KEY POINTS

SHORT-TERM

• The trend estimate decreased in February 1998 by 1.2% from January 1998. The trend has fallen 9% since the peak in August 1997.

PERMANENT AND LONG-TERM

There were 158,000 permanent and long-term arrivals to Australia and 111,800 departures during the seven months to January 1998. The net gain of arrivals over departures for the seven months to January 1998 was 46,200, 22% lower than the net gain recorded for the corresponding seven months to January 1997.

FORTHCOMING ISSUES

ISSUE

March 1998

EXPECTED RELEASE DATE

28 April 1998

. . . .

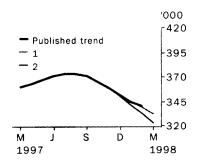

TREND REVISIONS

Each time new seasonally adjusted estimates become available, trend estimates of short-term arrivals and departures are revised (see paragraph 19 of the Explanatory Notes).

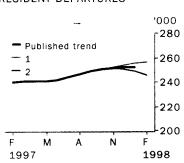

The examples in the graphs below show two illustrative scenarios and the consequent revisions to previous trend estimates of visitor arrivals and resident departures.

- **1** The seasonally adjusted estimate for:
- March visitor arrivals is 3.39% higher than February
- February resident departures is 4.82% higher than January
- 2 The seasonally adjusted estimate for:
- March visitor arrivals is 3.39% lower than February
- February resident departure is 4.82% lower than January

RESIDENT DEPARTURES

The percentage changes of 3.39% and 4.82% were chosen because they represent the average absolute monthly percentage changes between months for visitor arrivals and resident departures respectively over the last four years.

W. McLennan Australian Statistician

ANALYSES AND COMMENTS

SHORT-TERM MOVEMENTS

VISITOR ARRIVALS

There were an estimated 352,700 visitor arrivals to Australia during February 1998, bringing the total number for the eight months to February 1998 to an estimated 2,951,900, an increase of 0.5% over the number of overseas visitors arriving during the previous July to February period (2,938,600).

The major source countries of visitor arrivals to Australia during the eight months to February 1998 were Japan (19% of all visitor arrivals), New Zealand (16%), the United Kingdom (10%), the United States of America (8%) and Singapore (6%). Of the top ten source countries of visitors to Australia, Korea and Indonesia were the only countries which experienced a decreases (by 32% and 17% respectively) between the eight months to February 1998 and the corresponding period to February 1997.

RESIDENT DEPARTURES

There were 207,300 short-term departures of Australian residents in January 1998, bringing the total for the seven months to January 1998 to 1,770,900, an increase of 7% on the same period the previous year (1,662,400). The main destinations of Australian residents departing during this period were New Zealand (14%), the United States of America (12%), Indonesia (11%), the United Kingdom (10%) and Hong Kong (5%).

During the seven months to January 1998:

251,000 Australian residents mainly visited New Zealand, a-decrease of 0.2% compared to the seven months to January 1997;

214,800 residents mainly visited the United States of America, an increase of 7%; 180,500 residents mainly visited the United Kingdom, an increase of 12%; 200,400 residents mainly visited Indonesia, an increase of 18%; and 81,100 residents mainly visited Hong Kong, a decrease of 21%.

PURPOSE OF JOURNEY

Over half (58%) of all short-term visitors to Australia during the seven months to January 1998 stated on arrival that they had come here for a holiday (1,509,400). A further 20% stated that they were visiting friends/relatives (524,100), 10% were on business trips (251,600), while 3% arrived for educational purposes (78,500) and 2% arrived for a convention or conference (63,000).

