Annual Interest Payable(a) ..	(c)	5,227	974	1,199	553	51	(c)

(a) Includes debt or interest payable in London and New York. The former is expressed in United Kingdom currency, the latter is payable in dollars which have been converted at the rate of 4.8665 dollars to £1. (b) Included in debt figures above. (c) Not available.

In this and the following tables, debt includes all liabilities for which arrangements have been made for repayment over a period of one year or more, and net overdrafts. Interest capitalized and amounts due for the capital cost of assets or for services rendered which are to be repaid over a period of one year or more are included. Current liabilities, such as interest accrued (but not capitalized), trade creditors, amounts held in trust and other debts which are to be repaid in less than one year are not included. Net overdraft is the gross overdraft of all funds less all bank credit balances (including fixed deposits) which do not form part of a sinking fund to repay a loan. New loans raised during the year include new loan liabilities incurred during the year, loans raised to repay indebtedness to the Government, and interest capitalized. Loans raised and redeemed within the year, increases in overdrafts and loans raised for conversion or redemption

of existing debt are excluded. Funds provided for redemption include instalments of principal repaid and amounts credited to sinking funds established for the purpose of repaying the debt on maturity. Amounts provided for redemption from loans raised for that purpose are excluded.

In the following table a summary is given of new money loan raisings, provisions for the redemption of debt and debt outstanding of local and semi-governmental authorities for the years 1938-39 and 1947-48 to 1950-51.

### § 4. Roads and Bridges.

1. **Commonwealth Government Grants.**—The following table shows particulars of allocations to the several States from the Commonwealth Consolidated Revenue Fund under the several Commonwealth Aid Roads and Works Acts, for road construction, maintenance, repair and other works connected with transport during the years 1938–39 and 1946–47 to 1951–52. Allocations for the construction and maintenance of strategic roads and for the promotion of road safety practices made in the years 1947–48 to 1951–52 are excluded. The aggregate amounts payable under the relevant Acts from 1922–23 to 1951–52 for the purposes outlined above are also shown. Further particulars of these grants appear in Chapter XVII.—Public Finance.

#### ROAD CONSTRUCTION, MAINTENANCE, ETC. : GRANTS BY COMMONWEALTH GOVERNMENT. (£'000.)

Aggregate, years 1922–23 to 1951–52 .. .. .	30,291	18,994	20,615	12,025	20,751	5,404	108,080

(a) Under Federal Aid Roads and Works Act 1937. (b) Under Commonwealth Aid Roads and Works Act 1947–1949, except for £398,830 to New South Wales in 1947–48 under Federal Aid Roads and Works Act 1937, representing amounts not drawn by that State during 1943–44. (c) Under the Commonwealth Aid Roads Act 1950.

In addition to the foregoing amounts, financial assistance from loan fund has been granted by the Commonwealth Government to the States for road construction. Such assistance has not been granted in recent years. At 30th June, 1952 the aggregate amount was £249,686.

2. **New South Wales.**—(i) *General.* A central road authority was created by legislation early in 1925 for the purpose of providing improved and uniform standards of construction and maintenance of the principal roads, and to administer Governmental subsidies for work on those roads. This authority (now organized as the Department of Main Roads) exercises control over Governmental activities in connexion with road works, these activities embracing works on main and developmental roads throughout the State, all roads in the unincorporated portion of the Western Division, and proclaimed national works, principally bridges and vehicular ferries, constructed from Government funds. The department co-operates with the municipal and shire councils in the work of constructing and maintaining a well-organized system of main highways.

In the metropolitan district the whole cost of the construction and maintenance of main roads is paid from the funds of the Main Roads Department, while in the country districts assistance in respect of road works may be granted for any area through which a main road passes. The cost of constructing developmental roads and works is borne in full by the Main Roads Department, but local councils are required to maintain them in satisfactory condition. For other roads the cost of both construction and maintenance work is generally chargeable to the revenue of local authorities, although Governmental assistance is not infrequently granted for works of construction and re-construction. In the Western Division the full cost of all roads and bridges is met by the Department of Main Roads.

The New South Wales Transport and Highways Commission, which was constituted in 1950 and included the Commissioner for Main Roads as one of its members, was disbanded in September, 1952.

The general system of road communication throughout the State is made up of main roads classified into State highways, trunk roads and ordinary main roads. There are also secondary roads (metropolitan area) and developmental roads.

Public roads, except those within the City of Sydney, may be proclaimed as main roads on the recommendation of the Commissioner for Main Roads, who takes into consideration representations made by councils concerned, availability of funds for construction and maintenance purposes, and the value as connecting links between centres of population or business.

(ii) *Length of Roads.* (a) *Proclaimed Roads.* The following table shows lengths of proclaimed roads at 30th June, 1951, according to class of road :—

PROCLAIMED ROADS, NEW SOUTH WALES : LENGTHS, 30TH JUNE, 1951.  
(Miles.)

Division.	Main Roads.				Secondary Roads.	Developmental Roads.	Total.
	State Highways.	Trunk Roads.	Ordinary Main Roads.	Total.			
Eastern and Central	5,205	2,730	9,762	17,697	(a) 59	2,859	20,615
Western ..	1,328	1,359	2,936	5,623	..	..	(b) 5,623
Total ..	6,533	4,089	12,698	23,320	59	2,859	26,238

(a) Metropolitan area. (b) Excludes 2,705 miles of unclassified roads, the responsibility of the Department.

During 1950-51 the following roads were proclaimed or declared :—123 miles of new main roads and extensions of existing main roads, and 70 miles of new developmental roads.

The length of main and secondary roads maintained by the Department of Main Roads at 30th June, 1951 (excluding the Western Division) was 2,578 miles (15 per cent.), while the length maintained by Councils was 15,178 miles (85 per cent.). The proportions of the several classes of main roads maintained by the Department and Councils respectively were :—State highways, 38 per cent., 62 per cent.; trunk roads, 2 per cent., 98 per cent.; ordinary main roads, 6 per cent., 94 per cent. Secondary roads were wholly maintained by Councils. In the County of Cumberland (the metropolis and adjoining areas) the Department maintained 56 per cent. of the roads (504 miles).

(b) *Composition of Roads.* In 1951 the total length of all roads in New South Wales was estimated at 126,624 miles, including 7,911 miles in the Western Division. The lengths of roads, according to their composition or nature, were as follows :—cement concrete, 390 miles; asphaltic concrete, 197 miles; tar or bituminous macadam, 4,187 miles; surface water-bound macadam, 4,679 miles; water-bound macadam, 2,068 miles; gravel or crushed rock, 35,076 miles; formed only, 27,390 miles; cleared or natural surface only, 52,637 miles.

(iii) *Main Roads Department.* (a) *General.* Progress has continued with the implementation of the Main Roads Department plan for main road development in the metropolis and the balance of the County of Cumberland. This plan is now incorporated in the County of Cumberland Planning Scheme approved by Parliament under the Local Government (Amendment) Act 1951. Surveys and designs have been advanced, and the acquisition of land is proceeding, in connexion with the planned Newcastle and District Arterial Road System and Wollongong-Port Kembla District Main Roads System.

An investigation into the extent and classification of country main roads in the light of present and future traffic needs was completed during 1949-50.

In addition to its construction and maintenance work on roads, the Main Roads Department is engaged on a scheme for widening metropolitan roads. The acquisition of land required to implement approved schemes has been proceeding.

During 1950-51, 32 new bridges were completed on main roads by the Department and Councils. Piers and abutments have been constructed for the steel and concrete bridge over Iron Cove between Balmain and Drummoyne, Sydney (length 1,536 feet) while work on the reinforced concrete bridge over a division of Cook's River (length 566 feet) has been completed.

(b) *Receipts and Payments.* The funds of the Department of Main Roads are derived principally from taxation of motor vehicles, contributions by the Commonwealth Government under the Commonwealth Aid Roads and Works Acts (see Chapter XVII.—Public Finance, for some particulars of the basis and distribution of grants under these Acts and para. 1 of this section for particulars of the amounts paid in recent years), contributions by municipal and shire councils, and special (not statutory) assistance by the State Government by way of loan moneys or special grants from revenue funds. Receipts and payments for the four years 1947-48 to 1950-51 compared with the income and expenditure for 1938-39 are shown below.

(a) Income and expenditure. (b) Includes £398,830 not drawn by State during 1943-44. (c) Excludes £500,000 transferred from the County of Cumberland Main Roads Fund to the Country Main Roads Fund. (d) Includes £696,096 to liquidate certain outstanding liabilities before due dates.

The figures shown above represent the aggregate receipts and payments of three funds—the County of Cumberland Main Roads Fund, the Country Main Roads Fund and the Developmental Roads Fund. From 1st January, 1925 to 30th June, 1951

receipts amounted to £104,870,470 and payments to £102,993,086. Particulars of the individual funds are—County of Cumberland, receipts £28,677,717, payments £27,516,637, Country, £72,310,681, £71,888,857; Developmental, £3,882,072, £3,587,592.

The total expenditure on roads, streets and bridges in the State by all authorities during the years 1938–39 and 1947–48 to 1950–51 was, respectively, £8,894,099, £8,934,403, £10,479,716, £12,394,814 and £15,063,845. These figures are approximate and they include expenditure on construction, maintenance and direct administration, but not on debt charges. Expenditure on the Sydney Harbour Bridge is not included.

(c) *Sydney Harbour Bridge.* The Sydney Harbour Bridge was opened for traffic on 19th March, 1932. The main span is 1,650 feet and the clearance for shipping 170 feet from high water level. The deck, 160 feet wide, carries a roadway, two railway tracks and two tramway tracks, and there is also a footway on each side. The capital cost of the bridge to the 30th June, 1951, was £9,742,256, but this amount will be reduced by approximately £273,000 on the disposal of all surplus resumed property. The portion met from repayable loan funds, over £8,000,000, is to be repaid over a period of 53 years ending approximately in 1985. The accumulated balance of the Bridge Account to 30th June, 1951, showed a surplus of £104,831. Annual income, after a decline to less than £300,000 during the 1939–45 War, has risen from about £400,000 in 1938–39 to a little less than £700,000 in 1950–51; expenditure over the same period has remained around the £400,000 level. In 1950–51 income amounted to £697,022, and included road tolls £526,309, railway passenger tolls £129,678, and tram and omnibus passenger tolls £27,273. Expenditure amounted to £440,743, including interest, exchange, etc. £258,611, sinking fund £67,372 and maintenance and improvement £60,437. During 1950–51, 23,399,000 rail travellers, 24,873,000 tram and omnibus travellers, and 24,034,000 road travellers in 14,266,000 road vehicles crossed the bridge, contributing respectively, 19 per cent., 4 per cent., and 77 per cent. of the total toll revenue.

3. *Victoria.*—(i) *General.* With the object of improving the main roads of the State the Country Roads Board was established by legislation passed in 1912. The principal duties of the Board are to determine the main roads, State highways, tourists' roads, etc., to inquire into the State's resources in road materials and the most effective methods of road construction and maintenance, and to recommend deviations in existing roads or the construction of new roads in order to facilitate communication or to improve the conditions of traffic.

(ii) *Length of Roads.* (a) *Declared Roads.* The total length of declared roads in Victoria at 30th June, 1951, was 14,457 miles, classified as follows:—State highways, 3,850 miles; main roads, 9,800 miles; tourists' roads, 432 miles; forest roads, 375 miles. The total length of the surface treated (black) system included in the foregoing totals was 6,932 miles or 47.9 per cent.

(b) *Composition of Roads.* It is estimated that, in addition to the 14,457 miles of classified roads as above, there were 90,200 miles of unclassified roads at 30th June, 1951. The latest detailed estimate of the length of roads and streets in Victoria (as at 30th September, 1948) provides the following information:—Wood or stone, 62 miles; portland cement concrete, 150 miles; asphaltic concrete and sheet asphalt, 202 miles; tar or bitumen surface seal, 10,241 miles; water-bound macadam, gravel, sand and hard loam pavements, 28,418 miles; formed only, 23,901 miles; surveyed only, 38,437 miles; total 101,411 miles.

(iii) *Country Roads Board.* (a) *General.* During 1950–51 823 miles of declared roads under the Board's control were treated with bitumen. In addition, 121 miles of undeclared roads, for which the Board contributed funds, were similarly treated. Work for other authorities carried out by the Board's plant amounted to 65 miles. The total length of bitumen treatment carried out in 1950–51 was 1,009 miles. Of the work on the roads under the Board's control, 288 miles related to State highways.

During 1950–51, 153 bridge projects with a total value of £388,164 were initiated. Of these new projects, 40 with a total value of £232,147 were supervised by the Board and 113 with a total value of £156,017, were supervised by municipalities.

Despite delays occasioned by labour difficulties progress was maintained during the year on the Swan Street Bridge, Melbourne, for which the Country Roads Board is the constructing authority.

(b) *Receipts and Payments.* Funds created under the Act were the Country Roads Board Fund, the Loan Account and the Developmental Roads Loan Account. Particulars of the operations of these funds, together with those of the Commonwealth Aid Roads and Works Accounts, are given hereunder :—

*Country Roads Board Fund.* Fees and fines under the Motor Car Act, and all registration fees and fines for traction engines, less cost of collection of such fees and fines, are credited to this Fund. In 1949–50 drivers' licence fees, which were formerly paid into Consolidated Revenue Fund, were paid into the Country Roads Board Fund. In 1950–51, 68 per cent. of these fees was credited to the Country Roads Board Fund while 32 per cent. was credited to the Municipalities Assistance Fund. Particulars of receipts and payments connected with the Commonwealth Aid Roads and Works Acts, Commonwealth Defence Works and several other funds are not included therein (*see* next page for particulars). Receipts and payments for the years 1938–39 and 1947–48 to 1950–51 were as follows :—

(a) Figures for 1949–50 and 1950–51 are not directly comparable with those of previous years owing to a change in the method of compilation adopted by the Country Roads Board.

*Country Roads Board Loan Account.* Loans have been authorized from time to time under the Country Roads Acts for permanent works on main roads and State highways. During the year ended 30th June, 1951, receipts amounted to £715,956 and payments to £790,956. The total expenditure to 30th June, 1951 was £6,614,495.

*Developmental Roads Loan Account.* This fund was created for the purpose of constructing and maintaining subsidiary or developmental roads. Loan moneys raised were exhausted at 30th June, 1937, the total expenditure at that date being £6,425,758.

*Commonwealth Aid Roads and Works Accounts.* Revenue and expenditure in respect of the Commonwealth Aid Roads and Works Accounts, particulars of which are not included above, were as follows:—

(£.)

Item.	1938-39.	1947-48.	1948-49.	1949-50.	1950-51.
Revenue .. .. .	716,019.	993,144.	1,201,971.	1,540,233.	2,004,080.

(a) Includes amounts contributed by the Commonwealth Government under the provisions of the Commonwealth Aid Roads and Works Acts.

4. Queensland.—(i) *General.* Under the Main Roads Act 1920 a Main Roads Board was constituted, consisting of three members appointed by the Governor-in-Council. In 1925 the Board was abolished and its powers conferred upon a single Commissioner. The duties of the Commissioner are to carry out surveys and investigations necessary to determine State highways, main, developmental, secondary, mining access, farmers' and tourist roads and tourist tracks, and the responsibility for building and maintaining these declared roads is largely that of the Commissioner. Roads of purely local importance are constructed and maintained by local authorities. In many cases construction is subsidized by the State Government by means of Treasury loans. Other roads are built by the Public Estate Improvement Branch of the Lands Department in order to open up areas of previously inaccessible or undeveloped country.

(ii) *Length of Roads.* (a) *Declared Roads.* The total length of declared roads in Queensland at 30th June, 1951 was 20,916 miles, comprising State highways, 7,781 miles; main roads, 10,973 miles; developmental roads, 245 miles; secondary roads, 627 miles; mining access roads, 697 miles; farmers' roads, 290 miles; tourist roads, 301 miles; tourist tracks, 2 miles. During 1950-51, 309 miles were added to the list. The length of roads improved in Queensland from the date of commencement of work under the Main Roads Acts 1920-1943 to 30th June, 1951 was 10,446 miles (50 per cent.). At that date, also, 1,152 miles of new road construction and 931 miles of stage construction work were proceeding.

(b) *Composition of Roads.* The total length of roads and streets in Queensland at 30th June, 1951 was:—Concrete, 83 miles; bitumen, 4,326 miles; macadam, 9,430 miles; other formed, 44,102 miles; unconstructed, 73,895 miles; total, 131,836 miles.

(iii) *Main Roads Commission.* (a) *General.* During 1950-51 the Commission completed 506 miles of roads including new construction and stage construction. Bridges of all types to a length of 1,964 linear feet were constructed, bringing the total

constructed by the Commission at 30th June, 1951 to 153,337 feet. In addition, at 30th June, 1951, 1,152 feet were under construction. These figures exclude particulars of the Fitzroy River and Burdekin River bridges which are special projects.

The first of these projects is a joint operation being carried out by the Main Roads Commission and the Rockhampton City Council. The design provides for a bridge 1,210 feet long, at an original estimated cost, including approaches, of approximately £426,000, one half being financed under the terms of the Main Roads Act. The total expenditure to 30th June, 1951 was £454,159. The second project is a combined road and rail bridge over the Burdekin River, with an overall length, including approaches, of 3,620 feet, estimated to cost about £1,900,000. During 1950-51, construction was again seriously impeded by heavy rains and floods; this affected costs which at the end of the financial year totalled approximately £918,000.

(b) *Receipts and Payments.* The funds of the Main Roads Commission are obtained chiefly from motor vehicle registration and collections, fees, etc., under the Transport Acts, contributions under the Commonwealth Aid Roads and Works Acts, and loans, grants and advances from the State Government. The total receipts and payments, including amounts for defence works, during each of the years 1938-39 and 1947-48 to 1950-51 are shown below:—

5. **South Australia.**—(i) *General.* The Highways Act 1926–1949 created a Commissioner of Highways and provided for a Highways Fund. The Commissioner is virtually empowered to determine upon which main roads he will spend the moneys available; in doing which he has to take into account the availability of funds for main roads, the service the road is intended to render, and the present or future adequacy of railway facilities in the area through which it passes.

The Highways Fund is credited with the receipts from State motor taxation, fees, fines and licences, after deduction of the costs of collection, and all loans raised and appropriated for roads. All moneys received by the State from the Commonwealth under the Commonwealth Aid Roads and Works Acts are also expended by the Commissioner of Highways under the general provisions of the Highways Act.

(ii) *Length of Roads.* The total length of roads in use for general traffic at 30th June, 1948 (the latest date for which this information is available), was as follows:—Within District Council and Corporation Boundaries.—Blocks (wood or stone), 8 miles; bituminous concrete (asphalt and premix), 393 miles; cement concrete and cement penetration, 2 miles; penetration or surface dressed (bitumen or tar), 4,283 miles; metalled (gravelled or rubble), 13,429 miles; formed, but little or no metal, 8,742 miles; surveyed, used by traffic, but little or no improvement, 25,220 miles; total, 52,077 miles; Outside Districts (main roads only), 565 miles; Grand total, 52,642 miles. Lengths of main roads within district council and corporation boundaries aggregated 7,556 miles.

(iii) *State Highways and Local Government Department.* (a) *General.* The Department's programme for the acquisition of land for road improvement in the metropolitan and rural areas was continued during 1950–51 when approximately 23,000 linear feet of frontages in the metropolitan area were acquired and set back. This brought the total acquisition since the inception of the metropolitan widening scheme to 64,000 linear feet. In rural areas the policy of widening roads and improving the alignments was continued in order to provide for an expected future increase in the volume of traffic.

Construction and reconstruction works on main roads were carried out in the following areas:—Northern and Eyre Peninsula, Mid-Northern, Central, Metropolitan, Murray Lands, Upper South-Eastern and Lower South-Eastern. In other areas local authorities carried out the works under departmental supervision.

(b) *Receipts and Payments.* The following table shows particulars of receipts and payments, during the years 1938–39 and 1947–48 to 1950–51, of funds controlled by the Highways and Local Government Department. Wholly comparable figures for 1938–39 are not available.

(a) Figures for 1938-39 are not completely comparable with those for following years. (b) Roads, plant, etc. (c) Interest and sinking fund payments. (d) Not separately available; included elsewhere.

The total expenditure, both revenue and loan, by State and local governments on roads, streets and bridges in South Australia during the years 1938-39 and 1947-48 to 1950-51 was, respectively, £1,966,000, £2,341,000, £2,605,000, £3,166,000 and £3,384,000.

6. Western Australia.—(i) *General.* Under the Main Roads Act 1930-1939 the Main Roads Board previously existing was abolished and a Commissioner of Main Roads was appointed. His duties relate to the determination of main roads after consideration of the funds available and the services to be rendered by the roads, the declaration and provision of developmental roads, the construction and maintenance of main roads, and the carrying out of surveys, investigations and experiments connected with roads and road materials. The Act authorizes two trust accounts (Main Roads Trust Account and Main Roads Contribution Trust Account) to record the moneys prescribed as available to the Commissioner for expenditure associated with roads, etc. In addition, the Commissioner operates on those Trust Accounts which are used for funds made available under the Commonwealth Aid Roads and Works Acts.

(ii) *Length of Roads and Streets.* The total known lengths of roads and streets in existence in the various municipalities at 31st October, 1951 and in road districts at 30th June, 1951, were as follows:—Bituminous, 3,966 miles; gravel water-bound, 9,912 miles; other constructed surfaces, 3,833 miles; formed only, 28,680 miles; unprepared, 30,317 miles (incomplete); total 76,708 miles.

The lengths of declared roads at 30th June, 1951, were:—Main roads, 3,154 miles; developmental roads, 13,749 miles; other classified roads, 24 miles; total, 16,927 miles. No new main roads were declared during the year 1950-51.

(iii) *Main Roads Department.* During the year 1950-51 the activities of the Department included:—clearing, 1,174 miles; forming, 1,423 miles; gravelling, 799 miles; metalling, 5 miles; reconditioning, 2,291 miles; sanding, 94 miles; side drains, 101 miles. In addition, lengths of tar and bitumen work performed aggregated 258 miles. Bridges constructed numbered 25. Work progressed on the causeway over the Swan River which involves the construction of two bridges. The expenditure during the year on this structure was £196,510. At the eastern end the pier system was completed and the pile foundation system for the piers was laid at the western end of the bridge. Construction of the Marble Bar-Port Hedland and the Wyndham-Ord River-Nicholson Roads was continued during 1950-51.

(iv) *Receipts and Payments—Combined Road Funds.* The following table shows the combined transactions of the Main Roads Trust Account, the Main Roads Contributions Trust Account, the Metropolitan Traffic Trust Account, the Transport Co-ordination Trust Account in 1938-39 and the Commonwealth Aid Roads and Works Trust Accounts during the years ended 30th June, 1939 and 1948 to 1951.

(a) Figures not completely comparable with those for following years. (b) Excludes Transport Co-ordination Trust Account.

7. *Tasmania.*—(i) *General.* Under the Transport Act 1938, which came into operation on 1st July, 1939, the Transport Commission was constituted to co-ordinate, regulate, control, and improve the means of, and facilities for, transport by road, rail or air within the State. Revenues at its disposal for road and motor traffic purposes are the Commonwealth Aid Roads and Works grants, motor vehicle registration fees and tax, and licensing fees for drivers and public motor vehicles. Under the Roads and Jetties Act 1944, which provides for the classification of the whole of the roads of the State so that they will be adequately and efficiently maintained, the cost of maintenance of roads classified as State highways, tourist roads and developmental roads is borne by the Transport Commission. It is also responsible for a proportion of the cost of maintenance of main and secondary roads. Except in special cases, municipal councils bear the cost of maintaining country roads and a proportion of the cost of main and secondary roads. The cost of construction of roads and bridges in Tasmania is borne almost entirely by the State Government. The expenditure of the Public Works Department (the construction and maintenance authority for the Transport Commission) during 1950-51 on roads, tracks and bridges amounted to £1,191,154, of which £824,853 was charged to road funds, £46,175 to revenue, £320,000 to loan and £126 to Crown lands funds. The principal construction work carried out during 1950-51 consisted of reconstruction work on the Bass Highway, the Sheffield main road and the Northern Outlet Road.

As from 1st July, 1951 certain functions with respect to the construction and maintenance of roads and the vesting and control of certain plant were transferred from the Transport Commission to the Minister for Lands and Works. The existing Road Account and Commonwealth Aid Roads and Works Account in the books of the Transport Commission were closed and a new Fund—the State Highways Trust Fund—was opened in the Treasury books.

(ii) *Length of Roads.* (a) *Classified Roads.* The mileages of classified roads in Tasmania at 30th June, 1951 were as follows:—State highways, 1,165 miles; main roads, 660 miles; secondary roads, 189 miles; tourist roads, 46 miles; developmental roads, 49 miles; subsidized roads, 78 miles; total 2,187 miles. Country roads totalled more than 10,000 miles. The mileages of sealed roads, and their proportions to the respective totals, were:—State highways, 550 miles (47 per cent.); main roads, 154 miles (23 per cent.); secondary roads, 10 miles (5 per cent.); total, 714 miles (33 per cent. of all classified roads, and 6 per cent. of all roads, in Tasmania).

(b) *Composition of Roads.* The length of all roads in Tasmania, including those with surfaces of lower grade, at 30th June, 1951 was as follows:—Sheet asphalt on concrete base, 1 mile; other bituminous, 914 miles; concrete, 8 miles; granite, limestone, etc., water-bound, 8,559 miles; surfaces of lower grade, 2,787 miles; total, 12,269 miles.

(iii) *Receipts and Payments—Combined Road Funds.* The table hereunder shows particulars of the receipts and payments of combined Road Funds and Commonwealth Aid Roads and Works Funds under the control of the Transport Commission for the years 1939-40 and 1947-48 to 1950-51:—

## ROAD FUNDS, TASMANIA : RECEIPTS AND PAYMENTS.

**S. Summary of Roads used for General Traffic.—(i) Proclaimed or Declared Roads.** The table hereunder is a summary of the roads proclaimed or declared under the Acts of the several States relative to the operations of the central road authorities, and shows the lengths of various classes proclaimed or declared as at 30th June, 1951. These proclaimed or declared roads are those for which the central road authority assumes responsibility under the Act for the whole, or a proportion, of the cost of construction and/or maintenance, the extent varying from State to State and with the class and locality of the roads. Before proclamation of a main road, consideration is given, in general, to the following points:—availability of funds; whether the road is, or will be, within one of several classes of main trunk routes; whether the district is, or will be, sufficiently served by railways. Provision is also made in some States for the declaration of roads other than main. The absence of a particular class from the following data for any State does not necessarily imply that there are no roads within that State that might be so classified; the classes are restricted only to roads proclaimed or declared under the Acts. A further point to make is that, through various causes, e.g. insufficiency of funds, manpower or materials, etc., construction or maintenance may not keep pace with gazettals of mileages, and that therefore the condition of a road may not match its status.

**PROCLAIMED OR DECLARED ROADS : LENGTHS, 30th JUNE, 1951.**  
(Miles.)

(a) At 30th June, 1948. (b) Forest roads. (c) Includes mining access roads, 697 miles; farmers' roads, 290 miles; tourist tracks, 2 miles. (d) Subsidized roads.

(ii) *Composition of Roads.* The following table represents an attempt to classify all the roads used for general traffic in Australia, at the latest dates available, according to States and Territories and to certain broad composition groups. The results are not entirely satisfactory, (i) because it is doubtful whether the whole of Australia is covered, (ii) because the dates of reference differ, and (iii) because the figures constituting each group are not wholly comparable for the States and Territories. It is hoped, however, despite these defects, that the table will provide an approximate and general idea of the main types of roads in Australia.

The data in the table for the States are obtained from the State Government Statisticians, and are derived mainly from local government sources. Unincorporated areas in some States are probably excluded and the figures on the returns supplied by the local government authorities are in some cases of doubtful accuracy. Details of the composition of roads, as far as they are available, vary to such an extent that it was considered preferable to show here only major divisions.

Groups 1-4 as shown in the table include, respectively, the following types of composition :—

1. *Wood or Stone.* Wood blocks ; stone paved.
2. *Concrete.* Cement concrete ; asphaltic concrete ; bituminous concrete ; sheet asphalt on concrete base.
3. *Bituminous.* Tar or bituminous macadam ; tar and bituminous surface seal ; surfaced water-bound macadam or gravel ; bituminous or cement penetration.
4. *Macadam and Other.* Water-bound macadam ; granite, limestone, and blast-furnace slag, water-bound ; gravel water-bound ; gravel or crushed rock ; metallised (gravel or rubble) ; gravel, sand and hard loam pavements.

Groups 5 and 6 include roads so-called mainly because they are used for general traffic, irrespective of their surfaces, prepared or otherwise.

It will be noticed that some of the terms used above are practically synonymous. Such terms are, of course, not used by any one State, but are the classifications adopted by different States.

For details of any particular State, see the respective paragraphs in the preceding pages.

**ALL ROADS USED FOR GENERAL TRAFFIC : LENGTHS.**

(a) Municipalities, 31st October and Road Districts, 30th June.

(b) Estimated dissection.

It will be seen from the foregoing table that a little more than one-quarter of the road lengths of Australia has actually been constructed, the remainder, for the greater part, being in little more than the natural state. The percentages for each group are as follows :—Group 1, 0.01 ; Group 2, 0.28 ; Group 3, 6.63 ; Group 4, 21.65 ; Group 5, 27.86 ; Group 6, 43.57. The percentage of constructed lengths to total length in each State is as follows :—New South Wales, 37 ; Victoria, 39 ; Queensland, 10 ; South Australia, 34 ; Western Australia, 23 ; Tasmania, 77 ; Northern Territory, 13 ; Australian Capital Territory, 57. Comparisons between the States should be made with caution, however, because, in addition to the defects enumerated at the beginning of this section, factors such as the area, physiography, density and distribution of population, nature of economic activity, other facilities for transport, etc., in each State must be taken into account.

9. **Summary of Expenditure on Roads and Bridges.**—(i) *General.* Figures showing the total expenditure on roads and bridges in all States are not available. Such totals are very difficult to obtain, not only because of the number of States, but also because of the number of authorities concerned. In most States there are three classes of authorities—the State Government, the central road authority, and the numerous local

government bodies. Both State Government and local government bodies operate through revenue and loan funds, and payments may be made by the State Government direct from either fund, or through the funds of other authorities. The expenditure of the central road authority may also be direct or indirect. Consequently the problem of duplication caused by inter-fund payments arises. On the other hand, some expenditure may be omitted because separate particulars are not available. Ignorance of the precise nature of items may cause either incorrect inclusion or omission. To produce accurate figures would entail more research than at present can be undertaken.

The two paragraphs following therefore represent only: (a) aggregate expenditure from the various State road funds referred to in the foregoing pages, and (b) loan fund expenditure by State Governments. No direct expenditure by local government bodies is included. Paragraph 2. Finances, of § 2, Local Government Authorities, contains some particulars of local government revenue and expenditure in connexion with roads, streets and bridges (see pages 563 and 566).

(ii) *Aggregate Expenditure from State Road Funds.* The following table shows the expenditure on the construction and maintenance of roads, including payments to local government bodies, by each State during the years 1938-39 and 1946-47 to 1950-51, as summarized from the foregoing sections. Expenditure on administration, debt charges, Commonwealth defence works, payments to State consolidated revenues, and on plant and materials is not included. In some instances expenditure on works other than roads and bridges is included. Figures are not completely comparable as between States, and, in some States, as from year to year.

**ROADS AND BRIDGES : AGGREGATE EXPENDITURE FROM ROAD FUNDS.**  
( £'000.)

Year ended 30th June—	N.S.W.(a) (b)	Victoria.(b)	Q'land.	S. Aust.	W. Aust.	Tasmania.	Total.
1939 ..	3,257	2,099	2,405	692	1,067	(c) 272	9,792
1947 ..	3,305	1,976	2,613	851	791	566	10,102
1948 ..	3,886	3,113	3,939	1,314	1,267	675	13,294
1949 ..	4,224	2,601	2,708	1,499	1,614	621	13,267
1950 ..	5,160	3,143	3,212	2,067	1,872	791	16,245
1951 ..	6,063	5,333	4,380	2,174	2,628	1,277	21,855

(a) Excludes Sydney Harbour Bridge.

(b) Excludes Swan Street Bridge.

(c) Year 1939-40.

The foregoing particulars do not represent the total expenditure on roads and bridges in each State. To obtain such information additions must be made on account of (a) State Government expenditure from revenue and loan through Departments or authorities other than the Central Road Authority and (b) local government expenditure from revenue and loan, while, on the other hand, allowances must be made for inter-fund payments (see (i) above.)

(iii) *State Net Loan Expenditure.* In recent years, expenditure from State loan funds on roads and bridges has not been large, and it would appear, also, that a considerable proportion passes through the funds of the central road authorities and is therefore included in the figures of their financial operations in the foregoing sections. Gross loan expenditure by all State Governments during 1950-51 amounted to about £2,000,000, and net expenditure to about £300,000 less. Aggregate net loan expenditure on roads and bridges in each State to 30th June, 1951 amounted to the following approximate sums:—New South Wales, £21,000,000; Victoria, £14,000,000; Queensland, £9,000,000; South Australia, £4,000,000; Western Australia, £3,000,000; Tasmania, £7,000,000; total, £58,000,000.

## § 5. Water Supply, Sewerage and Drainage.

NOTE.—See also Chapter XXVI.—Water Conservation and Irrigation.

1. New South Wales.—(i) *General.* The largest two domestic water supply and sewerage systems are controlled by statutory boards each consisting of a president and a vice-president appointed by the State Government and five members elected by local councils. These are (a) the Metropolitan Water, Sewerage and Drainage Board, which administers the systems in the County of Cumberland, i.e., in Sydney and in the surrounding districts, and, in addition, has jurisdiction over territory extending along the South Coast beyond Wollongong to Lake Illawarra, and (b) the Hunter District Water Board, serving the Newcastle area. At Broken Hill a similar board includes a representative of the mining companies. Other systems, apart from irrigation projects and water storage systems administered by the State Government, are controlled by county, municipal and shire councils.

(ii) *Water Supply—to 30th June, 1951.* (a) *Metropolitan.* The storage reservoirs of the metropolitan system, with a combined available capacity of 125,144 million gallons, drain catchment areas of 376 square miles (Upper Nepean, 347 square miles and Woronora, 29 square miles). Water is drawn also from the Warragamba River, with a catchment of 3,383 square miles. This system is being developed, and building has commenced on a dam to have an overall height of 415 feet (greatest depth of water 340 feet) having a storage capacity of 460,000 million gallons and giving a safe draught of 285 million gallons per day. The existing temporary storage is supplied by a weir 50 feet high with a maximum storage of 579 million gallons. At 30th June, 1951 there were 102 service reservoirs in use with a combined capacity of 542.8 million gallons. Rating for water for 1950–51 was 9½d. in the £1 of assessed annual value and the charge for water measured by meters 1s. 6d. per 1,000 gallons.

(b) *Newcastle.* The water supply is drawn from two sources (1) the Chichester Reservoir, with a storage capacity of about 5,000 million gallons and draining a catchment of 76 square miles, and (2) the Tomago Sandbeds, which extend northerly along the coast towards Port Stephens. Service reservoirs and tanks distributed throughout the Water Supply District have a total storage capacity of 106 million gallons. Water rating for 1950–51 was 1s. 3d. in the £1 on assessed annual value. The price of water to domestic and industrial consumers is 1s. 6d. per 1,000 gallons.

(c) *Water Supplied, etc.* The following tables show, for the Sydney and Newcastle systems, the number of properties, the estimated population supplied, and other details for the years 1938–39 and 1946–47 to 1950–51 :—

## WATER SUPPLY, SYDNEY(a) : SERVICES.

1950-51..	65,445	261,780	22.3	8,131	340	85.1	1,234

(iii) *Sewerage and Drainage*—to 30th June, 1951. (a) *Metropolitan*. The Sydney sewerage systems consists mainly of outfall systems discharging into the Pacific Ocean. At 30th June, 1951 there were six outfalls and six treatment works, serving a population of 1,380,000 over a length of sewers of 2,951 miles.

Stormwater drainage channels under the Metropolitan Water, Sewerage and Drainage Board's control at the same date were 173 miles long. Sewerage rating for 1950-51 was 9 $\frac{3}{4}$ d. in the £1 of assessed annual value and drainage from  $\frac{1}{4}$ d. to 3d.

(b) *Newcastle*. The main sewerage system of the Newcastle area discharges into the Pacific Ocean at Merewether Gulf. In some of the outlying districts treatment works have been installed.

Sewerage rates for 1950-51 were 1s. 3d. in the £1 of assessed annual value and drainage rates (on certain areas served) 2d. in the £1.

(c) *Particulars of Services*. The following table supplies, for the Sydney system, details of sewerage services and stormwater drains as at 30th June, 1939 and 1947 to 1951.

SEWERAGE AND DRAINAGE, SYDNEY(a) : SERVICES.

At 30th June—	Improved Properties for which Sewer Available.	Estimated Population Served.	Total Sewage Pumped for the Year.	Length of Sewers.	Length of Storm- water Channels.
1939 .. .. .	254,632	1,066,000	8,299	2,561	87

NOTE.—See footnotes to previous table.

(v) *Country Water Supply and Sewerage Systems.* At 31st December, 1950, country water supply services were conducted or under construction by 67 municipalities, 55 shires and 6 county councils, and country sewerage services by 57 municipalities and 16 shires. The capital indebtedness of these schemes was £9,777,692 at 31st December, 1950, namely, £6,426,228 for water and £3,351,464 for sewerage. Of the foregoing amounts, Government advances amounted to £373,063. Debt of the municipalities amounted to £6,465,903, shires to £1,592,113 and county councils to £1,719,676. Aggregate income and expenditure, respectively, amounted to £1,385,415 and £1,145,501 in 1950.

(vi) *Other Water Supply and Sewerage Systems.* The water supply and sewerage services for Broken Hill are operated by a statutory board, the Broken Hill Water Board. Its capital indebtedness at 31st December, 1951 was £1,590,996. Income and expenditure, respectively, were £139,309 and £194,693 for 1951 and £117,977 and £134,482 for 1950.

The following country water supply systems—South-West Tablelands, Junee and Fish River—are administered by the Department of Public Works. These supply water in bulk to municipalities and shires, the Railways Department, and other large consumers; only a small quantity is sold directly to private consumers. The capital indebtedness of these systems was £2,475,506 at 31st December, 1951.

There are also the Mulwala Water Supply and Sewerage Service constructed as an urgent war-time work for the Commonwealth, and the Bethunga Water Supply System administered by the Department of Public Works in conjunction with the Junee supply.

2. *Victoria.*—(i) *Melbourne and Metropolitan Board of Works—to 30th June, 1951.*

(a) *General.* The metropolis, for water supply, sewerage and drainage and river improvement purposes, comprises all that land within a radius of 13 miles of the Post Office at the corner of Bourke and Elizabeth Streets, Melbourne, and the remaining portions of the Cities of Moorabbin, Mordialloc, and Nunawading and the shire of Mulgrave and certain portions of the remainder of the Shires of Eltham, Doncaster and Templestowe, and Dandenong, but excludes a portion of the Shire of Werribee within such radius. This territory has an area of 450 square miles and comprises 27 cities and one shire and parts of one other city and 9 other shires. The Board comprises 48 members, including the chairman, who is elected every four years by the other members. These members, or commissioners, are from time to time elected by the councils of the municipal districts wholly or partly within the metropolis. The principal functions of the Board are to control and manage the metropolitan water supply system; to provide the metropolis with an efficient system of main and general sewerage; to deal with main drains and main drainage works; and to control and manage the rivers, creeks and watercourses within the metropolis.

(b) *Water Supply.* There are five storage reservoirs serving the metropolitan area—Yan Yean, 7,234 million gallons (available for consumption, 6,605 million gallons); Toorourrong, 60 million gallons; Maroondah, 6,274 million gallons (4,855 million gallons); O'Shannassy, 930 million gallons; Silvan, 8,853 million gallons (8,823 million gallons); total 23,351 millions gallons (21,723 million gallons). Service reservoirs number 25, with a total capacity of 262 million gallons. Two new projects are under construction. One is a 23-mile conduit to carry water from the Upper Yarra catchment to the Silvan Reservoir and its estimated cost is £2,697,000. Up to 30th June, 1951, about 9 miles of the pipe-line had been laid. The other project, approved by the Board in 1946, consists of a dam, 280 feet high, which will impound 40,000 million gallons of water, on the River Yarra, immediately upstream from the confluence of the Yarra and Doctors Creek, and work on the project is proceeding. In 1951 it was estimated to cost £8,600,000.

The water rate levied by the Board in 1950-51 was 7d. in the £1 on the net annual value of the property served, and from 1st July, 1950, the charge for water supplied by measure in excess of the quantity which, at 1s. per 1,000 gallons, would produce an amount equal to the water rate payable on the property, was increased from 1s. to 1s. 3d. The following table shows particulars of Melbourne metropolitan water supply services for the years 1938-39 and 1946-47 to 1950-51.

## WATER SUPPLY, MELBOURNE : SERVICES.

Year.	Number of Houses Supplied.	Estimated Population Supplied.	Average Daily Consumption.	Total Consumption for the Year.	Average Daily Consumption.		Length of Aqueducts, etc., Mains and Reticulation.	Number of Meters.
					Per House.	Per Head of Estimated Population.		
1938-39	285,408	1,133,000	Mill. gals. 66.9	Mill. gals. 24,408	Gallons. 234	Gallons. 59.0	Miles. 3,234	189,617
1946-47	312,735	1,242,000	87.9	32,092	281	70.8	3,594	218,744

The metropolitan sewerage system consists of the Main system (serving an area of 67,433 acres) and three subsidiary systems—the Sunshine system (serving an area of 941 acres in the Shire of Braybrook, including the township of Sunshine), the Kew system (serving an area of 103 acres in Kew) and the South-eastern system (serving an area of 2,292 acres in Cheltenham, Parkdale, Mentone and Mordialloc). The Metropolitan Sewage Farm, 26,057 acres in extent and situated about 24 miles south-west of Melbourne beyond the township of Werribee, serves to purify and dispose of approximately 95 per cent. of the sewerage flow of the metropolis before its discharge into Port Phillip Bay. The total capital cost (less depreciation) to 30th June, 1951 was £2,080,664. Revenue during 1950-51 amounted to £104,554, cost of sewage disposal £127,929, trading expenses £85,707, interest £75,196, and net cost of sewage purification £184,278. These financial particulars are included in the sewerage items of the summary below.

At 30th June, 1951, the Melbourne and Metropolitan Board of Works had 128 miles of main drains under its control—108 miles of underground, 11 miles of constructed open drains, and 8 miles of natural watercourses and unlined open drains.

(d) *Finances.* The following table provides a summary, for the year 1950-51, of the financial operations of the three services conducted by the Melbourne and Metropolitan Board of Works.

MELBOURNE AND METROPOLITAN BOARD OF WORKS: FINANCES, 1950-51.  
(£.)

Service, etc.	Capital Cost.(a)	Revenue.	Expenditure.				Surplus (+) or Deficit (-).

(ii) *Geelong Waterworks and Sewerage Trust.* (a) *General.* The Geelong Waterworks and Sewerage Trust was constituted in 1908 and reconstituted under the Geelong Waterworks and Sewerage Act in 1910. It was further reconstituted in September, 1950 to include a Government nominee (Chairman) and provision was made for a commissioner to be elected by the ratepayers of the Shire of Corio, making a total of seven commissioners instead of five as formerly. The amount of loan money which may be raised is limited to £900,000 for water supply undertaking, £760,000 for sewerage undertaking, and £270,000 for sewerage installation to properties under the deferred payment system. The population supplied is estimated by the Trust at 60,400. This and other general information relates to 30th June, 1951.

(b) *Water Supply.* The catchment area is about 16,900 acres. There are five storage reservoirs and nine service basins whose total storage capacity is 2,746 million gallons. In addition, the State Rivers and Water Supply Commission has made available a supplementary supply of a minimum quantity of 545 million gallons of water per annum from the Bellarine Peninsula System. The total expenditure on water supply to 30th June, 1951 was £888,167. Expenditure for 1950-51 comprised £46,762 on working expenses and £45,508 on interest, sinking fund and reserves, and the revenue for the year 1950-51 was £93,227. The sinking fund appropriations at June, 1951 amounted to £122,727. The replacement and contingencies reserve amounted to £183,354. There is a water rate of 1s. 4d. in the £1 (with minima of 5s. for unbuilt-on land and £1 for tenements) on the net annual value of ratable properties.

(c) *Sewerage Works.* The sewerage scheme consists of a main outfall sewer to the ocean at Black Rock, about 9 miles from Geelong, and 152 miles of main and reticulation sewers. The sewerage area is 9,638 acres, and the number of buildings within the

sewered areas is 14,060 of which 14,058 have been connected. The number of buildings within the drainage area is 14,998. The total expenditure to 30th June, 1951 on sewerage works was £674,242, and on the cost of sewerage installation under deferred payment conditions £258,344, of which £515 was outstanding. The revenue in 1950-51 amounted to £59,926 and the expenditure comprised £22,013 on working expenses and £36,632 on interest, sinking fund and reserves. Sinking fund appropriations at June, 1951 were £108,507. Replacement and contingencies reserve amounted to £155,964. A general rate of 1s. 3d. in the £1 is levied on the net annual value of ratable properties.

(iii) *The Ballarat Water Commission and the Ballarat Sewerage Authority.* (a) *General.* The Ballarat Water Commission was constituted on 1st July, 1880, and the Ballarat Sewerage Authority on 30th November, 1920. The members of the Water Commission constitute the Sewerage Authority. The Commissioners number seven, three (one of whom is chairman) being appointed by the Government, and four being elected by the Council of the City of Ballarat. General and financial information relates to the year ended 31st December, 1951.

(b) *Water Supply.* The Water Supply District embraces an area of about 65 square miles, containing a population of about 50,000. The total storage capacity of the six reservoirs is 2,332 million gallons and the catchment area is 17,545 acres.

The capital cost of construction of the waterworks was £2,034,695 to 31st December, 1951. The liabilities are loans due to the Government, amounting to £1,078,920 at 31st December, 1951. The revenue for the year 1951 was £79,737. Working expenses during 1951 amounted to £32,021 and interest and other charges to £47,038. A rate of 1s. 3d. in the £1 is levied on the net annual value of all ratable properties, with a minimum of 15s. per annum for land on which there is a building or water supply.

(c) *Sewerage.* The Ballarat sewerage district embraces the City of Ballarat and part of the Shire of Ballarat. Work was commenced in 1922 and up to 31st December, 1951 the Authority had constructed a disposals works, an ejector station and more than 100 miles of sewers. The capital cost of sewerage construction works to 31st December, 1951 was £571,204. The method of sewerage disposal is by sedimentation, oxidation and sludge digestion. One hundred and twenty-two sewered areas had been declared as at 31st December, 1951. Assessments in the sewerage district numbered 14,206, while those in sewered areas numbered 11,333. There were 9,741 buildings connected.

The scheme is financed by debenture-issue loans from various financial institutions. The liabilities on account of loans secured for construction at 31st December, 1951 amounted to £457,526, redemption payments at that date totalling £169,963. An expenditure of £157,122 was incurred for house connexions, the whole of which has been redeemed. Revenue during 1951 amounted to £48,829 and expenditure, including £27,288 on interest and redemption, to £47,702.

A general rate of 1s. 5d. in the £1 is levied on the net annual value of all properties within the drainage area.

(iv) *Sewerage Authorities.* At 30th June, 1951, 57 sewerage authorities had been constituted under the provisions of the Sewerage Districts Acts in districts outside the areas under the control of the Melbourne and Metropolitan Board of Works and the Geelong Waterworks and Sewerage Trust, and systems were in operation in 28 districts (including three partly operating) serving a population of 182,400 persons.

In addition, sewerage authorities were constituted in a further 29 districts at this date, but their operations had either been suspended or had not commenced.

(v) *Water Supply in Country Towns and Districts.* Most of the country waterworks are controlled by the State Rivers and Water Supply Commission, but in some instances the control is by waterworks trusts or by municipal corporations.

The waterworks controlled by the State Rivers and Water Supply Commission at 30th June, 1951 included 35 large reservoirs and 238 subsidiary reservoirs and service basins with a total storage capacity of 537,906 million gallons (1,975,780 acre feet). Length of channels was 15,305 miles (irrigation, 4,708 miles, domestic and stock, 8,514 miles, drainage and flood protection, 2,083 miles) and of pipe lines 1,180 miles. The quantity of water delivered to water users during 1950-51 was 684,887 acre feet. The Commission administered 68 rural districts during 1950-51 (28 irrigation districts, 35 waterworks districts, 4 flood protection districts and 1 drainage district), and the reticulated pipe supplies for domestic and industrial purposes in 130 urban districts. In addition, 121 urban districts were administered by waterworks trusts and 15 by local governing bodies. The population served in these groups of urban districts numbered, respectively, 152,320, 248,530 and 85,450 persons. The table below is a summary of the Commission's finances for operations in districts under its control for the years 1938-39 and 1946-47 to 1950-51 :-

STATE RIVERS AND WATER SUPPLY COMMISSION, VICTORIA : FINANCES.(a)  
(£.)

Year.	Total Loan Capital Expenditure to 30th June.	Receipts.	Payments.				Total.
			Operating Expenses.	Interest on Capital Allotted.	Depreciation.	Redemption.	
1938-39 ..	24,223,037	560,680	476,085	145,105	27,553	4,922	653,665

1950-51 ..	41,318,382	1,592,333	1,810,264	37,950	97,425	1,383	1,947,022

(a) Excludes Waterworks and River Improvements Trusts and Local Governing Bodies.

The total loan capital expenditure of waterworks and river improvements trusts and local governing bodies at 30th June, 1951 was £6,496,772, making a grand total of £47,815,154 when added to the figure for works under the control of the Commission. The net loan capital after redemption payments of £1,686,552 was £46,128,602.

The financial operations of the State Rivers and Water Supply Commission form part of Consolidated Revenue Fund; but are included in this section for convenience. The major proportion of the interest payable is borne by the State and is additional to that shown above. The net expenditure borne by the State during 1950-51 was £1,641,456.

3. Queensland.—(i) *Brisbane City Council—to 30th June, 1951.* (a) *General.* This organization conducts the water supply and sewerage systems of the City of Greater Brisbane. Prior to 1928, water and sewerage activities had been controlled by the Metropolitan Water and Sewerage Board, but were then absorbed by the Brisbane City Council, which also supplies, in bulk, the whole of the water used by the City of Ipswich and the Town of Redcliffe.

(b) *Water Supply.* Water storage facilities comprise the following (available capacities are shown in parentheses):—Somerset Reservoir, 32,000 million gallons (32,000 million gallons); Lake Manchester, 5,806 million gallons (5,725 million gallons); Brisbane River, 543 million gallons (484 million gallons); Pure Water Reservoir, Holt's Hill, 8.3 million gallons (8.3 million gallons); Enoggera Reservoir, 1,000 million gallons (631 million gallons); Gold Creek Reservoir, 407 million gallons (400 million gallons). There are eleven service reservoirs with a capacity of approximately 35.9 million gallons. The Somerset reservoir is under the control of Stanley River Works Board and is a

dual purpose project with a designed total holding capacity of 200,000 million gallons, 55,000 million gallons to be for water storage and 145,000 million gallons for flood mitigation. Water rating at 30th June, 1951 was 5d. in the £1 of unimproved capital value for improved properties, and 3d. in the £1 for vacant lands, with a minimum of £3 10s. and £2 6s. 8d. respectively. The following table is a summary of operations of the complete Brisbane City Council system (metropolitan area, Ipswich and Redcliffe) for the years 1938-39 and 1946-47 to 1950-51 :—

## WATER SUPPLY, BRISBANE(a) : SERVICES.

(a) Includes Ipswich and Redcliffe.

(b) Not available.

(c) *Sewerage.* The sewage treatment works are situated at Luggage Point on the north bank at the entrance to the Brisbane River. The treatment plan is the activated sludge system, but this has not been put into operation, and since the commencement of pumping operations in 1923 a sedimentation plant only has been used. Sewerage rating at 30th June, 1951 was 4½d. in the £1 of unimproved capital value for improved properties, and 3½d. in the £1 for vacant lands, with a minimum of £3 15s. and £3 5s. respectively. The following table is a summary of operations of the Brisbane sewerage scheme for the years 1938-39 and 1946-47 to 1950-51 :—

## SEWERAGE, BRISBANE : SERVICES.

Year.	Premises Connected.	Estimated Population Served.	Total Sewage Pumped for the Year.	Length of Main, Branch, Reticulation, etc., Sewers.
1938-39	No. 33,248	149,616	Mill. gals. (a)	Miles. 484
1946-47	42,246	173,209	4,539	549
1947-48	43,485	178,289	4,696	567
1948-49	44,901	184,094	4,697	580
1949-50	46,330	189,953	4,967	590
1950-51	47,808	196,013	5,351	608

(a) Not available.

(d) *Finances.* The following table shows particulars of the finances of the water supply and sewerage undertakings of the Brisbane City Council for the years 1938-39 and 1946-47 to 1950-51:—

## WATER SUPPLY AND SEWERAGE, BRISBANE: FINANCES.

(£.)

Service and Year.	Gross Capital Cost.	Revenue.	Expenditure.			Surplus(+) or Deficit(-).
			Working Expenses.	Interest Redemption, etc. Charges.	Total.	
<i>Water Supply—</i>						
1938-39 .. ..	4,849,732	606,244	129,219	280,827	422,366	+ 183,878
1946-47 .. ..	6,906,676	744,989	225,343	315,595	596,948	+ 148,041

1949-50 .. ..	8,117,835	412,833	87,100	264,972	379,299	+ 33,534
1950-51 .. ..	8,821,671	483,854	105,928	313,308	472,725	+ 11,129

(ii) *Country Towns.* (a) *Water Supply.* In addition to the City of Brisbane there were, at 30th June, 1951, 97 cities and towns in Queensland provided with water supply systems controlled by municipal and shire councils.

(b) *Sewerage Systems.* At 30th June, 1951, there were 13 cities and towns outside the metropolitan area—Bundaberg, Charleville, Cunnamulla, Goondiwindi, Hughenden, Ipswich, Mackay, Maryborough, Quilpie, Rockhampton, Toowoomba, Townsville and Warwick—with sewerage systems. A sewerage system was in course of construction in Mt. Isa.

(c) *Finances.* The receipts (other than loan) of water undertakings controlled by the cities and towns referred to above amounted to £731,289 in 1950-51. Expenditure amounted to £761,289, including £246,073 for debt charges. In addition, loan expenditure amounted to £488,702.

Finances of sewerage undertakings are incorporated in council general funds and are not available separately.

4. *South Australia.*—(i) *General.* The water supply and sewerage systems in this State were constructed and are maintained by the Engineering and Water Supply Department under the control of the Minister of Works. The works controlled comprise the Adelaide, Barossa, Baroota Creek, Beetaloo, Bundaleer, Tod River, Warren and other country water districts systems, the Morgan-Whyalla water supply system, the Adelaide metropolitan sewerage system, the Murray River Weirs, water conservation, and the Metropolitan Flood Waters Scheme.

(ii) *South Australian Waterworks. (a) Services.* The table hereunder shows particulars of the area, capacity, etc. of combined metropolitan and country waterworks for the years 1938-39 and 1946-47 to 1950-51 :—

**WATERWORKS, SOUTH AUSTRALIA : SERVICES.**

Year.	Assessments.(a)		Area of Districts Supplied. (a)	Capacity of Reservoirs, Tanks, etc.	Length of Mains.	Number of Meters.
	Number.	Annual Value.				
1938-39 ..	185,625	£ 6,302,445	Acres. 11,857,968	Mill. gals. 23,814	Miles. 6,384	97,074
1946-47 ..	198,952	7,190,146	11,932,461	23,920	6,927	103,514
1947-48 ..	203,422	7,405,970	11,953,022	23,927	6,997	104,726
1948-49 ..	206,904	7,694,428	11,953,235	23,941	7,056	104,649

1950-51 ..	216,989	8,556,078	11,968,452	23,943	7,203	109,433

(a) Excludes Morgan-Whyalla Water Supply—water sold by measure.

(b) *Finances.* Figures for 1938-39 and 1946-47 to 1950-51 are shown in the following table.

**WATERWORKS, SOUTH AUSTRALIA : FINANCES.**

(£.)

Year.	Invested Capital.	Revenue.	Expenditure.			Surplus (+) or Deficit (-).
			Working Expenses.	Interest and Sinking Fund.	Total.	
1938-39 ..	14,649,052	654,688	242,528	651,972	894,500	— 239,812
1946-47 ..	19,577,522	856,733	542,203	676,604	1,218,807	— 362,074
1947-48 ..	20,229,154	935,693	588,703	680,550	1,269,253	— 333,560
1948-49 ..	20,399,213	978,339	670,447	695,547	1,365,994	— 387,655
1949-50 ..	21,247,004	1,016,078	817,696	705,700	1,523,396	— 507,318
1950-51 ..	22,602,531	1,098,360	1,068,102	720,250	1,788,352	— 689,992

(iii) *Adelaide Waterworks.* At 30th June, 1951 the Adelaide waterworks supplied a district of 144,402 acres. The capacity of its five reservoirs was 14,466 million gallons and there were 1,682 miles of mains.

Two major projects are in hand—(i) the construction of a large reservoir on the South Para River to provide additional storage to serve the lower northern areas of the State and to make some additional provision for the metropolitan area, and (ii) bringing River Murray water into Adelaide to supplement the metropolitan and Warren system areas and to serve country areas en route. The capacity of the new reservoir will be about 10,000 million gallons and the pipeline from the Murray near Mannum will deliver about 12,000 million gallons per annum.

Particulars of finances for the years 1938-39 and 1946-47 to 1950-51 are shown below :—

**ADELAIDE WATERWORKS : FINANCES.**

(£.)

Year.	Invested Capital.	Revenue.	Expenditure.			Surplus (+) or Deficit (-).
			Working Expenses.	Interest and Sinking Fund.	Total.	
1938-39 ..	4,676,110	446,459	111,347	202,279	313,626	+ 132,833
1946-47 ..	6,018,680	521,962	209,107	200,105	409,212	+ 112,750
1947-48 ..	6,253,146	574,687	211,450	203,510	414,960	+ 159,727
1948-49 ..	6,248,465	607,718	246,951	210,898	457,849	+ 149,869
1949-50 ..	6,665,805	630,765	310,382	218,737	529,119	+ 101,646
1950-51 ..	7,814,093	680,275	400,600	230,821	631,421	+ 48,854

(iv) *Adelaide Metropolitan Sewerage.* The Adelaide metropolitan sewerage system, comprising the Adelaide, Glenelg and Port Adelaide areas, with drainage areas of 94 square miles in all, includes a sewage farm, and treatment works at Glenelg and Port Adelaide. The total quantity of sewage pumped by the various stations was 3,272 million gallons during 1950-51 as compared with 2,713 million gallons during 1949-50. Other particulars for 1938-39 and 1946-47 to 1950-51 are shown hereunder :—

**ADELAIDE METROPOLITAN SEWERAGE : SUMMARY.**

Year.	Length of Sewers.	Number of Con-nexions.	Invested Capital.	Revenue.	Expenditure.			Surplus (+) or Deficit (-).
					Working Expenses.	Interest and Sinking Fund.	Total.	
	Miles.		£	£	£	£	£	£
1938-39 ..	923	80,745	3,361,034	268,880	77,023	150,273	227,296	+ 41,584
1946-47 ..	1,008	93,440	4,034,770	307,215	135,868	144,702	280,570	+ 26,645
1947-48 ..	1,025	96,057	4,176,725	319,078	159,509	145,732	305,241	+ 13,837
1948-49 ..	1,048	98,948	4,324,787	333,572	182,874	148,754	331,628	+ 1,944
1949-50 ..	1,092	102,782	4,629,510	352,631	209,410	154,959	364,369	- 11,738
1950-51 ..	1,133	107,634	4,855,351	371,835	255,009	160,253	415,262	- 43,427

(v) *Country Water Supply.* Water district systems outside Adelaide at 30th June, 1951 comprised an area of 11,812,939 acres, and the capacity of the reservoirs was 9,433 million gallons. These figures exclude the Morgan-Whyalla supply system, which obtains its water from the River Murray. The storage tanks of this system had a capacity of 44 million gallons.

Construction work is proceeding on the scheme for the augmentation of the Tod River District supplies, and for the supply of other areas not already served, by utilizing water from the Uley-Wanilla sub-artesian basin. During 1950-51, 347 million gallons were pumped from the basin, meeting all the needs of Port Lincoln and augmenting the reservoir. At 30th June, 1951, £4,153,260 had been invested in the Tod River District.

At the request of the Commonwealth, the Engineering and Water Supply Department undertook the construction above ground of a 10-in. pipeline, together with service reservoirs, pumping stations, etc., from Port Augusta to the Guided Missile Range at Woomera, a distance of about 110 miles. This project was completed in June, 1949.

To bring a permanent supply of water to the Yorke Peninsula, contracts were let for 76 miles of steel pipes for the enlargement of the main between the Bundaleer and Clinton Reservoirs, but shortage of steel plate has delayed progress.

The following table gives financial information on country waterworks for 1938-39 and 1946-47 to 1950-51 :—

**COUNTRY WATERWORKS, SOUTH AUSTRALIA : FINANCES.(a)**  
(£.)

Year.	Invested Capital.	Revenue.	Expenditure.			Surplus (+) or Deficit (-).
			Working Expenses.	Interest.	Total.	
1938-39 ..	10,015,613	207,569	130,523	449,691	580,214	— 372,645
1946-47 ..	11,231,493	244,495	307,379	394,392	701,771	— 457,276
1947-48 ..	11,643,730	270,738	337,557	395,246	732,803	— 462,065
1948-49 ..	11,616,857	286,646	395,717	402,809	798,526	— 511,880
1949-50 ..	12,056,803	298,256	508,759	405,355	914,114	— 615,858
1950-51 ..	12,289,918	319,396	647,994	407,810	1,055,804	— 736,408

(a) Excludes Morgan-Whyalla system.

(vi) *Morgan-Whyalla Water Supply Scheme.* This scheme, which involved the laying of 223 miles of main, was officially opened on 31st March, 1944, the capital invested to 30th June, 1951 being £2,498,520. Particulars of this scheme, where applicable, are included in the tables of the combined waterworks in (ii) above. During 1950-51 the water used from the system between Hanson and Whyalla amounted to 1,480 million gallons. Revenue for the year 1950-51 was £228,958, working expenses, etc. £149,777, interest charges, £81,619 and deficit, £2,438.

5. **Western Australia.**—(i) *General.* The water supply and sewerage systems of Western Australia are principally under the management of Government Departments, and are divided into the following categories :—(a) Metropolitan Water Supply, Sewerage and Drainage, covering Perth, Fremantle, Claremont, Guildford, Midland Junction and Armadale District ; (b) Country Areas (previously Goldfields) Water Supply ; (c) Water Supply of other towns, etc. ; (d) Agricultural Water Supply, and (e) Artesian and sub-artesian waters.

(ii) *Metropolitan Water Supply, Sewerage and Drainage.* (a) *General.* The sources of the metropolitan water supply are the Canning Dam, Churchman's Brook, Wongong Brook, Victoria Reservoir, Armadale Pipe Head Dam and Well, and certain bores. The largest reservoir, the Canning Dam, has a capacity of 20,550 million gallons, about 5,000 million gallons more than that of the recently increased Mundaring Reservoir to which it is linked by a pipeline.

The sewage treatment works of Perth and suburbs consist of primary sedimentation with separate sludge digestion and discharge of all effluent direct to the ocean. Fremantle treatment works consist of septic tanks with ocean outfall for effluent. There are three treatment works, situated at West Subiaco, Swanbourne and Fremantle.

(b) *Water Supply.* The following table shows particulars of water supply services for 1938-39 and 1946-47 to 1950-51 :—

**METROPOLITAN WATER SUPPLY, WESTERN AUSTRALIA : SERVICES.**

Year.	Number of Services.	Estimated Population Supplied.	Average Daily Consumption.	Total Consumption for Year.	Average Daily Consumption.		Length of Mains.	Number of Meters.
					Per Service.	Per Head of Estimated Population.		
			Mill. gals.	Mill. gals.	Gallons.	Gallons.	Miles.	
1938-39 ..	61,467	248,248	14.1	5,147	229	56.8	953	40,014
1946-47 ..	70,970	279,000	24.7	9,022	348	88.6	1,107	42,968
1947-48 ..	73,601	284,915	26.9	9,838	365	94.4	1,137	44,795
1948-49 ..	76,562	290,962	27.2	9,918	355	93.5	1,173	47,073
1949-50 ..	79,835	297,123	29.1	10,618	364	97.9	1,224	49,370
1950-51 ..	84,926	303,422	28.4	10,354	334	93.5	1,271	52,277

Water rating for 1950-51 was 1s. 6d. in the £1 on annual valuation, with a minimum of 10s.

(c) *Sewerage and Drainage.* Some particulars of the metropolitan sewerage and drainage services for 1938-39 and 1946-47 to 1950-51 are shown below :—

**METROPOLITAN SEWERAGE AND DRAINAGE, WESTERN AUSTRALIA : SERVICES.**

Year.	Houses Connected.	Estimated Population Served.	Sewage Pumped for the Year. (a)	Length of Sewers.	Length of Stormwater Drains.
			Mill. gals.	Miles.	Miles.
1938-39.. ..	36,652	162,457	1,030	444	31
1946-47.. ..	44,638	(b)	2,160	537	33
1947-48.. ..	45,977	193,103	2,263	550	34
1948-49.. ..	47,446	199,273	2,273	569	34
1949-50.. ..	48,909	205,418	2,326	588	34
1950-51.. ..	50,480	212,016	3,809	605	34

(a) Aggregate of quantities pumped by the various stations. (b) Not available.

Sewerage rating for 1950-51 was 1s. 6d. in the £1 on annual valuation, with a minimum of 7s. 6d. Stormwater drainage rating was 5d. with a minimum of 2s. 6d.

(d) *Finances.* The following table shows particulars of the finances of the Western Australian Metropolitan Water Supply, Sewerage and Drainage Department for the years 1938-39 and 1946-47 to 1950-51 :—

**METROPOLITAN WATER SUPPLY AND SEWERAGE AND DRAINAGE, WESTERN AUSTRALIA : FINANCES.**

1950-51 .. ..	4,884,224	288,598	119,125	206,701	325,826	- 37,228

(iii) *Country Areas Water Supply (Previously Goldfields Water Supply).* The source of supply for Kalgoorlie, Coolgardie and adjacent goldfields, as well as for the towns and districts on or near the pipeline, is the Mundaring Reservoir, whose capacity has recently been increased from 4,650 million gallons to 15,100 million gallons. This scheme is now linked by pipeline with the Canning Dam.

Work is proceeding for a comprehensively reticulated water scheme at an estimated cost of approximately £4,000,000 to serve an area of about 4,000,000 acres of farm lands and some 23 agricultural towns, including the principal towns on the Great Southern

Railway. The supply to the Eastern Goldfields will be increased to permit expansion of the gold-mining industry, the increased capacity of the Mundaring Reservoir (*see above*) being part of this scheme. It is also planned to increase the storage capacity of the Wellington Dam to 38,000 million gallons. Financing of the scheme is being shared by the Commonwealth and the State Governments on a £1 for £1 basis. Expenditure on this work to 30th June, 1951 totalled £755,518.

The following table shows details of the Country Areas Water Supply for 1938-39 and 1946-47 to 1950-51 :—

**COUNTRY AREAS WATER SUPPLY(a), WESTERN AUSTRALIA : SUMMARY.**

(a) Previously Goldfields Water Supply.

(b) Includes interest and sinking fund.

(iv) *Water Supply of Other Towns, etc.* (a) *Controlled by Public Works Department.* During 1950-51 water supplied to other towns and districts, excluding minor water supplies, amounted to 689 million gallons, including service to adjacent mines, 18 million gallons, and railways 64 million gallons. Estimated population served numbered 43,809.

(b) *Controlled by Commonwealth and State Government Railways.* Consumption for the year ended 30th June, 1951 was 292 million gallons. In addition, 470 million gallons were obtained from other sources, mainly the Country Areas Water Supply and the Metropolitan Water Supply.

(c) *Water Boards not Controlled by Government.* During 1950-51 approximately 379 million gallons of water were supplied to an estimated population of 17,770.

(v) *Agricultural Water Supply.* During the forty-one years from 1st July, 1910 to 30th June, 1951, 576 tanks were built, 387 wells sunk, and 3,944 bores put down to a total depth of 212,332 feet. Of the bores put down, 648 yielded fresh, and 383 stock water.

(vi) *Artesian and Sub-artesian Waters.* Up to 30th June, 1951 the total number of bores put down in search of artesian or sub-artesian water and in which water was struck (inclusive of operations by Defence Services) was 454, ranging in depth from 21 to 4,006 feet.

6. **Tasmania.**—(i) *Waterworks.* At the end of 1950-51 there were 36 municipal waterworks in Tasmania. The capacity of the reservoirs was 884 million gallons, the estimated population served was 194,428, the number of properties assessed was 61,305, and the length of aqueducts, mains and reticulation was about 1,110 miles. Costs of construction amounted to £2,131,310. The largest of these undertakings is Hobart, with a reservoir capacity at the end of 1950-51 of 578 million gallons, and 157 miles of reticulation and 92 miles of aqueduct and main.

(ii) *Sewerage.* Sewerage in Tasmania also is the concern of local authorities.

## § 6. Harbour Boards and Trusts.

NOTE.—The number and net tonnage of all vessels which entered the major ports in each State during the years 1938-39 and 1947-48 to 1950-51 are shown in Chapter V.—Transport and Communication, A. §3. Shipping at Principal Ports. Particulars of oversea and interstate cargo discharged and shipped during 1950-51 are shown in A. § 6 of the same chapter.

1. **New South Wales.**—(i) *Maritime Services Board of New South Wales.* (a) *General.* The Maritime Services Board of New South Wales is a corporate body of five Commissioners, three of whom are full-time members and two, representing shipping and

commercial interests, part-time members. The Board was brought into existence on 1st February, 1936 by the Maritime Services Act 1935 in order to co-ordinate the port and navigation services of the State, which had previously been administered by the Sydney Harbour Trust and by the State Department of Navigation.

The Board exercises general control over intra-state shipping, including the survey and certification of vessels, the licensing of harbour craft and the examination and issue of certificates to officers; is responsible for the provision of pilotage services, lights, beacons, buoys and other port facilities; imposes and collects rates and charges on goods and vessels; and is vested with the general control and management of the navigable waters and ports within the State.

At the Port of Sydney the Board is also responsible for the provision of adequate wharfage and channels, and carries out all construction, maintenance and dredging work. At other ports of New South Wales such work is undertaken by the Department of Public Works on behalf of the Board.

(b) *Port of Sydney.* The entrance to Sydney Harbour, the principal port of New South Wales, is nearly a mile wide, and the depth of its navigable channel is not less than 80 feet. Between the entrance, known as "The Heads", and the Harbour proper, a distance of 4 miles, there are two separate channels, each 700 feet wide, the Western Channel not less than 43 feet deep (low water ordinary spring tides) and the Eastern Channel 40 feet deep. The foreshores, which have been reduced by reclamations, are 152 miles in length and the total area of the port is 13,600 acres, or 21 square miles, of which about one-half has a depth of 30 feet or more at low water ordinary spring tide. The mean range of tides is 3 feet 6 inches.

The wharves are situated in close proximity to the business centre of the city, about four or five miles from the Heads. Excluding ferry wharves and jetties used for private purposes, there are 62,963 feet of wharfage controlled by the Maritime Services Board and 8,710 feet of commercial wharfage privately owned. Ferry berths cover 3,470 feet, and the total for all purposes is 75,143 feet. Depth of water at wharves is up to 40 feet. The principal wharves are leased to shipping companies whose vessels engage regularly in the trade of the port; the remainder are reserved for vessels which visit the port occasionally. Special facilities for the storage and handling of staple products such as wheat, wool, etc., are provided and modern plant has been installed for replenishing ships' bunkers with oil or coal.

The docking facilities comprise five large graving docks, four floating docks and eight patent slips. The Captain Cook Graving Dock, opened in March, 1945, is capable of accommodating the largest vessel afloat.

The following table shows particulars of the finances of the Board in respect of the Port of Sydney for 1938-39 and 1946-47 to 1950-51 :-

## MARITIME SERVICES BOARD : FINANCES OF THE PORT OF SYDNEY.

(£.)

Year.	Total Capital Debt.	Revenue.			Expenditure.			Surplus.
		Wharfage and Transhipment Rates.	Tonnage Rates and Berthing Charges.	Total.	Administration and Maintenance.	Interest, Sinking Fund, Exchange, etc.	Total. (a)	
1938-39..	11,276,399	773,501	38,180	1,155,627	380,120	536,781	916,901	238,726
1946-47..	11,097,221	725,903	158,521	1,379,882	702,833	540,240	1,243,073	136,809
1947-48..	11,242,140	759,014	167,406	1,446,779	793,319	530,159	1,323,478	123,301
1948-49..	11,334,338	821,376	182,360	1,569,157	923,656	517,715	1,441,371	127,786
1949-50..	11,571,669	925,144	229,092	1,658,203	957,510	526,171	1,483,681	174,522
1950-51..	11,779,317	1,032,685	333,902	1,955,073	1,155,004	528,928	1,683,932	271,141

(a) Excludes capital expenditure: 1938-39, £28,576; 1946-47, £153,854; 1947-48, £282,345; 1948-49, £221,227; 1949-50, £287,211; 1950-51, £384,911.

(c) *Port of Newcastle.* Newcastle Harbour is administered by the Maritime Services Board and an Advisory Committee consisting of five members appointed by the Governor. In regard to volume of shipping entered, Newcastle ranks second in importance in New South Wales and fifth in Australia. It is primarily a coal-loading port, and the proximity to the coal field has led to the establishment of important industries, including iron and steel works, in the district. Facilities are available for the shipment of wool, wheat and frozen meat, and a wharf is available for timber.

The area used by shipping is about 570 acres, excluding the entrance to the harbour and the inner basin, which together cover an area of 162 acres. The width of the harbour at the entrance is 1,200 feet, and the navigable channel, with a depth of 25 feet 6 inches at low water, is 350 feet wide. Wharfage accommodation amounts to 19,900 feet, the Maritime Services Board controlling 6,720 feet, the Railways Department 7,000 feet, the Public Works Department 200 feet, and private shipping companies 2,600 feet, while tie-up berths and ferry and depot wharves comprise 3,400 feet.

(d) *Port Kembla.* As from 3rd May, 1948, the Maritime Services Board assumed the administration and navigational control of Port Kembla, which had previously been administered by the New South Wales Department of Public Works. The Department continues however to be the constructing authority in respect of works, dredging and maintenance. In respect of volume of shipping entered, Port Kembla ranks third in the ports of New South Wales, and about seventh in those of Australia. It has an area of approximately 330 acres, with depths ranging from 20 to 50 feet (low water ordinary spring tide), and wharfage accommodation has been provided for large ocean-going vessels. It is the port of the southern coalfields and for the expanding industrial area in and about Wollongong.

(e) *Other Ports.* In addition to the ports of Sydney, Newcastle and Port Kembla, the Board controls 29 outports along the coastline of 609 miles. The shipping trade of these outports is relatively small.

(ii) *Port Charges.* The port charges payable in respect of shipping and ships' cargoes in New South Wales are imposed by the Commonwealth Government in terms of the Lighthouses Act and the Federal Navigation Act, and by the State authorities under the Navigation Act of New South Wales, the Harbour and Tonnage Rates Act, and the Sydney Harbour Trust Act. Since 1st February, 1936, the State enactments have been administered by the Maritime Services Board. The gross collections by the State authorities amounted to £2,628,000 in 1950-51. These figures include the Port of Sydney revenue (see table above) and State navigation service collections (£672,901 in 1950-51). Commonwealth Government revenue from light dues and navigation receipts, for the whole of Australia, amounted to £243,296 in 1950-51.

2. *Victoria.*—(i) *Melbourne Harbour Trust.* (a) *General.* Information regarding the origin and constitution of this Trust, which controls the Port of Melbourne, appears in Official Year Book No. 12, p. 970 *et seq.* At 31st December, 1951, the sheds available for wharfage accommodation had a length of 20,093 feet, covering an area of 1,389,982 square feet. The area of water in the bay and River Yarra under the control of the Trust is approximately 5,327 acres and the total length of wharves, piers and jetties in the port is 61,740 feet, giving an area of over 58 acres of wharfage, and 53,209 feet of effective berthing space. During 1951, work was continued on the River Entrance Docks project which provides for the construction of 28 new deep water berths. Other work undertaken during the year provides for new berths at Appleton Dock (ultimately

to have eighteen berths), Victoria Dock and South Wharf. The depth of water (low water ordinary spring tide) of main channels and at principal wharves is about 30 feet, the maximum being about 36 feet.

(b) *Finances.* The following table shows particulars of the financial operations of the Trust during the years 1939 and 1947 to 1951:—

## MELBOURNE HARBOUR TRUST: FINANCES.

(£.)

Year.	Gross Loan Indebtedness.	Revenue.		Expenditure.				Surplus.
		Wharfage and Tonnage Rates.	Total.	Administration and Maintenance.	Interest, Sinking Fund, Exchange, etc.	Depreciation, Renewals and Insurance Account.	Total. (a)	
1939 ..	4,018,527	689,100	843,899	282,533	270,650	129,160	837,577	6,322
1947 ..	3,937,709	819,425	1,113,456	399,641	238,084	123,940	944,516	168,940
1948 ..	3,820,203	961,925	1,313,813	471,039	220,463	134,230	1,037,152	276,661
1949 ..	3,766,678	1,118,059	1,471,221	460,955	190,056	121,798	1,015,421	455,800
1950 ..	3,972,029	1,293,923	1,771,074	675,839	187,582	162,883	1,301,687	469,387
1951 ..	5,883,857	1,493,423	2,129,432	1,036,842	235,881	175,263	1,768,105	361,327

(a) Includes statutory payments to Consolidated Revenue and Geelong Harbour Trust:—1939, £155,234; 1947, £182,851; 1948, £211,420; 1949, £242,612; 1950, £275,383; 1951, £320,119. Excludes capital expenditure:—1939, £128,567; 1947, £375,705; 1948, £393,240; 1949, £623,396; 1950, £1,589,392; 1951, £2,058,921.

(ii) *Geelong Harbor Trust.* The Geelong Harbour Trust was constituted in 1905, and reconstituted in 1934 under the provisions of the Melbourne and Geelong Harbour Trusts Act 1934. The Trust is under the control of three Commissioners appointed by the Governor-in-Council. Revenue for the year 1951 was £184,700, and revenue expenditure was £177,887. Payments made in respect of capital works amounted to £280,000 in 1951, and loans outstanding at the end of the year amounted to £567,019. Depth of water available in Geelong harbour will, upon completion of dredging operations which are well advanced, range from 32 to 37 feet (low water ordinary spring tide).

(iii) *Other Ports.* Portland is the only Victorian port other than Melbourne and Geelong of more than minor importance.

3. *Queensland.*—(i) *General.* The ports of Queensland, except Brisbane and certain minor ports, are administered by Harbour Boards with members representing the towns and districts served by the ports. Brisbane and the minor ports are controlled by the State Treasury through the Department of Harbours and Marine, which supervises the engineering activities of the other ports.

(ii) *Brisbane.* Brisbane accommodates comfortably, in its dredged and improved river, the largest vessels in the Australian trade. The main centres for shipping, although further downstream than formerly, because of the increasing size of vessels, are still within easy access of the city. The maximum depths (low water ordinary spring tide) of the shipping channel decrease from 32 feet in the North-West channel to 20 feet in

the Bulimba Reach to Victoria Bridge section. Depths at wharves vary between 23 and 29 feet. Adequate dry-docking facilities are available. The finances of Brisbane Harbour for the years 1938-39 and 1946-47 to 1950-51 are shown below :—

## BRISBANE HARBOUR : FINANCES.

(£'000.)

Year.	Loan Indebtedness.	Revenue.		Expenditure.		Credit Balance.
		Harbour Dues.	Total.	Working Expenses.	Total (including Interest and Redemption).	
1938-39 ..	1,179	165	173	36	112	(a) — 6
1946-47 ..	1,163	149	171	133	212	132
1947-48 ..	1,219	153	222	126	209	145
1948-49 ..	1,256	190	209	162	250	104
1949-50 ..	1,325	219	299	168	260	143
1950-51 ..	1,572	221	253	237	329	67

(a) Overdraft.

In addition to Brisbane Harbour, the Department of Harbours and Marine also controls the Brisbane Dry Dock, the Cairncross Dock, the Brisbane River, and ten smaller harbours not administered by Harbour Boards.

(iii) *Harbour Boards.* Harbour Boards control the ports of Bowen, Bundaberg, Cairns, Gladstone, Mackay, Rockhampton and Townsville. Finances for each port for the year 1951 are shown below, together with a summary for the years 1939 and 1947 to 1951.

## HARBOUR BOARDS, QUEENSLAND : FINANCES.

(£.)

Harbour Board.	Loan Indebtedness.	Revenue.		Expenditure (excluding Loan).		Surplus (+) or Deficit (-)
		Wharfage and Harbour Dues.	Total.	Working Expenses.	Total (including Interest and Redemption).

4. *South Australia.—The South Australian Harbours Board.* All South Australian harbours are controlled by the South Australian Harbours Board, which consists of three Commissioners appointed by the Governor for a period of five years and eligible for re-appointment. The Board is responsible to the Minister of Marine for the discharge of its duties and functions, and controls about 60 ports, but at many of them there is little or no shipping movement. The more important are Adelaide, Augusta, Lincoln, Pirie, Wallaroo and Whyalla. Maximum depths of water (low water ordinary spring tide) at the wharves of these ports range from 20 to 24 feet at Pirie to 35 feet at Adelaide (Outer Harbour). The following table shows the finances of the Board for 1938-39 and 1946-47 to 1950-51 :—

## SOUTH AUSTRALIAN HARBOURS BOARD : FINANCES.

( £. )

Year.	Capital Expenditure to 30th June.	Revenue.	Expenditure from Revenue.				Surplus (+) or Deficit (-).
			Working Expenses.	Interest.	Sinking Fund.	Total.	
1938-39 ..	7,861,905	664,915	205,848	326,719	50,000	582,567	+ 82,348
1946-47 ..	8,283,775	747,071	371,749	288,833	25,069	685,651	+ 61,420
1947-48 ..	8,367,780	873,059	386,459	281,517	27,585	695,561	+ 177,498

1949-50 ..	8,545,084	1,050,742	583,965	281,691	33,327	898,983	+ 151,759
1950-51 ..	8,896,281	1,141,174	784,191	281,657	..	1,065,848	+ 75,326

5. *Western Australia.—(i) Fremantle Harbour Trust.* Fremantle Harbour is controlled by a board of five Commissioners appointed by the Governor-in-Council. Maximum depth of water (low water ordinary spring tide) at the entrance to the harbour is 36 feet, and at the wharves 32 feet. The length of wharf berth accommodation is 10,566 feet.

Gross earnings for the year 1950-51 amounted to £1,497,436, working expenses to £983,357, interest £119,067, sinking fund £34,517, renewals fund £2,000, and payment of surplus cash to Consolidated Revenue £150,064. There was also a special loan repayment from revenue, amounting to £111,700. The total amount debited to loan capital account at 30th June, 1951 was £3,119,590.

(ii) *Bunbury Harbour Board.* The Bunbury Harbour Board consists of five members appointed by the Government. The depth of water at the entrance and at the wharf is 27 feet (low water ordinary spring tide). Berthage accommodation is 3,700 feet. Gross earnings in 1949-50 were £20,508, working expenses £39,000, and interest £28,088. The total amount debited to loan capital account at 30th June, 1950 was £890,439.

(iii) *Other Ports.* Only the ports of Fremantle, Bunbury and Albany in Western Australia are under the control of trusts, the remainder are Government operated. Of these, Carnarvon, Geraldton and Onslow have the largest amount of shipping movement.

