KEY POINTS

(a) Original

SHORT-TERM ARRIVALS

- There were an estimated 4.2 million visitor arrivals to Australia during 1998, a decrease of 4% compared to 1997. There were major declines in visitor arrivals from Southeast (17%) and Northeast (16%) Asia during 1998.
- The number of business and convention/conference visitors to Australia have increased almost five fold over the last two decades. (See Special Article on page 4.)

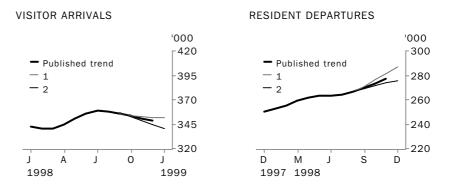

SHORT-TERM DEPARTURES

During the eleven months to November 1998 2.8 million Australian residents departed overseas, up by 8% compared to the corresponding period in 1997. Departures mainly to visit New Zealand and Indonesia, the two most popular destinations, increased by 17% and 13% respectively.

TREND REVISIONS	Each time new seasonally adjusted estimates become available, trend estimates of short-term arrivals and departures are revised (see paragraph 19 of the Explanatory Notes).							
	The examples in the graphs below show two illustrative scenarios and the consequent revisions to previous trend estimates of visitor arrivals and resident departures.							
	 The seasonally adjusted estimate for: January visitor arrivals is 2.84% higher than December December resident departures is 3.96% higher than November 							
	2 The seasonally adjusted estimate for:January visitor arrivals is 2.84% lower the							
	- Decomplete provident decomplete $2.0(0)$ leaves then Neverthere							

December resident departure is 3.96% lower than November

The percentage changes of 2.84% and 3.96% were chosen because they represent the average absolute monthly percentage changes between months for visitor arrivals and resident departures respectively over the last four years.

W. McLennan Australian Statistician

. . .

SHORT-TERM MOVEMENTS

VISITOR ARRIVALS	There were an estimated 450,600 short-term visitor arrivals to Australia during December 1998 bringing the total number of visitor arrivals for 1998 to 4,160,200, a decrease of 4% over the number of overseas visitors arriving during 1997 (4,317,900). The major source countries of visitor arrivals to Australia during 1998 were Japan (18% of all visitor arrivals), New Zealand (17%), the United Kingdom (11%), the United States of America (9%) and Singapore (6%). Visitor arrivals from United Kingdom and United States of America both increased by 14%, while New Zealand arrivals were up by 4%. Singapore was the only main source country from Asia to record an increase in arrivals with a 3% increase in 1998 over 1997. Japanese visitor arrivals were down 8% and visitors from Taiwan were down 2%. Of the top 10 source countries Malaysia and Indonesia had the largest declines of 22% and 42% respectively.
RESIDENT DEPARTURES	There were 256,500 short-term departures of Australian residents in November 1998, bringing the total for the eleven months to November 1998 to 2,842,900 an increase of 8% on the same period the previous year (2,632,000). The main destinations of Australian residents departing during January to November 1998 were New Zealand (15%), Indonesia (11%) the United Kingdom (10%), the United States of America (10%), and Hong Kong (5%).
	 During the eleven months to November 1998: 414,300 Australian residents mainly visited New Zealand, an increase of 17% compared to January to November 1997; 323,500 residents mainly visited Indonesia, an increase of 13%; 297,600 residents mainly visited the United Kingdom, a decrease of less than 1%; 289,300 residents mainly visited the United States of America, a decrease of 8%; and 129,500 residents mainly visited Hong Kong, a decrease of 6%.
MAIN REASON FOR JOURNEY	Over half (53%) of all short-term visitors to Australia during January to November 1998 stated on arrival that they had come here for a holiday (1,961,700). A further 19% stated that they were visiting friends/relatives (712,500), 11% were on business trips (403,700), while 4% (130,000) arrived for educational purposes and 3% (97,700) arrived for a convention or conference.
MAIN STATE OF STAY	Overseas visitors departing Australia between January and November 1998 stated that they had spent most of their time in either New South Wales (42%), Queensland (29%), Victoria (14%) or Western Australia (9%). Compared to the eleven months to November 1997, Victoria and South Australia were the only States to show an increase in the number of visitors, by 2% and 1% respectively. New South Wales and Tasmania experienced the largest declines (of 6% each) followed by Queensland (by 4%). (See Appendix 2 for Northern Territory data quality issues).