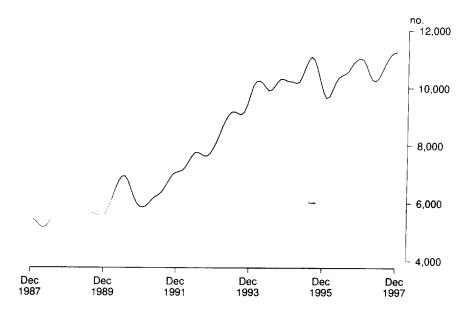

STATE OF STAY

Overseas visitors departing Australia between July 1997 and January 1998 stated that they had spent most of their time in New South Wales (42%), Queensland (30%), Victoria (14%) or Western Australia (9%). Victoria, South Australia and Tasmania experienced the largest increases in visitors (up by 9%), followed by Western Australia and the Northern Territory (both up by 6%). New South Wales decreased marginally.

GERMAN RESIDENTS: VISITOR ARRIVALS

In 1997 short-term visitors who arrived in Australia from Germany represented 3% of all short-term visitor arrivals. This proportion was the same in both 1987 and 1992. Between 1987 and 1997 the number of short-term German visitors more than doubled (from 53,300 to 128,900), while between 1992 and 1997 the number increased by 43% (from 89,900 to 128,900).

GERMAN VISITORS ARRIVALS, MONTHLY TREND-1988 TO 1997

Most short-term visitors from Germany in 1997 came to Australia for a holiday (69%) or to visit friends and relatives (16%). A smaller but still significant number came for business (7%) or education (2%). There were more male German visitors (68,300) than female (60,600). The most popular months for arrival in Australia in 1997 were December (15,000) and October (13,500).

HOLIDAY

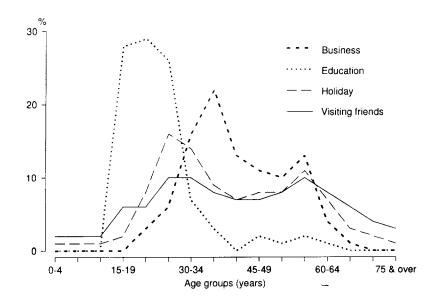

In 1997, 69% (89,300) of all short-term visitors from Germany came to Australia as holiday-makers (tourists). The peak age groups for German tourists in 1997 were the age groups 25–29 years and 30–34 years. These two age groups accounted for 30% of all German holiday-makers. The next highest group of tourists was the age group 55–59 years. Overall, there were more male holiday-makers (45,600) than female (43,700).

In 1997 New South Wales was the main destination for most German holiday-makers (47%), followed by Queensland (17%) and Victoria (13%). These three States were also the top destinations five years ago. However, for the first time since 1992 Northern Territory (10%) replaced Western Australia (9%) as the fourth most popular destination for German tourists. The median duration of stay for German holiday makers in Australia was 26 days.

ANALYSES AND COMMENTS

GERMAN RESIDENTS: VISITOR ARRIVALS

REASON FOR JOURNEY AND AGE, GERMAN VISITOR ARRIVALS-1997

VISITING FRIENDS/RELATIVES

Of the German short-term visitor arrivals to Australia in 1997, 16% (21,100) gave visiting friends and relatives as their reason for coming to Australia. Over the past five years this proportion has varied between 12% and 16%. Of this group of German visitors the peak age group was 30–34 year olds followed by 25–29 and 55–59 year olds; these three groups each accounted for 10% of all German short-term visitors visiting friends and relatives.

Short-term visitors from Germany who came to visit friends and relatives in 1997 intended to stay in Australia longer than German holiday-makers; the median duration of stay being 30 days.

BUSINESS

In 1997, 7% (9,100) of all short-term visitor arrivals from Germany indicated that business was the main reason for their visit to Australia. This proportion has remained similar over the past five years. Men represented 89% of this group. The peak age group was the 35–39 year olds, representing 24% of all male business visitors from Germany.

The main destinations for German business visitors in 1997 were New South Wales (49%) and Victoria (28%). Many business visitors from Germany intended to stay in Australia for a relatively short period of time; the median duration of stay being 10 days.