6. *Tasmania.*—There are seven Marine Boards and two Harbour Trusts in Tasmania. The Marine Boards control the ports of Hobart, Launceston, Circular Head, Burnie and Table Cape, Devonport, Strahan, and King Island (Currie), and the Harbour Trusts those of Smithton and Leven. Aggregate receipts of revenue accounts of all these authorities during the year 1950-51 were £432,021 and expenditures £436,569, including loan charges £74,950. The total receipts of the Hobart Marine Board during 1950-51

were £192,890, loan charges £13,087 and total expenditure £179,031. Launceston Marine Board receipts during 1950-51 amounted to £93,830, loan charges to £9,893 and total expenditure to £107,259. Loan indebtedness of all Marine Boards and Trusts at 30th June, 1951 was £1,413,672, of which £430,053 was in respect of Hobart and £75,101 in respect of Launceston.

Hobart, Launceston, Burnie and Devonport are the principal ports of Tasmania. In addition to their interstate and intra-state traffic, there is also considerable overseas shipping. Depths of water at wharves vary, in general, between 16 and 34 feet (low water ordinary spring tide), but at Hobart there is a depth of water of from 30 to 52 feet.

## § 7. Fire Brigades.

1. *New South Wales.*—(i) *General.* A Board of Fire Commissioners, consisting of eight members, operates under the Fire Brigades Act 1909-1949, and 153 fire districts had been constituted at the end of 1951. Up to the end of 1949, the cost of maintenance of fire brigades was borne in proportions of quarter, quarter, and half by the Government, the municipalities, and the insurance companies concerned, the expenditure so regulated that the proportion payable by the councils in a fire district should not, except in special circumstances, exceed the amount obtainable from  $\frac{1}{4}$ d. in the £1 rate on the unimproved capital value of ratable land in the fire district. In June, 1949 legislation was introduced (i) increasing the limit of the Board's borrowing power from £250,000 to £500,000, (ii) providing for the varying of the maximum rate that may be levied by councils, and (iii) altering the basis of contributions so that from 1st January, 1950, local councils and the Government will each pay one-eighth and the insurance companies three-quarters.

Other legislation, introduced in September, 1949 to improve and modernize the law dealing with the prevention of bush fires and to build up the organization of the bush fire-fighting services, provided for the establishment of Fire Regions and a Bush Fire Fighting Fund to be financed from contributions by the Government, councils and insurance companies in the proportion of one-quarter, one-quarter and one-half, respectively. The contribution of any council shall not exceed one-twentieth of a penny in the £1 on the unimproved capital value of ratable land in the area of the council not being land within a fire district constituted under the Fire Brigades Act 1909-1949.

(ii) *Board of Fire Commissioners of New South Wales.* At 31st December, 1951 the authorized strength of the Fire Brigade throughout the fire districts of New South Wales was 292 officers and 823 permanent, 2,113 volunteer, and 1,917 reserve firemen. Corresponding figures for the Sydney Fire District were 234, 774, 321 and 778. The revenue for the year 1951 was £1,279,131 made up as follows:—From the Government, £157,311; municipalities and shires, £157,311; fire insurance companies and firms, £943,866; and from other sources, £20,643. The disbursements for the year were £1,310,680.

2. *Victoria.*—(i) *General.* The Fire Brigades Act of 1928 provided for a Metropolitan Fire Brigades Board and a Country Fire Brigades Board each consisting of nine members. In December, 1944 the latter Board was superseded by the Country Fire Authority under an Act of that title, and the number of members was increased to ten. The income of each Board is derived in equal proportions from the Treasury, the municipalities and insurance companies.

(ii) *Metropolitan Fire Brigades Board.* On 30th June, 1951 the Board had under its control 42 stations, 550 permanent staff, 162 special service and clerical, etc. staff, and 22 part-time firemen. The total receipts for 1950-51 were £597,949, comprising contributions £465,985, receipts for services £68,076, and interest and sundries £63,888. The expenditure was £677,377.

(iii) *Country Fire Authority.* This authority, constituted in 1944, is responsible for the prevention and suppression of fires in the "country area of Victoria", which embraces the whole of the State outside the metropolitan fire district, excluding State forests and certain crown lands. The country area has been divided into 24 fire control regions, three of which (Ballarat, Bendigo and Geelong) are wholly urban and the remainder mixed urban and rural. At 30th June, 1951 there were 171 municipal councils and 132 insurance companies included in the operation of the Act, and 194 urban and 960 rural fire brigades. The effective registered strength of the brigades was 76,147 members.

The receipts for the year 1950-51 amounted to £163,048. Total expenditure other than loan amounted to £177,257.

3. *Queensland.*—(i) *General.* The Acts of 1920-1931 made provision for the retention of existing fire districts, and for the constitution of new districts. For each district there must be a Fire Brigades Board consisting of seven members, and the cost of maintenance of each brigade is proportioned as follows:—The Treasury two-sevenths, insurance companies three-sevenths, and local authorities two-sevenths. All volunteer fire brigades in a district must be registered.

(ii) *Fire Brigades Boards.* At 30th June, 1951 there were 63 Fire Brigades Boards. The total number of stations was 106, and full-time staff numbered 434, including 12 administrative, 89 officers and 333 firemen. Workshop staff numbered 14. Part-time staff numbered 565, including 65 administrative, 85 officers and 415 firemen. Volunteers numbered 366. The total revenue for the year 1950-51 was £384,038 received mainly from the following sources—Government £94,279, local authorities £94,400, insurance companies £141,474 and loans (Government and other) £31,333. The total expenditure for the year was £392,002, the chief items being salaries and wages £258,822 and interest and redemption of loans £27,463.

4. *South Australia.*—The Fire Brigades Act 1936-1944 provides for a board of five members, and the expenses and maintenance of brigades are defrayed in the proportion of two-ninths by the Treasury (subject to certain limits when the contribution exceeds £10,000), five-ninths by insurance companies, and two-ninths by the municipalities concerned. At 30th June, 1951 there were altogether 34 fire brigade stations, of which 12 were metropolitan and 22 country.

The authorized strength of the permanent staff was 420, including 311 officers and men and 80 country auxiliary firemen. The total revenue for the year 1950-51 was £214,202, made up as follows:—insurance companies £136,301, Treasury £23,414, and municipalities £54,487. The Treasury contribution includes an additional grant of £12,000.

5. *Western Australia.*—In 1942 certain Municipal and Road Board Districts were constituted fire districts under the control of the Western Australian Fire Brigades Board. There were 30 at 30th September, 1951. The income of the Board is derived in the proportion of two-ninths from the Government, two-ninths from Local Government Authorities, and five-ninths from insurance companies. The number of local government authorities and insurance companies who contributed numbered 54 and 118 respectively. The brigades throughout the State controlled by the Western Australian Fire Brigades Board at 30th September, 1951 numbered 48, with a staff of 1,320, including 207 permanent officers and firemen and 1,096 volunteer brigade officers and firemen. The revenue for the year ended 30th September, 1951 was £178,996 and the expenditure £185,598.

Under the Bush Fires Acts a Rural Fire Prevention Advisory Committee, consisting of ten members, four of whom are nominated by the Road Board Association, was set up to advise the Minister for Lands on bush fire control. The Act also provides for the registration of bush fire control officers, who numbered 1,124 at 30th June, 1951 and the establishment of bush fire brigades, the number of which was 423 at 30th June, 1951.

6. *Tasmania.*—The Fire Brigades Act 1945 provided for the creation of the Fire Brigades Commission of Tasmania to co-ordinate the activities of the 22 existing Fire Brigades Boards, while leaving the responsibility for individual control and management with the Boards. The Commission consists of five members nominated or elected by the Fire Brigades Boards and one member nominated by the Minister. Contributions towards the cost of operations remain on the old basis of one-third each from the Treasury, the municipalities and the insurance companies concerned. The cost for the year 1950–51 amounted to £66,810. There were at 30th June, 1951, 27 stations amongst the 22 brigades, and their aggregate staffs numbered 416, including 85 permanent officers and 303 part-time firemen, including officers.

## CHAPTER XVI.

### PRIVATE FINANCE.

NOTE.—This chapter, for convenience, has been subdivided into eight sections as follows :—

Currency; Banking, including Savings Banks; Companies; Insurance; Friendly Societies; Probates and Letters of Administration; State Lotteries and Betting; and Government, Semi-Governmental and Parliamentary Pension and Superannuation Schemes.

#### A. CURRENCY.

##### § 1. General.

The Australian monetary system is based on the British system, of which the unit is the pound (£) divided into 20 shillings (s.) each of 12 pence (d.). When the Australian currency was introduced in 1909 the Australian pound was specified as equivalent to 123.27447 grains of gold  $\frac{11}{12}$ ths fine or 113.002 grains of fine gold and, until the depression in 1930, was identical with the pound sterling. There was a gradual depreciation of the Australian pound in terms of sterling from the beginning of 1930 until 3rd December, 1931, when it was stabilized at the rate of £125 Australian = £100 sterling. This relationship has been maintained until the present time. Following the depreciation, no action was taken to define the value of the Australian pound in terms of gold until 5th August, 1947, when the Australian Government advised the International Monetary Fund, in terms of the membership agreement, that the par value of the Australian pound was 2.86507 grammes (44.2148 grains) of fine gold. From 19th September, 1949 this was reduced to 1.99062 grammes (30.720 grains) of fine gold.

When the Commonwealth was established in 1901, the currency in Australia consisted of United Kingdom gold, silver and bronze coins, notes issued by the banks, and Queensland Treasury notes. Queensland Treasury notes were in circulation in Queensland only, having superseded bank notes in that State after the 1893 crisis. Under the Commonwealth Constitution the control of currency, coinage and legal tender and the issue of paper money were vested in the Commonwealth. The Commonwealth assumed these powers by enacting the Coinage Act 1909 and the Australian Notes Act 1910.

##### § 2. Coinage.

1. **Coins in Circulation.**—Brief historical notes relating to the Australian Coinage are given in Official Year Book No. 37, pages 557 and 558. For weight, metal, composition, etc., of Australian coins in circulation *see* Official Year Book No. 39, page 697.

The silver coins issued prior to July, 1947 have a millesimal fineness of 925 (thirty-seven fortieths silver and three fortieths alloy) and those issued since 1st July, 1947 (dated 1946 and later) have a millesimal fineness of 500 (one-half silver and one-half alloy).

Australian coins are legal tender in Papua, New Guinea, Norfolk Island and Nauru.

From 1910 to 1916 Australian coins were minted in England by the Royal Mint, London, and the Mint, Birmingham Ltd., and in 1916 and 1917 by the Indian Mints. The minting of Australian coins was undertaken by the Australian Mints in 1916 and coins have been minted at the Melbourne branch of the Royal Mint from 1916 to the present time, at the Sydney branch from 1919 until that Mint closed in 1926 and at the Perth branch in 1922 and since 1940.

During the 1939-45 War the two Australian mints were unable to meet the demand for Australian coins and some coins were minted in the United States of America and India. Details of Australian coins obtained from each mint to 30th June, 1952, are given in the following table:—

**AUSTRALIAN COINS OBTAINED FROM MINTS FROM 1910 TO 30th JUNE, 1952.**  
(£'000.)

(a) Includes half-pence to June, 1948. (b) Included with pence to June, 1948. (c) No allowance has been made for £52,000 silver coin, for which denominations are not available, withdrawn since 1910.

Coin withdrawn between 1947 and 1952 included a considerable quantity of silver coin withdrawn for recoinage.

3. **Legal Tender.**—Imperial gold coins of the specified weight and fineness are legal tender in Australia for any amount. Australian silver coins are legal tender for any amount not exceeding forty shillings and Australian bronze coins are legal tender for any amount not exceeding one shilling.

4. **Profits on Coinage of Silver and Bronze.**—Australian silver and bronze coins are token coins and, as the face value of the coins is greater than the value of the bullion they contain, a profit is made from their issue. This profit forms part of the Commonwealth Consolidated Revenue. In the following table details are given of the value of coins issued, the cost of bullion, the cost of minting and sundry expenses connected with the issue, and the profits made on the issue of coins during the years 1938-39 and 1947-48 to 1951-52.

1951-52 ..	3,253,239	1,788,898	..	1,464,341	568,961	895,380

(a) Face value of coin less value of bullion recovered. (b) Minus sign (-) denotes a loss. (c) Included with Cost of Minting and Sundry Charges. (d) During 1946-47 a considerable quantity of new silver was minted but not issued until 1947-48. The cost of minting this coin is included in 1946-47. (e) In 1947-48 and 1948-49 silver in coin withdrawn was brought to account as bullion at a nominal value. In 1949-50 an adjustment was made to bring this value to the face value of the coin withdrawn. This adjustment and a consequent adjustment for an increase in the cost of bullion in coin issued during 1947-48, 1948-49 and 1949-50 are included in this figure.

5. **Australian Mints.**—(i) *General.* Soon after the discovery of gold in Australia a branch of the Royal Mint was established in Sydney. The formal opening took place on 14th May, 1855. The Melbourne branch was opened on 12th June, 1872, and the Perth Branch on 20th June, 1899. The States of New South Wales, Victoria and Western Australia provided an annual endowment in return for which the mint receipts were paid to the respective State Treasuries. Owing to losses incurred in its operations, the Sydney branch was closed at the end of 1926.

Since their establishment, the Australian branches of the Royal Mint have been primarily concerned with the refining of gold, minting of Imperial gold coins and the production of bars and ingots of gold bullion for export. The minting of Imperial gold coins was discontinued in September, 1931. In 1916 the Melbourne branch took over the minting of Australian silver and bronze coins from the Royal Mint, London. Australian coins were also minted at the Sydney Mint from 1919 to 1926 and at the

Perth Mint in 1922 and from 1940 to the present time. The Melbourne branch has also minted token coins for the Territory of New Guinea and for New Zealand.

(ii) *Gold Receipts and Issues.* (a) *Receipts.* The receipts of gold during the years 1948 to 1952 and the aggregate at each mint to the end of 1952 were as follows :—

**AUSTRALIAN MINTS : RECEIPTS OF GOLD.**

('000 oz.)

Year.	Melbourne.		Perth.		Total.	
	Gross.	Fine.	Gross.	Fine.	Gross.	Fine.
1948 ..	231	136	921	659	1,152	795
1949 ..	285	143	899	652	1,184	795
1950 ..	319	140	830	607	1,149	747
1951 ..	290	139	863	619	1,153	758
1952 ..	391	162	1,004	717	1,395	879
Aggregate to end of 1952 ..	48,511	42,763	54,755	43,222	(a)145,349	(a)122,892

(a) Includes 42,083,000 oz. gross and 36,907,000 oz. fine received by Sydney Mint until end of 1926, when it was closed.

(b) *Issues.* The Australian mints issue gold bullion for the use of local manufacturers (jewellers, dentists, etc.), and for export. Since September, 1931, when the United Kingdom departed from the gold standard, the minting of gold coins by Australian mints has ceased. Australian exports of gold are mainly in the form of 400-oz. ingots, but in earlier years a considerable amount of gold was shipped to India in 10-oz. bars. Since early in the 1939-45 War all gold has been acquired by the Commonwealth Bank and the export and use of gold has been subject to regulation by the Commonwealth Government. From December, 1951 export of a proportion of newly-mined gold for sale on premium markets overseas was permitted (see para. 6 following). The issues during the years 1948 to 1952, and the total to the end of 1952, are shown in the table below :—

**AUSTRALIAN MINTS : ISSUES OF GOLD.**

Total Gold Issued to 30th June, 1952 ..	156,791	181,653	183,631	522,075

(a) Value expressed at £3 17s. 10½d. per standard ounce. (b) Gold coin has not been issued since September, 1931.

6. *Price of Gold.*—The following table shows the average prices of gold and the average value of the sovereign in London and Australia for the years 1938-39 and 1942-43 to 1951-52. The average price of gold in Australia is based on the Commonwealth Bank's buying price for gold lodged with the mints.

In December, 1951, arrangements were made whereby producers could sell a proportion of newly-mined gold for industrial purposes on oversea premium markets. Under the arrangements, gold is acquired by the Commonwealth Bank in the usual manner and sold, at the Bank's buying price, to an association representing gold producers participating in the scheme. The association pays the Bank's handling charges and the costs of preparation of the gold and makes arrangements for export and sale. The gold can only be sold against payment in United States dollars. Profits earned by the association after meeting administrative expenses are distributed to members in proportion to the quantity of gold delivered to the Commonwealth Bank. Until August, 1952, when permission was given for the export of fine gold, gold exported under this arrangement was not to exceed a fineness of 22 carats ( $\frac{11}{12}$ ths.).

The average price (f.o.b.) obtained for gold exported under this scheme for each month from December, 1951 to June, 1953, was as follows:—

## AVERAGE PRICE OF GOLD—OVERSEA PREMIUM MARKETS.

## § 3. Notes.

1. General.—Brief historical notes relating to the circulation and issue of notes in Australia are given in Official Year Book No. 37, pages 561 and 562. The issue of notes intended for circulation as money by any person, bank or State other than by the Commonwealth Bank is prohibited.

2. **The Australian Note Issue.**—(i) *General.* Notes in circulation in Australia are issued by the Commonwealth Bank through the Note Issue Department. The Bank is authorized to issue Australian notes in denominations of 5s., 10s., £1, £5, £10 and any multiple of £10. The Commonwealth Bank is not required to hold a specific reserve in gold against the note issue, but the assets of the Note Issue Department must be held or invested in gold, on deposit with any bank or in securities of the Government of the United Kingdom, the Commonwealth or a State. All profits of the Note Issue Department, with the exception of an amount not exceeding £500,000 each year which may be paid to the other departments or divisions of the Commonwealth Bank, are paid to the Commonwealth Consolidated Revenue Fund.

Australian notes are legal tender to any amount within Australia and have been issued in denominations of 10s., £1, £5, £10, £20, £50, £100 and £1,000.

(ii) *Australian Notes in Circulation.* Particulars of the average values of notes in circulation for the years 1938-39 and 1947-48 to 1951-52 are given in the following table:—

**AUSTRALIAN NOTE ISSUE.**  
(£'000.)

Denomination.	Average of monthly statements for year—					
	1938-39.	1947-48.	1948-49.	1949-50.	1950-51.	1951-52.
10s. . . . .	4,141	8,268	8,309	8,496	8,919	9,454
£1 . . . . .	21,124	65,356	64,710	65,695	67,841	69,399

(iii) *Commonwealth Bank—Note Issue Department.* The following statement shows particulars of liabilities and assets of the Note Issue Department of the Commonwealth Bank as at 30th June, 1951 and 1952.

**NOTE ISSUE DEPARTMENT : LIABILITIES AND ASSETS, 30th JUNE.**  
(£'000.)

Liabilities.			Assets.		
	1951.	1952.		1951.	1952.
Notes on Issue(a) . .	275,221	301,668	Gold and Balances held abroad (including money at short call) . .	135,553	93,683
Special Reserve— Premium on gold sold . . . . .	4,755	4,755	Government Securities (including Commonwealth Treasury Bills) . .	146,719	215,261
Other Liabilities(a) . .	2,364	2,614	Other Assets . . . . .	68	93
Total Liabilities . .	282,340	309,037	Total Assets . . . . .	282,340	309,037

(a) Notes of a denomination not exceeding one pound which have been on issue for more than twenty years, and notes of a denomination exceeding one pound which have been on issue for more than 40 years are not included in the item "Notes on Issue" but are included in the item "Other Liabilities".

Until 30th June, 1951 all the net profits of the Note Issue Department, except £2,000,000 paid between 1926 and 1933 to the Capital Account of the Rural Credits Department, and £1,164,114 paid between 1943 and 1951 to the Capital Account of the Mortgage Bank Department, were paid to the Commonwealth Treasury. In 1951-52 the net profits of the Note Issue Department amounted to £3,880,762 of which £3,380,762 was paid to the Commonwealth Treasury and £500,000 to the Capital Accounts of sections of the Bank as follows:—Mortgage Bank Department £142,500, Rural Credits Department £71,500, General Banking Division £143,000, Industrial Finance Department £143,000.

§ 4. Legal Tender Extant.

Accurate information regarding the amount of legal tender in circulation is not available, but the following table provides an estimate of the amount of legal tender extant about the middle of the years 1939 and 1948 to 1952.

ESTIMATED LEGAL TENDER EXTANT : AUSTRALIA.

(£'000.)

Particulars.	1939.(a)	1948.	1949.	1950.	1951.	1952.
Australian Notes(b)—						
Held by Banks .. ..	14,829	22,766	23,744	28,068	35,130	37,478
Held by Public .. ..	32,701	173,839	189,111	203,245	240,140	265,243
Coin(c)—

Held by Public .. ..	6,830	22,236	22,712	23,013	24,106	23,344
Bronze—Held by Banks ..	132	162	143	175	161	232
Held by Public .. ..	521	1,371	1,556	1,674	1,896	2,074
Total .. ..	57,600	227,176	244,155	262,817	307,417	334,792

(a) Prior to 1947 withdrawals of coin were negligible and no allowance has been made for coin withdrawn in the estimates for the year 1939. (b) Last Monday in June, in 1939. Last Wednesday in June thereafter. (c) At 30th June. See also paragraph below. No allowance has been made for coin lost or destroyed which, during the war years, may have been considerable. (d) Value—one sovereign equals £1.

The figures shown above for silver coin represent the net issues of Australian silver coin less the excess of exports of Australian coins over the reimports of Australian coins. The amount of British coin in circulation in Australia is negligible, and, as it is not possible to ascertain accurately its volume, no allowance has been made for it. The figures shown for bronze coins refer to the total issues of Australian coin, the small amount of British coin in circulation being disregarded.

B. BANKING.

§ 1. Cheque-Paying Banks.

1. Banking Legislation.—(i) *Commonwealth Legislation.* Under Section 51 of the Commonwealth Constitution the Commonwealth Parliament has power to legislate with respect to “Banking, other than State banking; also State banking extending beyond the limits of the State concerned, the incorporation of banks, and the issue of paper money”. The principal Commonwealth Acts at present in force relating to Banking are—

- (a) The Commonwealth Bank Act 1945–1953 which provides for the constitution and management of the Commonwealth Bank, Commonwealth Trading Bank and Commonwealth Savings Bank and the management of the Australian note issue; and
- (b) The Banking Act 1945–1953, which provides for the regulation of banking and for the protection of the currency and the public credit of the Commonwealth.

The Banking Act 1945 was assented to on 3rd August, 1945, and came into operation on 21st August, 1945. It applies to all banks, except State banks, operating in Australia or Territories of the Commonwealth. The objects of the Act are :—(a) To provide a legal framework, uniform throughout Australia, for regulating the banking system; (b) to safeguard depositors of the banks from loss; (c) to provide for the co-ordination

of banking policy under the direction of the Commonwealth Bank; (d) to control the volume of credit in circulation and bank interest rates; (e) to mobilize and to provide machinery for the control of the foreign exchange and gold resources of the Australian economy. A summary of the main provisions of the Act is given in Official Year Book No. 37, page 565.

The Banking Act 1953, assented to on 1st April, 1953, amended the Banking Act 1945. The main amendments were—

(a) *Special Accounts.* Under the Banking Act 1945 the maximum amount a bank could be required to lodge in its special account was the amount in this account on 21st August, 1945, plus the whole of the increase in Australian assets from July, 1945. This was changed, by the Banking Act 1953, to the amount at credit in the Special Account on 10th October, 1952, plus 75 per cent. of the increase in the bank's average Australian deposits from September, 1952. If, at 30th September in any subsequent year, the amount uncalled in the Special Account is more than 10 per cent. of the bank's average Australian deposits for the preceding month, then the maximum amount is reduced to the amount at credit in the Special Account at 30th September, plus 10 per cent. of the Bank's average Australian deposits for August of that year. This figure is then adjusted by 75 per cent. of the increase or decrease in the average Australian deposits each month. Provision is made so that the maximum amount will not be reduced below the amount at credit in the Special Account on 10th October, 1952, unless the average Australian deposits of the bank fall below 90 per cent. of the average Australian deposits for September, 1952. If the average Australian deposits fall below this level, the maximum amount is reduced by 75 per cent. of the decrease below 90 per cent. of the average Australian deposits for September, 1952.

If the amount to the credit of the Special Account exceeds the maximum amount, the Commonwealth Bank is required to repay the amount of the excess.

In addition, the limit on the rate of interest to be paid on deposits in the Special Account (17s. 6d. per cent. per annum) was removed. Subject to the approval of the Treasurer, this rate of interest will now be fixed by the Commonwealth Bank. Provision is also made for the Commonwealth Bank to advise the banks what movement is expected in Australian deposits and liquid assets and the amount that it will require the banks to lodge in or that it will repay from the Special Accounts.

(b) *Commonwealth Trading Bank.* The Commonwealth Bank Act 1953 established the Commonwealth Trading Bank to take over the business of the General Banking Division of the Commonwealth Bank. By the Banking Act 1953 this Bank was brought under the provisions relating to Special Accounts, advance policy, mobilization of foreign currency, control of bank interest rates, and the settlement of balances between banks. In addition, provision was made for the Commonwealth Trading Bank and the specialized departments of the Commonwealth Bank to furnish the same statistical information as the other banks.

(c) *Other Amendments.* The provision requiring banks to obtain approval of the Commonwealth Bank before purchasing Government and other securities was withdrawn, and banks incorporated in the Queen's dominions carrying on business at the commencement of the Banking Act 1953, were exempted from the requirement to hold assets in Australia at least equal to their Australian deposits.

(ii) *State Legislation.* State banking legislation relates to the incorporation of banks and the constitution and management of State banks. The Acts under which the various banks are incorporated differ. While some of the older banks were incorporated by special Act or Charter, e.g., the Bank of New South Wales by Act of Council 1817, The Bank of Adelaide by Act of the South Australian Parliament, and the Bank of New Zealand by Act of the General Assembly of New Zealand, most of the banks are incorporated under a Companies Act of the States or the United Kingdom. This is also the case with those banks which were reconstructed after the crisis of 1893. State banks, constituted under State Acts, transacting general banking business are the Rural Bank of New South Wales, The State Bank of South Australia and The Rural and Industries Bank of Western Australia.

2. **Royal Commission on Monetary and Banking Systems.**—A Royal Commission was appointed by the Commonwealth Government in November, 1935 to inquire into the monetary and banking systems in operation in Australia and to report whether any, and if so what, alterations were desirable in the interests of the people of Australia as a whole, and the manner in which any such alterations should be effected. The Commission presented its report on 15th July, 1937, and a summary of the recommendations appears in Official Year Book No. 31, p. 1010.

3. **Presentation of Banking Statistics.**—Because of the different purposes they serve in the Australian financial system, Australian cheque-paying banks have been divided for statistical purposes, into three groups and a separate series is presented for each. These groups are :—

- (a) *The Commonwealth Bank.* This is the Central Bank. It also transacts general banking business through a General Banking Division and provides special banking facilities through the Rural Credits, Mortgage Bank and Industrial Finance Departments. Statistics of the Central Banking Business (including the Note Issue Department), the General Banking Division and Rural Credits, Mortgage Bank and Industrial Finance Departments are presented in separate series.
- (b) *Private Trading Banks.* This group was formerly known as the Nine Trading Banks but the number of banks included has been reduced to seven by amalgamations. With the General Banking Division of the Commonwealth Bank, these banks provide the major part of the general banking facilities in Australia. The banks included in this group are—the Bank of New South Wales, The Commercial Banking Company of Sydney Ltd., The National Bank of Australasia Ltd. (which has absorbed the Queensland National Bank Ltd.), The Commercial Bank of Australia Ltd., The Bank of Adelaide, the Australia and New Zealand Bank Ltd. (an amalgamation of the Bank of Australasia Ltd. and The Union Bank of Australia Ltd.), and The English, Scottish and Australian Bank Ltd.
- (c) *Other Banks.* This group consists of (i) three State Government Banks—The Rural Bank of New South Wales, The State Bank of South Australia and The Rural and Industries Bank of Western Australia which, in their general banking business, specialize mainly in financing rural industries, (ii) two joint stock banks—The Ballarat Banking Co. Ltd. and The Brisbane Permanent Building and Banking Co. Ltd. which have specialized business in two districts only, and (iii) branches of three oversea banks—the Bank of New Zealand, Comptoir National d'Escompte de Paris and the Bank of China which transact limited business in Australia and are mainly concerned with financing trade, etc., between Australia and oversea countries.

In addition to the series mentioned above, a series for all cheque-paying banks is presented. This series covers the General Banking Division of the Commonwealth Bank, the Private Trading Banks and the other cheque-paying banks included in the third group.

Unless otherwise stated, the statistics presented are averages of weekly returns. Averages of liabilities and assets are the averages of the liabilities and assets of the banks on the several weekly balance days during the period concerned. Averages of bank clearings and debits to customers' accounts are the averages of transactions for weeks ended on the balance days during the period.

4. **Banks Transacting Business in Australia.**—(i) *Number of Branches.* At 30th June, 1952 the 16 banks operating in Australia transacted all classes of banking business at 3,037 branches and 1,073 agencies. The Commonwealth Bank of Australia and the Private Trading Banks have branches throughout the Commonwealth. The Rural Bank of New South Wales, State Bank of South Australia and Rural and Industries Bank of Western Australia, being State Government banks specializing mainly in financing rural industries, have branches only in those States. Two banks, the Ballarat Banking Company Ltd. and the Brisbane Permanent Building and Banking Co. Ltd., transact business only in Ballarat and Brisbane respectively. The remaining three banks are branches of oversea banks.

## CHEQUE-PAYING BANKS : NUMBER OF BRANCHES(a) AT 30th JUNE, 1952.

(a) Includes dividends declared but not paid at date of balance-sheet. (b) Includes uncalled capital. (c) Dividends paid and payable out of profits earned during 1951-52. (d) Special Reserve—Premium on gold sold. (e) The business of the Queensland National Bank Ltd. was taken over by the National Bank of Australasia Ltd. in January, 1948. (f) Total stocks and debentures issued including liability in respect of deposits taken over by the Commonwealth Bank in December, 1931. (g) Includes £5,060,501 Special Reserve Account established under Section 12 (2) of Rural Bank of New South Wales Act 1932.

5. **Commonwealth Bank.**—(i) *General.* An account of the progress and development of the Commonwealth Bank is given in earlier issues of the Official Year Book (see No. 37, pages 570 to 573). The general functions of the Bank are set out in section 8 of the Commonwealth Bank Act 1945-1953 which states—

“8. It shall be the duty of the Commonwealth Bank, within the limits of its powers, to pursue a monetary and banking policy directed to the greatest advantage of the people of Australia, and to exercise its powers under this Act and the Banking Act 1945 in such a manner as, in the opinion of the Bank, will best contribute to :—

(a) the stability of the currency of Australia ; (b) the maintenance of full employment in Australia ; and (c) the economic prosperity and welfare of the people of Australia.”

In addition to its functions as a Central Bank, the Bank controls the Australian note issue through a Note Issue Department and provides general banking facilities through a General Banking Division and special services through the Rural Credits Department, Mortgage Bank Department and Industrial Finance Department. The Commonwealth Savings Bank, a separate institution providing for small depositors, is controlled by the Commonwealth Bank Board and is operated in conjunction with the Commonwealth Bank. The Commonwealth Bank Act 1953, assented to on 1st April, 1953, provided for the establishment of the Commonwealth Trading Bank to take over the business of the General Banking Division of the Commonwealth Bank.

(ii) *Management.* Under the Commonwealth Bank Act 1911 the Bank was managed by a Governor. From 1924 to August, 1945 it was controlled by a Board of Directors. Under the Commonwealth Bank Act 1945 control was vested in a Governor, assisted by an Advisory Council. Since 21st August, 1951, under the Commonwealth Bank Act 1951, the policy of the Commonwealth Bank and the Commonwealth Savings Bank has been determined by the Commonwealth Bank Board consisting of the Governor (Chairman), the Deputy Governor, the Secretary of the Department of the Treasury and seven other members appointed by the Governor-General. The Bank is managed by the Governor who shall act in accordance with the policy of the Bank and with any directions of the Board. The Board is required to inform the Government of the monetary and banking policy of the Bank. In the event of a disagreement between the Government and the Board as to whether the monetary and banking policy of the Bank is directed to the greatest advantage of the people of Australia, the Governor-General, acting with the advice of the Executive Council, may determine the policy to be adopted by the Bank. The Commonwealth Trading Bank is to be managed by a General Manager under the Governor of the Commonwealth Bank. The policy of the Trading Bank is to be determined by the Commonwealth Bank Board.

(iii) *Central Banking Business.* Under the powers it possessed under the Commonwealth Bank Act 1911-1943 and under its war-time powers under the National Security Regulations, the Commonwealth Bank had gradually assumed the functions of a Central Bank. Part III. of the Commonwealth Bank Act 1945 formally constituted the Commonwealth Bank as a Central Bank and granted the Bank the necessary powers to carry on the business of a Central Bank. The capital for the Central Banking Business is £4,000,000 and such other sums as are transferred from the Reserve Fund. Until 30th June, 1951 the profits of the Central Banking Business were distributed as follows :— (a) One-quarter to be placed to the credit of the Commonwealth Bank Reserve Fund ; (b) one-quarter to be paid to the Mortgage Bank Department Capital Account ; and (c) one-half to be paid to the National Debt Sinking Fund. When the capital of the Mortgage Bank Department reached £4,000,000, the share of profits payable to that department were credited to the Commonwealth Bank Reserve Fund. By the Commonwealth Bank Act 1951 the distribution of profits was altered as follows :—(a) One half to be paid to the National Debt Sinking Fund ; (b) for a period of five years, an amount not exceeding £500,000 per annum may be paid to the capital of the various sections of the Bank, this amount to be distributed as follows—General Banking Division, Mortgage Bank Department and Industrial Finance Department each two-sevenths and the Rural Credits Department one-seventh ; and (c) the balance to be paid to the Commonwealth Bank Reserve Fund.

(iv) *Note Issue Department.* This Department was established in 1920 when the control of the Australian note issue was transferred from the Commonwealth Treasury to the Commonwealth Bank. The Bank may, through this department, issue, re-issue and cancel Australian notes. Until 30th June, 1951, all profits of this Department, with the exception of £2,000,000 paid to the Capital Account of the Rural Credits Department and £1,200,000 paid to the Capital Account of the Mortgage Bank Department, were paid to the Commonwealth Consolidated Revenue Fund. Under the Commonwealth Bank Act 1951 provision is made for an amount, not exceeding £500,000 per annum for five years, to be paid to the Capital Accounts of the General Banking Division and the Rural Credits, Industrial Finance and Mortgage Bank Departments. This amount is payable only if a similar amount is paid from the profits of the Central Banking Business and is to be distributed to the various sections in the same proportions as the amount payable from the profits of the Central Banking Business. The balance of the profits is to be paid to the Commonwealth Consolidated Revenue Fund.

(v) *General Banking Division.* Under the Commonwealth Bank Act 1911-1943 no provision was made for the separation of the general banking business of the bank from its central banking business. Under the Commonwealth Bank Act 1945 the General Banking Division was set up to carry on the general banking business of the Bank. The accounts and transactions of this division are kept separate and distinct from the other accounts of the Bank. The capital of the General Banking Division is £4,000,000, and such other sums as are transferred from the General Banking Division Reserve Fund, or from the profits of the Central Banking Business and the Note Issue Department. In 1951-52 an amount of £143,000 was transferred from each of these two sources, making the total capital at 30th June, 1952, £4,286,000. The profits of the General Banking Division are distributed as follows:—(a) one-half is credited to the General Banking Division Reserve Fund, and (b) one-half is paid to the National Debt Sinking Fund. Under the Commonwealth Bank Act 1953 provision is made for the business of the General Banking Division to be transferred to the newly created Commonwealth Trading Bank on a date to be proclaimed.\*

(vi) *Rural Credits Department.* The Rural Credits Department was established in 1925 for the purpose of making short-term credit available for the orderly marketing of primary produce. The Bank may, through this department, make advances, upon the security of primary produce placed under the legal control of the Bank or other security associated with the production or marketing of primary produce, to co-operative associations or marketing boards formed under the laws of the Commonwealth or of a State or Territory of the Commonwealth or other bodies specified by proclamation. The period of the advance shall not be more than one year. The capital of the Rural Credits Department is £2,000,000 and such amounts as are transferred from the profits of the Central Banking Business and the Note Issue Department. In 1951-52 an amount of £71,500 was transferred from each of these two sources, bringing the total capital to £2,143,000 at 30th June, 1952. Profits are distributed as follows:—(a) one-half is credited to the Rural Credits Department Reserve Fund, and (b) one-half is credited to the Rural Credits Department Development Fund for the promotion of primary production.

(vii) *Mortgage Bank Department.* The Mortgage Bank Department was established in 1943 for the purpose of making long-term loans to primary producers. Through this Department the Bank may make a loan to any person engaged in farming, agricultural, horticultural, pastoral or grazing operations or other form of primary production, upon the security of a mortgage to the Bank of an estate or interest in land in the Commonwealth owned by the borrower. The term of the loan shall not be less than five years nor more than forty-one years. The capital of the Department is £4,000,000 plus any amount transferred from the profits of the Central Banking Business and the Note Issue Department. In 1951-52 an amount of £142,500 was transferred from each of these two sources, making the total capital at 30th June, 1952, £4,285,000. Profits are credited to the Mortgage Bank Department Reserve Fund.

\* The date proclaimed was 3rd December, 1953.

(viii) *Industrial Finance Department.* The functions of the Industrial Finance Department established in January, 1946 are:—(a) to provide finance for the establishment and development of industrial undertakings; (b) to assist in the establishment and development of industrial undertakings; and (c) to provide advice on the operations of industrial undertakings with a view to promoting the efficient organization and conduct thereof. To exercise these functions the Bank may, through the Industrial Finance Department, lend money and purchase and sell shares or securities in an industrial undertaking. The capital of this department is £4,000,000 plus any amount transferred from the profits of the Central Banking Business and Note Issue Department. In 1951–52 an amount of £143,000 was transferred from each of these two sources, making the total capital at 30th June, 1952, £4,286,000. The Treasurer, the Bank and the Savings Bank may advance money to the Industrial Finance Department. The amount that may be advanced by the Bank is limited to £1,000,000. The profits of the Department are credited to the Industrial Finance Department Reserve Fund.

(ix) *Housing Loans.* Provision is made for the Bank, through the General Banking Division, to make loans to individuals or building societies for the erection or purchase of homes or for the discharge of mortgages on homes. These loans must be made at the lowest possible rate of interest. Loans to individuals are to be on *crédit foncier* terms, to be secured by first mortgage on an estate or interest in land owned by the borrower and to be repaid in periods of not less than five years nor more than 35 years. Loans to building societies are to be made on such security and on such terms and conditions as the Bank determines.

(x) *Liabilities and Assets—All Departments.* Liabilities and assets of each Department of the Commonwealth Bank at 30th June, 1952 are shown in the following table. The Commonwealth Savings Bank, which is operated as a separate institution, is not included (see § 2, para. 6 (iv) following):—

COMMONWEALTH BANK : LIABILITIES AND ASSETS, 30th JUNE, 1952.  
(£'000.)

(a) Ten months ended June, 1946.

(xiii) *General Banking Division—Average Liabilities and Assets within Australia.* The average liabilities and assets within Australia of the General Banking Division of the Commonwealth Bank for the years ended June, 1946 to 1952 are shown in the tables below.

In previous issues of the Official Year Book these tables related to the combined assets and liabilities of the General Banking Division and the Rural Credits, Mortgage Bank and Industrial Finance Departments. In this issue only the assets and liabilities of the General Banking Division are included. By excluding the three specialized departments a clearer picture is given of the commercial banking activities of the Commonwealth Bank carried on through the General Banking Division. Between March and July, 1952, a change was made in the asset structure of the General Banking Division. During this period certain loans to building societies and *crédit foncier* loans for housing were transferred to the Savings Bank in exchange for Government securities. The reduction in these loans (held by the General Banking Division) over this period was approximately £24,000,000. In addition, at the end of June, 1952 the General Banking Division opened in the books of the Central Bank a deposit account with a balance approximating the amount that would be required if it were subject to the Special Account provisions of the Banking Act 1945. This represents a change in the form of liquid assets which were previously held predominantly in Treasury Bills. The amount of this deposit at 30th June, 1952, was £22,000,000.

**COMMONWEALTH BANK : GENERAL BANKING DIVISION—AVERAGE  
LIABILITIES WITHIN AUSTRALIA.(a)**  
(£'000.)

Year ended June—	Inter- minable Deposits or Deposit Stock.	Deposits.			Notes in Cir- culation.	Balances due to other Banks.	Bills payable and all other Li- abilities to the Public.	Total Li- abilities.

9. Classification of Advances within Australia—Commonwealth Bank and Private Trading Banks.—(i) *States, June, 1952*. A dissection of advances made by the Commonwealth Bank (General Banking Division) and the Private Trading Banks at the end of June, 1952, is shown in the following table. Business advances, which have been classified according to the main industry of the borrower, are those made mainly for business purposes and include all loans to corporate bodies other than public authorities. Advances made to public authorities are those made to Commonwealth and State Governments, Government Agencies and Local and Semi-governmental Authorities irrespective of the purpose of the advance or the industry in which the authority is engaged. Personal advances, which have been classified according to purpose, include advances to persons in their private capacity for such purposes as the purchase of a house or of household equipment, repayment of personal debts, etc. This table in previous issues, included advances of the Rural Credits, Mortgage Bank and Industrial Finance Departments of the Commonwealth Bank. Details of this change and other changes affecting the advances of the Commonwealth Bank, General Banking Division are given in § 1 para. 5 (xiii), page 623.

(a) Excludes transactions connected with the issue and redemption of Treasury Bills.

12 Debits to Customers' Accounts—All Cheque-Paying Banks.—Statistics of debits to customers' accounts have been collected since September, 1945. Generally they represent the total of all cheques drawn by the customers of the banks. In the following table are shown the average weekly debits to customers' accounts of all cheque-paying banks for each State for the years ended June, 1948 to 1952. In this table debits to accounts of Australian Governments in capital cities are excluded as they are subject to abnormal influences and are not uniform for each State.

**AVERAGE WEEKLY DEBITS TO CUSTOMERS' ACCOUNTS: ALL CHEQUE-PAYING BANKS.**

(Excluding Debits to Australian Government Accounts in Capital Cities.)  
(£'000.)

Year ended June—	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	A.C.T.	Total.

(a) From January, 1948 excludes debits to Customers' Accounts relating to the transfer of accounts from the Queensland National Bank Ltd. (in voluntary liquidation) to the National Bank of Australasia Ltd.

13. Rates of Exchange.—(i) *Overseas Exchange Rates.* In the following table the average telegraphic transfer rates of exchange for Sydney on a number of overseas countries are shown. For the year 1938-39 the rates quoted are the averages of quotations at the end of each month; for subsequent years they are averages of daily quotations. Generally the averages are based on rates quoted by the Commonwealth Bank of Australia, but where these were not available rates quoted by other Australian Banks have been used.

(a) Unchanged since 1st January, 1940.

There is no charge for transfers within a city or a town. In all States excepting Queensland and Western Australia, the exchange for transfers between towns in the same State is 2s. per £100. Queensland and Western Australia are divided into zones. The exchange rate for transfers between towns in the same zone is 2s. per £100, with higher rates for inter-zone transfers.

The exchange rate between Papua and New Guinea and the mainland is 10s. per £100 for all points.

## § 2. Savings Banks.

1. **General.**—The inauguration of Savings Banks in Australia dates from 1819, when a private Savings Bank was opened in Sydney. In 1832 the legislature created "The Savings Bank of New South Wales" under the control of trustees, and shortly after its establishment the funds of the private Savings Bank were transferred to the new institution. In the other States provision for placing deposits with savings banks dates from 1841 in Victoria; 1854 in Queensland; 1840 in South Australia; 1863 in Western Australia (a Savings Bank was opened in 1856 but was closed a year later); 1835 in Launceston; and 1845 in Hobart. These early banks functioned as Trustee Savings Banks, but, with the exception of the Hobart and Launceston institutions, were later absorbed by, or amalgamated with, Government Savings Banks.

Post Office Savings Banks were established in all States from 1864 onwards. These were separate Government institutions except in South Australia, where the Post Office acted as agent for the Savings Bank. Since the federation of the Australian States in 1900, post offices have been controlled by the Commonwealth Government, but they continued to act as savings bank agencies for the State institutions until the establishment of the Commonwealth Bank in 1912. They now act as agents for the Commonwealth Savings Bank.

Savings banks at present operating are the Commonwealth Savings Bank (all States and Territories); State Savings Bank of Victoria; Savings Bank of South Australia; and the two Trustee Banks—Hobart and Launceston.

The prime object of the foundation of savings banks in Australia was the encouragement of thrift, deposits of one shilling and upwards being accepted; nevertheless, the facilities offered, while preserving the original object, have led to developments in another direction. Although depositors may not operate on their accounts by means of cheques, they have practically all the other advantages of a current account and in addition receive interest on their minimum monthly balances. No charge is made by the banks for keeping the accounts.

Commencing with July, 1931, monthly returns of statistics have been furnished by savings bank authorities. The information given in the following paragraphs relates to the deposits at 30th June in each year. For convenience of reference the information has been grouped under the following headings:—

- (i) All Savings Banks; (ii) Commonwealth Savings Bank; and (iii) State Savings Banks (including Trustee Banks in Tasmania).

2. **Number of Accounts.**—The following table shows the number of savings bank accounts in existence at 30th June, 1951 and 1952. It should be noted that these figures relate to the number of accounts and not necessarily to the number of depositors.

## ALL SAVINGS BANKS : NUMBER OF ACCOUNTS.(a)

Bank.	30th June, 1951.		30th June, 1952.	
	Operative.	Inoperative. (b)	Operative.	Inoperative. (b)

(iii) *Deposits per head and Purchasing Power.* Particulars of the deposits per head of population, actual and adjusted to purchasing power by the application of retail price index-numbers, at 30th June, in each of the years 1939 and 1943 to 1952 are shown in the following table. In calculating the index-numbers in this table the average of deposits per head of population at 30th June, 1937, 1938 and 1939 has been used as a base and made equal to 1,000.

**ALL SAVINGS BANKS : DEPOSITS PER HEAD OF POPULATION, AUSTRALIA.**

At 30th June—	Actual.		Adjusted to Purchasing Power.(a)	
	Deposits per head of population.	Index-Number.	Deposits per head of population.	Index-Number.
	£	1937-1939 = 1000	£	1937-1939 = 1000
1939 .. .. .	35.25	1,018	34.32	991
1943 .. .. .	49.48	1,429	38.66	1,117
1944 .. .. .	64.51	1,863	51.20	1,479
1945 .. .. .	76.70	2,215	60.89	1,758
1946 .. .. .	88.89	2,567	69.32	2,002
1947 .. .. .	87.08	2,515	66.24	1,913
1948 .. .. .	88.36	2,552	61.75	1,783
1949 .. .. .	90.28	2,607	57.46	1,659
1950 .. .. .	93.10	2,689	54.20	1,565
1951 .. .. .	99.32	2,869	48.39	1,397
1952 .. .. .	103.13	2,979	41.75	1,206

(a) On the basis of the All Items ("C") Series of Retail Price Index-numbers (6 capitals) for June quarter in each year. (Base: Average of June quarters, 1937, 1938 and 1939 = 1,000.)

In interpreting the figures above it should be remembered that savings bank accounts are used to some extent by institutions and business people, as well as by individuals for the investment of personal savings. The relative extent to which savings bank accounts are used for business purposes, etc., may, and probably does, fluctuate considerably from time to time.

4. **School Banking.**—With the object of encouraging principles of thrift amongst children, agencies of the Savings Banks have been established at most of the schools throughout Australia. Particulars of operative accounts for each State and Territory at 30th June, 1952 were as follows:—

**SCHOOL SAVINGS BANKS AT 30th JUNE, 1952.**

State or Territory.	Number of School Agencies.	Number of Operative Accounts.	Deposits.	Deposits per Operative Account.
			£	£ s. d.
New South Wales .. .. .	2,512	172,462	986,661	5 14 5

1952	..	..	8,219	638,476	3,866,793	6 1 1

5. **War Savings and Savings Certificates.**—Sales of savings certificates and stamps under the War Savings and Savings Certificate schemes, particulars of which were given in earlier issues of the Official Year Book (see No. 37, page 586), were discontinued after 31st January, 1949, except for some sales made to wind up savings groups, etc. This method of saving was replaced by special savings schemes to operate through the savings banks. Employers were asked to co-operate by forming employee savings groups and by making regular deductions from wages and salaries for payment into group savings bank accounts, and thence, at the end of each quarter to individual accounts. The total value of certificates outstanding at 30th June in each of the last five years was :—1948, £64,483,000 ; 1949, £62,198,000 ; 1950, £55,025,000 ; 1951, £48,115,000 ; 1952, £41,809,000.

6. **Commonwealth Savings Bank.**—(i) *General.* The Savings Bank Department of the Commonwealth Bank opened for business in Victoria on 15th July, 1912 ; in Queensland on 16th September, 1912 ; in the Northern Territory on 21st October, 1912 ; and in New South Wales, South Australia and Western Australia on 13th January, 1913. The Tasmanian State Savings Bank was absorbed by the Commonwealth Bank in January, 1913, the Queensland State Savings Bank was taken over in 1920 and the New South Wales and Western Australian State Savings Banks in 1931. The Savings Bank Department was separated from the General Bank on 9th June, 1928, and established as a separate institution known as the "Commonwealth Savings Bank". It has since then operated independently, publishing its own balance-sheets and profit and loss accounts. The Commonwealth Bank Act 1927, which provided for the establishment of the Commonwealth Savings Bank as a separate institution, provided for a Commission of three members to manage the Savings Bank. This Commission was never appointed and the Commonwealth Bank Act 1945 placed the control of the Commonwealth Savings Bank under the Governor of the Commonwealth Bank.

(ii) *Particulars for Years 1950-51 and 1951-52.* Particulars for the States and Territories for the years 1950-51 and 1951-52 are shown in the table below :—

**COMMONWEALTH SAVINGS BANK : BUSINESS TRANSACTED.**

(a) Paid to Rural Bank of New South Wales.

(b) Paid to State Consolidated Revenue Funds.

7. State Savings Banks.—(i) *Particulars for Years 1950-51 and 1951-52.* Particulars of the transactions of all State savings banks for the years 1950-51 and 1951-52 are given hereunder. Throughout the following tables the figures for Tasmania refer to the Trustee Savings Banks in Hobart and Launceston. Although the accounts of these institutions are made up for half-yearly periods ending 28th February and 31st August, the managements have furnished particulars of deposits as at 30th June.

## STATE SAVINGS BANKS : BUSINESS TRANSACTED.

(£'000.)

State.	Amount on Deposit at 30th June, 1950.	1950-51.			1951-52.		
		Excess of Deposits over With- drawals during year.	Interest added during year.	Amount on Deposit at 30th June, 1951.	Excess of Deposits over With- drawals during year.	Interest added during year.	Amount on Deposit at 30th June, 1952.
Victoria ..	198,680	11,652	3,355	213,687	7,955	3,605	224,347

(a) Year ended 31st August, 1952. See para. 7 (i).

In 1950-51 total receipts were £8,316,000 and expenditure, £7,701,000. Net profits amounted to £615,000.

8. *Classification of Depositors' Balances.*—The classification of deposits published by savings banks does not permit a fully detailed analysis with respect to Australia as a whole, but information supplied to the Royal Commission on Monetary and Banking Systems, for all savings banks except the Hobart Trustee Savings Bank, shows that at 30th June, 1936 the amount on deposit in accounts with balances of less than £100 represented 21 per cent. of the total deposits; balances of over £100 but under £250, 21 per cent.; over £250 but under £500, 23 per cent.; over £500 but under £1,000, 25 per cent.; while those of over £1,000 accounted for 10 per cent. School, penny bank and small inoperative accounts were excluded in determining these percentages.

A similar classification as at 30th June, 1936, 1939 and 1948 to 1952, but relating only to the combined State Savings Banks of Victoria and South Australia, is shown below.

## STATE SAVINGS BANKS : CLASSIFICATION OF DEPOSITS.

(Per cent.)

At 30th June—	£100 and under.	£101-£300.	£301-£500.	Total under £501.	£501-£1,000.	Over £1,000.
1936.. ..	19.54	26.13	17.84	63.51	27.42	9.07
1939.. ..	20.27	27.15	17.90	65.32	26.14	8.54
1948.. ..		52.72		52.72	32.74	14.54

1952 .. ..	2	1	1	2½	2½	1½	1	2½	2½	2½	2½
1st August, 1952(c)	2½	1½	1½	2½	2½	1½	1½	(d) 2½	(d) 2½	(d) 2½	(d) 2½

(a) Rates on ordinary accounts. On Friendly and other Society Accounts the rates at 30th June, 1952 were—State Savings Bank of Victoria, 2 per cent. on first £2,000, 1 per cent. on balance; Savings Bank of South Australia, 2½ per cent. on first £500, 2 per cent. on next £1,500 and 1 per cent. on the balance.

(b) Increased from £300 to £450 from 13th April, 1951. (c) Rates fixed consequent upon revocation (on 28th July, 1952) of the Order under National Security (Economic Organization) Regulations fixing maximum rates of interest. The rates on Friendly and other Society Accounts were increased by ½ per cent. (d) From 1st September, 1952.

## COMMONWEALTH SAVINGS BANK : INTEREST RATES(a) ON DEPOSITS, 30th JUNE.

(Per Cent.)

Part of Balance—	1939.	1948.	1949.	1950.	1951.	1952.	1st August, 1952.(c)
£1 to £500 .. ..	2	2	2	2	2	2	2½
£501 to £1,000(b) .. ..	1½	1	1	1	1	1	1½

(a) Rates on ordinary accounts. On Friendly and other Society Accounts the rates at 30th June, 1952 were 2 per cent. on first £2,000 and 1 per cent. on the balance. These were increased by ½ per cent. from 1st August, 1952. (b) Up to 1941 the interest-bearing limit in all States except Queensland was £1,300. In Queensland it was £2,000. The limit since 1942 has been £1,000 in all States. (c) See

footnote (c) previous table.

## C. COMPANIES.

NOTE.—Statistics available in regard to companies relate to (a) Trustee, Executor and Agency Companies; (b) Building and Investment Societies; and (c) Co-operative Societies.

## § 1. Trustee, Executor and Agency Companies.

The following table shows, for the years 1939 and 1947 to 1951, particulars of the assets and liabilities of certain trustee companies transacting business in Australia and New Zealand. Figures for the year 1939 were obtained from returns supplied to the Commonwealth Bureau of Census and Statistics, while those for the years 1947 to 1951 have been extracted from a summary of the last published balance-sheets as shown in the *Australasian Insurance and Banking Record*. Individual items are therefore not entirely comparable. Details of assets of trust funds administered are shown for the year 1939, but for the years 1947 to 1951 totals are available for nine offices only.

(a) Includes Starr-Bowkett and other terminating societies:—New South Wales, £45,368,952; Queensland, £648,880. (b) Not available. (c) Included with Other Assets. (d) Includes cash in hand and on deposit. (e) Year 1951. (f) Incomplete.

## § 3. Co-operative Societies.

1. **General.**—Returns relating to co-operative societies are divided into three classes—(i) those engaged in the manufacture and marketing of primary products and trade requirements; (ii) those engaged in retailing general household requirements; and (iii) those engaged in activities covered by both classes (i) and (ii). The first class may be described briefly as Producers' Co-operative Societies and the second as Consumers' Co-operative Societies. The particulars given for New South Wales relate to societies registered under the Co-operation Act 1923-1945. A summary of the business of co-operative societies for the years 1950-51 or 1951 for all States except Western Australia is given in the following table. For Western Australia details of the business during 1940-41 (the latest year available) are given.

**D. INSURANCE.****§ 1. Introductory.**

1. **Legislation.**—Section 51 of the Commonwealth Constitution confers the necessary powers on the Commonwealth Parliament to legislate in regard to “insurance other than State insurance; also State insurance extending beyond the limits of the State concerned”. Legislation by the Commonwealth Parliament includes the Life Assurance Companies Act 1905 limiting the amount of assurance payable on the death of children, the Marine Insurance Act 1909 defining the limits of marine insurance and regulating the terms of contracts, etc., the Insurance Act 1932–1937, requiring the lodgment of deposits by insurance companies, and the Life Insurance Act 1945–1950 generally regulating life insurance business in Australia. The Life Assurance Companies Act 1905 was repealed by the Life Insurance Act 1945–1950 which incorporated the provisions of that Act. The Marine Insurance Act 1909 and the Insurance Act 1932–1937 have limited application, and, except for life insurance business which is regulated by the Life Insurance Act 1945–1950, insurance business is conducted under State laws.

2. **Insurance Act 1932–1937.**—Companies, persons or associations of persons carrying on insurance business in Australia or in any Territory of Australia are required to lodge a deposit with the Commonwealth Treasurer.

Money deposited is invested by the Treasurer in prescribed securities selected by the depositor, and all interest is paid to depositors. Deposits remain as security against liability to policy holders, and are available to satisfy judgments obtained in respect of policies.

Deposits held by States on 1st February, 1932, could, however, remain with the States subject to the conditions embodied in the laws of the States, and depositors to the extent of the value of these deposits, were exempt from liability to make deposits under the Commonwealth Act.

The following are not regarded as insurance businesses under the Act :—

Staff superannuation schemes; schemes of religious organizations solely for insurance of their property; and Friendly Society, Union and Association schemes involving superannuation or insurance benefits to employees.

This Act does not apply to State insurance within the limits of the State concerned, and, under the Life Insurance Act 1945–1950, ceased to apply to life insurance business.

Deposits lodged under the Insurance Acts at 30th June, 1952, totalled £5,032,996, comprising £1,090,132 held by the Commonwealth in respect of life insurance and £2,571,714 held by the Commonwealth and £1,371,150 held by the States in respect of other forms of insurance.

The deposits comprise cash £454,750, government, municipal and other securities £3,814,596, fixed deposits £1,000, bank guarantees and undertakings, £470,000, titles and mortgages £292,650.

3. **Life Insurance Act 1945–1950.**—The objects of this Act are :—(a) To replace all State legislation on the subject of life insurance and to provide uniform legislation for the whole of Australia; (b) to appoint an Insurance Commissioner to exercise active supervision of the activities of life insurance companies, with a view to securing the greatest possible protection for policy holders; (c) to set up adequate machinery for dealing with any company that fails to maintain a required minimum standard of solvency.

In addition, it provides for the establishment of a Commonwealth Government Insurance Office, if and when the establishment of such an office is thought to be in the public interest.

The Act was assented to on 16th August, 1945, and came into operation on 20th June, 1946. A summary of the provisions of the Act is given in Official Year Book No. 37 (pages 595 to 597).

**§ 2. Life Assurance.**

1. **General.**—Statistical returns have been collected from life assurance institutions since 1907. Until 1946 these returns were collected under the Census and Statistics Act. Since 1947 returns lodged under the Life Insurance Act 1945–1950 have been used to

compile life assurance statistics. This change in method of collection has resulted in some slight changes in definition and, as a result, the statistics for 1947 and later years are not in all cases strictly comparable with those for earlier years. In earlier years statistics of revenue and expenditure and of assets and liabilities, although generally related only to the life assurance business of the offices making the returns, included, in some cases, a small amount of other classes of business. Under the Life Insurance Act 1945-1950 companies transacting life assurance business are required to set up separate statutory funds for their life assurance business. As a result of this, it has been possible to separate life assurance business from other classes of business. Except where otherwise indicated, the figures in the succeeding paragraphs refer to Australian business only. Business in the Territories of Papua and New Guinea is, however, included in the Australian figures.

2. **Offices Transacting Business.**—The number of offices which transacted life assurance business in Australia during 1951 was 23, including two oversea companies. Of the twenty-one Australian offices, six are purely mutual, including one which transacts general business in respect of which share capital is used, thirteen are public companies, and two are State Government institutions. Of the total offices, thirteen transacted both ordinary and industrial business, and one industrial business only. Ordinary and industrial business has, where possible, been kept separate.

3. **Australian Business—Policies in Existence.**—(i) *Ordinary Business.* In the following table details of ordinary policies on the registers in each State and the Australian Capital Territory are given for the year 1951 :—

1951 .. .. .	6,743	667	..	2,250	35	2,646	12,341

(a) Includes other expenses of management, licence fees and taxes, &c.

8. **Liabilities and Assets.**—(i) *General.* The liabilities of the Australian offices consist mainly of their assurance funds, but in the case of public companies there is a further liability on account of the shareholders' capital. The assets consist chiefly of government and municipal securities, mortgages, loans on policies, landed and house property, etc. Loans on personal security are granted by very few of the Australian

offices. A number of the larger Australian offices have extensive business overseas and separate details of liabilities and assets in respect of Australian business are not available for years after 1941. For 1941 and earlier years *see* Official Year Book No. 37 and previous issues.

(ii) *Total Liabilities and Assets.* In the two tables which follow, the details of liabilities and assets relate to all business (Australian and overseas) of Australian companies, the life assurance business of the two State Government offices, all business of the Provident Life Assurance Co. Ltd. (incorporated in New Zealand) and the Australian business only of the Prudential Assurance Co. Ltd. (incorporated in England). For various reasons several offices do not attempt the dissection of liabilities and assets between the industrial and ordinary branches, and, therefore, the figures in the following tables relate to the ordinary and industrial branches combined. Details of the total liabilities of life assurance offices for the year 1951 are given in the following table:—

**ORDINARY AND INDUSTRIAL LIFE ASSURANCE: TOTAL LIABILITIES, 1951.**

(a) Excludes Government Insurance Office of New South Wales and Queensland State Government Insurance Office. (b) Excludes Advances of Premiums. (c) State or Territory of location of mortgage, registration of policy, or residence of borrower.

## § 3. Fire, Marine and General Insurance.

1. **Australasian Companies.**—The statistical information in this paragraph has been extracted from the *Australasian Insurance and Banking Record*. The following table shows, for the years 1938-39 and 1946-47 to 1950-51 particulars of the revenue and expenditure of a group of insurance companies having their head offices either in Australia, New Zealand or Fiji:—

**FIRE, MARINE AND GENERAL INSURANCE COMPANIES: SUMMARY OF REVENUE AND EXPENDITURE.**

Particulars.	1938-39.	1946-47.	1947-48.	1948-49.	1949-50.	1950-51.
No. of companies . . . . .	40	43	43	47	44	45
	£'000.	£'000.	£'000.	£'000.	£'000.	£'000.
Premiums, less reinsurances . . . . .	9,708	15,472	19,363	21,816	24,008	31,796
Losses . . . . .	5,417	8,056	10,437	11,502	12,585	17,131

(a) Not available.  
Unearned Premiums.

(b) Trade surplus. No provision has been made for transfers to Reserve for

2. **Aggregate Australian Business.**—(i) *General.* While the foregoing statements relate only to those companies whose head offices are located in Australia, New Zealand or Fiji, the following particulars, which are somewhat restricted in the range of information, are in respect of all companies operating in Australia. The statistics in this paragraph conform substantially to the following definitions and should be interpreted in accordance therewith.

(a) Premiums represent the full amount receivable in respect of policies issued and renewed in the year, less returns, rebates and bonuses paid or credited to policy-holders during the year. They are not adjusted to provide for premiums unearned at the end of the year and consequently the amounts differ from "earned premium income" appropriate to the year. When business is increasing, as in recent years, premiums receivable (as shown in the statistics) are greater than "earned premium income" appropriate to the year. The converse applies when business is declining.

(b) Claims or losses include provision for outstanding claims and represent claims or losses incurred in the year. Salvage and other amounts recoverable have been deducted.

(c) Contributions to Fire Brigades, Commission and Agents' Charges, and Expenses of Management represent mainly charges paid during the year.

(d) Taxation represents mainly payments made during the year, and includes income tax, pay-roll tax, licence fees, stamp duty (where paid by the company), etc. Income tax paid during the year is based on the income of earlier years.

The tables contain selected items of statistics and the information shown is not suitable for the construction of a "profit and loss" statement or "revenue" account.

In cases where the business is underwritten in one State and the risk is situated in another the business is included in the State in which the policy was issued.

During 1951-52 (1950-51) revenue from premiums amounted to £77,608,000 (£57,949,000) and from the net interest on investments, etc., to £2,232,000 (£2,087,000), totalling £79,840,000 (£60,036,000). Expenditure on losses amounted to £40,408,000 (£27,405,000), contributions to fire brigades £1,732,000 (£1,402,000), commission and agents' charges £8,057,000 (£6,102,000), expenses of management £12,840,000 (£9,731,000) and taxation £3,794,000 (£2,460,000), a total of £66,831,000 (£47,100,000).

(ii) *States.* The following table shows, for each State, the aggregate premium income less reinsurances and returns, and claims or losses less amounts recoverable, for all classes of insurance other than life for the years 1938-39 and 1947-48 to 1951-52 :—

**FIRE, MARINE AND GENERAL INSURANCE : PREMIUMS AND LOSSES—STATES.**

Personal Accident .. ..	264	(c)	349	412	514	634
All other .. ..	503	2,931	2,888	2,585	2,427	3,719
Total .. ..	8,529	16,353	18,898	21,168	27,405	40,408

(a) From 1947-48 excludes Workmen's Compensation Insurance in coal-mining industry in New South Wales. (b) Excludes business of Commonwealth Marine War Risks Insurance Board (see Official Year Book No. 38, pp. 753-4). (c) Included with All other.

The volume of business measured by the amount of premium income shows that fire insurance represented about 25.5 per cent. of the total business during 1950-51 and 23.9 per cent. during 1951-52, workers' compensation 23.1 per cent. during 1950-51 and 22.1 per cent. during 1951-52, motor vehicles (including compulsory third party insurance) 25.8 per cent. in 1950-51 and 29.4 per cent. in 1951-52 and marine insurance constituted 9.2 per cent. in 1950-51 and 9.6 per cent. in 1951-52.

### E. FRIENDLY SOCIETIES.

1. **General.**—The total membership of friendly societies in Australia is approximately 600,000 but as certain benefits, such as medical attendance and free medicines, and in many cases funeral expenses, are granted to members' families as well as to members themselves, this figure must, even when due allowance is made for young and unmarried members, be more than doubled to arrive at an estimate of the number of persons who receive some direct benefit from these societies. Legislation has conferred certain privileges on friendly societies, but, on the other hand, it insists on their registration, and it is the duty of the Registrars in the various States, prior to registering a new society, to see that its proposed rules conform to the law, and that the scale of contribution is sufficient to provide the promised benefits. Societies are obliged to forward to the Registrar annual returns about their membership and their finances, and reports are published in most of the States dealing with the returns received.

2. **Number of Societies, Lodges and Members.**—The number of different societies and lodges, the total number of benefit members at the end of the year 1950-51 and their average number during the year are shown in the following table :—

FRIENDLY SOCIETIES : SOCIETIES, LODGES AND MEMBERS, 1950-51.

State.	Registered Friendly Societies.	Branches.	Benefit Members at End of Year.	Average Benefit Members during the Year.
New South Wales (a) .. ..	32	2,302	213,091	219,170
Victoria (b) .. ..	111	1,436	193,851	196,991
Queensland .. ..	26	548	66,610	67,234
South Australia (c) .. ..	17	(d) 824	71,591	73,380
Western Australia (c) .. ..	13	310	28,288	28,690
Tasmania (e) .. ..	20	166	19,338	19,998
Total .. ..	..	5,586	592,769	605,463

(a) Includes branches in the Australian Capital Territory; excludes 24 miscellaneous societies consisting of Medical Institutes, Dispensaries and Accident and Burial Societies. (b) Excludes Dispensaries, Juvenile Branches and members contributing to medical benefits only. (c) Excludes Juvenile Branches. (d) Societies containing male and female branches counted as two branches. (e) Year 1951.

3. **Sickness and Death Returns.**—Sick pay is generally granted for a number of months at full rates, then for a period at half rates, and in some societies is finally reduced to quarter rates. The following table shows the total number of members who received sick pay during the year, the number of weeks in the aggregate for which they received

pay, and the average per member sick, and, further, the number of benefit members who died during the year, together with the proportion of deaths per thousand average members:—

## FRIENDLY SOCIETIES : SICKNESS AND DEATH RETURNS, 1950-51.

State.	Members who received Sick Pay.	Total Weeks Sick Pay granted.	Average Weeks per Member sick.	Benefit Members.(a)	
				Deaths.	Proportion of Deaths per 1,000 (Average).
New South Wales ..	(b)	(b)	(b)	(b)	(b)

(a) Total estates of deceased persons assessed for death duty. (b) Estates dealt with by Taxation Department. (c) Not available. (d) Not available separately.

## G. STATE LOTTERIES AND BETTING.

### § 1. State Lotteries.

State Governments operate lotteries in New South Wales, Queensland and Western Australia. In Tasmania, Tattersall's Lotteries are conducted under Regulations framed under the Gaming Act 1935.

New South Wales State Lotteries commenced in 1932. At present, each ordinary lottery consists of 100,000 tickets at 5s. 6d. each, with prizes totalling £17,750. Each special lottery has 100,000 tickets at 10s. each, with prize money totalling £31,700. Net profits of the lottery are paid to the Consolidated Revenue Fund from which grants are made to hospitals.

In Queensland, the Golden Casket Art Union commenced in 1916 with the specific object of augmenting the funds of the Queensland War Council. Subsequently, Anzac Cottages and Nurses Quarters Funds benefited until 1920, when net profits were paid to the Department of Health and Home Affairs (Hospitals, Motherhood and Child Welfare Trust Fund) and used for the maintenance of hospitals, grants to institutions, and for motherhood and child welfare purposes. A stamp duty is imposed on tickets sold. The proceeds of this are paid to Consolidated Revenue Fund. At present, ordinary tickets are priced at 5s. 6d. each (100,000), special tickets at 10s. each (100,000), with prizes totalling £17,550 and £32,000 respectively.

In Western Australia, lotteries are conducted by the Lotteries Commission under the Lotteries Control Act of 1932. Profits are paid by the Commission to hospitals and other charities. Each lottery comprises 100,000 tickets at 2s. 6d. each, with prizes totalling £6,630.

Details of the income, expenditure and net profit of the three State Lotteries for the years 1938-39 and 1947-48 to 1951-52 are given in the following table :-

(a) Estimated from taxes on totalizators. (b) Estimated from taxes on betting with licensed bookmakers. (c) Not available. (d) Year ended 31st December, (e) Seven months ended 31st July, 1948. (f) Year ended 31st July.

## H. GOVERNMENT, SEMI-GOVERNMENTAL AND PARLIAMENTARY PENSION AND SUPERANNUATION SCHEMES.

### § 1. Government and Semi-Governmental Pension and Superannuation Schemes.

The Commonwealth and all State Governments have established pension or superannuation schemes for their employees. These schemes are operated through funds to which both the Government and the employees make contributions. Employees of semi-governmental authorities are in some cases covered by the Commonwealth or State Government scheme and in other cases by a separate scheme of the authority.

In the following table aggregate details are given for the year 1951–52, of the receipts, expenditure, accumulated funds and number of contributors and pensioners of the Commonwealth and State Government and main semi-governmental schemes. The funds included are :—

- (a) *Commonwealth*.—The Superannuation Fund and Defence Forces Retirement Benefits Fund.
- (b) *New South Wales*.—State Superannuation Fund, Government Railways Superannuation Fund and Police Superannuation and Reward Fund.
- (c) *Victoria*.—The Superannuation Fund, Police Superannuation Fund, Police Pensions Fund, Melbourne Harbour Trust Superannuation Account, Geelong Harbour Trust Superannuation Fund, Melbourne and Metropolitan Board of Works Superannuation Fund, Electricity Commission Provident Fund, Gas and Fuel Corporation Superannuation Fund, Metropolitan Fire Brigades Board Superannuation Fund, Country Fire Authority Superannuation Fund and Port Phillip Pilots' Sick and Superannuation Fund.

- (d) *Queensland*.—Public Service Superannuation Fund and Police Superannuation Fund.
- (e) *South Australia*.—South Australian Superannuation Fund, Police Pensions Fund and Public Service Superannuation Fund.
- (f) *Western Australia*.—The Superannuation Fund.
- (g) *Tasmania*.—Public Service Superannuation Fund (Old and New Funds), Police Provident Fund and State Teachers' Superannuation Fund.

**GOVERNMENT AND SEMI-GOVERNMENTAL PENSION AND SUPERANNUATION SCHEMES, 1951-52.**

**§ 2. Parliamentary Pension and Superannuation Schemes.**

Pension and superannuation schemes have been established for members of the Commonwealth and all State Parliaments except the Tasmanian. Full details of these schemes are given in pages 91 to 99 of Official Year Book No. 38. All the schemes are

operated through funds to which the members of Parliament and the Commonwealth or States contribute. Details of the receipts, expenditure, funds and number of contributors and pensioners for the year 1951-52 are given in the following table :—

PARLIAMENTARY PENSION AND SUPERANNUATION SCHEMES, 1951-52.

## CHAPTER XVII. PUBLIC FINANCE.

NOTE.—The subject of "Public Finance" is dealt with in this Chapter under the two major divisions of Commonwealth Finance and State Finance. The close financial relations between the Commonwealth and States, however, particularly since the Financial Agreement has been in operation, demand also a combination of these two divisions under the heading of Commonwealth and State Finance. Under the Financial Agreement the Commonwealth assumed the liability to bondholders for the States' Debts existing at the date of the agreement and now arranges for all borrowings for and on behalf of the Commonwealth or any State and for all conversions, renewals, redemptions and consolidations of the Public Debts of the Commonwealth and the States. In view of this it has been found convenient to deal with the Commonwealth and State Public Debt in a separate division.

The subject of income taxes is also dealt with in a separate division.

### A. COMMONWEALTH FINANCE.

#### § 1. General.

1. **Financial Provisions of the Constitution.**—The main provisions of the Constitution relating to the initiation and development of the financial system of the Commonwealth are contained in Sections 81 to 105A of the Commonwealth Constitution (*see* pages 20–23 of Official Year Book No. 39 and also in earlier issues). Two other sections which have a most important bearing on questions of Commonwealth finance are Sections 69 and 51.

Section 69 provides for the transfer to the Commonwealth from the States of certain specified departments, and Section 51, in outlining the powers of the Commonwealth Parliament, implies the transfer or creation of other departments. Section 87 deals with the financial relations between the Commonwealth and the States. These matters have been treated in previous issues of the Official Year Book and on pages 694–9 of this issue a summary is given of the present provisions for Commonwealth financial assistance to the States.

The majority of the tables relating to Commonwealth Finance have been compiled from the annual Budget Papers as presented to Parliament by the Treasurer of the Commonwealth.

2. **Accounts of Commonwealth Government.**—The Commonwealth Government, like the State Governments, bases its accounts upon three funds, the Consolidated Revenue Fund, the Trust Fund and the Loan Fund.

#### § 2. Consolidated Revenue Fund.

##### Division I.—Nature of Fund.

1. **Provisions of the Constitution.**—The provisions made for the establishment of a Commonwealth Consolidated Revenue Fund, and the means to be adopted for operating on the fund, are contained in Sections 81 to 83 of the Constitution (*see* page 20 of Official Year Book No. 39 and also in earlier issues).

2. **Annual Results of Transactions.**—In the early 1920's receipts and expenditure of the Consolidated Revenue Fund each ranged between £60 million and £70 million. Excess receipts in these years amounted to one or two million pounds a year, and were utilized for a variety of purposes, e.g., for debt redemption, naval construction, main

roads, science and industry investigations, prospecting for oil and precious metals, civil aviation, etc. In the later 'twenties and early 'thirties, when receipts and expenditure were each about £70 million or £80 million a year, there were annual deficiencies, which by the end of 1930-31 had aggregated to more than £17 million.

In subsequent years (receipts and expenditure each rising from about £70 million in 1931-32 to £95 million in 1938-39) there were excess receipts of up to £3.5 million a year. Approximately £1.5 million of these excess receipts were used to reduce the accumulated deficiency, and the balance for non-recurring grants to the States, post office works and the provision of defence equipment. The balance of the accumulated deficiency (£15.7 million) was funded in 1937-38.

For most of the 1939-45 War years and thereafter, the Consolidated Revenue Fund has been balanced, as all available revenue after charging expenditure on ordinary services has been used for defence, war and repatriation purposes. In 1951-52 the Fund was balanced after a special payment of £98.5 million had been made to the National Debt Sinking Fund for investment in a special loan for States' works requirements.

Receipts and expenditure increased from £95 million each in 1938-39 to £377 million in 1944-45. By 1949-50 they had risen to £581 million, but in 1950-51 they increased sharply to £842 million and in 1951-52 had reached more than £1,016 million.

### Division II.—Revenue.

1. General.—The following table furnishes details of the revenue from each source and the amount per head of population under each of the main headings during the years 1938-39 and 1947-48 to 1951-52 :—

#### COMMONWEALTH CONSOLIDATED REVENUE FUND : SOURCES OF REVENUE. (£'000.)

Tasmania ..	184	982	1,103	1,231	1,393	1,991
Total ..	16,472	58,008	62,735	66,157	73,083	99,981

(a) Includes Australian Capital Territory.

(b) Includes Northern Territory.

(iv) *Other Taxation.* (a) *General.* Taxes other than customs and excise are, in general, assessed and collected by the Commissioner of Taxation. The organization comprises an office in each State assessing the returns of taxpayers whose interests are restricted to that State only, and a Central Office assessing taxpayers whose interests are in more than one State. In the tables which follow receipts of tax on account of assessments made in each office are given.

These figures do not give the absolute measure of taxes paid by the residents of each State, because the Central Office collections, which include taxation on account of all States, have not been allocated to the States. In the absence of precise information, it may be assumed, as a rough approximation, that Central Office collections may be divided among States in proportion to State office collections. It is probable, however, that a somewhat larger share is derived from the more populous States, New South Wales and Victoria.

(b) *Land Tax.* Commonwealth Land Tax was levied annually from 1910-11 to 1951-52 on the unimproved value of land. It was abolished from 1st July, 1952. The following table shows the rates of land tax imposed for each assessment year from 1942-43 to 1950-51:—

## LAND TAX : RATE OF TAX PER £1 OF TAXABLE VALUE.

(T = Taxable Value(a).)

(Pence.)

Assessment Year.	Residents.			Absentees.				
	If the Taxable Value is from £1 to £75,000—	If the Taxable Value is over £75,000—		If the Taxable Value is from £1 to £80,000—		If the Taxable Value is over £80,000—		
		On £75,000—	On excess over £75,000—	On first £5,000—	On excess over £5,000—	On £5,000—	On next £75,000—	On excess over £80,000—
1942-43 to 1950-51 (b)	$\left(1 + \frac{T}{18,750}\right)$	5.0	9.0	1.0	$\left(2 + \frac{T-5,000}{18,750}\right)$	1.0	6.0	10.0

(a) Taxable Value:—(i) For Residents—the unimproved value of land held less an exemption of £5,000, and (ii) For Absentees—the unimproved value of land (no exemption being allowed). (b) In addition, if the taxable value exceeded £20,000, there was payable a super tax equal to the lesser amount of the following:—(i) twenty per cent. of the amount of land tax; or (ii) one per cent. of the amount by which the taxable value of the land exceeded £20,000.

In 1951-52 the exemption allowed to residents was increased to £8,750 and the super tax abolished. Except for this, the rates remained unchanged for residents. In the case of absentees, the rates were changed to the following:—(i) If the taxable value did not exceed £83,750—On first £8,750, 1.0d. in £1; on the balance,  $\left(2 + \frac{T-8,750}{18,750}\right)$  d. in £1. (ii) If the taxable balance exceeded £83,750—On first £8,750, 1.0d. in £1; on next £75,000, 6.0d. in £1; and on the balance, 10.0d. in £1. The values of land, or of interests in land, as assessed for the financial year 1939-40, were adopted for the financial years 1940-41 to 1950-51. A revaluation of land was made for the assessment year 1951-52.

Land tax receipts in each State and Central Office for the years 1938-39 and 1947-48 to 1951-52 were as follows. The receipts referred to in this table differ slightly from the collections shown on page 667 because some refunds credited before 30th June were not paid until after that date.

## LAND TAX RECEIPTS.

(£'000.)

State, etc.	1938-39.	1947-48.	1948-49.	1949-50.	1950-51.	1951-52.

Total ..	1,488	3,622	3,069	4,211	3,590	6,163

(c) *Estate Duty.* The Commonwealth Estate Duty was first levied in 1914. Particulars of exemptions and the rates imposed prior to 1940 are given in earlier issues of the Year Book (see No. 37, page 614).

Estate duty, under the Estate Duty Assessment Act 1940, is assessed on the net value of the estate less a statutory exemption determined in accordance with the following formula:—(a) where the whole of the estate passes to the widow, children or grand-children of the deceased, the sum of £2,000 decreasing by £1 for every £10 by which the value exceeds £2,000 up to £10,000, and thereafter decreasing by £1 for every £2 by which the value exceeds £10,000; (b) where no part of the estate passes to the widow, children or grand-children, the sum of £1,000 decreasing by £1 for every £10 by which the value exceeds £1,000 up to £6,000, and thereafter decreasing by £1 for every £8 by which the value exceeds £6,000; and (c) where part only of the estate passes to the widow, children or grand-children, the statutory exemption is to be calculated proportionately under (a) and (b).

The rates of duty levied under the Estate Duty Act 1941 increase as the value of the estate increases as follows:—£1 to £10,000, 3 per cent.; £10,001 to £20,000, 3 per cent. to 6 per cent.; £20,001 to £120,000, 6 per cent. to 26 per cent.; £120,001 to £500,000, 26 per cent. to 27.9 per cent.; over £500,000, 27.9 per cent.

Particulars of the collections in each State and Central Office for the years 1938-39 and 1947-48 to 1951-52 are shown in the following table. These figures differ slightly from the figures on page 667 as some refunds were credited before 30th June and not paid until after that date.

**ESTATE DUTY RECEIPTS.**

(d) *Gift Duty.* The Gift Duty Assessment Act 1941-1947 and the Gift Duty Act 1941-1947 impose a gift duty on all gifts made after the 29th October, 1941. A gift has been defined as any disposition of property, which is made otherwise than by will, without adequate consideration in money or money's worth. There is a liability on both the donor and the donee to furnish a return, and both are jointly and severally liable for payment of the duty.

The following rates of duty are levied under the Gift Duty Act 1941-1947 and relate to the value of all gifts made within eighteen months:—Not exceeding £2,000, nil; £2,001 to £10,000, 3 per cent.; £10,001 to £20,000, 3 per cent. to 6 per cent.; £20,001 to £120,000, 6 per cent. to 26 per cent.; £120,001 to £500,000, 26 per cent. to 27.9 per cent.; £500,001 and over, 27.9 per cent.

An amendment which operated from 3rd June, 1947 provided that gift duty will not exceed one half of the amount by which the value of the gift exceeds £2,000.

The receipts from gift duty in each State for the years 1947-48 to 1951-52 are shown in the following table. The figures shown in the table differ from those shown on page 667 because certain refunds credited before 30th June were not paid until after that date.

(e) *Income Taxes.* Details of taxes on income are given in Division E of this Chapter.

(f) *Pay-roll Tax.* The Pay-roll Tax Assessment Act 1941-42 and the Pay-roll Tax Act 1941 imposed a pay-roll tax of 2½ per cent. on all wages in excess of £20 per week paid by an employer after 30th June, 1941. These measures formed part of the Commonwealth scheme of child endowment, the revenue from the tax being designed to provide part of the money required. Pay-roll tax is collected in a similar manner to sales tax. Employers are required to register and to furnish a monthly return of all wages paid.

The following table shows the receipts from pay-roll tax in each State for the years 1947-48 to 1951-52. The figures shown vary slightly from the collections shown on page 667 because some refunds which were credited before 30th June were not paid until after that date.

(g) *Gold Tax.* Particulars of the Gold Tax which operated from 15th September, 1939 to 20th September, 1947 are given in Official Year Book No. 39, page 767.

(h) *Entertainments Tax.* The Entertainments Tax Assessment Act 1942-1946 and Entertainments Tax Act 1942-1949 came into force on 1st October, 1942, following the agreement of the State Governments to the request of the Commonwealth to suspend their entertainments tax legislation for the duration of the war and one year after. This enabled the Commonwealth Government to re-enter this field of taxation. Until 1945-46 the Commonwealth recompensed the States by annual payments of £765,787, an amount equal to that collected by the States during the year 1941-42. Thereafter, these payments were incorporated with Income Tax in the Tax Reimbursement and the agreement that the States should not levy a tax on entertainments was terminated.

The rates of entertainments tax from 1st October, 1949 are shown in the following table. Details of rates operating prior to 1st October, 1949 are given in earlier issues of the Official Year Book (see No. 37, page 617).