BUSINESS AND CONVENTION/CONFERENCE VISITORS

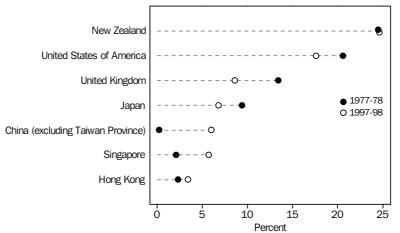

Business and convention/conference travellers form a small but regular proportion of all short-term visitor arrivals to Australia. This article examines trends throughout the last two decades and the characteristics of these visitors during the year 1997–98.

INCREASES OVER TIMEThe total number of overseas short-term visitors coming to Australia for business or
convention/conference1 reasons has increased almost five fold over the last two decades. In
1977–78 a total of 85,900 persons visited Australia for business reasons and 8,400 came to
attend a convention (15% and 1% respectively, of all short-term visitor arrivals). In 1987–88,
216,000 (11%) short-term visitors came for business reasons, while another 40,000 (2%)
visited to attend a convention/conference. In 1997–98 there were an estimated 446,200
(11%) business visitors and 99,900 (2%) convention/conference arrivals out of a total of
4,220,000 short term visitor arrivals.

The Asian currency crisis does not appear to have had an impact on the number of business visitor arrivals mainly because the main source countries for business arrivals are not Asian. Business arrivals in 1997–98 rose by 8% from 414,200 in 1996–97. However, there does appear to be some impact on convention/conference visitors with a decline of 13% over the same period. While not major source countries, Asian countries have contributed to the decline with Indonesia down by 48%, Hong Kong 29% and Singapore 17%. New Zealand which is a major source country has also declined by 12%. This is possibly due to the slowing of the New Zealand economy.

COUNTRY OF RESIDENCE

Over the past twenty years, New Zealand, the United States of America and the United Kingdom rank as Australia's main source countries for business and convention/conference travellers. In 1997–98, 25% of all business visitors came from New Zealand, 18% from the United States and 9% from the United Kingdom. The next largest countries for business travellers were Japan (7%), China (6%), and Singapore (6%). Despite the increasing numbers of business visitors from the main source countries, the proportion coming from these countries has declined, except for New Zealand which did not change. The proportion from China has increased from zero to 6% of all business visitors. BUSINESS ARRIVALS

 September 1994 marked the introduction of changes to the passenger cards and this represents a break in series for overseas arrival and departure statistics classified by 'purpose of journey'. Among other changes, the category 'convention' was changed to convention/conference'. This change does not appear to have had any significant effect on the number of visitors who select this category.

BUSINESS AND CONVENTION/CONFERENCE VISITORS

	Of convention/conference travellers, 20% were from New Zealand, 18% from the United States and 6% from the United Kingdom. The next largest groups came from Japan, Singapore and Korea with 4% each.
AGE	In 1997–98, the peak age-groups for both business and convention/conference visitors were 35–39 years (17% and 16% respectively) and 40–44 years (both 17%). These were followed by the age group 30–34 years (16%) for business visitors and the age group 45–49 years (15%) for convention/conference visitors.
SEX	Although the proportion of business arrivals who are female has almost doubled since 1977–78, business and convention/conference travellers are still more likely to be male. In 1977–78, 91% of business visitors and 75% of convention/conference visitors were male. By 1997–98, the proportion of male business visitors had declined to 83% and male convention/conference visitors had declined to 71%.
INTENDED DURATION OF STAY	Over the last twenty years, the length of business trips has shortended. In 1977–78, most business travellers intended to stay for less than one week (30%) or between one and two weeks (31%). By 1987–88, this had increased to 36% intending to stay less than one week and by 1997–98 close to half (47%). Of those business arrivals who intended to stay for less than one week, the greatest proportion (23%) stayed for five days, followed by 21% for three days. In comparison, the intended duration of stay for convention/conference arrivals changed little over the past twenty years with the largest proportion intending to stay for between one and two weeks (47% in 1977–78, 42% in 1987–88 and 44% in 1997–98).
	The distance between Australia and other source countries can affect visitors duration of stay in Australia. For example, visitors from the United Kingdom and Ireland are less likely to make short trips to Australia than New Zealand visitors. Almost three quarters (74%) of business visitors from New Zealand and 58% from both Japan and Singapore intended to stay for less than one week. In contrast, 36% of business visitors from the United States, and 31% from the United Kingdom intended to stay for less than one week. A similar pattern is evident for convention/conference arrivals. Almost two thirds (62%) of convention/conference arrivals from New Zealand and 49% from Singapore, intended to stay in Australia for less than one week. In comparison, only 17% of United Kingdom convention/conference arrivals and 24% of the United States convention/conference arrivals intended to stay for less than one week.
INTENDED STATE OF STAY	New South Wales was the most popular intended state of stay for short-term business and convention/conference arrivals. In 1997–98, more than half (52%) of business arrivals intended to stay in New South Wales. A further 22% intended to stay in Victoria and 13% intended to stay in Queensland. Of convention/conference arrivals, 45% intended to stay in New South Wales, 22% intended to stay in Queensland and 15% intended to stay in Victoria.

