by lenders over personal chattels, Bills and viz., a bill of sale, and a contract of sale for letting and hiring. of sale. The former is a simple mortgage of the chattels, whilst the latter purports to be an absolute sale of the chattels to the lender, with an agreement by the lender to hire the goods back to the borrower at a certain rental, which takes the place of interest. The number and amounts of those filed in each of the last five years are as follows :---

Security.	·	1904.	1905.	1906.	1907.	1908.

BILLS AND CONTRACTS OF SALE: 1904 TO 1908.

Before filing a bill of sale, 14 days' notice of intention to file must be lodged with the Registrar-General, within which period any creditor may lodge a "caveat" to prevent the filing of the bill without the payment by the borrower of his claim. To circumvent this, the practice arose, in 1877, whereby the borrower purported to sell the chattels to the lender, who hired them back to the borrower, and this became the form of security more generally adopted until 1887, when a decision was given that if there were any tacit understanding that the transaction should be considered as a loan, the security would be void unless registered as a bill of sale. In consequence of this, the number of contracts of sale has gradually decreased, until in 1906 the bills of sale were more than twelve times their number, and the amount secured thirty-six times as great. In 1908, the number of bills was seven and a half times the number of contracts. and the amount secured thereby twenty-seven times as great.

The figures in the above table refer only to companies registered under Part I. of the *Companies Act* 1890, and are, therefore, exclusive of ordinary mining companies, of which 74 were registered during 1908 under Part II. of the Act. Insurance companies doing

life business only, as well as building societies, are also excluded. From the above figures, it may be ascertained that of the 1,102 new companies registered during the last fifteen years, 421, or 38 per cent., were industrial; 211, or 19 per cent., were connected with primary production; 168, or 15 per cent., with trade; 71, or 7 per cent., with finance; 51, or 5 per cent., with transport; whilst 180, or 16 per cent., were of a miscellaneous character, including newspapers, magazines, public halls, and various societies and associations. Those industrial companies, included under the term "others," are principally companies registered for the manufacture of a particular patented article, but include a number of companies formed for the manufacture of various commodities and for the treatment of natural products.

According to records in the Registrar-General's office, there were Number of 1,303 trading companies in 1908 actively engaged in the operations for companies, which they were formed, as against 1,337 in 1907, 1,305 in 1906, 1,131 in 1905, 1,115 in 1904, 1,143 in 1903, 1,073 in 1902, 1,074 in 1901, 989 in 1900, 953 in 1899, 924 in 1898, 781 in 1897, and 799 in 1896, prior to which year this information was not obtainable. In addition to the above there were 13 insurance companies doing life business only in 1908, and a large number of mining companies, but how many is not known.

The following table shows the particulars of the Registered Cooperative Societies for 1908:—

REGISTERED CO-OPERATIVE SOCIETIES, 1908.

4395.

М

As compared with 1907 there has been an increase of 8 in the number of societies, and 2,464 in the number of shareholders. The total liabilities have increased by  $\pounds 42,163 - \pounds 15,258$  of which is due to increased capital. The total assets have also increased by  $\pounds 42,724$ .

Of the thirty-five co-operative societies, fourteen were engaged in the purchase of farmers' requisites or the sale of farm and garden produce, ten as general distributors, two each in the manufacture of jams, &c., bread making, and meat supplying, and one each in supplying coachbuilders' materials, co-operative credit banking, fish selling, printing and publishing, and eucalyptus oil distilling.