**RATES OF ENTERTAINMENTS TAX OPERATING FROM 1st OCTOBER, 1949.**

5 6	6 0	1 3	1 8
6 0	..	1s. 5d. plus 1½d. for each 6d. (or part thereof) by which the payment for admission exceeds 6s. 6d.(a)	1s. 10d. plus 2½d. for each 6d. (or part thereof) by which the payment for admission exceeds 6s. 6d.(a)

(a) Fractions of a penny in the amount of tax are treated as follows:—½d. and ¼d. are disregarded—¾d. is taken as one penny.

The reduced rates of tax apply to entertainments which consist of one or more of the following items, viz. :—a stage play, a ballet, a performance of music, a lecture, a recitation, a music hall or other variety entertainment, or a circus or travelling show, and to entertainments which consist solely of a game or sport in which human beings are the sole participants and the entertainment is conducted by a society which is not established or carried on for profit. The full rates apply to all other forms of entertainment. Entertainments tax is not charged on admission to entertainments the proceeds of which are devoted to public, patriotic, philanthropic, religious or charitable purposes or where the entertainment is of an educational or scientific character.

Entertainments tax received during the five years 1947-48 to 1951-52 is shown in the following table. The figures shown in the table differ from those shown on page 667 because certain refunds credited before 30th June were not paid until after that date.

Total	..	3,704	140,085	11,999	9,503	6,958	4,972	177,221

There were 13,150,000 admissions at the reduced rate, and 164,071,000 at the full rate.

(i) *Sales Tax.* The sales tax was first imposed in August, 1930. The operation of the tax is controlled chiefly by a system of registration of taxpayers whereby all manufacturers and wholesale merchants, who are the taxpayers under the Act in respect of goods sold in Australia, must be registered with the Department. The tax on imports subject to sales tax is collected by the Customs Department at ports of entry.

Since the inception of the tax certain exemptions have been allowed. These exemptions, which have been extended from time to time, relate mainly to goods of an essential nature or for use in primary production. The most recent exemptions were those granted from 7th August, 1952.

A general rate of Sales Tax is levied on all goods other than those specified in the schedules of the Sales Tax (Exemptions and Classifications) Act 1935-1952. These schedules set out details of goods exempt from sales tax and those subject to special rates. The general and special rates which operated from 15th November, 1946, were :—

Period.	General Rate.	Special Rates.
15th November, 1946 to 7th September, 1949 ..	10 per cent. ..	25 per cent.
8th September, 1949 to 12th October, 1950 ..	8½ per cent. ..	25 per cent.
13th October, 1950 to 26th September, 1951 ..	8½ per cent. ..	10, 25 and 33½ per cent.
27th September, 1951 to 6th August, 1952 ..	12½ per cent. ..	20, 25, 33½, 50 and 66⅔ per cent.
From 7th August, 1952 .. .. .	12½ per cent. ..	20, 33½ and 50 per cent.

For particulars of rates applicable since the inception of Sales Tax in August, 1930 see Official Year Book No. 37, page 617.

Particulars of the net amount of sales tax payable, and the sales of taxable and exempt goods in each State for 1951-52 are given in the following table. The figures are in respect of sales during the period 1st July to 30th June.

#### SALES TAX AND AMOUNT OF SALES, 1951-52.

Sales Tax Payable ..	38,235	27,751	9,248	8,789	5,527	1,757	25	91,332

(a) Includes Australian Capital Territory.

Sales of taxable and exempt goods and sales tax payable for Australia as a whole for the years 1938-39 and 1947-48 to 1951-52 are shown in the following table :—

#### SALES TAX AND AMOUNT OF SALES.

(£'000.)

Year.	Net Sales on which Sales Tax was Payable.	Sales of Exempt Goods by Registered Persons.	Total Sales of Taxable and Exempt Goods.	Sales Tax Payable.
1938-39 .. .. .	196,491	280,656	477,147	9,363
1947-48 .. .. .	314,311	639,948	954,259	34,059
1948-49 .. .. .	363,164	757,381	1,120,545	38,197
1949-50 .. .. .	455,251	866,575	1,321,826	40,789
1950-51 .. .. .	552,919	1,138,887	1,691,806	54,471
1951-52 .. .. .	623,390	1,321,696	1,945,086	91,332

In the foregoing tables exempt sales relate to goods exempted from sales tax under the Sales Tax (Exemptions and Classifications) Act 1935-1952. The figures shown in the foregoing tables do not represent the total sales of all commodities, as vendors trading in exempt goods only are not required to be registered and consequently the volume of their sales is not included in the statistics above.

(j) *Flour Tax.* Particulars of the rates of flour tax which operated from 4th December, 1933 to 21st December, 1947 are given in Official Year Book No. 37, pages 618 and 619. Because of the rise in wheat prices the rate was declared to be nil as from 22nd December, 1947.

(k) *Wool Levy.* The Wool Tax Act 1936 and Wool Tax Assessment Act 1936 provided for a levy on all wool grown in Australia and shorn on or after 1st July, 1936. Details of this levy are given in earlier issues of the Official Year Book. This levy was suspended from 1st July, 1946 until 30th June, 1952 while the Wool Contributory Charge was imposed. The amounts collected from wool levy in 1938-39, 1946-47 and 1947-48 were £74,396, £11,628 and £458 respectively. No levy has been collected since 1947-48.

However, with the repeal of the Wool Contributory Charge, a levy on wool produced in Australia was re-introduced from 1st July, 1952. The Wool Tax Acts (Nos. 1 and 2) of 1952 provide for the payment of a levy of four shillings per bale until 30th June, 1953 after which date the rate of tax may be varied within prescribed limits. The purpose of the tax is to provide funds for publicity and research previously provided by the Wool Contributory Charge.

(l) *Wool Contributory Charge.* The Wool (Contributory Charge) Act 1945 and the Wool (Contributory Charge) Assessment Act 1945 imposed a charge on all wool produced in Australia and sold, manufactured or exported. Wool sold by the Australian Wool Realization Commission was not liable to the charge. The rate of the charge was a percentage of the sale value of the wool sufficient to provide—(a) the amounts required to meet the share of the industry in the operating expenses of the Joint Organization for the disposal of wool stocks; (b) the amounts required for payment of interest on the amount spent by the Commonwealth in purchase of wool under the disposals plan; and (c) the amount of the wool levy.

The Acts came into operation on 1st July, 1946, and the rate fixed was 5 per cent. on the sale value of the wool. From 1st August, 1947 the rate was reduced to 0.75 per cent. A further reduction to 0.5 per cent. was made on 1st July, 1948. On 26th August, 1950, the rate of the charge was reduced to 0.25 per cent. and a further charge of 7.25 per cent. to provide funds for a reserve prices scheme was introduced. In the Wool (Reserve Prices) Fund Act 1950 it was provided that if a reserve prices scheme which had the general approval of wool-growers was not in operation on 30th September, 1951 the amounts of contributory charge collected for that purpose were to be refunded. A scheme placed before wool-growers was not accepted and the collections were subsequently refunded. (*See also* Chapter XIX.—Pastoral Production.) The various Wool (Contributory) Charge Acts were repealed by the Wool Tax Assessment Act of 1952 and the charge superseded by the wool levy. Collections in each State during the years 1947-48 to 1951-52 are shown in the following table:—

**WOOL CONTRIBUTORY CHARGE RECEIPTS.**

<b>Total .. ..</b>	<b>1,424</b>	<b>1,029</b>	<b>1,439</b>	<b>44,844</b>	<b>2,230</b>

(m) *Wool Sales Deduction.* The Wool Sales Deduction Act 1950 and the Wool Sales Deduction (Administration) Act 1950 came into operation on 2nd December, 1950 and required that a deduction be made from the sale value of wool sold or exported, the amount deducted being set off against the Income Tax and Social Services Contribution assessed in respect of the income of the year 1950-51. These Acts were repealed by the Wool Sales Deduction Legislation Repeal Act 1951 which came into operation on 17th November, 1951, and provided for the refund to producers, etc., of amounts paid on the value of wool sold or otherwise disposed of, after 30th June, 1951. The deduction for each State during the year 1951-52 was as follows:—New South Wales, £1,343,037; Victoria, £158,964; Queensland, £3,013,160; South Australia, £1,170,491; Western Australia, £289,942; Tasmania, —£12,418; Total, £5,963,176.

(n) *Wheat Export Charge and Wheat Tax.* The Wheat Export Charge Acts 1946 imposed an export charge on wheat (including the content of wheat products) harvested after 30th September, 1945 and exported from the Commonwealth after 30th November, 1945. These Acts did not apply to wheat harvested between 1st October, 1945 and 1st October, 1947 and exported by the Australian Wheat Board, but provision was made in the Wheat Tax Act 1946 to collect an amount equivalent to the charge that would have been collected on this wheat, by imposing a tax on wheat acquired by the Board. Wheat Tax collected amounted to £5,500,000 in 1946-47 and £5,729,780 in 1947-48. These amounts were paid to the Wheat Prices Stabilization Fund and, under the Wheat Tax (Refund and Repeal) Act 1948, were refunded to growers. The amount of the refund was £11,548,637 (including interest, £318,857).

The Wheat Export Charge Act 1948, which operated from 25th November, 1948, repealed the Wheat Export Charge Acts 1946 and provided for an export charge on all wheat and wheat products of the 1947-48 and subsequent seasons exported after 25th November, 1948. Subject to a lower rate being prescribed, the rate of charge per bushel of wheat exported by the Australian Wheat Board was fixed at 50 per cent. of the amount by which the average price per bushel of all wheat exported by the Board exceeded the guaranteed price, with a maximum charge of 2s. 2d. per bushel. If the exporter was not the Australian Wheat Board the charge was the same except that there was no maximum charge of 2s. 2d. per bushel.

The guaranteed price for the 1947-48 season was 6s. 3d. per bushel for all fair average quality bulk wheat f.o.r. at the ports of export. It was raised to 6s. 8d. per bushel for the 1948-49 season with further rises to 7s. 1d. for the 1949-50 season, 7s. 10d. for the 1950-51 season and 10s. 0d. for the 1951-52 season. Unless Parliament otherwise provides the Act shall not apply to wheat harvested after 30th September, 1953.

Under the Wheat Industry Stabilization Act 1946-1948 an amount equivalent to the charges collected under the Wheat Export Charge Act 1948 is paid to the Wheat Prices Stabilization Fund. Out of this fund payments shall be made to the Australian Wheat Board, when required, for the purpose of building up the average export price for any season to the guaranteed price. By reason of the favourable level of export prices, part of the funds of the Wheat Stabilization Fund were considered surplus and accordingly, the export charge collected on wheat for the 1947-48 and 1948-49 seasons was repaid to growers under the Wheat Industry Stabilization (Refund of Charge) Acts 1950 and 1951. These repayments amounted to £17,000,000 and £12,960,000 (including interest) respectively. (*See also* Chapter XX.—Agricultural Production.)

Collections of wheat tax and wheat export charge were as follows:—1947-48, £5,730,000; 1948-49, £18,086,000; 1949-50, £12,633,000; 1950-51, £13,353,000; and 1951-52, £12,202,000.

(o) *Stevedoring Industry Charge.* The Stevedoring Industry Charge Act 1947 and the Stevedoring Industry Charge Assessment Act 1947 imposed a charge of 4½d. per man-hour on the employer of a waterside worker after 22nd December, 1947.

The amounts received are paid to the Stevedoring Industry Board for the payment of attendance money to waterside workers and for other expenses of the Board.

Since 1947 the charge has been amended as follows :—11th October, 1949 a reduction to 2½d. per man-hour; 11th December, 1951 an increase to 4d. per man-hour and a further increase to 11d. per man-hour from 18th November, 1952.

Collections in each State during the years 1947-48 to 1951-52 are shown in the following table :—

(a) Included with Department of the Interior. (b) Included with Prime Minister's Department.  
(c) Invalid and Age Pensions and Maternity Allowances. (d) Provided in part from Postmaster-General's Department Votes and balance from Wireless Broadcasting Trust Account. (e) In addition, £24,911,000 was provided from Loan Fund. (f) Assistance to Primary Producers.

Particulars for each department include interest, sinking fund, superannuation charges, etc., but do not include the expenditure on capital works and services and

Defence, War and Repatriation Services. Further details of the expenditure in each section are given in paragraphs 2 to 12 following.

A graphical representation of the revenue and expenditure of the Commonwealth Consolidated Revenue Fund appears on page 677. In this diagram Public Debt Charges (interest and sinking fund payments, etc.) are shown as a separate item, whereas in the table above these charges are included in the section to which they relate.

Details of Commonwealth expenditure on public debt charges for 1938-39 and 1947-48 to 1951-52 are shown in the following table:—

(a) Excludes payments to or for States under the Financial Agreement. See pages 694-9.  
 (b) Redemption, conversion and loan management, etc., expenses. (c) Included with War (1939-45) Debt.  
 (d) Includes War (1914-18) Debt in 1950-51 and 1951-52.

2. **Defence Services.**—Details of the expenditure on Defence Services by the Departments of Defence, Navy, Army, Air, Supply and Defence Production are shown in the following table. The expenditure shown under Department of Supply includes the former Departments of Shipping and Fuel, Supply and Development, Supply and Shipping, and Munitions. This table covers expenditure by the service and associated departments only, and includes the cost of maintaining forces in Korea and at other oversea posts.

The figures represent the combined expenditures from revenue, trust and loan fund for the years 1938-39 and 1947-48 to 1951-52.

(a) Excludes Interest and Sinking Fund payments on War (1914-18) Debt due to the United Kingdom Government, payment of which was suspended in 1931. (b) Included with living and other allowances. (c) From Service Departments and Australian Soldiers' Repatriation Trust Account. (d) Represents expenditure on War and Repatriation Services by Defence Departments (see pages 683-4), but for which dissection is not available. (e) Provided under Ordinary Services. (f) Munitions, stores, etc., supplied to the Government of United Kingdom and other administrations. Includes repayments and waiver of war-time indebtedness of other administrations.

4. Subsidies and Bounties.—The following table shows details, for the years 1938-39 and 1947-48 to 1951-52, of Commonwealth expenditure from revenue on subsidies, bounties and assistance to primary producers. Expenditure on special relief such as drought, frost, flood and bush fire, etc. (see table, p. 689, for more important items), is not included, nor are items of expenditure grouped under "Primary Production—

Self Balancing Items" (see paragraph 12 following). These items of expenditure are from the proceeds of certain taxes on primary products and profits from marketing schemes, which have been paid to trust funds for the purpose of price or other stabilization schemes or for distribution to producers. Further information relating to these schemes and other assistance to primary producers is given in Chapter XX.—Agricultural Production.

Details of price stabilization subsidies and of various forms of assistance to primary producers for earlier years may be found on pages 414 and 1014-15 respectively of Official Year Book No. 38.

### SUBSIDIES AND BOUNTIES : COMMONWEALTH EXPENDITURE.

(a) Dairy products.

(b) Includes Sulphur Bounty, £88,000.

5. Total Cost of Departments.—Expenditure under this heading covers expenditure by departments, other than the defence and repatriation departments and business undertakings, on administrative services and other activities. Expenditure on defence, war and repatriation services, subsidies and bounties, social services (paid from the National Welfare Fund), business undertakings, Commonwealth territories and capital works and services is excluded.

Information on the functions of the several departments and the acts administered by the Ministers of the departments was published in Official Year Book No. 37, pages 276-86, and particulars of subsequent changes in departmental structure are given in later issues.

In the following table details are given of that expenditure on the branches of each department which might be termed running expenses. Miscellaneous expenditure and debt charges, etc., are not included in this table but in the one following.

(a) Includes rent, repairs and maintenance, interest and sinking fund payments, pension and superannuation contributions. (b) League of Nations. (c) Included with Department of the Interior. (d) Provided under War or Defence Services. (e) Included with Prime Minister's Department.

6. **National Welfare Fund.**—The National Welfare Fund was established for the purpose of providing a fund for the payment of Commonwealth social services benefits. During the years 1947-48 to 1949-50 an amount equivalent to the total collections of pay-roll tax and social services contribution was paid to the fund from Consolidated Revenue. During 1950-51 the social services contribution was amalgamated with the normal income tax and it became necessary to base the contributions on another formula. For the year 1950-51 the amount paid to the fund was the total of collections of pay-roll tax and social services contribution and £30,000,000. In 1951-52 the amount paid to the fund was the amount paid in 1950-51 increased in the same proportion as collections of pay-roll tax increase over the collections of pay-roll tax in 1950-51. By an amendment to the National Welfare Fund Act 1943-1950, the amount to be paid to the fund in 1952-53 and subsequent years was changed to the amount of moneys paid out of the fund. In addition to these payments from Consolidated Revenue the fund received a small amount of interest from investments of the fund.

In the following table details are given of the income and expenditure of the National Welfare Fund and the balance in the fund at the end of each year for the years 1947-48 to 1951-52. A dissection of expenditure into the various types of benefits is given in Chapter XIV.—Welfare Services (*see* page 540).

NATIONAL WELFARE FUND : RECEIPTS, EXPENDITURE AND BALANCES.  
(£'000.)

Year.	Income.			Expenditure.	Balance in Fund at end of Year.
	Contribution from Consolidated Revenue.	Interest on Investments.	Total.		
1947-48 .. .. .	88,043	503	88,546	68,613	69,927

1951-52 .. .. .	171,709	1,129	172,838	137,608	185,027

7. **National Debt Sinking Fund.**—During 1951-52 surplus revenue of £98,500,000 was paid to the National Debt Sinking Fund for investment in a special loan raised to finance State works expenditure.

8. **Business Undertakings.**—(i) *Postmaster-General's Department.* From the beginning of 1949-50, Broadcasting Services were separated from the Postmaster-General's Department. In years prior to 1949-50 part of the expenditure on these services is included with the Postmaster-General's Department. Details of the expenditure of this Department for the years 1938-39 and 1947-48 to 1951-52 are given in the following table :—

POSTMASTER-GENERAL'S DEPARTMENT : EXPENDITURE.  
(£'000.)

Item.	1938-39.	1947-48.	1948-49.	1949-50.	1950-51.	1951-52.
Salaries, stores and materials, mail, engineering services, etc.	11,473	27,923	34,302	39,902	49,653	58,661

<b>Grand Total .. .. .</b>	<b>18,729</b>	<b>40,431</b>	<b>53,439</b>	<b>64,304</b>	<b>89,699</b>	<b>93,110</b>

Further details of expenditure for 1950-51 on account of the Postmaster-General's Department appear in Chapter V.—Transport and Communication (Division I, Posts, Telegraphs, Telephones and Wireless).

(ii) *Broadcasting Services.* Since 1949-50 all expenditure on broadcasting services has been brought together in one section. Previously these services had been financed partly by the Postmaster-General's Department and partly from the Wireless Broadcasting Trust Account. Details of expenditure for the years 1949-50 to 1951-52 are shown in the following table :—

**COMMONWEALTH BROADCASTING SERVICES : EXPENDITURE.**  
( £'000.)

Item.	1949-50.	1950-51.	1951-52.
Australian Broadcasting Control Board .. .. .	37	59	61

Technical and other Services—Postmaster-General	1,290	1,509	1,807
Repairs and maintenance .. .. .	6	12	11
Audit (proportion) .. .. .	..	1	2
<b>Total Working, etc., expenses .. .. .</b>	<b>2,872</b>	<b>3,591</b>	<b>4,135</b>
<b>Capital Works and Services .. .. .</b>	<b>157</b>	<b>212</b>	<b>251</b>
<b>Grand Total .. .. .</b>	<b>3,029</b>	<b>3,803</b>	<b>4,386</b>

(iii) *Railways.* The Commonwealth Railways, previously administered by the Department of the Interior, were transferred in March, 1950 to the newly-formed Department of Fuel, Shipping and Transport (later Shipping and Transport). The expenditure on railways for the years 1938-39 and 1947-48 to 1951-52 is shown below.

**COMMONWEALTH RAILWAYS : EXPENDITURE.**  
( £'000.)

Item.	1938-39.	1947-48.	1948-49.	1949-50.	1950-51.	1951-52.

(a) Includes loans, redemption and conversion expenses, 1947-48, £20,000; 1948-49, £1,000; 1949-50, £7,000.

Additional details of the financial operations of the Commonwealth Railways to 1950-51 are given in Chapter V.—Transport and Communication (Division B, Government Railways).

9. Territories.—The following table shows the expenditure on account of Commonwealth Territories for the years 1938-39 and 1947-48 to 1951-52. The Australian Capital Territory is administered by the Department of the Interior, and the Department of Territories controls the external territories and the Northern Territory. The expenditure has been grouped in one table for convenience. Information in greater detail will be found in the *Finance Bulletins* issued by this Bureau.

## COMMONWEALTH TERRITORIES : EXPENDITURE.

( £'000.)

Territory.	1938-39.	1947-48.	1948-49.	1949-50.	1950-51.	1951-52.

(a) Excludes Railways, see para. 8 (iii).

(b) Excludes developmental expenditure.

10. Capital Works and Services.—In the following table details are given of Commonwealth expenditure on capital works and services during each of the years 1938-39 and 1947-48 to 1951-52 and of the aggregate to 30th June, 1952. The table covers all expenditure on capital works and services made from the Consolidated Revenue Fund, the Loan Fund and Trust Funds.

## COMMONWEALTH EXPENDITURE ON CAPITAL WORKS AND SERVICES FROM REVENUE, TRUST AND LOAN FUNDS.

(c) Includes River Murray Waters Act:—Works, £3,101,000; War Memorial, Canberra, £292,000; Solar Observatory, Mount Stromlo, £184,000; Forestry School, Canberra, £36,000. (d) Not available. (e) From excess receipts of previous years and National Defence Contribution Trust Account. (f) Surplus buildings, equipment, etc., taken over from Disposals Commission.

**II. Payments to or for the States.—(i) General.** An outline of the provisions of the Constitution requiring the Commonwealth to make payments to the States, and of the systems which followed, is given in earlier issues of the Official Year Book (see No. 37, pages 633 to 638). In the following paragraphs reference is made to the arrangements at present in operation.

(ii) *Financial Agreement.* Details of the Financial Agreement between the Commonwealth and the States are given in Official Year Book No. 37, pages 685 to 690. Under this Agreement the Commonwealth undertook to contribute £7,584,912 per annum towards interest payable on the State Debts for a period of 58 years from 1st July, 1927. This amount is to be distributed amongst the States as follows:—New South Wales, £2,917,411; Victoria, £2,127,159; Queensland, £1,096,235; South Australia, £703,816; Western Australia, £473,432; Tasmania, £266,859.

These amounts are equal to the sums paid by the Commonwealth to each State in the year 1926-27 at the rate of 25s. per head of population, the rate at which the Commonwealth had contributed annually to the States since 1st July, 1910 as compensation for the States relinquishing, after Federation, the right to levy Customs and Excise Duties.

In addition, the Commonwealth agreed to pay to the National Debt Sinking Fund for redemption of State Debts the following amounts:—(a) an annual contribution of 2s. 6d. per cent. of the net public debt of the States at 30th June, 1927 for a period of 58 years from 1st July, 1927 (in respect of New South Wales net public debt from 1st July, 1928); (b) an annual contribution of 5s. per cent. on new borrowings (except those for redemption, conversion or funding a State deficit) after 1st July, 1927 for a period of 53 years from the date of raising; (c) an annual contribution of 5s. per cent. on loans raised to meet revenue deficits occurring between 1st July, 1927 and 30th June, 1935 for a period of 39 years from 1st July, 1944.

(iii) *Special Grants.* The Constitution provides in Section 96 for the granting of special financial assistance to the States. Western Australia has received financial assistance each year since 1910-11. In 1912 a grant was made to Tasmania, the amount payable in the first year, 1912-13, being £95,000, which was to be progressively reduced by £10,000 in each successive year. The Tasmania Grant Act 1913 provided for an addition to this grant, bringing the amount payable to £85,000 per annum to the year 1921-22, after which annual grants of varying magnitude were made. South Australia received £360,000 in 1929-30 and further grants in each successive year.

In 1933 the Commonwealth Government appointed the Commonwealth Grants Commission of three members to inquire into and report upon claims made by any State for a grant of financial assistance and any matters relevant thereto.

Applications have been received from South Australia, Western Australia and Tasmania during each year from 1933 and the recommendations of the Commission in respect of the years 1938-39 and 1948-49 to 1952-53 are shown in the following table. Commencing with 1949-50 the Commission has divided the grants recommended into two parts. One part is the Commission's estimate of the indispensable need of the claimant State for the year in which the payment is to be made after allowing a sufficient margin for safety. The other part is an adjustment of this estimate for an earlier year after an examination of the audited accounts for that year. Thus the grants for 1952-53 include an estimate of the indispensable need of the claimant State for 1952-53 and an adjustment to the estimated grant for 1950-51.

(a) Of 1946-47.

(b) Of 1947-48.

(c) Of 1948-49.

(d) Of 1949-50.

(e) Of 1950-51.

(iv) *Tax Reimbursement Grants.* Details of the States Grants (Income Tax Reimbursement) Act 1942 and the States Grants (Entertainments Tax Reimbursement) Act 1942 are given in earlier issues of the Official Year Book (*see No. 37, pages 635 to 637*). These Acts provided for grants to the States as compensation for vacating the fields of Income Tax and Entertainments Tax. Grants under these Acts ceased after 1945-46 and were replaced by grants under the States Grants (Tax Reimbursement) Act 1946-1948. This Act provided for the following reimbursement grants to be paid to the States, the figures shown relating to 1946-47 and 1947-48 respectively:—New South Wales, £16,477,000, £18,536,625; Victoria, £8,860,000, £9,967,500; Queensland, £6,601,000, £7,426,125; South Australia, £3,458,000, £3,890,250; Western Australia, £3,384,000, £3,807,000; Tasmania, £1,220,000, £1,372,500; Total, £40,000,000, £45,000,000.

For 1948-49 and subsequent years an amount is to be determined by increasing the aggregate grants paid in 1947-48 (£45,000,000) by the same proportion as the aggregate population of the six States at the beginning of the financial year increases over the aggregate population of the six States at 1st July, 1947. This amount is to be further increased by a percentage equal to the percentage increase in average wages per person employed in the financial year preceding the year in which the reimbursement grants are to be paid over the average wages per person employed in 1945-46. The amount so determined will be the aggregate of the reimbursement grants and is to be distributed to the States in the following proportions:—

- (i) 1948-49 to 1956-57:—(a) The following percentages of the grant shall be distributed in the proportion indicated by the distribution of the aggregate reimbursement grant in 1946-47 and 1947-48, viz.:—1948-49, 90 per cent.; 1949-50, 80 per cent.; and thus decreasing by 10 per cent. each year to 10 per cent. in 1956-57, and (b) the remainder in the proportion indicated by the "adjusted" population\* for each State.
- (ii) 1957-58 and subsequent years:—the proportion indicated by the "adjusted" population for each State.

It is provided that, if the application of the foregoing formula for distribution of the aggregate grants causes the amount of the reimbursement grant for any State to fall below the grant for 1946-47, the grant payable will be the same as that for 1946-47 and the balance of the aggregate grant is to be distributed between the remaining States in the proportions above:

An amount equal to arrears of State income taxes collected by the States in any year is to be deducted from the reimbursement grants for that year. The aggregate amount so deducted less any refunds of State income taxes made by the Commonwealth is to be repaid in the event of uniform taxation ceasing to operate. This amount bore interest at 3 per cent. up to 30th June, 1946, but thereafter, under the new arrangement, will bear no interest. The payment of the tax reimbursement grant in any year to any State is subject to the condition that that State does not impose a tax on incomes in that year.

In 1950-51 an amount of £5,000,000 was paid to the States under the States Grants (Additional Tax Reimbursement Act) 1950. As this was considered as a non-recurring grant the formula outlined above was not amended.

(v) *Additional Financial Assistance, 1949-50 to 1951-52.*—(a) *Coal Strike Emergency Grant.* During 1949-50 State business undertakings suffered considerable losses as a result of the coal strike. Towards meeting these losses the Commonwealth made grants totalling £8,000,000 to the States. The amounts paid to each State were:—New South Wales, £3,261,000; Victoria, £1,830,000; Queensland, £1,309,000; South Australia, £687,000; Western Australia, £661,000; and Tasmania, £252,000.

(b) *Special Financial Assistance Grants.* During 1950-51 there were heavy additions to the financial needs of the States and in June, 1951 a special grant of £15,000,000 was made. The amounts granted to each State were—New South Wales, £6,250,000; Victoria, £4,750,000; Queensland, £2,000,000; South Australia, £800,000; Western Australia, £1,000,000; and Tasmania, £200,000.

\* In the "adjusted" population, allowances are made for differences in the proportion of school children in the population and the density of the population in each State.

Again in 1951-52 payments were made to the States under a Special Financial Assistance Act. The total amount of £33,577,000 was distributed as follows:—New South Wales, £13,074,000; Victoria, £9,124,000; Queensland, £5,005,000; South Australia, £2,790,000; Western Australia, £2,390,000; and Tasmania, £1,194,000.

(vi) *Grants for Road Construction.* (a) *Main Roads Development Act 1923-25, Federal Aid Roads Act 1926, 1931 and 1936, Federal Aid Roads and Works Act 1937 and Commonwealth Aid Roads and Works Act 1947-1949.* Details of these Acts are given in earlier issues of the Year Book (see issue No. 38, pp. 787-8) and in the *Finance Bulletins* published by this Bureau.

(b) *Commonwealth Aid Roads.* On the expiration of the Commonwealth Aid Roads and Works Act 1947-1949 the Commonwealth Aid Roads Act 1950 provided, for a period of five years from 1st July, 1950, an amount equivalent to the sum of (i) 6d. per gallon of customs duty and (ii) 3½d. per gallon of excise duty collected on petroleum and shale products as specified in Customs Tariff Item 229C and Excise Tariff Item 11 (excluding such products used in civil aircraft). Out of this amount the following grants are to be made to the States for construction and maintenance of roads and the purchase of road-making plant:—

(a) Sixty-five per cent. of the amount, less £600,000, per annum, for expenditure on roads, and

(b) Thirty-five per cent. of the amount for expenditure on roads in rural areas other than highways, trunk or main roads.

Of the former amount, one-sixth may be spent on other works connected with transport by road or water. Five per cent. of the grants to the States is payable to Tasmania. Fifty-seven per cent. is to be divided between the other States in proportion to their populations at 30th June, 1947, and 38 per cent. according to area. In addition, the Commonwealth may spend each year £500,000 on strategic roads and £100,000 on the promotion of road safety practices.

(vii) *Other Payments.* (a) *Price Control Reimbursement.* These grants are made each year to reimburse the States for expenditure incurred in administering prices, rents and land sales controls.

(b) *Western Australian Waterworks.* The Western Australia (Water Supply) Act 1948 provides for grants to Western Australia not exceeding an aggregate of £2,150,000 for the development of the agricultural areas, great southern towns and Goldfields Water Supply scheme. The amount provided by the Commonwealth is not to exceed half the total expenditure on the scheme.

(c) *Coal Mining Industry—Long Service Leave.* To provide funds for the payment for long service leave in the coal mining industry the Commonwealth imposed an excise duty of 6d. per ton on coal produced from 1st November, 1949. The rate of duty was raised to 7½d. per ton from 26th August, 1951 and to 8d. per ton from 30th May, 1952. The proceeds of this excise duty are paid to a trust fund out of which the States are reimbursed for expenditure incurred in granting long service leave to employees in the coal mining industry.

(d) *Imported Houses.* A subsidy is paid to the States for houses imported by a State or a housing authority of a State after 12th October, 1949. The amount of the subsidy is the amount by which the cost of imported houses exceeds the cost of building comparable houses from local materials. The subsidy is limited to £300 per house and in aggregate to 30,000 houses or £9,000,000.

(e) *Encouragement of Meat Production.* To develop meat production in Queensland and Western Australia grants are made to these States for the provision of improved roads and other facilities for the movement of live-stock. Provision is made for the Commonwealth to meet the cost of the construction and improvement of certain

specified roads in both States and the construction of eight cattle loading and unloading points in Queensland. Provision is also made for the Commonwealth to meet half the cost of improving watering facilities on specified stock routes in both States. The amount of the grants for improving watering facilities on stock routes is limited to £75,000 in Queensland and £31,500 in Western Australia.

(f) *Assistance to Universities.* The States Grants (Universities) Act 1951, provides for grants to be made to the States for the purpose of financial assistance to Universities during the three years 1950-51 to 1952-53.

(viii) *Amounts Paid.* (a) *Year 1951-52.* The following table shows particulars of the amounts paid to each of the States as grants for the several purposes referred to in the preceding paragraphs.

**COMMONWEALTH PAYMENTS TO OR FOR THE STATES, 1951-52.(a)**

(a) Excludes relief to primary producers and other payments for medical research, etc. (b) Paid to National Debt Sinking Fund. (c) Includes payments for road safety practices and Commonwealth strategic roads not included in the preceding table.

Since Federation to 30th June, 1952 an aggregate amount of more than £1,175 million has been paid by the Commonwealth Government to or on behalf of the States. Of this, New South Wales' share was £418 million, Victoria's £259 million, Queensland's £169 million, South Australia's £138 million, Western Australia's £138 million and Tasmania's £53 million. About £74 million was paid to the States from 1900-01 to 1909-10 under section 87 of the Constitution, £109 million from 1910-11 to 1926-27 under the Surplus Revenue Acts, and £227 million from 1927-28 to 1951-52 under the Financial Agreement. Special grants to the States of South Australia, Western Australia and Tasmania have amounted to £95 million, tax reimbursement grants under the various Acts to £491 million, and grants for road construction to £108 million.

For further particulars of the total amounts paid to the several States since Federation see *Finance Bulletin* No. 43 published by this Bureau.

Particulars of special Commonwealth grants for the relief of primary producers are not included in the foregoing tables. For details see Chapter XX.—Agricultural Production. See also para. 4. Subsidies and Bounties and para. 12.—Primary Production—Self-balancing Items of this Division.

12. **Primary Production—Self-balancing Items.**—Expenditure under this item represents the proceeds of certain taxes on primary products or profits from marketing schemes which have been paid to trust funds for the purpose of price stabilization and other assistance schemes, or for distribution to producers. Details of expenditure from the trust funds are given in § 3. Commonwealth Trust Funds. Information relating to the taxes levied is given in Division II.—Revenue of this section (see pages 675, 676 and 679) and details of the price stabilization and other assistance schemes may be found in Chapter XX.—Agricultural Production. Details of expenditure from the Consolidated Revenue Fund during the last five years are given in the following table.

### § 4. Commonwealth Loan Fund.

Brief historical notes relating to the Commonwealth Loan Fund are given in earlier issues of the Official Year Book (*see* No. 37, page 640). In the following table details are given of the net expenditure from the Commonwealth Loan Fund for the years 1938-39 and 1947-48 to 1951-52 and of the aggregate expenditure to 30th June, 1952. The figures shown represent "net" loan expenditure, i.e., after adjustments have been made on account of amounts expended in earlier years.

(a) Repayment of surplus balances of Defence Trust Accounts. (b) Comprises expenditure under War Service Homes Acts 1914-1949—(1950-51, £24,911,484) and financial assistance to the States in connexion with War Service Land Settlement—1950-51, £3,861,577; 1951-52, £5,119,982. (c) Excludes amounts charged to War Loan Fund. (d) In addition, £13,045,408 was expended from War Loan Fund prior to 1923-24. (e) Includes Administration and other Public Buildings, Australian Capital Territory. (f) Payment to National Debt Sinking Fund. See pages 734 and 735.

NOTE.—Minus sign (—) indicates excess of repayments to Loan Fund.

Information relating to the Public Debt of the Commonwealth is given in part D. Commonwealth and State Public Debt (of this chapter).

**B. STATE FINANCE.****§ 1. General.**

1. **Functions of State Governments.**—In comparing the financial returns of the States, allowances must be made for the various functions discharged by the respective Governments, and for local conditions in each case. Direct comparisons of the revenue, expenditure and debt of the individual States are difficult, owing to the fact that functions which in one State are assumed by the Central Government are in another relegated to municipal or semi-governmental bodies which are vested with certain defined borrowing powers and whose financial transactions are not included with those of the Central Government. Care, therefore, is needed in making comparisons, and the particulars contained in this Chapter should be read with those contained in Chapter XV.—Local Government. In many respects, moreover, the budgets of the Australian Governments differ materially from those of most European countries, owing to the inclusion therein of the revenue and expenditure of departments concerned in rendering public services, such as railways, tramways, water supply, etc., which in other countries are often left to private enterprise.

2. **Accounts of State Governments.**—The various financial transactions of the States are in each case mainly concerned with one or other of three Funds—the “Consolidated Revenue Fund”, the “Trust Fund”, and the “Loan Fund”. All revenue (except certain items paid into special funds) collected by the State is paid into its Consolidated Revenue Fund, from which payments are made under the authority of an annual Appropriation Act passed by the Legislature, or by a permanent appropriation under a special act.

Figures in § 2 following relating to New South Wales represent the transactions of the Consolidated Revenue Fund and the business undertakings included in the annual budget papers. These latter are as follows:—Railways, Tramways and Omnibuses, and Sydney Harbour Trust Section of the Maritime Services Board. Adjustments have been made to the Budget figures, however, in order to obviate duplications caused by inter-fund payments and to maintain uniformity from year to year in the presentation of statistics. Particulars for all other States relate to the transactions of the Consolidated Revenue Fund.

The Trust Fund comprises all moneys held in trust by the Government, and includes such items as superannuation funds, road funds, insurance companies' deposits, etc.

The Loan Fund is debited with all loan moneys raised by the State, and credited with the expenditure therefrom on public works or other purposes.

3. **Inter-relation of Commonwealth and State Finances.**—A statement in some detail, covering the inter-relation of Commonwealth and State Finances during the period from the inception of Federation to the passing of the Financial Agreement Act 1928, was published in Official Year Book No. 22, pages 379–80. Changes in the financial relations between the Commonwealth and States since the passing of the Financial Agreement Act have been described in issues of the Official Year Book from year to year (*see also* pages 719–21).

**§ 2. State Consolidated Revenue Funds.****Division I.—Revenue.**

1. **General.**—The principal sources of State revenue are:—

- (a) Taxation; (b) The business undertakings controlled by the State Governments; (c) Sale of and rental from crown lands; (d) Payments by Commonwealth Government under the Financial Agreement, Special Grants and Tax Reimbursement Acts, etc.; (e) Interest on advances; and (f) Miscellaneous sources, comprising fines, fees, etc.

Of these sources, that yielding the largest revenue for the States as a whole is the group of business undertakings, the principal contributors being the government railways and tramways. Next in magnitude are Commonwealth payments under the Tax Reimbursement Acts, followed in order by the Commonwealth payments under the Financial Agreement and special grants, taxation and lands receipts. Since the

introduction in 1942-43 of the uniform tax scheme, Commonwealth payments under the income and entertainments tax reimbursement acts and, from 1946-47, under the tax reimbursement act, have replaced revenue previously received from income and entertainments taxes.

2. **Revenue Received.**—The following table shows particulars of the total amounts and the amounts per head of consolidated revenue received by the several States during the years 1938-39 and 1947-48 to 1951-52.

## STATE CONSOLIDATED REVENUE.

(a) See § 1 para. 2, page 702. (b) In all States certain taxation collections are not paid into Consolidated Revenue Fund. For total collections see next page. (c) Includes payments under Financial Agreement, Special Grants, Prices Control Reimbursement Grants and Special Financial Assistance.

In comparing the revenue of the States, it should be borne in mind that business undertakings which in one State may be controlled by the Government are, in another State, controlled by a board or trust. For example, in New South Wales and Western Australia the tramway systems are controlled by the Government, while in the other States ownership is largely vested in trusts. Harbour and river services and water supply and sewerage are also controlled in some cases by the State and in others by trusts.

(ii) *Revenue from Taxation.* (a) *General.* The following table shows, for the year 1951-52, particulars of all State taxation collections irrespective of whether such moneys have been paid into the Consolidated Revenue Funds or not. For this reason the particulars hereunder differ from those shown in the tables relating to the Consolidated Revenue Funds and represent a comprehensive statement of all taxation collections by the Government in each State. In this and the succeeding statements of taxation, the collections have been grouped according to the nature of the tax rather than the method of collection. For example, stamp duties on betting tickets and bookmakers' licences have been included under "Entertainments Tax" instead of under "Stamp Duties" and "Licences" respectively. Commonwealth payments under the State Grants (Tax Reimbursement) Act are included because these grants have replaced revenue received by the States from income and entertainments taxes prior to the introduction of the uniform tax scheme in 1942-43:—

(b) 1938-39 and 1947-48 to 1951-52. Prior to federation, duties of Customs and Excise constituted the principal source of revenue from taxation. Thereafter, until the introduction of the uniform income tax scheme in 1942-43, the most productive State taxes were the various income taxes which, in 1941-42, included unemployment relief, State development and hospital taxes. Since 1941-42 the States have been reimbursed by the Commonwealth for the revenue lost by the discontinuance of these taxes. Details of the reimbursement grants are given on pp. 696 and 703-6. Information relating to the State income taxes which were levied prior to 1942-43 may be found in earlier issues of the Year Book.

The total amounts and the amounts per head raised from all sources of taxation by the several State Governments, including amounts not paid into the Consolidated Revenue Fund and tax reimbursements received from the Commonwealth, during the years 1938-39 and 1947-48 to 1951-52, are shown in the following table :—

**STATE REVENUE FROM TAXATION : TOTAL NET COLLECTIONS (INCLUDING COMMONWEALTH TAX REIMBURSEMENTS).**

(a) From all sources of taxation irrespective of whether paid to Consolidated Revenue or to other funds. (b) Arrears of State income taxes. (c) Excludes Special Financial Assistance—1950-51, £15,000,000; 1951-52, £33,577,000. (d) Mainly racing.

(iii) *Business Undertakings.* (a) 1951-52. A very large proportion of State gross revenues is made up of receipts from business undertakings under the control of the Governments. The principal of these are railways and tramways, harbour works, water supply and sewerage and electricity supply, and, in addition, State batteries for the treatment of auriferous ores are included for Western Australia, and various minor revenue-producing services are rendered by the Governments of all States. For the year 1951-52 the revenue from these sources was £159,397,000 or 41.2 per cent. of the revenue from all sources. Details of revenue are as follows:—

**STATE REVENUE FROM BUSINESS UNDERTAKINGS, 1951-52.**

Total ..	5,848	1,889	2,845	306	650	254	11,792

The total land revenue for all States for the years 1938-39 and 1947-48 to 1951-52 respectively was:—£4,144,000, £6,196,000, £6,476,000, £7,004,000, £7,917,000, £11,792,000.

(v) *Commonwealth Payments.* Commonwealth payments to the States represent a considerable proportion of the States' Revenue. In 1951-52 the total amount (excluding sundry minor items) paid to the Consolidated Revenue Funds of the States was £138,835,000 (35.9 per cent.). This was made up of the contribution towards interest or States' debts under the Financial Agreement, £7,585,000, special grants to the States of South Australia, Western Australia and Tasmania, £10,522,000, prices control reimbursement, £883,000, special financial assistance, £33,577,000 and tax reimbursement grants, £86,268,000. The latter item has been included under the State taxation above as it is paid to the States as a reimbursement for vacating the field of income taxation.

In addition to these, the States receive a number of other payments which are paid to trust funds. The main items in this class are the contribution towards the sinking fund on States' debts (£2,557,000 in 1951-52) paid to the National Debt Sinking Fund and grants for Commonwealth Aid Roads (£14,647,000 in 1951-52) paid to State trust funds.

More detailed information concerning Commonwealth payments to the States is given under part A of this Chapter (§ 2, para. 11, page 694).

(vi) *Interest and Miscellaneous.* In addition to the foregoing, there are in each State several miscellaneous sources of revenue, including such items as interest, fines, fees, etc. In 1951-52 interest, mainly from loans to local governing bodies, on public account balances and for soldier land settlement supplied £7,796,000, whilst "Miscellaneous" revenue, which includes fines of the courts and fees for services, amounted to £23,791,000.

## Division II.—Expenditure.

1. *General.*—The principal heads of State expenditure from Consolidated Revenue Funds are:—

(a) Interest, sinking fund and exchange charges in connexion with public debt; (b) Working expenses of railways, tramways and other business and industrial undertakings; (c) Education; (d) Health and charitable expenditure; (e) Justice; (f) Police; (g) Penal establishments; and (h) all other expenditure, under which heading is included public works, lands and surveys, agriculture and forestry, legislative and general administration, pensions and miscellaneous.

In earlier years the working expenses of railways and tramways were the most important item of State Governmental expenditure, but, for a period prior to 1941-42, public debt charges were the heaviest item. Since then, however, railways and tramways expenditure has again taken the major place. In the year 1951-52 the working expenses of the railways, tramways and omnibuses were 38.9 per cent. of the total expenditure from the State Consolidated Revenue Funds; next in importance were education, 13.1 per cent.; public debt charges, 13.0 per cent.; charitable public health and hospitals, 12.4 per cent.; and law, order and public safety, 5.2 per cent.

2. **Total Expenditure.**—The total expenditure from the Consolidated Revenue Funds of the several States and the expenditure per head of population during each of the years 1938-39 and 1947-48 to 1951-52 are shown in the following table:—

## STATE EXPENDITURE : CONSOLIDATED REVENUE FUNDS.

(a) Special Deposits Account and Special Accounts.

**§ 4. State Loan Funds.**

1. **General.**—As far back as 1812 revenue collections were supplemented by borrowed moneys, the earliest loan being raised by New South Wales for the purpose of assisting immigration, at rates of interest varying from 2½d. to 5½d. per £100 per diem, or

approximately from  $4\frac{1}{4}$  per cent. to 8 per cent. per annum. Australian public borrowing, however, is mainly due to the fact that the State Governments, in addition to ordinary administrative duties, undertake functions which in other countries are usually entrusted to local authorities or left to private enterprise. Foremost amongst these are the construction and control of the railway systems. Loan moneys have also been largely used for improvements to harbours and rivers, and for the construction of roads, water supply and sewerage works. The State loan expenditure and public debt thus differ very materially from those of most European countries, and from those of the Commonwealth, where such expenditure was very largely incurred for defence or war purposes. As shown above, the State debts consist chiefly of moneys raised and expended with the object of assisting the development of the resources of the country, and are to a very large extent represented by tangible assets.

Statements relating to Loan Expenditure are shown below for both "gross" and "net" expenditure. The gross expenditure represents the amounts disbursed during each year whereas the net expenditure represents the gross expenditure less any credits to the Loan Fund during the year on account of repayments of advances to local governing bodies, settlers, etc., the sale of assets, and transfers from other funds. Such moneys are credited to the Loan Fund in the year of repayment irrespective of when the advance was made.

2. Details of Loan Expenditure.—(i) *Gross Loan Expenditure, 1951-52.* Particulars of gross loan expenditure on works, services, etc., are shown in the following table:—

STATE GROSS LOAN EXPENDITURE ON WORKS, SERVICES, ETC., 1951-52.

(a) Expenditure from Loan Funds and on account of Loans; includes expenditure from Loan Funds, from Treasurer's Advance Account, and from State Loans Repayment Fund. (b) Credits arising from the cancellation of securities redeemed from Sinking Fund are not included. (c) Excludes expenditure from Commonwealth loans under Commonwealth-State Housing Agreements. (d) Included in Advances to Settlers. (e) Includes Gas and Fuel Corporation, £2,393,000 and Rural Finance Corporation, for advances to rural industries, £1,600,000.

NOTE.—Minus sign (—) indicates excess of repayments to loan funds.

**3. Loan Expenditure on Works, Services, etc., 1938-39 and 1947-48 to 1951-52.—**

(i) *Gross Loan Expenditure.* Gross loan expenditure on works, etc. for these years is shown in the following table:—

(a) See footnotes (a) and (b) to table in para. 2 (ii) above.

The four tables in this paragraph and paragraph 2 do not include particulars of expenditure on loan discounts and flotations, the funding of deficits, the retirement of treasury bills, and similar items of a nature other than works, services, etc. The aggregate net expenditure on those items to 30th June, 1952 is shown in paragraph 4 following. Summaries of the gross and net expenditure and repayments in respect of all loan purposes for the years 1949-50 to 1951-52 are shown in paragraph 5 following.

4. Total Net Loan Expenditure to 30th June, 1952.—Particulars of the total net loan expenditure of the States from the initiation of borrowing to 30th June, 1952 are shown in the following table:—

## STATE NET LOAN EXPENDITURE TO 30th JUNE, 1952.

(a) Aggregate Gross Loan Expenditure. (b) Loans to Municipal Tramways Trust. (c) Revised. Amounts previously included in Other Public Works reclassified to Water Supply and Sewerage and Other Purposes. (d) Not available separately. Distributed under various particular headings. (e) Excludes expenditure from Commonwealth loans under Commonwealth-State Housing Agreement. (f) Under Prickly Pear Land Act. (g) Included with Advances to Settlers. (h) Includes grain elevators, New South Wales and Victoria. (i) Includes Government Agency Department of Rural and Industries Bank, £2,680,000. (j) Includes Gas and Fuel Corporation, £4,944,000 and Rural Finance Corporation, £2,419,000. (k) Includes State Bank, £2,105,000. (l) Includes Rural and Industries Bank, £5,633,000. (m) Contributions to Sinking Fund.

The figures in the foregoing table show the amounts actually expended from loan fund, and differ from those shown later in the statements relating to the public debt, which represent the amount of loans still outstanding. The statement above includes all expenditure, whether the loans have been repaid or are still in existence. As in the earlier tables on net loan expenditure, allowance has been made, however, for credits on account of repayments of advances to local government bodies, settlers, etc., the sale of assets, and transfers from other funds. In the public debt statement, on the other hand, loans repaid are not included, and in the case of loans still outstanding,

each is shown according to the amount repayable at maturity, and not according to the amount originally available for expenditure.

5. **Total Loan Expenditure, 1949-50 to 1951-52.**—The following table shows particulars, in summary form, of the total loan expenditure in each State during each of these years.

**STATE LOAN EXPENDITURE : SUMMARY.**

(a) Includes exchange, discounts and flotation expenses, revenue and general cash deficits.  
(b) From Consolidated Revenue Fund.

NOTE.—Minus sign (—) indicates excess of repayments to loan funds.

Information relating to the States Public Debt is given in part D. Commonwealth and State Public Debt (page 719).

## C. COMMONWEALTH AND STATE FINANCE.

1. Revenue and Expenditure.—(i) *Consolidated Revenue Funds.* The following tables show the aggregate revenue and expenditure of the Consolidated Revenue Funds of the Commonwealth and States for each of the years 1938–39 and 1947–48 to 1951–52. In these tables the combined Commonwealth and State totals have been adjusted to exclude major duplications, but the separate Commonwealth and State figures are as shown in other sections of this Chapter. The items excluded from the adjusted figures include the following:—payments made by the Commonwealth to the States on account of tax reimbursements, interest under the Financial Agreement, special grants, special financial assistance, coal strike emergency grants, price control reimbursements and estimated payments of pay-roll tax by the States to the Commonwealth.

## COMMONWEALTH AND STATE CONSOLIDATED REVENUE FUNDS: REVENUE.

Year ended 30th June—					Commonwealth.	State.	Total.	
							Unadjusted.	Adjusted.
					£'000.	£'000.	£'000.	£m.

**D. COMMONWEALTH AND STATE PUBLIC DEBT.****§ 1. General.**

Under the Financial Agreement between the Commonwealth and the States in 1927 the Commonwealth and State Public Debts were amalgamated and the Commonwealth Government accepted responsibility for the State Public Debts. The Commonwealth is reimbursed by the States for interest, exchange, etc., paid on their behalf and the debt is redeemed from a sinking fund to which both the Commonwealth and the States make contributions. Under the agreement the Commonwealth arranges for all borrowings on behalf of the Commonwealth and the States, and Commonwealth securities are issued for all money borrowed.

In the statistical tables relating to Public Debt the units of currency for debt outstanding and interest payable, with the exception referred to below, are:—Debt in Australia—£ Australian; Debt in London—£ Sterling; Debt in New York—£ (converted from dollars at the rate of \$4.8665 to £1).

\* The totals shown represent the total "face" or "book" value of the debt without adjustment or account of the differences in currency mentioned above.

In § 3, para. 5 only, details of the debt for the Commonwealth and each State are given in Australian currency.

**§ 2. The Financial Agreement between the Commonwealth and the States.**

1. **General.**—Full details of the Financial Agreement between the Commonwealth and the States are given in earlier issues of the Official Year Book (*see* No. 37, pages 685 to 690). In this issue a summary of the main provisions only is given.

2. **Australian Loan Council.**—The Australian Loan Council was set up to co-ordinate the public borrowings of the Commonwealth and the States. It consists of the Prime Minister of the Commonwealth, or another Minister nominated by him in writing, as Chairman and the Premier of each State, or Ministers nominated by them in writing. Each year the Loan Council examines the loan programmes of the Commonwealth and the States and determines the total amount to be borrowed during the year. Borrowings by the Commonwealth for defence purposes are not subject to decisions of the Loan Council.

3. **Loan Raisings for the Commonwealth and States.**—Subject to the decisions of the Loan Council, the Commonwealth arranges for all borrowings for or on behalf of the Commonwealth or any State, and for all conversions, renewals, redemptions, and consolidations of the Public Debts of the Commonwealth and of the States.

If the Loan Council unanimously decides, however, a State may borrow outside Australia in the name of the State, and may issue securities for the amount so borrowed. The Commonwealth then guarantees that the State will fulfil all its obligations to bond-holders in respect of the money so borrowed and the money is deemed to be borrowed by the Commonwealth for and on behalf of the State.

Subject to any maximum limits decided upon by the Loan Council for interest, brokerage, discount and other charges, the Commonwealth or any State may—

- (i) borrow within its own territory, for any purpose, money from any authorities, bodies, funds or institutions (including Savings Banks) constituted or established under Commonwealth or State law or practice;
- (ii) borrow from the public by means of counter sales of securities; and
- (iii) use any available public moneys.

However, any securities issued for money so borrowed or used must be Commonwealth securities on terms approved by the Loan Council.

4. **Taking over of State Public Debts.**—The Commonwealth took over on 1st July, 1929—

- (a) the balance then unpaid of the gross public debt of each State existing on 30th June, 1927; and
- (b) all other debts of each State existing on 1st July, 1929 for money borrowed by that State deemed by the Agreement to be money borrowed by the Commonwealth for and on behalf of the State,

and in respect of these debts assumed, as between the Commonwealth and the States, the liabilities of the States to bond holders.

5. **Transferred Properties.**—In relation to State properties transferred to the Commonwealth under Section 85 of the Constitution, the States, as from 1st July, 1929, were discharged from any liability in respect of principal, interest or sinking fund on so much of the debts bearing interest at 5 per cent. per annum, taken over by the Commonwealth, as amounted to the agreed value of these properties, namely £10,924,323.

6. **Payment of Interest.**—For a period of 58 years from 1st July, 1927 the Commonwealth agreed to contribute the sum of £7,584,912 each year towards the interest payable on the State debts. The balance of the interest payable on the State debts is paid to the Commonwealth by the States.

7. **Sinking Fund.**—(i) *State Public Debt existing at 30th June, 1927.* A sinking fund at the rate of 7s. 6d. per annum for each £100 of the net public debts of the States existing on 30th June, 1927, and conversions thereof, was established under the terms of the Agreement. The Commonwealth contributes annually from revenue 2s. 6d. per cent. on the net public debts of the States existing at 30th June, 1927 and each State contributes annually 5s. per cent. on the net public debt of such State at 30th June, 1927. The payments of the Commonwealth and of all States except New South Wales will continue for a period of 58 years from 1st July, 1927, and those of New South Wales for a similar period from 1st July, 1928.

(ii) *New Borrowings.* On new borrowings after 1st July, 1927 (except those for redemptions or conversions, or funding a State deficit) a sinking fund at the rate of 10s. per cent. per annum was established and the State and the Commonwealth contribute from revenue equal shares for a period of 53 years from the date of raising. (New South Wales did not commence sinking fund contributions in respect of new loans raised in the financial year 1927–28 until 1st July, 1928.)

(iii) *Loans raised to meet a Revenue Deficit.* In respect of any loan (except any of the loans referred to in para. (iv) below) raised after 30th June, 1927 by a State to meet a revenue deficit accruing after that date, no sinking fund contribution is made by the Commonwealth, but the State makes a sinking fund contribution at the rate of not less than 4 per cent. per annum of the loan for a period sufficient to provide for the redemption of the loan, the contributions being deemed to accumulate at the rate of 4½ per cent. per annum compound interest.

(iv) *Loans raised to meet Revenue Deficits between 30th June, 1927 and 1st July, 1935.* In respect of loans raised by a State or by the Commonwealth on behalf of a State, on the security of Commonwealth Treasury Bills, to meet a revenue deficit accruing after 30th June, 1927 and before 1st July, 1935, special contributions are payable. Details of these contributions are given in Official Year Book No. 37, pages 688 and 689.

(v) *National Debt Commission.* The sinking funds established are controlled by the National Debt Commission, which may arrange with any State to act as its agent in connexion with payments due to bond holders. Except where the conditions relating to sinking funds, redemption funds, and funds of a like nature held by a State on 30th June, 1929, precluded such transfer, all such funds were transferred to the National Debt Commission.

(vi) *Operation of Sinking Fund.* Sinking fund contributions made in respect of the debts of a State, and funds of that State transferred to the National Debt Commission, are not accumulated but must be applied, whenever expedient, to the redemption and repurchase of loan securities. When such a loan security is repurchased or redeemed by the National Debt Commission, it is cancelled, and the State, in addition to sinking fund contributions otherwise payable, pays a further annual sinking fund contribution at the rate of 4½ per cent. on the face value of the cancelled security.

(vii) *Oversea Debt.* Sinking fund contributions in respect of oversea debt shall be calculated at the mint par of exchange prevailing on 1st July, 1927.

8. **Borrowing by Semi-Governmental Authorities.**—It was realized at the inception of the Loan Council that, in the interests of co-ordinated borrowing, the Council should be advised of borrowing of large amounts by semi-governmental authorities. In May, 1936, all resolutions passed by the Loan Council in connexion with semi-governmental borrowings were consolidated into one set of rules, which superseded all previous resolutions. This set of rules is regarded as the "Gentlemen's Agreement", and provides, *inter alia* for the submission of annual loan programmes, in respect of semi-governmental authorities proposing to raise £100,000 or more in a year, for the consideration of such programmes in conjunction with the loan programme of the Government concerned, and for the fixing of the terms of individual semi-governmental loans coming within the scope of the annual programme.

### § 3. Commonwealth and State Public Debt Outstanding.

1. **Public Debt, Annual Interest Payable and Average Rate of Interest at 30th June, 1952.**—In the following table details are given of the Commonwealth and State Public Debt, annual interest payable and average rate of interest at 30th June, 1952.

In some States certain public utilities such as tramways, water supply and sewerage, harbour services, etc., are controlled by boards or trusts, which, in addition to receiving advances from the central Government, raise loans by public borrowing on their own behalf, while in other States these services are controlled by the central Government. Comparison of the debts of the States is therefore difficult, but on page 731 figures showing the aggregate debts of the States, including these local and semi-governmental authorities, are shown for the years 1938-39 and 1947-48 to 1950-51.

5. Public Debt and Interest Payable in Australian Currency.—In the foregoing tables relating to Commonwealth and State public debt the debt outstanding in London is expressed in sterling, and debt outstanding in New York is expressed in pounds converted from dollars at the rate of \$4.8665 to £1. This method of showing the debt gives no

indication of the amount that the Australian Governments would have to find to repay the debt. In the following tables the public debt and the interest payable are shown in terms of Australian currency throughout. Debt in London and in New York has been converted to Australian currency at the selling rate of exchange on 30th June, 1952.

**COMMONWEALTH AND STATE PUBLIC DEBT AND INTEREST PAYABLE**

(a) Includes short-term debt, £22,868,000.

Under the Financial Agreement Act 1944, Treasury Bills issued to meet State revenue deficits accruing between 1st July, 1928 and 30th June, 1935 were retired on 31st December, 1944. In place of those not redeemed, one per cent. debentures amounting to £43,018,000 were issued. One of these debentures will mature in each year up to 1983. Particulars of these debentures are included under their respective years of maturity in the tables above.

**8. Short-term Debt.**—(i) *Amount.* Particulars of the short-term debt (Treasury Bills and Debentures) of the Commonwealth and States in London and in Australia at 30th June, 1939 and at intervals from 30th June, 1948 to 30th June, 1952 are shown in the following table. This debt is included in the public debt as shown elsewhere.

(a) Excludes Overdrafts and Internal Treasury Bills.

(ii) *Interest Rates.* (a) *London.* The rates of interest payable on Treasury Bills and Debentures in London during the following periods were: 1938-39—minimum rate, 2 per cent., maximum rate, 2½ per cent.; 1947-48 to 1950-51—minimum rate, 2 per cent., maximum rate, 2½ per cent. On 8th November, 1951 the rates were increased to—minimum rate, 2½ per cent., maximum rate, 2¾ per cent.

(b) *Australia.* The Treasury Bill rates in Australia were as follows:—1¼ per cent. from 1st January, 1935; 1½ per cent. from 1st May, 1940; 1¼ per cent. from 1st May, 1943; 1 per cent. from 1st March, 1945; ¾ per cent. from 1st May, 1949; 1 per cent. from 1st August, 1952.

9. *State and Municipal and Semi-Governmental Authority Public Debt.*—For the reasons indicated on page 726 direct comparisons of the debts of the several States should be made with caution. The table following shows, for 1938-39 and 1947-48 to 1950-51, particulars of the debts of the States and the debts due to the public by municipal and semi-governmental authorities in each State.

(a) Due to the public and excludes amounts due to Central Government. Includes bank overdrafts.

## § 4. Commonwealth Loan Raisings.

1. New Loans Raised, 1947-48 to 1951-52.—Under the Financial Agreement between the Commonwealth and the States, the Commonwealth is responsible for raising all loan moneys required by both the Commonwealth and the State Governments. Details of loan transactions given in this section relate, therefore, to all loans raised for the Commonwealth and the States. The following table shows details of new loans raised in Australia by the Commonwealth during the five years 1947-48 to 1951-52. No new loans were raised in London during this period, and the only new loan raised in New York was that from the International Bank for Reconstruction and Development, amounting to \$100,000,000, raised in May, 1951 and repayable in half-yearly instalments from 1st September, 1955 to 1st September, 1975. The rate of interest is 4½ per cent. Of this loan \$62,439,164 had been drawn at 30th June, 1952.

June .. ..	160,000	(b)	160,000	2	1955	100	7,135	16,367	136,498

(a) Includes loans raised for redemption of Treasury Bills, but excludes conversion loans, loans for redemption of debt maturing in London, short-term debt and certain miscellaneous debt (see below).  
(b) Special Issue (taken up by National Debt Sinking Fund, £125.5 million, and other Commonwealth Trust Funds).

The loan of £160,000,000 issued in June, 1952 was for the purpose of fulfilling an undertaking given by the Commonwealth that the States would have access to loan funds

for their works programmes during 1951-52 up to the approved Loan Council borrowing programme of £225,287,000. Subscriptions to this special loan came from the following sources :—

National Debt Commission—	£
Investment of surplus received from Commonwealth Revenue	98,500,000
Investment of Australian currency proceeds of International Bank Loan .. .. .	27,000,000
Commonwealth Trust Moneys—Investment .. .. .	34,500,000
	160,000,000

Finance of the approved Loan Council programme in 1951-52 was therefore provided from the following sources—

Public Loans, domestic raisings, etc. .. .. .	72,422,000
Special Commonwealth Loan .. .. .	152,865,000
	225,287,000

In addition to the new loans raised shown in the foregoing table, and the redemption and conversion loans shown in the following table, there were other miscellaneous debt operations during 1951-52, viz. :—Savings Certificates and War Saving Certificates (Five and Seven Years' Series), decrease of £6,306,000 ; War Savings and Savings Stamps, decrease of £3,000 ; " Over the Counter Sales " (small amounts borrowed by the States by virtue of certain statutory rights), £1,844,000. Advance loan subscriptions in hand increased from £1,026,000 at the end of 1950-51 to £1,417,000 at the end of 1951-52.

2. Conversion and Redemption Loans, 1947-48 to 1951-52.—(i) *Australia*. Particulars of conversion loans raised in Australia during the five years 1947-48 to 1951-52 are given in the following table :—

**COMMONWEALTH CONVERSION AND REDEMPTION LOANS RAISED IN AUSTRALIA.**

1950-51— July ..	9,400	3½	11,785	..	3½	100	1964	44

(a) No account has been taken of cost of issuing the conversion loans at a discount. Exchange calculated at £A. 125.375 = £ stg. 100.

(iii) *New York.* During 1946-47 four loans totalling \$128,000,000 were raised in New York to redeem loans which became due for redemption or which the Commonwealth had the option of redeeming. Details of these loans are given in the last issue of the Year Book (page 836). No further loans were raised in New York for this purpose during the five years 1947-48 to 1951-52.

3. *International Bank for Reconstruction and Development Loan.*—To provide dollar funds for the purchase of certain types of capital equipment and plant which were indispensable to the furtherance of development in Australia and which could only be obtained in the United States of America and Canada, the Commonwealth Government, in August, 1950, arranged a loan of \$100,000,000 from the International Bank for Reconstruction and Development. The loan is for a term of 25 years with interest at 4½ per cent. per annum on the amount of the loan withdrawn and outstanding from time to time. In addition there is a commitment charge of ¾ per cent. per annum on the amount of the loan not withdrawn from time to time. Repayment of the loan is to be made in half-yearly instalments commencing on 1st September, 1955. The last instalment is payable on 1st September, 1975. Up to 30th June, 1952, \$62,439,164 had been drawn on the loan.

In July, 1952, a further loan of \$50,000,000 was arranged. This loan is for a term of 20 years with interest at 4½ per cent. per annum on the amount of the loan withdrawn and outstanding from time to time. There is also a commitment charge of ¾ per cent. per annum similar to that of the previous loan. Repayment of the loan is to be made in half-yearly instalments from 1st June, 1957 to 1st December, 1972.

The capital equipment and plant purchased from the proceeds of these loans are made available to Commonwealth and State Government departments and agencies and private firms and individuals for use in the development of Australian resources. Subject to a special import licence being obtained, the goods are imported and distributed through normal channels and payment made through the Australian banking system. Periodically, schedules of dollar payments for goods imported against loan licences are submitted to the International Bank for Reconstruction and Development. These schedules form the basis for periodical drawings by the Commonwealth against the loan. The amounts drawn are paid to the Commonwealth Bank to replace the dollar funds used in making the purchases. In return, the Commonwealth Government receives Australian currency from the Commonwealth Bank. This is paid to the Commonwealth National Debt Sinking Fund, out of which the loans will subsequently be redeemed.

4. Summary of Loan Transactions, 1942-43 to 1951-52.—The following table contains a summary of loan transactions on behalf of the Commonwealth and State Governments during the last ten years.

(a) Includes loans raised for redemption of Treasury Bills. No new loans were raised in London during this period. (b) "Over the Counter Sales" and net increase in debt on account of Citizens' National Emergency Loans, War Savings and Savings Certificates and Stamps, National Savings Bonds and Stamps, and Advance Loan Subscriptions. Debt in London includes Citizens' National Emergency Loans and debt to United Kingdom Government. (c) Amount drawn of \$100,000,000 loan from International Bank for Reconstruction and Development. (d) Includes special loan of £160,000,000 raised from Commonwealth Trust Funds.

NOTE.—Minus sign (—) denotes a decrease in debt.

§ 5. National Debt Sinking Fund.

1. Commonwealth Public Debt.—Particulars relating to the creation of sinking funds are included in issues of the Official Year Book prior to No. 23.

The old sinking funds were merged in the National Debt Sinking Fund on 11th August, 1923. Particulars of receipts and expenditure of the Commonwealth Account for the years 1938-39 and 1947-48 to 1951-52 were as follows:—

NATIONAL DEBT SINKING FUND : COMMONWEALTH ACCOUNT.

Particulars of the Financial Agreement between the Commonwealth and the States and of the provisions regarding Sinking Fund contributions are shown on page 719 of this issue and in the *Finance Bulletins* issued by this Bureau.

## E. TAXES ON INCOME.

NOTE—The following section was written prior to the introduction of the 1953-54 Commonwealth Budget, when certain changes in income taxes were made. For a description of the taxes inclusive of these changes see Appendix to this volume.

1. **General.**—A description of the development of income taxes in Australia appeared in Official Year Book No. 35, p. 926. Since July, 1942, the Commonwealth, under the uniform tax arrangement, has been the only authority imposing taxes on income. Taxes on income are assessed and imposed under the Income Tax and Social Services Contribution Assessment Act 1936-1953 and the Income Tax and Social Services Contribution Act 1952. The latter act is an annual measure and its primary purpose is to declare the rates of tax and contribution payable for the financial year. The rates for the financial year are levied, in the case of individuals, on the income of that year and, in the case of companies, on the income of the preceding year. Thus tax for the financial year 1952-53 is levied on the income of individuals in 1952-53 and on the income of companies in 1951-52.

2. **Present Taxes.**—Commencing with the 1950-51 financial year the two taxes on incomes of individuals (Income Tax and Social Services Contribution) were combined into a single tax known as Income Tax and Social Services Contribution. For the financial year 1950-51 companies were liable to pay primary tax and tax on undistributed income. Public companies were also liable to a super tax. For the financial year 1951-52 the super tax and tax on the undistributed income of public companies were discontinued. However, in the latter year provision was made for an additional tax on the income of certain public companies and an advance payment of tax for 1952-53.

3. **Assessable Income.**—Income taxes in Australia are levied, primarily, on all income derived from Australian sources by any person, rather than on income derived from all sources by Australian residents. Thus a non-resident is taxed on income derived in Australia, while a resident is, in general, not taxed on income other than dividends derived from overseas if the income is taxed in the country in which it is derived.

Certain types of Australian income are exempt from tax in Australia, the more important being (i) pensions, child endowment and other payments under the Social Services Consolidation Act 1947-1950, (ii) income from gold-mining and uranium mining, (iii) twenty per cent. of certain mining profits, (iv) dividends paid out of exempt mining profits, and (v) pay and allowances earned by a member of the Defence Forces while serving in Korea after 26th June, 1950 and Malaya after 28th June, 1950. Commencing with the year 1951-52, income received from a scholarship, bursary or other educational allowance is also exempt.

No amount is included in assessable income on account of a house occupied by its owner. Profits derived from the sale of property are not assessable income if such property was not purchased with a view to resale at a profit.

Assessable income is divided into two main groups—personal exertion and property. Personal exertion income includes all wage, salary, business and professional incomes, while property income includes all rents, dividends and interest. A further tax on property income is imposed on individuals in cases where the total taxable income exceeds £400 and the amount of property income exceeds £100 (see page 739). No distinction between personal exertion and property income is made for companies.

Expenses incurred in earning income, certain subscriptions to business associations and trade union dues, are allowable deductions. Losses incurred in previous years may be carried forward as a deduction.

Because of uncongenial climatic conditions, isolation and high cost of living, taxpayers living in certain areas are allowed an additional deduction. Two zones have been prescribed, and the allowances are Zone A, £120 and Zone B, £20.

Income Tax and Social Services Contribution is levied on the taxable income remaining after making these deductions and the concessional deductions to which reference is made in paragraph 4 following.

4. **Concessional Deductions.**—Prior to the financial year 1950-51, concessional allowances for dependants, medical expenses, life assurance and superannuation contributions, etc., were made by way of rebates of Income Tax or by way of concessional rates for Social Services Contribution. Since 1950-51 these allowances have been made by way of a deduction from income. The maximum deduction allowed for each dependant, parent or a housekeeper employed by the taxpayer for the financial years 1950-51 to 1952-53 is shown in the following table.

## CONCESSIONAL DEDUCTIONS FOR DEPENDANTS, ETC.

(£.)

Dependant, etc. (Resident).	Maximum Deduction. (a)
Spouse .. .. .	104
Daughter-housekeeper (b) .. .. .	104
Housekeeper (b) having care of taxpayer's children under 16 years of age .. .. .	104
Parent .. .. .	104
One child under 16 years of age .. .. .	78
Other children under 16 years of age .. .. .	52
Invalid relative(c) .. .. .	78
Child 16 to 21 years receiving full-time education .. .. .	78

(a) These deductions are allowed only if the dependant or parent is a resident of Australia. If the dependant derives income or is maintained for part only of the year a partial deduction is allowed.

(b) Of a widower or widow. (c) Child, step-child, brother or sister over 16 years of age.

Medical expenses paid by a taxpayer who is a resident, in respect of himself, a dependant, or other child under 21 years of age, up to £100 for each person, are allowed as a concessional deduction. Medical expenses include payments made to a legally qualified medical practitioner, nurse or chemist, or a hospital, in respect of an illness or operation, payments for dental services not exceeding £20 for any one person, payment for therapeutic treatment and eye tests, expenditure on medical or surgical appliances, artificial limbs or eyes, hearing aids and spectacles, and the remuneration of an attendant of a person who is blind or confined to bed or invalid chair.

Payments of life, etc., insurance premiums and contributions to superannuation, medical, hospital and similar funds and friendly societies, not exceeding an aggregate of £200, and funeral expenses of a dependant not exceeding £30 are allowed as concessional deductions if the taxpayer is a resident. In 1952-53 concessional deductions were extended to cover payments made by a resident taxpayer to a school, college, university or tutor on behalf of dependent student children who are less than 21 years of age (maximum £50 per dependant).

In addition to concessional deductions, all taxpayers (residents and non-residents) are allowed a deduction from income of rates and taxes on land which are annually assessed, gifts to charitable, benevolent or patriotic funds and one-third of amounts paid as calls to certain mining, forestry and oil-prospecting companies.

5. **Effective Exemptions from Tax.**—For the financial years 1950-51 to 1952-53 resident taxpayers without dependants were exempt from Income Tax and Social Services Contribution if their income did not exceed £104. The effect of the deductions for dependants was to exempt taxpayers up to the incomes shown hereunder in the years 1950-51 to 1952-53. For comparison, the effect of concessions for dependants for the years 1948-49 and 1949-50 are also shown.

## RESIDENT TAXPAYERS: EFFECTIVE EXEMPTIONS FROM TAX.

(£.)

Taxpayer with—	Social Services Contribution— Financial Years 1948-49 and 1949-50.	Income Tax and Social Services Contribution— Financial Years 1950-51 to 1952-53.
No dependants .. .. .	104	104
Wife .. .. .	200	208
„ and one child .. .. .	283	286
„ „ two children .. .. .	317	338
„ „ three children .. .. .	350	390
„ „ four children .. .. .	400	442

Commencing with the 1951-52 financial year, an aged person (i.e. a man who has attained the age of 65 years or a woman who has attained the age of 60 years) is exempt from Income Tax and Social Services Contribution if his net income (i.e. gross income less expenses of earning that income) does not exceed £234. A married couple both of whom qualify by age for the concession, are exempt from tax if their combined net incomes do not exceed £468. For the 1952-53 financial year, these exemptions were raised to £254 and £507 respectively.

6. Rates of Income Tax and Social Services Contribution on Individuals.—The following table shows the rates of income tax and social services contribution for the financial year 1950-51. The same rates operated for the 1951-52 financial year, but additional tax and contribution of 10 per cent. of the tax payable, prior to the allowance of any rebate or credit, was imposed. No change was made in tax rates for 1952-53 but the additional tax of 10 per cent. was abolished, leaving the effective rates the same as for the 1950-51 financial year.

(a) See footnote (a) to table above.

If the total taxable income does not exceed £1,000, the further tax on property income cannot exceed twelve pence for every £1 by which the total taxable income exceeds £400. No further tax and contribution is imposed where the taxable income from property does not exceed £100.

Prior to the 1951-52 financial year the rate of Income Tax and Social Services Contribution for primary producers was determined by the average taxable income of the five years up to the current year and this rate was applied to the taxable income of the current year. For the 1951-52 and subsequent financial years the application of the averaging provisions was limited to that part of the taxable income which did not exceed £4,000 and, where the taxable income exceeded £4,000, the balance was taxed at ordinary rates. Where the taxable income was less than £4,000, the rate of tax for average purposes was limited to the rate on a taxable income of £4,000. Provision was also made for a taxpayer to elect not to have the averaging provisions applied to his assessment for any income year and subsequent years. Such an election once made is irrevocable.

Interest on Commonwealth Loans issued prior to 1st January, 1940 is subject to the condition that it shall not be taxed at rates higher than those for 1930-31. Interest on Commonwealth Loans issued after 1st January, 1940 and interest on certain State semi-governmental loans issued free of State income tax receive a rebate of 2s. in the £1.

The minimum amount of Income Tax and Social Services Contribution payable is 10s. and the amounts payable and rebates are calculated to the nearest shilling.

7. Taxes on Specified Incomes.—The following table shows the Income Tax and Social Services Contribution payable by taxpayers, with various incomes and numbers of dependants, on income derived in each year from 1949-50 to 1952-53:—

8. **Pay-as-you-earn.**—Individual taxpayers pay tax on a pay-as-you-earn basis. A similar scheme does not operate for companies.

(a) *Salary and Wage Earners.* Salary and wage earners are subject to instalment deductions for payment of tax at current rates out of weekly (or fortnightly) earnings. Employers are required to deduct tax and contribution from each payment of wages and salary to an employee at the appropriate rate in accordance with a prescribed instalment scale. This scale shows the amount to be deducted according to the income and number of dependants of the employee.

Under the group scheme of deduction, which covers most employers of more than ten persons, the amount deducted is remitted to the Taxation Department, and after 30th June each year each employee is given a group certificate by his employer showing the amount of deductions made during the year. This certificate is forwarded to the Taxation Department with the employee's return of income for the year. If the tax assessed on the basis of this return is less than the amount shown on the group certificate a refund is forwarded to the employee with his assessment. If the tax assessed is greater than the amount shown on the group certificate the employee is required to pay the balance.

Under the stamp scheme, used by small employers, a stamp deduction sheet in two parts is used. Each four weeks the employer purchases stamps (also in two parts) for the amount of the deductions made each pay day and sticks one part on each half of the sheet. At the end of the year the employer gives the employee one half of the sheet and sends the other half to the Taxation Department. The employee's half is then used in the same way as a group certificate.

(b) *Taxpayers with Income other than Salary and Wages.* These taxpayers pay provisional tax in respect of income other than salary and wages. Collection of tax and contribution for the current year is made at the same time as collection and assessment for the previous year is adjusted. The notice of assessment shows an amount of provisional tax and contribution for the current year. This provisional amount is an approximation to the tax and contribution which will be payable after the return of income for the current year has been lodged. It is ascertained by assuming that the income of the current year will be the same as that for the previous year (for which a return has already been lodged) but the rates for the current year are applied to the income and not the rates for the year in which it was derived. The assessment notice shows the provisional tax and contribution paid in the previous year as a credit against the tax and contribution assessed on the basis of the return for that year.

By amendments to the Income Tax and Social Services Contribution Assessment Act in 1952 and 1953 provision was made for a taxpayer to reassess the provisional tax payable. As previously, provisional tax will be assessed by the Commissioner of Taxation on the basis of the income of the previous year. On receipt of his assessment the taxpayer may elect to substitute his estimate of income for the current year and pay tax on the basis of this estimate. In the 1952 amendment it was compulsory for the taxpayer to reassess his provisional tax if he considered his income for the current year would be more than 20 per cent. greater than his income in the previous year. This compulsory provision was removed by the 1953 amendment. To protect the revenue, a penalty is imposed if the taxpayer elects to pay provisional tax on an estimate of income 20 per cent. lower than the income of the previous year and he underestimates his income by more than 20 per cent.

In 1950–51 high wool prices caused a large increase in the incomes of woolgrowers. This was followed, in 1951–52, by a reduction in incomes as a result of the subsequent fall in wool prices. To avoid large overpayments that would result under the normal procedure of assessing provisional tax, provision was made for a woolgrower to defer payment of up to 40 per cent. of the provisional tax payable in 1951–52 if he considered his income was likely to be less than it was in 1950–51.

Employees with more than £100 income from sources other than wages and salaries are required to pay provisional tax in respect of that income. This limit was raised from £50 in 1952–53.

9. **Lodgment of Returns and Assessment of Tax.**—All persons with assessable income in excess of £104 are required to lodge returns by the 31st July each year (31st August for business incomes). Income Tax and Social Service Contribution payable is assessed, and assessment notices showing the amount payable are issued during the year following the year of income (in most cases from September to June following the lodgment of the return). The approximate amount payable, however, has already been collected during

the income year—from employees by deductions from wages and from non-employees by a provisional tax. The amount shown on the assessment notice is therefore adjusted against the amount already collected and any difference either collected or refunded.

10. **Company Income Taxes.**—(i) *General.* For taxation purposes, companies are divided into two main groups—public and private. A private company is defined as a company in which all the issued shares are held by not more than twenty persons or which is capable of being controlled by not more than seven persons, and which is not a company in which the public is substantially interested or a subsidiary of a public company. All other companies are regarded as public companies. Both public and private companies pay primary Income Tax and Social Services Contribution assessed on a taxable income ascertained by the same principles as for individuals.

Dividends received are assessable income, but resident companies receive a rebate at the average rate on the amount of dividends included in the taxable income. This rebate is not allowed to non-resident companies.

(ii) *Public Companies.* (a) *Primary Income Tax and Social Services Contribution.* For companies, other than life assurance companies, the rates of Income Tax and Social Services Contribution for the last three financial years were :—1950-51—On the first £5,000 of taxable income 5s. in the £1 and on the remainder of the taxable income 6s. in the £1 : 1951-52—7s. in the £1 on all taxable income ; 1952-53—On the first £5,000 of taxable income 5s. in the £1 and on the remainder of the taxable income 7s. in the £1. For mutual life assurance companies the rates were 1s. in the £1 less in each case. For other life assurance companies the rates for mutual income were the same as those for mutual life assurance companies and for the remainder of their income the rates for other companies applied.

(b) *Additional Income Tax and Social Services Contribution.* For the 1951-52 and 1952-53 financial years an additional tax of 2s. in the £1 was imposed on taxable income. This additional tax did not apply to the income of non-resident companies from dividends, the income of mutual life assurance companies or the mutual income of other life assurance companies and the income of co-operative companies and companies not carried on for the profit of individual members.

(c) *Super Tax.* Super Tax, which was levied at the rate of 1s. in the £1 on the excess of taxable income over £5,000 in 1950-51 and earlier financial years, has not since been imposed.

(d) *Undistributed Income Tax.* This tax was imposed for the financial years 1940-41 to 1950-51. Details are given in Official Year Book No. 39, page 846.

(iii) *Private Companies.* (a) *Primary Income Tax and Social Services Contribution.* For the financial years 1950-51 and 1952-53 the rates of Primary Income Tax and Social Service Contributions were the same as those for public companies (other than life assurance companies). For 1951-52 the rates were 5s. in the £1 on the first £5,000 of taxable income and 7s. in the £1 on the remainder. The additional tax and contribution and super tax were not imposed on the taxable income of private companies.

(b) *Undistributed Income Tax.* A private company incurs liability for undistributed income tax if it fails to make a sufficient distribution of income within a specified period after the close of the year of income. The tax is levied on the undistributed amount which, for practical purposes, is the taxable income less—

- (i) Primary income tax and social services contribution payable ;
- (ii) Retention allowance (i.e. the proportion of the reduced distributable income which a company may retain without incurring liability for undistributed income tax) ; and
- (iii) Certain dividends paid by the company.

The retention allowance is the following proportion of the reduced distributable income.

Financial Year 1950-51 and 1951-52.	Financial Year 1952-53.
On first £1,000 or part, 50 per cent.	On first £1,000 or part, 50 per cent.
On next £1,000 or part, 40 per cent.	On next £1,000 or part, 40 per cent.
On next £1,000 or part, 35 per cent.	On next £1,000 or part, 35 per cent.
On next £1,000 or part, 30 per cent.	On next £1,000 or part, 30 per cent.
On next £2,000 or part, 25 per cent.	On balance, 25 per cent.
On next £2,000 or part, 20 per cent.	
On next £2,000 or part, 15 per cent.	
On balance, 10 per cent.	

For the financial years 1950-51 and 1951-52, the reduced distributable income was calculated by deducting from the taxable income the primary tax payable and the amount of dividends received from other private companies. For the financial year 1952-53 all property income included in taxable income was deducted.

For financial years 1950-51 and 1951-52 the undistributed income tax was the additional tax that shareholders would have become liable to pay if the undistributed amount had been paid to them as dividends on the last day of the year of income. In effect it was levied at the shareholders' graduated rates.