EDUCATION

In 1997, 2% (2,500) of short-term visitors from Germany stated education as their reason for visiting Australia. As might be expected, these students were concentrated in the younger ages with 83% aged between 15 and 29 years. New South Wales was the main destination for students (39%) followed by Victoria (26%) and Queensland (15%). German students also intended to stay longer than most short-term visitor arrivals; the median duration of stay being 91 days.

EXPLANATORY NOTES

INTRODUCTION

1 This publication contains statistics of persons arriving in, and departing from, Australia, together with the major characteristics of travellers. More detailed statistics can be made available on request (see paragraph 23).

SOURCE OF THE STATISTICS

- **2** Persons arriving in, or departing from, Australia are required to complete prescribed questionnaires in the form of Incoming and Outgoing Passenger Cards (see Appendix). These cards provide information to the Department of Immigration and Multicultural Affairs (DIMA) for administrative purposes and serve as the source of statistics of overseas arrivals and departures. In some cases pre-recorded visa data is used in lieu of passenger card data by DIMA. In accordance with the *Census and Statistics Act 1905*, information relating to individuals, individual flights or ships and individual carriers, which is contained in these cards or other documents, is treated as confidential by the Australian Bureau of Statistics (ABS).
- **3** Implementation of the *Migration Reform Act 1992* by DIMA required that a health and character check be incorporated with the Incoming Passenger Card. The redesign of both passenger cards followed and new passenger cards were officially introduced on 1 September 1994, with minor alterations to the cards in March 1995. The two main statistical changes affect *Marital status* and *Purpose of journey* and constitute a break in time series for these data items.
- **4** In addition to the four *Marital status* categories of 'Never married', 'Married', 'Widowed' and 'Divorced', both passenger cards now include 'Separated but not divorced' and 'Common law/de facto'. The following changes were also made to the *Purpose of journey* question: on the Incoming Passenger Card 'In transit' was dropped; on the Outgoing Passenger Card 'Student vacation' was dropped; and on both cards 'Visiting relatives' was changed to 'Visiting friends/relatives', 'Convention' was changed to 'Convention/conference' and 'Accompanying business visitor' was dropped.
- **5** The statistics in this publication relate to the number of movements of travellers rather than the number of travellers (i.e. the multiple movements of individual persons during a given reference period are each counted separately). The statistics exclude the movements of operational air and ships' crew, of transit passengers who pass through Australia but are not cleared for entry, and of passengers on pleasure cruises commencing and finishing in Australia aboard ships not then engaged on regular voyages.

COUNTRY CLASSIFICATION

SCOPE

- **6** The classification of countries in this publication is the *Australian Standard Classification of Countries for Social Statistics* (ASCCSS). For more detailed information refer to the ABS publication *Australian Standard Classification of Countries for Social Statistics* (1269.0). Political developments in Europe, the former USSR and Africa have resulted in a number of changes, and are detailed in Revisions 1.01–1.03 of the ASCCSS.
- **7** Statistics on country of birth, citizenship, residence or main destination have certain limitations because of inadequate reporting on passenger cards. For instance, it is not possible to identify separately England, Scotland and Wales. Similarly Korea includes both the Republic of Korea and the Democratic People's Republic of Korea.

STATE AND TERRITORY CLASSIFICATION

8 Following the 1992 amendment to the *Acts Interpretation Act* to include the Indian Ocean Territories of Christmas Island and the Cocos (Keeling) Islands as part of geographic Australia, population estimates commencing with the September quarter 1993 include estimates for these two territories. To reflect this change, another category of the State/Territory classification has been created, known as Other Territories. Other Territories includes Jervis Bay Territory, Christmas Island and the Cocos (Keeling) Islands. Data for Other Territories are included in tables where specifically noted.