INTRODUCTION	1 This publication contains statistics of persons arriving in, and departing from, Australia, together with the major characteristics of travellers. More detailed statistics can be made available on request (see paragraph 21).
SOURCE OF THE STATISTICS	2 Persons arriving in, or departing from, Australia provide information in the form of incoming and outgoing passenger cards (see Appendix 1). Incoming persons also provide information in visa applications, apart from people travelling as Australian and New Zealand citizens. These and other information available to the Department of Immigration and Multicultural Affairs (DIMA) serve as a source for statistics of overseas arrivals and departures.
	3 As from July 1998, DIMA has revised incoming and outgoing passenger cards and associated procedures as well as computer systems. Following these changes, some questions on the passenger cards will no longer be compulsory and answers to these questions will no longer be checked by Customs officers. The question on marital status has been deleted. Data on marital status is derived from visa applications (only for certain visa classes) and is therefore not available for Australian or New Zealand citizens. The changes also affect the data for 'Previous country of residence' which is imputed for Australian and New Zealand citizens. For more information see the May 1998 issue of this publication.
	4 The preliminary estimates of visitor arrivals by country of residence (see Table 6, page 9) are based on data from DIMA's Travel and Immigration Processing System (TRIPS). The TRIPS system produces a limited range of data, including country of citizenship, which is used by ABS to produce preliminary estimates by country of usual residence. These preliminary estimates will be revised in the next issue of this publication, when final data is available. For more information see pages 3 and 4 of the June 1997 and the September 1998 issues of this publication.
SCOPE	5 The statistics in this publication relate to the number of movements of travellers rather than the number of travellers (i.e. multiple movements of individual persons during a given reference period are each counted separately). The statistics exclude the movements of operational air and ships' crew, of transit passengers who pass through Australia but are not cleared for entry, and of passengers on pleasure cruises commencing and finishing in Australia aboard ships not then engaged on regular voyages.
COUNTRY CLASSIFICATION	6 The classification of countries in this publication is the <i>Australian Standard Classification of Countries for Social Statistics</i> (ASCCSS). For more detailed information refer to the ABS publication <i>Australian Standard Classification of Countries for Social Statistics</i> (Cat. no. 1269.0).
	7 The statistics on country of birth, citizenship, residence or main destination have certain limitations because of reporting on passenger cards. For instance, United Kingdom includes England, Scotland and Wales, Similarly Korea includes both the Republic of Korea and the Democratic People's Republic of Korea.
STATE AND TERRITORY CLASSIFICATION	8 Following the 1992 amendment to the <i>Acts Interpretation Act</i> to include the Indian Ocean Territories of Christmas Island and the Cocos (Keeling) Islands as part of geographic Australia, population estimates commencing with the September quarter 1993 include estimates for these two territories. To reflect this change, another category of the State/Territory classification has been created, known as Other Territories. Other Territories includes Jervis Bay Territory, Christmas Island and the Cocos (Keeling) Islands.