For financial year 1952-53 the undistributed income tax was imposed at a flat rate of 10s. in the £1 on the undistributed amount.

(iv) *Advance Payment of Income Tax and Social Services Contribution.* In the financial year 1951-52 all companies were required to make an advance payment of part of the Income Tax and Social Services Contribution that would be assessed in 1952-53. The amount of this advance payment was fixed at 19 per cent. of the Income Tax and Social Services Contribution assessed for 1951-52 (other than tax on the undistributed income of private companies). An advance payment was not required in the financial year 1952-53, and a credit was allowed in assessments for that year of the advance payment levied in the previous year.

II. *Yield of Income Taxes.*—(i) *Collections from all Income Taxes.* The following table shows the collections of taxes of all types imposed on income for the years 1938-39 and 1947-48 to 1951-52 :—

**INCOME TAX COLLECTIONS.**  
(£'000.)

Year.	Total.		
	Commonwealth.	State.	Total.
1938-39 .. .. .	11,882	29,812	41,694
1947-48(a) .. .. .	232,944	368	233,312
1948-49(a) .. .. .	272,368	235	272,603
1949-50(a) .. .. .	279,663	258	279,921
1950-51(a) .. .. .	341,970	279	342,249
1951-52(a) .. .. .	545,179	155	545,334

(a) Commonwealth collections are greater than the Budget figures by the amount of refunds of State taxes. State collections are net arrears after deduction of these refunds.

(ii) *Commonwealth Income Tax Assessed.* The amounts of Commonwealth taxes assessed on the income of recent years are shown in the following table. The amounts are shown under the year in which most of the assessments were made, i.e., the year following the income year. Income taxes assessed on income for past years and for the years shown, after the close of the normal assessing period, are not included.

(a) Assessment in respect of 1950-51 income issued to 30th September, 1952. Assessments issued after that date have been excluded. (b) Actual income is the total income (less any expenses of earning the income) and includes any exempt income and any concessional deductions or expenses of a capital nature which are allowed as a deduction for the purpose of assessing taxable income.

(iv) *Commonwealth Income Tax on Residents—Grades of Income.* Individual income taxes assessed on residents are distributed according to grades of actual income in the following table. The year shown in each case refers to the year in which assessment was made, i.e., the year following the income year. The figures relate only to assessments made on the income of the previous year during the normal assessing period. Assessments issued after the normal assessing period are excluded.

## CHAPTER XVIII.

## MINERAL INDUSTRY.

## § 1. The Mineral Wealth of Australia.

1. **Place of Mining in Australian Development.**—The discovery of gold in payable quantities first attracted population to Australia in large numbers and was thus a significant factor in its early development. In more recent times the rapid growth of Australia's secondary industries has been associated with considerable expansion in mining for silver-lead-zinc, copper and iron ores, and coal. However, the value of mineral production has lagged behind that recorded for Australia's large rural industries and in 1951 represented only about 10.4 per cent. of the net value of production of all primary industries.

2. **Extent of Mineral Wealth.**—The extent of the mineral wealth of Australia has not been determined fully, and large areas of the country still await geological survey. Regional and detailed investigations are being carried out by the Commonwealth Bureau of Mineral Resources, Geology and Geophysics, by the Geological Surveys of the State Governments and by the exploration departments of mining companies. No major discoveries have been made in recent years, although important prospects of uranium ore, bauxite (aluminium ore) and some other minerals have been recorded and are being investigated in detail.

Progress has been made in utilizing the sulphur content of domestic ores that were previously of only limited economic importance, and facilities for the treatment of copper, lead and zinc have been extended; in this sense, the mineral wealth of the country has expanded.

3. **Standardization of Mineral Statistics.**—Prior to the year 1950, the official statistics of mineral production in Australia were defective because of the widely different methods adopted by the Mines Departments of the several States in collecting, compiling and reporting the data. The Bureau of Mineral Resources, Geology and Geophysics had done much work in post-war years in re-arranging State data with the object of deriving satisfactory Commonwealth totals, but it was not until 1950 that some States commenced implementation of a plan which originated at the 1945 Conference of Australian Statisticians for the unification and standardization of Australian mineral statistics.

Further improvements were made in 1951 and 1952 and work is proceeding with the object of removing the remaining defects in the statistics, with particular emphasis on the problem of obtaining sound and uniform statistical value and employment data for all States and Territories.

The fundamental provision of the plan for standardization of Australian mineral statistics is that quantities and values of individual minerals produced should be reported in terms of the products in the form in which they are despatched from the locality of each mine. This involves the inclusion in the mining industry of ore-dressing and elementary smelting of metallic minerals (e.g. in the case of gold) and miscellaneous treatment of non-metallic minerals where these operations are carried out in an associated plant at or near the mine. For example, in the case of a metal mine, the output is recorded as ore when no treatment is undertaken at the mine or as a concentrate where ore-dressing operations are carried out in associated works in the locality of the mine. In addition to the basic quantity data, the plan provides for the reporting of contents of metallic minerals and of contents or average grade of selected non-metallic minerals. Wherever practicable, contents (based on assay) of metallic minerals are shown for each metal which is a "pay metal" or a "refiners' prize" when present in the particular mineral.

For the purpose of compiling and publishing data relating to employment, value of output, value of production, etc., a tentative detailed statistical classification for the mining industry has been used in Australia from 1950. For the purpose of this classification, the "Mining Industry" includes all mining and quarrying and the recovery of minerals from ore dumps, tailings, etc. As mentioned above, ore dressing and miscellaneous treatment of non-metallic minerals (where these are carried out in an associated plant at or near the mine) are included in the Mining Industry. The classification divides the industry into four major groups, viz. Metal Mining, Fuel Mining, Non-metal Mining and Construction-material Quarrying.

The adoption of revised methods of compiling and presenting mineral statistics in 1950 has caused a break in continuity of the data published for earlier years. For this reason, it has not been possible to continue some of the comparative tables beyond 1949, while in other tables comparisons have been continued, but data for 1950 and 1951 are in general not strictly comparable with those for 1949 and earlier years.

4. **Quantity and Value of Minerals Produced, 1951.**—In the two tables following, particulars of the quantities and recorded values of minerals produced are shown for each State and the Northern Territory for 1951. Particulars of production data by States for 1950 may be found in *Primary Industries Bulletin No. 45, Part II., Non-Rural Industries and Value of Production*. Because of the revised bases of compiling and presenting mineral statistics referred to above, the data in the tables differ considerably as to form and content from corresponding data for 1949 and earlier years published in previous issues of the Year Book.

In the main, the data consist of official statistics of Mines Departments furnished to this Bureau by the Statisticians of the several States and by the Northern Territory Mines Branch. These statistics have been supplemented, as necessary, by data obtained from the Australian Mines and Metals Association (Inc.), the Bureau of Mineral Resources, Geology and Geophysics and several other sources. The particulars shown have been compiled as far as practicable on the standardized basis outlined in par. 3 preceding. This has involved some re-arrangement of Mines Department official statistics for States which have not yet fully implemented the plan for standardization of mineral statistics in Australia.

In these tables individual minerals are arranged in four groups, viz., metallic minerals, fuel minerals, non-metallic minerals and construction materials, to correspond with the major groups of the tentative statistical classification of the mining industry.

The particulars shown in the group "construction materials" cover, broadly, data similar to those previously included under the heading of "Quarries".

 (d) Included under "Gold—Other Forms". (e) Excludes Western Australia. (f) Bullion,  
 alluvial, retorted gold, etc. (g) Not available.

6. Value of Production, 1939, 1947 to 1951.—The defective nature of mineral statistics, generally, prior to 1950 has been referred to in para. 3, preceding. This applied particularly to the values of individual minerals recorded by Mines Departments, which from the point of view of Australian statistics were very unsatisfactory as they represented a heterogeneous collection of "values" ascribed to ores, concentrates and metal contents of untreated or partly treated minerals. In 1950 satisfactory methods of compiling mineral values (i.e. as incorporated in the plan for standardization of mineral statistics referred to in para. 3) were adopted in several States but in others the old defective procedures are still being used.

In the table below particulars of the recorded values of minerals are shown for the years 1939 and 1947 to 1951. Because of the changes in the bases of recording mineral values adopted in some States in 1950, the data for that year and 1951 are not strictly comparable with those shown for earlier years. Separate figures are shown for metallic minerals, fuel minerals and non-metallic minerals. It should be noted that the values of construction materials are excluded from the particulars of non-metallic minerals and from the total.

1948 .. .. .	36,351	2,347	9,211	3,261	8,561	4,367	294	64,392
1949 .. .. .	36,021	2,756	11,858	2,444	9,463	4,629	599	67,770
1950(a) .. ..	48,093	3,575	16,454	3,912	11,467	5,348	701	89,550
1951(a) .. ..	66,351	4,926	20,423	4,535	13,367	8,639	987	119,228

(a) Because of revised methods adopted in the collection and presentation of mineral statistics, the values shown for the years 1950 and 1951 are not strictly comparable with those published for previous years.

(b) Excludes Construction Materials.

7. Total Production since the Inception of Mining in Australia.—The previous issue of the Year Book included a table showing the recorded values of principal minerals produced from the inception of mining in Australia to the end of 1949. Because of the revised methods of the collection and presentation of mineral statistics adopted in 1950 it is not possible to continue the table beyond 1949.

## § 2. Gold.

1. Discovery in Various States.—The discovery of gold in payable quantities was an epoch-making event in Australian history, for, as one writer aptly phrases it, this event "precipitated Australia into nationhood". A more or less detailed account of the finding of gold in the various States appears under this section in Official Year Books Nos. 1 to 4.

2. *Mine Production.*—The following table shows the mine production of gold (i.e. gold content of minerals produced) in the several States and in Australia as a whole during each of the ten decennial periods from 1851 to 1950, and in single years from 1946 to 1952. Owing to the defective information in the earlier years the figures fall considerably short of the actual totals, for during the first stages of mining development large quantities of gold were taken out of Australia by successful miners who preferred to keep the amount of their wealth secret.

**GOLD : MINE PRODUCTION.(a)**  
(<sup>'000</sup> fine oz.)

Total, 1851-1952..	16,470	73,713	22,437	457	58,081	2,499	954	174,611

(a) Gold content of minerals produced.

(b) Less than half the unit of quantity shown.

The amount of gold raised in Australia in any one year attained its maximum in 1903, when Western Australia also reached its highest point. For the other States the years in which the greatest yields were obtained were as follows:—New South Wales, 1852; Victoria, 1856; Queensland, 1900; South Australia, 1904; and Tasmania, 1899.

Owing to the exhaustion of the more easily worked deposits and increased costs due to deep mining the production of gold in Australia declined from 3,837,979 fine oz. in 1903 to 427,160 fine oz. in 1929, the lowest output since the discovery of the precious metal.

Increased activity in prospecting due to prevailing economic conditions resulted in some improvement in 1930, but the marked development between that year and 1939 received its impetus from the heavy depreciation of Australian currency in terms of gold. Oversea and local capital were attracted to the industry, and the employment of advanced geological methods and technical improvements brought many difficult or abandoned propositions into profit. The output of gold rose annually from 467,742 fine oz. in 1930 to 1,645,697 fine oz. in 1939. Following the outbreak of the 1939-45 War, losses of man-power through enlistment in the Armed Services and transfers to more essential work associated with the war effort resulted in a sharp fall in gold production to 656,867 fine oz. in 1944 and 657,213 fine oz. in 1945. Following the release of man-power after the war, there was an upward trend in mine production of gold until 1947 when output was 937,654 fine oz. Output fell again in 1948 to 885,507 fine oz. and remained below 900,000 fine oz. in each of the years 1949, 1950 and 1951, notwithstanding the increase in the price of gold from £A.10 15s. 3d. to £A.15 9s. 10d. which became operative from 19th September, 1949. In 1952, mine gold output increased to 980,435 fine oz., this being the highest figure recorded since 1942. Since December, 1951, the bulk of Australian newly-won gold has been sold on overseas premium markets.

3. **Refinery Production.**—The quantities and values of the refinery production of new gold of Australian origin are shown in the following table for each of the years 1940 to 1952. The value of the refined new gold is based on the price fixed by the Commonwealth Bank, but allowance is made in 1952 for premiums on sales of gold for industrial purposes in Australia and overseas. Particulars of the values ascribed to gold production (mine basis) in 1939 and earlier years were included in previous issues of the Year Book.

**GOLD : REFINERY PRODUCTION OF NEWLY-WON GOLD OF AUSTRALIAN ORIGIN.**

Year.	Quantity.	Value.	Year.	Quantity.	Value.
	'000. fine oz.	£'000.		'000. fine oz.	£'000.
1940 .. ..	1,637	17,445	1947 .. ..	969	10,430
1941 .. ..	1,441	15,393	1948 .. ..	884	9,517
1942 .. ..	1,168	12,210	1949 .. ..	879	10,670
1943 .. ..	754	7,878	1950 .. ..	844	13,077
1944 .. ..	636	6,679	1951 .. ..	850	13,172
1945 .. ..	613	6,556	1952 .. ..	1,000	16,490
1946 .. ..	820	8,830			

4. **Unit Values.**—Values per fine oz. in Australian currency assigned to the production of gold during recent years are : £9 14s. 5½d. in 1939, £10 13s. 1¾d. in 1940, £10 13s. 8d. in 1941, £10 9s. 0¾d. in 1942, £10 9s. 0d. in 1943, £10 10s. 1½d. in 1944, £10 13s. 11¼d. in 1945 and £10 15s. 3d. in each year 1946 to 1948. The unit value of gold production rose to £12 2s. 10d. in 1949, as a result of the increase in the price to £15 9s. 10d. per fine oz. fixed by the Commonwealth Bank on 19th September, 1949, consequent upon alteration in the rate of exchange. In 1950 and 1951, the unit values adopted were the Bank's price of £15 9s. 10d. per fine oz., while in 1952 allowance was made for premiums on gold sold for industrial purposes in Australia and on premium markets overseas, the weighted average value for the year being £16 9s. 10d. per fine oz. Further information regarding the price of gold realized, including particulars of prices for newly-won gold sold on overseas premium markets since December, 1951, is given in Chapter XVI.—Private Finance.

5. **Changes in Relative Positions of States as Gold Producers.**—The figures in the table showing the quantity of gold raised explain the very large increase in the population of Victoria during the period 1851 to 1861, when an average of over 40,000 persons reached the State each year. With the exception of 1889, when its output was exceeded by that of Queensland, Victoria maintained its position as the chief gold producer for a period of forty-seven years, until its production was surpassed by that of Western Australia in 1898. From that year onward the proportion contributed by Western Australia has increased and in 1952 represented 74 per cent. of the entire yield of Australia. The proportion contributed by this State for the period 1851 to 1952 was 33 per cent. and by Victoria for the same period 42 per cent.

6. **Place of Australia in the World's Gold Production.**—The table below shows, in decennial periods from 1851 to 1950 and for each of the years 1950–51 the world's gold production (as ascertained from authoritative sources) and the share of Australia therein. The details of world production from 1940 are possibly less complete than those for earlier years, because of censorship during and after the war. The figures recorded for these years represent recorded production only and therefore omit any production for those countries not reporting. Included in this latter group are the Soviet Union and other producing countries of lesser importance.

## GOLD : WORLD PRODUCTION.

Period.	World Production of Gold.		Gold Produced in Australia.		Proportion of Australian Production to Total.	Period.	World Production of Gold.		Gold Produced in Australia.		Proportion of Australian Production to Total.

Belgian Congo .. .. .	394	301	300	334	339	352

(a) Estimated. Sierra Leone.

(b) Includes Newfoundland.

(c) Includes Gambia, Gold Coast, Nigeria,

7. **Employment in Gold-mining.**—The number of persons employed in gold-mining in each State at various intervals since 1901 is shown in the following table. The figures include prospectors, etc., so far as data are ascertainable, and include those who may not have worked during the whole of the year. The figures for Queensland in the table below include persons employed in the Mount Morgan copper-gold mining establishment. In the tables in § 13 relating to employment in the mining industry generally, employment in the Mount Morgan establishment for the years 1950 and 1951 has been classified to copper-gold mining, which is a separate industry in the Draft Classification of the Mining Industry adopted for 1950.

## GOLD-MINING : PERSONS EMPLOYED.

Year.	N.S.W.	Victoria.	Q'land.(a)	S. Aust.	W. Aust.	Tas.	Nor. Terr.	Total.
1901 .. .. .	12,064	27,387	9,438	(b)1,000	19,771	1,112	(b) 200	70,972
1903(e) .. .. .	11,247	25,208	9,229	(b)1,000	20,716	973	(b) 200	68,573
1913 .. .. .	3,570	11,931	3,123	800	13,445	481	175	33,525
1923 .. .. .	1,141	2,982	603	32	5,555	119	30	10,462
1933 .. .. .	6,913	6,126	4,161	231	9,900	229	95	27,655
1938 .. .. .	3,764	6,315	3,378	158	15,374	141	267	29,397
1947 .. .. .	795	1,135	1,834	50	7,649	14	176	11,653
1948 .. .. .	702	1,064	1,627	34	7,178	15	171	10,791
1949 .. .. .	688	1,019	1,589	52	6,800	9	238	10,395
1950 .. .. .	695	1,050	1,738	47	7,048	12	208	10,798
1951 .. .. .	574	761	1,653	27	6,742	12	143	9,912

(a) Includes employment in the Mount Morgan copper-gold mine, mill and smelter. (b) Estimated.

(c) Year of maximum production for Australia.

Owing to the exhaustion of the more easily worked deposits and increased costs due to deep mining, the number employed in gold-mining in 1929 had dwindled to the comparatively small figure of 6,108. Stimulated by the enhanced price of gold, employment in the industry rose over four-fold to 33,113 in 1935, but thereafter the numbers employed declined each year to 7,015 in 1944. Following the cessation of hostilities and a relaxation of manpower control, the numbers rose in each succeeding year to reach 11,653 in 1947. In the next three years they remained between 10,000 and 11,000 but in 1951 declined to 9,912.

8. Assistance to Gold-mining Industry.—The Commonwealth Government imposed a tax on gold produced in Australia or in any Territory under its jurisdiction and delivered to the Commonwealth Bank on or after 15th September, 1939, the rate of tax being fixed at 50 per cent. of the price payable by the Bank in excess of £A.9 per fine oz. This tax was suspended as from 20th September, 1947, by the Gold Tax Suspension Act 1947 in order to assist the gold-mining industry in meeting higher costs and to encourage greater output.

### § 3. Silver, Lead and Zinc.

1. Mine Production.—(i) *Australia.* Because of revised methods adopted in the compilation and presentation of mineral statistics, data relating to the production of silver-lead-zinc minerals for the years 1950 and 1951 are not strictly comparable with those published for previous years. The following table shows for 1950 and 1951 the mine production of silver, lead and zinc in Australia, and the respective minerals in which these metals were contained.

#### SILVER, LEAD AND ZINC : MINE PRODUCTION IN INDIVIDUAL MINERALS.

Mineral in which contained.	Silver (fine oz.).		Lead (tons).		Zinc (tons).	
	1950.	1951.	1950.	1951.	1950.	1951.

(a) Source : Australian Mines and Metals Association.

The following table shows the quantities of silver, lead and zinc contained in minerals won in the several States of Australia in the years 1950 and 1951 :—

## SILVER, LEAD AND ZINC : MINE PRODUCTION, STATES AND AUSTRALIA.

State.	Silver (fine oz.)		Lead (tons).		Zinc (tons).	
	1950.	1951.	1950.	1951.	1950.	1951.
New South Wales ..	6,847,686	6,479,493	175,575	168,566	144,225	143,113
Victoria .. ..	9,473	8,326	..	..	..	..
Queensland .. ..	2,708,068	2,585,042	38,790	33,243	25,800	21,743
South Australia ..	1,348	457	59	41	..	..
Western Australia ..	205,313	196,743	1,302	1,913	3	9
Tasmania .. ..	1,211,575	973,629	9,626	8,250	27,755	24,362
Northern Territory ..	(a) 339	1	15	..	..	..
Australia .. ..	10,983,802	10,243,691	225,367	212,013	197,783	189,227

(a) Estimated.

Particulars of the values ascribed to the various minerals containing silver, lead and zinc for the year 1951 are shown in the detailed tables relating to mineral production on pp. 750 and 751.

(ii) *New South Wales.* By far the greater amount of silver-lead-zinc ore in New South Wales, in fact in Australia, is won from the massive silver-lead-zinc sulphide deposit at Broken Hill. Those concerned in operating this gigantic lode are North Broken Hill Limited (which mines the northern limb of the ore-bearing structure), Broken Hill South Ltd., and Zinc Corporation Ltd. with which is associated New Broken Hill Consolidated (which are conducting operations on the southern limb).

The oxidized lead ores were directly smelted at Broken Hill prior to 1897, when smelting operations were transferred to Port Pirie in South Australia. The present-day sulphide ores are concentrated by gravity and flotation methods at Broken Hill. The lead (galena) concentrates (averaging, per ton, approximately 76 per cent. lead, 4 per cent. zinc, 30 oz. silver, 9.0 grains of gold, 0.22 per cent. antimony and 0.64 per cent. copper) are railed to Port Pirie and smelted to produce lead bullion which is later refined by a continuous lead refining process for the elimination of arsenic and antimony and the recovery of silver and gold. A large proportion of the zinc concentrates produced at Broken Hill are roasted by fertilizer plants in South Australia for the recovery of sulphur dioxide for sulphuric acid manufacture, the calcines after roasting being sent to Risdon in Tasmania for refining. The balance of the concentrates is either exported overseas or sent to Risdon in Tasmania for roasting and refining.

At Captain's Flat, Lake George Mines Limited is operating a lode of similar constitution. Concentration of the ore is carried out at the mine itself, after which process individual concentrates of zinc and lead (containing silver) are despatched to Port Kembla, New South Wales, for further treatment. Concentrates of copper, pyrites and gold are also produced at this mine.

Silver-lead-zinc ore has been mined in small quantities in various other parts of the State, the more important localities being Yerranderie, Howell and Kangiara.

Particulars of the New South Wales mine production of silver, lead and zinc, as reported by the Mines Department, are shown in the table below for the years 1950 and 1951. The greater part of the silver of New South Wales origin is contained in the lead ore and concentrates shown separately in the table. The greater part of this is mined at Broken Hill, with smaller quantities from Captain's Flat.

## SILVER, LEAD AND ZINC : MINE PRODUCTION, NEW SOUTH WALES.

Mineral in which Contained.	Quantity of Contents.	
	1950.	1951.
SILVER (fine ounces).		
Bismuth Concentrate .. .. .	81	124
Copper Ore, Concentrate, etc. .. .. .	89,823	70,497
Gold Ore Concentrate, etc. .. .. .	1,670	1,713
Gold—Other Forms .. .. .	1,984	1,383
Lead Ore, Concentrate, etc. .. .. .	6,431,587	6,148,407
Silver Ore .. .. .	25,786	4,420
Zinc Concentrate .. .. .	296,755	252,949
Total .. .. .	6,847,686	6,479,493
LEAD (tons).		
Lead Ore, Concentrate, etc. .. .. .	172,421	165,786
Zinc Concentrate .. .. .	3,154	2,780
Total .. .. .	175,575	168,566
ZINC (tons).		
Zinc Ore and Concentrate .. .. .	144,225	143,113

(iii) *Victoria*. Small quantities of lead sulphide ore occur on most of Victoria's goldfields and in minor amounts in the Omeo, Bethanga and Cassilis districts. There has been no production of lead ore in recent years, the total recorded production being about 800 tons valued at £5,892.

Practically the whole of the Victorian mine production of silver of 8,326 fine oz. for 1951 was won as a by-product of the gold-mining industry.

(iv) *Queensland*. In the far north-west of Queensland at Mt. Isa, some 600 miles west of Townsville, is operated the mining, milling and smelting enterprise of Mt. Isa Mines Ltd. Here, mining is carried out on extensive silver-lead-zinc ore lodes. After concentration by flotation in the concentrating mill, the silver-lead concentrate is converted to bullion in the smelter. All Mt. Isa bullion is exported overseas, where certain impurities, such as antimony, arsenic, and copper, as well as silver, are removed to yield a pure lead suitable for commercial use.

Zinc concentrates and copper-lead dross produced by Mt. Isa are also exported overseas. During the 1939-45 War, operations on silver-lead-zinc ores at Mt. Isa were suspended while the mine was engaged in mining copper, but normal operations of the mine were resumed in 1946. However, in February, 1953, a new copper smelter at Mt. Isa commenced production. The annual output of the smelter is estimated to be approximately 16,000 tons of blister copper.

The following table shows particulars of the Queensland mine production of silver, lead and zinc for the years 1950 and 1951.

## SILVER, LEAD AND ZINC : MINE PRODUCTION, QUEENSLAND.

Mineral in which Contained.	Quantity of Contents.	
	1950.	1951.
SILVER (fine ounces).		
Copper Ore, Concentrate, etc. .. .. .	18,043	18,663
Gold Ore, Concentrate, etc. .. .. .	15	13
Gold—Other Forms .. .. .	8,522	7,979
Lead Ore, Concentrate, etc. .. .. .	2,681,488	2,558,387
• Total .. .. .	2,708,068	2,585,042
LEAD (tons).		
Lead Ore, Concentrate, etc. .. .. .	38,790	33,243
ZINC (tons).		
Zinc Concentrate .. .. .	25,800	21,743

(v) *South Australia.* Output of lead from local ores has been very small in recent years. In 1950, 81 tons of lead-silver ore were produced (valued at £5,897 and containing 59 tons of lead and 1,348 fine ounces of silver) while in 1951, 326 tons of this ore were won (valued at £6,791 and containing 41 tons of lead and 350 fine ounces of silver). There were also 107 fine ounces of silver contained in gold ore won in South Australia in 1951.

There has been no recorded zinc production since 1903, when the zinc was contained in lead ores and concentrates which came mainly from the Glen Osmond and Strathalbyn districts.

(vi) *Western Australia.* During 1950 and 1951, lead-silver ore, lead-silver-zinc ore and lead concentrates were produced in Western Australia. Main centres of production were the Northampton area, Nabawa, the Ashburton area and the West Kimberley district. The lead concentrates won at Nabawa and in the Northampton area do not contain payable amounts of silver. Silver-lead-zinc ore is produced by the Devonian Lead Mine in the West Kimberley district.

The bulk of the mine production of silver in Western Australia is obtained as a by-product of the gold-mining industry.

Particulars of the mine production of silver, lead and zinc, as reported by the Mines Department of Western Australia for 1950 and 1951, are shown below.

## SILVER, LEAD AND ZINC : MINE PRODUCTION, WESTERN AUSTRALIA.

Mineral in which Contained.	Quantity of Contents.	
	1950.	1951.
SILVER (fine ounces).		
Copper Concentrate .. .. .	..	116
Gold Bullion, etc. .. .. .	198,420	188,942
Lead-Silver Ore .. .. .	6,551	7,164

LEAD (tons).		
Lead-Silver Ore .. .. .	553	705
Lead-Silver-Zinc Ore .. .. .	22	22
Lead Concentrate .. .. .	727	1,186
Total .. .. .	1,302	1,913
ZINC (tons).		
Lead-Silver-Zinc Ore .. .. .	3	9

(vii) *Tasmania*. There are two large centres of silver-lead-zinc mining in Tasmania. The more important is the field operated by the Electrolytic Zinc Company of Australasia Limited at Read-Rosebery. These are primarily zinc mines, although lead and copper-lead concentrates are also produced. This company also owns the electrolytic zinc works at Risdon near Hobart.

The lead concentrates and copper-lead concentrates produced at Rosebery are exported overseas.

The zinc concentrates, which are the principal product from the mine, also contain some lead. This concentrate is sent to Risdon for roasting and refining, portion of the resultant lead residue being sent to Port Pirie in South Australia for refining, the balance being dumped. In addition to the refining of zinc concentrates produced at Rosebery, the Risdon plant also treats considerable quantities of zinc concentrates from the Broken Hill mines.

Of secondary importance to Rosebery is the Mount Farrell field, situated 6 miles north-east of Rosebery. These ore-bodies are mainly silver-lead lodes which yield a lead concentrate with high silver content. The zinc content is insufficient to warrant recovery.

Most of the State's silver is contained in concentrates produced at Rosebery and Mount Farrell. Some silver is obtained from the Mount Lyell copper refinery tank house slimes which are treated at Port Kembla in New South Wales.

Particulars of Tasmanian mine production of silver, lead and zinc, as reported by the Department of Mines, are shown in the following table for the years 1950 and 1951.

#### SILVER, LEAD AND ZINC : MINE PRODUCTION, TASMANIA.

Mineral in which Contained.	Quantity of Contents.	
	1950.	1951.
SILVER (fine ounces.)

Total .. .. .	9,626	8,250
ZINC (tons).		
Zinc Concentrate .. .. .	27,997	24,362

(viii) *Northern Territory*. There was no production of lead-silver ore in the Northern Territory in 1951. However, 41 tons of ore valued at £883 and with a content of 339 fine ounces of silver and 15 tons of lead were won in 1950. The output in 1950 came mainly from a few old mines in the northern part of the Territory, abandoned since the early days of mining. The principal centres are Boomlera, Mount Shoobridge, McArthur River and Jervois Range.

2. **Production and Sales of Refined Silver, Lead and Zinc.**—In the following table, details are given of the production and sales of refined primary silver, lead and zinc as recorded from data received from the Australian Mines and Metals Association and from other sources. The figures shown for refined silver production include small quantities recovered from imported materials. The data relating to lead production include small quantities recovered from scrap for the years 1939 and 1948.

## REFINED SILVER, LEAD AND ZINC : PRODUCTION, SALES AND STOCKS, AUSTRALIA.

(a) Includes Newfoundland. (b) Estimated. (c) Information not available.

5. Prices of Silver, Lead and Zinc.—In view of the close association in Australia, particularly in New South Wales, of ores containing these metals, relevant particulars of the prices of each of the metals have been included in the following table. The table shows average prices in Australia and on the London Metal Exchange during the years 1938 and 1948 to 1952. Lead and zinc prices were controlled in the United Kingdom and Australia after the outbreak of war in 1939. Free trading in lead in the United Kingdom, after thirteen years of Government control, was resumed on 1st October, 1952, while the price of zinc, fixed by regulation, was abandoned from 1st January, 1953. Prices of lead and zinc were decontrolled in Australia on the 21st April, 1953. Silver prices have not been controlled in the United Kingdom and Australia.

## PRICES OF SILVER, LEAD AND ZINC.

( £ s. d.)

Metal.	1938.	1948.	1949.	1950.	1951.	1952.
Australian Prices, in Australian currency—						
Silver, per fine oz. (a) ..	0 2 2.0	0 4 8.4	0 5 1.6	0 6 9.2	0 8 1.7	0 7 9.1
Lead, per ton b	c22 0 0	22 0 0	35 0 0	43 12 7	65 0 0	74 15 1
Zinc, per ton b	c22 0 0	22 0 0	40 0 0	47 3 10	65 0 0	74 15 1
London Metal Exchange Prices, in sterling—						
Silver, per fine oz. ..	0 1 9.06	0 3 9.0	0 4 1.2	0 5 4.8	0 6 5.9	0 6 2.4
Lead, per ton b	15 6 6	95 10 0	103 3 11	106 8 2	161 19 10	135 9 0 d
Zinc, per ton b	14 1 7	80 0 9	87 8 6	119 4 3	171 12 3	149 10 2

(a) Silver prices have not been fixed by regulation in Australia, the prices shown representing export parity calculated from London Metal Exchange prices. (b) Prices fixed by regulation. (c) From February, 1940. (d) Price regulation was abandoned from 1st October, 1952.

6 Employment in Silver, Lead and Zinc Mining.—The average number of persons employed in mining for these metals during each of the years 1938 and 1947 to 1951 is given below :—

**SILVER, LEAD AND ZINC MINING : PERSONS EMPLOYED.**

Year.	N.S.W.	Q'land.	S. Aust.	W. Aust.	Tas.	Nor. Terr.	Australia.
1938 .. ..	5,612	530	..	4	421	3	6,570
1947 .. ..	5,331	994	12	..	523	2	6,862
1948 .. ..	5,918	1,411	17	114	577	6	8,043
1949 .. ..	6,052	1,285	32	135	616	6	8,126
1950 .. ..	6,244	1,787	33	119	618	6	8,807
1951 .. ..	6,781	1,949	15	189	602	..	9,536

**§ 4. Copper.**

1. Production.—Copper is widely distributed throughout Australia. However, the principal producing States are at present Tasmania, Queensland and New South Wales, in that order.

In view of the revised methods of compiling values of individual minerals produced, operative from 1950 (see page 748), it is not practicable to continue a table of values of mine production of copper similar to that shown in previous issues of the Year Book. The table hereunder shows the quantity of mine production of copper in Australia for the years 1950 and 1951. It should be noted that the minerals shown below contain, in addition to copper, certain other metals (see pp. 751-3 for particulars).

**COPPER : MINE PRODUCTION, AUSTRALIA.**

(Tons).

Mineral in which Contained.	Quantity of Contents.	
	1950.	1951.
Copper Ore, Concentrates, etc. .. ..	15,025	15,739
Gold Ore, Concentrates, etc. .. ..	2	5
Lead Concentrate .. ..	2,166	1,874
Zinc Concentrate .. ..	288	308
Total .. ..	17,481	17,926

Particulars of the copper content of ores and concentrates produced in each producing State and the Northern Territory, as published by the Australian Mines and Metals Association for the years 1938 and 1947 to 1951, and as recorded by this Bureau from data obtained from the several State Mines Departments and other sources for the years 1950 and 1951, are shown in the table below.

**COPPER CONTENT OF ORES AND CONCENTRATES PRODUCED.**

(Tons).

State.	1938.	1947.	1948.	1949.	1950.	1951.
New South Wales .. ..	1,963	2,391	2,515	2,453	3,893	3,679
Queensland .. ..	4,458	2,778	3,149	4,924	5,424	5,432
South Australia .. ..	254	..	4	3	..	(a)
Western Australia .. ..	5	..	..	5	1	7
Tasmania .. ..	12,729	7,954	6,574	5,229	7,884	8,657
Northern Territory .. ..	37	..	126	848	279	151
Australia .. ..	19,446	13,123	12,368	13,462	17,481	17,926

(a) Less than half a ton.

2. **Sources of Production.**—(i) *New South Wales.* The copper content of ores and concentrates produced in New South Wales in 1951 amounted to 3,679 tons. The principal sources of this production were ores mined at Broken Hill, Cobar, and Captain's Flat.

(ii) *Queensland.* In 1951 mine production of copper in this State amounted to 5,432 tons compared with 5,424 tons in 1950 and 4,924 tons in 1949. The bulk of the production in 1951 came from Mt. Morgan (4,960 tons) while the copper content of copper-lead dross from Mt. Isa Mines, treated overseas, yielded 346 tons.

A copper mill and smelter is under construction at Mt. Isa for the purpose of operating on copper ores at that site. Copper was produced from copper ore at Mt. Isa during the 1939-45 War, but production was suspended in 1946 and until recently operations have been confined to silver-lead-zinc ores. The production of copper in the new smelter commenced early in 1953.

(iii) *South Australia.* Deposits of copper were previously found over a large portion of South Australia, and its total production to date has been considerable, notwithstanding that output has diminished to negligible dimensions since the exhaustion of the ore reserves on the principal copper fields. Mine production of copper recorded in 1948 and 1949 was only 4 and 3 tons respectively, whilst production was nil in 1950 and less than half a ton in 1951

(iv) *Western Australia.* The ore sent to smelters in 1951 amounted to 43 tons containing 7 tons of metal. In the same year carbonate ores for use as fertilizers amounted to 1,337 tons, the average copper content being 10 per cent.

(v) *Tasmania.* The quantity of copper produced in Tasmania during 1951 was 8,657 tons, the Mount Lyell Mining and Railway Co. Ltd. providing the greater part thereof. Copper in concentrates produced by this company in 1951 was 8,190 tons. There was an accumulation of untreated concentrates at the end of the year containing an estimated 4,800 tons of recoverable copper. Output of blister copper was 7,428 tons in 1951, while production of cathode copper was 7,162 tons.

(vi) *Northern Territory.* Copper has been found at various places in the Territory. In 1950 and 1951, 1,450 tons and 805 tons, respectively, of ore were mined, the copper content of which was 279 tons and 151 tons. In 1949, 4,492 tons of copper ore were produced with a copper content of 848 tons. The main decrease in production was in the Barrow Creek area where 3,990 tons of ore were produced in 1949, 1,010 tons in 1950 and 503 tons in 1951.

3. **Production and Sales of Refined Copper.**—There are two refining plants in Australia, one operated by Electrolytic Refining and Smelting Co., Port Kembla, New South Wales, and the other by Mount Lyell Mining and Railway Co., Mt. Lyell, Tasmania. The electrolytic process is employed in both cases. However the latter plant produces the copper in cathode form, which with exception of a quantity sold to the trade in Tasmania, is shipped to Port Kembla for conversion into the various customary refinery shapes. In the following table, details are given of the production and sales of refined domestic primary copper, as recorded from data received from the Australian Mines and Metals Association and other sources.

#### REFINED COPPER(a) : PRODUCTION AND SALES, AUSTRALIA.

(Tons.)

Particulars.	1939.	1948.	1949.	1950.	1951.	1952.
Production for year . . . . .	17,867	11,389	9,858	13,321	13,543	19,623
Sold to Australian consumers(b)	18,808	11,407	9,884	11,910	13,746	17,102
Exported or sold for export (b)	100	..	4	..	..	..

(a) Refined from domestic primary copper.

(b) Source : Australian Mines and Metals Association.

In recent years, local demand for copper has considerably exceeded Australian production and substantial quantities of copper have been imported. A large proportion of the imports in 1948 and later years has comprised blister copper imported mainly from South Africa and refined in Australia. Recorded imports of "pigs, ingots and other refinery shapes" (including blister copper) in 1950 and 1951 were 13,948 tons and 19,592 tons respectively.

4. **World Production of Copper.**—The world's estimated mine production of copper during the years 1938 and 1946 to 1951 is shown below.

**COPPER : WORLD MINE PRODUCTION.**  
(<sup>'000</sup> tons of 2,240 lb.).

1938.	1946.	1947.	1948.	1949.	1950.	1951.
2,000	1,806	2,180	2,280	2,250	2,490	2,630

The yields in 1951 from the principal copper-producing countries reporting, as published by the Mineral Resources Division of the Colonial Geological Surveys, were as follows:—

**COPPER : MINE PRODUCTION IN PRINCIPAL COUNTRIES, 1951.**  
(Tons of 2,240 lb.).

Country.	Production.	Country.	Production.
United States of America ..	828,866	Union of South Africa ..	33,198
Chile .. .. .	373,729	Peru .. .. .	32,075
Rhodesia .. .. .	314,423	Cyprus .. .. .	23,700
Russia .. .. .	(a) 296,000	Cuba .. .. .	20,873
Canada(b) .. .. .	241,503	Finland .. .. .	18,018
Belgian Congo .. .. .	188,927	<b>Australia .. .. .</b>	<b>17,926</b>
Mexico .. .. .	66,287	Sweden .. .. .	14,200
Japan .. .. .	41,620	Norway .. .. .	13,782
Yugoslavia .. .. .	35,382	Turkey .. .. .	12,889

(a) Estimated.

(b) Includes Newfoundland.

During 1951 the share of the United States of America in the world's mine copper production amounted to 31 per cent. while the Australian proportion was less than 1 per cent.

5. **Prices.**—Since the outbreak of war in 1939, the price of copper in Australia and the United Kingdom has been fixed by Regulator. Details of the average price for the years shown are given in terms of Australian currency and sterling in the following table:—

**AVERAGE PRICE PER TON OF ELECTROLYTIC COPPER IN AUSTRALIA AND UNITED KINGDOM.**  
(£ s. d.)

Country.	December 1939.	1948.	1949.	1950.	1951.	1952.
Australia — in Aust. currency	63 17 6	140 0 0	167 19 5	189 1 8	254 6 4	308 15 1
United Kingdom — in Sterling ..	62 0 0	134 0 0	133 1 11	178 17 1	220 7 1	258 19 6

(a) Ex works Port Kembla.

6. **Employment in Copper-mining.**—The numbers of persons shown in the table below have been compiled from data supplied by Mines Departments. The figures for Queensland exclude for all years, persons employed in the Mt. Morgan copper-gold mining establishment, which was classified as a gold mine up to 1949. In the tables in § 13 relating to employment in the mining industry generally, employment in the Mt. Morgan establishment for the years 1950 and 1951 has been classified to copper-gold mining, which is a separate industry in the Draft Classification of the Mining Industry adopted from 1950..

**COPPER-MINING : PERSONS EMPLOYED.**

Year.	N.S.W.	Q'land.	S. Aust.	W. Aust.	Tas.	Nor. Terr.	Australia.
1938 .. ..	13	213	67	4	1,015	5	1,317
1947 .. ..	184	48	..	2	733	15	982
1948 .. ..	187	45	11	..	746	13	1,002
1949 .. ..	136	57	14	3	757	32	999
1950 .. ..	203	57	3	5	764	35	1,067
1951 .. ..	156	34	7	..	742	6	945

In 1917 more than 9,000 persons were engaged in copper-mining.

**§ 5. Tin.**

1. **Production.**—Tasmania, Queensland and New South Wales are the principal producing States.

The table of values of tin production as published in previous Year Books has been discontinued for reasons stated on page 748.

The following table shows the mine production of tin in Australia in the years 1947 to 1951 compared with 1938.

**TIN : MINE PRODUCTION, AUSTRALIA.**

(Tons.)

—	1938.	1947.	1948.	1949.	1950.	1951
Production ..	3,329	2,456	1,885	1,882	1,854	1,559

Production of refined tin for years 1938 and 1948 to 1952 is shown in the table hereunder. The information has been prepared from data received from the Australian Mines and Metals Association and other sources.

**REFINED TIN : PRODUCTION, AUSTRALIA.**

(Tons.)

—	1938.	1948.	1949.	1950.	1951.	1952.
Production .. ..	3,229	1,885	1,955	2,014	1,459	1,699

2. **Sources of Production.**—(1) *New South Wales.* Production of tin concentrates in 1951 was 578 tons, valued at £413,712, compared with 669 tons, valued at £319,531, in 1950. The tin content was 413 tons in 1951 and 482 tons in 1950. A large proportion of the output in this State is obtained in normal years by dredging and sluicing, principally in the New England district.

(ii) *Victoria*. The production of tin in this State is obtained solely as a by-product from the gold dredging operations at Eldorado. The production in 1951 amounted to 49 tons of concentrates, valued at £35,213, compared with 40 tons, valued at £21,327 in 1950. The tin content in 1951 was 36 tons and in 1950, 29 tons.

(iii) *Queensland*. The chief producing districts in Queensland during 1950 and 1951, the figures in brackets being for 1950, were Herberton, 376 (693) tons of concentrates; Cooktown, 43 (29) tons; Stanthorpe, 21 (37) tons; Chillagoe, 15 (20) tons; and Kangaroo Hills, 13 (65) tons. The total production in 1951 amounted to 490 tons, valued at £309,810, compared with 857 tons, valued at £383,313, in 1950. The tin content in 1950 and 1951 was 600 tons and 340 tons respectively. It is interesting to compare these production figures with those recorded in the early years of this century in this State when the output ranged between 2,000 and 5,000 tons per annum.

(iv) *Western Australia*. The quantity of tin concentrates reported in this State in 1951 amounted to 61 tons, valued at £39,493, compared with 51 tons in 1950, valued at £25,496. The tin content was 41 tons for 1951 and 36 tons for 1950. Production was mainly in the Pilbara and Greenbushes fields.

(v) *Tasmania*. For 1951 the output amounted to 998 tons of tin concentrates, valued at £706,527, an increase of 39 tons on the output of the previous year. The tin content for 1951 was 706 tons and for 1950, 685 tons.

(vi) *Northern Territory*. The production for 1951 amounted to 37 tons of concentrates, valued at £15,139, compared with 37 tons of concentrates valued at £15,139 produced during 1950. The tin content for 1951 and 1950 was 23 tons and 22 tons respectively.

3. **World Production.**—The world production of tin ore, *in terms of metal*, during each of the years 1938 and 1947 to 1951, as published by the Mineral Resources Division of the Colonial Geological Surveys, was as follows:—

**TIN : WORLD PRODUCTION.**  
(<sup>0</sup>000 tons of 2,240 lb.).

1938.	1947.	1948.	1949.	1950.	1951.
164.0	111.4	151.4	161.9	166.3	167.3

The production of tin reached its maximum in 1941 when 241,400 tons were recorded. The following are the chief producing countries of the world:—Malayan Union, Bolivia, Indonesia, Belgian Congo, Thailand (Siam) and Nigeria. In recent years these countries have produced approximately 90 per cent. of the total production.

The production of tin ore, *in terms of metal*, as published by the International Tin Study Group and other authorities, for the principal producing countries in 1951 was as follows:—

**TIN : PRODUCTION IN PRINCIPAL COUNTRIES, 1951.**  
(Tons of 2,240 lb.).

Country.	Production.	Country.	Production.
Malayan Union .. ..	57,167	<b>Australia</b> .. ..	<b>1,559</b>

Indonesia .. .. .	30,986	Burma .. .. .	(b) 1,050
Belgian Congo (a) ..	13,669	United Kingdom ..	931
Thailand (Siam) .. ..	9,502	Union of South Africa ..	767
Nigeria .. .. .	8,529	Spain .. .. .	(b) 716
China .. .. .	(b) 4,800	Mexico .. .. .	366

(a) Includes Ruanda-Urundi.

(b) Estimated.

Australia's share of the world's tin production is about 1 per cent.

4. **Prices.**—At the outbreak of war in September, 1939, the price of tin in Australia and London was fixed by regulation. London control of tin prices ceased on 14th November, 1949, while the Australian price was decontrolled on the 21st April, 1953. Details of the movement in average prices for the years shown are given in terms of Australian currency and sterling in the following table:—

**AVERAGE PRICE PER TON OF TIN IN AUSTRALIA AND UNITED KINGDOM.**

(£ s. d.)

Country.	December, 1939.	1948.	1949.	1950.	1951.	1952.
Australia — in Aust. currency	(a) 299 0 0	577 7 0	620 0 0	725 5 9	1,222 8 9	1,150 10 0

1951 .. ..	334	..	609	33	551	50	1,577

(a) The tin produced in Victoria was raised by a dredging company operating primarily for gold.

**§ 6. Iron.**

1. **General.**—Although iron ore is widely distributed throughout Australia, the only known ore bodies of large extent and high grade which are easily accessible are those situated at Iron Knob, South Australia and at Yampi Sound, Western Australia. Estimates of the reserves at these centres place the quantities available at approximately 150 million tons and 100 million tons respectively. Bearing in mind the expansion of the iron industry in Australia, and the limitations of these reserves, the Commonwealth Government prohibited the export of iron ore from 1st July, 1938. A survey of the iron ore resources of Australia undertaken by the Commonwealth Geologist was completed at the end of 1940.

2. **Production.**—(i) *Australia.* The production of pig-iron and steel in Australia, of which New South Wales is the main producing State, is shown in the following table for each of the years 1942-43 to 1951-52 inclusive.

## PIG-IRON AND STEEL : PRODUCTION, AUSTRALIA.

(Tons.)

Year.	Pig-iron. (a)	Steel Ingots.	Blooms and Billets.	Year.	Pig-iron. (a)	Steel Ingots.	Blooms and Billets.
1942-43..	1,399,306	1,632,825	1,583,417	1947-48..	1,235,574	1,343,153	1,221,938
1943-44..	1,395,357	1,527,564	1,393,919	1948-49..	1,044,957	1,178,010	1,101,063
1944-45..	1,117,709	1,356,913	1,236,528	1949-50..	1,097,635	1,217,971	1,103,784
1945-46..	906,283	1,061,918	1,036,501	1950-51..	1,313,332	1,443,831	1,297,260
1946-47..	1,143,132	1,312,439	1,255,703	1951-52..	1,430,027	1,521,386	1,361,342

(a) Includes pig-iron for castings.

(ii) *New South Wales.* The production in 1935 of pig iron from ores mined in New South Wales amounted to 4,580 tons, valued at £18,320. No iron ores were produced from 1935 until 1941, when 202,180 tons of ore were mined: In 1942, 375,297 tons were mined, but only 86,185 tons in 1945. Since that year there has been no iron ore mined in this State for conversion into pig-iron. For many years the chief source of supply has been South Australia.

Small quantities of iron oxide produced in New South Wales are used by the various gas-works for purifying gas, and also in the manufacture of paper, and for pigments. These supplies are drawn chiefly from the deposits in the Port Macquarie Division. During 1950, 11,924 tons of oxide, valued at £26,940, were won, while production in 1951 was 11,886 tons, valued at £33,677.

(iii) *Queensland.* Extensive deposits of iron ore are known to exist in Queensland. Their location and size, however, in comparison with the more favourable deposits of South Australia and Western Australia, preclude their exploitation. The output of 2,850 tons, valued at £6,806, for 1950 and 2,983 tons, valued at £9,205 for 1951 came mainly from the Biggenden district.

(iv) *South Australia.* The production from the deposits worked by The Broken Hill Pty. Co. Ltd. at Iron Knob reached its maximum in 1939, when 2,571,759 tons of ore, valued at £2,957,523, were raised. Production in 1950 was 2,349,824 tons (1,409,882 tons, iron content) valued at £2,702,424 and in 1951 was 2,400,577 tons (1,440,154 tons, iron content) valued at £2,760,664.

(v) *Western Australia.* Plans drawn up in 1927 to develop the rich iron ore deposits on Cockatoo Island in Yampi Sound were realized on 24th July, 1951 when one specially designed vessel of The Broken Hill Proprietary Co. Ltd. left the island with 10,384 tons of ore for Port Kembla, New South Wales. Since that date, regular shipments of ore have proceeded for smelting at Port Kembla. In 1952, 204,945 tons valued at £203,238 were transported. The estimated iron content of this ore amounted to 128,157 tons.

The production of pig-iron was commenced at Wundowie in Western Australia in January, 1948 under the direction of the State Department of Industrial Development. The ore used is obtained from the local deposits at Wundowie and Koolyanobbing and converted to pig-iron by the use of charcoal burnt from timber obtained in the same locality. Production in 1951-52 amounted to 10,920 tons. This, in addition to meeting local requirements, provided a small quantity for export to the eastern States.

The whole iron pyrites production of Western Australia is won at the Iron King and Norseman mines and is railed, in the form of ores and concentrates, to superphosphate manufacturers at Bassendean and Bayswater on the coast.

(vi) *Tasmania*. There has been no production of ironstone in Tasmania since 1943 when 7 tons, valued at £14 were produced. The iron pyrites concentrate produced, which in 1951 amounted to 39,625 tons, valued at £48,517 (sulphur content, 19,549 tons) is a by-product from the flotation of copper ores at Mount Lyell. This product is exported to the mainland, where it is used in the manufacture of chemical fertilizers.

3. **Production of Iron and Steel in Principal Countries.**—Particulars of the production in the principal countries during the years 1938, 1950 and 1951, according to figures published by the Mineral Resources Division, Colonial Geological Surveys, are shown in the next table.

**PIG-IRON AND STEEL : PRODUCTION IN PRINCIPAL COUNTRIES.**

(a) Estimated. (b) Western Germany. (c) Excludes electric furnace ferro-alloys. (d) Year ended 30th June.

The principal producers in Australia are The Broken Hill Pty. Co. Ltd. and Australian Iron and Steel Ltd., both in New South Wales, the former situated at Newcastle and the latter at Port Kembla. The Broken Hill Pty. Co. Ltd. established a blast furnace at Whyalla in South Australia; this was blown in during May, 1941, and has since continued to operate except for the periods May, 1944 to April, 1946 and April, 1949 to September, 1949.

In Western Australia, the production of pig-iron, under the direction of the State Department of Industrial Development, commenced in January, 1948. The output for the year 1951-52 amounted to 11,087 tons.

### § 7. Other Metallic Minerals.

1. **Tungsten.**—Tungsten ores occur in all States, and on King Island in Bass Strait. Particulars of the King Island scheelite concentrates are included with Tasmanian production. Important deposits of tungsten ores occur in Queensland, New South Wales, Tasmania and Northern Territory, but production from the other States has been comparatively unimportant. Queensland has the largest total output to date, but its annual production is now much less than formerly. In recent years the largest production has come from Tasmania, followed by Northern Territory. Production of tungsten concentrates and contents during 1951 in each State etc. is shown below :—

#### TUNGSTEN CONCENTRATES : PRODUCTION, 1951.

(Tons.)

Particulars.	N.S.W.	Vic.	Q'land.	W. Aust.	Tas.	N. Terr.	Australia.
Wolfram Concentrate ..	14	(a)	152	5	379	147	697
WO <sub>3</sub> Content .. ..	9	(a)	100	3	264	91	467
Scheelite Concentrate ..	8	..	3	..	1,020	..	1,031
WO <sub>3</sub> Content .. ..	6	..	2	..	624	..	632

(a) Less than half a ton.

The following table shows production for Australia for the years 1938 and 1947 to 1951 :—

#### TUNGSTEN CONCENTRATES : PRODUCTION, AUSTRALIA.

(Tons.)

Particulars.	1938.	1947.	1948.	1949.	1950.	1951.
Wolfram Concentrate ..	978	388	328	375	282	697
WO <sub>3</sub> Content .. ..	649	243	292	265	198	467
Scheelite Concentrate ..	40	660	651	809	800	1,031
WO <sub>3</sub> Content .. ..	26	431	510	545	532	632

NOTE.—In addition to the foregoing, 7 tons of bismuth-tungsten concentrates containing 1 ton of WO<sub>3</sub> and 12 tons of tin-tungsten concentrates with a WO<sub>3</sub> content of 6 tons were produced in New South Wales during 1951.

2. **Cadmium and Cobalt.**—The sources of cadmium in Australia are lead and zinc concentrates. The cadmium content of these concentrates produced during the year 1950 is estimated at 597 tons and during 1951 at 605 tons. The greater proportion of the concentrates are treated at Risdon, Tasmania, and at Port Pirie, South Australia, for the extraction of cadmium. The remainder of the concentrates are exported. In 1938, which is the latest year for which relatively complete world production figures are available, Australia produced 196 tons of refined cadmium, amounting to about 5 per cent. of world output.

Cobalt is present in zinc concentrates produced at Broken Hill, New South Wales, and at Rosebery, Tasmania. The cobalt is recovered in the form of cobalt oxide at the zinc refining plant at Risdon, Tasmania, and is sold as such to industry. The cobalt metal content of zinc concentrate produced in 1950 is estimated at 43 tons and in 1951 at 42 tons.

Production of refined cadmium and cobalt oxide for the years 1938 and 1947 to 1951 is shown in the following table :—

**CADMIUM (REFINED) AND COBALT OXIDE : PRODUCTION.**  
(Tons.)

Year.	Cadmium (Refined).			Cobalt Oxide.
	Extracted from Ores Mined in—			Extracted from Ores Mined in New South Wales.(a)
	New South Wales	Tasmania.	Total.	
1938 .. ..	147	49	196	19
1947 .. ..	171	34	205	12
1948 .. ..	245	44	289	15
1949 .. ..	215	44	259	14
1950 .. ..	250	44	294	16
1951 .. ..	195	36	231	13

(a) Excludes less than half a ton of Cobalt Oxide produced in Tasmania in each of the years shown.

The figures shown above do not include the metallic contents of cadmium and cobalt oxide contained in the ores and concentrates exported overseas.

3. **Platinum Group Metals.**—(i) *Platinum*. The only production in Australia in recent years has been from deposits worked at Fifield, New South Wales. In 1950 the output of concentrates was 24 oz., containing 16 oz. of platinum, and in 1951 the quantity of concentrates produced was 13 oz., the platinum content being 8 oz.

(ii) *Osmiridium*. Practically all the production of osmiridium is from the west coast of Tasmania, the only other production being a very small quantity contained in platinum concentrates produced at Fifield, New South Wales. Total production in 1950 was 48 oz. and in 1951, 34 oz. Of this, 2 oz. were from New South Wales in 1950 and half an ounce in 1951.

(iii) *Palladium*. In 1951 less than half an ounce of palladium was recovered from concentrates produced at Fifield, New South Wales.

(iv) *Osmium, iridium, etc.* There has been no production recorded in recent years.

4. **Other.**—The production, in 1951, of other metallic minerals worthy of note, is as follows :—

*Antimony*. The antimony content of antimony-bearing minerals produced was 744 tons. Of this amount 489 tons were in lead concentrates and 255 tons in 676 tons of antimony ore and concentrates.

*Bismuth*. Bismuth content of minerals produced was 2,620 lb., 2,492 lb. of which was contained in 7 tons of bismuth-wolfram concentrates from New South Wales.

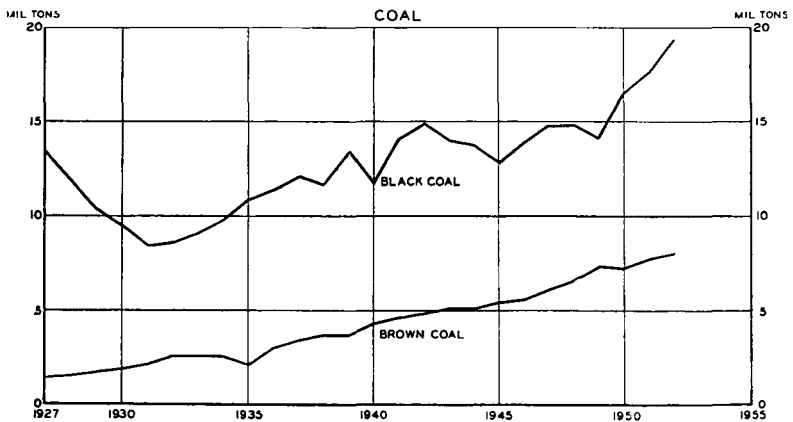

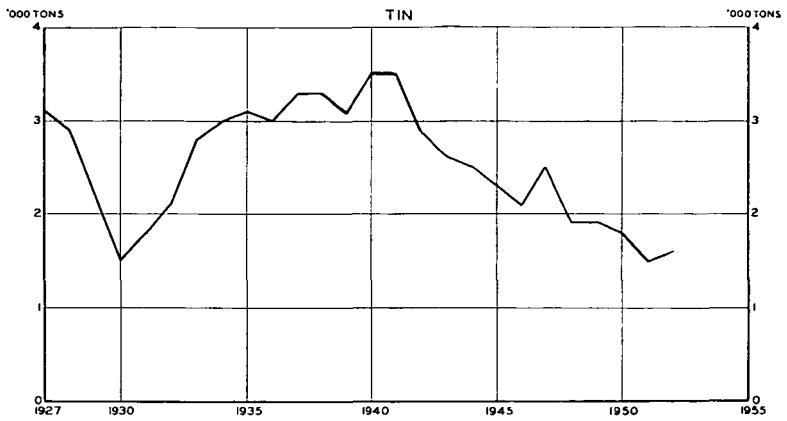

*Manganese*. Production of manganese ore comprised 6,311 tons of metallurgical grade (manganese content 3,042 tons), 1,543 tons of battery grade (manganese dioxide content 1,146 tons), and 115 tons of other grades (manganese dioxide content 70 tons). Manganese content of zinc concentrates produced in New South Wales was 3,435 tons.

*Molybdenum*. Two tons of molybdenite concentrates were produced, the molybdenum sulphide content being about 73 per cent.

## MINE PRODUCTION OF MINERALS AND METALS AUSTRALIA: 1927 to 1952

## MINE PRODUCTION OF MINERALS AND METALS AUSTRALIA: 1927 to 1952

§ 8. Coal.

1. Production in each State.—An account of the discovery of coal in each State appears in preceding issues of the Official Year Book (see No. 3, pp. 515-16). The quantity and value of the production in each State and in Australia during 1915, 1925, 1935, 1938, 1945 and for each of the years 1948 to 1952 are shown in the following table. Of the total production of black coal in 1952, 82,426 tons were classified as semi-anthracite, 16,029,615 tons as bituminous and 1,496,387 tons as sub-bituminous.

Of the total production of black coal in Australia in 1952, 4,072,274 tons (21 per cent.) were obtained by open-cut methods. The remainder, 15,332,824 tons (79 per cent.) came from underground mines. In 1948, 13 per cent. of black coal won in Australia came from open-cut mines while in 1951 the proportion had risen to 21 per cent., thus indicating the increased activity in the mining of black coal by this method.

BLACK COAL : PRODUCTION.

(a) Cost of production.

2. **Distribution and Production of Coal in each State.**—(i) *New South Wales.* The coal deposits of New South Wales are the most important and extensively worked in Australia. The principal fields are known as the Northern, Southern and Western, and are situated in the vicinity of Newcastle, Bulli and Lithgow respectively.

The coal from the various districts differs in quality or, geologically speaking, rank—that from the Northern district being especially suitable for gas-making, household purposes and steam, while the product of the Southern and Western districts is essentially a steaming coal. The Permian Coal Measures in the Northern division are being worked extensively in the Hunter River Valley area, particularly in the vicinity of Maitland, Cessnock and, more recently, Muswellbrook. The district is the most important, from the aspect of coal mining, in Australia.

The following table shows the yields in each of the three districts during the five years 1948 to 1952 compared with 1938. Separate details are given respecting coal won underground and from open cuts—

**COAL : PRODUCTION IN DISTRICTS OF NEW SOUTH WALES.**

District.	1938.	1948.	1949.	1950.	1951.	1952.

(a) At the pit's mouth.

Much development has been carried out in recent years on the New South Wales coalfields. Areas receiving particular attention are those in the vicinities of Muswellbrook and Lithgow, where the open-cut mining method is being exploited more fully. In 1952, 15,022,100 tons (420 tons semi-anthracite, 15,008,489 tons bituminous and 13,191 tons sub-bituminous) were won, which is the highest production recorded for any year and was 1,508,856 tons more than in 1951.

In 1952 open-cut production accounted for 16.8 per cent. of all coal produced in this State, a considerable advance on the 10.7 per cent. of total production recorded by open-cuts in 1948 and indicative of the recent development in this sphere.

(ii) *Victoria.* (a) *Black Coal.* During 1952, production of bituminous coal decreased by 3,923 tons to a total of 143,820 tons. Of this, 128,006 tons or 89 per cent., were won from the State Coal Mines at Wonthaggi in South Gippsland, while the remaining 15,814 tons represent the total production of four small mines at Korumburra, Kilcunda and Jumbunna.

The Department of Mines considers that future prospects at the State Coal Mines are doubtful, as seams are becoming increasingly faulted and it is difficult to induce men to work under existing conditions.

The output of black coal in Victoria during each of the five years ended 1952 compared with 1938 was as follows:—

**BLACK COAL : PRODUCTION IN VICTORIA.**

Year.	Quantities.			Total Value. (a)
	State Coal- mine.	Other Coal- mines.	Total.	
	Tons.	Tons.	Tons.	£
1938 .. .. .	253,065	54,193	307,258	188,101
1948 .. .. .	145,880	19,026	164,906	347,687
1949 .. .. .	108,159	14,348	122,507	379,464
1950 .. .. .	109,988	16,443	126,431	382,230

1952 .. .. .	128,006	15,814	143,820	753,007

(a) At the pit's mouth.

(b) *Brown Coal. General.* The mining of brown coal is carried on only in the State of Victoria, where extensive deposits exist; estimates place the available reserves at 27,000 million tons. Large-scale developmental projects are in progress; these, when completed, will greatly reduce the dependence on fuel from other States. Brown coal produced in Victoria in 1952 amounted to 8,103,764 tons, of which 6,447,692 tons, or 79.6 per cent., were won at the State open-cut at Yallourn. During 1951-52, 6,480,723 tons of brown coal were produced at Yallourn, of which 4,151,742 tons went to the Yallourn power station, and 2,328,981 tons to the briquette factory.

*Production of Briquettes.* The briquetting plant of the State Electricity Commission started operations in November, 1924, and the output, which in 1926 was 95,477 tons, had increased to 180,905 tons in 1930 and to 568,252 tons in 1951-52. Two and a half tons of brown coal are required to make one ton of briquettes.

The table following shows the production and distribution of brown coal, and the production of briquettes in Victoria for the years 1947-48 to 1951-52, compared with 1938-39.

**BROWN COAL : PRODUCTION AND UTILIZATION, VICTORIA.**

('000 Tons.)

Year.	Total Production.	State Electricity Commission.				Brown Coal for other Industries.

Mt. Morgan .. ..	13,698	43,245	144,146	206,886	280,772	382,043
Rockhampton .. ..	64,174	73,611	76,271	84,970	89,586	84,357
Roma .. ..	..	..	15,778	18,213	16,980	21,528
Toowoomba .. ..	..	..	98,786	118,235	99,208	112,137
Warwick .. ..	..	..	19,213	20,807	15,794	22,097
Total .. ..	1,113,426	1,742,396	1,970,388	2,320,799	2,473,775	2,742,236

The production of 2,742,236 tons in 1952 represents the highest annual production to date. Of the total, 83,562 tons were semi-anthracite, 2,314,667 tons were bituminous and 344,007 tons, sub-bituminous.

The open-cut method of mining for black coal has advanced considerably in Queensland in recent years. In 1948, 224,069 tons (or 12.8 per cent. of total production) were won from open-cuts while in 1951 and 1952, 612,909 tons (24.8 per cent.) and 730,643 tons (26.6 per cent.) respectively were mined in this manner.

(iv) *South Australia.* Coal mined in South Australia is won by open-cut methods at Leigh Creek, some 380 miles by rail north of Adelaide. This important deposit yields a low grade sub-bituminous coal of Triassic age, and has known reserves of about 380 million tons. However, this State relies to a great degree on bituminous coal from New South Wales to supplement the demand created by industrial expansion. In its first year of major production in 1944, 34,620 tons were won. Production has risen considerably in more recent years, and amounted to 388,303 tons (valued at £399,628) in 1951 and 418,582 tons (valued at £429,709) in 1952.

(v) *Western Australia.* The only coal deposit which has been developed on a commercial scale is at Collie in the south-west of the State. Collie coal is sub-bituminous in rank. Production in 1951 was 848,475 tons (valued at £1,716,788) and in 1952, 830,461 tons (valued at £2,457,296) compared with 604,792 tons (valued at £375,083) in 1938.

(vi) *Tasmania.* Two periods of coal formation are represented in Tasmania. The older (Permo-Carboniferous) seams contain fairly high ranking semi-anthracitic coal, with a high sulphur content, but production from these mines represents less than one per cent of Tasmanian black coal output. The more recent Mesozoic coal of bituminous rank is mined in the north-east of the island, the Cornwall and Mt. Nicholas mines being the most prolific producers. In 1951, output amounted to 236,888 tons (value, £305,548) while 247,899 tons (value, £341,561) were produced in 1952. Production in 1938 at 83,753 tons valued at £61,991 was considerably lower than in recent years.

(vii) *Australia's Coal Reserves.* The latest available estimate of the actual and probable coal reserves of Australia is that prepared by the Coal and Lignites Panel of the Power Survey Sectional Committee of the Standards Association of Australia in March, 1953. The following table shows the actual and probable coal reserves as determined by that Committee :—

ACTUAL AND PROBABLE COAL RESERVES OF AUSTRALIA.  
( '000,000 Tons.)

Rank of Coal.	New South Wales.	Victoria.	Queensland.	South Australia.	Western Australia.	Tasmania.	Australia.
Anthracitic and Bituminous ..	10,000	30	4,000	..	..	240	(a)14,250

(a) Included with Black Coal.

(b) Pre-war Germany.

World production of coal amounted to 1,440 million tons in 1938; it rose to 1,770 million tons in 1943 and by 1951 had reached 1,872 million tons. Of these quantities, those produced in the British Commonwealth totalled 304 million or 21 per cent. in 1938, 286 million or 16 per cent. in 1943 and 332 million tons or 18 per cent. in 1951.

4. *Exports.*—(i) *General.* The quantity of coal of Australian production exported to other countries in 1951–52 was 139,140 tons, valued at £608,045, shipped mainly

from New South Wales. These figures of oversea exports exclude bunker coal supplied to oversea vessels, which in 1951-52 amounted to 54,207 tons, valued at £246,258. The quantities and values of the oversea exports of Australian coal and of bunker coal for oversea vessels for a series of years are shown in the following table.

**COAL : OVERSEA EXPORTS AND BUNKERS, AUSTRALIA.**

(a) Includes miners' and colliery coal. (b) Estimated when details not available.  
(c) Government railways only. (d) Includes bunker coal for interstate and intrastate shipping.  
(e) Not available.

In order to meet the greatly increased demands for coal in Australia, arrangements have been made in recent years to import considerable quantities to augment local supplies. The quantity imported in 1949-50 was 493,805 tons and in 1950-51, 597,866 tons.

5. **Coal Value at the Mine in New South Wales.**—Particulars of the average values at the mine (or at screens where these are at a distance from the mine) of saleable coal for each district and for New South Wales as a whole are shown in the following table for the years 1938 and 1947 to 1951, according to figures compiled by the State Statistician. Saleable coal is taken to exclude miners' coal, coal consumed at the mines and other producer-consumed coal. For 1951, stocks of coal held at grass by the Commonwealth Government are also excluded. The figures for the years 1947 and 1948 include Commonwealth subsidy on coal. No deduction has been made in respect of excise duty operative from 1st November, 1949.

**AVERAGE SELLING VALUE AT THE MINE PER TON OF SALEABLE COAL : NEW SOUTH WALES.**

(s. d.)

Year.	Northern District.	Southern District.	Western District.	Average for State.

1950 .. ..	18,540	777	889	3,495	408	1,099	334	25,542
1951 .. ..	18,747	773	898	3,503	434	1,125	329	25,809

(a) Included with black coal; production prior to 1925 was of little significance.

The year of maximum employment was 1926 when 31,774 persons were engaged in the coal-mines of Australia. Shortly after that year the industrial depression and a prolonged stoppage of work on one of the principal fields of New South Wales during 1929 and 1930 seriously affected the figures of employment. Since 1933 there has been a gradual increase, but the numbers employed in 1951 were only about three-quarters of the maximum figure already quoted. In New South Wales in 1939, 3,594,000 tons of coal, or 32.1 per cent. of the total output of underground coal, were cut by machinery, compared with 3,364,351 tons or 35.5 per cent. in 1949, 4,345,836 tons or 38.8 per cent. in 1950, 4,964,941 tons or 44.2 per cent. in 1951, and 6,243,060 tons or 50.0 per cent. in 1952. Similar details for other States are not available.

9. **Production of Coal per Man-day (or Man-shift) in New South Wales Underground Mines.**—The following table shows particulars of the estimated production of coal in New South Wales underground mines per man-day or man-shift for the years 1939 and 1944 to 1952. For 1947 and earlier years the figures relate to coal raised per man-day and have been calculated by the Government Statistician for New South Wales from data collected from mines as to production of coal, average numbers of employees, and numbers of days worked by the mines. From 1948, the table shows production per man-shift, as calculated by the Joint Coal Board from fortnightly returns from each mine showing actual numbers of shifts worked. Although the two series have not been compiled on identical bases, they may be taken as comparable for practical purposes.

**PRODUCTION OF COAL PER MAN-DAY (OR MAN-SHIFT) : NEW SOUTH WALES UNDERGROUND MINES.**

(Tons.)

Year.	Coal Raised per Man-day(a)		Year.	Production of Coal per Man-shift.(b)		
	Employees Below Ground.	All Employees.		Employees at Coal Face.	All Employees Below Ground.	All Employees.
1939 ..	4.42	3.35	1948 ..	9.51	4.26	2.92
1944 ..	4.13	3.09	1949 ..	9.83	4.26	2.91
1945 ..	3.97	2.98	1950 ..	10.28	4.39	2.95
1946 ..	4.05	2.99	1951 ..	10.82	(c)	2.96
1947 ..	4.11	3.01	1952 ..	10.06	(c)	3.00

(a) As compiled by Government Statistician.

(b) As compiled by Joint Coal Board.

(c) Not available.

10. **Accidents in Coal-mining.**—The following table shows the number of persons killed or injured in the coal-mining industry in Australia during 1951. Owing to the different bases of recording mining accidents in the various States of Australia the figures in the table below are not strictly comparable between States. Particulars for brown coal mining, which is confined to Victoria, are included.

**COAL-MINING : EMPLOYMENT AND ACCIDENTS, 1951.**

State.	Persons Employed in Coal-mining.	No. of Persons.	
		Killed.	Injured.
New South Wales .. .. .	18,747	14	81
Victoria (a) .. .. .	1,671	..	20
Queensland .. .. .	3,593	4	183
South Australia .. .. .	434	..	11
Western Australia .. .. .	1,125	2	151
Tasmania .. .. .	329	..	5
Total .. .. .	25,809	20	451

(a) Includes brown coal.

11. **Commonwealth Board of Inquiry into the Coal-mining Industry.**—Reference to the appointment in 1945 of the Commonwealth Board of Inquiry, its terms of reference and the report issued in 1946 is given in Official Year Book No. 37, page 842.

12. **Joint Coal Board.**—Under war-time emergency legislation, the Commonwealth had wide powers to control the production, distribution and price of coal in Australia. Under peace-time conditions, however, the constitutional powers of the Commonwealth were less effective and, in order to ensure the maintenance of supplies of coal to meet the peace-time needs of industry, it was necessary to seek wider powers.

With this objective in view, the Governments of the Commonwealth and New South Wales, the chief coal-producing State, mutually agreed to create jointly an authority with powers similar to and in some respects wider than those possessed under Commonwealth war-time legislation. Following this agreement, the Joint Coal Board was created and has functioned as from 1st March, 1947. Briefly, it is the responsibility of the Board to ensure that the coal of the State is conserved, developed, worked, distributed and used to the best advantage in the public interest, and to promote the welfare of the workers in the industry. Further details of the powers and functions of the Board are contained in previous issues of the Year Book.

### § 9. Coke and Other By-products from Coal.

1. **Coke.**—The production of metallurgical coke in Australia was limited to about 250,000 tons per annum prior to the 1914-18 War. This was below local requirements and necessitated an annual import of about 27,000 tons. By 1920, production had risen to more than 500,000 tons and by 1938-39 it had reached 1,164,873 tons. This increased production permitted an export of 30,000 tons in 1938-39. Imports in the same year were 9,700 tons. In recent years, imports have exceeded exports and in 1951-52, 6,508 tons were imported (5,037 tons from South Africa) and 1,396 tons exported (1,016 tons to New Zealand). In 1950-51, imports totalled 37,658 tons (29,802 tons from South Africa) and exports were 1,722 tons (1,403 tons to New Zealand).

In addition to metallurgical coke referred to above (which is produced by specialized coke works), considerable quantities of coke are produced in gas works as a by-product of the manufacture of gas. Output in gas works in 1951-52 was 1,040,934 tons compared with 757,046 tons in 1938-39.

In order to avoid duplication with coal values, the returns for coke have not been included in the general tables of mineral production in the early part of this chapter.

In the following table, particulars of the production of coke in coke works and gas works in Australia are shown for the years 1938-39 and 1947-48 to 1951-52. Relevant particulars of the output of coke breeze are also shown.

## TOTAL COKE PRODUCTION : AUSTRALIA.

(Tons.)

Industry.	1938-39.	1947-48.	1948-49.	1949-50.	1950-51.	1951-52.

(a) Includes production in works other than coke and gas works.

## § 10. Shale-oil and Mineral Oil.

1. **Shale-oil.**—(i) *General.* Reference to the deposits of shale and the search for mineral oil in Australia will be found in Official Year Book No. 22, pp. 791-3.

(ii) *New South Wales.* Reference to the establishment of the shale-oil industry in Australia will be found in previous issues of the Official Year Book. In 1937 negotiations were completed between the Commonwealth and New South Wales Governments and the National Oil Proprietary Ltd., by which the latter company undertook to develop the shale-oil industry in the Newnes-Capertee district. The Commonwealth Government agreed to protect the industry by exempting from excise, up to 10 million gallons annually, the Company's output of petrol for a period of 25 years. Production of petrol from crude oil commenced at Glen Davis, near Newnes, in 1940.

In January, 1951, the Commonwealth Government announced that in view of the continued uneconomic operation of the project, its small contribution to Australian petroleum supplies, the doubtful prospect of raising production to a considerably higher figure and the urgent need for miners in black coal production, it would close down the works completely as soon as possible. In September, 1951, the Government appointed a receiver in National Oil Pty. Ltd., the company which has operated this project. Operations were continued on a restricted basis, but ceased entirely on 30th May, 1952. A total quantity of 26,034,403 gallons of petrol had been produced at the time of the closing of the plant.

The following table shows the production of oil shale during the years 1948 to 1952 compared with 1940 :—

**OIL SHALE : PRODUCTION IN NEW SOUTH WALES.**

	1940.	1948.	1949.	1950.	1951.	1952.
Quantity tons	43,805	136,352	120,956	98,487	78,564	21,661
Value £	43,805	204,528	181,437	185,084	181,132	50,902

(iii) *Tasmania.* About 38,000 gallons of crude oil were produced in 1934 from shale treated in Tasmania, while the total quantity of oil distilled from shale up to the end of 1934 was set down at 357,000 gallons. The plant owned by the Tasmanite Shale Oil Company has not operated since the end of January, 1935.

Interest in the commercial utilization of oil shales of the Mersey Valley for the extraction of fuel oils has been retarded owing to structural and physical conditions for underground mining and the low-grade nature of the shale.

2. **Coal Oil.**—Reference to investigations made into the possibility of establishing plants for the production of oil from coal is made in previous issues of the Official Year Book. See Official Year Book No. 37, pages 844-5.

3. **Natural Oil.**—(i) *Australia.* Natural oil has been proved to exist in Queensland, Victoria and Western Australia, the best indications being found in Victoria and Queensland. Many of the conditions favourable to the accumulation of oil in commercial quantities have been shown to be present in Queensland, Western Australia and New South Wales. In the latter State, however, no strong positive evidence of its existence has been recorded.

Reference is made in § 14 below to the assistance afforded by the Commonwealth Government in the search for petroleum.

Test drilling has been carried on in two areas—Oiapu in the Gulf District of Papua and Nerrima in the Kimberley District of Western Australia. At Oiapu, further geological surveys did not indicate favourable conditions, drilling operations were terminated and the permit was not extended. At Nerrima, the Frenay Kimberley Oil Company N.L. was unable to clear the borehole and again suspended operations; negotiations led to a tripartite arrangement whereby the Commonwealth, State and company would share equally in the cost of drilling a new bore at Nerrima subject to geophysical surveys confirming the suitability of the area for test drilling. The geophysical survey results were decidedly unfavourable and, in the face of constantly rising costs, the Commonwealth and State decided not to go ahead with the project.

(ii) *Victoria.* Production of crude oil by Lakes Oil Limited at Lakes Entrance was discontinued in 1951 because of economic considerations. In the Avon area of Gippsland near the Lakes Oil Limited shaft, a small seismic survey was made by the Commonwealth Bureau of Mineral Resources, Geology and Geophysics to investigate a possible structure indicated by a previous gravity survey. In East Gippsland, the previous gravity reconnaissance surveys by Robert H. Ray Company of the United States of America and by the Bureau were extended eastward as far as Orbost in search of structures suitable for further investigation.

Geological surveys have been carried out in the Portland-Nelson-Mt. Gambier area of Western Victoria and the eastern part of South Australia by the Departments of Mines of Victoria and South Australia. Geophysical surveys (gravity) were made in Western Victoria by the Bureau of Mineral Resources, Geology and Geophysics.

(iii) *Queensland.* At Roma, Queensland, Associated Australia Oilfields N.L. drilled a hole on a structure indicated by a seismic survey made by the Bureau of Mineral Resources, Geology and Geophysics. The hole reached basement at a depth of 3,892 feet without significant indications of oil or natural gas. Another hole was begun in October, 1952 and had reached basement at a depth of about 3,600 feet. Production tests are being carried out on this well.

(iv) *South Australia.* Under prescribed conditions, the South Australian Government offers a bonus of £5,000 to the person or body corporate which first obtains from a local bore or well 100,000 gallons of crude petroleum containing not less than 90 per cent. of products obtainable by distillation. Geophysical surveys were undertaken by private interests during 1947, and continued into 1948, in the north-east corner of the State and extending over the border into New South Wales, and Queensland, but with little success. Assistance given by the Commonwealth included equipment and a geophysical survey party.

(v) *Western Australia.* Systematic geological mapping and stratigraphic and structural studies have been continued in the Carnarvon area by the Commonwealth Bureau of Mineral Resources, Geology and Geophysics. Western Australian Petroleum Company (an exploration Company formed by Caltex in partnership with Ampol Petroleum Company) landed drilling equipment in the Exmouth Gulf area. This Company also continued seismic exploration of the Giralalia Cape Range and Rough Range Anticlines during 1952. In the Fitzroy Basin, South Kimberley area, the Bureau has carried out geological and geophysical (seismic and gravity) surveys.

(vi) *Papua.* Australasian Petroleum Company and Island Exploration Company continued surface and sub-surface exploration. In the western and eastern parts of the Delta District, and between the Fly and Wawoi Rivers, Western District, field parties conducted seismic and refraction surveys. In the foothills area of the eastern and western parts of the Gulf District, three parties carried out geological surveys during 1952. Australasian Petroleum Company's Hohoro Well No. 2, which was spudded in during February, 1951, was abandoned as a dry hole in May, 1952, when it has reached a depth of 10,642 feet. Island Exploration Company's Omati Well, which was spudded in during November, 1950, was drilled to 11,915 feet during 1952.

(vii) *General.* During 1939 efforts were made to secure greater uniformity in State legislation governing the search for oil. A draft Bill based on modern legislation in other countries was prepared by the Commonwealth and submitted to the State Governments. As a result, amending legislation was passed in Victoria, Queensland, South Australia and Western Australia. There was immediate response to this in Queensland, where an agreement has been reached between the State Government and one of the major oil companies, whereby the company has undertaken to spend up to £400,000 in the search for oil in that State.

Further details of action taken by the Commonwealth Government in connexion with the search for oil will be found in § 14. Government Aid to Mining, and Mineral Control.

## § 11. Sulphur.

Sulphur, although produced in Australia as a content of certain metallic minerals, is itself *non-metallic in character*. Sulphides such as zinc concentrate and pyrites, which contain sulphur, are produced in appreciable quantities. There is no production of elemental sulphur (brimstone) in Australia. The sulphur content of zinc concentrate averages 32 per cent. and of pyrites, approximately 47 per cent. A large proportion of zinc concentrate produced is exported and therefore lost to Australia for utilization of the sulphur content. The sulphur recovered in Australia is in the form of acid, most of which is used in the manufacture of fertilizers, mainly superphosphate. As this recovery amounts to only about 40 per cent. of total requirements, it is necessary to import elemental sulphur to meet the balance. Every effort is being made by increasing and improving plant to step up recovery from local sulphides, thereby making Australia less dependent on importation of elemental sulphur.

The following table shows for the years 1939, 1950 and 1951, the sulphur content of sulphur-bearing minerals produced, quantities of sulphur recoverable therefrom, production of monohydrate acid (100 per cent. sulphuric acid), and sulphur content of monohydrate acid produced. It will be noted that particulars regarding spent oxide roasted have been included. This has been done to complete the statistics relating to recovery of sulphur and monohydrate acid production.

**SULPHUR : PRODUCTION, AUSTRALIA.**

(d) All imported.

### § 12. Gems and Gemstones.

1. **General.**—Among the gems and precious stones discovered from time to time in the different States are agate, amethyst, beryl, chiolite, diamond, emerald, garnet, moonstone, olivine, opal, ruby, sapphire, topaz, tourmaline, turquoise and zircon. The following paragraphs, however, deal only with opal and sapphire, the most important of the more commonly found precious stones in Australia. Reference in some detail to the production of gems and gemstones in earlier years is made in previous issues of the Official Year Book.

2. **Opal.**—Opal of a recorded value of £65,474 was produced in Australia in 1951. The recorded value in 1950 was £56,219. The main producing centres are in South Australia on the Andamooka and Coober Pedy fields. Recorded output in this State was valued at £64,117. Queensland production in 1951 (£1,117) came from the Quilpie district while the opal in New South Wales (£240) was won at Lightning Ridge.

3. **Sapphire.**—The production of sapphire in Australia in 1951 was valued at £1,135 and was won at Rubyvale and Sapphire in Queensland.