EXPLANATORY NOTES

ESTIMATION METHOD

- **9** Overseas arrival and departure statistics are derived from a combination of full enumeration and sampling. All permanent movements and all movements with a duration of stay of one year or more are fully enumerated. All movements with a duration of stay of less than one year are sampled. Statistics relating to these movements are therefore estimates which may differ from statistics which would have been obtained if details of all these movements had been processed.
- **10** From April 1995, the fractions used for sampling movements of the citizens of Australia, France, Germany, Japan and Taiwan were changed, reflecting increases in the number of movements. From May 1995 further changes were made to the fractions used for sampling movements of citizens of Indonesia, Italy, Malaysia, Netherlands, Singapore, Republic of Korea, Switzerland and Thailand. Comments on the sampling errors associated with the estimates are contained in the Standard Errors pages.
- 11 The statistics in this publication have been rounded to the nearest 100 for short-term movements and to the nearest 10 for permanent and long-term movements. In tables showing both short-term and permanent and long-term movements the total movements have been rounded to the nearest 100. The sums of the components may, due to rounding, not add exactly to totals.
- **12** From the June 1997 issue, this publication includes preliminary estimates of visitor arrivals by country of residence (see Table 6, page 9). These preliminary estimates will be revised in the next issue of this publication, when final data is available.
- 13 Department of Immigration and Ethnic Affairs maintains the Travel and Immigration Processing System (TRIPS). The TRIPS system produces a limited range of data, including country of citizenship, which is used in an ABS model to produce preliminary estimates by country of usual residence. For more information see page 3-4 of the June 1997 issue of this publication.

CORRECTIONS AND IMPUTATIONS

- 14 The imprecision due to sampling errors should not be confused with errors arising from imperfections in reporting, which may occur in any data collection, whether sampled or not. Every effort is made to minimise such errors, both through careful design of the passenger cards and through checks on the information once it is received. During the edit process some items are corrected where they conflict with other known information. Missing replies to certain items such as age and country of birth are also imputed by reference to other related items.
- **15** Errors of this kind differ from discrepancies arising from the fact that certain information reflects the travellers' intentions at the time the passenger cards were completed. These intentions are, of course, subject to change. Particularly affected is the distinction between permanent and temporary movement and in the latter case, length of intended stay, country in which most time will be spent and purpose of journey.
- SEASONAL ADJUSTMENT AND TREND ESTIMATES
- **16** Original and seasonally adjusted short-term overseas visitor arrivals and short-term Australian resident departures are shown in Tables 1 and 2 respectively. In the seasonally adjusted series, account has been taken of normal seasonal factors and trading day effects (arising from the varying numbers of Sundays, Mondays, Tuesdays etc. in the month) and the effect of movement in the date of Easter which may, in successive years, affect figures for different months.

EXPLANATORY NOTES

SEASONAL ADJUSTMENT AND TREND ESTIMATES continued

- **17** Seasonal adjustment is a means of removing the estimated effects of normal seasonal variation from the series so that the effects of other influences on the series may be more clearly recognised. Seasonal adjustment procedures do not aim to remove the irregular or non-seasonal influences which may be present in any particular month, such as the effect of major sporting and cultural events, changes in airfares and the fluctuation of \$A relative to other currencies. Irregular influences that are highly volatile can make it difficult to interpret the movement of the series even after adjustment for seasonal variation.
- **18** The trend estimates for short-term overseas visitor arrivals and short-term Australian resident departures are shown in Tables 1 and 2 respectively. These trend estimates are derived by applying a 13–term Henderson-weighted moving average to all months of the respective seasonally adjusted series except the first and last six months. Trend series are created for the last six months by applying surrogates of the Henderson weighted moving average to the seasonally adjusted series.
- **19** While this technique enables smoothed data for the latest period to be produced, it does result in revisions to the smoothed series, principally of recent months, as additional observations become available. There may also be revisions as a result of the re-estimation of the seasonal factors. For further information, see *A Guide to Interpreting Time Series Monitoring 'Trends', an Overview* (1348.0) or contact the Assistant Director, Time Series Analysis on 02 6252 6354.