ESTIMATION METHOD	9 Overseas arrival and departure statistics are derived from a combination of full enumeration and sampling. All permanent movements and all movements with a duration of stay of one year or more are fully enumerated. All movements with a duration of stay of less than one year are sampled. Statistics relating to these movements are therefore estimates which may differ from statistics which would have been obtained if details of all these movements had been processed.
	10 Since January 1997 variable sample skips have been used in the selection of records to be sampled. Separate skips are applied for each country of citizenship and the skips may vary for each processing month. Over a year about 3.5% of all short term movements are selected for sampling.
	11 The statistics in this publication have been rounded to the nearest 100 for short-term movements and to the nearest 10 for permanent and long-term movements. In tables showing both short-term and permanent and long-term movements the total movements have been rounded to the nearest 100. The sums of the components may, due to rounding, not add exactly to totals.
CORRECTIONS AND IMPUTATIONS	12 The imprecision due to sampling errors should not be confused with errors arising from imperfections in reporting, which may occur in any data collection, whether sampled or not. Every effort is made to minimise such errors, both through careful design of the passenger cards and through checks on the information once it is received. During the edit process some items are corrected where they conflict with other known information. Missing replies to certain items such as age and country of birth are also imputed by reference to other related items. Information on non-sampling errors appears in Appendix 2.
	13 Errors of this kind differ from discrepancies arising from the fact that certain information reflects the travellers' intentions at the time the passenger cards were completed. These intentions are, of course, subject to change. Particularly affected is the distinction between permanent and temporary movement and in the latter case, length of intended stay, country in which most time will be spent and main reason for journey.
SEASONAL ADJUSTMENT AND TREND ESTIMATES	14 Original and seasonally adjusted short-term overseas visitor arrivals and short-term Australian resident departures are shown in Tables 1 and 2 respectively. In the seasonally adjusted series, account has been taken of normal seasonal factors and trading day effects (arising from the varying numbers of Sundays, Mondays, Tuesdays etc. in the month) and the effect of movement in the date of Easter which may, in successive years, affect figures for different months.
	15 Seasonal adjustment is a means of removing the estimated effects of normal seasonal variation from the series so that the effects of other influences on the series may be more clearly recognised. Seasonal adjustment procedures do not aim to remove the irregular or non-seasonal influences which may be present in any particular month, such as the effect of major sporting and cultural events, changes in airfares and the fluctuation of \$A relative to other currencies. Irregular influences that are highly volatile can make it difficult to interpret the movement of the series even after adjustment for seasonal variation.

SEASONAL ADJUSTMENT AND TREND ESTIMATES continued **16** The trend estimates for short-term overseas visitor arrivals and short-term Australian resident departures are shown in Tables 1 and 2 respectively. These trend estimates are derived by applying a 13–term Henderson-weighted moving average to all months of the respective seasonally adjusted series except the first and last six months. Trend series are created for the last six months by applying surrogates of the Henderson weighted moving average to the seasonally adjusted series.

17 While this technique enables smoothed data for the latest period to be produced, it does result in revisions to the smoothed series, principally of recent months, as additional observations become available. There may also be revisions as a result of the re-estimation of the seasonal factors. For further information, see *A Guide to Interpreting Time Series—Monitoring 'Trends', an Overview* (Cat. no. 1348.0).

RELATED PUBLICATIONS 18 Users of these statistics may also wish to refer to the following ABS publications:

- Australian Demographic Statistics (Cat. no. 3101.0)—issued quarterly
- Migration, Australia (Cat. no. 3412.0)—issued annually
- Tourism Indicators, Australia (Cat. no. 8634.0)—issued quarterly.

19 Related statistics are also published by the Department of Immigration and Multicultural Affairs, the Department of Transport and Regional Services and the Bureau of Tourism Research.

20 Current publications produced by the ABS are listed in the *Catalogue of Publications and Products, Australia* (Cat. no. 1101.0). The ABS also issues, on Tuesdays and Fridays, a *Release Advice* (Cat. no. 1105.0) which lists publications to be released in the next few days. Both are available from any ABS office or the ABS website.

ADDITIONAL STATISTICS AVAILABLE	21 As well as the statistics included in this and related publications, other relevant unpublished data are available for the following variables:
AVAILABLE	Citizenship (Nationality) Country of birth Age (Date of birth) Sex Marital status (not available for Australia or New Zealand citizens) Category of travel Permanent migrant Previous/future country of residence State of intended address/lived Overseas visitor Intended/actual length of stay Main reason for journey Country of residence State of intended address/in which most time spent Australian residents Intended/actual time away from Australia Country spent/intend to spend most time in State of intended address/lived Occupation (not available for short-term movements) State of intended/actual address Flight number or name of ship
	Country of embarkation/disembarkation Airport/Port of arrival/departure Arrival/departure date Whether intend to live in Australia for next 12 months (not available for short-term movements)
	For more information about related unpublished statistics or data concepts contact Katrina Phelan on (02) 6252 6573.
	22 This publications draws extensively on information provided by the Department of Immigration and Multicultral Affairs. This continued cooperation is very much appreciated: without it, the statistics published would not be available. Information received by the ABS is treated in strict confidence as required by the <i>Census and Statistics Act 1905</i> .

GLOSSARY

.