### § 13. Persons Engaged, Wages Paid and Accidents in Mining.

1. **Total Employment in Mining.**—The number of person engaged in the mining industry in Australia fluctuates according to the season, the price of industrial metals, the state of the labour market, and according to the permanence of new finds and the development of the established mines. The following table shows the numbers engaged in the various mining industries in each State and Australia, as a whole in 1951, compared with the total employment for each industry in Australia in 1950. Attention is drawn to § 1. para. 3 Standardization of Mineral Statistics (pp. 747-8) which outlines the nature of changes adopted in reporting mineral statistics from 1950.

EMPLOYMENT IN MINING.

(a) Excludes construction material quarrying, particulars of which are not available.

NOTE.—Owing to the varying bases of recording mining accidents in the several States of Australia, the figures in this table are not strictly comparable between States.

## § 14. Government Aid to Mining, and Mineral Control.

1. Aid to Mining.—(i) *Commonwealth.* (a) *Rewards for Discovery of Uranium Ore.* To encourage the search for and discovery of deposits of uranium ore, the Commonwealth Government has approved the granting of monetary rewards. These rewards will be paid as follows :—(1) £1,000 for the discovery of a deposit containing sufficient ore to be of economic importance; (2) £1,000 for the discovery of a deposit capable of producing 25 tons or more of uranium oxide and £2,000 for each 25 tons in excess of the first 25 tons; and (3) a maximum of £25,000 for any one deposit.

(b) *Bureau of Mineral Resources, Geology and Geophysics.* The Bureau of Mineral Resources, Geology and Geophysics has sections dealing with geology and geophysics, mining engineering, petroleum technology and mineral economics. The geological section conducts all surveys required in Commonwealth Territories, detailed and regional surveys in conjunction with or by arrangement with the State Mines Departments, surveys of possible oil-fields in Australia and New Guinea, surveys of mines for which financial assistance is sought, and investigations of deposits of radio-active minerals. The geophysical section conducts investigations throughout Australia and New Guinea connected with the search for metalliferous, radio-active and other mineral deposits; problems connected with exploration for coal, oil and water; regional magnetic and gravity surveys; engineering and military geophysics; and the operation of geophysical (magnetic and seismic) observatories. The Bureau works in close co-operation with the Mines Departments of the States. It has assumed full responsibility for geological and geophysical surveys in Commonwealth Territories, but suitable arrangements have been made to ensure that the local Administrations have the necessary technical advice directly available to them. The Bureau has also assumed full responsibility for scout-boring to prove deposits of coal in New South Wales suitable for working by open-cut methods.

(c) *Diamond Drills.* Three of the heavy diamond drills mentioned in the previous Official Year Book have been on hire to various mining companies. Four more light drills are on order and will be used in prospecting for uranium in the Northern Territory.

(d) *Search for Oil.* No variation has been made in the policy described in Official Year Book No. 37, page 850, regarding the search for petroleum throughout Australia and its Territories. In addition to its activities set out in that Year Book, the Bureau of Mineral Resources, Geology and Geophysics furnishes field laboratories and trained personnel to assist small companies in recording scientific information obtained while drilling for oil. A modern diesel-driven rotary drilling plant has been procured for deep test-drilling on suitable geological structures.

The Commonwealth Government has encouraged the search for oil in Australia, Papua and New Guinea; details of the efforts made are outlined in previous issues of the Official Year Book and in § 10. Shale-oil and Mineral Oil of this issue. A considerable amount of geological and geophysical work and test drilling has been conducted under the provision of the Petroleum Oil Search Act 1936.

(e) *Survey of North Australia.* Reference to this survey which was completed at the end of 1940 appears in Official Year Book No. 35, page 744.

(f) *Ore-dressing and mineragraphic investigations.* These investigations are conducted by the Commonwealth Scientific and Industrial Research Organization as required by the industry. Ore-dressing investigations are carried out conjointly with appropriate State institutions, the three laboratory centres being the School of Mines, Kalgoorlie, the School of Mines and Industries, Adelaide, and the University of Melbourne.

The grant of £22,000 mentioned in Official Year Book No. 37, page 851, was expended by 1947; since that year funds to continue the investigations are included in an investigational vote approved annually for the Commonwealth Scientific and Industrial Research Organization. In 1948 the Government expended approximately £5,000 on ore-dressing and £6,100 on mineragraphic investigations.

(g) *Petroleum Legislation.* The petroleum ordinances of Papua and New Guinea have been amended and combined in a single ordinance entitled Petroleum (Prospecting and Mining) Ordinance 1951.

(ii) *States. (a) General.* In addition to free assays and determinations of rocks and minerals carried out for prospectors by the Mines Departments of the States and Territories, technical officers of these departments provide advice to the mining industry where required, carry out field examinations of mining prospects, advise on exploration and development, select sites for water supply, and in general give a free technical service to the mining industry.

(b) *New South Wales.* State aid to assist metalliferous mining consisted of grants to assist the prospecting and/or mining for gold and minerals and for the purchase, removal and installation of mining plant or equipment.

(c) *Victoria.* Grants may be made to assist prospecting and development or the purchase of machinery. The Mines Department has 24 stamp batteries in different parts of the State to crush ore for prospectors at nominal rates. Small mining companies may avail themselves of these facilities.

(d) *Queensland.* The Mines Department maintains a treatment works for tin ores, etc., at Irvinebank, an assay office at Cloncurry and diamond-drilling plants in several parts of the State. The Venus State Mill at Charters Towers is available for the treatment of gold-bearing ores and another State battery is located at Kidston. In addition, many departmental compressor plants, pumping plants and other mining equipment are provided and made available on hire on the principal mining fields.

(e) *South Australia.* During 1940 the Premier announced that assistance would be given to copper-mining in the form of financial help towards such development work as was absolutely necessary for a mine to enter upon reasonably continuous production. On 5th November, 1942, the Leigh Creek Coal Act was passed to develop the Leigh Creek Coalfield. As a result of extensive drilling operations, development of open-cut mining was commenced in January, 1943. The State maintains batteries and cyanide works at Mount Torrens, Peterborough, Mongolata, Tarcoola and Glenloth and assays for public purposes are made at the School of Mines.

(f) *Western Australia.* The Mines Department has about twenty batteries throughout the mining fields where prospectors and others can have their ore treated.

(g) *Tasmania.* During 1951 the Department of Mines reported that the policy of assistance to mining was maintained to the extent provided for under the provisions of the Aid to Mining Act but little advantage was taken thereof.

Other assistance rendered to the industry is provided by a well-equipped metallurgical laboratory at Launceston where ore-dressing and other metallurgical problems can be investigated for the mine-owner, and advice given regarding the most suitable type of plant to install.

(h) *Northern Territory.* The Commonwealth Government has maintained a ten-head battery at Tennant Creek for the treatment of ore by miners. Another battery has been leased. A ten-head battery is situated on the Maranboy tin-field and crushes ore for all parties on the field. Assistance has been given to miners on the mica fields to purchase air-compressors and other mining plant on liberal terms. The Commonwealth Government has purchased all mica produced on the fields. Roads and water supply services are provided and maintained for all mines and mineral-producing areas throughout the Territory.

2. **Control of Minerals.**—(i) *Minerals Committee, and Controller of Minerals Production.* With the ending of the 1939-45 War, the activities of the Minerals Committee and Controller of Minerals Production were merged with the Bureau of Mineral Resources Geology and Geophysics. Operations conducted by the Controller taken over by the Director of the Bureau were the Dorset Tin Dredge and the Commonwealth Mica Pool. The Dorset Tin Dredge is in active operation and produces about 150 tons of tin concentrate annually; it has about ten years of operation in sight.

(ii) *Mica Production.* The Bureau, for the Department of Supply, operates the Commonwealth Mica Pool which purchases all mica won in the Harts Range, Northern Territory, thus ensuring the miners of a ready market for their product at fixed prices and also permitting an orderly distribution of mica to the trade. Under a recent Cabinet decision, the Commonwealth Mica Pool will operate until the end of 1953 when the position will be reviewed.

(iii) *Control of Exports of Metals and Minerals.* Certain metals and minerals produced in Australia are subject to export control for one or more of the following reasons:—

- (a) the necessity to conserve resources (e.g. iron ore, manganese and bauxite);
- (b) inadequacy of local production to fulfil domestic demand (e.g. tin ore, concentrates and metal; mica, manganese ore, copper, iron and steel);
- (c) the strategic importance of the minerals (e.g. beryllium ores, concentrates and metal; monazite; tantalite and tantalum products; uranium ore, concentrates, residues and metal; mica).

Mixed concentrates of beach sand minerals are prohibited exports, but rutile, zircon and ilmenite may be exported. Non-ferrous scrap is also subject to control.

(iv) *Radio-active Minerals.* Since the discovery of the possibility of using atomic energy considerable attention has been paid to the occurrence of uranium in Australia. To encourage the search for and discovery of deposits of uranium ore, the Commonwealth Government has approved the granting of monetary rewards for such discoveries. The amount of reward to be paid for the discovery of any deposit will be determined by the Minister for Supply, but will not exceed £25,000.

Up to the end of 1949 important deposits had been found only in the northern part of South Australia where the Mt. Painter and Radium Hill fields had been investigated, largely by the South Australian Government, but in that year the presence of uranium was discovered in the Rum Jungle district of the Northern Territory, and investigations carried out by the Commonwealth Bureau of Mineral Resources, Geology and Geophysics in the years 1949-1952 proved that these deposits are of substantial importance.

Towards the end of 1952 the Commonwealth Government placed the Rum Jungle deposits, together with other deposits which are known to occur, but which have not yet been adequately investigated, under the control of Consolidated Zinc Corporation Limited, to carry on the investigations on its behalf and to mine and treat the ore. Investigation of an area adjacent to Rum Jungle was carried out by the Bureau, using an airborne scintillometer. This survey indicated the presence of many radio-active anomalies, and demonstrated the effectiveness of this method of search. During 1952, arrangements were completed between the Governments of the United States of America, South Australia and the Australian Commonwealth, for the purchase of ores by the United States.

In South Australia, the South Australian Government extensively explored the Radium Hill deposit by underground development and diamond drilling. The production of ore is now proceeding and treatment plants are being erected.

During 1953, the Bureau of Mineral Resources will carry out further airborne scintillometer surveys and extensive geological, geophysical and geochemical surveys and diamond drilling operations, with a view to discovering further deposits and to assessing the value of known deposits.

During 1953 Commonwealth Legislation was enacted to set up an Atomic Energy Commission which will be responsible, in an overall sense, for the production and utilization of uranium in Australia. This Act supersedes the Atomic Energy (Control of Materials) Act No. 34 of 1946, but contains a provision of that Act which provides for control of substances which could be used for production or use of atomic energy. It gives the Commonwealth power to acquire such substances in their natural state and in waste materials from mining operations, to carry on mining and other operations necessary for the recovery of such substances, and to pay compensation for such acquisition. It also gives the Commonwealth power to obtain possession of such substances held by any person.

Further reference to the Atomic Energy Commission appears in Chapter XXVII.—Defence.

## CHAPTER XIX. PASTORAL PRODUCTION.

NOTE.—Except where otherwise indicated, values of Australian oversea trade shown throughout this chapter are expressed as *f.o.b.*, Australian currency, port of shipment.

### § 1. Initiation and Growth of Pastoral Industry.

1. **General.**—A detailed account of the various enumerations of live stock in Australia made prior to 1860 is given in previous issues of the Year Book. The numbers recorded between 1800 and 1860 are regarded as somewhat defective. Doubtless the growth of population, the expansion in the area settled and the increase in private ownership made it difficult in those early times to secure accurate returns. Since 1860 however, the annual enumerations have been based, with few exceptions, on actual collections made through the agency of the State Police or by post and reliably record the movement in live stock numbers from year to year.

2. **Live Stock Numbers since 1860.**—Particulars concerning the numbers of each of the principal kinds of live stock in Australia at decennial intervals from 1860 to 1930 and from 1939 onwards in single years are given in the following table, and are shown continuously on the graph on page 809.

During the ninety-two years from 1860 to 1952 the live stock of Australia increased considerably, viz. :—Horses, 117 per cent. ; cattle, 276 per cent. ; sheep, 484 per cent. ; and pigs, 191 per cent. The average annual increases which these aggregates represent are as follows :—Horses, 0.84 per cent. ; cattle, 1.45 per cent. ; sheep, 1.94 per cent. ; and pigs, 1.17 per cent.

#### LIVE STOCK : AUSTRALIA. (‘000.)

Year.	Horses.	Cattle.	Sheep.	Pigs.
1860 .. .. .	432	3,958	20,135	351

1948 " " .. .. .	1,165	13,785	102,559	1,255
1949 " " .. .. .	1,115	14,124	108,735	1,196
1950 " " .. .. .	1,057	14,640	112,891	1,123
1951 " " .. .. .	999	15,229	115,596	1,134
1952 " " .. .. .	937	14,893	117,647	1,022

3. **Fluctuations.**—The increases referred to, however, have not been continuous, marked fluctuations having taken place during the period, mainly on account of droughts which have from time to time left their impress on the pastoral history of Australia. These occurred in 1868, 1877, 1883-4, 1892, 1893, 1895, 1901-2, 1912, 1914, 1918, 1919, 1922-23, 1925-26, 1927-28, 1929-30, 1940-41 and 1944-45 to 1946-47.

The years in which the numbers of live stock attained their maxima are as follows :—Horses, 1918 (2,527,000); cattle, 1951 (15,229,000); sheep, 1942 (125,189,000); and pigs, 1941 (1,797,000).

The distribution throughout Australia of beef cattle, dairy cattle, sheep and pigs as at 31st March, 1948 is shown in the graphs on pages 905-8 of Official Year Book No. 39.

The numbers of horses, beef cattle and sheep in each State and Territory are shown later in this chapter; similar information for dairy cattle and pigs appears in Chapter XXI., Farmyard, Dairy and Bee Products.

4. **Minor Classes of Live Stock.**—Statistics of the minor classes of live stock (goats, camels, mules, donkeys, etc.) have not been collected in recent years. The last year in which all States, other than Victoria, collected this information was 1941, when total numbers were as follows :—Goats, 80,366; camels, 2,267; and mules and donkeys, 10,881. Of these, goats were most numerous in Queensland, and camels, mules and donkeys in Western Australia. In the raising of goats, some attention has been devoted to the angora goat and its product (mohair), and upwards of 5,000 angora goats are included in the number shown above. Of these, 1,640 were in New South Wales, 1,000 in Queensland, 1,531 in South Australia, and 284 in Tasmania.

New South Wales ceased collecting these details after 1941 and other States after 1942.

5. **Net Exports of Principal Pastoral Products.**—The quantities by which the exports of the principal pastoral products of Australia exceeded the imports for the years 1938-39 and 1948-49 to 1951-52 were as follows :—

#### NET EXPORTS OF PASTORAL PRODUCTS : AUSTRALIA.

(a) Quantity not available. (b) Includes chilled beef. (c) Inedible tallow only.

NOTE.—Minus sign (—) signifies net imports.

The values of the net exports for the same five years are furnished in the next table. For the four years ended 1951-52 they amounted to £1,672,272,831, or an average of £418,068,208 per annum, of which wool represented 89.5 per cent. Meat, skins and tallow comprise the remaining principal pastoral products exported. Net exports in 1938-39 were valued at £56,290,910, of which wool represented 74.56 per cent.

6. Value of Pastoral Production.—(i) *Gross, Local and Net Values, 1950-51 and 1951-52.* Values of pastoral production for each State are shown for 1950-51 and 1951-52 in the following table. Fuller details of the source of the information and an explanation of the terms used in this compilation will be found in Chapter XXIX.—Miscellaneous. Maintenance costs have not been computed in all States and depreciation has not been deducted; consequently the net values are inflated to the extent of these costs.

7. **Consumption of Meats.**—Particulars of the quantity of meat per head per annum available for civilian consumption in Australia, Canada, the United Kingdom and the United States are given in the following table. Canned and cured meat has been included at its carcass weight equivalent.

The sources of the figures for Canada, the United Kingdom, and the United States of America are *Food Balance Sheets* published by the Food and Agricultural Organization of the United Nations for the years 1949-50 to 1951-52 and *Food Consumption Levels in the United States of America, Canada and the United Kingdom* (Third Report (1946) of a Special Joint Committee set up by the Combined Food Board for the pre-war periods).

The demand for meat during the war years was such as to necessitate the introduction of rationing in order to divert supplies from civilian consumption to the armed services. The rationing of meat (other than bacon and ham, canned meat, sausages and offal) was in operation in Australia from 17th January, 1944 to 21st June, 1948. Details of the ration rates in force over this period are shown in Official Year Book No. 37, p. 858.

QUANTITY OF MEAT (INCLUDING CURED AND CANNED) AND EDIBLE OFFAL AVAILABLE FOR CIVILIAN CONSUMPTION PER HEAD PER ANNUM.

8. **Marketing of Meat.**—(i) *General.* The Meat Export Control Act 1935-1953 was introduced following a decision of a conference of Commonwealth and State Ministers with members of the Commonwealth Meat Advisory Committee, held in October, 1935, to set up a Meat Board with defined statutory powers. The Australian Meat Board, which was appointed under the Act in January, 1936, consisted of eighteen members, representative of producers, processors, exporters and the Commonwealth Government. Provision was made for the appointment from within the Board of an Executive Committee and a Beef Committee. The Act provided for the control of the export of meat by licence. The Board was empowered to regulate shipments of meat and to arrange contracts in respect of freights and insurances; to promote overseas sales by advertising and to foster research into meat problems; and to supervise the issue of export licences. The Board also has power to appoint a London representative.

During the 1939-45 War the control of meat exports was under National Security Regulations which ceased to operate with the expiry of the National Security Act on 31st December, 1946. Control then reverted to the Board, which was reconstituted in August, 1946 by legislation amending the Meat Export Control Act. Membership of the reconstituted Board is on an industry basis in lieu of a State basis and the number of members has been reduced from eighteen to twelve. The powers and functions of the Board were *inter alia* extended to enable it to purchase and sell any meat, meat products or edible offal on behalf of the Commonwealth Government and subject to any direction of the Minister for Commerce and Agriculture.

The Meat Export Charges Act 1935-1946 provides for the imposition of a levy on all meats exported from Australia, the funds from which are used for the purpose of defraying expenses and charges incurred by the Australian Meat Board in the course of its business. The customary provision is made for exemption from the levy when recommended by the Board.

(ii) *War-time Marketing.* Details of arrangements for the marketing of meat during the 1939-45 War are given on page 1107 of Official Year Book No. 36.

(iii) *United Kingdom Long-term Purchase Agreements.* Details of the long-term meat contracts with the United Kingdom Government from the outbreak of the 1939-45 War up to 30th September, 1950, were given on page 903 of Official Year Book No. 38, and page 1107 of Official Year Book No. 36.

After the termination of the long-term contract on 30th September, 1950, annual arrangements were entered into for the sale of Australia's exportable surplus of meat to the United Kingdom up to 30th June, 1952.

In October, 1951, representatives of the United Kingdom and Australian Governments signed the Fifteen-year Meat Agreement in London which covers the period from 1st July, 1952 to 30th September, 1967. The classes of meat included in the Agreement are chilled and frozen beef, frozen veal, frozen mutton and lamb, frozen cattle and sheep sundries and edible offals. The principal objectives of the Agreement are to promote the production of meat in Australia, enabling increased exports to be made to the United Kingdom and providing for a satisfactory market for Australian meat in the United Kingdom for the period of the Agreement.

The first detailed Agreement for beef and veal covers the period of six years ending 30th September, 1958, and for mutton and lamb for three years ending 30th June, 1955. In both cases, 1950-51 prices are the basic level. The prices which were agreed for the meat year 1952-53 represented substantial increases on those previously ruling.

The following table sets out the prices of representative descriptions of Australian beef and lamb which have been sold to the United Kingdom on a Government-to-Government basis since the beginning of the 1939-45 War.

#### CONTRACT PRICES: BEEF AND LAMB SOLD TO UNITED KINGDOM.

„ 1952..	13.08	16.35			

Provision was also made in the Agreement for reservation of quantities of meat for sale to other markets. This is 3 per cent. of the quantity shipped to the United Kingdom, or such other amount as may be agreed annually between the two Governments. The quantity for 1952-53 was 5,000 tons.

Pig meats were not included in the Agreement, but a two-year arrangement terminating on 30th September, 1954 was negotiated. This arrangement did not limit shipments of pig meats to other markets.

## § 2. Horses.

1. *Distribution throughout Australia.*—The States of New South Wales, Queensland and Victoria together depasture about 80 per cent. of the total number of horses in Australia. In the following table figures are shown for each State and Territory for the years 1948 to 1952 in comparison with the average for the years 1935 to 1939 :—

### HORSES : NUMBER.

('000.)

Year.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	N.T.	A.C.T.	Total.
Average, 1935 to 1939 ..	537	355	444	198	154	31	33	I	1,753
1948 ..	376	221	336	101	75	23	32	I	1,165
1949 ..	358	213	325	94	69	22	33	I	1,115
1950 ..	343	200	317	83	59	21	33	I	1,057
1951 ..	329	187	307	71	55	20	29	I	999
1952 ..	311	169	289	63	53	19	32	I	937

The number of horses in Australia attained its maximum during 1918, when a total of 2,527,149 was recorded. The United States of America made its highest recording in the same year and Canada in 1921. The number in Australia has declined considerably since 1918 owing to the mechanization of transport and farming. During the period 1918 to 1952 the decrease in numbers averaged 47,000 per annum, the rate of decline being 53,000 per annum during the five years ended 1952.

The number of horses in Australia from 1860 onwards may be obtained from the graph on page 809.

The percentages of the number of horses in the several States and Territories of the total for Australia for 1952 were :—New South Wales, 33.1; Victoria, 18.1; Queensland, 30.8; South Australia, 6.7; Western Australia, 5.7; Tasmania, 2.0; Northern Territory, 3.5; and Australian Capital Territory, 0.1 per cent.

2. *Oversea Trade in Horses.*—(i) *Exports.* The export of horses from Australia during the early years of this century was fairly considerable, averaging about 15,000 head per annum between 1901 and 1920, exclusive of those used for war purposes during the 1914-18 War. Since then, exports have gradually declined and averaged only about 4,000 for the five years ended 1938-39 and 950 for the five years ended 1951-52.

(ii) *Imports.* The few horses imported into Australia consist mainly of valuable stud animals from the United Kingdom and racehorses from New Zealand. The average value per head of the horses imported during the five years 1947-48 to 1951-52 was £829. The average number imported per annum during this period was 406 and the average annual value, £336,579.

Details of the quantity and value of imports, exports and net exports of horses are shown in the following table for the years 1947-48 to 1951-52 compared with the average for the five years ended 1938-39.

## HORSES : IMPORTS AND EXPORTS, AUSTRALIA.

NOTE.—The minus sign (—) signifies net imports.

## § 3. Cattle.

1. **Purposes for which Raised.**—Cattle-raising is carried out in all the States, the main object in certain districts being the production of stock suitable for slaughtering purposes, and in others the raising of profitable dairy herds. The great impetus which the development of the export trade in Australian butter gave to the dairying industry led to a considerable increase in numbers and an improvement in quality of the dairy herds in Victoria, New South Wales, and southern Queensland in particular, the portion of Australia in the temperate zone being the best adapted to this industry. On the other hand, beef-producing cattle are mainly raised in the tropical districts, i.e., in the northern parts of Queensland, in the Northern Territory, and in the Kimberley district in the north of Western Australia.

2. **Distribution throughout Australia.**—Until 1880, New South Wales was the principal cattle-raising State, but in that year Queensland occupied the leading position, which it has since maintained. There was a very rapid increase in the number of cattle in Australia up to the year 1894, when 12,312,000 head were depastured. From 1895 onwards, however, the effects of droughts and the ravages of tick fever reduced the number to 7,063,000 in 1902. Following the disastrous drought which terminated in the latter year the herds were gradually built up, and, despite recurring droughts, they continued to increase until the maximum number of 14,441,000 cattle was attained in 1921. After that year the number dropped continuously till 1929, largely owing to the decline in the overseas demand for frozen beef. With the expansion of dairying it recovered to 14,049,000 in 1934, but from that year declined continuously to 1939 when it stood at 12,862,000. The upward movement which commenced in 1940 was continued until 1944, the total number of cattle (14,184,000) in the latter year being at its highest level since 1923. Drought conditions and other factors during 1944-45 and 1945-46 caused a decline in numbers to 14,133,000 in 1945, to 13,878,000 in 1946 and to 13,427,000 in 1947. This was followed by an upward movement in numbers to 15,229,000 in 1951, the highest number yet recorded. In 1952 numbers declined to 14,893,000, the reduction being confined mainly to dairy cattle in the Eastern States. A graph showing the number of cattle in Australia from 1860 appears on page 809.

The numbers of cattle (beef and dairy) in the several States and Territories in each year 1948 to 1952 compared with the average for the years 1935 to 1939 are shown below.

## CATTLE : NUMBER.

('000.)

Year.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Nor. Terr.	Aust. Cap. Terr.	Total.
Average, 1935 to 1939 ..	3,198	1,952	6,018	331	819	262	889	9	13,478
1948 ..	3,130	2,174	5,976	445	816	244	991	9	13,785
1949 ..	3,253	2,225	5,992	461	864	266	1,053	10	14,124
1950 ..	3,440	2,231	6,305	464	865	275	1,049	11	14,640
1951 ..	3,703	2,216	6,734	433	841	272	1,019	11	15,229
1952 ..	3,621	2,215	6,434	437	852	266	1,058	10	14,893

Although the proportion is not as high as it has been in the past, Queensland was carrying 43.2 per cent. of the cattle in Australia in 1952. The percentage in each State and Territory during that year was:—New South Wales, 24.3; Victoria, 14.9; Queensland, 43.2; South Australia, 2.9; Western Australia, 5.7; Tasmania, 1.8; Northern Territory, 7.1; Australian Capital Territory, 0.1.

Graphs indicating the distribution of beef and dairy cattle separately in Australia at 31st March, 1948 are shown on pages 905-6 of Official Year Book No. 39. A graph showing the distribution in 1924-25 of the total cattle in Australia appeared on page 660 of Official Year Book No. 22, while in Official Year Book No. 34 similar graphs showing for 1938-39 the distribution of total cattle and of dairy cows may be found on pp. 453-4.

3. **Classification of Cattle According to Purpose.**—Of the total number of cattle in Australia in 1952, 10,327,000 or 69.3 per cent. were classified as beef cattle. The numbers classified as beef cattle in the several States and Territories during the years 1943 and 1948 to 1952 were as follows:—

**BEEF CATTLE : NUMBER.**  
(‘000.)

Year.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Nor. Terr.	Aust. Cap. Terr.	Total.
1943 .. ..	1,676	577	4,893	171	605	102	978	5	9,007
1948 .. ..	1,890	698	4,593	170	590	100	991	6	9,038
1949 .. ..	1,994	711	4,569	182	634	111	1,053	7	9,261
1950 .. ..	2,167	706	4,872	193	638	117	1,049	8	9,759
1951 .. ..	2,457	727	5,293	189	618	115	1,019	8	10,426
1952 .. ..	2,416	776	5,138	201	621	110	1,058	7	10,327

A classification of numbers on this basis is not available prior to 1943.

Particulars relating to dairy cattle numbers will be found in Chapter XXI.—Farm-yard, Dairy and Bee Products.

4. **Size Classifications of Cattle Herds.**—A special series of tabulations relating to rural holdings in Australia was compiled for 1949-50 and published in Primary Industries Bulletin No. 44. The tables relating to beef and dairy cattle show classifications according to size of herd and area of the holdings.

5. **Comparison with other Countries.**—The following table shows the number of cattle in Australia and in some of the principal cattle-raising countries of the world for the years 1936-40 and at the latest available date. The figures, which have been compiled by the Food and Agriculture Organization of the United Nations, relate generally to areas embraced by post-war boundaries, but do not cover identical areas for the two periods in all cases.

**CATTLE : NUMBER IN VARIOUS COUNTRIES.**  
(‘000.)

Country.	Average, 1936-40. (a)	Year and Month.	Number.
India .. ..	(b) 137,974	1952 (May) ..	150,298

(a) Average for two to four years in some cases.  
(e) 1938.

(b) 1939.

(c) Unofficial estimate.

(d) 1937.

6. **Imports and Exports of Cattle.**—The products of the cattle-raising industry figure largely in the export trade of Australia, although the export of live cattle has never been large. The number of cattle imported is also small, consisting, as in the case of horses, mainly of valuable animals for stud purposes. Details for the years 1947-48 to 1951-52 compared with the average for the years 1934-35 to 1938-39 are as follows :—

**CATTLE : IMPORTS AND EXPORTS, AUSTRALIA.**

Year.	Imports.		Exports.		Net Exports.	
	No.	Value.	No.	Value.	No.	Value.
Average, 1934-35 to 1938-39	295	£ 22,304	308	£ 5,977	13	— 16,327
1947-48 ..	103	29,934	4,359	74,141	4,256	— 44,207
1948-49 ..	147	75,553	1,087	47,708	940	— 27,845
1949-50 ..	160	88,831	485	40,156	325	— 48,675
1950-51 ..	201	122,936	876	70,005	675	— 52,931
1951-52 ..	318	214,441	681	58,046	363	— 156,395

NOTE.—The minus sign (—) signifies net imports.

The average value per head of the cattle imported during the last five years was £572, while the average value per head of the cattle exported during the same period was £39.

7. **Cattle Slaughtered.**—The numbers of cattle slaughtered during each of the years ended June, 1948 to 1952 compared with the average for the years 1934-35 to 1938-39 are shown in the following table :—

**CATTLE (INCLUDING CALVES) SLAUGHTERED.**  
(’000.)

Year ended June—	Slaughtering passed for Human Consumption.									Total Slaughtering including Boiled Down.
	N.S.W.	Vic.	Qld.	S.A.	W.A.	Tas.	N.T.	A.C.T.	Total.	
Average, 1935 to 1939 ..	1,112	812	1,046	(b) 156	(b) 124	45	(b) 4	2	3,301	3,331
1948 ..	1,076	748	1,188	165	145	38	15	3	3,378	3,411

1951 ..	1,160	915	1,181	226	160	70	15	8	3,735	3,794
1952 ..	1,247	966	1,029	197	152	71	15	9	3,686	3,738

(a) Year ended March. (b) Year ended previous December.

8. **Production of Beef and Veal.**—Details of the production of beef and veal in each State and Territory are shown in the following table for the years indicated :—

**PRODUCTION OF BEEF AND VEAL (BONE-IN WEIGHT) : AUSTRALIA.**  
(’000 tons.)

Year ended June—	N.S.W.	Victoria.	Q’land.	S. Aust.	W. Aust.	Tas.	N. Terr.	A.C.T.	Total.
Average, 1935 to 1939	(a) 173	115	181	(b) 25	(b) 27	9	(b) 1	..	531
1948	162	105	226	27	30	8	3	1	562
1949	180	118	202	30	33	10	3	1	577
1950	186	125	212	33	35	12	3	1	607
1951	193	137	232	36	34	14	4	2	652
1952	184	138	178	31	32	14	3	2	582

(a) Year ended March. (b) Year ended previous December.

9. **Consumption of Beef and Veal.**—For the three pre-war years 1936–37 to 1938–39 the average annual production of beef and veal in Australia was 569,000 tons of which 127,000 tons were exported, leaving a balance of 442,000 tons (or the carcass equivalent of 144 lb. per head per annum) available for consumption as fresh and canned meat.

Civilian consumption during the war and immediate post-war years was considerably lower than previously (due mainly to the effects of rationing), but, following the return to more normal conditions, rose to 131.6 lb. per head in 1950–51. In 1951–52, consumption fell again to 121.8 lb. per head, principally as a result of drought conditions prevailing in Queensland which restricted available supplies.

In the following table details of the production and disposal of beef and veal are shown for the periods stated.

**PRODUCTION AND DISPOSAL OF BEEF AND VEAL (BONE-IN WEIGHT) :  
AUSTRALIA.  
(’000 tons.)**

Year.	Changes in Stock.	Production.	Exports.	For Canning.	Consumption in Australia as Human Food.

1951–52 .. ..	— 4	582	52	70	464	121.8

(a) Included with exports.

10. **Exports of Frozen Beef and Veal.**—The export of frozen meat from Australia dates from about 1881, and since that year the trade has grown considerably. The quantity of frozen beef and veal exported in 1938–39 amounted to 271,964,000 lb., valued at £4,323,680, but there was a decline during the war years owing to reduced production and the diversion of supplies to meet the requirements of the Australian and Allied Services based on Australia. By 1947–48 the quantity exported had risen again to 237,150,000 lb., valued at £6,192,615, but in subsequent years it declined once more and in 1951–52 amounted to only 95,876,000 lb., valued at £5,229,844. The quantities and values of frozen beef and veal exported during the five pre-war years ended 1938–39 and in each year 1946–47 to 1951–52 are shown in the following table:—

**EXPORTS OF FROZEN BEEF AND VEAL : AUSTRALIA.**

Year.	Exports of Frozen and Chilled Beef.		Exports of Frozen Veal.	
	Quantity.	Value.	Quantity.	Value.
	’000 lb.	£	’000 lb.	£
Average, 1934–35 to 1938–39	231,355	3,188,491	10,353	165,205
1946–47 .. ..	178,298	4,521,746	2,040	60,127
1947–48 .. ..	234,593	6,110,568	2,557	82,047
1948–49 .. ..	189,007	5,715,934	2,646	99,532
1949–50 .. ..	178,128	6,522,476	4,233	182,175
1950–51 .. ..	154,832	6,440,395	3,478	207,459
1951–52 .. ..	92,926	5,008,788	2,950	221,056

Prior to the war the largest purchaser of Australian beef and veal was the United Kingdom, which during 1938–39 took about 90.2 per cent. of the total shipments. However, at the request of the United Kingdom Government there was a considerable diversion from that country to nearer British possessions during the war years. In 1951–52 shipments to the United Kingdom were valued at £2,031,040 or 38.8 per cent. of the total value of beef and veal exports, while exports to other British countries amounted to £2,483,284, equivalent to 47.4 per cent. of the total.

In view of the preference overseas for chilled beef, the Australian beef industry was at a serious disadvantage until investigations proved that beef could be successfully transported from Australia to United Kingdom in a chilled condition. Trial shipments of 254,000 lb. in 1932-33 and 1,515,000 lb. in 1933-34 were made, and the exports in subsequent years increased to a maximum of 58,963,000 lb. in 1938-39. However, the advent of war seriously affected the export trade in chilled beef, which declined to a negligible amount after 1939-40.

#### § 4. Sheep.

1. **Initiation of the Pastoral Industry.**—Fortunately for Australia, the suitability of its climate and general conditions for the production of a high class of wool were, at an early date in the history of its settlement, surmised and tested by Captain Macarthur, one of the pioneer sheep-breeders of New South Wales. To the energy of this enterprising pastoralist is due in large measure the rapid and extremely satisfactory development of Australia as a producer of fine wool, and while it would appear that the introduction of the merino sheep into Australia was not due to Macarthur, a great deal of the credit for having successfully established the pastoral industry in Australia must certainly be his.

2. **Movement in Sheep Numbers in Australia.**—Fluctuations in the number of sheep recorded in Australia for each year from 1860 onwards may be seen from the graph on page 809. Up to 1945 there were five marked periods of decline, but the losses were made up rapidly. In each of the years 1925 to 1945 the sheep flocks exceeded 100 million, reaching 125,189,129 in 1942, the greatest number recorded in Australia. At no previous period have such large numbers been depastured continuously, and the development took place despite an increase in the annual slaughter for the meat trade over this period, from about 10 million to 25 million.

However, a sharp decline to 105 million occurred in 1945, followed by a further reduction to 96.4 million in 1946 and to 95.7 million in 1947. This represented a loss from all causes other than slaughtering of about 37 million sheep (30 per cent.) since 1944 and was largely attributable to the severe drought conditions experienced during 1944, 1945 and 1946. The passing of the drought and consequent re-stocking resulted in a rise in sheep numbers to 108.7 million in 1949, 112.9 million in 1950, 115.6 million in 1951 and 117.6 million in 1952.

The following table shows the approximate movement in sheep numbers in Australia in each season 1938-39 to 1951-52:—

**SHEEP AND LAMBS : ANALYSIS OF MOVEMENT IN NUMBERS, AUSTRALIA.**  
(‘000.)

# SHEEP NUMBERS AND WOOL PRODUCTION: AUSTRALIA 1870 to 1951-52

3. **Distribution throughout Australia.**—With the exception of a short period in the early sixties, when the flocks of Victoria outnumbered those of New South Wales, the latter State has occupied the premier position in sheep-raising, depasturing about one half of the sheep of Australia.

A graph indicating the distribution of sheep in Australia at 31st March, 1948, is shown on page 907 of Official Year Book No. 39. Similar graphs for the years 1938–39 and 1924–25 were published in Official Year Books No. 34, page 452 and No. 22, page 659, respectively.

The numbers of sheep in the several States and Territories for each year 1948 to 1952 compared with the average for the years 1935 to 1939 are shown in the following table:—

**SHEEP : NUMBER.**  
( '000.)

Year.	N.S.W.	Vic.	Q'land.	S. Aust.	W.Aust.	Tas.	Nor. Terr.	Aust. Cap. Terr.	Total.
Average, 1935 to 1939 ..	51,774	17,555	21,061	8,515	9,839	2,312	23	240	111,319
1948 ..	46,065	17,931	16,743	9,055	10,444	2,087	19	215	102,559
1949 ..	50,404	19,170	16,499	9,366	10,872	2,160	26	238	108,735
1950 ..	53,298	19,161	17,382	9,477	10,923	2,170	26	254	112,891
1951 ..	54,111	20,012	17,478	10,166	11,362	2,181	29	257	115,596
1952 ..	53,676	21,537	16,164	11,470	12,188	2,338	31	243	117,647

Except when affected by drought, the relative number of sheep depastured in the different States has remained fairly constant.

The percentage distribution in 1952 was:—New South Wales, 45.6; Victoria, 18.3; Queensland, 13.7; South Australia, 9.8; Western Australia, 10.4; Tasmania, 2.0; Northern Territory, 0.0; Australian Capital Territory, 0.2.

4. **Classification of Sheep According to Age, Sex and Breed.**—In the following table numbers of sheep in Australia are classified according to age and sex at 31st March of the years 1943 and 1949 to 1952. Data in this form are not available prior to 1943.

**SHEEP : AGE AND SEX, AUSTRALIA.**  
( '000.)

Description.	31st March—

(a) As at 31st December, 1949. Distribution between categories has been estimated. (b) Merino comeback is the progeny of a crossbred merino ewe and a merino ram, i.e., finer than half-bred. (c) Half-bred and coarser.

5. **Numbers of Sheep on Rural Holdings.**—A special series of tabulations relating to rural holdings in Australia was compiled for 1949-50 and published in *Primary Industries Bulletin* No. 44. The tables relating to sheep farming show classifications according to areas of the holdings on which the sheep were carried.

6. **Comparison with other Countries.**—As regards the size of its flocks and the quantity and quality of wool produced, Australia has long occupied a leading position amongst the sheep-raising countries of the world. In 1951-52, Australian flocks numbered 118 million sheep, compared with the estimate of 153 million for the U.S.S.R. (Russia), China and Eastern Europe, with about 48 million in Argentina and about 46 million in India and Pakistan together.

The following table shows the number of sheep in Australia in relation to the numbers in some of the principal sheep-raising countries of the world for the last available pre-war year and at the latest date of enumeration for which figures are published. The figures have been compiled by the Commonwealth Economic Committee and the International Wool Textile Organization, who have estimated the world sheep numbers in 1951-52 at 769 million.

7. **Oversea Imports and Exports of Sheep.**—As in the case of cattle, the oversea exports of live sheep from Australia are of comparatively little importance. During the last five years the principal consignments of ordinary sheep have been made to Malaya (British) from Western Australia. On 27th November, 1929, the export of stud sheep was prohibited, except with the approval of the Minister for Trade and Customs.

Sheep for breeding purposes, however, were being exported in increasing numbers up to the outbreak of war in the Pacific, and shipments in 1939-40 amounted to 23,329 sheep, valued at £79,955, compared with 1,411 valued at £48,415, in 1951-52. The chief countries to which sheep for breeding purposes were consigned in 1939-40 were New Zealand, South Africa, Japan and Korea and, in 1951-52, to New Zealand and United States of America. The ordinary flock sheep exported from Australia were, for the most part, consigned to Malaya. The following table shows the imports and exports of breeding and flock sheep for the years 1947-48 to 1951-52 compared with the average for the years 1934-35 to 1938-39.

## SHEEP : IMPORTS AND EXPORTS, AUSTRALIA.

10. Consumption of Mutton and Lamb.—For the three pre-war years 1936-37 to 1938-39 the annual production of mutton and lamb averaged 319,000 tons of which 89,000 tons were exported leaving a balance of 230,000 tons (or the carcass equivalent of 74.9 lb. per head per annum) available for consumption.

Civilian consumption of mutton and lamb during the war years rose substantially. This was a direct result of the preference of the Defence Service and export demand for beef and of the system of rationing which was introduced (the coupon rating for mutton and lamb being low compared with beef). Consumption per head fell steeply in 1946-47 and has since been lower than in pre-war years.

In the following table details of the production and disposal of mutton and lamb are shown for the periods stated:—

**PRODUCTION AND DISPOSAL OF MUTTON AND LAMB (BONE-IN WEIGHT) :  
AUSTRALIA.  
( '000 tons.)**

Year.	Changes in Stock.	Pro-duction.	Exports.	For Canning and Dehydra-tion.	Consumption in Aus-tralia as Human Food.

II. Exports of Frozen Mutton and Lamb.—The export trade in mutton and lamb preserved by cold process expanded rapidly up to 1913 when 205 million lb. were shipped. Progress was interrupted during the 1914-18 War and, owing probably to high wool prices, the exports of mutton and lamb for a number of years after were considerably less than earlier shipments. Exports commenced to rise again in 1929-30 and from that year onwards they continued to expand almost uninterruptedly until 1942-43, in which year 203,682,000 lb. of mutton and lamb, valued at £5,495,886, were exported. In earlier years shipments consisted mainly of frozen mutton, but in 1923-24 lamb supplanted mutton and the exports of lamb were largely responsible for the increase in total shipments during the ten years to 1942-43. Due to reduced production as a result of drought conditions and the diversion of supplies to meet the requirements of the Australian and Allied Services based in Australia, there was subsequently a marked decline in mutton and lamb exports, which fell to 56,575,000 lb., valued at £1,540,419, in 1945-46. The maximum quantity exported in the post-war years amounted to 193,092,000 lb. (£7,452,675) in 1949-50. In 1950-51 exports fell steeply to 54,108,000 lb. (£2,684,134) and in 1951-52 to 31,153,000 lb. (£1,918,007), the lowest quantity recorded this century with the single exception of the war year 1917-18.

The quantities and values of exports of frozen mutton and lamb in each year 1947-48 to 1951-52 compared with the average for the five years ended 1938-39 are shown in the following table:—

**EXPORTS OF FROZEN MUTTON AND LAMB : AUSTRALIA.**

Year.	Exports of Frozen Mutton.		Exports of Frozen Lamb.		Exports of Frozen Mutton and Lamb.	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.
	'000 lb.	£	'000 lb.	£	'000 lb.	£
Average, 1934-35 to 1938-39 .. ..	40,584	656,194	153,606	4,208,318	194,190	4,864,512
1947-48 .. ..	19,394	447,278	103,089	3,801,417	122,483	4,248,695
1948-49 .. ..	27,509	651,082	87,355	3,571,091	114,864	4,222,173
1949-50 .. ..	69,744	1,694,984	123,348	5,757,691	193,092	7,452,675
1950-51 .. ..	8,424	289,781	45,684	2,394,353	54,108	2,684,134
1951-52 .. ..	5,507	296,645	25,246	1,621,362	31,153	1,918,007

As with beef, the principal customer in this trade is normally the United Kingdom. In 1951-52 exports of mutton and lamb to the United Kingdom were, however, much lower than usual and only amounted to 16.9 per cent. and 44.4 per cent., respectively, of the total quantities exported.

## § 5. Wool.

1. **General.**—Australia is the leading wool-growing country in the world. With less than one-sixth of the world's sheep Australia produces more than one-quarter of the world's wool and of the total fine-quality merino wool, Australia produces about one-half. The bulk of the production is exported, but with the greater activity of Australian woollen mills the quantity used locally is increasing; the amount (greasy basis) so used represented more than 8 per cent. of the total production in 1951-52 compared with 6 per cent. in 1938-39.

The important position held by Australia among the principal sheep and wool producing countries of the world is shown in the following table. Further particulars of wool production in principal countries and of world production of wool by type are included in paragraph 6, World Wool Production.

### SHEEP AND WOOL : PRINCIPAL PRODUCING COUNTRIES, 1951-52.

Country.	No. of Sheep ('000,000).	Wool Production ('000,000 lb. in terms of greasy).

Union of South Africa .. .. .	34.8	249

(a) Unofficial estimate. Source: Commonwealth Economic Committee and International Wool Textile Organization.

2. **Greasy and Scoured Wool.**—Whether the weight of the wool clip should be stated as “in the grease” or as “scoured and washed” is a matter which seriously affects comparisons between the clips of different seasons and of different countries. The quantity of grease and other extraneous matter in a fleece differs, not only between countries, but between districts in the same country. It fluctuates with the vagaries of the season, and with the breed and the condition of the sheep.

A committee of experts in a report to the Central Wool Committee estimated in 1940 that the clean scoured wool content of the total production of Australia averaged between 51 and 53 per cent. of its greasy weight. The Australian Wool Realization Commission assessed the clean scoured yield of the Australian wool clip in the 1951-52 season as 59 per cent. of the greasy weight.

Wool scoured in Australia by wool-scouring works, however, yields only about 46 per cent. because the grade of greasy wool treated locally for export as scoured includes a large proportion of dirty and low-grade wool.

The quantity of scoured and washed and carbonized Australian wool exported during the five years ended 1951-52 was approximately 29.0 per cent. of the total raw wool exports (excluding wool exported on skins) in terms of greasy.

3. **Production.**—The bulk of the Australian wool production is shorn from live sheep; approximately 6 per cent. is obtained by fellmongering and about 5 per cent. is on skins exported. Statistics of wool production are compiled from data received from growers, fellmongers, etc. The following table shows the production for the five years 1947-48 to 1951-52 compared with average production for the five years ended 1938-39. Particulars of the gross value of wool produced are based in the case of shorn wool upon the average price realized for greasy wool sold at auction and in the case of skin wools on prices recorded by fellmongers and skin exporters.

WOOL : TOTAL PRODUCTION (AS IN THE GREASE).

(a) For year ended previous December.

(b) Estimated.

Production for 1952-53 was 1,300 million lb., valued at £435,000,000 (subject to revision).

4. **Care Needed in Comparing Clips.**—In comparing successive clips allowance must be made for the circumstance that, owing to climatic or other conditions, the time of shearing may be so far delayed in some areas that one clip may include almost thirteen months' growth of wool, while the succeeding one may include little more than eleven months' growth.

5. Average Weights of Fleeces Shorn.—The average weights of sheep and lamb fleeces shorn in each of the States of Australia and the Australian Capital Territory are shown in the following table for each season 1947-48 to 1951-52 compared with the average for the five seasons 1934-35 to 1938-39 :—

## AVERAGE WEIGHT OF SHEEP AND LAMB FLEECES SHORN.

(b) Excludes Northern Territory.

6. World Wool Production.—The following table shows particulars of total production of wool, in terms of greasy, in the principal wool-producing countries of the world, together with estimates of world production of merino, crossbred and carpet type wool for each season 1948-49 to 1951-52 compared with the average for the five seasons 1934-38. The data for countries other than Australia have been taken from reports published by the Commonwealth Economic Committee compiled from questionnaires prepared by the Committee and the International Wool Textile Organization.

In 1951-52 Australia produced 27 per cent. of the world total of all types of wool, the share of the British Commonwealth representing approximately 50 per cent. The principal wool producers, other than Australia, are Argentina with 11 per cent. of the world total, New Zealand, 10 per cent., United States of America, 7 per cent., and Union of South Africa, 6 per cent. Production in the Soviet Union, China and Eastern European countries together amounted to 14 per cent. World production of wool (all types) in 1951-52 was about 200 million lb. (5.3 per cent.) greater than the average for 1934-38.

Australia's wool clip is predominantly merino; New Zealand and Argentina produce mainly crossbred wool, while the clip of the U.S.S.R. (Russia) is largely of the carpet type. While world production of merino wool has declined by about 9 per cent. since pre-war, the production of crossbred types has risen by about 20 per cent. Carpet wool production has risen by about 5 per cent.

**WORLD PRODUCTION OF WOOL.**

(a) Provisional. (b) Includes Basutoland and S.W. Africa Territory. (c) Comprising Soviet Union, Poland, Czechoslovakia, Hungary, Roumania, Bulgaria, Eastern Germany, Albania, China and Dependencies, Outer Mongolia and Tibet.

7. **War-time Contracts.**—(i) *Wool.* Details of the contract entered into between the Governments of Australia and the United Kingdom for the purchase of the surplus wool clip of Australia for the duration of the war and one full clip thereafter (1939-40 to 1945-46) will be found in Official Year Book No. 36, page 1106.

(ii) *Sheepskins.* Details of the war-time contract arrangements for the period April, 1940 to June, 1946 between the Australian and United Kingdom Governments for the purchase of Australia's exportable surplus of woolled sheepskins will be found in Official Year Book No. 37, page 875.

8. **Australian Wool Realization Commission.**—(i) *General.* The accumulation of Dominion wool in the hands of the United Kingdom Government as an outcome of the war-time arrangements and the disposal of these stocks concurrently with future clips were matters for discussion by a conference of officials and experts from the United Kingdom, the Commonwealth of Australia, the Dominion of New Zealand, and the Union of South Africa, held in London in April-May, 1945. At this conference it was

decided that the only sound method of handling the gigantic task of disposing of these stocks was by means of a partnership between the countries concerned, under which the old wool would be marketed and the marketing of the current clip supported throughout the period of disposal of stocks. To ensure that stability of wool prices would be achieved, a reserve price appropriate to type and governed by the general trend of prices, and at which the wool would be bought in if commercial bidding did not attain the appropriate level, was agreed upon.

(ii) *U.K.-Dominion Wool Disposals Limited.* The formation, by the four Governments, of a Joint Organization under the title of "U.K.-Dominion Wool Disposals Limited" (commonly referred to as "J.O.") was, therefore, undertaken for the purposes of buying, holding and selling wool on behalf of the United Kingdom and the Dominion Governments concerned. The Australian Wool Realization Commission was the Australian subsidiary of this organization. An account of the detailed provisions of the plan and of the functions and operations of the Australian Wool Realization Commission was given on pages 921-3 of Year Book, No. 38.

Total stocks of Dominion-grown wool in the ownership of the United Kingdom Government transferred to the Joint Organization at 31st July, 1945, were 10,407,000 bales comprising 6,796,000 bales of Australian-grown wool, 1,777,000 bales of New Zealand-grown wool and 1,834,000 bales of South-African-grown wool.

By the end of 1951 the whole of these stocks had been sold as well as the wool bought in by the Joint Organization at the reserve price. U.K.-Dominion Wool Disposals Limited went into voluntary liquidation on 22nd January, 1952.

Details of the stocks of wool held in Australia by the Central Wool Committee and its successor, the Australian Wool Realization Commission at the end of each year (31st July) from 1940 to 1951 will be found in Official Year Book No. 39, page 924.

Distributions to Australian wool growers on account of the profits arising from the transactions of J.O. in Australian wool were £23.6 million in November, 1949, £23.6 million in March, 1952, and £15.1 million in March, 1953.

(iii) *The-Contributory Charge.* Associated legislation, viz., the Wool (Contributory Charge) Act 1945 (subsequently replaced by the Wool (Contributory Charge) Act (No. 1) 1950-1951 and the Wool (Contributory Charge) Act (No. 2) 1950-1951) and the Wool (Contributory Charge) Assessment Act 1945-1951 provided for a contributory charge to be imposed on all wool produced in Australia and sold, purchased or processed by a manufacturer or exported on or after a date fixed by proclamation. The rate of the charge was to be such percentage as was prescribed from time to time of the sale value of the wool, the percentage being such as was necessary to provide the amounts required to meet the share of the industry in the operating expenses of the Joint Organization, the payment of interest on moneys expended by the Commonwealth in purchases of wool in pursuance of the Disposals Plan and unrecouped, and payment into the Wool Use Promotion Fund, as provided under the Wool Use Promotion Act 1945, of amounts equivalent to the amounts which would have been raised by the Wool Tax had it been operating.

As there was a substantial accumulation of funds collected by way of contributory charge and as the operations of J.O. had virtually ceased, the charge in 1951-52 was limited to a rate (one-eighth of one per cent.) which, it was calculated, would equal the amount which would otherwise have been raised by the Wool Tax for payment into the Wool Use Promotion Fund. The passage of amending Wool Tax legislation in June, 1952 made it possible to cease collection of the contributory charge at 30th June, 1952, and the legislation under which it was imposed was repealed. For further particulars of the Wool Contributory Charge and the amounts collected see Chapter XVII.—Public Finance, page 675.

(iv) *The Wool Tax.* As has been noted above, whilst the contributory charge legislation was in force the Wool Tax, which was imposed by the Wool Tax Act 1936 and the Wool Tax Assessment Act 1936, was not collected. When the Wool Tax was first imposed in 1936, the rate of tax was 6d. per bale, 3d. per fadge or 1d. per bag of wool delivered into the store of a wool dealer or wool selling broker or exported. The proceeds were paid into the Wool Publicity and Research Fund administered by the Australian Wool Board.

When collection of the contributory charge ceased, the Wool Tax again became operative (i.e. from 1st July, 1952) but at a rate of 4s. per bale, 2s. per fadge and 8d. per bag of wool. The new rates were provided for in the Wool Tax Act (No. 1) 1952 and the Wool Tax Act (No. 2) 1952, which also provided that in subsequent years the rate could be prescribed, by regulation, between limits of 2s. per bale and 5s. per bale.

(v) *Wool classified according to Quality.* Under control exercised during the 1939-45 War, records were kept of the classification of each lot of wool appraised according to quality, degree of fault and combing or carding type for each of the years 1940-41 to 1945-46. Since the resumption of auctions in 1946-47 this analysis has been continued by the Australian Wool Realization Commission, but the basis of the data has been changed to the catalogues of auction sales, excluding wool to which Joint Organization's reserves were not applicable, and not upon appraisement as previously. The following table provides a detailed analysis of wool appraised or sold at auction according to quality, for the years 1948-49 to 1951-52 compared with 1940-41, according to the records compiled by the Australian Wool Realization Commission. "Quality" ("64's, 60's, 58's," etc.) is a measure of the fineness and texture of wool for spinning purposes. Broadly, it means the maximum number of hanks of yarn, each of 560 yards length, which can be spun from 1lb. of combed wool. For instance, wool of 64's quality is of a fineness and texture which will produce 64 hanks, each of 560 yards, from 1lb. of tops (combed wool) of that particular wool.

#### CLASSIFICATION OF GREASY WOOL APPRAISED OR SOLD AT AUCTION : AUSTRALIA.

(a) Appraised greasy wool. (b) Greasy wool sold at auction to which Joint Organization's reserves were applicable. (c) All greasy wool sold at auction except "wool re-offered account buyer".

9. *Marketing of Wool.*—(i) *Minimum Reserve Price Plan.* Details of the minimum reserve price plan which was completed by the Governments of Australia, New Zealand, South Africa and the United Kingdom in May, 1951, and which was subsequently rejected at a referendum of wool-growers in Australia will be found in Official Year Book No. 39, page 925.

(ii) *Subsidy on Woollen Goods, 1950-51.* In order to reduce the effects of greatly increased wool prices in the 1950-51 season (see para. 15 following), the Commonwealth Government paid a subsidy on woollen goods manufactured for consumption in Australia

from wool sold during the 1950-51 season. The subsidy was equivalent to about 45d. per lb. of all greasy wool (1950-51 clip) consumed in Australia, the total amount paid being approximately £17,000,000.

10. **Wool Publicity and Research.**—(i) *Wool Use Promotion.* In 1936 the Australian Wool Board was set up to take measures for improving the production and increasing the use of wool. The Board's functions were redefined in the Wool Use Promotion Act 1945 as the promotion, by publicity or other means, of the use of wool throughout the world and the performance of other approved functions for the benefit of the industry.

The Wool Use Promotion Act was further amended in 1953 when the title of the Australian Wool Board was altered to the Australian Wool Bureau and the Bureau's powers were again defined as including measures for improving the production of wool and the encouragement of research in Australia and other countries directed to the promotion of the use of wool.

The Bureau is also authorized to make arrangements with other bodies in Australia and overseas likely to be conducive to promoting the use of wool, improving the production of wool in Australia and encouraging research. By virtue of this power the Bureau is represented on the International Wool Secretariat, which was established in 1937 with head-quarters in London, to promote the use of wool through a broad programme of publicity, education and research. The Wool Boards of New Zealand and South Africa are also associated with the Australian Wool Bureau in the International Wool Secretariat and, through the Secretariat, in partnership with American wool industry representatives, in the Wool Bureau Inc. The Wool Bureau Inc. operates only in North America and has similar functions to the International Wool Secretariat.

The activities of the Australian Wool Bureau are financed from the Wool Use Promotion Fund, into which are paid the proceeds of the Wool Tax.

(ii) *Research.* Until 1945 the Australian Wool Board was responsible for the supervision of economic and scientific research but in that year the Commonwealth Scientific and Industrial Research Organization was made responsible for scientific, technical and biological research into sheep raising and wool production, as well as wool textile research. Economic wool research is the responsibility of the Bureau of Agricultural Economics, a division of the Commonwealth Department of Commerce and Agriculture. The economic research work falls into two main categories, viz., farm production economics dealing with economics of wool growing and sheep-station management generally, and commodity research dealing with the economic aspects of the wool industry in Australia and of wool as a commodity in world trade.

Finance for research is provided from a Wool Research Trust Account into which, since 1945, has been paid annually from the Commonwealth Consolidated Revenue a sum equal to the amount which is raised by the wool tax or its equivalent. In 1952-53 the Commonwealth's contribution to the Wool Research Trust Account was set at 2s. per bale, 1s. per fadge and 4d. per bag of wool on which wool tax was paid—i.e. one-half of the amount raised under the wool tax at its new rate. In addition, expenditure on items of a capital nature for the research programme may be met from the Wool Industry Fund which was constituted as a Trust Account from various moneys accumulated by the Central Wool Committee in war-time.

Ample opportunity is afforded for co-operation, in these research activities, with State Departments of Agriculture and other organizations.

11. **Consumption of Wool.**—(i) *Consumption of Raw Wool.* Statistics of raw wool consumption published in recent years for the purposes of broad international comparisons are based on the quantities of scoured or carbonized wool used on the woollen and worsted systems (mill consumption) plus quantities used in such processes as felting. Consumption estimates compiled on this basis have obvious defects as they disregard oversea trade in semi-processed wool (e.g. tops and yarn) as well as woollen goods. They are, however, comparatively simple to calculate and are useful in providing an approximate indication of trends in wool consumption. Estimates of raw wool consumption on the woollen and worsted systems and by felt manufacturers in Australia are shown below for the years 1938-39 and 1947-48 to 1951-52.

**ESTIMATED CONSUMPTION OF RAW WOOL IN AUSTRALIA.**  
( '000 lb.)

Year.	Greasy Basis.			Clean Basis.		
	Used on woollen and worsted systems.	Used for felt manufacture (including Hats).	Total.	Used on woollen and worsted systems.	Used for felt manufacture (including Hats).	Total.
1938-39 ..	77,947	2,248	80,195	39,599	1,068	40,667
1947-48 ..	121,613	13,376	134,989	67,170	6,354	73,524
1948-49 ..	109,430	13,382	122,812	60,794	6,356	67,150

1950-51 ..	90,801	8,700	99,501	51,307	4,133	55,530
1951-52 ..	72,868	5,548	78,416	42,731	2,635	45,366

(ii) *Consumption of Locally Processed Wool.* As considerable quantities of tops, noils and yarn are exported from Australia, the series on raw wool consumption shown above is over-stated to this extent. The series entitled "Consumption of Locally Processed Wool" published in previous issues of the Year Book provides a more reliable indication of wool consumption in Australia, as allowance has been made for exports of wool in semi-processed form. The series has recently been revised to some extent in respect of methods of calculation (including conversion factors used) and is shown below on the revised basis for the years 1938-39 and 1947-48 to 1951-52. Briefly the series measures consumption of wool in terms of yarn used in Australian mills and other factories to produce woollen cloth and other woollen goods, yarn used for hand knitting purposes (since 1949-50) and scoured wool used for felt manufacture. No allowance has been made for oversea trade in woollen piece goods, clothing, etc., because of the obvious difficulties of accurately estimating the wool content of these products.

**ESTIMATED CONSUMPTION OF LOCALLY PROCESSED WOOL IN AUSTRALIA.**

(a) Includes hand knitting yarns used from 1949-50.

12. *Exports of Wool.*—(i) *Greasy—Quantities.* Prior to the 1939-45 War, Australian greasy wool exported overseas was sent principally to the United Kingdom and other European countries. In 1938-39, 41.9 per cent. of total shipments were sent to the United Kingdom, other important consignees being France, 20.4 per cent., Belgium, 13.1 per cent., and Japan, 9.1 per cent. During the war, exports to the United Kingdom declined and shipments to the European continent and to Japan virtually ceased, while the quantity shipped to the United States of America showed great expansion. Of the total quantity of greasy wool exported overseas during the five years ended 1951-52, 13.0 per cent. was sent to the United States of America and 33.6 per cent. to the United Kingdom. Of the total shipments in 1951-52, 29.0 per cent. went to the United Kingdom, 16.3 per cent. to France, 15.7 per cent. to the United States of America, and 11.7 per cent. to Japan. The following table shows the quantities of greasy wool exported, and the principal countries of recorded destination.

(v) *Total Value of Exports.* The value of wool of Australian origin exported from Australia during the five years ended 1951-52 averaged 52.0 per cent. of the total value of exports of merchandise of Australian origin, and during 1951-52 the proportion was 49.2 per cent. The value during the period under review, together with the principal countries to which wool was exported, is shown in the following table.

**VALUE OF WOOL EXPORTS (AUSTRALIAN PRODUCE).**

13. *Local Sales of Wool.*—In 1946-47 following the cessation of the war-time acquisition scheme which ended with the 1945-46 season, auction sales were resumed in Australia. Sales are conducted at Sydney, Goulburn, Newcastle, Albury, Melbourne, Geelong, Ballarat, Brisbane, Adelaide, Perth, Hobart and Launceston, and are attended by buyers representing manufacturers and merchants in the United Kingdom, France, the United States of America, Japan, U.S.S.R. and many other countries. More than 95 per cent. of the Australian wool clip is now disposed of at auction in Australia.

14. **Stocks of Wool.**—In the following table, stocks of raw wool held in Australia by factories (woollen mills, wool scourers and fellmongeries), brokers and Joint Organization are shown at 30th June, 1948 to 1952. Stocks of wool on skins have been omitted, as wool on skins is not recorded as production until fellmongered in Australia or exported on skins.

(a) Excludes stocks of wool on skins.  
(c) Unsold wool; assumed to be all greasy.

(b) Woollen mills, wool scourers and fellmongeries.

15. **Value.**—Wool is the chief factor in the pastoral wealth of Australia, and the nation's prosperity is largely dependent upon its satisfactory sale. During the three years ended 1951-52 the price of greasy wool sold in the selling centres of Australia averaged 93.4d. per lb. compared with the average United Kingdom contract price of 14.59d. per lb. during the years 1939-40 to 1945-46 and the average selling price of 11.5d. per lb. during the ten years ended 1938-39. The average for the nine years ended 1928-29 was 18d. per lb., and for the seven years ended 1913-14, 9d. per lb. The heavy decline in the price of wool which commenced in 1929-30 continued during the next three years. In 1933-34, prices rose in a remarkable manner, averaging 15.84d. per lb., compared with 8.72d. per lb. for the previous year, an increase of 81.6 per cent. A decline in 1934-35 was succeeded by a period of rising prices in the two years following, but in 1937-38 and in 1938-39 prices again receded.

As mentioned in paragraph 7 above, the price of wool during the 1939-45 War was determined by the British Government wool contract. The price fixed for the years 1939-40 to 1941-42 was 13.4375d. per lb., and for the years 1942-43 to 1945-46, 15.45d. per lb. With the return to auction sales since 1945-46, the average price of greasy wool sold rose to 24.49d. per lb. in 1946-47, 39.50d. per lb. in 1947-48, 48.07d. per lb. in 1948-49, 63.35d. per lb. in 1949-50 and to the unprecedented level of 144.19d. per lb. in 1950-51. This was followed by a sharp fall in 1951-52 to 72.42d. per lb. or to only slightly more than half the price in 1950-51. It was however higher than in any of the years preceding 1950-51.

The effect of fluctuating wool values upon the national income is reflected in the following figures. Based upon appraisal in each State plus certain adjustments as recorded by the State Statisticians, the gross value of wool produced in Australia for

1942-43 amounted to £73,017,000 and for 1943-44 to £75,124,000 compared with £42,043,000 realized during 1938-39 under open market conditions. The value in 1944-45 and 1945-46 declined to £64,894,000 and £58,597,000 respectively, as a result of decreased production. In 1924-25 when the record pre-war price was realized, the value was £81,430,000, and in the year 1930-31, £34,804,000. With the remarkable increases in post-war wool prices, the value of production rose to £96,858,000 in 1946-47, to £158,691,000 in 1947-48, to £201,959,000 1948-49, to £289,905,000 in 1949-50, and to the all time record figure of £651,902,000 in 1950-51. As a result of the marked decline in wool prices in 1951-52 the value of production fell to £322,615,000 or slightly less than half the value recorded in 1950-51.

The following table shows the average auction-room price of greasy wool in Australia for 1938-39 and 1947-48 to 1951-52 as compiled by the National Council of Wool Selling Brokers. This latter price represents the average price realized for all greasy wool of whatever type or quality marketed during the year indicated.

16. **United Kingdom Importation of Wool.**—The important position which Australia occupies in the supply of wool to the United Kingdom is indicated in the following statement of the quantities of wool imported into that country from the principal wool-producing countries during 1938 and each year 1948 to 1952.

**WOOL(a) : IMPORTS INTO UNITED KINGDOM.**

(a) Greasy and Scoured.

Australian wool represented 52.0 per cent. of the total quantity imported into the United Kingdom during the five years ended 1952. New Zealand supplied 27.8 per cent. and South Africa 8.4 per cent., while the total quantity received from British countries constituted 94.2 per cent. of all United Kingdom imports.

17. **Principal Importing Countries and Sources of Supply.**—The following table furnishes in respect of the principal importing countries details of their production and imports of wool for 1952 together with the chief sources of supply. The quantities imported refer to the actual weight of wool without distinguishing between greasy and scoured except in the case of the United States of America where estimated clean content of raw wool is quoted.

**WOOL : PRINCIPAL IMPORTING COUNTRIES AND SOURCES OF SUPPLY, 1952.**  
(Million lb.)

Importing Country.	Pro- duction of Importing Country. (a)	Quantity Imported from(b)—					Total Imports.
		Australia.	Union of South Africa.	Argen- tina.	New Zealand.	Other Countries.	
United Kingdom	88	320.7	64.0	23.8	190.7	96.5	695.7
Belgium .. ..	(c)	70.9	10.5	12.7	14.8	13.6	122.5
France .. ..	35	149.0	33.7	8.4	75.3	19.9	286.3
Germany (Federal Republic) .. ..	15	36.7	24.3	5.8	17.6	28.7	113.1
Italy .. ..	37	91.7	24.0	(d)	17.2	25.4	158.3
Japan .. ..	(c)	123.6	10.4	1.9	4.5	2.6	143.0
United States of America(e) .. ..	259	92.1	24.0	62.4	71.6	117.0	367.1

(a) As in the grease, 1951-52. (b) Actual weight of greasy and scoured wool. (c) Not available. (d) Included, in "Other Countries". (e) Imports are in terms of estimated clean content of greasy and scoured wool. Actual weight of total United States of America imports was 521.9 million lb.

As a considerable transit trade exists between continental countries it must not be assumed that the whole of the imports recorded by these countries are retained for their own consumption. The countries chiefly concerned with the transit trade are the United Kingdom (12 per cent. of total imports re-exported in 1952), Belgium and France.

## § 6. Trade in Hides and Skins.

1. **Extent of Trade.**—In addition to the hides and skins treated locally, considerable quantities are exported: the value of cattle and horse hides, and sheep and other skins, sent overseas during the five years ended 1951-1952 amounted to £84,066,840 or an average of £16,813,368 per annum.

2. **Sheepskins with Wool.**—The exports of sheepskins with wool, aggregating £59,568,175 during these five years, constitute the most important item in the values referred to in the preceding paragraph. During 1938-39 France was the largest purchaser of sheepskins with wool, taking 74 per cent. of the total consignments, while the United Kingdom ranked next with 15 per cent., followed by Germany with 7 per cent. In 1951-52, France obtained 67.5 per cent. of total exports, the United Kingdom 17.1 per cent., and the United States of America 5.4 per cent. The exports of sheepskins with wool during each of the years 1947-48 to 1951-52 compared with the average for the years 1934-35 to 1938-39 were as follows:—

### EXPORTS OF SHEEPSKINS WITH WOOL : AUSTRALIA.

Particulars.	Average, 1934-35 to 1938-39.	1947-48.	1948-49.	1949-50.	1950-51.	1951-52.
Number .. '000	12,000	11,233	11,255	14,919	10,201	10,611
Value .. £	2,779,523	7,420,682	7,339,103	10,876,557	20,773,298	13,158,535

3. **Sheepskins without Wool.**—Up to 1943-44 sheepskins without wool were exported chiefly to the United States of America. During the year mentioned this country accounted for 97 per cent. of the total shipments while the remaining 3 per cent. were exported to the United Kingdom, Canada and the U.S.S.R. There has, however, since been a decline in shipments to the United States of America and an increase in the quantities shipped to the United Kingdom and other countries; in 1951-52 the United States of America received 65 per cent. of total shipments; the United Kingdom 32 per cent. and other countries 3 per cent. Quantities and values for the five years 1947-48 to 1951-52 compared with the average for the years 1934-35 to 1938-39 are shown in the table hereunder:—

**EXPORTS OF SHEEPSKINS WITHOUT WOOL : AUSTRALIA.**

Particulars.	Average, 1934-35 to 1938-39.	1947-48.	1948-49.	1949-50.	1950-51.	1951-52.
Number .. '000	808	907	814	3,441	3,000	1,454
Value .. £	69,600	148,675	107,667	826,110	1,272,096	517,887

4. **Hides.**—(i) *Exports.* The export trade in cattle hides during 1951-52 was distributed as follows:—Japan, £231,065; United Kingdom, £193,655; Turkey, £179,927; Netherlands, £102,919; Italy, £81,780; and other countries, £319,812.

The exports during each of the five years 1947-48 to 1951-52 compared with the average for the years 1934-35 to 1938-39 are shown in the table below:—

**EXPORTS OF CATTLE HIDES : AUSTRALIA.**

Particulars.	Average, 1934-35 to 1938-39.	1947-48.	1948-49.	1949-50.	1950-51.	1951-52.
Number .. ..	956,552	101,681	270,514	272,197	210,871	177,916
Value .. £	791,730	312,562	1,177,040	1,340,471	1,344,533	1,109,158

Calfskins exported during the five years ended 1951-52 numbered 43,044, valued at £35,027. Exports of horse hides during the same period numbered 233,989, valued at £854,173.

(ii) *Imports.* The imports of cattle hides and calfskins are fairly large, the chief sources of supply being New Zealand and the Pacific Islands. The quantities and values of cattle hides, including calfskins, imported into Australia during the years 1947-48 to 1951-52 compared with the average for the years 1934-35 to 1938-39 were as follows:—

**IMPORTS OF CATTLE HIDES AND CALFSKINS : AUSTRALIA.**

Particulars.	Average, 1934-35 to 1938-39.	1947-48.	1948-49.	1949-50.	1950-51.	1951-52.

<b>Total ..</b>	<b>1,358,462</b>	<b>529,742</b>	<b>6,115</b>	<b>37,614</b>	<b>1,931,933</b>

6. **Marketing of Hides and Skins.**—(i) *Sheepskins with Wool.* Details of the war-time agreement between the United Kingdom and Commonwealth Governments for the purchases by acquisition of the "exportable surplus" of woolled sheepskins in Australia were given in Official Year Book No. 37, page 886. The contract expired on 30th June, 1946, and sheepskins are marketed at open auction.

(ii) *Sheep and Lamb Pelts.* Details of the marketing control of sheep and lamb pelts were given in Official Year Book No. 38, page 930. Pelts have reverted to open marketing without export restrictions.

(iii) *Hides and Leather.* A hide acquisition and marketing scheme has been in operation since November, 1939. Until 31st December, 1948, the scheme operated under the National Security Regulations. Since 1st January, 1949, it has continued under a Commonwealth Act and six supporting State Acts.

The Australian Hide and Leather Industries Board, which administers the scheme, acquires all cattle hides and yearling and calf skins at prices from 15 per cent. to 20 per cent. above August, 1939 levels, and these are allocated to tanners at these prices. Surplus hides are disposed of by tender or open auction. The Board retains the amounts realized in excess of appraised values, and supplements the price to the producers in cases where the realized amount is less than the appraisement values.

Pre-war, about 40 to 45 per cent. of Australian production was exported, but with the development of the local tanning industry, the proportion is approximately 12½ per cent.

Returns from export sales of hides and deferred payments levied on leather exported, based on the difference between world and Australian prices for the hides involved, are paid into a fund by the Board. From this fund, premiums are paid to producers as a proportion of appraised values. These premiums compensate hide producers to some extent for the margin between local and oversea prices. Further details of the war-time operations of the scheme will be found in Official Year Book No. 37, page 387 and Official Year Book No. 38, pages 930-1.

(iv) *Rabbit Skins.* A marketing control scheme for rabbit skins was introduced under the National Security (Rabbit Skins) Regulations on 10th June, 1940 and terminated in April, 1949. Details of the scheme will be found in Official Year Book No. 38, page 931.

### § 7. Tallow.

1. **Production.**—Australia's production of tallow is in excess of local requirements and considerable quantities are normally available for export. The recorded production in factories is incomplete as production in establishments which do not come within the definition of a factory is excluded. Details of production of tallow have also been collected on a calendar year basis from slaughtering establishments up to 1951. These have also proved defective in certain respects and, as a result, the table appearing in previous issues of the Official Year Book has been deleted until more complete information becomes available.

2. **Consumption in Factories.**—Details of consumption are collected from the principal factories using tallow (soap and candle, chemical and woolscouring works). Total consumption of tallow in factories as shown in the table below for the years 1938-39 and 1947-48 to 1951-52 is however deficient to the extent that no allowance is made for the small unrecorded amounts used in other types of establishments.

#### TALLOW : CONSUMPTION IN FACTORIES, AUSTRALIA. (cwt.)

Year.	Quantity Used.	Year.	Quantity Used.
1938-39.. ..	539,095	1949-50 .. ..	1,063,194
1947-48.. ..	946,279	1950-51 .. ..	1,217,027
1948-49.. ..	1,054,040	1951-52 .. ..	1,205,307

3. **Exports of Tallow.**—Particulars of exports of edible and inedible tallow are shown in the following table for the five years 1947-48 to 1951-52 in comparison with the average for the five years ended 1938-39.

#### TALLOW : EXPORTS, AUSTRALIA. (cwt.)

Particulars.	Average, 1934-35 to 1938-39.	1947-48.	1948-49.	1949-50.	1950-51.	1951-52.
Edible .. ..	(a)	38,324	59,106	73,663	26,022	25,833
Inedible .. ..	606,934	68,537	142,179	348,214	260,569	126,618
Total .. ..	(a)	106,861	201,285	421,877	286,591	152,451

(a) Not available.

4. **Marketing.**—Until 30th September, 1952 the bulk of Australia's exportable surplus tallow, other than collar white mutton tallow, was sold to the United Kingdom Ministry of Food under a series of annual contracts. The 1951-52 contract was not renewed and soon afterwards tallow export control was removed following termination of the industry's equalization pool arrangement and price de-control in most States.

Price control on tallow now operates only in Queensland and there are no restrictions on the export of tallow to any destination from any part of Australia.

## CHAPTER XX.

## AGRICULTURAL PRODUCTION.

NOTE.—Values of Australian oversea trade shown throughout this chapter are expressed as £A. f.o.b. Port of Shipment, except where otherwise indicated.

## § 1. Introductory.

In general, statistics in this chapter relating to agricultural production are derived from "census" returns supplied by farmers (approximately 244,000 in 1951-52) who utilize one acre or more of land for agricultural or pastoral purposes. The returns are collected by the Statisticians of each State and by the Commonwealth Statistician in respect of the Australian Capital Territory. Particulars for the Northern Territory have not been available in recent years. The returns are collected on a substantially uniform basis in all States at 31st March each year and relate to areas sown and crops produced in the previous twelve months. Where harvests are not completed by March (e.g. potatoes) provision is made in some States for a special collection after the harvest is completed and in others for the inclusion of the total estimated yield expected from the complete harvest. In cases where additional data are available from marketing authorities or other sources, these are used in conjunction with the "census" returns. Except where otherwise stated the "agricultural" years hereafter mentioned are taken as ending on 30th June.

## § 2. Progress of Agriculture.

1. **Early Records.**—In an "Account of Live Stock and Ground under Crop in New South Wales, 19th August, 1797", Governor Hunter gives the acreage of crops as follows:—Wheat, 3,361 acres; maize, 1,527 acres; barley, 26 acres; potatoes, 11 acres; and vines, 8 acres.

At a muster taken in 1808 the following was the return of crops:—Wheat, 6,874 acres; maize, 3,389 acres; barley, 544 acres; oats, 92 acres; peas and beans, 100 acres; potatoes, 301 acres; turnips, 13 acres; orchards, 546 acres; and flax and hemp, 37 acres.

A brief reference to the attempts at cultivation by the first settlers in New South Wales and to the discovery of suitable agricultural land on the Parramatta and Hawkesbury Rivers prior to the year 1813 and west of the Blue Mountains thereafter is contained in early issues of the Official Year Book. (*See No. 22, p. 670.*)

By the year 1850 the area of crops had increased to 491,000 acres, of which 198,000 acres were cultivated in what is now the State of New South Wales, and 169,000 acres in Tasmania. At the end of 1850 the area under cultivation in Victoria, which was then the Port Phillip District of New South Wales, was 52,190 acres.

The gold discoveries of 1851 and subsequent years had at first a very disturbing effect on agricultural progress, the area of crops declining from 491,000 acres in 1850 to 458,000 acres in 1854. The demand for agricultural products occasioned by the large influx of population was, however, soon reflected in the increased area cultivated, for at the end of 1858 the land under crop in Australia exceeded a million acres.

2. **Progress of Cultivation.**—The following table shows the area of crops in each of the States and Territories of Australia at decennial intervals since 1860 and during each of the eleven seasons ended 1951-52, and on page 875 there is a graph showing the area of crops in Australia from 1860 onward.

## AREA OF CROPS.

('000 Acres.)

Season.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	N.T.	A.C.T.	Australia

(a) Not available.

The progress of agriculture was practically uninterrupted from 1860 to 1915-16, when, as the result of a special effort to raise wheat during the 1914-18 War, 18.5 million acres were cultivated in Australia. Four years later the area of crops declined to 13.3 million acres owing to the accumulation of wheat stocks consequent upon the difficulty of securing freight space during the war years. After the termination of hostilities the area again began to expand and rose steadily to a new maximum of 25.2 million acres in 1930-31. Thereafter the slump in wheat prices seriously depressed the agricultural industry and the area of crops receded to just under 20 million acres in 1935-36. Subsequently the area increased and reached a maximum of 23.5 million acres in 1938-39. Thereafter it declined to less than 16 million acres in 1943-44, rising in each succeeding year up to and including 1947-48, when the area of crops amounted to 22.3 million acres. This upward trend was reversed in 1948-49, the area of crops declining in that year and each succeeding year to 19.8 million acres in 1951-52. As the area under wheat in Australia constitutes a large proportion of the total areas cropped (55 per cent. during the ten years ended 1951-52), fluctuations in the latter follow broadly the same pattern as changes in wheat areas.

3. **Area under Sown Pastures.**—In all the States there are considerable areas of grasses mainly sown on land from which scrub has been cleared or on land which it is desired to rest from cultivation. These areas, which are not included in "area of crops", have expanded from about 5.3 million acres in 1929-30 to about 18.6 million acres in 1951-52.

4. **Australian Agricultural Council.**—Arising out of a conference of Commonwealth and State Ministers on agricultural and marketing matters held at Canberra in December, 1934, a permanent organization known as the Australian Agricultural Council was formed. The Council consists of the Commonwealth Ministers for Commerce and Agriculture and for Territories, and the State Ministers of Agriculture, with power to co-opt the services of other Commonwealth and State Ministers as required. The principal functions of the Council are:—(i) the promotion of the welfare and development of agricultural industries generally; (ii) exchange of information on agricultural production

and marketing; (iii) the improvement of the quality of agricultural products and the maintenance of high grade standards; (iv) to ensure, as far as possible, balance between production and available markets; and (v) organized marketing, etc.

In addition, a permanent technical committee known as the Standing Committee on Agriculture was formed to act in an advisory capacity to the Council. Its functions, in addition to advising the Agricultural Council on the above-mentioned matters, include the following:—(i) to secure co-operation and co-ordination in agricultural research throughout Australia; (ii) to advise the Commonwealth and State Governments, either directly or through the Council, on matters pertaining to the initiation and development of research on agricultural problems; and (iii) to secure co-operation between the Commonwealth and States and between the States in respect of quarantine measures relating to pests and diseases of plants and animals, and to advise the Commonwealth and State Governments. The personnel of this Committee consists of the permanent heads of the State Departments of Agriculture, members of the Executive Committee of the Commonwealth Scientific and Industrial Research Organization, the Commonwealth Director-General of Health, the Secretary, Department of Commerce and Agriculture, the Secretary, Department of Territories and a representative of the Commonwealth Treasury. The Council and the Standing Committee meet normally two or three times a year according to the nature and urgency of the problems to be discussed.

At the 36th Meeting of the Council held in Canberra in April, 1952, a programme of expansion of rural industries was unanimously approved by members. As a first stage quantitative production aims to be achieved over a period of five years, the target date being 1957-58, were set for the major rural products. These were set having regard to methods of production and conditions on farms existing at the time the programme was approved and do not represent a maximum level of production to be achieved, but rather suggest a balanced expansion between different commodities within the limits of physical capacity and the avenues in which production should be increased so as to contribute to the best development of rural industries in the national interest.

The production aims were based on the following general assumptions:—

- (1) That Commonwealth and State Governments will continue their efforts to expand agricultural production by increasing their extension or advisory services to farmers, by special grants for research purposes and by such incentives as special taxation depreciation allowances for primary producers;
- (2) That supplies of farm machinery, farm materials, fertilizers and labour will be adequate;
- (3) That work on land development schemes including irrigation projects, will be intensified;
- (4) That seasonal conditions are reasonably satisfactory over the next five years;
- (5) That the relative prices of individual rural commodities will be such that there will be no undue incentive to the production of any one commodity at the expense of another (such as occurred in the case of wool particularly in 1950-51);
- (6) That the price of each individual commodity will be regarded as attractive;

Details of the 1957-58 production aims for the principal rural products as agreed on by the Council compared with actual production in 1951-52 are shown in the following table.

**RURAL PRODUCTION 1951-52 AND PRODUCTION AIMS SET FOR 1957-58. BY THE  
AUSTRALIAN AGRICULTURAL COUNCIL**

(a) Excludes Northern Territory, details for which are not available. (b) Excludes 41,115 acres<sup>8</sup> of pasture land sown to lucerne and 193,064 acres sown to oats, for grazing. (c) Excludes 129,608 acres of pasture land sown to lucerne for grazing. (d) Not available. Included in "All Other Crops". (e) Not available. Included in "Other Grass Seed". (f) Incomplete. See footnotes to individual States. (g) Not available for publication. Included in "All Other Crops".