RELATED PUBLICATIONS

- **20** Users of these statistics may also wish to refer to the following ABS publications:
- Australian Demographic Statistics (3101.0) issued quarterly
- Migration, Australia (3412.0) issued annually
- Tourism Indicators, Australia (8634.0) issued quarterly
- **21** Related statistics are also published by the Department of Immigration and Multicultural Affairs, the Department of Transport and Communications and the Bureau of Tourism Research.
- **22** Current publications produced by the ABS are listed in the *Catalogue of Publications* and *Products, Australia* (1101.0). The ABS also issues, on Tuesdays and Fridays, a *Release Advice* (1105.0) which lists publications to be released in the next few days. Both are available from any ABS office or the ABS website.

ADDITIONAL STATISTICS AVAILABLE

23 In some cases, the ABS can make available information which is not published. This information may be made available in one or more of the following forms: microfiche, photocopy, data tape, floppy disk, computer printout, clerically-extracted tabulations. Generally, a charge is made for providing unpublished information. A full list of unpublished Overseas Arrival and Departure tabulations is available on request.

GLOSSARY

Australian resident

Australian residence is self-defined as reported by travellers when completing Incoming and Outgoing Passenger Cards.

Category of movement

Overseas Arrivals and Departures are classified according to length of stay (in Australia or overseas), recorded in months and days by travellers on passenger cards. There are three main *categories of movement*:

- permanent movements
- long-term movements
- short-term movements.

A significant number of travellers (i.e. overseas visitors to Australia on arrival and Australian residents going abroad) state exactly 12 months or one year as their intended period of stay. Many of them stay for less than that period and on their departure from, or return to, Australia are therefore classified as short-term. Accordingly in an attempt to maintain consistency between arrivals and departures, movements of travellers who report their actual or intended period of stay as being one year exactly are randomly allocated to long-term or short-term, in proportion to the number of movements of travellers who report their actual length of stay as up to one month more, or one month less, than one year.

Country of residence

Country of residence refers to the country in which travellers regard themselves as living or as last having lived.

Intended length of stay

On arrival in Australia, all overseas visitors are asked to state their 'Intended length of stay in Australia'. On departure from Australia, all Australian residents are asked to state their 'Intended length of stay abroad'.

Long-term arrivals

Long-term arrivals comprise:

- overseas visitors who intend to stay in Australia for 12 months or more (but not permanently); and
- Australian residents returning after an absence of 12 months or more overseas.

Long-term departures

Long-term departures comprise:

- Australian residents who intend to stay abroad for 12 months or more (but not permanently); and
- overseas visitors departing who stayed 12 months or more in Australia.

Main destination

Australian residents travelling overseas are asked on departure for the name of the country in which they intend to spend most time.

Overseas Arrivals and Departures (OAD)

Overseas Arrivals and Departures refer to the arrival or departure of Australian residents or overseas visitors, through Australian airports (or sea ports), which have been recorded on Incoming or Outgoing Passenger Cards. Statistics on Overseas Arrivals and Departures relate to the number of movements of travellers rather than the number of travellers (i.e. the multiple movements of individual persons during a given reference period are all counted).

GLOSSARY

Permanent arrivals

Permanent arrivals (settlers) comprise:

- travellers who hold migrant visas (regardless of stated intended period of stay);
- New Zealand citizens who indicate an intention to settle; and
- those who are otherwise eligible to settle (e.g. overseas born children of Australian citizens).

This definition of settlers is used by the Department of Immigration and Multicultural Affairs. Prior to 1985 the definition of settlers used by the ABS was the stated intention of the traveller only. Numerically the effect of the change in definition is insignificant. The change was made to avoid the confusion caused by minor differences between data on settlers published separately by the ABS and the Department of Immigration and Multicultural Affairs.

Permanent departures

Permanent departures are Australian residents (including former settlers) who on departure state that they intend to settle permanently in another country.