Australian resident	Australian residence is self-defined as reported by travellers when completing Incoming and Outgoing Passenger Cards.
Category of movement	 Overseas Arrivals and Departures are classified according to length of stay (in Australia or overseas), recorded in months and days by travellers on passenger cards. There are three main <i>categories of movement</i>: permanent movements long-term movements.
	A significant number of travellers (i.e. overseas visitors to Australia on arrival and Australian residents going abroad) state exactly 12 months or one year as their intended period of stay. Many of them stay for less than that period and on their departure from, or return to, Australia are therefore classified as short-term. Accordingly in an attempt to maintain consistency between arrivals and departures, movements of travellers who report their actual or intended period of stay as being one year exactly are randomly allocated to long-term or short-term, in proportion to the number of movements of travellers who report their actual length of stay as up to one month more, or one month less, than one year.
Country of residence	Country of residence refers to the country in which travellers regard themselves as living or as last having lived.
Intended length of stay	On arrival in Australia, all overseas visitors are asked to state their 'Intended length of stay in Australia'. On departure from Australia, all Australian residents are asked to state their 'Intended length of stay abroad'.
Long-term arrivals	 Long-term arrivals comprise: overseas visitors who intend to stay in Australia for 12 months or more (but not permanently); and Australian residents returning after an absence of 12 months or more overseas.
Long-term departures	 Long-term departures comprise: Australian residents who intend to stay abroad for 12 months or more (but not permanently); and overseas visitors departing who stayed 12 months or more in Australia.
Main destination	Australian residents travelling overseas are asked on departure for the name of the country in which they intend to spend most time.
Overseas Arrivals and Departures (OAD)	Overseas Arrivals and Departures refer to the arrival or departure of Australian residents or overseas visitors, through Australian airports (or sea ports), which have been recorded on Incoming or Outgoing Passenger Cards. Statistics on Overseas Arrivals and Departures relate to the number of movements of travellers rather than the number of travellers (i.e. the multiple movements of individual persons during a given reference period are all counted).

GLOSSARY

.

Permanent arrivals	Permanent arrivals (settlers) comprise:
	 travellers who hold migrant visas (regardless of stated intended period of stay); New Zealand citizens who indicate an intention to settle; and those who are otherwise eligible to settle (e.g. overseas born children of Australian citizens).
	This definition of settlers is used by the Department of Immigration and Multicultural Affairs. Prior to 1985 the definition of settlers used by the ABS was the stated intention of the traveller only. Numerically the effect of the change in definition is insignificant. The change was made to avoid the confusion caused by minor differences between data on settlers published separately by the ABS and the Department of Immigration and Multicultural Affairs.
Permanent departures	Permanent departures are Australian residents (including former settlers) who on departure state that they intend to settle permanently in another country.
Reason for journey	On arrival in, or departure from, Australia all overseas visitors and Australian residents are asked to state their reason for journey. From September 1994, all statistics relating to <i>main reason for journey</i> have been published using the following categories: convention/conference business visiting friends/relatives holiday employment education other In tabulations of data collected before September 1994, the 'Other' category includes 'In transit' and the 'Holiday' category includes both 'Student vacation' and 'Accompanying business wietor'
Short-term arrivals	and 'Accompanying business visitor'.Short-term arrivals comprise:overseas visitors whose intended stay in Australia is less than 12 months; and
	 Australian residents returning after an absence of less than 12 months overseas.
Short-term departures	 Short-term departures comprise: Australian residents who intend to stay abroad for less than 12 months; and overseas visitors departing who stayed less than 12 months in Australia.
Main State/Territory of stay	Overseas visitors are asked on departure for the name of the State or Territory in which they spent the most time.

STANDARD ERRORS

RELIABILITY OF ESTIMATES

1 Estimates based on a sample are subject to sampling variability i.e. they may differ from those that would be obtained from full enumeration.

2 The sampling error associated with any estimate can be estimated from the sample results and one measure so derived is the standard error. Given an estimate and the standard error on that estimate, there are about two chances in three that the sample estimate will differ by less than one standard error from the figure that would have been obtained from full enumeration, and about nineteen chances in twenty that the difference will be less than two standard errors. The relative standard error is the standard error on the estimate expressed as a percentage of the estimate.

3 It would be impractical to publish estimates of standard errors for all figures in individual tables. However, the following tables of standard errors and relative standard errors give an indication of the magnitude of the sampling error associated with any estimate of a particular size for short-term and total movement.