2. Relative Areas of Crops in States and Territories.—The proportion of each of the crops cultivated to the extent of over 100,000 acres in the various States and Territories to the total area of crops for the season 1951-52 is shown in the next table. Similar details for the season 1950-51 appear in *Primary Industries Bulletin* No. 45, Part I.—*Rural Industries*. In four of the States, namely, New South Wales, Victoria, South Australia and Western Australia, wheat-growing for grain is by far the most extensive crop. In Queensland the most extensive crops are wheat, green fodder and sugar-cane, and in Tasmania, green fodder, hay and potatoes.

As pointed out previously, wheat is the main crop in Australia, the area thereof, for grain only, representing more than 50 per cent. of the total area of crops in 1951-52.

## RELATIVE AREAS OF CROPS, 1951-52.

(Per cent.)

Crop.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	A.C.T.	Aust.(a)

(a) Incomplete. Market gardens and pulse only.

4. **Weights and Measures.**—The production of agricultural commodities in Australia is recorded in terms of either capacity or weight. When measured in terms of capacity the unit is the bushel of 2,218.192 cubic inches or gallon of 277.274 cubic inches. When measured in terms of weight, the unit adopted is either the long ton of 2,240 lb. (except in the case of flour, bran and pollard, when the short ton of 2,000 lb. is used), the hundred-weight (cwt.) of 112 lb. or pound (lb.).

The production of cereals and fruit is recorded in bushels, the production of wine in gallons, while hay, vegetables, grapes and industrial crops are measured by weight, generally in terms of long tons or cwt.

The standard weights adopted per bushel for the more important cereals, are as follows:—rye, sorghum and wheat 60 lb.; barley, 50 lb.; maize, 56 lb.; oats, 40 lb.; and rice 42 lb. Several types of cases are used for fruits, but in determining average weights a bushel case with a capacity of 2,223 cubic inches has been adopted. The packed weight of a bushel of fruit also is subject to considerable variation according to the kind and variety of fruit. The weights adopted per bushel for the more important fruits were as follows:—Apples, pineapples and grapefruit, 42 lb.; apricots, cherries, oranges, mandarins and lemons, 48 lb.; bananas, 56 lb.; papaws, 24 lb.; peaches and pears, 45 lb.; and plums and prunes, 58 lb.

Data compiled by the State Departments of Agriculture made available to this Bureau were used in determining these average weights.

5. **Production of Crops in States and Territories.**—The following table shows production of crops in the various States and the Australian Capital Territory for the season 1951-52:—

9. Value of Production and Indexes of Price and Quantity of Production.—(i) *Gross and Net Values, 1950-51 and 1951-52.* Uniform methods for arriving at the gross and net values of production in the various States were determined at a Conference of Statisticians held in March, 1935. The returns for the year 1933-34 and subsequent years have been valued on the new basis, and a revaluation was made for the years back to 1928-29. A more detailed reference to the value of production of agriculture and other industries in Australia as well as a brief explanation of the terms used will be found in Chapter XXIX.—Miscellaneous.

In computing the net value of production no deduction has been made for the cost of maintenance of farm buildings and fences, nor for the depreciation of farm plant, consequently, the figures stated are inflated to that extent.

GROSS, FARM AND NET VALUES OF AGRICULTURAL PRODUCTION, 1950-51  
AND 1951-52.  
(£'000.)

## § 4. Wheat.

1. **Royal Commission on the Wheat Industry.**—A Royal Commission was appointed in January, 1934, to inquire into and report upon the economic condition of the industries of growing, handling and marketing wheat, and the manufacturing, distributing and selling of flour and bread. A searching inquiry was made by the Commission and the results of its investigations were submitted in a series of five reports. The first and second reports covered the wheat-growing industry, the third that of baking, the fourth the flour-milling industry, while the fifth, completed in February, 1936, dealt with the history of the Commission's investigations and traversed the principal recommendations submitted.

2. **Wheat Costs of Production Committee.**—A Wheat Costs of Production Committee was appointed by the Commonwealth Government in February, 1947, to enquire into and report upon :—(i) the reasonable costs of production of wheat per bushel in Australia's main wheat-growing districts, and (ii) whether basic items of cost could be established as an index to periodical variations in costs of the production of wheat. The Committee in its report to the Commonwealth Government in March, 1948, found that the cost of growing wheat in the Commonwealth was 6s. per bushel at sidings and advised that basic items of cost could be established as an index to periodical variations in wheat production costs.

3. **Licensing of Areas Sown to Wheat, and Acreages Sown.**—Details of the operations of the Wheat Stabilization Board in licensing wheat growing during the seasons 1941-42 to 1948-49 will be found in Official Year Book No. 38, pp. 940, 941. The Board ceased to function on 31st December, 1948.

4. **Legislation relating to Wheat Industry.**—(i) *Financial Assistance to Wheat Growers.* Reference to financial assistance during 1950-51 and 1951-52 will be found in § 23, Financial Assistance to Primary Producers, hereafter. Details of financial assistance rendered by the Commonwealth Government prior to 1950-51 appear in Official Year Books No. 37, No. 38 and No. 39.

(ii) *Stabilized Marketing.* A detailed survey of legislation relating to stabilization of the wheat industry, including controls exercised during the 1914-18 and 1939-45 Wars and legislation establishing the permanent Wheat Stabilization Plan in 1948, were given in the Appendix to Official Year Book No. 37 (pp. 1295-99).

(iii) *Wheat Stabilization Plan.* Briefly, the principal provisions of the Wheat Stabilization Plan, which is operated by the Australian Wheat Board conjointly with State Wheat Boards and similar authorities nominated by State Governments, are as follows :—

- (a) The Commonwealth Government has guaranteed a price for wheat grown and delivered to the Australian Wheat Board or other approved organizations for each season 1947-48 to 1952-53.
- (b) The price guaranteed was 6s. 3d. per bushel f.o.r. ports, bulk basis (this being related to costs of producing wheat in the 1947-48 season), subject to variation, as agreed upon by the Commonwealth Minister for Commerce and Agriculture in consultation with the appropriate State Ministers, in accordance with variations in the cost of producing wheat in subsequent seasons. Following reviews of wheat production costs, the guaranteed price was increased to 6s. 8d. per bushel f.o.r. ports, bulk basis for the 1948-49 season and to 7s. 1d. per bushel for the 1949-50 season. For the 1947-48 and 1948-49 seasons the price of wheat fixed for home consumption was the guaranteed price of 6s. 3d. and 6s. 8d. per bushel respectively, but for the 1949-50 season it remained unchanged from the previous year at 6s. 8d. per bushel. The additional 5d. per bushel payable to growers for wheat for home consumption in 1949-50 was met by subsidy provided by the Commonwealth Government. For the 1950-51 season the subsidy was withdrawn and the guaranteed and home consumption prices fixed at 7s. 10d. per bushel (f.o.r. ports, bulk basis).

- (c) The guaranteed price applies in respect of the export from any one season's crop up to a maximum of 100,000,000 bushels.
- (d) A Wheat Prices Stabilization Fund has been established by means of a tax on wheat exported. The tax applies when the export price is greater than the guaranteed price, the rate of tax being 50 per cent. of the difference between the two but not exceeding 2s. 2d. per bushel.
- (e) The Stabilization Fund will be drawn upon as required to meet the guaranteed price when this exceeds the export price. If amounts held in the Fund are at any time insufficient for this purpose, the deficiency will be provided by the Commonwealth Government from Consolidated Revenue.

(iv) *The Australian Wheat Board and the Stabilization Fund.* The Australian Wheat Board, as reconstituted under the Commonwealth Wheat Industry Stabilization Act 1948, commenced to perform its functions under the Act on 18th December, 1948.

The provisions of the Commonwealth Wheat Stabilization Plan relating to the levy of a tax on wheat exported and the establishment of a Stabilization Fund were implemented by the Commonwealth Government under legislation passed in 1946 and in 1948. Contributions to the Fund from the 1949-50, 1950-51 and 1951-52 harvests were approximately £15,000,000, £11,000,000 and £8,400,000 respectively. The 1949-50 harvest contributions were refunded to growers in August, 1952. No contributions were made to the Fund from the 1952-53 harvest.

5. *Marketing of Wheat.*—(i) *General.* On page 908 of Official Year Book No. 37 an outline was given of the circumstances leading up to the establishment by the Commonwealth Government on 21st September, 1939 of the Australian Wheat Board, under the National Security (Wheat Acquisition) Regulations.

(ii) *Australian Wheat Board.* Under the Wheat Acquisition Regulations the Board was empowered, subject to directions of the Minister for Commerce and Agriculture, to purchase, sell or dispose of wheat or wheat products, manage and control all matters connected with the handling, storage, protection, shipment, etc., of wheat acquired, and such other matters necessary to give effect to the regulations under which it was created. The Australian Wheat Board was reconstituted and vested with similar powers under the Commonwealth Wheat Stabilization Act 1948, for the purpose of administering the Wheat Stabilization Plan (see paragraph 4 (iii) above). The reconstructed Board commenced operations on 18th December, 1948.

(iii) *Wheat Acquired and Disposed of.* (a) *Wheat Acquired.* Particulars of wheat acquired by the Australian Wheat Board from the 1942-43 to 1951-52 harvests are shown in the following table :—

AUSTRALIAN WHEAT BOARD : WHEAT ACQUIRED, 1942-43 TO 1951-52.

**6. International Wheat Agreement.**—Following a series of unsuccessful attempts extending over a period of years to secure an arrangement for the stabilization of international trade in wheat, an International Wheat Agreement was signed in Washington, D.C., United States of America, on 6th March, 1948, by 33 importing nations and the three exporting countries of Canada, United States of America and Australia. However, principally owing to the failure of the Government of the United States of America to ratify the Agreement within the prescribed time, it was allowed to lapse.

A further International Wheat Agreement was signed in Washington in March and April, 1949 by the representatives of 41 nations, comprising all the important wheat importing countries excluding Germany and Japan and the wheat exporting countries of Canada, United States of America, Australia, France and Uruguay. The 1949 Agreement was similar to that proposed in 1948, its stated objectives being "to assure supplies of wheat to importing countries and markets for wheat to exporting countries at equitable and stable prices".

The Agreement covered a period of four years from 1st August, 1949 to 31st July, 1953, with provision for extension beyond that date, if desired. Under its terms, the exporting countries participating in the Agreement were to sell specified minimum quantities of wheat each year if required by importing countries to do so at the maximum price quoted in the Agreement, while the importing countries were obliged to buy specified quantities if required by the exporter at the minimum price quoted for the relevant year. Expressed in Australian currency equivalent, the maximum price in respect of transactions under the Agreement was approximately 16s. 6d. per bushel (including 5d. per bushel carrying charge) for each year, while minimum prices ranged from 13s. 5d. per bushel in 1949-50 to 10s. 9d. per bushel in 1952-53.

The export and import quotas originally specified in the Agreement, totalling 456.3 million bushels, were subsequently varied because of—(i) the withdrawal of certain countries from participation in the Agreement (Uruguay as an exporter, and China, principally, of the importing countries), and (ii) the admission of new members to the Agreement. The principal new participants were Germany (from late 1949) and Japan (from 1951-52), for which the United States of America originally accepted responsibility for wheat supplied outside the provisions of the Agreement.

The adjusted quotas for 1951-52 initially totalled 580.9 million bushels, but because Australian supplies in that year were inadequate to meet commitments, her quota was reduced from 88.7 million bushels to 72.0 million bushels and the total quota was reduced to 572.8 million bushels. The table below shows guaranteed sales and purchases and actual transactions recorded during 1951-52.

**INTERNATIONAL WHEAT AGREEMENT: GUARANTEED ANNUAL SALES AND PURCHASES AND TRANSACTIONS RECORDED FOR 1951-52.**

(a) Wheat and wheat flour as wheat.

A further agreement covering a period of three years from 1st August, 1953 to 31st July, 1956 was signed in Washington in April, 1953 by all member countries of the 1949 Agreement except the United Kingdom. It was decided that Australia's export quota under the new Agreement should be 48 million bushels.

7. **Wheat Farms.**—(i) *Number.* Particulars of the number of farms growing 20 acres and upwards of wheat for grain during each of the years 1947-48 to 1951-52, compared with the average for the five years ended 1938-39, are shown in the following table. It should be noted that a farm worked on the share system or as a partnership is included as one holding only.

**NUMBER OF FARMS GROWING 20 ACRES AND UPWARDS OF WHEAT FOR GRAIN.**

(a) Excludes Australian Capital Territory.

(ii) *Special Tabulations relating to Wheat Holdings.* With the co-operation of State Statisticians, a series of special tabulations relating to rural holdings was undertaken for all States for the year 1949-50. The tabulations, which covered, *inter alia*, a series

of size classifications of wheat farms, have been published in detail in *Primary Industries Bulletin*, 1949-50, No. 44. A similar tabulation was made for the year 1947-48, a summary of the results being published in *Production Bulletin* No. 42, Part II.—*Primary Industries* and Official Year Book No. 38, page 947.

8. Area, Production and Average Yield.—(i) *Area*. Wheat is the principal crop raised in Australia, and its progress since 1860 has been almost continuous. Prominent features in its early development were the increase in population following the discovery of gold and the redistribution of labour after the surface gold had been won. The economic depression of 1893 interrupted its progress, but its subsequent recovery was assisted by the invention of mechanical appliances, the use of superphosphates as an aid to production, and the introduction of new and more suitable varieties for Australian conditions. The establishment of closer settlement schemes and the settling of returned soldiers and others on the land were additional factors in its expansion. The most serious interruptions in more recent years were those occasioned by the two World Wars and the economic depression of the early 'thirties.

As previously mentioned, any variation in the acreage sown to this cereal materially affects the total area of crops. The area, production and average yield per acre of wheat for grain in each State are shown below for the years 1947-48 to 1951-52 in comparison with the averages for the decennial periods ended 1938-39 and 1950-51:—

(a) 60 lb. per bushel.

A graph showing the expansion of the area sown to wheat for grain in Australia since 1860 appears on page 875 while a map showing the distribution of areas growing wheat for grain throughout Australia in 1947-48 appeared on pp. 977-8 of issue No. 39. Similar maps showing the distribution of wheat areas in 1924-25 and 1938-39 appeared in Official Year Book No. 22, p. 695, and Official Year Book No. 34, p. 451, respectively.

(ii) *Production.* Apart from the variations in the area sown, the size of the wheat harvest in Australia is largely determined by the nature of the season and inconsistencies in this respect are reflected in the yearly production.

It should be noted, however, that with improved farming methods, including the proper tillage of the soil, rotation of crops, the growing of suitable varieties and the application of fertilizers, average yields per acre during five decades to 1951 have shown a continued improvement.

The main wheat-producing States of Australia are New South Wales, Victoria, South Australia and Western Australia. Queensland production normally approaches local demands, but Tasmania imports from the mainland to satisfy its needs, though partly in exchange it ships flour made from local wheat which is particularly suitable for biscuits. Normally the production of wheat greatly exceeds Australian requirements, and from half to three-quarters of the crop is exported overseas.

Australia's wheat production in 1951-52 was 159.7 million bushels, representing an average yield of 15.38 bushels per acre. This was 3.9 million bushels more than the average for the decennium ended 1950-51 and 9.7 million bushels less than the average for the ten years ended 1938-39.

(iii) *Average Yield.* Short-term variations in this are due chiefly to the vagaries of the seasons. The best average yields per acre for single seasons since 1901 were obtained in 1920-21, 16.08 bushels; in 1942-43, 16.78 bushels; and in 1949-50, 17.83 bushels. The average yield obtained for the 1951-52 season was 15.38 bushels.

(iv) *Decennial Averages, 1861-70 to 1943-52.* The following table shows the average area, production and yield per acre for decennial periods since 1861.

#### WHEAT FOR GRAIN : AVERAGE AREA AND PRODUCTION, AUSTRALIA.

Decennium.	Area.	Production.	Yield per Acre.
	'000 Acres.	'000 Bushels.	Bushels.
1861-70 .. .. .	831	10,622	12.77

9. *Varieties of Wheat Sown.*—(i) *General.* The breeding of wheat suitable to local conditions has long been established in Australia. Farrar (1845-1905) did invaluable work in pioneering this field and the results of his labour and the continued efforts of those who have since followed him have proved of immense benefit to the wheat industry of Australia. Their efforts have resulted in better average yields, a greater uniformity of sample, with which has accrued certain marketing advantages, as well as an improvement in the quality of wheat grown. More than 1,000 different varieties of Australian wheats have been catalogued by the Commonwealth Scientific and Industrial Research Organization, but the number of the principal varieties grown during each season is restricted to about 40.

(ii) *States, 1951.* Details of the principal varieties of wheat sown in 1951 in the five main producing States and the proportion each bears to the total area sown are given in the following table.

**WHEAT : PRINCIPAL VARIETIES SOWN FOR ALL PURPOSES. 1951.**

(a) Wheat sown for grain and hay only.  
"not stated."

(b) Wheat sown for grain only.

(c) Includes

10. **F.A.Q. Standard of Wheat.**—The Chambers of Commerce in each of the four main wheat States each year determine the "f.a.q." standard for the State. "F.a.q." means "fair average quality", and the standard is used as the basis for sales of the season's crop. It represents the average quality for the season, and this average varies from year to year, and from State to State. "F.a.q." is an Australian term, and the method differs from that of other countries which sell according to sample, or (as in Canada) according to grades which are fixed, and do not vary from year to year.

Samples of wheat are obtained by the Chambers of Commerce from the different wheat districts, and are mixed to give a representative sample of the whole crop. From this representative sample the f.a.q. weight is determined by the use of the Schopper 1-litre scale chondrometer.

The f.a.q. weight of a bushel of wheat used in each of the four main wheat-producing States for the 1952-53 season's crop was as follows (1951-52 details in parentheses)—New South Wales, 64 lb. (63 lb.); Victoria, 64½ lb. (64 lb.); South Australia, 63½ lb. (63 lb.); and Western Australia, 64¾ lb. (62½ lb.).

11. **Price of Wheat.**—(i) *Home Consumption.* The price charged by the Australian Wheat Board for wheat sold to millers for gristing into flour for consumption in Australia and for wheat sold as stock feed is shown in the table below for the years indicated.

**AUSTRALIAN WHEAT BOARD'S PRICE FOR WHEAT FOR HOME CONSUMPTION :  
AUSTRALIA.**

(s. d. per Bushel, Bulk Basis.)

Particulars.	1947.	1948.	1949.	1950.(a)	1951.	1952.	1953.
For Flour ..	(b) 3 11	6 3	6 8	6 8	7 10	10 0	11 11
For Stock Feed ..	4 11	6 3	6 8	6 8	7 10	(c)12 0	(c)13 11

(a) Excludes 5d. per bushel subsidy paid by the Commonwealth Government, making the total return to growers 7s. 1d. per bushel, bulk basis. (b) Excludes 1s. per bushel recovered from Flour Tax and included in advances to growers. (c) Excludes subsidy of 4s. 1d. in 1952 and 2s. 2d. in 1953 paid by the Commonwealth Government. In Western Australia the price in 1952 was 10s., exclusive of subsidy.

(ii) *Export Wheat Prices—Australian Wheat Board's Basic Selling Price.* Details of the export wheat prices are given in the table below for the years stated. Owing to changes which have occurred in the manner of selling export wheat, it is not possible to quote prices on a strictly comparable basis throughout the period covered by the table. The prices for 1939 represent the "weighted average shippers' limits f.o.r. ports for growers' bagged and bulk lots, Sydney, Melbourne and Adelaide." Following the acquisition of the 1939-40 and later wheat crops by the Commonwealth Government, it was no longer possible to record prices on this basis. The prices shown below for the years 1946 to 1951 are the basic export selling prices of the Australian Wheat Board. The quotations are more or less nominal, as the market is "broad" and wheat is sold at times above and below this basic price, depending upon conditions of sale. Much of the wheat is sold at prices fixed under contract for delivery over lengthy periods.

As from August, 1949, under the terms of the International Wheat Agreement, Australia has undertaken to sell, if required, 80.8 (subsequently increased to 88.7, but for the year 1951-52, because of the small harvest, reduced to 72.0) million bushels per year (August to July) to contracting importing countries. After commitments

under the International Wheat Agreement have been met, Australia is free to sell any additional wheat available at any price which may find a market. It has therefore become necessary since August, 1949, to distinguish between the prices applicable to wheat for sale within and without the Agreement as follows :—

(a) *Prices at which Australia is prepared to sell Wheat under the Terms of the I.W.A.* These are shown in terms of Australian currency under the heading "I.W.A. Quota Wheat" in the table below. Up to July, 1953 (that is for the full period covered by the 1949 Agreement) negotiations were at the maximum price permitted by the Agreement. As the prices were fixed basically in terms of gold the maximum prices expressed in terms of Australian currency rose from 11s. 2d. prior to devaluation to 16s. 1d. per bushel after devaluation (19th September, 1949). From 1st December, 1951 the f.o.b. price at which Australia will sell wheat under the I.W.A. was increased to 16s. 6d. per bushel (bulk basis) by the addition of 5d. per bushel carrying charge.

(b) *Prices at which Australia is prepared to sell Wheat outside the I.W.A.* These are shown in terms of Australian currency under the heading "Free" Wheat in the table below. The amount of wheat available for sale at these prices on the "free" market is that which is available, after commitments under the I.W.A. have been met and thus varies considerably from year to year.

Owing to the fact that in recent years varying proportions of exportable wheat have been sold forward on contracts for delivery some months ahead at widely differing prices and because sales have been made on differential bases under the I.W.A. since August, 1949 prices recorded in the table below do not necessarily represent the prices actually received for wheat shipped during the periods shown.

### EXPORT WHEAT PRICES : AUSTRALIA.

(s. d.)

Year ended December.	Average price per bushel for bulk and bagged lots f.o.b. ports basis.	Year ended July.	Australian Wheat Board average selling price per bushel for f.a.q. bulk wheat, f.o.b. basis.

(a) Gross value of total crop, including drought relief and also seed used on farm.

13. **Production and Disposal of Wheat in Australia.**—In the following table details are given of the production of wheat and its disposal during each of the cereal years ended 30th November, 1948 to 1952 in comparison with the average for the three years ended November, 1937 to 1939. The particulars respecting local consumption refer to sales actually executed by the Australian Wheat Board, whilst those respecting exports represent actual shipments. (For particulars of production and exports from 1860 see graph, p. 876).

## WHEAT : PRODUCTION AND DISPOSAL, AUSTRALIA.

('000,000 Bushels.)

(a) Included with flour (local consumption). (b) Included with stock feed. (c) Includes allowance for unrecorded movements in stocks, gain or loss in out-turn, etc.

14. Exports of Wheat and Flour.—(i) *Quantities.* The following table shows particulars of the exports of wheat and flour and total of both in terms of wheat for each of the years 1947-48 to 1951-52 compared with the average for the five years ended 1938-39. For the sake of convenience, flour has been expressed at its equivalent in wheat, 1 ton of flour being taken as equal to 46.3 bushels of grain. Wheat and flour have been imported to tide over lean seasons on only two occasions since 1900: in 1902-3 the wheat harvest was as low as 12,378,000 bushels, and wheat and flour representing 12,468,000 bushels of wheat were imported, whilst an equivalent of 7,279,000 bushels was imported in 1914-15 to supplement the yield of 25 million bushels produced in that season. During the five years ended 1951-52 exports in terms of wheat averaged 112,252,000 bushels compared with the average of 106,432,000 bushels for the five years ended 1938-39.

**WHEAT AND FLOUR : EXPORTS FROM AUSTRALIA.**

Year.	Quantity.			Value (£'000.)			
	Wheat.	Flour.		Total as Wheat.	Wheat.	Flour.	Total.
		As Flour.	As Wheat. (a)

(a) One ton of flour is treated as equivalent to 46.3 bushels of wheat.

16. *Bulk Handling of Wheat in Australia.*—(i) *Description and Development of the Bulk Handling System.* A detailed description of the bulk handling system including its advantages and disadvantages compared with other methods of handling appeared on pages 954-8 of Official Year Book No. 39.

New South Wales, Victoria and Western Australia have operated bulk handling systems for a number of years, but no attempt was made until 1952 to introduce such a system in Queensland or South Australia. In this year, partly because of the difficulty of obtaining supplies of jute bags, the Australian Wheat Board erected an up-to-date plant for the receipt and shipping of wheat in bulk at the Port of Ardrossan in South Australia and a temporary silo at Pinkenba, Brisbane. Tasmania has to date not found bulk handling necessary as it is a relatively small wheat producer.

(ii) *Bulk Handling in the States.* Particulars of the operation of the bulk handling system and projected extensions of the system in the States concerned are set out below :—

(a) *New South Wales.* At present, there are 180 elevators situated at the more important wheat receiving stations throughout the State, with a storage capacity of 24,678,000 bushels, as well as terminal elevators at Sydney and Newcastle, which have receiving capacity per day of 6,000 tons and 2,000 tons respectively.

Work is proceeding on additions to country silos and the extension to the Newcastle terminal. In addition, four wheat storage sub-terminals at Junee, Temora, Parkes and Werris Creek are being erected to overcome the shortage of sacks and the immediate difficulties involved in constructing permanent silos at country centres. Two of these sub-terminals were in operation for the 1951-52 season. For that season there were also 75 temporary country bulkheads erected by the Australian Wheat Board each with a capacity of approximately 100,000 bushels. These bulkheads are operated by the Government Grain Elevators.

The following table illustrates the development of the bulk handling system in New South Wales from its inception in 1920-21 :—

GRAIN ELEVATORS : WHEAT RECEIVED, NEW SOUTH WALES.

Season.	Elevators in Country Districts.		Storage Capacity of Elevators available in Country Districts. (a)	Wheat Received.			Proportion of Total Crop Received in Elevators.
	Available.	Used.		In Country Elevators.	In Terminal Elevators from Non-Silo Stations.	Total.

(a) At one filling. (b) Includes 268,000 bushels received into bulkheads. (c) Includes 3,483,000 bushels received into bulkheads and terminals.

(b) *Victoria.* The Victorian Grain Elevators Board operates at present 147 country elevators, including nine leased from flour mills, with a capacity of 16,639,000 bushels and a terminal elevator at Geelong with a capacity of 4,100,000 bushels. Amendments to the Grain Elevators Acts were passed in 1950 to permit the construction of elevators at a number of stations not yet provided with bulk handling facilities, and to erect additional bins at stations where the existing storage capacity is inadequate. The shortage of essential construction materials and labour has so far prevented commencement of this new work.

Temporary means of extending bulk handling facilities have been adopted pending these extensions and owing to cornsack difficulties. During the war years, the Australian Wheat Board had constructed or acquired sub-terminal storages at Dunolly, Murtoa and Warracknabeal with total storage capacity of 23,000,000 bushels. In addition, in recent years, a programme of construction of temporary bulkheads at country stations has been planned by the Australian Wheat Board and, for the 1951-52 season, 71 of these with a capacity of 5,990,000 bushels were in operation. Bulkheads were also constructed at eight country centres in New South Wales, where bulk wheat receipts are under the control of the Victorian bulk handling authorities. These gave a further 1,064,000 bushels of bulk storage capacity.

The following table sets out the development of the bulk handling system in Victoria for a series of years from 1939-40.

## GRAIN ELEVATORS : WHEAT RECEIVED, VICTORIA.

Season.	Elevators.		Terminal.		Wheat Received.	Proportion of Total Crop Received in Elevators.
	Number.	Capacity at one filling.	Number.	Capacity at one filling.		
1939-40 ..	48	'000 Bush. 5,385	1	'000 Bush. 2,250	'000 Bush. 10,784	% 23.9
1948-49 ..	138	14,159	1	4,100	38,739	79.0
1949-50 ..	138	14,159	1	4,100	45,341	78.9
1950-51 ..	(a) 147	16,639	1	4,100	(b) 40,590	79.2
1951-52 ..	(a) 147	16,639	1	4,100	(b) 41,849	91.0

(a) Includes 9 elevators leased from country flour mills. (b) Includes bulkheads and sub-terminals.

(c) *Queensland.* Bulkheads of 90,000 bushels capacity each have been erected at Oakley and Dalby in the Darling Downs. These together with a temporary terminal silo at Pinkenba, Brisbane with a capacity of 500,000 bushels first came into operation in the 1952-53 season.

(d) *South Australia.* Arising from the shortage of cornsacks which threatened the 1951-52 season and also the restricted demand overseas for wheat in bags, the Australian Wheat Board constructed a bulk terminal at Ardrossan capable of receiving wheat direct from growers on York Peninsula and storing approximately 1,000,000 bushels of wheat. With shipments being made during the receipt period the total which could be received into this facility would be about 1,250,000 bushels, whilst any bagged wheat received in excess of that accommodation could be later cut into the storage and shipped in bulk. This facility is controlled by the Australian Wheat Board and operated from the 1952-53 harvest.

(e) *Western Australia.* Under the Bulk Handling Act, 1936, the Co-operative Bulk Handling Ltd., controlled and managed by Western Australian wheat growers, has until 31st December, 1955, the sole right of receiving wheat in bulk at railway stations and sidings where the company has installations.

The company operates 268 sidings equipped for bulk handling, a shipping gallery and conveyor belt at Geraldton and a silo at Fremantle. The installations at Geraldton and Fremantle are owned by the State Government. Plans are in hand for the construction of a terminal at Albany and improvements at Bunbury which at present has a storage capacity of 300,000 bushels.

The method of storage in Western Australia differs from that employed in the eastern States. Horizontal storages made simply from timber and galvanized iron are employed as compared with the more costly vertical concrete structures in the eastern States. The Western Australian storage bins can be dismantled, moved and re-erected as required.

Owing to the nature of the system in use in Western Australia, particulars of the capacity comparable with those published for New South Wales and Victoria do not exist. The table below sets out the number of sidings equipped for bulk handling, receipts of bulk wheat and the proportion of the marketable harvest represented by the receipts for the seasons indicated.

## BULK WHEAT HANDLED : WESTERN AUSTRALIA.

Season.				Total Sidings Equipped.(a)	Total Bulk Receivals.	Receivals as a Proportion of Marketable Harvest.
				No.	Bushels.	%
1931-32	..	..	..	5	1,265,000	3.4
1941-42	..	..	..	232	33,304,000	(b) 97.8
1948-49	..	..	..	234	32,815,119	(c) 100.0
1949-50	..	..	..	234	34,565,140	(c) 100.0
1950-51	..	..	..	260	46,088,474	(c) 100.0
1951-52	..	..	..	268	36,412,027	(c) 100.0

(a) These figures do not include four bins in Lakes District erected in 1940, a fifth point at Ravensthorpe equipped for the 1947-48 season, and two installations in East and West Yorkrakin built in 1949. These points are removed from the railway and wheat received is transported by road to the rail or direct to the port. They do not include six points at which wheat is directly loaded into railway wagons.

(b) Quantities affected by war-time restrictions and difficulties. (c) In 1948, the Wheat Stabilization Act passed by the Western Australian Parliament as complementary legislation to the Federal Act provided for all bagged wheat to be treated. This is done by the company paying the grower the value of the bag when received and issuing him a bulk wheat receipt.

17. World Area and Production of Wheat.—The details in the following table of the world area and production of wheat by principal countries and by continents have been compiled from official sources so far as they are available, but more particularly from the records published by the Food and Agriculture Organization of the United Nations, and the United States Office of Foreign Agricultural Relations. The harvests shown for countries in the Northern Hemisphere are those garnered during the period March to October whilst those for the Southern Hemisphere cover the period November to February following.

18. Exports—Principal Countries.—The following table shows the quantities of wheat exported from the chief exporting countries for the period 1934-38 and the years 1950 and 1951 according to statistics recently published by the Food and Agriculture Organization of the United Nations, and the United States Office of Foreign Agricultural Relations.

While Australia's production of wheat ranges between 2 and 4 per cent. of the world's total, its exports account for a much higher proportion of the total quantities shipped. During the five years 1934-38 Australia's share of world wheat exports was 16 per cent., but in 1951 the proportion fell to 11 per cent., although the actual quantity shipped was somewhat greater.

## § 5. Oats.

i. Area, Production and Average Yield.—Oats are usually next in importance to wheat amongst the grain crops cultivated in Australia, but while wheat grown for grain in 1951-52 accounted for 52.45 per cent., oats grown for grain represented only 11.94 per cent. of the area of crops. The area, production and average yield per acre of oats for the years 1947-48 to 1951-52 and the averages for the ten-year periods ended 1938-39 and 1950-51 are shown in the following table :—

1951-52 ..	15.75	16.48	12.61	13.95	11.71	22.39	15.39	14.59

(a) 40 lb. per bushel.

The principal oat-growing States are New South Wales and Victoria which produce on the average, more than half the total quantity grown in Australia. Western Australia and South Australia also produce considerable quantities, but in Queensland and Tasmania the output is small.

Oats are mainly used in Australia as feed grain. During the ten years ended 1951-52 the average annual quantity consumed by stock was about 11.5 million bushels, leaving a balance of about 6.5 million bushels for seed purposes, about 3.4 million bushels for oat-meal and a small quantity for the production of spirits and for malting. Prior to the year 1947-48 exports of oats were usually small, but from 1947-48 to 1951-52 heavy shipments were made and exports over these years averaged 9.84 million bushels.

The smallest average yield per acre ever recorded for Australia was that experienced in the abnormally dry season 1944-45, namely 4.41 bushels, while the largest in the last ten years was that of the season 1947-48, amounting to 19.33 bushels per acre, this being the highest yield since 1920-21.

2. **Price of Oats.**—The average wholesale price in the Melbourne market for oats of good milling quality in 1951-52 was 10s. 6½d per bushel. This represents an increase of 25.6 per cent. on the price in 1950-51 (8s. 4¾d.) and of 204.8 per cent. on the price in 1938-39 (3s. 5¾d.).

3. **Value of Oat Crop.**—The estimated values of the oat crops for the seasons 1950-51 and 1951-52 were as follows :—

**OATS : VALUE OF CROP, 1950-51 AND 1951-52.**

Particulars.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	A.C.T.	Australia.
1950-51—

4. **Imports and Exports.**—The production of oats in Australia is sufficient to admit of a regular export trade. The quantities and values of oats exported from Australia during the years 1947-48 to 1951-52 compared with the average for the years 1934-35 to 1938-39 are shown hereunder :—

**OATS : EXPORTS, AUSTRALIA.**

Particulars.	Average, 1934-35 to 1938-39.	1947-48.	1948-49.	1949-50.	1950-51.	1951-52.
Quantity .. bush.	286,360	6,803,427	14,853,777	6,625,560	7,946,736	12,971,224
Value .. £	36,458	3,945,807	6,160,586	2,393,566	3,529,070	8,000,703

The quantity of oats imported into Australia is usually not very large, although in 1945-46 imports exceeded exports by 801,922 bushels. Canada was the chief supplier. The previous year when imports exceeded exports was in 1927-28 (by 460,581 bushels) when New Zealand was the main supplier. In 1951-52 the principal countries of destination of the exports were Federal Republic of Germany, Netherlands, United Kingdom, Union of South Africa, Denmark and Belgium.

5. **Oatmeal, etc.**—The production of oatmeal amounted in 1951-52 to 363,400 cwt., equivalent to about 2,035,000 bushels of oats, or about 6.0 per cent. of the total production. Prior to the 1939-45 War the exports of oatmeal were small, but in recent years a considerable export trade has developed and in 1951-52 the quantity shipped amounted to 133,386 cwt. or 36.7 per cent. of total production.

6. **World Production.**—The world's production of oats for the year 1952, excluding that produced in U.S.S.R., according to preliminary details released by the Food and Agriculture Organization of the United Nations, amounted to 3,348 million bushels, harvested from 90 million acres, representing an average yield of 37.20 bushels per acre. This compared with the production in the previous year of 3,458 million bushels from an

area of 89 million acres giving an average yield of 38.85 bushels per acre. The world's average production including that of the U.S.S.R. for the years 1935 to 1939 amounted to 4,336 million bushels from 139 million acres giving an average yield of 31.26 bushels per acre. In comparison with the average return per acre for world production in 1952 that of Australia for the same period (14.59 bushels) appears very small. Yields in excess of 40 bushels per acre are not uncommon and some European countries record averages in excess of 50 bushels per acre.

### § 6. Maize.

1. **States Growing Maize.**—Maize is grown for grain chiefly in Queensland and New South Wales, the area so cropped in these States during the 1951-52 season being 165,397 acres, or 98 per cent. of the total for Australia. In all States except South Australia the crop is grown to a greater or lesser extent for green fodder, particularly in connexion with the dairying industry.

2. **Area, Production and Average Yield.**—Although maize for grain is grown extensively in other countries, the area sown to maize for grain in Australia has averaged only 238,869 acres during the past decennium. Compared with the previous year, the area in 1951-52 increased by 201 acres and was considerably less than the comparatively large areas of 414,914 and 400,544 acres sown in 1910-11 and 1927-28 respectively.

There has been a considerable increase in recent years in the growing of maize from hybrid strains of seed. Varieties have been developed which are capable of producing average yields per acre considerably in excess of the older open pollinated types. The expansion in areas sown to hybrid maize necessitates a parallel development in the specialized industry of growing hybrid strains of seed.

The area, production and average yield per acre of maize for grain in each State for the years 1947-48 to 1951-52 and the averages for the ten-year periods ended 1938-39 and 1950-51 are given in the following table. Separate details for hybrid and other varieties are shown for New South Wales and Queensland for 1951-52.

(a) 56 lb. per bushel.

The average yield for Australia for the ten-year period was 25.89 bushels per acre. Among principal producing countries the United States of America during 1952 averaged 40.64 bushels, Italy, 29.91 bushels and Brazil, 20.27 bushels.

3. **Price of Maize.**—The average wholesale price of maize in the Melbourne market in 1951-52 was 21s. 3½d., per bushel compared with 14s. 4¾d. in 1950-51. No comparable pre-war price is available, but that in the Sydney market in 1938-39 was 4s. 6½d.

4. **Value of Crop.**—The values of the crops for the seasons 1950-51 and 1951-52 were as follows:—

## MAIZE FOR GRAIN: VALUE OF CROP, 1950-51 AND 1951-52.

Particulars.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	A.C.T.	Aust.

5. **Exports of Maize and Maize Products.**—Details of exports of maize for the five years ended 1951-52 compared with the five-yearly average ended 1938-39 are shown below.

## MAIZE: EXPORTS, AUSTRALIA.

Particulars.	Average, 1934-35 to 1938-39.	1947-48.	1948-49.	1949-50.	1950-51.	1951-52.
Quantity .. bush.	57,432	547,536	126,686	1,201,032	1,188,960	187,600
Value .. £	8,571	627,565	105,786	613,604	785,686	148,580

In recent years only small quantities of maize have been imported.

Exports of cornflour, which prior to the war were very small, increased considerably during the war years, the principal country of destination being New Zealand. In 1951-52 1,538,424 lb., valued at £58,376, were exported, compared with an annual average of 36,761 lb., valued at £364, during the five years ended 1938-39. It should be noted that these figures include some quantities of "cornflour" made from wheat. Imports of cornflour into Australia are negligible.

6. **World Production.**—According to preliminary details released by the Food and Agriculture Organization of the United Nations, world production of maize, excluding that of the U.S.S.R., in the year 1952, amounted to 5,590 million bushels, harvested from 209 million acres giving an average yield per acre of 26.75 bushels. This compared with production in the previous year of 5,189 million bushels from 204 million acres yielding an average per acre of 25.44 bushels. Production (including that of the U.S.S.R.) over the years 1935 to 1939 averaged 4,725 million bushels from 216 million acres giving an average yield per acre of 21.88 bushels.

The United States of America is the most important maize-producing country in the world and during the three years ended 1952 the area sown to maize in that country averaged 81 million acres or 39 per cent. of the world total. During the same period production averaged 3,088 million bushels or about 58 per cent. of the world total. These figures are not strictly comparable with those for other countries included in the above-mentioned world totals as the area and an estimate of grain equivalent of maize used as green fodder are included. In recent years maize grain actually harvested in the United States has amounted to about 90 per cent. of the total crop.

§ 7. Barley.

1. **Area, Production and Average Yield.**—The area sown to barley for grain expanded considerably during the ten years preceding the 1939-45 War—from 383,000 acres in 1930-31 to 836,000 acres in 1939-40. This increase was followed by a decline to 443,000 acres in 1943-44, but the area sown has increased in succeeding years, and in 1951-52 reached the record level of 1,118,000 acres. Victoria was originally the principal barley-growing State, but since 1913-14 its place has been taken by South Australia which accounted for 74 per cent. of the Australian acreage in 1951-52. Victoria was next in importance with 17 per cent., leaving a balance of about 9 per cent. distributed among the other States. The totals here given relate to the areas harvested for grain; small areas are sown for hay, but more considerable quantities are cut for green forage. These, however, are not included in this section. The area, production and average yield per acre of barley for grain in the several States for the years 1947-48 to 1951-52 and the averages for the ten-year periods ended 1938-39 and 1950-51 are shown in the following table:—

(a) 50 lb. per bushel.

Taking Australia as a whole, about 86 per cent. of the area of barley for grain in 1951-52 was sown with malting or 2-row barley while the remainder consisted of 6-row, or feed varieties. The proportion, however, varied considerably in the several States. The disposal of barley during the season 1951-52 was as follows:—malt works, 6,063,000 bushels; flour and other grain mills, 169,000 bushels; distilleries, 310,000 bushels; exports, 12,061,593 bushels; leaving a balance of 3,305,000 bushels for feed, seed and other purposes.

The following table sets out the acreage and production of malting and other barley in Australia during the seasons 1947-48 to 1951-52 and the averages for the ten-year periods ended 1938-39 and 1950-51.

## BARLEY, MALTING AND OTHER: AREA AND PRODUCTION, AUSTRALIA.

Season.	Area. ('000 Acres.)			Production. ('000 Bushels.)			Average Yield per Acre. (Bush.)		
	Malting (2-row).	Other (6-row).	Total.	Malting (2 row).	Other (6-row).	Total.	Malting (2-row).	Other (6-row).	Total.

1949-50 ..	927	113	1,040	17,509	1,974	19,543	18.95	17.51	18.79
1950-51 ..	963	116	1,079	20,811	2,060	22,871	21.61	17.82	21.20
Average, 1941-42 to 1950-51 ..	667	104	771	12,647	1,620	14,267	18.97	15.57	18.51
1951-52 ..	965	153	1,118	19,477	2,432	21,909	20.17	15.95	19.60

During the last ten-yearly period shown the average area of barley of the malting, or 2-row class, was more than six times the corresponding figures for barley of the 6-row, or feed class. The average yield per acre for malting barley was 22 per cent. higher than that for 6-row barley.

2. Australian Barley Board.—Following the outbreak of war in 1939, the Australian Barley Board, representative of the industry, was formed, and the Commonwealth Government acceded to its request to acquire the entire 1939-40 barley crop, which was placed under the control of the Board. A pool was established from which proceeds were distributed with appropriate margins for different grades of barley.

The Board was responsible for the marketing and storage of barley, and, like the Australian Wheat Board, appointed licensed receivers to receive grain on its behalf and to act as agents for all local and oversea sales.

Following the decision of the Commonwealth Government not to acquire barley in the smaller producing States after 1941-42, the Governments of Western Australia and Queensland established State Barley Boards to control marketing in these States.

Particulars of the barley acquired and sold, and of advances made to growers by the Australian Barley Board in respect of the 1945-46 to 1947-48 crops are given in the following table. The Commonwealth Government did not acquire barley after the 1947-48 crop, and the Victorian and South Australian Governments formed a joint board under the same name as the former Commonwealth board to market the 1948-49 and subsequent crops of the two States. Details of these acquisitions are also shown in the table below.

**AUSTRALIAN BARLEY BOARD : BARLEY ACQUIRED, SOLD, ETC.,

„ 13 (1951-52 „ ) (c) .. ..	19,340	19,475	(d) 14 9	13,697,930

(a) Includes surplus in out-turn. (b) Paid to growers in the northern part of South Australia. Growers in the south-east of South Australia and Victoria received an additional 2d. per bushel. (c) Subject to revision. (d) To 31st December, 1952.

3. Prices.—The average wholesale prices in the Melbourne market during 1951-52 were 12s. 10½d. per bushel for malting barley and 9s. 6½d. per bushel for feed barley. These were substantially higher than in 1950-51 when prices were 7s. 8d. and 7s. 1¾d. per bushel respectively. In 1938-39 comparative prices were 3s. 5½d. per bushel and 2s. 11½d. per bushel respectively.

4. Value of Barley Crop.—The estimated values of the barley crops for the seasons 1950-51 and 1951-52 and the value per acre are shown in the following table :—

**BARLEY FOR GRAIN : VALUE OF CROP, 1950-51 AND 1951-52.**

Particulars.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	A.C.T.	Australia.
1950-51—								
Aggregate value £	6,520	2,518,234	290,652	9,901,590	520,415	43,490	..	13,338,901
Value per acre	£7/15/5	£11/12/0	£11/2/9	£12/18/11	£8/16/1	£13/6/9	..	£12/7/4
1951-52—								
Aggregate value £	113,000	2,753,491	329,496	13,852,936	583,214	106,190	365	17,738,692
Value per acre ..	£10/2/10	£14/15/9	£11/14/0	£16/13/2	£10/6/2	£25/0/9	£16/11/10	£15/17/4

5. **Exports.**—Australian exports of barley during the five years ended 1951-52 averaged 10,780,000 bushels, South Australia being the principal exporting State and the United Kingdom, Netherlands and Japan the principal countries to which barley was shipped. Particulars of Australian exports for the years 1947-48 to 1951-52 together with the average for the five years ended 1938-39 are shown in the following table :—

**BARLEY : EXPORTS, AUSTRALIA.**

Particulars.	Average, 1934-35 to 1938-39.	1947-48.	1948-49.	1949-50.	1950-51.	1951-52.
Quantity ('000 bush.)	3,279	8,050	10,876	10,703	12,208	12,062
Value .. £'000	483	8,134	6,864	6,433	9,053	11,154

Imports of barley in recent years have been negligible.

In addition to exports of barley grain, there is also an export of Australian pearl and scotch barley, the total for 1951-52 amounting to 467,814 lb., valued at £16,292, and consigned mainly to Ceylon, Singapore and Malaya.

6. **Malt.**—(i) *Production.* The production of malt in Australia was sufficient to meet local requirements and to provide a margin for export up until 1947-48 but since then imports have risen rapidly in each succeeding year, reaching a surplus of 265,731 bushels over exports in 1951-52. Details of the quantity of grain used and the production of barley malt are given in the following table.

**BARLEY MALT : GRAIN USED AND MALT PRODUCED, AUSTRALIA.**

Particulars.	1938-39.	1947-48.	1948-49.	1949-50.	1950-51.	1951-52.
Grain used .. bush.	3,729,730	4,976,615	5,048,387	5,293,979	5,543,042	6,063,112
Malt produced bush.(a)	3,620,909	4,879,145	4,989,371	5,437,539	5,550,307	6,072,509

(a) 40 lb. per bushel.

(ii) *Net Exports.* Details of the net exports of malt for the years 1947-48 to 1951-52, together with the average for the five years ended 1938-39, are given in the next table :—

**MALT : NET EXPORTS, AUSTRALIA.**

Particulars.	Average, 1934-35 to 1938-39.	1947-48.	1948-49.	1949-50.	1950-51.	1951-52.
Quantity .. bush.	108,550	12,920	—14,002	—95,460	—131,556	—265,731
Value .. £	37,647	14,159	—16,508	—107,641	—195,982	—389,342

NOTE.—Minus sign (—) denotes net imports.

7. **World Production.**—In comparison with the barley production of other countries, that of Australia is extremely small. The main world producers in 1952 were China, Canada and the United States of America. Australian production in that year was less than one per cent. of the world total.

According to preliminary results compiled by the Food and Agriculture Organization of the United Nations world production of barley in the year 1952, excluding that of the U.S.S.R., amounted to 2,342 million bushels harvested from 98.3 million acres, equivalent to an average yield per acre of 23.82 bushels. This compared with the production

of 2,251 million bushels in the previous year from 96.1 million acres giving an average yield per acre of 23.41 bushels. Production, including that of U.S.S.R., over the years 1935-39 averaged 2,338 million bushels from 114.2 million acres, representing an average yield of 20.47 bushels per acre.

### § 8. Rice.

Rice growing is almost entirely concentrated in Asia and the extent to which this crop is grown in other countries is relatively small. In Australia experimental rice cultivation was carried on at the Yanco Experimental Farm in New South Wales for a number of years before 1924-25, but it was not until that year that an attempt was made to grow the crop on a commercial basis, 16,240 bushels being produced from 153 acres, or an average of 106 bushels per acre. Favoured by tariff protection and high average yields, the development of rice culture in the Murrumbidgee Irrigation Area made rapid progress, and production soon equalled Australian requirements and later provided a margin for export.

The area which growers may plant is subject to control. Each year representatives of the Rice Marketing Board, rice growers, the Department of Agriculture and the Water Conservation and Irrigation Commission of New South Wales meet to decide the maximum area which growers may plant in the following season, the extent of any expansion being determined by the limits imposed by the quantity of water available.

For the five years ended 1938-39 the area sown to rice in the Murrumbidgee Irrigation Area averaged 22,800 acres. The area sown fluctuated considerably during succeeding years, the maximum of 40,690 acres being recorded in 1943-44. In 1950-51 the area sown was 36,945 acres, but in 1951-52 it fell to 35,664 acres.

The production of paddy rice in 1943-44 was more than 4 million bushels or an average yield of just under 100 bushels per acre. In 1944-45 it dropped to nearly 1.7 million bushels or 69 bushels per acre, owing to water shortage arising from severe drought conditions. In 1950-51 production reached its highest level with 4.1 million bushels or an average of 111 bushels per acre, but in 1951-52 it declined to 3.0 million bushels or an average of 85 bushels per acre.

Prior to 1938-39 the greater part of Australia's export of rice was consigned to the United Kingdom, but, because of shortages in Pacific areas arising from war damage in south-east Asia, exports from Australia have been diverted mainly to the islands in this region.

Details relating to area, production, and trade for the years 1947-48 to 1951-52 compared with the averages for the years 1934-35 to 1938-39 are shown in the following table:—

RICE : AREA, PRODUCTION AND TRADE, AUSTRALIA.(a)

Year.	No. of Growers.	Area.	Production (Paddy Rice).		Average Yield (Paddy) per acre.	Imports.		Exports.	
			Quantity.	Gross Value. (b)		Un-cleaned.	Cleaned.	Un-cleaned.	Cleaned.
		Acres.	'000 Bushels.c	£'000.	Bushels.c	Centals.	Centals.	Centals.	Centals.
Average, 1934-35 to 1938-39 ..	(d) 313	22,823	2,274	450	99.66	2,124	38,272	9,357	271,851
1947-48 ..	349	26,208	2,676	950	102.12	..	5	4,763	622,208
1948-49 ..	404	32,689	2,739	1,032	83.79	..	549	8,658	610,497
1949-50 ..	444	37,540	3,783	1,653	100.78	..	6,685	225	597,759
1950-51 ..	462	36,945	4,118	2,171	111.45	1	63	2,065	657,267
1951-52 ..	452	35,664	3,048	2,108	85.47	3	18	4,140	559,395

(a) Rice growing in Australia has been practically confined to New South Wales with very small acreages only being sown in Queensland in the 1950-51 and 1951-52 seasons. (b) Excludes the value of straw.

(c) 42 lb. per bushel.

(d) 1938-39 figure, previous years not collected.

## § 9. Sorghum for Grain.

1. **Area, Production and Average Yield.**—The growing of sorghum for grain on an extensive scale is a recent development in Australia. No details of the area and production of this cereal are available prior to 1939-40, but the output was of little importance. The climatic conditions of Queensland and northern New South Wales are particularly suited for the growing of sorghum and the development so far has been restricted to these areas, but more particularly to Queensland which accounts for the greater portion of the area sown. The grain produced is fed to live-stock and is becoming an important source of supply for supplementing other coarse grains for the feeding of live-stock. Other sorghums are grown in Australia mainly as green fodder, hay and silage (sweet sorghums and sudan grass) and for the production of brush for broom manufacture (broom millet). Particulars of the area and production of sorghum grown for grain are given in the following table.

GRAIN SORGHUM : AREA, PRODUCTION AND AVERAGE YIELD, AUSTRALIA.

Year.	Area.			Production.(a)			Average Yield per Acre.(a)		
	N.S.W.	Q'land.	Total.	N.S.W.	Q'land.	Total.	N.S.W.	Q'land.	Total.

(a) 60 lb. per bushel. (b) Includes small areas sown and quantities produced in other States.  
(c) Not available. (d) Queensland only.

2. **Queensland-British Food Corporation Project.**—Early in 1948 an agreement was entered into between the Queensland Government and the Overseas Food Corporation of the United Kingdom Government to develop selected areas of Central Western Queensland for the growing of grain sorghum for pig-raising in Queensland and/or for export to the United Kingdom, and for sunflower and possibly other oilseed production. Because of losses incurred, the United Kingdom and Queensland Governments decided, early in 1953, to abandon the project. Although the scheme resulted in financial loss, the activities of the Corporation did much to indicate ways by which combined grain sorghum production and beef cattle husbandry could be used as a basis for closer settlement of the great tracts of brigalow country in Queensland. The activities of the Corporation are described in "The future of the Queensland-British Food Corporation", a White Paper Cmd 8760 presented to the United Kingdom Parliament, February, 1953.

## § 10. Potatoes.

1. **Area, Production and Average Yield.**—Victoria possesses peculiar advantages for the growing of potatoes, as the rainfall is generally satisfactory and the climate is unfavourable to the spread of Irish blight; consequently, the crop is widely grown. The principal areas of that State are the central highlands, and the south-western and Gippsland districts. Tasmania comes next in order of acreage sown, although the production exceeded that of Victoria in some of the war years. New South Wales occupies third place in acreage and production. The area for these three States accounted for 78 per cent. of the total for Australia in 1951-52.

POTATOES.

869

The area sown, production and average yield per acre of potatoes in each State during the years 1947-48 to 1951-52 and the averages for the ten-year periods ended 1938-39 and 1950-51 are shown hereunder :—

1949-50 .. .. .	2.97	3.31	2.64	5.66	5.72	3.58	5.90	3.52
1950-51 .. .. .	2.35	2.66	2.29	5.16	6.47	3.93	4.65	3.24
Average, 1941-42 to								
1950-51 .. .. .	2.63	3.44	2.25	4.88	5.23	3.85	5.38	3.50
1951-52 .. .. .	2.73	4.24	2.88	6.30	7.25	4.78	6.05	4.31

After the outbreak of war in the Pacific in December, 1941, the area sown to potatoes increased rapidly and reached a maximum of 241,803 acres in 1944-45. Areas sown in subsequent seasons were considerably less, however, and have shown a general decline to the figure for the 1951-52 season, 118,145 acres.

Compared with the average yield per acre obtained in other countries, that returned for Australia is low; the production in New Zealand, for example, in 1951-52 averaged 6.85 tons per acre from an area of about 12,000 acres, as compared with the record yield of 4.31 tons per acre in Australia from 118,145 acres in the same season.

2. Gross Value of Potato Crop.—The estimated gross value of the potato crop of each State for the seasons 1950-51 and 1951-52 is shown in the following table :—

POTATOES : VALUE OF CROP, 1950-51 and 1951-52.

Particulars.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	A.C.T.	Australia.
1950-51—								
Aggregate value	£1,218,170	£3,661,748	£556,313	£877,152	£1,153,130	£2,779,740	£18,654	£10,264,907
Value per acre ..	£66/6/0	£69/15/5	£51/11/10	£125/17/4	£170/1/7	£88/0/5	£131/7/4	£80/15/1
1951-52—								
Aggregate value	£2,097,710	£5,512,002	£962,117	£1,640,688	£1,587,166	£4,141,040	£41,010	£15,981,733
Value per acre ..	£110/4/2	£130/18/0	£83/18/4	£235/7/2	£230/10/6	£131/8/1	£244/2/2	£135/5/5

3. **Consumption.**—The annual consumption of potatoes in Australia during each of the three years 1949–50 to 1951–52 amounted to 391,800 tons, 341,700 tons and 438,100 tons respectively, or 109.0 lb., 92.1 lb. and 114.9 lb. per head of population respectively. These figures exclude the quantities used for seed, which averaged about 60,000 tons annually over this period. Consumption during the three years ended 1938–39 averaged 318,500 tons (103.8 lb. per head of population) excluding 37,000 tons for seed. New South Wales, Queensland and, in some seasons, South Australia do not produce the quantities necessary for their requirements and must import from Tasmania and Victoria which have a surplus.

4. **Marketing.**—Commonwealth control of potato marketing under war-time legislation ceased at the end of 1948 with the completion of sales of the 1947–48 crop.

Later crops have been marketed by Boards established in the respective States under State legislation. Although the State Boards operate separately they have a working arrangement for the interstate marketing of potato crops.

5. **Exports.**—Prior to the 1939–45 War, small quantities of potatoes were exported, principally to the Pacific Islands and Papua. Since the war, an expanded export trade has been developed, principally with Eastern countries, including Singapore, Ceylon, Hong Kong and Indo-China. However in 1951–52, the bulk of exports was diverted to New Zealand which received a total of 6,883 tons. Details showing exports for the years 1947–48 to 1951–52 and the annual average for the period 1934–35 to 1938–39 are given in the following table:—

**POTATOES : EXPORTS, AUSTRALIA.**

Particulars.		Average, 1934–35 to 1938–39.	1947–48.	1948–49.	1949–50.	1950–51.	1951–52.
Quantity ..	tons	18,838	30,008	15,074	15,183	6,231	12,468
Value ..	£	16,639	622,379	243,540	340,747	190,128	436,780

Imports of potatoes are negligible.

### § 11. Onions.

1. **Area, Production and Average Yield.**—Australia's supply of onions comes chiefly from Victoria, which accounted for 54.7 per cent. of the total area and 58.5 per cent. of the quantity produced in 1951–52. Queensland came next with 29.1 per cent. of the area and 18.2 per cent. of the production, leaving a balance of 16.2 per cent. of area and 23.3 per cent. of production distributed among the remaining four States. The Victorian crop consists almost entirely of brown onions of good keeping qualities, and the bulk of the crop is grown in a small section of the Western Division of the State, where soil conditions have been found to be particularly suitable for onion growing on a commercial scale. Details of the area, production and average yield per acre are given in the following table for the years 1947–48 to 1951–52 together with averages for the ten-year periods ended 1938–39 and 1950–51.

Details of the area and production of fresh vegetables other than potatoes and onions are given in § 17.

2. **Gross Value of Onion Crop.**—The gross value of the onion crop is shown in the following table for the years 1950-51 and 1951-52.

## ONIONS : VALUE OF CROP, 1950-51 AND 1951-52.

Particulars.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	A.C.T.	Aust.
1950-51—								
Aggregate value £	25,060	571,142	176,690	188,712	121,206	2,310	1,209	1,086,329
Value per acre..	£118/15/4	£137/13/10	£73/13/0	£372/19/0	£319/16/1	£121/11/7	£241/16/0	£141/13/9
1951-52—								
Aggregate value £	118,500	1,176,951	454,186	349,761	139,429	8,510	2,325	2,249,662
Value per acre..	£295/10/2	£248/0/10	£179/14/8	£564/2/7	£417/9/0	£170/4/0	£465/0/0	£250/2/4

3. **Consumption.**—The annual consumption of onions in Australia averaged 45,100 tons or 12.3 lb. per head of population during the three years ended 1951-52 compared with 40,600 tons or 13.2 lb. per head during the three years ended 1938-39. These figures exclude an estimated wastage which averaged 7,900 tons and 2,200 tons respectively.

4. **Imports and Exports.**—Onions are the only root crop, other than potatoes, in which any considerable overseas trade is carried on by Australia. Onions were imported in 1950-51 for the first time since 1946-47 when approximately 100 tons were obtained, principally from New Zealand. Imports in 1950-51 amounted to 636 tons principally from Lebanon, Egypt and India and in 1951-52 to 2,397 tons principally from New Zealand. During 1951-52 exports, which amounted to 3,673 tons, valued at £152,216, were shipped mainly to Singapore and Canada.

## § 12. Hay.

1. General.—(i) *Area and Production.* As already stated, the chief crop in Australia is wheat grown for grain. Up to and including 1946-47 hay has been next in importance but since that year it has been third to oats (for grain).

In 1951-52 the hay area represented 7.8 per cent. of the total area cropped. A graph showing the area sown to hay since 1860 appears on page 875. In most European countries the hay consists almost entirely of meadow and other grasses, but in Australia a very large proportion consists of oats, wheat and lucerne. The area, production and average yield per acre of hay of all kinds in the several States during the years 1947-48 to 1951-52 and the averages for the ten-year periods ended 1938-39 and 1950-51 are shown below:—

## HAY : AREA, PRODUCTION AND AVERAGE YIELD.

1951-52 ..	450,774	1,046,764	79,763	379,978	211,629	172,286	3,655	2,344,849
AVERAGE YIELD PER ACRE (TONS).								
Average, 1929-30 to 1938-39 ..	1.27	1.14	1.54	1.07	1.07	1.44	1.21	1.17
1947-48 ..	1.56	1.59	1.85	1.50	1.17	1.63	1.38	1.53
1948-49 ..	1.33	1.58	1.97	1.33	1.22	1.66	1.63	1.45
1949-50 ..	1.46	1.65	2.11	1.31	1.26	1.70	1.91	1.51
1950-51 ..	1.32	1.60	2.25	1.39	1.28	1.67	1.56	1.50
Average, 1941-42 to 1950-51 ..	1.19	1.38	1.86	1.24	1.14	1.55	1.34	1.30
1951-52 ..	1.35	1.63	1.83	1.48	1.22	1.76	1.58	1.51

Owing to various causes, the principal being the variation in the relative prices of grain and hay and the favourableness or otherwise of the season for a grain crop, the area of hay is liable to fluctuate considerably. The area under hay in Australia during the season 1915-16, 3,597,771 acres, was the largest on record, whilst the average for the decennium ended 1950-51 was 2,086,513 acres.

(ii) *Varieties Grown.* Information regarding areas cut for hay is available for all States, and details for 1951-52 are given in the following table. Similar information for 1950-51 appears in *Primary Industries Bulletin* No. 45, Part I.—*Rural Industries.*

HAY : AREA UNDER VARIOUS KINDS GROWN, 1951-52.  
(Acres.)

State.	Wheaten.	Oaten.	Lucerne.	Other.	Total.
New South Wales ..	120,756	113,348	72,760	27,143	334,007
Victoria ..	34,964	214,427	40,851	350,176	640,418
Queensland ..	6,807	3,284	29,791	3,704	43,586
South Australia ..	63,439	132,465	7,789	53,312	257,005
Western Australia ..	48,597	84,244	143	40,871	173,855
Tasmania ..	2,452	32,668	781	61,862	97,763
Australian Capital Territory ..	146	1,100	972	88	2,306
Total ..	277,161	581,536	153,087	537,156	1,548,940

For all States and the Australian Capital Territory combined the proportions of the areas sown to the principal kinds of hay in 1951-52 were 37 per cent. for oaten, 18 per cent. for wheaten, 10 per cent. for lucerne, and 35 per cent. for other hay. In that year, oaten hay predominated in the States of South Australia and Western Australia, wheaten hay in New South Wales, lucerne in Queensland, and meadow and grass in Victoria and Tasmania.

2. **Value of Hay Crop.**—The following table shows the value, and the value per acre, of the hay crop of the several States for the seasons 1950-51 and 1951-52 :—

HAY : VALUE OF CROP, 1950-51 AND 1951-52.

Particulars.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	A.C.T.	Australia.
1950-51—								
Aggregate value £	3,537,030	8,307,154	1,235,606	2,766,993	964,429	1,084,870	34,599	17,930,591
Value per acre . .	£14/16/1	£14/18/0	£27/10/0	£10/12/2	£5/9/0	£11/5/1	£21/10/1	£13/0/5
1951-52—								
Aggregate value £	6,702,190	11,407,015	2,228,823	2,877,613	1,438,253	1,464,430	74,497	26,192,821
Value per acre . .	£20/1/4	£17/16/3	£51/2/9	£11/3/11	£8/5/5	£14/19/7	£32/6/1	£16/18/2

3. **Farm Stocks of Hay.**—Details of stocks of hay held on farms are now collected at the annual census of farm production. Particulars of stocks so held at 31st March in each year 1948 to 1952 are given in the table below.

STOCKS OF HAY HELD ON FARMS.

(Tons.)

31st March—	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	A.C.T.	Australia.
1948 ..	825,821	1,059,842	96,158	478,142	176,188	95,147	3,676	2,734,974
1949 ..	691,608	969,242	84,170	404,813	177,502	88,098	3,345	2,418,778
1950 ..	680,498	1,014,747	101,222	341,888	188,167	116,549	2,530	2,445,601
1951 ..	608,416	940,537	102,487	321,873	154,094	112,887	1,774	2,242,068
1952 ..	500,596	1,129,163	29,766	418,734	142,711	129,893	2,702	2,353,565

4. **Imports and Exports.**—Under normal conditions, hay, whether whole or in the form of chaff, is somewhat bulky for oversea trade, and consequently does not figure largely amongst the imports and exports of Australia. During 1951-52 exports amounted to 3,663 tons, valued at £92,669.

### § 13. Green Fodder.

1. **Nature and Extent.**—Considerable areas are devoted to the growing of green fodder, mainly in connexion with the dairying industry. The areas recorded in respect of green fodder include areas of crops cut for feeding to live stock as green fodder, together with areas fed off to stock as green forage. Included with the latter are areas which may have been sown with the intention of harvesting for grain, but which, due to adverse seasonal conditions, showed no promise of producing grain or even hay and were fed off to live stock. The principal crops cut for green fodder are oats, wheat and lucerne, while small quantities of barley, sorghum, maize, rye and sugar-cane also are so used. In 1951-52 the area under green fodder (2,521,835 acres) consisted of oats (1,455,611 acres), lucerne (228,703 acres), wheat (177,634 acres), sorghum (62,017 acres), maize (49,736 acres), barley (78,502 acres), rye (33,464 acres), sugar-cane (6,431 acres) and other crops (429,737 acres). Particulars concerning the area of green fodder in the several States during each of the years 1947-48 to 1951-52 are given in the following table together with the average for the periods of ten years ended 1938-39 and 1950-51.

**GREEN FODDER : AREA.**  
(Acres.)

Season.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	A.C.T.	Aust.

1949-50 .. .. .	584,541	44,928	581,811	277,265	550,690	136,412	2,249	2,177,896
1950-51 .. .. .	528,214	41,279	583,304	340,727	566,312	163,153	1,214	2,224,203
Average, 1941-42 to								
1950-51 .. .. .	588,948	68,292	573,050	236,257	409,716	97,437	1,744	1,975,444
1951-52 .. .. .	672,633	45,661	604,190	385,079	636,728	176,319	1,225	2,521,835

2. Value of Green Fodder Crops.—The value of these crops is variously estimated in the several States, and the Australian total for the season 1951-52, excluding Western Australia, may be taken approximately as £6,934,000.

**§ 14. Sugar-cane.**

1. Area.—Sugar-cane growing appears to have commenced in Australia in or about 1862, and is confined to New South Wales and Queensland. A brief outline of the development of the industry was included in earlier issues of the Official Year Book (see No. 38, page 985). The area of sugar-cane in Australia for the seasons 1947-48 to 1951-52 and the averages for the ten-year periods ended 1938-39 and 1950-51 are shown in the following table. In 1951-52 the total area of sugar-cane (excluding areas cut for green fodder) was a record at 402,867 acres, an increase of 1.4 per cent. over the 1950-51 area of 397,122 acres.

**SUGAR-CANE : AREA.(a).**  
(Acres.)

1950-51 .. .. .	8,207	7,134	236	263,666	106,903	10,976	271,873	114,037	11,212	397,122
Average, 1941-42 to										
1950-51 .. .. .	7,896	8,272	293	237,685	86,693	12,035	245,581	94,965	12,328	352,874
1951-52 .. .. .	8,354	5,974	191	273,370	101,731	13,247	281,724	107,705	13,438	402,867

(a) Excludes areas cut for green fodder.

2. Productive and Unproductive Cane.—The areas shown in the preceding table do not include the small acreage cut for green fodder, which in 1951-52 amounted to 6,431 acres. The whole area planted is not cut for crushing during any one season, there being always a considerable amount of young and "stand-over" cane as well as a small quantity required for plants. Thus the season in which the highest acreage is recorded may not show the greatest area of productive cane cut for crushing.

3. Production of Cane and Sugar.—For Queensland, statistics of the production of sugar-cane are not available prior to the season 1897-98. In that season the total for Australia was 1,073,883 tons, as against the maximum production of 7,051,555 tons in 1950-51.

The average production of cane during the ten seasons ended 1950-51 was 5,190,256 tons, and of raw sugar 721,395 tons. Particulars of the total production of cane and sugar for the years 1947-48 to 1951-52 and the averages for the ten-year periods ended 1938-39 and 1950-51 are as follows.

# AREA OF CROPS: AUSTRALIA, 1860-61 to 1952-53

## WHEAT PRODUCTION AND EXPORTS: AUSTRALIA, 1860-61 to 1951-52

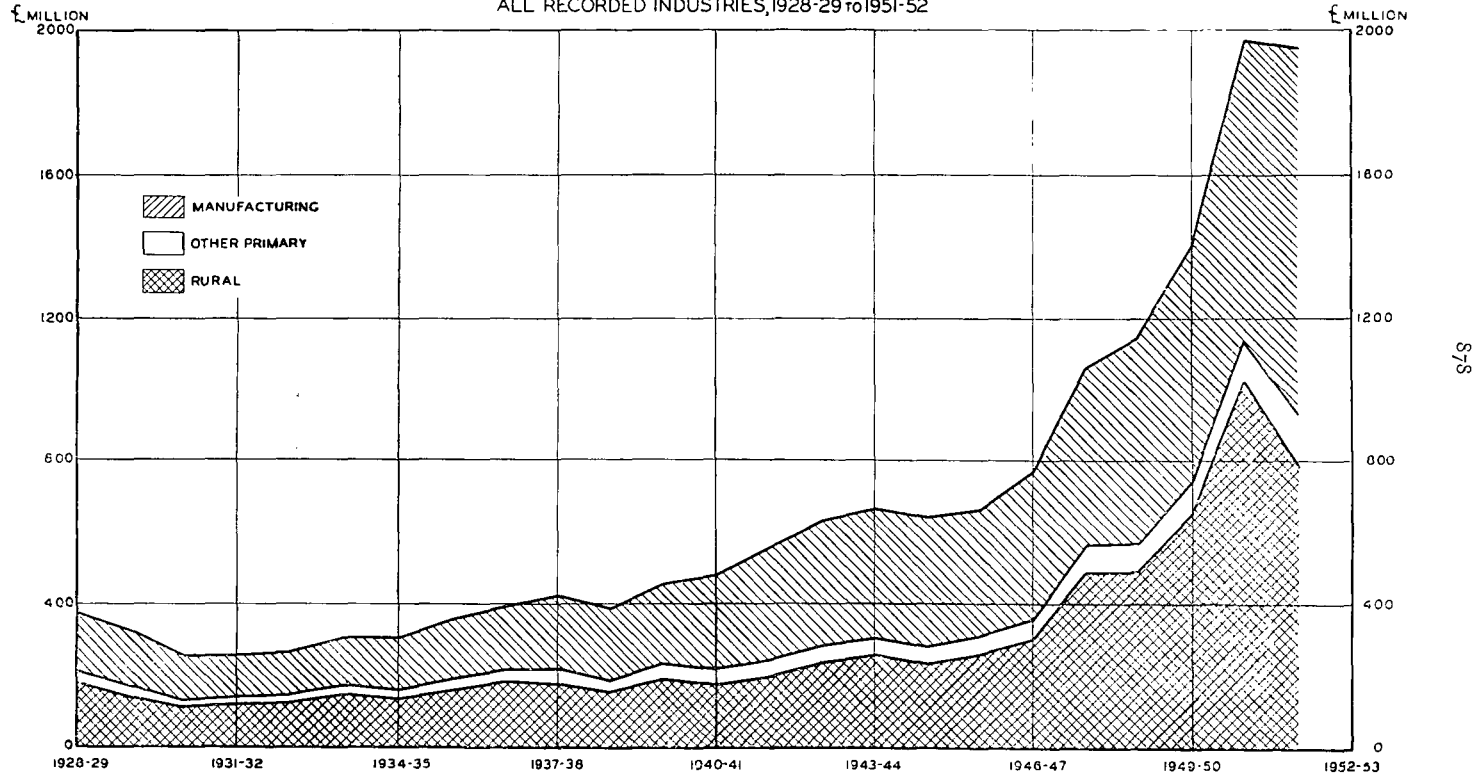

NOTE.—The export figures for the years 1915-16 to 1920-21 do not represent the surplus available for export in each of these years because of the dislocation of shipping due to the 1914-1918 War. For these years the quantity consumed in Australia has been averaged and the balance taken as exports.

# PRODUCTION OF OATS, BARLEY, MAIZE, RICE AND HAY : AUSTRALIA, 1860-61 TO 1952-53

# NET VALUE OF PRODUCTION: AUSTRALIA

ALL RECORDED INDUSTRIES, 1928-29 to 1951-52

## SUGAR-CANE : PRODUCTION OF CANE AND SUGAR.

(Tons.)

Season.	New South Wales.		Queensland.		Australia.

1951-52 .. .. .	321,388	41,060	5,005,172	704,341	5,326,560	745,401

(a) Raw sugar at 94 net titre.

The production of raw sugar in Australia in 1951-52 amounted to 745,401 tons manufactured from 5,326,560 tons of cane, compared with the record production of 943,052 tons in 1948-49, and production of 921,102 tons in 1950-51.

Official annual data are not available regarding the total number engaged in the sugar industry in Queensland other than the number of separate holdings growing cane (6,136 in 1951-52) and of employees in sugar mills (5,788 in 1951-52).

According to data obtained from the population census of 30th June, 1947, the number of persons engaged in the sugar-cane industry in New South Wales and Queensland comprised 15,789 males and 287 females, a total of 16,076 persons, of whom 2,521 were employers and 4,549 were self-employed.

4. Average Production of Cane Sugar.—Owing to climatic variation, comparison between the average yields of cane per productive acre in Queensland and New South Wales cannot be accurately made except on an annual basis. In New South Wales the crop matures in from 20 to 24 months, whereas in Queensland a period of from 12 to 14 months is sufficient. Allowing for the disparity in maturing periods the average annual yields of cane per productive acre during the ten years ended 1950-51 were 36.67 tons for New South Wales, and 20.62 tons for Queensland. Similarly, the yields of sugar per acre crushed for the same period were estimated at 4.64 tons and 2.88 tons respectively. Apart from the consideration mentioned above, the yields of cane and sugar per acre crushed for Australia for the ten years ended 1950-51 were 21.13 tons and 2.94 tons respectively, as compared with 19.73 tons and 2.76 tons for the decennium ended 1938-39.

5. Quality of Cane.—The quantity of cane required to produce a ton of sugar varies with the variety planted, the district and the season. For the ten years ended 1950-51 it required on the average 7.19 tons of cane to produce 1 ton of sugar, or 13.91 per cent.

of its total weight, as compared with 7.15 tons for the ten years ended 1938-39. As the result of the systematic study of cane culture in Queensland and improvements in field and mill methods the sugar content of the cane has been considerably increased, and in 1937-38 only 6.78 tons of cane were required to produce 1 ton of sugar. It is believed that this is the highest sugar content obtained anywhere in the world.

The Bureau of Sugar Experiment Stations in Queensland is rendering useful service to the sugar industry by advocating and demonstrating better methods of cultivation, the more scientific use of fertilizers, lime, etc., and by producing and distributing improved varieties of cane.

**6. Production and Utilization.**—Details of the production and utilization of raw sugar for the three years ended 1938-39 and each year 1947-48 to 1951-52 are shown below. It should be noted that the details of sugar production refer to the annual periods shown, without regard to the season in which the sugar was produced; they include the small quantities of beet sugar produced in certain of these years. Consumption is shown in terms of refined sugar, including that consumed in manufactured products.

in refining.

(c) In terms of refined sugar.

(b) Includes industrial uses and losses

**7. Consumption in Factories.**—The quantity of sugar used in factories in 1951-52 amounted to 273,536 tons compared with 260,560 tons in 1950-51 and 123,883 tons in 1938-39. These figures include, where necessary, estimates of consumption based on the sugar content of the finished product. Particulars of sugar used in establishments not classified as factories are not available, and consequently these quantities are deficient to that extent. In 1951-52 consumption by factories engaged in the production of jams, jellies and preserved fruit (including condiments, pickles, etc.) amounted to 82,745 tons and by those producing confectionery, ice cream, etc., amounted to 54,011 tons.

**8. Control of Cane Production in Queensland.**—Agreements between the Commonwealth and Queensland Governments have fixed the wholesale price of sugar and sugar products from time to time. On 1st September, 1946, a Sugar Agreement Act came into operation, fixing the wholesale price at £33 4s. per ton (4d. per lb. retail). Subsequently this Act was twice amended, in December, 1947, when the price was raised to £37 6s. 8d. per ton (4½d. per lb. retail) and in October, 1949, when a further increase to £41 9s. 4d. per ton (5d. per lb. retail) was granted. This Act was due to expire on 31st August, 1951, but on 27th June, 1951, a new agreement was signed. This new agreement, which came into operation on 7th July, 1951, repealed the 1946, 1947 and 1949 agreements and increased the wholesale price to £53 6s. 8d. per ton (6½d. per lb. retail). The wholesale price was further increased on 24th March, 1952 to £64 per ton (8d. per lb. retail) and on 13th October, 1952 to £72 per ton (9d. per lb. retail) by an exchange of letters between the two Governments. These amendments have not yet been incorporated in the Act. The new agreement is intended to cover the period up to 31st August, 1956.

The net proceeds of all sugar sold in Australia and sugar sold abroad are pooled and a uniform price per ton is paid to the mills. This pooling is made possible by the acquisition by the Queensland Government of all sugar produced in the State, under legislation which has been in force since 1915. The small New South Wales production (about 5 per cent. of the whole) is also acquired by the Queensland Government by private agreement.

Sugar production, which in 1923 had scarcely been sufficient to cover Australian requirements, grew very rapidly in subsequent years. In 1925 the Queensland Government took steps to prevent, as a general rule, new land from being opened up for cane production. During that year 56 per cent. of the sugar production was consumed in Australia and 44 per cent. exported. After 1925, production remained stable for some years. In 1929 the operations of the pool, which had hitherto received at a uniform price all sugar offered it by the mills, were re-organized. After 1929, mills received the full pool price for sugar up to the amount of their previous maximum production only. Any further supplies were acquired at export price only.

Between 1929 and 1939 the export price was generally less than half the pool price. In spite of this, production increased by 72 per cent. during that period. In 1939, in view of the fact that the International Sugar Agreement imposed certain restrictions on the volume of Australian exports, the Queensland Parliament passed further legislation limiting the pool (mill peaks) to 737,000 tons in respect of production in Queensland. Any production in excess of this was to be acquired at a penalty price. This tonnage was divided up in quotas between the mills, on the understanding that the mills would allocate quotas of production to individual farmers. Proclamations issued by the Queensland Government, however, permitted the harvesting of the whole of the crops for the seasons 1939 to 1948.

In 1948 the mill peak was raised to 874,000 tons. As a result of the Commonwealth Countries Sugar Marketing Agreement, negotiated in London in December, 1949, the Queensland Government initiated a controlled expansion of the industry, and for the 1950 season mill peaks were increased to 942,300 tons. Further increases in mill peaks to 1,045,000 tons to operate from 1953 and to 1,162,000 tons to operate from 1954 were subsequently announced.

9. **Sugar-beet.**—The production of sugar-beet fell from an average of 4,642 tons in the ten years ended 1938–39 to 584 tons in 1947–48. There has been no production in subsequent years and the Victorian Government has now dismantled and disposed of its factory which formerly treated the sugar-beet at Maffra.

10. **Sugar Agreement in Australia—Embargo on Imports, etc.**—Reference was made in Official Year Book No. 37 (pp. 940, 941) to the agreement operating between the Commonwealth and Queensland Governments in respect of the sugar industry in Australia. Briefly, the agreement places an embargo on sugar importations and fixes the price of sugar consumed in Australia. A new agreement operating from 7th July, 1951 covers the period up to 31st August, 1956.

11. **International Sugar Agreement.**—Delegates of 21 nations, representing 90 per cent. of producers, met in London and entered into an agreement on 6th May, 1937, providing for the regulation of the production and marketing of sugar in the world during a period of five years from 1st September, 1937. The object of the agreement was to ensure an adequate supply of sugar at a price not exceeding the cost of production, including a reasonable profit to efficient producers. For this purpose, each exporting country was given a basic annual export quota which would be increased in proportion to any expansion in sugar consumption. By this means and by limitations on stocks and measures to encourage more consumption it was hoped that the International Sugar Council, which was established to administer the agreement, would be able to hold in proper balance the supplies and requirements of sugar. The export quota originally allotted to Australia was 400,000 long tons. This figure could be increased, however, where the delivery from any British Colony fell short of its quota. In such circumstances, the deficiency could be allocated among other producing countries of the Empire, including Australia.

This agreement, which normally would have expired on 31st August, 1942, has proved of great benefit to Australia. In 1943, fourteen of the original 21 nations signed a protocol continuing the agreement for another two years ending 31st August, 1944. Nine further protocols have since been signed, the latest extending the agreement to 31st August, 1955. The first protocol, signed in 1943, continued the agreement unchanged, while later protocols contained two new provisions. The first of these provisions was that during the period of the extension, the quotas fixed in the agreement should be inoperative. The second provision was that the signatories of the protocols recognized that revision of the agreement was necessary and should be undertaken when the time appeared opportune. The protocols prescribed that, in any negotiations for a new agreement, the existing agreement shall be taken as the starting point. The United Nations, at the request of the International Sugar Council, convened a conference in London in July, 1953, to discuss the conclusion of a new International Sugar Agreement. Australia was represented at the conference.

12. **Net Return for Sugar Crop.**—Details of the disposal of the crop, net value of exports and the average price realized during each of the years 1938-39 and 1947-48 to 1951-52 will be found in the following table :—

**RAW SUGAR(a) : NET RETURNS, AUSTRALIA.**

Year.	Proportion Exported. (b)	Net Value of Exports per Ton. (b)		Average Price per Ton for Whole Crop.	Estimated Value of Crop.
		£	s. d.		
	Per cent.				£
1938-39 .. ..	55.78	8	4 3	15 3 11	12,806,376
1947-48 .. ..	17.61	29	12 6	24 10 9	14,879,144
1948-49 .. ..	47.00	28	2 0	25 8 6	23,904,606
1949-50 .. ..	46.92	29	7 6	26 13 8	25,362,288
1950-51 .. ..	43.73	32	16 6	28 3 4	26,131,998
1951-52 .. ..	21.12	36	15 6	34 7 0	24,911,788

(a) 94 net titre.

(b) As supplied by the Queensland Sugar Board.

The estimated value of the raw sugar produced has been based upon details taken from the audited accounts of the Queensland Sugar Board. The values stated represent the gross receipts from sales in Australia and overseas, less refining costs, freight, administrative charges, etc., and export charges, but not deducting concessions to the fruit industry and other rebates which in 1951-52 amounted to £3,484. The value thus obtained represents the net market value of all raw sugar sold, which, since 1933, has been divided between the growers and millers in the approximate proportions of 70 per cent. and 30 per cent. respectively. Prior to that year the distribution was about two-thirds to the grower and one-third to the miller.

13. **Exports of Sugar.**—Particulars of the exports of cane sugar (raw and refined) for the five years ended 1938-39 and each year 1947-48 to 1951-52 are as follows :—

**SUGAR : EXPORTS, AUSTRALIA.**

Particulars.	Average, 1934-35 to 1938-39.	1947-48.	1948-49.	1949-50.	1950-51.	1951-52.
	Quantity tons	377,930	100,351	415,194	432,711	387,841
Value £	3,480,632	3,062,450	13,199,309	14,147,150	14,791,575	6,896,398

14. **Sugar By-products.**—Large quantities of molasses are produced as a by-product in the sugar mills. Details for a series of years of the quantities produced and the amounts used for distilling, fuel, manure and other purposes will be found in Chapter XXIV.—Manufacturing Industry.

Boards are now being made from the residue of crushed fibre after the removal of the sugar content from sugar-cane. These boards are used in the building industry for walls and ceilings and possess high insulating and sound-absorbing properties.