Purpose of journey

On arrival in, or departure from, Australia all overseas visitors and Australian residents are asked to state their purpose of journey. From September 1994, all statistics relating to *purpose of journey* have been published using the following categories:

- convention/conference
- business
- visiting friends/relatives
- holiday
- employment
- education
- other

In tabulations of data collected before September 1994, the 'Other' category includes 'In transit' and the 'Holiday' category includes both 'Student vacation' and 'Accompanying business visitor'.

Short-term arrivals

Short-term arrivals comprise:

- overseas visitors whose intended stay in Australia is less than 12 months;
- Australian residents returning after an absence of less than 12 months overseas.

Short-term departures

Short-term departures comprise:

- Australian residents who intend to stay abroad for less than 12 months; and
- overseas visitors departing who stayed less than 12 months in Australia.

State/Territory of stay

Overseas visitors are asked on departure for the name of the State or Territory in which they spent the most time.

STANDARD ERRORS

RELIABILITY OF ESTIMATES

- **1** Estimates based on a sample are subject to sampling variability i.e. they may differ from those that would be obtained from full enumeration.
- 2 The sampling error associated with any estimate can be estimated from the sample results and one measure so derived is the standard error. Given an estimate and the standard error on that estimate, there are about two chances in three that the sample estimate will differ by less than one standard error from the figure that would have been obtained from full enumeration, and about nineteen chances in twenty that the difference will be less than two standard errors. The relative standard error is the standard error on the estimate expressed as a percentage of the estimate.
- **3** It would be impractical to publish estimates of standard errors for all figures in individual tables. However, the following tables of standard errors and relative standard errors give an indication of the magnitude of the sampling error associated with any estimate of a particular size for short-term and total movement.

APPROXIMATE STANDARD ERRORS ON ESTIMATES FOR STRATIFIED SAMPLE

SHORT-TERM SHORT-TERM TOTAL
DEPARTURE OR ARRIVAL ARRIVAL OR DEPARTURE OR AUSTRALIAN RESIDENTS OF OVERSEAS_VISITORS DEPARTURES

Estimated number of persons	Standard error	Relative standard error	Standard error	Relative standard error	Standard error	Relative standard error
	no.	%	no.	%	no.	%
10 000	550	6	490	5	550	6
5 000	450	9	330	7	410	8
2 000	280	14	230	11	250	13
1 000	200	20	150	15	170	17
750	180	24	140	19	150	20
500	130	26	110	22	125	25
400	120	30	100	25	115	29
300	110	36	84	28	97	32
200	90	45	70	35	80	40
100	63	63	49	49	56	56

- **4** An example of the use of this table is as follows. If the estimate of the number of Australian resident departures for short-term visits abroad is 500, then the standard error on this estimate is 130 i.e. there are two chances in three that the actual number of Australian resident departures for short-term visits abroad will lie between 370 and 630 and nineteen chances in twenty that it will lie between 240 and 760.
- **5** The larger the size of an estimate the smaller the relative standard error. For any estimate of greater than 10,000 the relative standard error will be less than 6%.

STANDARD ERRORS

RELIABILITY OF ESTIMATES continued

- **6** The estimate of the difference between an estimate in two different periods or between different estimates from the same period is also subject to sampling error. The standard error on the difference between any two estimates which are subject to sampling error can be approximated by using the larger standard error of the estimates inflated by a factor of 1.4.
- **7** An example of the use of this procedure is as follows. Assume the estimates of the number of arrivals to Australia from Taiwan during January 1994 and January 1995 are 1,500 and 750 respectively. The difference between the 1994 and 1995 figures is 750 and the standard errors on these estimates are approximately 190 and 140. The standard error on the difference is approximately $266 (1.4 \times 190)$, and there are nineteen chances in twenty that the estimate of the difference between the two years will lie between 218 and 1,282.