APPROXIMATE STANDARD ERRORS ON ESTIMATES FOR STRATIFIED SAMPLE

		ERM RE OR ARRIVAL RALIAN RESIDENTS		OR DEPARTURE	TOTAL ARRIVALS DEPARTU	•••
Estimated		Relative		Relative		Relative
number of	Standard	standard	Standard	standard	Standard	standard
persons	error	error	error	error	error	error
	no.	%	no.	%	no.	%
10 000	550	6	490	5	550	6
5 000	450	9	330	7	410	8
2 000	280	14	230	11	250	13
1 000	200	20	150	15	170	17
750	180	24	140	19	150	20
500	130	26	110	22	125	25
400	120	30	100	25	115	29
300	110	36	84	28	97	32
200	90	45	70	35	80	40
100	63	63	49	49	56	56

4 An example of the use of this table is as follows. If the estimate of the number of Australian resident departures for short-term visits abroad is 500, then the standard error on this estimate is 130 i.e. there are two chances in three that the actual number of Australian resident departures for short-term visits abroad will lie between 370 and 630 and nineteen chances in twenty that it will lie between 240 and 760.

5 The larger the size of an estimate the smaller the relative standard error. For any estimate of greater than 10,000 the relative standard error will be less than 6%.

STANDARD ERRORS

RELIABILITY OF ESTIMATES continued **6** The estimate of the difference between an estimate in two different periods or between different estimates from the same period is also subject to sampling error. The standard error on the difference between any two estimates which are subject to sampling error can be approximated by using the larger standard error of the estimates inflated by a factor of 1.4.

7 An example of the use of this procedure is as follows. Assume the estimates of the number of arrivals to Australia from Taiwan during January 1994 and January 1995 are 1,500 and 750 respectively. The difference between the 1994 and 1995 figures is 750 and the standard errors on these estimates are approximately 190 and 140. The standard error on the difference is approximately 266 (1.4×190), and there are nineteen chances in twenty that the estimate of the difference between the two years will lie between 218 and 1,282.

.

(a) See paragraphs 3 and 4 of the Explanatory Notes for more detail.

Apart from the 1,275,495 movements processed during November 1998, an additional 1,527 arrivals and 605 departures were also processed which had insufficient information to impute a category of travel. These records were excluded from further processing and are not included in the published estimates or the non-response rates in the following table.

NON-RESPONSE RATES PRIOR TO IMPUTATION, November 1998(a)

OAD variables	Incoming Variables	Outgoing Variables
	•••••	• • • • • •
Citizenship (Nationality)	0.27	0.25
Country of birth	0.18	0.03
Age (Date of birth)	0.03	0.02

Arrival/departure date	0.00	0.00
Whether intend to live in Australia for		
next 12 months	1.71	

(a) Non-response rates are unweighted

(b) Not available for Australia or New Zealand.

(c) Not available for short term movements.

INTENDED LENGTH OF STAY / TIME AWAY FROM AUSTRALIA

Non-response rates are available for these data items from November 1998. For data prior to November 1998, imputation carried out as part of processing by the Department of Immigration and Multicultural Affairs (DIMA) has prevented reliable estimation of non-response rates for these two data items.

MAIN REASON FOR JOURNEY

Before the introduction of the redesigned passenger card in July 1998, 5% of visitor arrivals, on average, were recorded as having a purpose of journey of 'Other' or 'Not Stated'. This percentage rose to 16% in August 1998 and 29% in September 1998 as a result of processing problems. These problems have now been addressed by DIMA, with the percentage of 'Other' and 'Not Stated' dropping in October 1998 to 8% and 7% in November 1998.

APPENDIX 2 — DATA QUALITY ISSUES

STATE IN WHICH MOST TIME WAS SPENT	Data on visitor departures suggest a significant increase in the Northern Territory as the State or Territory spent most time in for the months of August 1998, September 1998 and October 1998. This increase can be attributed to data entry problems experienced by DIMA during this time. These numbers have returned in November 1998 to levels more comparable with previous years, with DIMA indicating that they have instigated data quality procedures to address this issue. DIMA estimates the correct figure for October 1998 to be approximately 4,000 persons, compared to the published estimate of 8,000 persons. No additional information is available for August 1998 and September 1998.
SEPTEMBER 1998 PROCESSING	A problem was experienced in the processing of OAD data for movement dates between 6 September 1998 and 16 September 1998, following the introduction of changes to DIMA's input processing system. This problem may affect in the order of 10% of all September records used in estimation and result in incorrect details for citizenship, date of birth, sex and country of birth.