15. **Sugar Prices.**—The prices of sugar in Australia from 1939 to 1941 and 1947 to 1951 in the case of raw sugar, and from 1925 to 1936 and 1947 to 1956 in the case of refined sugar, are shown in the following table.

SUGAR : PRICES IN AUSTRALIA.

Year.	Raw Sugar, 94 Net Titre.			Refined Sugar.		
	Average Return per Ton received by millers and growers for—			Date of Determination.	Wholesale Price per Ton.	Retail Price per lb.

(a) Including "Excess" Sugar.

16. **Marketing Arrangements.**—After the outbreak of war in September, 1939, the British Ministry of Food concluded arrangements with the Queensland Government for the purchase of Australia's surplus production of raw sugar for the season 1939. The price was fixed at £Stg.7 10s. per ton at United Kingdom ports plus the preference on dominion sugar of £Stg.3 15s. per ton under the existing tariff. Similar agreements were negotiated for the disposal of the surplus raw sugar in each subsequent season. The price in sterling currency per ton c.i.f. United Kingdom ports, basic 96° polarization, inclusive of the tariff preference has risen to £32 17s. 6d. per ton from 1st January, 1951, to £38 10s. from 1st January, 1952 and to £42 6s. 8d. from 1st January, 1953. However, the latter price applied only to 314,000 tons of 1953 exports, the remainder being sold at world prices plus preference. (For prices in previous years see earlier issues.)

In December, 1949, a Commonwealth Countries Sugar Marketing Agreement was formulated in London, the terms of which include an undertaking by the United Kingdom Government to find a market for the Australian exportable surplus sugar to the end of 1952.

From January, 1953, a new arrangement entered into, pursuant to the British Commonwealth Sugar Agreement, came into operation. For the six years 1953-1958, Australia is to plan for aggregate exports not exceeding 600,000 tons annually. Of this amount, the United Kingdom Government agreed to take 314,000 tons at guaranteed prices to be negotiated annually. The balance of 286,000 tons is expected to find a market in the United Kingdom or Canada at the world price plus United Kingdom or Canadian preference. Provision is made for extension of the term of the agreement, and for upward revision of the quotas, if necessary.

17. **Fruit Industry Sugar Concession Committee and Sugar Rebates.**—The 1931-36 and subsequent Sugar Agreements between the Commonwealth and Queensland Governments have provided for the establishment of a Committee entitled the "Fruit Industry

Sugar Concession Committee". The Agreements provide that the Queensland Government shall, on behalf of the Australian Sugar Industry, contribute £216,000 annually to a fund administered by the Committee. (The annual contribution is temporarily suspended whilst the Committee's accumulated funds exceed £500,000). From this fund, the Committee pays a rebate to Australian manufacturers amounting to £2 4s. per ton of refined sugar used in the processing of approved fruit products. Payment of this rebate is conditional upon manufacturers paying for all fresh fruit used in such products at prices not lower than those declared by the Committee to be reasonable prices. The Committee also pays exporters of approved fruit products an export sugar rebate the rate of which is equivalent to the amount (if any) by which the price of Australian sugar to manufacturers exceeds the price at which the cheapest available foreign sugar could be landed in Australia. This rebate ensures that manufacturers of fruit products containing sugar are not handicapped on the world's markets by having to pay a higher price for Australian sugar than they would pay for foreign sugar landed in Australia duty free. A similar rebate on some other products (not being approved fruit products) is paid to exporters by the Queensland Government on behalf of the Australian sugar industry. After paying rebates and administrative expenses the Committee is empowered to use any money remaining in the fund for the promotion of the use and sale of Australian fruit products, or for scientific research.

18. **Sugar Inquiry Committee.**—The Sugar Inquiry Committee under the Chairmanship of the Commonwealth Prices Consultant, was constituted by the Commonwealth Government on 18th March, 1952, to conduct an investigation into the Australian Sugar Industry. The terms of reference to the Committee included a general survey of all branches of the Australian sugar industry and particular examination of the prices and other matters covered by the Sugar Agreement between the Commonwealth and Queensland Governments.

The Committee conducted public hearings in New South Wales, Victoria and Queensland and also accepted much supporting material in confidence. It presented its report on 11th September, 1952. As an outcome of the report, the wholesale price of refined sugar was increased as from 13th October, 1952, by £8 per ton (equivalent to an increase of 1d. per lb. in the retail price). Other amendments recommended by the Committee were made to the Sugar Agreement.

19. **Bulk Handling of Sugar.**—Following a successful trial shipment of bulk raw sugar to England in 1951 and consideration of two independent and comprehensive reports on bulk handling prepared for it, the Sugar Board recommended, and the Queensland Government subsequently approved (on 5th August, 1952), the establishment of bulk handling facilities at the ports of Mackay and Lucinda Point. Consideration was to be given later to the installation of similar facilities in certain other Queensland ports. The Government Railways have conducted experiments with improvised railway trucks for conveying bulk sugar with a view to provision of the necessary bulk rail transport facilities.

## § 15. Vineyards.

1. **Progress of Cultivation.**—(i) *Area of Vineyards.* Since the early days of Australian settlement the expansion of the cultivation of vines has been most rapid in Victoria and South Australia, the area under vineyards in the 1952 season in these two States comprising 78 per cent. of the total area. The purposes for which grapes are grown in Australia are (a) for wine-making, (b) for table use, and (c) for drying. The total area of vines in the several States during each of the years 1947-48 to 1951-52 and the averages for the ten-year periods ended 1938-39 and 1950-51 are shown in the following table.

## VINEYARDS : AREA.

(Acres.)

Season.	N.S.W.	Victoria.	Queen-land.	S. Aust.	W. Aust.	Australia.(a)
Average, 1929-30 to 1938-39	15,777	40,563	2,142	54,156	5,666	118,304
1947-48 ..	16,541	43,784	3,087	58,885	10,025	132,322
1948-49 ..	16,568	45,609	3,265	59,806	10,014	135,262

Total ..	17,047	45,267	2,819	61,214	9,358	135,705

(a) Excludes particulars for Australian Capital Territory.

(ii) *Wine Production, Bounties, etc.* The production of wine in Australia has shown a marked increase in recent years, rising from 14.3 million gallons in 1938-39 to 35.3 million gallons in 1951-52. In the same period consumption in Australia has expanded from 4.5 million gallons (0.7 gallons per head of population) to 13.8 million gallons (1.6 gallons per head of population). For many years prior to the 1939-45 War a bounty was paid on wine shipped overseas under the provisions of the Wine Export Bounty Act of 1930, as amended from time to time. Details of the bounty, payment of which was discontinued in 1947, may be found in Official Year Book No. 39, page 992.

The quantity of wine produced in the several States during the 1947-48 to 1951-52 seasons, together with the averages for the ten-year periods ended 1938-39 and 1950-51, is shown in the following table:—

## WINE : PRODUCTION.(a)

('000 Gallons.)

Season.	N.S.W.	Victoria.	Queensland.	S. Aust.	W. Aust.	Australia.
Average, 1929-30 to 1938-39	2,099	1,449	36	12,127	393	16,104
1947-48 ..	4,500	2,958	28	24,729	664	32,879
1948-49 ..	4,127	3,081	36	24,952	622	32,818
1949-50 ..	5,185	3,230	45	23,702	513	32,675
1950-51 ..	4,372	2,358	43	18,611	652	26,036
Average, 1941-42 to 1950-51	3,700	2,127	34	18,472	577	24,910
1951-52 ..	5,465	3,472	33	25,495	790	35,255

(a) Excludes spirits used in fortified wine, such spirit having been made from distillation wine.

2. *Imports and Exports of Wine.*—(i) *Imports.* The principal countries of origin of wine imported into Australia were, before the 1939-45 War, France, Spain, Portugal and Italy, the bulk of the sparkling wines coming from France. The bulk of the post-war

wine imports have been obtained from France. Imports for 1951-52 amounted to 79,791 gallons valued at £166,761 compared with 45,816 gallons valued at £97,655 in the previous year and an average of 36,685 gallons valued at £39,577 for the five years ended 1938-39.

(ii) *Exports.* Before the 1939-45 War practically all wine exported was sent to the United Kingdom, only 200,000 gallons (approximately) being sent elsewhere. Exports in 1951-52 totalled 1,162,292 gallons, of which the United Kingdom received 552,309 gallons, New Zealand, 175,881 gallons, Canada, 332,831 gallons, and other countries 101,271 gallons.

Exports for the five years ended 1951-52 are shown in the following table in comparison with average exports during the five years ended 1938-39:—

**WINE : EXPORTS FROM AUSTRALIA.**

Year.	Quantity (Gallons).			Value. (£)		
	Sparkling.	Other.	Total.	Sparkling.	Other.	Total.
Average, 1934-35 to 1938-39	3,772	3,559,094	3,562,866	5,400	938,195	943,595

1949-50 ..	6,093	1,097,225	1,103,318	6,323	509,516	515,839
1950-51 ..	3,651	1,219,258	1,222,909	7,121	627,741	634,862
1951-52 ..	6,685	1,155,610	1,162,295	18,983	711,554	730,537

3. *Oversea Marketing of Wine.*—(i) *The Wine Overseas Marketing Act 1929-1953.* This Act was introduced at the request of the viticultural interests in Australia with the object of placing the oversea marketing of Australia's surplus wine on an orderly basis. The Wine Overseas Marketing Board was appointed to supervise the export, and the sale and distribution after export, of Australian wine.

The name of the Board was changed to the Australian Wine Board in 1936. An amendment to the Act in 1945 made provision for eleven members on the Board, comprising five representatives of proprietary and privately-owned wineries and distilleries, two representatives of co-operative wineries and distilleries, three representatives of grape-growers supplying to wineries and distilleries, and one representative of the Commonwealth Government. No wine may be exported except by means of a licence which is issued under conditions recommended to the Minister by the Board; these include the withholding of shipments as directed by the Board. The Board has a London agency which advises on marketing conditions. The methods of marketing adopted by the Board have resulted in the widening of the distribution of Australian wines overseas.

(ii) *The Wine Grapes Charges Act 1929-1941.* This Act provides for the imposition of a levy on all grapes used in Australia for the manufacture of wines or spirit used for fortifying wine. The proceeds of the levy are used to defray the administrative and other expenses of the Board, and provision is made for such exemptions from the levy as the Board may recommend.

4. *Other Viticultural Products.*—(i) *Table Grapes.* Grapes for table use are grown in all the States except Tasmania, but the area cultivated to this variety is only about 7 per cent. of the productive area of grapes. The greatest development in the industry has taken place in the drying of raisins and currants, particularly in Victoria and South Australia. The quantities of table grapes produced during the season 1951-52 in each State are shown in § 3 of this chapter.

(ii) *Raisins and Currants.* The quantities of raisins (sultanas and lexias) and currants dried during each of the seasons 1947-48 to 1951-52 and the averages for the ten-year periods ended 1938-39 and 1950-51 are shown in the following table. The production of 103,410 tons for the 1943-44 season represents the greatest output recorded in any year. Owing to adverse seasonal conditions, heavy crop losses occurred during the three succeeding years. Production in 1947-48 amounted to 84,828 tons, but in none of the three seasons following did it reach 70,000 tons. In 1951-52, however, it amounted to almost 72,000 tons.

(a) Sultanas and lexias.

5. *Production and Disposal of Dried Vine Fruit.*—As the production of dried vine fruit is far in excess of Australia's requirements, considerable quantities are available for export. The quantities disposed of in Australia and overseas, as recorded by the Commonwealth Dried Fruits Control Board for the season ended December, 1952, totalled 69,475 tons, Australian consumption amounting to 18,521 tons and oversea exports 50,954 tons. Australian consumption includes amounts delivered to biscuit manufacturers, bakeries, etc., as well as retail sales for household consumption.

The following table shows the oversea exports of raisins and currants during each of the years 1947-48 to 1951-52 compared with the average for the five years ended 1938-39.

**RAISINS AND CURRANTS(a) : EXPORTS, AUSTRALIA.**

Year.	Raisins.		Currants.		Total Raisins and Currants.	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.
	Tons.	£	Tons.	£	Tons.	£

(a) Excludes quantities exported as mincemeat which amounted to 4,150 tons in 1951-52 value at £643,194.

Since 1912 Australia has not only produced sufficient raisins and currants for home consumption but has been able to maintain a large export trade. The chief countries importing Australian raisins and currants are the United Kingdom, New Zealand and Canada, the quantities exported thereto in 1951-52 being 18,640 tons, 7,303 tons and 10,269 tons respectively. Exports to Canada increased from 4,600 tons in 1928-29 to 16,944 tons in 1939-40 and to 25,955 tons in 1944-45, but had decreased to 10,269 tons by 1951-52.

6. **Post-war Contracts.**—A long-term agreement was negotiated between the Governments of the United Kingdom and Australia for the purchase of the exportable surplus of the dried vine fruit crop for the 1946, 1947 and 1948 seasons. A further agreement was reached between the Governments of the United Kingdom and Australia under which Australian dried vine fruits were purchased by the United Kingdom during the five years 1949 to 1953. This contract originally provided that the quantity of fruit to be purchased each year should not exceed a value of £2,500,000 sterling currency on an f.o.b. basis. This provision, however, was deleted after the 1951 season, enabling unrestricted tonnages of Australian dried vine fruits to enter the United Kingdom during 1952 and 1953. Export prices were fixed for the first two years, but during the remaining three years they were the subject of annual agreements by the two Governments. In April, 1953, the United Kingdom Government agreed to extend the five year contract for a period of one year to provide for the purchase by the British Ministry of Food of the exportable surplus from the 1954 crop on the same terms and conditions as applied under that contract. The contract prices for currants, sultanas and lexias sold to the United Kingdom during the years 1946 to 1953, are shown in the following table.

**DRIED VINE FRUITS : CONTRACT PRICES PER TON TO UNITED KINGDOM.**

Lexias ..	4 and 5 Crown ..	64 7 6	64 7 6	125 0 0	123 2 6	117 10 0

7. **Oversea Marketing of Dried Fruits.**—(i) *The Dried Fruits Export Control Act 1924-1953.* This Act was passed by the Commonwealth Parliament at the request of the dried fruits industry to organize the oversea marketing of Australian dried vine fruits. The Dried Fruits Control Board was appointed to control the export, and the sale and distribution after export, of Australian sultanas, currants and lexias. The Board, as at present constituted, consists of eleven members comprising seven growers' representatives, two members with commercial experience, one member with experience in marketing dried fruits and one representative of the Commonwealth Government. In conjunction with its London agency, the Board has improved the marketing of Australian dried fruits overseas, and has increased the demand for the product. Its system of appraisalment has resulted in more satisfactory realizations. Its methods of ensuring continuity of supply and regulating shipments and its participation in the advertising campaign of the Australian Overseas Trade Publicity Committee have benefited the industry considerably. No dried fruits may be exported except by means of a licence, which is issued subject to conditions recommended by the Board.

(ii) *Dried Fruits Export Charges Act 1924-1929.* This Act provides for the imposition of a levy on all sultanas, currants and lexias exported from Australia for the purpose of defraying the administrative expenses of the Board and the cost of advertising, etc. The rate of the levy is fixed by regulation. Under an amendment made in 1927 provision was made for the exemption of sultanas, currants and lexias from the levy upon recommendations by the Board.

(iii) *The Dried Fruits Act 1928-1935.* In previous issues of the Official Year Book reference has been made to the Dried Fruits Act and its provisions have been outlined (see p. 894 of Official Year Book No. 28).

## § 16. Orchards and Fruit-Gardens.

1. **Area.**—The largest area of orchards and fruit-gardens prior to the 1939-45 War was attained in 1933-34 when 281,899 acres were planted. From that year until 1942-43, when 260,384 acres were under fruit, there was a gradual decline. In each subsequent year there was a continuous upward movement to 1947-48 when the area reached a new

peak of 290,320 acres. Subsequently there was a continuous decline to 270,882 acres in 1951-52. The total area of orchards and fruit-gardens in the several States during the years 1947-48 to 1951-52 compared with the averages for the ten seasons 1929-30 to 1938-39 and the ten seasons 1941-42 to 1950-51 is shown in the following table:—

## ORCHARDS AND FRUIT-GARDENS : AREA.

(Acres.)

2. Varieties of Crops.—The varieties grown differ in various parts of the States, ranging from such fruits as the pineapple, papaw and mango of the tropics, to the strawberry, the raspberry and the currant of the colder parts of the temperate zone. In New South Wales, citrus fruits (oranges, lemons, etc.) and bananas are the principal crops, although apples, peaches, plums, pears and cherries are extensively grown. The principal varieties grown in Victoria are the apple, peach, pear, orange, plum and apricot. In Queensland, the banana, pineapple, apple, orange, mandarin, peach and plum are the varieties most largely cultivated. In South Australia, in addition to the apple, orange, apricot, plum, peach and pear, the almond and the olive are extensively grown. In Western Australia, the apple, orange, lemon, pear, plum, peach, apricot and fig are the chief varieties. In Tasmania, the apple occupies over two-thirds of the fruit-growing area, but small fruits, such as the currant, raspberry and gooseberry, are extensively grown, while the balance of the area is mainly taken up with the pear, apricot and plum. The following table shows the acreage—bearing and non-bearing—of the principal kinds of fruit, and the quantity and value of fruit produced.

4. **Production of Jams and Jellies and Preserved Fruit.**—Considerable quantities of fruit are used in the production of jams and jellies and preserved fruit in Australia. In 1951-52 output of jams and jellies amounted to 108,173,000 lb. whilst output of preserved fruit, excluding preserved apples, amounted to 241,288,000 lb. Production of preserved apples was 14,845,000 lb.

The recorded consumption of fruit in factories for all purposes, including that used for juice and cordial manufacture and for drying, was 195,877 tons in 1951-52.

5. **Consumption of Fruit and Fruit Products.**—Details of the estimated consumption of fruit and fruit products per head of population for a series of years ending 1952-53 are shown in Chapter XXIX.—Miscellaneous of this Year Book.

6. **Imports and Exports of Fruit.**—(i) *General.* The imports of fresh fruit into Australia are negligible, whilst those of dried fruit consist mainly of dates.

A considerable export trade in both fresh and dried fruit is carried on by Australia with oversea countries. The values of the shipments in 1951-52 amounted to £6,895,313 and £5,021,635 respectively. Apples constitute the bulk of the fresh fruit exported, although the exports of citrus fruit and pears are fairly considerable. Shipments of raisins' and currants have increased greatly since 1914-15 and are mainly responsible for the growth in the dried fruit exports, although dried tree fruit also figures amongst the exports.

(ii) *Fresh Fruit.* Particulars of the Australian export trade in fresh and frozen fruit are shown in the following table:—

FRESH AND FROZEN FRUIT : EXPORTS, AUSTRALIA.

Year.	Apples.		Pears.		Citrus.		Total.(a)	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.

(a) Total, including exports of all other fresh and frozen fruit.

(iii) *Dried Tree Fruit.* The quantity and value of oversea imports and exports of dried fruit, other than raisins and currants, for the five years ending 1951-52, compared with the average for the five years 1934-35 to 1938-39, are shown below. Normally, the bulk of the imports consists of dates obtained almost entirely from Iraq. This trade was prohibited during the war years but has since been resumed.

**DRIED TREE FRUIT(a) : IMPORTS AND EXPORTS, AUSTRALIA.**

Year.	Imports.		Exports.		Net Exports.	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.

(a) Excludes raisins and currants referred to separately under Vineyards, § 15, par. 5.

NOTE.—Minus sign (-) denotes net imports.

(iv) *Jams and Jellies.* The exports of jams and jellies have reached large proportions since the 1939-45 War. In 1951-52 shipments totalled 19,919,000 lb. valued at £1,149,096 compared with average exports of 7,118,000 lb. valued at £137,707 during the five years ended 1938-39. Small quantities of jam were imported before the war but the quantities involved now are negligible. Particulars of exports during each of the five years ended 1951-52, compared with the average for the five years 1934-35 to 1938-39, are as follows:—

**JAMS AND JELLIES : EXPORTS, AUSTRALIA.**

Particulars.	Average, 1934-35 to 1938-39.	1947-48.	1948-49.	1949-50.	1950-51.	1951-52.

Value £	137,707	2,232,168	2,049,224	2,473,095	1,871,686	1,149,096

(v) *Preserved Fruit.* The total quantity of fruit preserved in liquid, or partly preserved in liquid or pulped, imported into Australia during 1951-52 was 2,923,321 lb. valued at £200,784. Large quantities of fruit preserved in liquid are normally exported from Australia, the value of shipments in 1938-39 amounting to £1,271,525. In 1951-52 the value of exports had increased to £6,501,251. In addition, the exports of pulped fruits during 1951-52 amounted to 9,738,789 lb. valued at £451,980. Quantities of fruit preserved in liquid exported from Australia for each of the five years ended 1951-52 compared with the average for the five years 1934-35 to 1938-39 are shown in the following table:—

**FRUIT PRESERVED IN LIQUID : EXPORTS FROM AUSTRALIA.**

7. **Marketing of Apples and Pears.**—(i) *Apple and Pear Organization Act 1938–1953.* This Act, which was passed by the Commonwealth Parliament at the request of the apple and pear industry, provides for the establishment of an Australian Apple and Pear Board for the purpose of organizing and controlling the export trade in fresh apples and pears.

The Board originally comprised sixteen members but by an amendment of the Act in 1947 the members were reduced to twelve, representative of the following interests :— one member to represent the Commonwealth Government ; seven members to represent growers of apples and pears on the basis of two for Tasmania and one each for the other States ; three members to represent exporters of apples and pears on the basis of one each for Tasmania and Western Australia and one for the other States ; and one member to represent the employees engaged in the apple and pear industry.

The Board has power to regulate the shipment of apples and pears from Australia by licensing exporters and issuing permits to export. Power is also given to determine export quotas and to allocate the consignments from each State. The Board may appoint persons to represent it overseas.

The Apple and Pear Publicity and Research Act 1938 and the related Apple and Pear Tax Acts, referred to in earlier issues of the Official Year Book, were repealed by amendment to the Apple and Pear Organization Act in 1947.

(ii) *Apple and Pear Export Charges Act 1938–1947.* This Act provides for the imposition of a levy on all apples and pears exported from Australia for the purpose of providing the funds necessary to meet the administrative and other expenses of the Board.

(iii) *Apple and Pear Acquisition.* Exports of apples and pears were seriously curtailed as a result of the war, and during the 1940 to 1948 seasons, crops were acquired and marketed under the National Security (Apple and Pear Acquisition) Regulations and Regulations issued under the Defence (Transitional Provisions) Act 1946. During the 1949 season in Tasmania and the 1949 and 1950 seasons in Western Australia the crops were marketed under State schemes, but crops in all States have since been marketed on a normal commercial basis. Details of the acquisition scheme which operated during the 1940 to 1948 seasons will be found on pages 1003 and 1004 of Official Year Book No. 38 and in earlier issues of the Year Book.

8. **Oversea Marketing of Canned Fruit.**—(i) *The Canned Fruits Export Control Act 1926–1953.* This legislation was introduced at the request of canners and representative organizations of fruit-growers with the object of organizing the oversea marketing of canned fruit. The original Act referred to canned apricots, peaches and pears only, but canned pineapples, canned pineapple juice and certain canned fruit salads were subsequently brought within the scope of the Board's operations. The personnel of the Australian Canned Fruits Board consists of one representative each from proprietary and privately owned canneries, co-operative canneries, pineapple interests and the Commonwealth Government. No canned fruits to which the Act applies are permitted to be exported except under a licence issued in accordance with conditions recommended by the Board. The system of marketing adopted by the Board, including the fixation of minimum selling prices overseas, the appointment of a London agency and the engaging in oversea trade publicity, has resulted in the satisfactory disposal of the annual exportable surplus of canned fruits. The distribution of canned fruits has been widened and the exporting side of the industry placed on a sounder basis through the Board's operations.

(ii) *The Canned Fruits Export Charges Act 1926–1938.* This Act provides for the imposition of a levy on the export of canned fruits to meet the administrative and other commitments of the Board. The rate of the levy is fixed by regulation from time to time. An amendment in 1929 provided for certain exemptions from payment of the levy when recommended by the Board.

### § 17. Vegetables for Human Consumption.

1. **Area and Production of Fresh Vegetables.**—Details of the areas planted and production of individual kinds of vegetables, excluding potatoes and onions referred to in §§ 10 and 11 of this chapter, are shown below for the seasons 1949-50 to 1951-52. Comparable figures prior to the 1942-43 season are not available.

#### FRESH VEGETABLES(a) FOR HUMAN CONSUMPTION : AUSTRALIA.

(a) Excludes potatoes and onions.  
in "All Other".

(b) Excludes french beans harvested dry; these are included

2. **Production of Canned and Dehydrated Vegetables.**—Total production of canned vegetables in 1951-52 amounted to 100,446,000 lb., which was considerably higher than pre-war production, and approximately 90 per cent. of the peak war-time production. The principal canned vegetables produced in 1951-52 were beans 27,178,000 lb., green peas 24,374,000 lb., tomatoes 9,605,000 lb. and beetroot 9,298,000 lb.

The production of dehydrated vegetables, which was initiated during the 1939-45 War by the Commonwealth Government, rose to a maximum of 22 million lb. in 1945-46, but in recent years has declined to an annual output of less than one million lb.

3. **Imports and Exports of Vegetables.**—Oversea exports of pulse and fresh vegetables during 1951-52 consisted of :—Pulse, 11,005 tons, £616,936; onions, 3,673 tons, £178,916; potatoes, 12,468 tons, £436,780; other vegetables, 2,635 tons, £198,224. Imports totalled 13,424 tons, valued at £339,587, of which pulse comprised 10,890 tons, valued at £684,525.

In 1951-52 exports of vegetables preserved in liquid consisted of :—Peas, 901,785 lb., £61,181; tomatoes, 1,317,663 lb., £82,104; other vegetables, 6,138,643 lb., £435,438.

4. **Consumption of Vegetables.**—Details of the estimated consumption of vegetables for a series of years ending with 1952-53 are shown in Chapter XXIX.—Miscellaneous of this Year Book.

### § 18. Tobacco.

1. **States, Area and Production.** Tobacco-growing years ago promised to occupy an important place amongst the agricultural industries of Australia. As early as the season 1888-89, the area of this crop amounted to 6,641 acres, of which 4,833 were in New South Wales, 1,685 in Victoria, and 123 in Queensland. This promise was, however, not fulfilled, and after numerous fluctuations, in the course of which the Victorian area rose in 1895 to more than 2,000 acres, and that in Queensland to more than 1,000 acres, the total area declined considerably.

The expansion of the tobacco-growing industry was hoped for as a 1939-45 war-time measure but, after increasing slightly during the first three war years, the acreage planted decreased to 1948-49, but by 1951-52 had recovered to 73 per cent. of the annual average for the ten years ended 1938-39. Owing to improvement in average yields, however, the production of dried leaf in 1951-52 was 50 per cent. higher than the pre-war average.

In the following table particulars of the area and production of tobacco are given by States for each of the years 1947-48 to 1951-52, together with averages for the ten-year periods ended 1938-39 and 1950-51 :—

#### TOBACCO : AREA AND PRODUCTION.

1951-52 .. .. .	518	1,381	4,667	..	988	..	7,554

2. **The Tobacco Industry.**—(i) *Marketing.* The Australian Tobacco Board was constituted in May, 1941, under the National Security (Australian Tobacco Leaf) Regulations for the purpose of controlling the marketing of Australian-grown tobacco leaf, which was required to be submitted to the Board for appraisalment. The Board ceased to function towards the end of 1948 and subsequent crops have been marketed at open auction in the respective States.

(ii) *Tariff Board Inquiries.* The tobacco industry has been the subject of a number of investigations. The Tariff Board inquired into the industry in 1926, 1931 and 1940 and reports were issued.

(iii) *Tobacco Inquiry Committee.* Details of the recommendations by the Tobacco Inquiry Committee and grants periodically approved by the Commonwealth Government up to 30th June, 1952, were given in Official Year Book No. 39, page 1007.

In October, 1952, the Commonwealth Government agreed that—

- (a) the tenure of the 1946 grant (for experimental and demonstration work in connexion with tobacco leaf production; particularly in regard to control and elimination of diseases and pests) which expired on 30th June, 1952, be extended for a further period of five years;

- (b) the Commonwealth's annual contribution be increased from £10,000 to £15,000, the allocation being as follows :—New South Wales, £2,250 ; Victoria, £3,375 ; Queensland, £5,625 ; Western Australia, £3,750 ;
- (c) the conditions of the grant be the same as those under which the 1946 grant was made, except that provision be made to enable any unexpended moneys to be carried forward for use in subsequent years, provided that the accumulated carryover be kept within a specified limit.

The Scientific and Industrial Research Organization is investigating diseases affecting the tobacco plant, including work on disease-resisting varieties, and is making tests of smoking quality. In spite of delays due to the war, the Organization has been successful in discovering effective means of preventing blue mould, which has seriously retarded the development of the industry. The States are carrying out field investigations on disease resistance, selection, yield and quality improvement, and are conducting instructional, demonstrational and field experimental work.

(iv) *Tobacco Factories.* In 1951-52 the quantity of stemmed leaf used in tobacco factories in Australia amounted to 29.8 million lb. of which 3.7 million was of local origin, the balance being imported, chiefly from the United States of America.

3. *Oversea Trade.*—Imports of tobacco and manufactures thereof into Australia during 1951-52 were valued at £18.8 million, including 27 million lb. of unmanufactured tobacco valued at £8.8 million. Exports of tobacco and manufactures thereof during 1951-52 were valued at £344,180.

### § 19. Hops.

Hop-growing in Australia is practically confined to Tasmania and some of the cooler districts of Victoria, the total area for 1951-52 being 1,725 acres, of which 1,378 acres were in Tasmania, and 347 acres in Victoria. A small area was also grown in Western Australia, but the details are not available for publication. The Tasmanian area, though still small, has increased during the present century, the total for 1901-2 being 599 acres. The cultivation of hops was much more extensive in Victoria some 60 years ago than at present, the area in 1883-84 being 1,758 acres.

The production of hops in Australia is insufficient to meet local requirements, and additional supplies are imported to meet the needs of the brewing industry. In the following table details of the production, imports and exports of hops and the quantity of hops used in breweries are shown for each of the years 1947-48 to 1951-52 in comparison with the average for the five years ended 1938-39.

HOPS : PRODUCTION AND DISPOSAL, AUSTRALIA.

(a) Disregards movements in stocks.

The Tariff Board conducted an inquiry into the hop-growing industry and issued a report on 12th June, 1945.

### § 20. Flax.

For many years flax was grown intermittently in parts of Victoria and unsuccessful attempts were made to introduce its cultivation in some of the other States.

During the 1914-18 and 1939-45 Wars there was an acute shortage of flax fibre and expansion of production was encouraged by the Commonwealth Government. The area sown reached a maximum of more than 61,000 acres in 1944-45 but by 1951-52 it had fallen again to less than 6,400 acres.

Details of the area under flax and the production of straw are given in the following table :—

#### FLAX FOR FIBRE : AREA AND PRODUCTION.

1951-52 .. ..	4,065	2,214	1,573	7,852

(a) Includes nine acres of unproductive flax in Queensland.

Although the growing of flax on a large scale was established as a war-time measure, it is proposed to continue the industry at a level sufficient to meet local requirements, providing that it can be efficiently maintained in competition with other countries. To stimulate the production of flax fibre, on 16th July, 1950, the Flax Canvas Bounty Act was passed, authorizing the payment of £60 per ton of scutched flax fibre used.

The industry is under the control of the Flax Production Committee appointed under the Supply and Development (Flax Production) Regulations. The Committee has, amongst other things, organized the growing and harvesting of the crop and the processing of the flax, as well as disposing of the resultant products to spinners and others in Australia and overseas. In 1943-44 in the four producing States there were 31 mills under the control of the Committee. The number of flax mills operating in 1951-52 was 13.

Prior to 1948-49, the growing of flax for linseed oil had not been developed extensively in Australia. Action has since been taken to develop this industry, however, the ultimate objective being the production of sufficient linseed to meet Australia's total oil requirements. The area sown in 1951-52 (53,741 acres) was a record, but production at 7,393 tons was somewhat lower than in 1950-51 when 7,954 tons were produced. Details are shown in the following table for the years 1947-48 to 1951-52.

## FLAX FOR LINSEED : AREA AND PRODUCTION.

Year.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Aust.

1951-52 .. ..	1,617	705	4,174	857	1	39	7,393

The flax industry was the subject of investigations in 1933 and in 1936 (*see Official Year Book No. 32, p. 658*). In addition the Tariff Board has conducted an enquiry into the need for assistance to linseed growers and on the form such assistance should take and subsequently issued a report on 21st March, 1951.

## § 21. Peanuts.

The production of peanuts, or groundnuts, in Australia is mainly confined to Queensland, although small quantities are grown in New South Wales and Western Australia. Details of the area and production are given in the table below.

## PEANUTS : AREA AND PRODUCTION, AUSTRALIA.

Year.	Area (Acres).				Production (Tons).			
	N.S.W.	Q'land.	W. Aust.	Australia. (a)	N.S.W.	Q'land.	W. Aust.	Australia. (a)
Average, 1929-30 to 1938-39 ..	29	8,320	100	8,449	(b) 11	3,715	24	3,750
1947-48 .. ..	97	34,645	28	34,770	41	15,804	3	15,848

Average, 1941-42 to 1950-51 ..	64	22,359	31	22,454	31	10,735	8	10,774
1951-52 .. ..	374	13,312	15	13,701	222	4,535	9	4,766

(a) Excludes Northern Territory.

(b) Average for five years.

The gross value of the 1951-52 crop was £475,000.

Considerable quantities of peanut kernels were formerly imported annually, chiefly from India, for oil expression purposes. These imports were suspended from 1946 to 1949, but have since been resumed on an increasing scale. Total supplies available for consumption in Australia in 1951-52 of 9,309 tons (shell equivalent) consisted of 5,433 tons locally produced (previous season) and 3,876 tons imported.

## § 22. Cotton.

1. **General.**—The production of cotton in Australia is restricted to Queensland, where cultivation began in 1860. Details of areas sown for years prior to 1930 and of Government financial assistance to growers up to 1940 appear in Official Year Book No. 39 and earlier issues.

Australia produces only portion of its requirements of raw cotton, the balance being obtained in 1950–51 chiefly from India, Pakistan, Brazil, Egypt and the U.S. of America. Efforts have been directed towards increasing production by an extension of area, the introduction of irrigation methods and payment of bounties but so far have not met with much success. Production was increased very considerably during the early war years—it reached a peak of 17,550,000 lb. unginnged cotton in 1939–40—but has since fallen away. The expansion of the industries connected with the spinning and weaving of cotton is referred to in Chapter XXIV.—Manufacturing Industry.

The Raw Cotton Bounty Act 1940 provided an extension until 31st December, 1946 of assistance previously granted by way of bounty. The Act was amended in August, 1946 to provide a guaranteed net average return to cotton-growers of 15d. per lb. of raw cotton for five years from 1st January, 1947. It was superseded by the Cotton Bounty Act 1951, which guaranteed a net average return of 9½d. per lb. of seed cotton for five years from 1st January, 1951. The 1951 Act was amended in 1952 to provide for a guaranteed return of 14d. per lb. of seed cotton for the 1953 crop, and for variation by regulation of the guaranteed return, in succeeding seasons, with a minimum of 9½d. per lb. The Government has decided that the return for the 1954 crop will remain at 14d. per lb.

2. **Area and Production.**—The area under cultivation and the production in Queensland for the years 1947 to 1951 are shown hereunder together with the averages for the periods of ten years ended 1939 and 1950 :—

### COTTON : AREA AND PRODUCTION IN QUEENSLAND.

Season ended September—	Area Sown.	Production of Cotton.				Average Yield per Acre Sown.	
		Unginned.		Ginned.	Ginned— Equiva- lent in Bales. (a)	Unginned.	Ginned.

1951-52 .. .. .	549	43,296	43,845	39,030

## § 23. Financial Assistance to Primary Producers.

NOTE.—See also Chapter XVII.—Public Finance, pages 685-6.

1. Bounties.—Bounties paid by the Commonwealth Government during the year ended 30th June 1952 amounted to £4,729,000 compared with £14,985,000 in 1950-51. Brief details of the various Bounty Acts under which these amounts were paid are given below :—

(i) *Wheat Bounty Act 1951*. This Act provides for the payment of bounty for two years from 1st December, 1951 on wheat sold by the Australian Wheat Board as feed for poultry, pigs or dairy cattle up to a maximum of 26 million bushels, the rate to be the lesser amount by which 16s. 1d. per bushel exceeds—(a) the guaranteed price of wheat for the season plus 2s., or (b) 14s. The rate of bounty during 1951-52 (from 1st December, 1951) was 4s. 1d. per bushel and a total amount of £2,368,000 was paid on 11,599,000 bushels.

(ii) *Wool Products Bounty Act 1950*. This Act provided for a bounty to be paid on certain wool products made in Australia between 29th November, 1950 and 31st December, 1951, the rate to be fixed according to the quantity and type of clean wool used in them as estimated by the Australian Wool Realization Commission acting as agent for the Commonwealth Government. The cost to the Commonwealth in 1950-51 was £14,875,000 and in 1951-52, £2,254,000.

(iii) *Tractor Bounty Act 1950*. This Act provides for the payment to manufacturers of tractors produced in a factory in the Commonwealth of a bounty based on the belt pulley horse-power of the engine. Payments for 1950-51 were made on 1,501 tractors produced, and amounted to £90,000, and for 1951-52 on 1,275 tractors produced, and amounted to £103,000.

(iv) *Flax Canvas Bounty Act 1950*. This Act provides for the payment of a bounty on flax canvas manufactured in Australia during the two years from 17th July, 1950 for sale and use within the Commonwealth, the rate to be £60 per ton of scutched flax fibre used. Payments during 1950-51 amounted to £20,000 on 342 tons of fibre and during 1951-52 to £4,000 on 135 tons of fibre.

2. **Subsidies.**—Subsidies paid by the Commonwealth Government as assistance to primary producers amounted to £16,579,000 in 1950–51 and to £19,373,000 in 1951–52. The principal subsidies paid were as follows :—

(i) *Dairy Industry.* Under the provisions of the Dairy Industry Assistance Act 1943 subsidy was paid on a flat rate basis on milk supplied for the manufacture of butter, cheese and processed milk products during 1950–51 and 1951–52. The subsidy was designed to ensure a return to dairymen equal to the average cost of production of their produce. In 1950–51 the rate of subsidy on butter was 8s. 4d. per cwt. and on cheese 37s. 11d. per cwt., total payments amounting to £14,998,000. The respective rates rose in 1951–52 to 10os. 1d. and 35s. 10d. per cwt. and total payments to £17,843,000

(ii) *Artificial Fertilizers.* Prices charged to primary producers for superphosphate and nitrogenous fertilizers (other than sulphate of ammonia produced locally as a by-product on which a surcharge is fixed) have been less than cost, the balance being met by the surcharge on sulphate of ammonia and by Commonwealth subsidy. Total subsidy payments in 1950–51 amounted to £862,000, comprising £599,000 on nitrogenous fertilizers and £263,000 on superphosphate. Subsidy on superphosphate ceased during 1950–51 and in 1951–52 payments totalling £1,521,000 were made, wholly on account of nitrogenous fertilizers.

(iii) *Wheat-growers.* During the year ended 30th November, 1950 a subsidy of 5d. per bushel was paid on wheat for local consumption to raise the return to growers from 6s. 8d. per bushel, f.o.r. ports, bulk basis, the Australian Wheat Board's local selling price for the year, to 7s. 1d., the price guaranteed by the Commonwealth Government. The amount of subsidy paid by the Commonwealth during the year 1950–51 on this account amounted to £683,000.

## § 24. Fertilizers.

1. **General.**—In the early days of settlement in Australia scientific cultivation was little understood. It was common, as in other new countries, for the land to be cropped continuously to a degree of exhaustion. This practice is very much less in evidence now than in the early days of Australian agricultural development. Under the guidance of the State Departments of Agriculture, scientific farming is now much more widely practised. The importance of fallowing, crop rotation, and the application of suitable fertilizers in adequate quantities is now appreciated by farmers. The introduction of the modern seed-drill, acting also as a fertilizer-distributor, has greatly facilitated the use of artificial manures and much land formerly regarded as useless for cultivation has now been made productive.

In order to protect the users of artificial fertilizers, legislation has been passed in each of the States regulating the sale and prohibiting the adulteration of fertilizers. A list of these Acts and their main features is given in Official Year Book No. 12, p. 378.

2. **Imports and Exports.**—The Australian output of prepared fertilizers is derived chiefly from imported rock phosphate and is sufficient for local requirements.

The chief sources of Australia's supplies of rock phosphate are Nauru, Gilbert Islands Group and Christmas Island. Sodium nitrate is obtained chiefly from Chile.

The imports of artificial fertilizers during the five years ended 1951-52, compared with average imports for the period 1934-35 to 1938-39, are shown in the following table:—

## ARTIFICIAL FERTILIZERS : IMPORTS INTO AUSTRALIA.

Fertilizer.		Average, 1934-35 to 1938-39.	1947-48.	1948-49.	1949-50.	1950-51.	1951-52.
Ammonium	tons	26,090	18,834	10,200	27,259	42,756	40,848
Sulphate	£	214,509	337,470	228,346	662,121	1,049,893	1,015,570
Potash Salts	tons	10,641	10,849	9,220	12,924	14,605	15,978
	£	82,220	206,231	139,299	265,454	335,826	368,665
Rock Phosphate	tons	635,097	701,602	909,764	1,185,402	1,101,678	1,014,100
	£	775,840	1,862,846	2,022,983	2,559,282	2,216,928	2,258,487
Sodium Nitrate	tons	7,199	6,458	7,173	13,416	5,679	15,802
	£	63,464	68,085	106,711	273,099	130,389	362,755
Other	.. tons	3,430	2,743	534	673	1,369	2,735
	£	7,657	38,259	35,233	24,966	47,396	120,191
Total	.. tons	682,457	740,486	936,891	1,239,674	1,166,087	1,089,463
	£	1,143,690	2,512,891	2,532,572	3,784,922	3,780,432	4,125,668

Exports of fertilizers (practically all of which are manufactured locally) amounted to 1,472 tons valued at £79,683 in 1951-52 compared with 1,666 tons valued at £63,387 in 1950-51 and 4,826 tons valued at £34,411 for the average of the five years ended 1938-39. Superphosphate is the principal fertilizer exported and amounted to 990 tons in 1951-52.

3. Quantities Locally Used.—Information regarding the area fertilized with artificial fertilizers and the quantity of artificial fertilizers (superphosphate, bonedust, nitrates, etc.) used in each State during the year 1951-52 is given in the following table. Details of the area manured with natural manure (stableyard, etc.) are no longer collected.

## AREA FERTILIZED AND QUANTITY OF ARTIFICIAL FERTILIZERS USED, 1951-52.

State or Territory.	Area Fertilized ('000 Acres).			Fertilizers Used (Tons).

Total .. .. .	13,937	15,554	29,491	731,155	824,699	1,555,854

Particulars of the quantity of artificial fertilizers used in each State and Territory during each of the years 1947-48 to 1951-52, compared with the average for the five years ended 1938-39, are shown in the next table. These details include the quantity used in the top-dressing of pasture lands.

**QUANTITY OF ARTIFICIAL FERTILIZERS USED.**  
(Tons.)

Year.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	A.C.T.	Total.
Average, 1934-35 to 1938-39 ..	148,277	305,969	50,651	200,566	230,713	30,272	276	966,724
1947-48 ..	171,707	402,643	54,433	224,253	292,723	41,945	870	1,188,574
1948-49 ..	171,738	467,690	62,084	250,107	333,622	39,109	860	1,325,210
1949-50 ..	174,171	550,020	72,298	243,768	357,632	53,874	1,098	1,452,861
1950-51 ..	160,871	563,086	73,761	255,781	377,083	56,224	822	1,487,628
1951-52 ..	177,120	579,022	72,610	270,046	399,304	56,719	1,033	1,555,854

As mentioned in § 23 the Commonwealth Government has encouraged the use of artificial fertilizers by providing subsidies to primary producers. In 1951-52 subsidy was paid only on nitrogenous fertilizers.

4. **Local Production.**—Complete information regarding local production of fertilizers is not available. The number of firms engaged in the manufacture of chemical fertilizers in Australia for the year 1951-52 was 49, made up as follows:—New South Wales, 13; Victoria, 9; Queensland, 8; South Australia, 7; Western Australia, 5; and Tasmania, 7. The production of superphosphate in Australia during 1951-52 amounted to 1,597,080 tons, the largest producing States being Victoria, Western Australia and South Australia.

**§ 25. Ensilage.**

1. **Government Assistance in Production.**—The several State Governments devote a considerable amount of attention to the education of the farming community in regard to the value of ensilage. Monetary aid is afforded in the erection of silos, and expert advice is supplied in connexion with the design of the silos and the cutting and packing of the ensilage.

2. **Quantity Made and Stocks Held on Farms.**—Information regarding production and farm stocks of ensilage for the years ended 31st March, 1950, 1951 and 1952 are given in the following table:—

**ENSILAGE : PRODUCTION AND FARM STOCKS.**  
(Tons.)

(a) Not available.

The drought of 1902-3 drew increased attention to the value of stocks of ensilage, and during the four seasons ended 1909-10 there was an increase both in the number of holdings on which ensilage was made and in the quantity produced. The accumulated stocks proved of great value during the 1914 drought, though far less than would have been the case if more attention had been paid to production during the previous years

when there was a surplus of green fodder. The quantities made since that date have fluctuated considerably, but the output increased up to 1939-40 in which year the production of 303,495 tons was the highest yet recorded. During subsequent seasons output declined noticeably and reached the extremely low level of 94,744 tons during the drought year 1944-45, but rose to 180,622 tons in 1947-48, and decreased continuously in each succeeding year to 110,474 tons in 1951-52.

### § 26. Agricultural Colleges and Experimental Farms.

Agricultural colleges, administered by State Departments of Agriculture, have been established in all States except Tasmania. The primary function of these colleges is the training of students in the various phases of agricultural work and live stock husbandry. Students are required to undertake a considerable amount of practical work in addition to lectures and theory. A secondary function of the colleges is agricultural research and experimentation. To a lesser degree they carry out extension work in the form of public field days. Upon graduation, students receive diplomas in agriculture, dairying or animal husbandry, according to the course undertaken.

Experimental farms have been set up by State Departments of Agriculture in all States. They are primarily concerned with agricultural research and experimentation, each farm concentrating on problems specific to the district in which it is located. The results of the work undertaken are passed on to farmers at field days, which are held at regular intervals, through publication in various agricultural or scientific journals and through the agricultural extension officers of the State Departments of Agriculture.

The Commonwealth Scientific and Industrial Research Organization has field stations scattered throughout Australia, and sometimes undertakes joint research with the appropriate State authorities. In general, however, the Commonwealth Scientific and Industrial Research Organization concentrates on fundamental research, except when otherwise specifically invited, while the State Departments of Agriculture study problems of particular significance within their own boundaries. The universities also carry out valuable research work on their own experimental farms.

### § 27. Tractors on Rural Holdings.

The growth of mechanization in agriculture is indicated by the increase in the number of tractors on rural holdings from 41,943 in 1939 to 143,497 in 1952 or by 242 per cent. Since 1943, the first year in which the collection was made by types, wheeled type tractors have increased by 187 per cent., and crawler types by 87 per cent.

The table below sets out the total number of tractors on rural holdings in 1939, and the number of wheeled type and crawler tractors for the five years ended 1952.

## § 28. Number and Area of Rural Holdings and Employment Thereon.

1. **Number and Area.**—A holding in Australia has been defined by Statisticians on a more or less uniform basis and discrepancies which exist are not of sufficient importance to vitiate any comparisons. For the purpose of these statistics, a holding may be defined as land of one acre or more in extent, used in the production of agricultural produce, the raising of live stock or the products of live stock.

The following table shows the number and area of the holdings in each State for the years 1938-39 and 1947-48 to 1951-52.

## RURAL HOLDINGS : NUMBER AND AREA.

Year.	New South Wales.	Victoria.	Queens-land.	South Australia.	Western Australia.	Tas-mania.	Australian Capital Territory.	Total.

1950-51..	168,375	38,108	359,606	151,731	213,362	6,476	395	938,053
1951-52..	168,250	37,935	358,320	151,785	215,386	6,438	395	938,509

It is not possible to classify these holdings according to the purpose for which they are used. This arises from a number of factors, the chief of which is mixed farming. The general trend in Australia is for farmers to diversify their activities and consequently it is very difficult to determine whether the purpose of many holdings is mainly agricultural, pastoral or dairying, or any of these in combination.

An approximate classification was, however, made for New South Wales for 1945-46 and details may be found on page 1018 of Official Year Book No. 39.

2. **Special Tabulation Relating to Rural Holdings, 1949-50.**—With the co-operation of State Statisticians, the second series of special tabulations relating to rural holdings was undertaken for all States for the year 1949-50. These tabulations have been published in detail in Primary Industries Bulletin No. 44, 1949-50. The following table shows particulars of the number and area of rural holdings classified according to the size of holdings.

## CHAPTER XXI.

## FARMYARD, DAIRY AND BEE PRODUCTS.

NOTE.—Values of Australian oversea trade shown throughout this chapter are expressed as £A. f.o.b. Port of Shipment, except where otherwise indicated.

## § 1. Introductory.

1. **General.**—The introduction of cattle into Australia and the early history of the dairying industry are referred to in some detail in earlier issues of this publication. It may here be noted that the original stock has been crossed with specially imported stud cattle, while further judicious crossings of strains have resulted in an increased and improved milk supply. In Australia dairy cattle thrive in the open throughout the year, local climatic conditions demanding no protection other than tree plantations for shelter, and in certain districts rugging in the coldest weather. Indigenous and imported grasses furnish food during the greater part of the year, and winter fodder, when necessary, is given to the cattle in the fields. With the wider application of scientific methods in the treatment of animals and pasturages and in the processes of manufacture, coupled with herd testing and effective State supervision, the dairying industry has shown rapid expansion. It has been demonstrated that Australian production and marketing methods do not adversely affect the vitamin content of the butter and that the loss during cold storage even for as long as two years is insignificant.

2. **Mixed Farming.**—Dairying is not, as formerly, wholly confined to agriculturists, since many graziers in a large way of business also give it their attention. In non-coastal regions it is generally carried on in conjunction with agriculture and sheep-raising, sufficient fodder being grown to carry the cattle through the winter months. Local wants are thus met, and in many places remote from the metropolis well-equipped factories have been established. The extent to which dairy cattle were run in conjunction with pig raising and wheat growing in 1949-50 is shown in the relevant tables published in the section "Special Tabulations Relating to Rural Holdings, 1949-50" of *Primary Industries Bulletin* No. 44, 1949-50.

3. **Employment.**—The numbers of persons employed in primary industry are ascertained at the annual census of rural production. The particulars collected are in respect of those persons who were permanently engaged in the actual work of the farm and include owners, lessees, tenants or sharefarmers, relatives over 14 years of age not receiving wages, and other permanent employees, including managers and relatives, working for wages or salary. Details of the numbers so engaged are given in Chapter XX.—Agricultural Production, § 28.

For the years up to 1939-40, information was also collected which enabled the classification of each holding according to the chief purpose for which it was used, thus obtaining a distribution of employment in the three main classes, viz., Agriculture, Pastoral and Dairying. However, because of difficulties in determining with precision the chief purpose for which holdings are used, this information has since been omitted from the schedules. Consequently it has not been possible to continue to compile details of employment in the dairying industry from data obtained from this source.

Details of the number of persons who described themselves at the population census of 30th June, 1947 as being engaged in dairy farming were shown for each State in Official Year Book No. 38, page 1025. They comprised 96,508 males and 10,018 females, a total of 106,526 persons.

4. **Growth of the Dairying Industry.**—The following table gives some indication of the growth of the dairying industry since 1918-19 :—

#### DAIRYING INDUSTRY : AUSTRALIA.

Year.	Number of Dairy Cows.		Total Milk Produced for all Purposes.	Production of Butter.	Production of Cheese.	Milking Machines (No. of Stands) (a)
	In Milk.	Dry.

(a) "Number of Stands" indicates the number of cows that can be milked simultaneously—i.e., the cow capacity of installed milking machines. (b) Not available.

5. **Official Supervision of Dairying Industry.**—Dairy experts of the various State Agricultural Departments give instruction in approved methods of production, and inspect animals, buildings and marketable produce. A high standard of cleanliness, both of *personnel* and *materiel*, prevails.

The export trade is regulated by the terms of the Commonwealth Commerce (Trade Descriptions) Act 1905-1933, and regulations thereunder. It will be sufficient to state here that the true trade description, etc., must be marked on all produce intended for export, while official inspection ensures the maintenance of purity and quality. Upon request of the exporter the goods are given a certificate by the inspector.

6. **Australian Agricultural Council.**—General information on the constitution and functions of the Australian Agricultural Council is given on pages 832-4 of Chapter XX.—Agricultural Production. Details are also given on these pages of the production aims for the five-year period ended 1957-58 (including specific targets for the principal dairy products) as set by the Council at its 36th Meeting in April, 1952.

## § 2. Value of Farmyard, Dairy and Bee Production and Indexes of Price and Quantity Production.

1. **Gross Value of Farmyard, Dairy and Bee Production, 1936-37 to 1951-52.**—The following table shows the gross value of recorded farmyard and dairy production at the principal markets in Australia.

GROSS VALUE OF FARMYARD, DAIRY AND BEE PRODUCTION: AUSTRALIA.(a)  
(£'000.)

Particulars.	Average 1936-37 to 1938-39.	1947-48.	1948-49.	1949-50.	1950-51.	1951-52.
Whole Milk(b) used for—						
Butter .. ..	22,550	29,753	34,655	39,414	36,692	38,875
Cheese .. ..	1,505	4,087	4,943	5,451	5,398	6,700
Condensing, concentrating, etc. .. ..	1,094	3,470	5,241	5,900	6,223	7,948
Human Consumption and other purposes ..	7,971	16,109	19,428	24,511	28,315	37,261
Subsidy Paid on Whole Milk for—						
Butter, Cheese, Condensing, Concentrating, etc. ..	..	8,104	5,540	8,062	13,629	15,041
Human Consumption ..	..	1,167	320	..	..	..
Total Whole Milk (in- cluding Subsidy) ..	33,120	62,690	70,127	83,338	90,257	105,825
Pigs Slaughtered .. ..	5,526	10,551	12,325	14,281	15,358	18,516
Dairy Cattle Slaughtered ..	1,591	2,602	2,769	3,492	4,872	5,966
Eggs .. ..	9,117	20,414	23,870	25,766	28,047	37,534
Poultry .. ..	2,386	6,297	7,146	7,726	9,408	10,985
Honey .. ..	154	781	1,597	787	871	800
Beeswax .. ..	10	40	87	50	71	62
Total .. ..	51,904	103,375	117,921	135,440	148,884	179,688

(a) Excludes Australian Capital Territory and Northern Territory, details for which are not available.  
(b) Excludes Commonwealth subsidy which is shown separately below.

2. Gross and Net Values, 1951-52.—The values of dairy, poultry and bee farming on gross, local and net bases are shown in the following table. Production values for this and other industries are dealt with more fully in Chapter XXIX.—Miscellaneous.

GROSS, LOCAL AND NET VALUE OF FARMYARD, DAIRY AND BEE PRODUCTION,  
1951-52.  
(£'000.)

State.	Gross Production valued at Principal Markets.	Marketing Costs.	Gross Production valued at Farm.	Farm Costs.		Net Value of Pro- duction. (a)
				Fodder fed to Farm Stock.	Value of Other Materials used in process of Pro- duction.	

DAIRY PRODUCTION.

New South Wales ..	38,966	4,576	34,390	3,711	154	(b) 30,525
Victoria .. ..	47,285	1,859	45,426	4,474	1,800	39,152

## § 3. Dairy Cattle and Dairy Products.

1. Dairy Herds.—Owing to the lack of uniformity in the schedules used by the several States in the collection of live-stock statistics, it is not possible to measure with precision the growth of the dairy herds of Australia prior to 1943. However, statistics of dairy cows, which provide a reliable measurement of this development, show that in 1918-19 there were 1,902,036 dairy cows (in milk and dry), compared with 2,345,070 in 1928-29 and 3,209,519 in 1938-39. The numbers remained at this level until March, 1944, but have since declined, the number recorded at 31st March, 1952 being 2,972,752. In New South Wales, Victoria, South Australia and Tasmania the proportion of dairy to all cattle is high. In Queensland, the Northern Territory and Western Australia there is a great preponderance of other cattle, the main object in these areas being the production of beef. Since 1939 there have been substantial decreases in the number of dairy cows in New South Wales and Queensland. The numbers of dairy cows for 1948 to 1952 shown in the following table refer to those recorded by farmers as being in milk and dry as at 31st March. The figures shown for the years 1935 to 1939 cover the same categories, but the period differs in some States (see footnote (a)). To this extent the figures lack comparability.

## NUMBER OF CATTLE AND DAIRY COWS (IN MILK AND DRY).

State.	Average, 1935-39. (a)	31st March—

	1952	2,098,560	874,192	808,858	679,901	104,666	4,566,177

A graph showing the distribution of dairy cattle in Australia at 31st March, 1948 appears on page 906 of Official Year Book No. 39.

2. **Size of Dairy Herds.**—A series of special tabulations relating to rural holdings, undertaken for all States for the year 1949-50, covered, *inter alia*, a classification of holdings with dairy cattle according to size of herd. Details of these tabulations are published in *Primary Industries Bulletin* No. 44, 1949-50.

3. **Factory System.**—(i) *General.* Cream separation and butter-making are often carried on together under the co-operative system. The creation of large central butter factories has resulted in a considerable reduction in the cost of manufacture, since improved appliances such as refrigerators, etc., may be profitably worked at the larger establishments. The product is also of a more uniform quality, and few farmers prefer to convert to cream rather than send milk to the factory. Formerly, the average quantity of milk used per pound of hand-made butter was about 3 gallons, but factory butter requires less than 2½ gallons.

(ii) *Number of Factories.* In 1951-52 the factories in Australia for the manufacture of butter, cheese and condensed milk numbered 399 and were distributed among the States as follows:—New South Wales, 90; Victoria, 139; Queensland, 91; South Australia, 42; Western Australia, 14; and Tasmania, 23. More details regarding numbers of factories, output, etc., are given in Chapter XXIV.—Manufacturing Industry.

4. **Butter and Cheese—Stabilization Schemes.**—(i) *Voluntary Plan.* During the period from January, 1926 to April, 1934, a voluntary scheme known as the "Paterson Plan" was in operation and had the effect of stabilizing the price of butter in Australia. Details of this scheme may be found on page 1028 of Official Year Book No. 38 and in earlier issues.

(ii) *Compulsory Plan.* On 1st May, 1934 the "Paterson Plan" was superseded by a compulsory price equalization plan, details of which were shown on page 1029 of Official Year Book No. 38 and earlier issues. This compulsory plan was invalidated by the decision in 1936 of the Privy Council which declared in the James (Dried Fruits) Case that the Commonwealth had no power under the Constitution to regulate trade between the States.

(iii) *Equalization Scheme.* Since the Privy Council decision, the butter price stabilization scheme has continued to operate by voluntary action based on the agreements between the manufacturers and the Commonwealth Dairy Produce Equalization Committee Limited. The Committee, which comprises members of the State Dairy Products Boards and other persons representing the industry, enters into agreements with manufacturers to secure to them equal rates from sales of butter and cheese, and for this purpose may fix basic prices at which these products sold in Australia or abroad are to be taken into account. The effect is that local and export trade are distributed in equitable proportions among the manufacturers by means of quotas. The Committee fixes basic prices and equalizes returns to factories through an Equalization Fund. The States originally participating in the scheme were New South Wales, Victoria, Queensland and Tasmania in respect of both butter and cheese, and South Australia in respect of cheese. South Australia and Western Australia entered the scheme in respect of butter on 1st April, 1946 and Western Australia extended its participation to include cheese in January, 1947.

The home consumption prices of butter and cheese were fixed by the Commonwealth Prices Commissioner up to 19th September, 1948, from which date prices have been controlled by State Governments.

5. **Commonwealth Subsidies.**—(i) *Butter, Cheese and Processed Milk Products.* Under the provisions of the various Dairy Industry Assistance Acts, the first of which was passed in 1942, the Commonwealth Government has provided subsidies on milk supplied for the manufacture of butter, cheese and processed milk products. Subsidies were paid on a seasonal basis prior to 1st April, 1946, but from that date have been on a flat rate basis. Subsidies are distributed by the Commonwealth Dairy Produce Equalization Committee Limited through factories to milk producers by payments on butter, cheese and processed milk products manufactured. Subsidy on milk supplied for the manufacture of processed milk products was discontinued from 1st July, 1948 to 30th June, 1949 and again from 1st July, 1952.

The following table shows particulars, in respect of butter and cheese, of the rates realized on local, interstate and oversea sales and the average equalization and subsidy rates in operation for the years ended June, 1939 and 1949 to 1953.

(Source : Commonwealth Dairy Produce Equalisation Committee Limited.)

Following representations by industry organizations, the Commonwealth Government established the Joint Dairy Industry Advisory Committee in November, 1946, comprising a chairman nominated by the Government, four representatives of Commonwealth Government Departments and four industry representatives from the several States. The Committee's functions, broadly, are to advise and assist in conducting cost and other surveys of dairy farm production and to act as an advisory body to the Government in these matters. Since 1st April, 1947, the rates of overall return to milk producers determined by the Commonwealth Government for the purpose of subsidy payments have been based on recommendations made by the Committee following surveys of production costs in the dairy industry.

Under the Five-year Stabilization Plan which came into operation on 1st July, 1952, the Commonwealth Government, with the approval of the States, determines each season the ex-factory prices of butter and cheese, guarantees to dairy farmers a return, based upon costs of efficient production, in respect of quantities of butter and cheese sold within the Commonwealth, plus an additional 20 per cent. (if produced), and hence determines the amount of subsidy it will make available to lift the return on that part of output covered by the guarantee to the guaranteed level.

Amounts realized on exports of butter and cheese in excess of the f.o.b. equivalent of the guaranteed return have been credited to the Dairying Industry Stabilization Fund, which was established in July, 1948 for the purpose of stabilizing returns from exports. During 1951-52 the Stabilization Fund met the deficiency in respect of all exports which did not return sufficient to meet the basic return to the factory. Since 1st July, 1952, it has been available to the industry to be used, in whatever manner considered desirable by it, to make good any deficiency in respect of all exports other than the 20 per cent. provided for under the Commonwealth Government's Five-year Stabilization Plan. After allowing for outstanding debits the amount standing to the credit of the Dairying Industry Stabilization Fund at 30th June, 1952 totalled approximately £2,500,000.

(ii) *Whole Milk.* In addition to the subsidies referred to above, the Commonwealth Government has also subsidized the production of whole milk consumed directly. The subsidy rates varied according to States, regions within the State and the seasonal period. Commonwealth subsidy on whole milk was paid during the year 1948-49 in respect of milk supplied up to 30th September, 1948, but was discontinued after that date. Details of the amounts distributed during each year will be found in Official Year Book No. 38, page 1031.

6. Total Dairy Production.—The dairy production for each State in 1951-52 is shown below :—

DAIRY PRODUCTION, 1951-52.

(a) Includes 3,590,000 gallons of milk, the produce of New South Wales, sent as cream to factories in Victoria and Queensland. (b) Includes 562,000 gallons of milk, the produce of Victoria, sent as cream to New South Wales. (c) Includes 595,000 gallons of milk, the produce of Queensland, sent as cream to New South Wales. (d) Includes 251 tons of butter made from cream, the produce of Victoria and Queensland. (e) Includes 695 tons of butter made from cream, the produce of New South Wales. (f) Includes 78 tons of butter made from cream, the produce of New South Wales. (g) Estimated. (h) Includes 16½ tons of cheese made in establishments not classified as factories.

7. *Whole Milk.*—(i) *Production and Utilization.* During the five years ended 1938-39 approximately 80 per cent. of Australia's milk supply was used for butter-making, 4 per cent. for cheese manufacture. 2 per cent. for condensary products and 14 per cent. for fluid consumption and other purposes. There has since been a considerable decline in the proportion of milk used for butter-making, with corresponding increases in the quantities used for other purposes. In 1951-52, 60.0 per cent. of the total milk supply was used for butter, 8.3 per cent. for cheese, 7.3 per cent. for condensary products and 24.4 per cent. for other purposes.

Details of the production of whole milk for various purposes are shown in the following table for each year 1947-48 to 1951-52 in comparison with the average for the years 1934-35 to 1938-39:—

**PRODUCTION AND UTILIZATION OF WHOLE MILK : AUSTRALIA.**  
(<sup>'000</sup> gallons.)

Year.	Total Production.	Quantity used for—			
		Butter (Factory and Farm).	Cheese (Factory and Farm).	Condensary Products.	Other purposes.
Average, 1934-35 to 1938-39	1,149,559	913,754	48,595	28,116	159,094
1947-48 .. ..	1,173,105	763,049	90,121	78,113	241,822
1948-49 .. ..	1,212,644	781,230	93,720	87,653	250,041
1949-50 .. ..	1,241,759	806,682	96,757	89,565	248,755
1950-51 .. ..	1,199,716	762,692	96,532	84,828	255,664
1951-52 .. ..	1,051,287	630,771	87,360	76,324	256,832

In the following table, particulars of production of whole milk in the several States are shown for the years 1947-48 to 1951-52, compared with the average for the five years ended 1938-39. Victoria is the principal milk-producing State and in 1951-52 output from that State, viz., 446.8 million gallons, represented 42.5 per cent. of total production. Output from New South Wales was 241.2 million gallons or 22.9 per cent. of the total and that of Queensland 181.1 million gallons (17.2 per cent.) Production in the remaining States accounted for 17.4 per cent. of the total Australian output.

(ii) *Production per Cow.* The annual quantity of milk produced per dairy cow reaches as high as 1,000 gallons, varying greatly with breed, locality and season. For the whole of Australia for all dairy cows and for all seasons prior to 1916 it averaged considerably less than 300 gallons per annum. In recent years not only has there been an improvement in the quality of the cattle, but the application of scientific methods has been continually extended, and the 300-gallon average has been exceeded in each year since 1924, the yield of 392 gallons in 1931 constituting a record. In 1951-52 the yield was 343 gallons. The annual average yields per cow shown in the following table are based on the number of dairy cows which were in milk during any part of the year. The average shown is, therefore, less than that for cows which were yielding during the greater

part of the year. It should be noted that there are many difficulties attending the collection of particulars of the total quantity of milk obtained during any year. In addition, there is the further difficulty of ascertaining with reasonable accuracy the average number of cows in milk during the same period. The average yield per cow shown hereunder may be accepted as sufficiently reliable to show the general trend :—

(a) Mean for the year.

8. Butter Production.—There was a steady increase in the annual output of butter for many years prior to the 1939-45 War. The average annual production rose from 126,000 tons for the five years ended 1928-29 to 195,000 tons for the five years ended 1938-39.

Following the record output of 211,988 tons in 1939-40 the general trend of butter production declined until 1946-47, when 143,308 tons were produced. Output increased again to 173,599 tons in 1949-50, but in 1950-51 decreased to 163,934 tons and in 1951-52 to 135,319 tons. The foregoing figures include butter produced on farms which has shown a decline from 8,714 tons in 1938-39 to 4,153 tons in 1951-52.

The following table shows production of butter in factories in each State for the years 1947-48 to 1951-52, compared with the average for the five years ended 1938-39.

9. **Cheese Production.**—Until 1916 the annual production of cheese had not reached 10,000 tons. From 1916 to 1926-27 it ranged between 10,000 and 13,000 tons with two years (1921 and 1924) having more than 14,000 tons. For the next five years between 13,500 and 14,800 tons were produced each year. In 1932-33 production rose to 16,488 tons, and, with some reversals of trend, continued to rise and reached the record output of 44,796 tons in 1949-50. Production decreased slightly in 1950-51 and more substantially in 1951-52 to 40,582 tons. The States contributing chiefly towards the general increase over the years are Victoria, Queensland and South Australia.

The following table shows production of cheese in factories in each State in the years 1947-48 to 1951-52 in comparison with average output during the years 1934-35 to 1938-39 :—

10. Condensed, Concentrated and Powdered, etc. Milk Production.—The manufacture of these products has expanded greatly since 1938-39—to meet the needs of the Services during the 1939-45 War and for export purposes since the war. The output of condensed milk (sweetened and unsweetened) in 1951-52 was 202 per cent. higher than in the three years ended 1938-39 while that of powdered milk (full cream and skim) was 175 per cent. higher. Over the same period the quantity of whole milk used in the manufacture of the products shown below increased from 33.2 million gallons to 78.3 million gallons or by 136 per cent. These products are manufactured mainly in Victoria, which produced 70 per cent. of the total (in terms of whole milk equivalent) in 1951-52. New South Wales accounted for 18 per cent. and the remaining States for 12 per cent.

The following table shows details of the output of condensed, concentrated, powdered, etc. milk during the years 1947-48 to 1951-52, compared with the available details for the years 1936-37 to 1938-39.

PRODUCTION OF CONDENSED, CONCENTRATED AND POWDERED, ETC., MILK : AUSTRALIA.

(a) Mainly for ice-cream manufacture. (b) Incomplete. (c) Malted milk and milk sugar only. (d) Not available separately; included with Powdered Full Cream Milk. (e) Excludes Powdered Whey.

11. **Local Consumption of Butter and Cheese.**—The production of butter and cheese less net exports and adjusted to account for movements in stocks, represents the quantity available for consumption in Australia.

A system of butter rationing introduced as a war-time measure and retained until 16th June, 1950, had the effect of considerably reducing civilian consumption. In the last year of rationing, 1949-50, consumption was 25.3 lb. per head per annum compared with an average of 32.9 lb. during the years 1936-37 to 1938-39. In 1950-51, following the cessation of rationing, consumption rose sharply to 30.9 lb. per head and in 1951-52 rose still further to 31.2 lb.

Cheese consumption rose considerably during the period of butter rationing, from 4.4 lb. per head pre-war to 6.3 lb. per head in 1949-50. There was a further slight rise in 1950-51 to 6.5 lb. per head, but this was followed by a decline in 1951-52 to 6.0 lb. per head.

The following table shows details of the production and disposal of butter and cheese for each of the years 1948-49 to 1951-52 compared with the average for the years 1936-37 to 1938-39.

**PRODUCTION AND DISPOSAL OF BUTTER AND CHEESE : AUSTRALIA.**

(a) Figures for butter include ghee expressed as butter as well as butter shipped as ships' stores. Figures for cheese include ships' stores after allowance for a small quantity of cheese imported. (b) Not available. (c) Excludes ghee. (d) Includes allowance for movements in stocks other than those held in main cold stores.

12. **Marketing of Dairy Products.**—(i) *The Dairy Produce Export Control Act 1924-47.* Introduced at the request of the dairying industry this Act was passed by the Commonwealth Parliament with the object of organizing the oversea marketing of Australian dairy produce. A Dairy Produce Control Board was appointed and was in existence from 1924 to 1935. It dealt with matters relating to the organization and supervision of oversea marketing of dairy produce. In the course of its functions the Board regulated shipments to ensure regularity of supply in the London market, controlled forward selling, obtained reductions in oversea freights and insurance rates and participated in an advertising campaign in the United Kingdom.

Prior to the appointment of the Dairy Produce Control Board a voluntary body—the Australian Dairy Council—was established to advise and make recommendations to the Governments on problems connected with the production, manufacture and quality of dairy produce, pasture improvement and diseases of dairy cattle.

Following a recommendation by the Australian Agricultural Council the functions of these bodies were combined by an amending Act of 1935 under the Australian Dairy Produce Board and provision was made for the allocation of money from the Board's funds for research and investigation into pastures, diseases of dairy cattle and the quality of butter. The functions of the Board were later extended to enable it to advise the Government in connexion with the transport of dairy produce, the securing of new markets, the expansion of existing markets and other matters.

The Australian Dairy Produce Board was re-constituted in 1947 by an amendment to the Dairy Produce Export Control Act, reducing its membership from seventeen to twelve. The functions of the Board were extended to enable it to purchase and sell, on behalf of the Commonwealth, dairy produce intended for export, and to control all matters concerning the handling, storage, protection, treatment, transfer and shipment of the produce so purchased or sold. In 1953 the direct farmer representation on the Board was increased from two to three members thus raising the total membership from twelve to thirteen.

(ii) *The Dairy Produce Export Charges Act 1924-1937.* This Act provides for the imposition of a levy on all butter and cheese exported from Australia to cover the administrative expenses of the Board and for advertising and other purposes. The rate of the levy is fixed by regulation.

13. **Butter and Cheese Contracts.**—(i) *General.* Details of the war-time contracts arranged between the United Kingdom and Australian Governments whereby the former undertook to purchase Australia's surplus butter and cheese were shown on pp. 985 and 986 of Official Year Book No. 37. The purchase of butter and cheese in 1944-45 and subsequent years has been covered by the Long-Term Purchase Agreement (*see sub-par. (ii) following*).

For the years 1943-44 to 1947-48 the United Kingdom Government reimbursed the Australian Government to the extent of subsidy paid on butter and cheese exported on Ministry of Food account. From 1st July, 1948 to 30th November, 1950 in respect of butter, and for the year 1948-49 in the case of cheese, however, contract prices paid by the United Kingdom Government were in excess of the basic return to the Australian manufacturer. As a result, subsidy on butter and cheese exported was discontinued from that date and returns from export sales in excess of the basic return to the producer have been credited to the Dairying Industry Stabilization Fund (*see par. 5 (i) ante*). The Fund was drawn upon to cover the deficiencies in export prices during 1951-52 and since July, 1952 has been available to make good the deficiency in respect of all exports other than the 20 per cent. provided for under the Five-year Stabilization Plan.

The following table indicates the prices per cwt. Australian currency f.o.b. part of shipment payable under the Long-term Purchase Agreement for the various grades of butter and cheese for the years 1946-47 to 1952-53.

(ii) *Long-term Purchase Agreement.* Early in 1945 an agreement was completed between the United Kingdom and Australian Governments covering the sale to the former of Australia's surplus butter and cheese for the four years 1944-45 to 1947-48. The Agreement was later extended to cover the period up to 30th June, 1955. In the original agreement, prices were stipulated for the initial two years ended June, 1946, while any variation in price for the succeeding years was not to exceed 7½ per cent. of the price paid for the preceding year. In accordance with the terms of the agreement, prices were increased for the year 1946-47 and further increases were agreed upon for the years 1947-48 to 1950-51 following representations from the Australian Government after having considered recommendations by the Joint Dairy Industry Advisory Committee (*see par. 5 above*). The United Kingdom undertakes responsibility for storage costs if unable to provide ships to lift butter and cheese from store after 90 days, and makes advances against stored stock in this event. The usual provisions relative to quality, packing, etc., continued to obtain, but in regard to payment the United Kingdom now pays the whole of the value on shipment, instead of 97½ per cent. on shipment and 2½ per cent. 60 days after the date of the last bill of lading, as formerly.

14. *Oversea Trade in Butter, Cheese and Milk.*—(i) *General.* The production of butter and cheese in Australia is considerably in excess of local requirements and consequently a substantial surplus is available for export overseas. In normal circumstances the extent of this surplus is chiefly dependent upon the seasonal conditions. Exports of butter, which averaged 90,000 tons in the three-pre-war years, were maintained to a certain extent during the war-time and post-war years by the restriction of supplies for local consumption, but, because of lower production they nevertheless fell as low as 41,800 tons in 1944-45. In the last year of rationing, 1949-50 exports were 81,900 tons, but in 1950-51 they fell to 55,200 tons and in 1951-52 to 12,900 tons. Exports of cheese, which averaged 11,500 tons pre-war rose to a maximum of 26,100 tons in 1948-49, but they subsequently fell and in 1951-52 amounted to 17,900 tons.

During 1938-39, 96,900 tons or 95 per cent. of all butter exported, was shipped to the United Kingdom. With the decline in total exports there has also been a substantial reduction in the quantity shipped to the United Kingdom. In 1951-52 it amounted to only 4,500 tons (39 per cent. of total exports).

In 1938-39, exports of cheese totalled 16,000 tons of which 15,500 tons or 97 per cent. were exported to the United Kingdom. Of the total of 18,000 tons exported in 1951-52 13,200 tons or 73 per cent. were shipped to the United Kingdom.

Total quantities and values of exports of Australian origin of butter, cheese and condensed, concentrated, etc., milk and cream are shown on page 933.

(ii) *Butter and Cheese Exports graded according to Quality.* All butter and cheese exported comes under the provisions of the Exports (Dairy Produce) Regulations and is subject to the supervision, inspection and examination of officers appointed for that purpose. These commodities are graded according to quality which has been fixed by

regulation as follows :—Flavour and aroma, 50 points ; texture, 30 points ; and condition, 20 points. Butter and cheese graded at 93 to 100 points is of choicest quality ; at 90 to 92 points, first quality ; at 86 to 89 points, second quality ; and at 80 to 85 points, pastry or cooking quality or, in the case of cheese, third quality.

In the following table particulars are given of the relative proportions of butter and cheese graded for export according to quality. Further details, which include actual quantities by States, are to be found in *Primary Industries Bulletin* No. 46, *Part I.—Rural Industries*, 1951–52.

### § 4. Pigs and Pig Products.

1. Pigs.—Between 1928–29 and 1938–39 the number of pigs in Australia fluctuated around one million. In the latter year an upward movement commenced and continued until the record number of 1,797,340 was recorded in 1940–41. There was a decline in the following two years but the numbers rose again to 1,746,721 in 1943–44 ; thereafter, there has been an almost continuous decline, the year 1950–51 being the exception, to the figure for 1951–52 of 1,022,124. Details of the number of pigs by States for each of the five years 1948 to 1952, together with the average for the five years 1935 to 1939, are given in the following table.

#### NUMBER OF PIGS.

As at 31st March.	N.S.W.	Vic.	Qld.	S. Aust.	W. Aust.	Tas.	N.T.(a)	A.C.T.	Total.
Average, 1935 to 1939(b) ..	391,874	287,140	294,777	80,548	83,999	42,772	479	544	1,182,133

(a) As at 1st January. (b) As at 31st March for New South Wales and Australian Capital Territory ; 1st March for Victoria ; 1st January for Queensland, South Australia, Western Australia and Tasmania.

A more accurate index of the development of pig-raising in Australia is provided in the following table, which shows for each of the years 1938–39 to 1951–52, the number of slaughterings together with the total number recorded.

NUMBER OF PIGS AND NUMBER SLAUGHTERED<sup>(a)</sup>: AUSTRALIA.

Year.	Number of Pigs. <sup>(b)</sup>	Number Slaughtered.	Year.	Number of Pigs. <sup>(b)</sup>	Number Slaughtered.
1938-39 ..	1,155,591	1,829,392	1945-46 ..	1,425,709	1,650,926
1939-40 ..	1,455,341	1,949,582	1946-47 ..	1,273,011	1,591,627
1940-41 ..	1,797,340	2,335,801	1947-48 ..	1,254,683	1,550,163
1941-42 ..	1,414,920	2,581,859	1948-49 ..	1,196,321	1,675,807
1942-43 ..	1,563,000	2,072,921	1949-50 ..	1,123,267	1,556,918
1943-44 ..	1,746,721	1,841,198	1950-51 ..	1,133,588	1,516,270
1944-45 ..	1,630,855	1,922,388	1951-52 ..	1,022,124	1,487,695

(a) The numbers slaughtered relate to slaughterings for human consumption. (b) For dates of enumeration see previous table.

Further details relating to pig numbers are given in Chapter XIX.—Pastoral Production. A graph showing the distribution of pigs in Australia at 31st March, 1948, appears on p. 908 of Official Year Book No. 39.

2. Size of Pig Herds.—A series of special tabulations relating to rural holdings undertaken for all States for the year 1949-50 covered, *inter alia*, a classification of holdings carrying pigs according to size of herd. Full details of these tabulations are published in *Primary Industries Bulletin* No. 44, 1949-50.

3. Pork.—(i) *Production*. In the following table details of the production of pork in each State are shown for the years 1947-48 to 1951-52 compared with average production during the years 1934-35 to 1938-39.

PRODUCTION OF PORK (BONE-IN WEIGHT).  
(Tons.)

Year.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	N.T.	A.C.T.	Total.
Average, 1934-35 to 1938-39 ..	9,938	12,236	9,867	3,215	1,741	1,240	7	38	38,282
1947-48 ..	6,448	7,138	7,134	2,954	2,234	1,391	28	34	27,361
1948-49 ..	9,831	8,623	12,254	2,358	2,649	1,442	27	56	37,240
1949-50 ..	10,260	6,645	12,911	2,009	1,793	1,208	42	90	34,958
1950-51 ..	9,307	7,596	11,751	2,774	2,116	1,499	64	150	35,257
1951-52 ..	10,382	8,716	8,604	2,551	2,550	1,981	70	170	35,024

(ii) *Consumption*. As in the case of other meats, pork was subject to rationing during the late war and immediate post-war years. This resulted in the consumption of pork per head declining from the pre-war average of 10.4 lb. to 4.9 lb. in 1945. After 1945, the demand for pork for the Armed Services declined and larger quantities were available for civilian consumption. As a result, consumption per head rose steadily again to reach 7.4 lb. per head in 1948-49. Since then it has remained at about 7 lb. per head. In the following table details of the production and disposal of pork are shown for the years 1947-48 to 1951-52 compared with averages for the three years 1936-37 to 1938-39.

PRODUCTION AND DISPOSAL OF PORK (BONE-IN WEIGHT): AUSTRALIA.  
(\*000 tons.)

Year.	Changes in Stock.	Production. (a)	Exports.	Canning.	Consumption in Australia.	
					Total.	Per Head per annum.

1951-52 ..	..	35.0	1.7	5.0	27.9	7.3

(a) Includes an estimate of trimmings from baconer carcasses.

4. Bacon and Ham.—(i) *Production.* As in the case of pork, the increased demand for bacon and ham during the war years stimulated production to a level not previously attained. Production reached its peak in 1944-45 when 56,246 tons of bacon and ham were cured. This has been followed by a continuous decline in output in each succeeding year to 36,628 tons in 1951-52. Details of production are shown by States in the following table for each year 1947-48 to 1951-52 compared with the average production for the five pre-war years ended 1938-39.

(a) Pressed and canned bacon and ham have been converted to bone-in-weight.

(ii) *Consumption.* Consumption per head declined in the early stages of the 1939-45 War from the pre-war average of 10.2 lb. per annum, but by 1944 it had been restored to this level and subsequently increased to 12.7 lb. in 1946-47. Since that year, however, there has been a steady decline to 7.2 lb. per head during 1951-52. Details of production and disposal of bacon and ham for the years 1948-49 to 1951-52 compared with average production and disposal for the period 1936-37 to 1938-39 are shown in the following table:—

PRODUCTION AND DISPOSAL OF BACON AND HAM (CURED WEIGHT) : AUSTRALIA.

('000 tons.)

(a) Not available.

(b) Pressed and canned bacon and ham have been converted to bone-in-weight.

5. *United Kingdom Contracts.*—Details relating to the several war-time contracts and the more recent Long-term Purchase Agreement between the Governments of the Commonwealth and the United Kingdom for the sale and purchase of Australia's surplus production of meats (including pigmeats) are included in Chapter XIX.—Pastoral Production.

6. *Overseas Trade in Pigs and Pig Products.*—Total quantities and values of exports of Australian origin of pigs and pig products (bacon and ham, lard and frozen pork) for the years 1938-39 and 1947-48 to 1951-52 are shown on page 933.

### § 5. Poultry-Farming.

1. **General.**—Poultry-farming has been carried on in Australia for many years and the State Departments of Agriculture have encouraged its development by appointing experts to advise on the care and management of poultry and by conducting egg-laying competitions. Originally the industry was conducted in conjunction with other branches of rural activity, mainly dairying, but it is now a specialized and distinct industry and it is from this source that the bulk of the commercial production is obtained. Practically all farms keep poultry for the purpose of supplying their own domestic requirements and in many cases some supplies from this source are also marketed. In addition, many private homes keep small numbers of fowls in backyard runs and this helps to maintain domestic needs particularly when eggs are in short supply.

2. **Numbers of Poultry.**—In pre-war years the numbers of the principal kinds of poultry were a normal feature of the annual census of live-stock in all States except Victoria and Tasmania. These data were collected on a restricted scale by all States in 1942-43, the details obtained being confined to farms of one acre or more producing eggs or poultry for sale. The collection has since been discontinued in some States. Because of their incompleteness, details of poultry numbers are not published.

3. **Recorded Production and Disposal of Eggs.**—(i) *Shell Eggs.* Available statistics of the production and disposal of eggs in Australia are restricted to those recorded by the Egg Boards of the several States. Egg Boards, or authorities appointed to control the marketing of eggs, have operated in the States of New South Wales, Victoria and Queensland for some years, whilst in South Australia the Board commenced to operate in August, 1942. It was not until August, 1943 that Advisory Committees were established in Western Australia and Tasmania. Statistics of recorded production of eggs for Australia as a whole are not available, therefore, prior to 1943-44.

Details of production in the respective States as recorded by these authorities for the years 1947-48 to 1951-52 are shown in the following table :—

**SHELL EGGS : PRODUCTION(a) RECORDED BY EGG BOARDS.**  
(‘000 dozen.)

State.	1947-48.	1948-49.	1949-50.	1950-51.	1951-52.

<b>Total .. ..</b>	<b>119,427</b>	<b>120,209</b>	<b>115,686</b>	<b>107,293</b>	<b>102,034</b>

(a) Receipts from consignors and sales by producer agents.

(ii) *Egg Pulp.* Prior to the 1939-45 War, production of egg pulp was about 7 million lb. per annum. This was used almost entirely for the manufacture of cakes, pastry and biscuits, only negligible quantities being exported. Production was expanded greatly during the war years to meet the requirements of the Armed Services and has since been maintained at a high level for export purposes and to meet increased local requirements.

Particulars of the production of whole egg pulp as recorded by the Egg Boards in the several States are shown in the following table.

**LIQUID WHOLE EGG : PRODUCTION RECORDED BY EGG BOARDS.**  
(<sup>'000</sup> lb.)

State.	1947-48.	1948-49.	1949-50.	1950-51.	1951-52.
New South Wales .. ..	14,600	15,966	14,760	16,003	12,357
Victoria .. ..	16,139	14,579	8,565	6,153	6,559
Queensland .. ..	3,240	4,560	4,498	4,008	2,278
South Australia .. ..	8,510	7,663	6,574	5,692	5,629
Western Australia .. ..	1,834	1,782	1,837	1,939	2,878
Tasmania .. ..	189	129	407	353	249
<b>Total .. ..</b>	<b>44,512</b>	<b>44,679</b>	<b>36,641</b>	<b>34,148</b>	<b>29,950</b>

In addition to liquid whole egg production was also recorded of liquid egg whites and liquid egg yolks. Output in 1951-52 amounted to 912,000 lb. and 654,000 lb. respectively compared with 517,000 lb. and 279,000 lb. respectively in the previous year.

(iii) *Egg Powder.* The production of dried egg powder was not established in Australia until 1942, when the industry was introduced to treat Australia's surplus eggs so as to maintain exports to the United Kingdom. The shortage of refrigerated shipping space precluded the export of shell eggs so they were converted into powdered form. Since the termination of hostilities in 1945, the manufacture of egg powder has been continued for export purposes, but has been considerably curtailed since 1946-47. Owing, no doubt, to the availability of fresh eggs, a market has not yet been established in Australia. Recorded production was 472,000 lb. in 1950-51 and 158,000 lb. in 1951-52, production being confined to New South Wales and South Australia.

4. **Production and Consumption of Eggs.**—Statistics of egg production must necessarily be accepted with some reserve. Owing to the difficulties experienced in obtaining a complete census of output, it is more expedient to compute a figure based on the best data available. The production shown in the following table, which shows also details of exports and consumption, is based upon the records of Egg Boards of production from areas under their control plus an estimate of production from uncontrolled areas and an estimate of the production of "back-yard" poultry-keepers. The estimates of total production obtained have been checked with data from other sources and found to be reasonably in accord.

5. **Marketing of Eggs.**—(i) *United Kingdom Contracts.* Details of the annual contracts entered into between the United Kingdom and Australian Governments will be found in Official Year Book Nos. 38, pp. 1048-9 and 39 p. 1044.

In respect of the 1953-54 season the Ministry of Food will pay to the Australian Government the actual United Kingdom market realizations for eggs in shell, less actual cost, paid by the Ministry up to the point of delivery to wholesalers. For the same season the contract price for egg pulp was fixed at £294 sterling per ton, f.o.b. Australian ports which is equivalent to 3s. 3.375d. per lb. (Australian currency) and represents an increase of 3½d. per lb. (Australian currency) over the contract price for the 1952-53 season.

The prices stipulated in the several contracts for eggs and egg products for the years 1949-50 to 1953-54 are shown in the following table. Contract prices in operation for the years 1939-40 to 1944-45 were shown on page 997 of Official Year Book No. 37, and those for 1945-46 to 1948-49 on page 1049 of Official Year Book No. 38.

(ii) *Egg Export Control Act 1947.* Following the termination of Commonwealth control over the production and marketing of eggs on 31st December, 1947, functions relating to the local marketing of eggs reverted to State Egg Boards which became responsible for stabilizing prices and marketing of eggs produced in the respective States.

In order to assist in marketing Australia's surplus production of eggs under the Long-term Purchase Agreement with the United Kingdom, the Commonwealth established the Australian Egg Board under the Egg Export Control Act 1947. The Board, which commenced to operate on 1st January, 1948, is empowered to buy and sell, on behalf of the Commonwealth Government, eggs and egg products intended for export which comply with the provisions of the Export (Dairy Produce) Regulations. In addition, the Board is authorized to deal with all matters relating to the export of eggs and egg products from Australia, to make such experiments as are likely to lead to the improvement of the quality of Australian eggs and to promote their sale overseas. The Board consists of ten members, including six representatives of egg producers and one representative of the Commonwealth Government.

6. *Oversea Trade in Poultry Products.*—The Australian oversea export of poultry products has in the past been confined chiefly to eggs in shell and egg contents, which are consigned mainly to the United Kingdom. New South Wales, Victoria and South Australia are at present the largest exporters. Exports of eggs in shell from Australia rose from less than 3 million dozen valued at £219,000 in 1928-29 to 21.7 million dozen valued at more than £1,100,000 in 1934-35, but declined to 10.3 million dozen in 1939-40. A high level of exports in 1940-41 was followed by a steep decline down to almost negligible quantities in 1942-43 and 1943-44. In 1949-50 exports reached the record level of 23.0 million dozen, but in the two succeeding years amounted to less than 14 million dozen.

Prior to the 1939-45 War, exports of egg contents were small and in 1939-40 there was an excess of imports. During the war years, exports expanded greatly, mainly to meet Service requirements, and since the close of the war there has been further expansion, although the latest year, 1951-52, shows a considerable decline from the peak year, 1947-48.

Since the close of the war there has also been a remarkable increase in the exports of frozen poultry, exports amounting to 2,219,000 pair in 1951-52 compared with 283,000 pair in 1945-46. The average for the pre-war years 1934-35 to 1938-39 was only 37,913 pair.

Total quantities and values of exports of Australian origin of poultry products (live poultry, frozen poultry, eggs in shell, egg pulp and powder and undressed feathers) for the years 1938-39 and 1947-48 to 1951-52 are shown on page 933.

## § 6. Bee-Farming.

1. *Production of Honey and Bees-wax.*—Although practised as a separate industry, bee-farming is also carried on in conjunction with other branches of farming, but its place in Australia's rural economy is not very significant. The returns of honey from productive hives during 1951-52 showed an average of 74.56 lb. per hive and the average quantity of wax was 0.95 lb. per productive hive.

The number of hives and the production of honey and bees-wax during the year 1951-52 are shown in the following table.

BEEHIVES, HONEY AND BEES-WAX, 1951-52.

State.	Beehives.			Honey Produced.		Bees-wax Produced.	
	Pro- ductive.	Unpro- ductive.	Total.	Quantity.	Gross Value.	Quantity.	Gross Value.
	'000.	'000.	'000.	'000 lb.	£	lb.	£
New South Wales..	97	67	164	6,814	270,285	85,801	12,870
Victoria..	65	40	105	5,208	216,999	55,963	19,587
Queensland..	16	15	31	706	27,724	15,080	5,278
South Australia..	69	23	92	4,191	149,814	58,178	14,782
Western Australia	26	4	30	3,480	122,044	44,860	7,851
Tasmania..	4	1	5	254	13,250	3,266	1,220
Australia(a) ..	277	150	427	27,653	800,116	263,148	61,588

(a) Excludes Australian Capital Territory and Northern Territory.

The production of honey and bees-wax fluctuates considerably and is determined mainly by the flow of nectar from flora of the eucalypts, which varies greatly from year to year. In recent years there has been a pronounced upward trend in the output of honey, the 1948-49 figure (53,200,000 lb.) being an all-time record. Production in 1951-52 (20,653,000 lb.), although much lower than in 1948-49, was still higher than pre-war.

The table hereunder shows the production of honey and bees-wax for the five years ended 1951-52 in comparison with the averages for the years 1934-35 to 1938-39.

### HONEY AND BEES-WAX PRODUCTION.

1951-52 ..	6,814	5,208	706	4,191	3,480	254	20,653
BEES-WAX (lb.).							
Average, 1934-35 to							
1938-39 ..	55,927	41,856	10,318	41,083	18,855	2,382	170,421
1947-48 ..	113,211	70,851	32,147	85,405	19,598	3,144	324,356
1948-49 ..	295,892	90,778	47,184	140,384	55,239	2,944	632,421
1949-50 ..	117,939	78,124	22,162	70,442	32,045	3,724	324,436
1950-51 ..	126,047	90,605	29,907	78,838	16,968	4,218	346,583
1951-52 ..	85,801	55,963	15,080	58,178	44,860	3,266	263,148

(a) Excludes Australian Capital Territory and Northern Territory.

2. **Oversea Trade in Bee Products.**—Prior to the 1939-45 War the production of honey exceeded Australian requirements and a small quantity was available for export. As a result of increased production, exports have risen considerably since 1938-39, when a quantity of 687,000 lb. of honey was shipped. In 1948-49 the record quantity of 32.09 million lb., was exported. In 1950-51 exports amounted to 7.48 million lb. and in 1951-52 to 15.91 million lb.

The wider use of frame hives has reduced the production of wax, and as a result the quantity imported has generally exceeded that exported. During each of the five years prior to 1951-52 production was high on account of exceptionally good seasons, and exports exceeded imports by substantial margins. However, with the falling off in production in 1951-52 imports (73,294 lb.) again exceeded exports (23,587 lb.).

Total quantities and values of exports of Australian origin of honey and bees-wax for the years 1938-39 and 1947-48 to 1951-52 are shown on page 933.

## § 7. Exports of Australian Farmyard, Dairy and Bee Products.

The quantities and values of Australian farmyard, dairy and bee products exported during each of the five years ended 1951-52 are shown below in comparison with those of 1938-39.

AUSTRALIAN FARMYARD, DAIRY AND BEE PRODUCTS : EXPORTS OF AUSTRALIAN ORIGIN.

2. Butter.—(i) Imports. Australia normally supplies a considerable proportion of the butter imported into the United Kingdom. The quantity in 1952, however, was much lower than usual and amounted to only 277,911 cwt., or 5.36 per cent. of the total importation. The Australian contribution was valued at £4,507,584 and was exceeded by that received from New Zealand and Denmark. New Zealand supplied 57.28 per cent. of the total quantity imported during 1952 and Denmark, 33.54 per cent.

In the following table particulars of the quantity and value of butter imported into the United Kingdom are shown for the years 1938 and 1952 according to country of origin.

#### BUTTER : IMPORTS INTO UNITED KINGDOM.

Country from which Imported	1938.		1952.	
	Quantity.	Value.	Quantity.	Value.
	Cwt.	£	Cwt.	£
New Zealand .. ..	2,592,251	14,524,140	2,969,930	46,519,557
Australia .. ..	1,797,811	9,629,939	277,911	4,507,584
Other British Countries .. ..	422,704	2,454,725	10,807	165,696
Denmark .. ..	2,364,799	12,960,434	1,739,006	28,238,938
Netherlands .. ..	711,910	3,465,835	114,863	1,836,834
Other Foreign Countries .. ..	1,628,438	7,838,060	72,347	1,147,891

3. *Cheese.*—The value of cheese imported into the United Kingdom in 1952 was £28,277,000. Of this, £15,366,000 represented imports from New Zealand, £4,112,000 from Denmark, £2,849,000 from the Netherlands and £2,722,000 from Australia.

4. *Bacon.*—Of a total import in 1952 of bacon valued at £68,243,000, the value of that supplied by Denmark was £47,286,000, Poland, £10,249,000, and the Netherlands, £10,158,000.

5. *Pork.*—The value of the United Kingdom imports of pork was £3,835,000 in 1952. Imports from New Zealand, valued at £1,192,000, and Argentina, £736,000, comprised 50 per cent. of the imports into the United Kingdom.

6. *Eggs.*—In 1952 the value of eggs imported into the United Kingdom was £25,117,000, comprising eggs-in-shell, £21,617,000, liquid or frozen eggs, £3,083,000, and dried eggs, £417,000. The Australian share in this trade amounted to £5,114,000. Eggs-in-shell were supplied by Denmark, £13,990,000 and Irish Republic, £3,299,000.

7. **Milk Products.**—In 1952 the value of powdered and preserved milk imported into the United Kingdom was £10,398,000, comprising condensed milk, sweetened, £3,130,000, condensed milk, unsweetened, £1,742,000 and powdered milk, £5,526,000. Australia supplied unsweetened milk powder valued at £980,000.

8. **Other Products.**—The imports into the United Kingdom from Australia of poultry amounted to £1,978,000, while those of bees-wax, lard and honey in 1952 were unimportant.

## CHAPTER XXII.

## FORESTRY.\*

## § 1. General.

NOTE.—Values of Australian oversea trade shown throughout this Chapter are expressed in £A f.o.b., Port of Shipment, except where otherwise indicated.

1. **Objects of Forestry.**—The objects of forestry are to protect and treat forests as restorable resources to provide their maximum direct and indirect benefits to a country. The direct benefits lie in the providing of essential commodities such as structural timber, pulpwood, firewood, tans, oils, resins, etc., and the indirect benefits includes the regulation of stream flow from catchment areas, by providing conditions ideal for the maximum penetration into the soil of rainfall and other precipitation.

Australia has a particular interest in water and soil conservation because the area suitable for agricultural and pastoral development is not so large that material reduction or deterioration of productive capacity cannot but retard development; moreover, the water conservation and irrigation schemes, constructed to ensure the successful cropping of very large areas, are ultimately dependent on regular stream flow and minimum siltation.

Forestry aims to protect existing forests from destructive agencies generally; to improve the quality and condition of forests by carrying out judicious fellings; to control exploitation; to regenerate cut over area; to afforest with native or exotic species denuded lands, or those which for protection or other reasons are from a national point of view better under forest than under any other crop.

2. **General Account of Forests and Timbers.**—Compared with Australia's land area of approximately three million square miles, the area of forest land capable of producing commercial timber has always been very small, occupying in the main the wetter belts of the coastal areas and the near coastal highlands. In the early days timbers were exploited chiefly on account of their accessibility, ease of working and general utility regardless of their intrinsic merits, and so it was that what are now regarded as superlative furniture and cabinet timbers were often put to quite inferior uses. Clearing of forest land to make room for crops and pastures has bitten deeply into the original forest estate which has been further degraded by recurrent forest fires.

The forests of Australia consist predominantly of relatively coarse bluish green foliated evergreen hardwoods. The characteristic genus is *Eucalyptus*, embracing five to six hundred species, which with few exceptions are endemic to Australia. The genus includes such species as the mountain ash (*Eucalyptus regnans*) of Victoria and Tasmania and karri (*E. diversicolor*) of Western Australia, both of which for height and grandeur have few equals in the world. At the other ends of the scale of size of species of this genus are dwarf types, including the small multiple stemmed species collectively known as the "mallees", which thrive in some of the drier belts. Probably not more than 80 to 90 of the species of eucalypts are used for sawmilling in Australia, and, for one reason or another, not more than 30 to 40 are extensively exploited. Some of the outstanding eucalypts are listed in Official Year Book No. 39 and earlier issues.

\* A specially contributed article dealing with Forestry in Australia appeared as part of this chapter in Official Year Book No. 19 (see pp. 701-12 therein). See also "The Commercial Timbers of Australia, Their Properties and Uses" by I. H. Boas, published by the Council for Scientific and Industrial Research in 1947, "Timbers and Forest Products of Queensland" by E. H. S. Swain, published in 1928 and "Australian Standard Nomenclature of Australian Timbers" published by the Standards Association of Australia.

The range and properties of eucalypt timbers fulfil all Australia's requirements where strength and durability are required, and in large measure they also meet general building requirements and, to a lesser extent perhaps, the needs of export packaging. In recent years certain of the eucalypts have been extensively pulped for paper-making and, less widely, for the manufacture of hardboard. The species most commonly used for the production of paper pulp is *E. regnans*, but *E. obliqua*, *gigantea*, *sieberiana*, *scabra*, *goniocalyx baxteri*, *condeniana* and *muellariana* are used to a lesser extent, and still different species are at present used in pulping for fibreboard manufacture.

A large number of other genera represented in the Australian forest flora also produce commercial hardwoods. Among the outstanding furniture cabinet and veneer timbers are red cedar (*Cedrela toona* var. *australis*), Queensland maple (*Flindersia brayleyana*), Southern and Northern silky oak (*Grevillea robusta* and *Cardwellia sublimis*, respectively), Queensland walnut (*Endiandra palmerstoni*), blackwood (*Acacia melanoxylon*), rose mahogany (*Dysoxylum fraserianum*), etc. Turpentine (*Syncarpia laurifolia*) ranks with the world's best as a harbour piling timber and swamp box (*Tristania suaveolens*) is almost as good. Coachwood (*Ceratopetalum apetalum*) came into prominence for rifle furniture and for aircraft ply during the last war. The foregoing are but a few examples indicating the range of use of the timbers of the Australian hardwood forests.

Indigenous softwood resources have never been large and are now seriously depleted. A remnant only remains of the forests of hoop pine (*Araucaria cunninghamii*), bunya pine (*Araucaria bidwillii*) of New South Wales and Queensland, kauri (*Agathis spp.*) of Queensland, and huon pine (*Dacrydium franklinii*), celerytop pine (*Phyllocladus rhomboidalis*) and King William pine (*Athrotaxis selaginoides*) of Tasmania.

There are still considerable areas of the slow-growing but useful white ant resisting cypress (*Callitris spp.*) in the forest of the inland areas of Queensland, New South Wales and Victoria, but many of them are being overcut and in some localities regeneration of the forests presents difficulties.

The savannah forests of the interior yield minor products such as sandalwood and tan barks, and the leaves of some of the mallees are used for oil distillation.

**3. Extent of Forests.**—According to data submitted mainly by State forestry authorities for the Sixth British Commonwealth Forestry Conference held in Canada in 1952, the total area of forest in Australia is 159,751 square miles, or about 5.4 per cent. of the total land area of the continent. The forest area is distributed amongst the States as follows—New South Wales and the Australian Capital Territory, 47,356 square miles; Victoria, 26,236; Queensland, 22,300; South Australia, 10,311 (including 4,600 square miles of mallee suitable for firewood only); Western Australia, 41,256; and Tasmania, 12,292. The total area of 159,751 square miles is considerably greater than the area previously given for Australia, owing to the inclusion of considerable areas of low grade forest, in many cases suitable for little more than the production of firewood. It is doubtful if the remaining prime native forest area of Australia exceeds 20,000 square miles.

The South Australian authorities especially emphasize that, after excluding the mallee firewood areas, the proportion of the remaining forest comparable with even mediocre forest land in other States is so small as to be almost negligible. Apart from this specific case it seems clear that there is considerable variation in the standards adopted for the definition of forest land. Also it should be emphasized that the figures given are stated to be rough estimates only. Furthermore, it is generally agreed that the figures for forest areas given are often far in excess of those which are both suitable for reservation and likely to be maintained for timber production. Considering these facts the proportion of Australia carrying commercial forests is very low. On the other hand it should be noted that approximately 68 per cent. of the area of the continent is practically uninhabited and carries less than one person in every eight square miles.

The table below shows a classification of the estimated total forest area referred to above :—

**CLASSIFICATION OF FOREST AREA : AUSTRALIA.**  
(Square miles.)

Class of Forest.	State Forest.	Communal Forest.	Private Forest.	Total.	
				Area.	Proportion of Total Forest Area.
Exploitable—					Per cent.
Softwood .. ..	4,157	5	1,072	5,234	3.3
Mixed wood .. ..	729	..	..	729	0.5
Hardwood .. ..	41,020	74	11,050	52,144	32.6
Total .. ..	45,906	79	12,122	58,107	36.4
Potentially Exploitable—					
Softwood .. ..	156	..	78	234	0.1
Mixed wood .. ..	..	..	..	..	..
Hardwood .. ..	15,063	..	12,877	27,940	17.5
Total .. ..	15,219	..	12,955	28,174	17.6
Other Land Classed as Forest .. ..	67,294	450	5,726	73,470	46.0
Grand Total .. ..	128,419	529	30,803	159,751	100.0
Proportion of Total Forest Area .. .. Per cent.	80.4	0.3	19.3	..	100.0

The bulk of the softwood areas of approximately 5,468 square miles is in Queensland and New South Wales and consists principally of natural forest, a large proportion of which is slow-growing cypress pine (*Callitris spp.*) in low rainfall areas, the per acre volume of which is comparatively low.

4. **Forest Reservations.**—Over the years recognition became more general that forest reservations were inadequate, but it was not until an Interstate Forestry Conference was held at Hobart in 1920 that a specific target to be aimed at was mentioned. The figure then agreed upon was an area of 24½ million acres of indigenous forest, which it was considered should be permanently reserved to meet the future requirements of Australia.

The forest reservations in Australia at 30th June, 1952, totalled 28,769,231 acres of which 21,314,780 acres are described as Dedicated State Forests, and 7,454,451 acres as Timber and Fuel Reserves. The distribution of these areas is shown by States in § 4. 2 hereafter.

In general, the timber and fuel reserves are temporary only and are liable to be alienated after the timber on them has been exploited. Some of these areas contain land of high value for forestry purposes, but the greater part does not justify permanent reservation.

If the permanently reserved areas were all of good quality, accessible, and fully productive forests supplying the class of timber required, they could be regarded as adequate for a much larger population than exists in Australia at the present time. Actually, however, a considerable proportion is in inaccessible mountainous country and many of the forests contain a mixture of species, some only of which are at present of commercial value: a good proportion consists of inferior forest and a large proportion of the whole has been seriously degraded by recurrent fires. Also, the indigenous forest does not contain adequate supplies of softwoods producing commercial timbers, of which our needs have to be largely met by softwood timber imported from other countries.

It is freely acknowledged by Australian forestry authorities that information on forest resources is very imperfect. It is not possible at present to give a reliable estimate of the forest areas needed to meet all future demands because of the number of unknown variables involved; in particular the yield capacity per acre, future consumption of different classes of timber per head, and the future population. It would appear, however, that all available potentially good forest country, including adequate areas for plantations of conifers, will need to be reserved, protected and systematically managed, if Australia is to approach the goal of self sufficiency in timber supplies in the future. One of the most urgent requirements in this connexion is a comprehensive, if provisional, estimate of forest resources.

5. **Plantations.**—Reference has been made to the inadequacy of indigenous softwood supplies, but, as a result of the planned policy of the forest services of the States and the Commonwealth and, to a less extent, of several private commercial organizations, the area of softwood plantations is steadily increasing. It now totals approximately 500 square miles and the species used are mainly exotic to Australia. It was natural that this aspect of forestry received earliest attention in South Australia as it is the State most poorly endowed with natural forest. This State now has a larger area of planted softwoods than any other State in Australia, and for some years has been exploiting considerable quantities of timber from these plantations. The total production is now in the vicinity of 100,000,000 superficial feet and this quantity is expected to be increased very substantially during the next decade. Production is also increasing in the other States and first thinnings from their plantations are already supplying a significant portion of the requirements of the case-making industry.

According to statements provided by State authorities, the total effective area of plantations in Australia as at the 30th June, 1952 was 318,338 acres. Details by States are given under § 4. 3.

## § 2. Forestry Activities of the Commonwealth.

1. **Prior to 1925.**—When the Commonwealth of Australia was established on the 1st January, 1901, forestry was not included among the matters transferred from the States to the control of the Commonwealth, and Federal jurisdiction was therefore restricted to the then relatively unimportant forests of the Australian Territories. After the 1914–18 War these Territories (including Papua-New Guinea and Norfolk Island) covered a large area, and in the aggregate contained a substantial forest resource. In the early twenties of this century a professional forester was appointed as forestry adviser to the Commonwealth Government, and he submitted preliminary reports on the forest resources of Papua-New Guinea, Norfolk Island and the Australian Capital Territory, with suggestions for future policy.

2. **Forestry and Timber Bureau.**—In 1925 the Commonwealth Forestry Bureau was instituted, and the previous Commonwealth Forestry Adviser became the Inspector-General of Forests. Pending completion of the Australian Forestry School in Canberra, which took place in 1927, it commenced its career in Adelaide in 1926, where all States sent students, while a nucleus of qualified officers were sent abroad to undergo special courses of instruction. By an Act of 1930, the Bureau received statutory powers, and its functions included the advising of the various Territory Administrations on forestry matters, the management of forests placed under its control, the establishment of experimental stations, the training of students, etc.

At the end of the 1939–45 War, the Commonwealth Government decided to continue certain advisory functions which during the War had been carried out by War-time Timber Control, and such functions were incorporated in the Forestry and Timber Bureau Act 1946, under which the title of the Bureau was altered to Forestry and Timber Bureau. The powers and functions of the Bureau were extended to embrace the collection of statistics and information, and advising the Governments of the Commonwealth and the States or other interested bodies on matters relating to the supply, production, oversea trade and distribution of timber in Australia.

The activities of the Bureau under its statutory functions are summarized below under four main headings

(a) *Forestry Education—Australian Forestry School.*—For information on the conditions required for enrolment as a student, the methods of entry and the scholarships available, see issues of this Year Book prior to No. 39. The Calendar of the School is also available on application to the Director General.

A Board of Higher Forestry Education advises in regard to the maintenance of the standard of the school diploma course and regarding pre-requisite university courses leading to the diploma course. Students who have passed the approved two-year university preliminary science course and two years of diploma course at the school may be granted the degree of B.Sc.F. by their universities.

The number of students enrolled decreased from 80 during 1950 to 60 during 1951, to 37 during 1952 and to 32 during 1953. The high level of enrolment in 1950 and 1951 resulted from the intake of Commonwealth Reconstruction Training Scheme students from the Universities.

(b) *Silvicultural Research.* The Bureau was charged with the responsibility of initiating research into problems connected with silviculture, forest management and forest protection, and some progress has been made by the establishment of a small Central Research Station at Canberra. Experimental forest research stations were also established at Mt. Burr in the south-east of South Australia and in Tasmania on a co-operative basis with the Forest Services of those States.

With its present limited staff, the research work of the Bureau has been concentrated largely upon studies of forest and climatic conditions, the genetical relationships and silvicultural requirements of various species, forest nutrition and the improvement of forest yields. A considerable expansion in the research activities is envisaged over the next few years as suitable trained staff becomes available.

The activities of the Central Research Station are in course of expansion and an Experimental Forest Research Station has been opened at Dwellingup, Western Australia, in co-operation with the Forests Department of that State. It is proposed to extend further the field of this class of work by the establishment of Research Stations in other States and Papua-New Guinea in co-operation with the respective Forest Services.

(c) *Timber Supply.* The value of reliable statistical data covering availability of timber and timber requirements was so forcibly demonstrated during the 1939-45 War that it was considered essential to maintain at least a skeleton organization against times of future national emergency. Apart from this, it became clear that for many years to come shortages of timber on the one hand and heavy post-war reconstruction demands on the other, accentuated by a rapidly increasing population, would necessitate assessment of requirements and availability of supplies being kept constantly under review as a basis for short and long term policies of timber supply and distribution.

Advice is currently provided to Government Departments and the trade in matters pertaining to timber supply, including—(a) the availability of total quantities and quantities of particular grades and specifications required to meet Australia's needs; (b) the quantity of timber that should be imported; (c) the extent to which exports of timber and related products might be allowed without detriment to local needs; and (d) distribution of timber within Australia.

(d) *Research and Investigation regarding Forest Resources.* Production of timber from native grown species has considerably increased since 1939 in order to assist in meeting the heavy demands, firstly for war purposes, and more latterly for building and other constructional projects of the post-war era.

In the national interests it is essential that overcutting of our forests should be avoided and in consequence it is a matter of primary importance that reliable information be available as to the country's forest resources and potentialities. To this end a national forest stocktaking is being carried out by the Bureau in co-operation with the Forest Services of the States and, to assist in the work of forest assessment, special consideration is being given to the development of the use of aerial surveys.

Consideration is also being given, in co-operation with the State Forest Services, to the establishment of increased areas of plantations of exotic pines with a view to providing additional supplies of softwood timber to meet requirements.

3. **Commercial Forests.**—The forest areas under Commonwealth control include the following :—

- (a) *Australian Capital Territory.* The forests of the Australian Capital Territory are administered by a Division of the Forestry and Timber Bureau. Further information is contained in Chapter VII.—The Territories of Australia.
- (b) *Northern Territory.* The forests of the Northern Territory are administered by the Administrator of that Territory under ordinance. The native forests of the Territory are very limited, consisting only of a limited area of rain forest in the North, patches of cypress pine, river fringing forests of paper bark, titree and savannah woodland. A Forestry Officer has recently been appointed to the Territory and efforts are to be made to protect and extend the forests.
- (c) *Norfolk Island.* The forests of Norfolk Island are administered by the Administrator of that Territory. The area reserved for forest covers 1,037 acres, of which the main species is Norfolk Island pine.
- (d) *Papua and New Guinea.* The forests are under the control of a Forestry Department and administered under ordinance of the Territorial Administration. Forestry in the Territory of Papua and New Guinea commenced with the appointment of two Forestry Officers to the Administration of New Guinea in 1938. Plans for the expansion of forestry activities are being prepared by the Director of the Forestry Department. This planning has been somewhat hampered by the loss of all records through enemy activities in 1942. Further information is contained in Chapter VII.—The Territories of Australia.

4. **Forest Products Research.**—Fundamental investigations connected with the properties and uses of timber and forest products generally are carried out by the Forest Products Division of the Commonwealth Scientific and Industrial Research Organization. These investigations cover a very wide field, e.g., pulp, paper, seasoning, structure and chemistry of wood, tans, etc.

Details can be obtained from the annual reports and publications of the Division.

### § 3. Forest Congresses.

The first British Empire Forestry Conference was held in London in 1920. Subsequent conferences were held in Ottawa in 1923, Australia and New Zealand, 1928, South Africa, 1935 and again in the United Kingdom in 1947. In 1952 (the name of these conferences having been changed in conformity with the development of the British Commonwealth of Nations) the Sixth British Commonwealth Forestry Conference was held in Canada. It is proposed to hold the next conference in Australia and New Zealand in 1957.

Forestry matters were considered at the first session of the Food and Agriculture Organization of the United Nations held at Quebec in 1945, and at the second session at Copenhagen in 1946, which the Director-General of the Forestry and Timber Bureau attended as alternate delegate and adviser in forestry matters for the Commonwealth.

The Third World Forestry Congress was held in Helsinki in 1949 and was attended by the Officer-in-Charge of the Division of Forest Resources of the Forestry and Timber Bureau, who also attended the United Nations Scientific Conference on Conservation and Utilization of Resources, held at Lake Success, United States of America, in the same year.

### § 4. State Forestry Departments.

1. **Functions.**—Except for Queensland, the powers and functions of State forest authorities are laid down under Forestry Acts and Regulations. In each State there is a department or commission to control forestry work. The functions of these administrations are as follows:—(a) The securing of an adequate reservation of forest lands; (b) the introduction of proper measures for scientific control and management of forest lands; (c) the protection of forests; (d) the conversion, marketing and economic utilization of forest produce; and (e) the establishment and maintenance of coniferous forests to remedy existing deficiency in softwoods. Annual reports are issued by each State forest authority. In Queensland, forestry is a sub-department of the Department of Public Lands. For many years Victoria has possessed a forestry school at which recruits are trained for the forestry service of the State.

2. **Forest Reservations.**—As mentioned in § 1, para. 4 *ante*, State forest authorities agreed that, in order to secure Australia's future requirements, an area of 24½ million acres should be permanently reserved. In June, 1952, the area of State forests reserved in perpetuity totalled 21,314,780 acres or 87 per cent. of the area recommended as the goal to be attained.

In addition to the work of permanently reserving areas in each State, foresters are endeavouring to survey all timbered lands with a view to the elimination of those unsuitable for forestry. Considerable areas have been revoked in certain States, while dedications of new areas have resulted in gains to the permanent forest estate. The Forestry Departments also control more than 7,000,000 acres, recorded as temporary timber and fuel reserves, but, while these areas contain some land of high value for forestry purposes, the greater part does not justify permanent reservation.

In the following table details of forest areas as recorded by State Forest Authorities, distinguishing between Dedicated State Forests and Timber and Fuel Reserves, are shown for each State as at 30th June, 1952.

AREA OF FOREST RESERVATIONS, 30th JUNE, 1952.  
(Acres.)

Particulars.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	Total.
Dedicated State Forests ..	6,136,462	5,171,186	4,500,709	(a) 258,593	3,441,950	1,805,880	21,314,780
Timber and Fuel Reserves ..	1,386,189	(b)	c 3,099,434	..	2,831,800	(c) 137,028	d 7,454,451
Total ..	7,522,651	d 5,171,186	e 7,600,143	258,593	6,273,750	e 1,942,908	d28,769,231

(a) Includes Timber and Fuel Reserves. (b) Not available. (c) Excludes Fuel Reserves. (d) Incomplete.

3. **Reforestation, Afforestation, etc.**—In the table below details are shown of the area of indigenous forest improved or regenerated, the area of forest plantations and the number of persons employed by Forestry Departments for the year 1951–52.

FORESTRY AREAS, AND NUMBERS EMPLOYED BY FORESTRY DEPARTMENTS, 1951-52.

Particulars.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Total.
Total area of indigenous forest improved or regenerated .. acres	1,566,793	1,115,433	503,982	9,928	1,897,300	420,000	5,513,436
Total area of effective plantations—							
Hardwoods .. .. acres	909	3,067	2,770	4,159	18,189	153	29,337
Softwoods .. .. "	45,222	55,287	50,387	115,755	15,148	(a) 7,202	289,001
Number of persons employed in Forestry Departments—							
Office staff .. .. "	(b) 457	232	196	109	62	69	1,125
Field staff .. .. "	243	375	2,111	631	(c) 141	(d) 82	3,583

(a) Includes 30 acres of nurseries. (b) Includes Wood Technology staff totalling 65. (c) Excludes 451 other employees. (d) Excludes 245 bush employees.

4. Revenue and Expenditure.—The revenue of State Forestry Departments for 1951-52 was £7,639,388, as compared with £5,064,685 in 1950-51 and £1,466,781 in 1938-39; State details for 1951-52 were as follows:—New South Wales, £2,043,954; Victoria, £1,889,947; Queensland, £2,182,406; South Australia, £889,793; Western Australia, £481,497; and Tasmania, £151,791.

The expenditure of the Departments for 1951-52 was £10,475,950, as compared with £8,599,036 in 1950-51 and £1,840,088 in 1938-39; State details for 1951-52 were as follows:—New South Wales, £2,404,004; Victoria, £2,798,629; Queensland, £3,010,983; South Australia, £984,402; Western Australia, £838,846; and Tasmania, £439,086.

### § 5. Forestry Production.

1. Timber.—Particulars of logs treated and the production of rough sawn timber by sawmills and other woodworking establishments are shown in the following table by States for the year 1951-52.

#### OUTPUT OF NATIVE TIMBER : ALL MILLS, 1951-52.

('000 super. feet.)

Particulars.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	Total.
<b>LOGS TREATED, INCLUDING THOSE SAWN ON COMMISSION.(a)</b>							
Hardwood ..	508,095	526,216	340,998	8,076	391,234	230,425	2,005,044
Softwood ..	87,232	33,231	128,660	100,310	5,778	8,288	363,499
Total ..	595,327	559,447	469,658	108,386	397,012	238,713	2,368,543
<b>SAWN TIMBER PRODUCED FROM LOGS ABOVE.(b)</b>

(a) Not available for publication; included with softwoods.

The next table shows the sawn output of native timber in sawmills and other wood-working establishments in each State for the years 1938-39 and 1947-48 to 1951-52.

SAWN OUTPUT (a) OF NATIVE TIMBER : ALL MILLS.

('000 super. feet.)

State.	1938-39.	1947-48.	1948-49.	1949-50.	1950-51.	1951-52.
New South Wales ..	179,350	332,591	353,685	341,143	338,347	380,633
Victoria ..	120,197	260,502	281,852	308,792	329,640	353,103
Queensland..	193,250	235,214	250,355	251,127	252,378	291,681
South Australia ..	14,537	47,700	51,633	56,775	59,393	67,121
Western Australia ..	125,453	131,597	126,859	138,077	156,809	177,329
Tasmania ..	84,228	109,709	119,704	127,146	124,773	126,563
Total ..	717,015	1,117,313	1,184,088	1,223,060	1,261,340	1,396,430

(a) Includes the sawn equivalent of timber peeled or sliced for plywood and veneers.

In addition to the sawn timber shown in the preceding table, a large amount of other timber, e.g., sleepers, piles, poles, fencing material, timber used in mining, and fuel, is obtained from forest and other lands. Complete information in regard to the volume of this output is, however, not available. In Western Australia particulars are obtained of the quantities of timber hewn by contractors for the Railway Department, mines, etc., as well as of the quantities produced by other agencies, but the figures have not been included in the preceding tables. The quantities so produced in Western Australia in the six years shown in the preceding table were as follows:—1938-39, 35,862,540 sup. feet; 1947-48, 17,210,844 sup. feet; 1948-49, 16,331,835 sup. feet; 1949-50, 16,823,566 sup. feet; 1950-51, 19,396,134 sup. feet: and 1951-52, 21,156,790 sup. feet. The annual reports of the Forest Departments of the States contain particulars of the output of timber from areas under department control, but owing to lack of uniformity in classification and measurement, accurate determination of total production cannot be made. Moreover, there is a moderate quantity of hewn timber produced from privately owned land, but information regarding output is not available.

2. Paper and Wood Pulp.—(i) *Tasmania*. The manufacture of paper from Australian-grown timber has been established in three States. In Tasmania two large mills are making paper from indigenous hardwoods. The paper produced at Burnie covers a wide range of high class printing, writing, drawing, duplicating and blotting papers. At Boyer on the River Derwent, 20 miles from Hobart, newsprint is manufactured from locally ground wood pulp to which is added a small proportion of kraft pulp imported from New Zealand. When running at full capacity total production is 1,560 tons per week. An associate of the Burnie company was formed in 1948 to make vegetable parchment, grease-proof, glassine and specialty papers. Production of vegetable parchment commenced in June, 1952, using a machine of 126 in. width, and a second machine of 94 in. width was first used in May, 1953 to produce sulphite bonds and banks. A greaseproof machine is expected to be in operation towards the end of 1953 and two additional machines are to be installed for production of high-class writing and printing papers. Raw materials requirements will be met by extension to the major pulp mill. Hardwood not suitable for pulping and Tasmanian coal are used as fuels. During 1951-52, 169,212 tons of pulpwood and 48,334 tons of firewood were used by these mills.

(ii) *Victoria*. In Victoria wood pulp is produced for paper-making at Maryvale. Associated with the pulp mill is a paper-making plant capable of producing about 20,000 tons of kraft paper per annum. The timber used at this mill consists mainly of hardwoods at present unsuitable for other purposes and, in addition, a small quantity of pine, mainly thinnings, mill waste, and special softwood for production of cellulose. During 1951-52 the wood taken from Crown Lands for the production of pulpwood and cellulose amounted to 1,888,352 cubic feet of which 1,869,896 cubic feet were hardwood and 18,456 cubic feet were radiata pine.

(iii) *South Australia.* In South Australia a pulp and paper board mill commenced operations during 1941-42 near Millicent. The mill uses considerable quantities of softwoods from the Mount Burr and Penola pine plantations. During 1951-52, 31,177,455 super. feet of pulp wood were produced, 4,581,004 super. feet for local use and 26,596,451 super. feet for use in an interstate mill.

3. *Other Forest Products.*—(i) *Veneers, Plywood, etc.* Cutting of timber for the manufacture of veneers, plywood, etc., has been carried out in most States for a number of years. Recently, however, this has been considerably extended in all States, and much greater use has been made of local-grown timbers, both hard and softwoods. In recent years special attention has been paid to the selection of logs suitable for peeling.

The following table shows the production of plywood for each of the years 1938-39 and 1947-48 to 1951-52 :—

PLYWOOD PRODUCED.  
(’000 square feet  $\frac{3}{8}$  in. basis.)

State.	1938-39.	1947-48.	1948-49.	1949-50.	1950-51.	1951-52.
New South Wales ..	24,194	23,726	25,572	28,008	32,287	31,784
Queensland ..	66,100	99,823	104,262	111,048	104,849	110,028
Other States ..	14,511	15,528	16,451	17,977	16,361	17,341
Total ..	104,805	139,077	146,285	157,033	153,497	159,153

During 1951-52, 444.2 million square feet ( $\frac{1}{8}$ -in. basis) of veneers were produced by the rotary process for the manufacture of plywood, and 87.3 million square feet ( $\frac{1}{8}$ -in. basis) were sold or added to stock, the bulk of which would eventually be used in the production of plywood. In addition, 20.2 million square feet were produced by slicing.

(ii) *Eucalyptus Oil.* Oil may be distilled from the foliage of all varieties of eucalyptus, and several of them furnish a product widely known for its commercial and medicinal uses. Complete information regarding Australian production and consumption of eucalyptus oil is not available, but considerable quantities are manufactured, particularly in Victoria. The value of overseas exports of eucalyptus oil distilled in Australia amounted in 1938-39 to £86,714; in 1949-50 to £147,355; in 1950-51 to £468,680; and in 1951-52 to £445,206. The quantities exported in the years 1949-50 to 1951-52 were 680,802 lb., 1,219,762 lb., and 1,254,618 lb., respectively.

(iii) *Sandalwood and Sandalwood Oil.* Most of the sandalwood is produced in Western Australia for export to Asiatic countries. Small quantities are also produced in South Australia, Queensland and New South Wales. Details of exports of sandalwood are shown in paragraph 3 (ii), § 6. Oil distilled from Western Australian sandalwood has a medicinal value and is used extensively in the manufacture of perfumes. Quantities of this oil are exported annually to the eastern States of Australia and overseas countries, principally to the United Kingdom. Oversea exports of Australian sandalwood oil amounted in 1938-39 to £13,964; in 1949-50 to £22,889; in 1950-51 to £9,629; and in 1951-52 to £19,397.

(iv) *Grass Tree or Yacca Gum.* South Australia is the chief State producing this gum, which is used in the preparation of varnishes and lacquers. Quantities are also obtained in New South Wales and Western Australia but these are small. The production in South Australia during 1951-52 amounted to 1,002 tons, whilst the exports from Australia amounted to 1,013 tons valued at £38,529.

(v) *Tanning Barks.* The forests of Australia are capable of yielding a wealth of tanning materials; many species of eucalyptus and other genera contain varying proportions of tannin, chiefly in the bark, but also in the wood and twigs. Scattered distribution however, has resulted in the richest tan-bearing species only being used in

Australia. These are :—Golden wattle (*Acacia pycnantha*), black or green wattle (*Acacia decurrens* or *mollissima*), and mallet (*Eucalyptus astringens*). Mallet (*E. astringens*), of Western Australia, is not extensively used in Australian tanneries, but is exported to Europe and other countries. Reference to oversea trade in tanning barks is made in § 6, para. 3.

A brief account of work done by the Council for Scientific and Industrial Research in connexion with tanning materials is given in Official Year Book No. 22, p. 743.. The production of extract from the bark of karri (*E. diversicolor*), of which very large quantities are available at karri sawmills, has passed the experimental stage, and private enterprise has started production on a commercial scale. The experimental work in kino impregnated karri (*E. calophylla*) bark is not yet complete. The production of tanning bark in Australia approximated 25,000 tons per annum in the years prior to 1939, but since then production has declined and in 1951-52 stood at approximately 11,000 tons. However, this diminution is offset by the increased use of vegetable tanning extract, which rose from 3,686 tons in 1938-39 to 6,880 tons in 1951-52.

4. Value of Production.—(i) *Gross, Local and Net Values, 1951-52.* The values of forestry production on a gross, local and net basis are shown in the following table for the year 1951-52.

GROSS, LOCAL AND NET VALUE OF FORESTRY PRODUCTION, 1951-52.  
(£'000.)

State.	Gross Production Valued at Principal Markets.	Marketing Costs.	Gross Production Valued at Place of Production.	Net Value of Production. (a)
New South Wales .. .. .	12,848	387	12,461	12,461
Victoria .. .. .	9,275	796	8,479	8,479
Queensland .. .. .	8,230	1,190	7,040	7,040
South Australia .. .. .	3,323	144	3,179	3,179
Western Australia .. .. .	4,258	569	3,689	3,689
Tasmania .. .. .	3,422	305	3,057	3,057
Total .. .. .	41,356	3,451	37,905	37,905

(a) No deduction has been made for depreciation and maintenance nor for the value of materials used in the process of production.

(ii) *Net Values, 1934-35 to 1951-52.* In the following table the net value of forestry production and the net value per head of population are shown by States for the years 1947-48 to 1951-52 in comparison with the average for the five years ended 1938-39.

NET VALUE OF FORESTRY PRODUCTION.

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	Total.
NET VALUE.(a) (£'000.)							
Average, 1934-35 to 1938-39 .. .. .	2,094	837	2,226	547	1,176	394	7,274

(a) No deduction has been made for depreciation and maintenance nor, since the year 1948-49, for the value of materials used in the process of production; in earlier years deductions were made on this account for one or two States only.

5. **Employment.**—(i) *Forestry Operations.* The estimated number of persons employed in forestry operations as at June, 1952 is shown in the following table. These estimates, which have been based upon pay-roll tax and other data, include working proprietors, but exclude those employed in the sawmilling industry for which particulars are shown in the next table.

**ESTIMATED NUMBERS EMPLOYED IN FORESTRY, JUNE, 1952.**

(Excluding Sawmilling Industry.)

Sex.	N.S.W. (a)	Victoria.	Q'land.	S. Aust. (b)	W. Aust.	Tasmania.	Total.

**§ 6. Imports and Exports of Timber and Tanning Substances.**

i. **Imports of Dressed and Undressed Timber.** The quantities of timber imported into Australia during the years 1938-39 and 1949-50 to 1951-52 inclusive are shown in the following table according to countries of origin:—

**IMPORTS OF DRESSED AND UNDRESSED TIMBER INTO AUSTRALIA :**

**COUNTRIES OF ORIGIN.**

(a) Includes logs not sawn and excludes timber not measured in super. feet.

The figures in the table above exclude items such as architraves, veneers, plywood, staves, etc., quantities for which are either not shown, or are expressed in dissimilar units in the Customs entries. The total value of the items so excluded amounted to £2,773,047 in 1951-52.

The bulk of the imports of dressed timber now comes from Norway and Sweden and consists of softwoods cut for making boxes, and tongued and grooved timber, weather-boards, etc. The total value of dressed timber, shown in the table above amounted to £7,097,000 during 1951-52, the major items being tongued and grooved weather-boarding. Undressed timber imported totalled £15,992,000, principally softwood beams, baulks, etc., valued at £9,861,000, and softwood boards and planks valued at £4,475,000. The principal component of beams, baulks, etc., was oregon pine from Canada and the United States of America, while the balance was mainly hemlock from North America, pine from New Zealand, Sweden and Finland, and spruce from Sweden. Included in the softwood boards and planks are oregon and hemlock from North America, pines principally from New Zealand and Brazil, spruce, principally from Sweden and Rumania (although there are considerable quantities from other European countries), red and white pine from New Zealand, and other softwood from Brazil.

2. Exports of Undressed Timber and Railway Sleepers.—The quantities of undressed timber and railway sleepers exported during the years 1938-39 and 1949-50 to 1951-52 are shown below, together with the countries of destination.

EXPORTS OF UNDRESSED TIMBER (a) AND RAILWAY SLEEPERS FROM AUSTRALIA : COUNTRIES OF DESTINATION.

('000 super. feet.)

Country of Destination.	Undressed Timber (excluding Railway Sleepers).				Railway Sleepers.			
	1938-39.	1949-50.	1950-51.	1951-52.	1938-39.	1949-50.	1950-51.	1951-52.

Total ..	44,338	34,237	21,836	23,996	34,036	15,540	7,519	4,748

(a) Excludes timber not measured in super. feet.

The bulk of the exports of undressed timber were consigned to New Zealand, and the United Kingdom, and consisted largely of the Western Australian hardwoods, jarrah and karri, which have earned an excellent reputation for such purposes as harbour works and wood paving, etc. The total value of exports of undressed timber, excluding railway sleepers, during 1951-52 was £1,561,987 of which £1,445,118 was hardwood and £116,869 was softwood. Railway sleepers exported were valued at £162,837.

3. Classification of Imports and Exports.—(i) *General.* The quantities and values of timber, according to items, imported and exported during the year 1951-52 are shown in the following table:—

TIMBER : IMPORTS AND EXPORTS, AUSTRALIA, 1951-52.

Description.	Quantity.				Value (£).		
	Unit of Quantity.	Imports.	Exports.	Excess of Imports over Exports.	Imports.	Exports.	Excess of Imports over Exports.

Total ..	..	(b)	(b)	(b)	25,861,940	1,836,640	24,025,300

(a) Not separately recorded. (b) Not available.

NOTE.—Minus sign (—) denotes an excess of exports.

(ii) *Sandalwood.* Sandalwood is exported, principally from Western Australia, to Singapore, Malaya and Hong Kong, where it is highly prized and largely used for artistic and ceremonial purposes. During 1951-52 total exports were 361 tons valued at £83,010, as compared with 344 tons, £80,987 in 1950-51, 195 tons, £45,546 in 1949-50, and 1,648 tons, £42,328 in 1938-39.

(iii) *Tanning Bark.* With the exception of 1950-51 when 10,019 cwt. of tanning bark valued at £11,020 were exported from Tasmania to India, imports have been considerably in excess of exports for every year since 1938-39. Imports have, however, declined from 86,367 cwt. (£56,986) during 1945-46 to 10,783 cwt. (£24,359) during 1951-52, compared with 6,199 cwt. (£2,318) during 1938-39. In 1938-39 exports totalled 18,220 cwt. valued at £8,630. There were no exports of tanning bark during 1951-52.

The imports of tanning bark consist almost exclusively of wattle bark from the plantations in South Africa. One species of Australian wattle, *Acacia mollissima*, is chiefly relied upon for the production of wattle bark in the South African plantations, most of the seed being obtained from the best wattle bark areas in eastern Tasmania and western Victoria. Two reasons are given to account for the success of the industry in the Union of South Africa:—(a) The suitability of the treeless, grassy highlands of Natal; and (b) the availability of native labour.

(iv) *Other Tanning Substances.* Considerable quantities of tanning substances other than bark are imported annually into Australia. The total value in Australian currency of the importations in 1951-52 was £637,900, and was composed as follows:—Tanners' Bates, £3,880; wattle bark extract, £569,353; other extract, £19,327; and valonia, myrobalans, cutch, etc., £45,340.

Exports of tanning extracts and other tanning substances from Australia amounted to £326,371 in 1951-52.

## CHAPTER XXIII.

## FISHERIES.

## § 1. General.

1. **Fish Stocks.**—Australia possesses a varied native fauna of freshwater and marine fish, including tropical and temperate species. In addition, certain exotic species have become acclimatized in the freshwater streams. The commercial fisheries exploit on-shore, demersal (bottom) and pelagic (surface) stocks. The on-shore stocks are at present of greatest importance.

The Australian marine fauna includes also a number of mollusca (oysters, scallops) and crustacea (crabs, prawns, crayfish) groups which are commercially exploited.

In winter whales of various species, of which the humpback is the most common, appear off the western and eastern coasts.

2. **Fishing Areas.**—The principal fishing areas at present are the coastal lakes, streams, estuaries and beaches, from Cairns in Queensland to Ceduna in South Australia, and from Esperance to Geraldton in Western Australia. There are interruptions of variable size; for the most part, these fishing grounds are associated with the coastal streams. The demersal grounds fall into two classes—(a) the reefs from which cod and other tropical species are taken in tropical waters, and snapper in temperate waters; and (b) the grounds from which flathead, morwong, etc., are taken. The reefs extend intermittently from northern Queensland around the southern part of the continent to Shark's Bay in Western Australia. The flathead grounds lie on the continental shelf off south-east Australia, chiefly from Crowdy Head to south of Cape Everard and further off the east Tasmanian coast from Babel Island southwards to Storm Bay. Other demersal grounds exist in the Great Australian Bight but would require large modern trawlers for commercial exploitation. The demersal shark grounds lie principally in Bass Strait and on the continental shelf off eastern South Australia. Other grounds have been located off southern Western Australia.

The grounds of existing pelagic fisheries include that for the Spanish mackerel off the north-eastern coast from about Coff's Harbour to Cairns and that for barracouta in Bass Strait and off eastern Tasmania. Jack mackerel is found in the waters of eastern Tasmania, the south-east coast of New South Wales, and Western Australia. Tuna is now being taken in commercial quantities on the New South Wales and South Australian coasts.

Pearlshell is fished from Cooktown in Northern Queensland (and from Thursday Island) round the north coast of Australia to Exmouth Gulf in Western Australia. Trochus shell is obtained from Mackay in Queensland round the north coast to King Sound in Western Australia.

Edible oysters are found in the temperate waters of Queensland, New South Wales and Victoria. Some cropping of natural resources takes place in Queensland, but the principal cultivation grounds are found in New South Wales. The scallop is taken commercially only in Tasmanian waters.

Crabs of various species are found in practically all coastal waters. Prawns are taken in the temperate waters of Queensland and New South Wales. Crayfish are taken on reefs of the continental shelf in the waters of all southern States, the fishery extending (with a major interruption in the Bight) from Port Macquarie in New South Wales to Geraldton in Western Australia. Considerable development has taken place in the crayfish fisheries, particularly in South Australian and Western Australian waters, owing to the opening up of markets in the United States of America for frozen crayfish tails.

Whales emigrating from Antarctic waters to their breeding grounds in the warmer waters of low latitudes pass up both the western and eastern coasts of Australia, returning to the Antarctic in the spring. Three whaling stations operate in Western Australia (Pt. Cloates, Babbage Island adjoining Carnarvon, and near Albany) and one in Queensland (Moreton Bay).

3. **Fishing Boats and Equipment.**—The fishing equipment includes almost every possible type of gear, and appropriate boats are employed. The on-shore equipment includes mesh-nets, trawl-nets, and traps of various types. The demersal reef-fishery

is worked with traps, hand lines and other long lines. The demersal flathead-fishery is worked by both otter trawl (with V.-D. gear) and Danish seine; in addition some hand-lining is carried out. The demersal shark fishery is worked by long lines. The pelagic mackerel-fishery employs trolling gear with lures of various types, while the pelagic barracouta fishery employs principally barbless jigs. Tuna is taken by trolling and, more recently, by pole fishing with live bait, and jack mackerel and pilchards are taken with purse-seine and lampara nets.

The boats for the on-shore fisheries are almost invariably small vessels fitted with low-power petrol engines. The vessels working the reefs are larger (up to 50 feet) and have more power. The otter trawl vessels are steam trawlers, and the Danish seine vessels are 40 to 70 feet in length with diesel engines. The shark boats have diesel power and range from 35 to 50 feet in length.

4. **Administration.**—The fisheries are administered by State Departments implementing State laws. This administration includes licensing of men and boats, and restrictions of fishing by prohibitions against fishing at certain times and places and by certain methods. The States also prescribe the gear that may be used and for some fishes the legal minimum size at which they may be landed.

In October, 1946 the Commonwealth Government appointed a Director of Fisheries and established the Commonwealth Fisheries Office as a division of the Department of Commerce and Agriculture to co-ordinate fisheries administration and develop the fisheries of Australia.

In July, 1952, a conference of fisheries and legal officers of the Commonwealth and all States, except Western Australia, agreed on procedure for implementing through the States the Fisheries Act 1952, and the Pearling Act 1952, which had been passed by the Commonwealth Parliament at the end of February. These Acts were passed to enable the Commonwealth to conserve and develop fisheries in Australian waters outside the States' 3-mile territorial limit. As a first result of the July conference the conservation of the school shark and tiger flathead fisheries was taken in hand by the Commonwealth in co-operation with the States concerned.

The Commonwealth Scientific and Industrial Research Organization, through its Fisheries Division, is responsible for fishery research (*see* § 4, par. 2 hereafter).

## § 2. Development and Present Condition of the Fishery.

1. **Fisheries Proper.**—(i) *General.* The earliest Australian fishery was on-shore. To this was soon added the demersal reef fishery using lines. At each centre of population this sequence has almost invariably been followed, and expansion of the industry up to about the year 1900 consisted chiefly of the extension of these operations into hitherto unworked areas. The taking of barracouta in Tasmanian waters was begun at least by 1880, if not earlier, but the main development of this fishery occurred between 1915 and 1925.

The first major development of the fishery came with the institution of trawling operations off the New South Wales coast in 1918 by the New South Wales Government. The State enterprise failed, but the fishery was found very profitable by private enterprise. In 1936 the use of Danish seine vessels began and the fleet of these vessels rapidly expanded, and in 1946 (after the return of vessels requisitioned in war-time) a peak was reached and thirteen steam trawlers and 120 Danish seine vessels were licensed. The total catch of trawled fish in 1946-47 was 16,000,000 lb. However, by the end of 1947 many of these vessels found that the fish stocks, particularly of flathead, appeared to be seriously depleted. Of the species taken by the trawl fishery, tiger flathead, morwong and nannygai are the most important, and of these flathead may be regarded as the prime fish and commands a higher price. Since 1947 the composition of the catch has changed, because of depletion of the flathead stocks, and the lower priced fish have become a larger proportion of the catch. In 1951-52 ten steam trawlers (all based at Sydney but fishing right down the coast to Bass Strait) and thirty-nine Danish seine vessels in New South Wales, with a few more in Victoria, were engaged in the trawl fishery.

In Queensland waters the Spanish mackerel is taken by line fishermen, operating in off-shore waters out to the Barrier Reef between Gladstone and Cairns, with Townsville as the centre. This fishery started in 1930 and by 1942 production had risen to about 1,000,000 lb. The catch decreased considerably during the war and post-war period, but by 1949-50 it had increased again to the 1942 level of approximately 1,000,000 lb.

In 1930 fishing for snapper shark was started in south-eastern waters, particularly off the Victorian and Tasmanian coasts. This fishery extended rapidly its area of operations, particularly in the Bass Strait area and the south-east coast of South Australia, and the catch increased from 23,000 lb. in 1930 to a steady 3,000,000 lb. catch in each year since 1942. Great impetus was given to the fishery during war years by the demand for livers for fish oil production for medicinal purposes. This demand has eased with the return of cod-liver oil, and the production overseas of synthetic vitamin "A". However shark is still fished for the flesh, which is sold as "flake", mainly in the Melbourne Fish Market.

Pilchards occur in the southern waters of Australia from Port Stephens to the south-west of Western Australia. Commercial catches have been made with lampara nets and to a less extent with purse seines at Jervis Bay on the New South Wales coast, in Port Phillip Bay in Victoria, at Coffin Bay in South Australia and at Albany in Western Australia. Anchovies in Port Phillip Bay and sprats in Tasmanian waters are caught in payable quantities, though there is usually some difficulty in finding a market for them. Jack mackerel have been caught in commercial quantities off the east coast of Tasmania and off Eden in New South Wales.

The tuna fishery was established on the New South Wales coast during the second half of 1949, when fishermen, using improvised trolling gear, caught 1,000 tons of southern blue-fin tuna. The catch was canned at Narooma and Eden, and samples of both canned and frozen fresh tuna were sent to California, where it met with approval. Owing to adverse marine conditions, subsequent years have been disappointing. The American-owned tuna clipper *Senibua*, whose operations were subsidized by the Commonwealth, proved that Australian tuna could be caught by pole fishing with live bait. As tuna come close to the coast, ice can be used instead of refrigeration to preserve the catch to the landing port. This means that smaller and less expensive vessels can be used.

(ii) *Production.* The total recorded catch of fresh fish during 1951-52 amounted to 65,000,000 lb., compared with 64,000,000 lb. in the previous year. This is a considerable decline on the peak production of 76,000,000 lb. reached in 1947-48.

Production for the years 1938-39 and 1947-48 to 1951-52 is shown by States in the following table:—

RECORDED PRODUCTION OF FRESH FISH.  
( '000 lb.)

State.	1938-39.	1947-48.	1948-49.	1949-50.	1950-51.	1951-52.

<b>Total ..</b>	<b>68,626</b>	<b>76,169</b>	<b>75,414</b>	<b>69,970</b>	<b>63,995</b>	<b>64,951</b>

(a) Year ended previous December.

2. **Oysters and Shell Fisheries.**—Initially the Australian oyster fisheries depended solely upon the harvesting of naturally grown stock in littoral and submarine areas. However, the stocks soon deteriorated and attention was turned to methods of cultivation. This is carried on mainly in New South Wales where there has been constant improvement in methods and the present technique in certain areas is highly efficient. The production for Australia in 1951-52 was 8,209,000 lb. Scallops are taken by dredge in the D'Entrecasteaux Channel in Tasmania.

Cray fisheries have developed greatly in recent years and the development has been such as to permit an export trade of crayfish tails to America to meet the off-season demand for frozen tails. Details of production by States for the years 1938-39 and 1947-48 to 1951-52 are shown in the following table:—

RECORDED PRODUCTION OF CRAYFISH.  
(‘000 lb.)

State.	1938-39.	1947-48.	1948-49.	1949-50.	1950-51.	1951-52.

Australia ..	5,109	8,079	9,877	12,859	13,713	13,735

(a) Year ended previous December.

3. **Pearl-shell and Trochus.**—The industry, which ceased operations on Japan's entry into the war in December, 1941, did not resume on a commercial basis at Queensland centres until late in 1945, and at Western Australian centres until 1946, while operations off the Northern Territory coast were not resumed until 1948.

Before the war a large proportion of the key men were Japanese; the others included Malays, Chinese, Koepangers, Filipinos, Papuans and Torres Straits Islanders. On the resumption of operations without the Japanese, the labour available was, with few exceptions, inefficient. Queensland with a more ready source of labour from the Torres Strait Islands and mainland was able to expand its fishing more rapidly, and in the 1949 season, achieved its second highest pearl shell production on record. The expansion of the industry at Darwin has been retarded by the fact that the key men lack the local knowledge acquired by the Japanese. Western Australian centres also suffered from lack of skilled labour. In 1953 the Commonwealth permitted the employment at Broome, under certain conditions, of 35 Japanese divers, tenders and engine-drivers.

Tables showing the principal statistics relating to pearl-shell and trochus are shown in § 5, para. 1 (iii) hereafter.

Reference to inquiries into the pearl-shell fishing industry by a Royal Commission in 1912, and by the Tariff Board in 1935, appears on page 1031 of Official Year Book No. 37.

### § 3. Marketing and Distribution.

1. **Marketing.**—The greater portion of Australian fish is sold in metropolitan markets. In Queensland, fish marketing is under the control of a Fish Board, which has representatives of producers, wholesalers, consumers, and a Government nominee as chairman. A central market is located in Brisbane and there are branch markets or depots at 14 centres along the coast. The organization ensures that all fish is marketed through the correct channels, and the board has encouraged to a very marked extent the steadily increasing annual fish production of the State. The fish marketing methods in this

State have proved most successful. In New South Wales the central market in Sydney is conducted by the Chief Secretary's Department, and the port depots in various centres along the coast by fishermen's co-operatives. These co-operatives distribute some of their fish to local centres and to inland country districts, and send the balance to the central market in Sydney. In Victoria, South Australia, and Western Australia fish is sold in central markets by agents. The greater part of the catch of fish in Tasmania is either processed in canneries in that State or exported to the mainland. There is some interstate movement of fish from the northern rivers of New South Wales to Queensland, from Tasmania to New South Wales and Victoria, and from South Australia to Victoria.

2. **Consumption of Fish.**—Prior to the 1939-45 War, Australians consumed annually the fresh and canned equivalent of about 131 million lb. of round fish, or 19.0 lb. per person. About 70 million lb. was produced locally and the remainder was imported. Total consumption (including canned and cured) during 1951-52 is estimated at 89.0 million lb. edible weight (10.5 lb. per head) as compared with 84.5 million lb. edible weight (10.2 lb. per head) in the previous year. This is equivalent to approximately 167.7 million lb. fresh round weight (19.6 lb. per head) and 157.6 million lb. fresh round weight (19.0 lb. per head) respectively. Fish is not, as in many countries, a staple item in the diet of Australians and, away from the sea board, is still regarded rather as a luxury.

3. **Processing, including Canning.**—The equipment for handling fish has in the past been rather inadequate, but in most States since the war cold storage facilities have been improved and increased. In Queensland and New South Wales particularly, the depots which have been established at fishing ports have been equipped with cold storage space. In several States there has been a development of establishments equipped for snap freezing of fish, in particular the freezing of crayfish tails for export. A number of vessels have been equipped with freezing plants to process crayfish at sea.

In all States there has been a development of facilities for light processing of fish.

Reference to the production of processed fish and number of factories operating will be found in § 5, par. 3 hereafter. Considerable expansion has taken place in the industry, particularly since 1945-46. In 1938-39, three factories processed 603,302 lb. of fish valued at £13,700, whereas in 1951-52 seventeen factories processed 6,754,943 lb., valued at £884,697.

4. **By-Products.**—Processing of offal for fish-meals, etc., has been established in certain States. The processing of livers for vitamin-rich oils has been undertaken in several States and oil-production has been favourably developed.

## § 4. Inquiries and Research.

1. **General.**—The Australian fishing industry has been the subject of a number of official inquiries seeking an explanation of the very slow rate of development and the unfortunate conditions prevailing within the industry as well as the paucity of supplies available to the public. Details of the inquiries undertaken, the recommendations arising from them and subsequent developments will be found in Official Year Book No. 38, page 1082.

2. **Commonwealth Scientific and Industrial Research Organization, Division of Fisheries.**—Details of the establishment, organization and functions of the Division of Fisheries of the Commonwealth Scientific and Industrial Research Organization will be found in Official Year Book No. 38, page 1083.

Since its inception, the work of the Division has extended, and there are field stations at Melbourne, Perth, Hobart, Dunwich (Queensland) and Thursday Island. The Division has two research vessels, F.R.V. *Derwent Hunter*, working in South Australian waters and a ketch F.R.V. *Gahleu* working as a pearling lugger in the Thursday Island area.

As a result of the exploratory investigations and the research of the Division, together with the collaboration of commercial fishermen, it has been shown that important species of pelagic fish can be taken in commercial quantities in Australia. It has been shown, too, that crayfish, mullet, shark, whitebait and New South Wales trawl fish stocks need the protection of regulations to preserve them. In all but the last mentioned, restrictions have been imposed by the administrative departments to preserve the stocks.

Research on oysters has been aimed at cultivation methods, including the fertilization of mud to increase the output. It has been determined that the Pacific oyster from Japan can be established and grown satisfactorily in Tasmanian waters. Experiments are being carried out with Australian species of pearl-shell in the Thursday Island area to determine whether the cultivation methods used in Japan can be established.

**3. Commonwealth Fisheries Authority.**—The Commonwealth Fisheries Office, a section of the Department of Commerce and Agriculture, was established as a result of a recommendation in 1941 by the Tariff Board, after a public inquiry into the fishing industry, that a Commonwealth developmental authority should be established. Details of the establishment, organization and functions of the Authority will be found in Official Year Book No. 38, page 1084.

In accordance with the Tariff Board report, scientific research, as distinct from developmental and administrative functions, was left to the Commonwealth Scientific and Industrial Research Organization which had established a Division of Fisheries for this purpose in 1937.

After the revocation of the Commonwealth war-time powers, the Commonwealth and State spheres were fixed at an interstate conference in February, 1947. The Commonwealth is responsible for extra-territorial waters, whaling, pearling, rehabilitation of ex-servicemen in the fishing industry, fishery training schools, commercial development of fisheries, promotion of uniform conditions governing catches of various species of fish, statistics, information and publications.

**4. North Australia Development Committee.**—In 1946 the North Australia Development Committee gave considerable attention to the fisheries resources of North Australia and recommended that a hydrological and oceanographical survey should be made of the area. It also suggested that a biological survey should be made of pearl shell with particular reference to the possibility of instituting pearl shell culture. It recommended that all information regarding the area should be compiled and made available for scientific workers. It also recommended that an economic survey of the fisheries resources should be made, comparing them particularly with those of the Netherlands East Indies.

**5. Whaling.**—The Commonwealth Fisheries Office carried out extensive investigational and preparatory work for the establishment of an Australian whaling industry. A commission of three members was established in 1949, and a station was built at Babbage Island in Western Australia. Operations did not begin until the 1950 season, when 40 whales were processed and in 1952, with three catcher boats, this station obtained its quota of 600 whales. A second station in Western Australia at Pt. Cloates, which began operating in 1949, in 1952 took 536 whales of its 600 quota, and a smaller station near Albany took 51 of a quota of 75. A new station at Moreton Island (Queensland) in its first season (1952), took its full quota of 600 whales.

The Director of Fisheries represents Australia on the International Whaling Commission, which controls whaling throughout the world.

§ 5. The Fishing Industry.

1. Boats and Men Engaged, and Take.—(i) *General Fisheries.* The returns have been compiled from particulars supplied by the State Departments, and while the data do not generally lend themselves to presentation on a uniform basis, the principal facts are shown in the following tables.

GENERAL FISHERIES, 1951-52.

Particulars.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust. (a)	Tas.	N.T.	Aust.
No. of boats engaged ..	2,142	693	3,408	1,400	531	911	10	9,095
Value of boats and equipment .. £'000	1,503	622	922	475	686	400	5	4,613
No. of men engaged ..	(b)2,598	974	6,963	3,992	925	1,134	16	16,602
Total take of—								
Fish .. '000 lb.	25,473	10,133	9,020	6,950	8,089	5,224	62	64,951

(a) Year ended December, 1951. (b) Fishermen's licences issued; licences are issued only to persons deriving a substantial proportion of their income from personal exertion from the capture and sale of fish.

Figures for Australia for the years 1938-39 and 1947-48 to 1951-52 are shown in the table below:—

GENERAL FISHERIES : AUSTRALIA.

Particulars.	1938-39.	1947-48.	1948-49.	1949-50.	1950-51.	1951-52.
No. of boats engaged	5,462	11,059	10,160	9,329	8,628	9,095
Value of boats and equipment .. £'000	649	4,222	3,668	4,104	4,149	4,613
No. of men engaged(a)	9,081	18,378	17,440	15,637	14,870	16,602
Fish obtained—						
Quantity .. '000 lb.	68,626	76,169	75,414	69,970	63,995	64,951
Gross value .. £'000	1,385	2,827	3,160	2,877	3,555	3,770
Crustaceans obtained—						
Gross value .. £'000	135	457	664	914	725	1,582

(a) Includes Fishermen's licences issued for New South Wales; see note (b) above.

(ii) *Edible Oyster Fisheries.* Edible oyster fisheries are of small dimensions outside New South Wales and Queensland. The available returns show the following takes during 1951-52 in these States:—New South Wales, 7.6 million lb., value £380,144; Queensland, 482,000 lb., value £15,050. In Tasmania the scallop is far more important than the oyster, and in 1951-52 the take was valued at £38,650.

Figures for Australia for the years 1938-39 and 1947-48 to 1951-52 are shown in the following table :—

## EDIBLE OYSTER FISHERIES : AUSTRALIA.

Particulars.	1938-39.	1947-48.	1948-49.	1949-50.	1950-51.	1951-52.
No. of boats engaged	754	815	833	1,132	1,020	1,114
No. of men engaged ..	850	626	768	878	664	901
Oysters obtained—						
Quantity (a) '000 lb.	9,984	8,115	7,063	9,307	7,245	8,535
Gross value (b) £	132,201	295,763	291,470	425,745	398,995	435,513

(a) Includes scallops in Tasmania, 7,470 cwt. in 1947-48; 5,969 cwt. in 1948-49; 4,211 cwt. in 1949-50; 3,219 cwt. in 1950-51; and 2,908 cwt. in 1951-52; 1938-39 weight not available. (b) Includes scallops in Tasmania, valued at £14,500 in 1938-39; £33,115 in 1947-48; £26,460 in 1948-49; £23,580 in 1949-50; £31,540 in 1950-51; and £38,650 in 1951-52.

(iii) *Pearl and Pearl-shell Fisheries.* (a) *States.* The following table shows particulars of equipment used in the pearling industry, men engaged and production for the year 1951-52 :—

## PEARL AND PEARL-SHELL FISHERIES, 1951-52.

State or Territory.	Boats Engaged.	Value of Boats and Equipment.	Men Engaged.	Pearl-shell.		Gross Value of Pearls obtained. (c)	Tortoise-shell.		Trochus-shell.	
				Quantity obtained.	Gross Value.		Quantity obtained.	Gross Value.	Quantity obtained.	Gross Value.

Pearls obtained(a) £	3,397	1,294	1,930	1,040	3,635	1,490
Trochus-shell obtained—						
Quantity ..	tons 321	272	414	577	1,287	1,176
Value ..	£ 23,823	18,729	28,170	51,682	228,325	234,332

(a) Incomplete; as returned.

2. Value of Production.—(i) *Gross and Local Values, 1951-52.* Although statistics of the value of production of the fishing industry have been on an established basis for some years, attention is drawn to the fact that the actual collection of statistics of the quantity of fish taken presents many difficulties and consequently any defects which may occur in the collection must necessarily be reflected in the value of production. Particulars of the value of other materials used in the process of production are not available for all States, so the values can only be stated at the point of production and not on a net basis as has been done with other industries. Variations in the relative proportions of marketing costs to gross production suggest that complete uniformity in method has not yet been attained.

GROSS AND LOCAL VALUE OF FISHERIES PRODUCTION, 1951-52.  
(£'000.)

State.	Gross Production Valued at Principal Markets.	Marketing Costs.	Gross Production Valued at Place of Production.	Value of other Materials used in Process of Production.	Net Value of Production.(a)
New South Wales .. ..	2,233	412	1,821	156	1,665
Victoria .. ..	824	118	706	(b)	(b)
Queensland .. ..	1,095	260	835	225	610
South Australia .. ..	792	91	701	(b)	(b)
Western Australia .. ..	1,253	28	1,225	167	1,058
Tasmania .. ..	441	(b)	441	(b)	(b)
Total (c) .. ..	6,638	909	5,729	(b)	(b)

(a) No deduction has been made for depreciation and maintenance. (b) Not available.  
(c) Excludes production in the Northern Territory.

(ii) *Local Values, 1934-35 to 1938-39 (Average) and 1947-48 to 1951-52.* In the following table the local value of fisheries production and the local value per head of population are shown by States for the average of years 1934-35 to 1938-39 and each of the years 1947-48 to 1951-52. Local value is gross value less marketing costs and is the value at the place of production. The value of materials used in the course of production is not available for all States and consequently production is valued at that point. These values therefore overstate the net values by the extent of these costs.

LOCAL VALUE OF FISHERIES PRODUCTION.

Year.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Total.
LOCAL VALUE.(a) (£'000.)							
Average, 1934-35 to 1938-39 ..	588	159	292	182	229	80	1,530
1947-48 ..	1,224	450	561	214	564	490	3,593
1948-49 ..	1,479	522	704	232	679	558	4,174
1949-50 ..	1,449	615	760	287	697	426	4,234
1950-51 ..	1,730	700	812	404	812	411	4,869
1951-52 ..	1,821	706	835	701	1,225	441	5,729

(a) No deduction has been made for depreciation and maintenance.

LOCAL VALUE OF FISHERIES PRODUCTION—*continued.*

Year.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Total.
LOCAL VALUE PER HEAD OF POPULATION.							
(s. d.)							
Average, 1934-35 to 1938-39 ..	4 5	1 9	5 11	6 3	10 0	6 11	4 6

1951-52 ..	10 10	6 2	13 8	19 3	41 5	29 6	13 6

(a) No deduction has been made for depreciation and maintenance.

3. **Fish Preserving.**—The attempt to establish the fish preserving industry at the commencement of this century met with little success although a bounty was paid to encourage production. The industry, however, continued to operate, but there was no marked development until about 1945-46 when the production of canned fish amounted to 1,700,000 lb. After that year production increased considerably and reached a peak of 10,900,000 lb. in 1948-49, but by 1951-52 it had declined to 6,800,000 lb.

In addition to the canning of fish, other fish products are produced. The quantities produced during 1951-52 were 319,000 lb. of smoked fish and 1,099,000 lb. of fish paste.

In 1939 New South Wales and Tasmania were the only producing States, but by 1941 the industry had been extended to South Australia and Western Australia. Details of production are given in the following table for the years 1938-39 and 1947-48 to 1951-52.

## PRODUCTION OF CANNED FISH : AUSTRALIA.

Particulars.	1938-39.	1947-48.	1948-49.	1949-50.	1950-51.	1951-52.
Number of factories operating(a) ..	3	16	16	15	18	17
Quantity .. lb.	603,302	9,731,702	10,886,254	7,442,521	7,000,365	6,754,943
Value .. £	13,700	727,660	973,027	676,812	701,141	884,697

(a) Including factories engaged in the canning of fish loaf.

The varieties canned in the several States differ according to the catch available, but separate details for each variety are not collected. In New South Wales salmon is the principal variety. In South Australia the canned pack includes mullet, salmon, garfish, etc., in Western Australia herrings, crayfish and mullet, and in Tasmania, salmon and crayfish.

4. **State Revenue from Fisheries.**—The revenue from fisheries during the year 1951-52 was £59,769 compared with £48,866 in 1950-51 and £34,273 in 1938-39. Of the total of £59,769 in 1951-52 New South Wales collected £29,004, Victoria £4,164, Queensland £11,124, South Australia £3,839, Western Australia (year ended December, 1951) £7,325, Tasmania £4,238 and Northern Territory £75.

### § 6. Oversea Trade in Fishery Products.

NOTE.—Values of Australian oversea trade shown in this section are expressed in £A. f.o.b., Port of Shipment.

1. Imports of Fish.—The equivalent, in the round, of imported fish consumed in Australia in 1951-52, was 46 per cent. of the total consumption. Particulars of the imports of fish are shown below for the years 1947-48 to 1951-52 in comparison with 1938-39.

#### FISH (INCLUDING SHELL FISH): IMPORTS INTO AUSTRALIA. (Cwt.)

N.E.I. (including salted) ..	7,987	3,202	3,319	8,577	8,655	11,911

(a) Not recorded separately.

The value of fish and fish products imported during 1951-52 amounted to £4,983,000 as compared with £1,470,854 in 1938-39.

Canned fish (total imports of which in 1951-52 were valued at £3,320,390) constituted the largest proportion of the imports; salmon from the Soviet Union, herrings from the United Kingdom and Norway, pilchards from the Union of South Africa and sardines from Norway were the chief varieties imported. A considerable proportion of the fresh fish imported in 1951-52 came from the United Kingdom and New Zealand, and the potted fish came chiefly from the United Kingdom; the bulk of the remainder came from the United Kingdom and Spain. The small import of oysters was supplied by New Zealand, whilst the bulk of the crustaceans was supplied by the Union of South Africa and the Soviet Union.

2. Exports of Fish.—During 1951-52 the exports of fish of Australian origin were as follows:—oysters in shell, 895 cwt., £6,590; other fresh or preserved by cold process, 30,046 cwt., £1,069,048; potted or concentrated, 297 cwt., £13,705; fish, preserved in tins, 5,240 cwt., £94,600; shell fish in tins, 1,335 cwt., £33,607; smoked or dried, 189 cwt., £3,797; and other fish, 16 cwt., £210.

3. Exports of Pearl and other Shell.—The exports of pearl, tortoise and trochus-shell of Australian origin are shown hereunder for the years 1938-39 and 1947-48 to 1951-52.

## PEARL, TROCHUS AND OTHER SHELL : EXPORTS FROM AUSTRALIA.

## CHAPTER XXIV. MANUFACTURING INDUSTRY.

### § 1. General.

1. **Introduction.**—A complete statistical account of the growth of the manufacturing industry in Australia cannot be given owing to the fact that prior to 1906 the necessary statistics were not collected by the several States on a definite and uniform basis. A standard classification of manufacturing industries was formulated at a conference of Australian Statisticians in 1902 and adopted by all States in 1906. Figures on this basis were prepared for 1907 and subsequent years.

Prior to the federation of the Australian States in 1901, the manufacturing industry in Australia was primarily engaged in the production of goods for local use, mainly of food commodities, furniture, bricks, clothing made from imported materials, printing, the repair rather than the manufacture of machinery, and the preliminary treatment of primary products, such as wool-scouring and sawmilling.

After federation, steady expansion of the manufacturing industry resulted from the removal of interstate trade barriers and the operation of a uniform protective tariff. This expansion was quickened as a result of the demands created by the 1914-18 War, the curtailment of imports, and the rapid growth of spending power within the community. New and more advanced development took place, iron and steel works and many related and subsidiary industries were established, extensive manufacture of machinery was begun, and a wide range of high-grade products—textiles, metal manufactures, electrical goods, etc.—was added to the list of commodities made in Australia.

A check was made in this expansion by the world-wide economic depression of 1929-33, but returning general prosperity and the opportunities opened to local manufacturers by import restrictions initiated revival in 1933 and, with depreciation of Australian currency, gave renewed stimulus to manufacturing enterprise. As economic conditions improved, the tariff, revenue duties and primage were reduced, but without materially prejudicing the progress of local manufactures.

When war broke out in September, 1939, Australia became a major source of supply for British countries east of Suez and in meeting these demands, as well as those arising locally because of interruption of oversea importations, existing manufacturing industries expanded, and new enterprises were developed rapidly for the production of all classes of munitions, aircraft, ships, many new kinds of machinery and metal manufactures, scientific equipment, textiles, chemicals, etc. The outbreak of war with Japan, the basing of Allied armed forces in Australia, and Australian responsibilities for supplies in the South-west Pacific Area, gave added impetus to these developments, and manufacturing in Australia outstripped all previous levels.

The cessation of war production and the transition of industry to a peace-time basis temporarily retarded progress, but from 1945-46 onward, there was renewed expansion of the manufacturing industries to which an inflow of capital from overseas contributed.

2. **Decentralization of Manufacturing Industries.**—Following upon a report by the Secondary Industries Commission, the Commonwealth Government called a conference of Commonwealth and State Ministers in August, 1945 to formulate a national policy for the decentralization of secondary industries. It was agreed that the State Governments should seek to promote decentralization along the lines appropriate to each, providing necessary services, assistance and concessions to the full extent of State resources. The Commonwealth undertook to collaborate in all matters of Commonwealth industrial policy affecting the development and location of industry, to investigate in association with the States the prospects of developing secondary industries in selected areas, to advise the States of developments desirable for defence purposes, and to provide financial assistance for projects of national importance where the cost would be great relative to the State's resources.

The Commonwealth has assisted decentralization by allocating to private industry munitions and other defence buildings in decentralized areas and accommodating migrants in provincial centres with prospects of development. Oversea firms contemplating establishment in Australia are encouraged to select locations in rural areas or the less industrialized States.

**3. Commonwealth Division of Industrial Development.**—The Secondary Industries Commission was established in 1943 to investigate post-war uses for munitions factories, to plan for the transition of secondary industries from war-time to peace-time activities, and generally to seek to increase industrial efficiency and to explore opportunities for new industries. The Commission was disbanded in April, 1950.

The functions of the Division of Industrial Development (formed in February, 1945 as the Secondary Industries Division of the Department of Post-war Reconstruction) were extended in August, 1948 to include the encouragement of industrial development, the exercising of Commonwealth responsibilities for the decentralization of industry, the promotion of industrial efficiency (especially the study of technical, production, and managerial problems and the dissemination and application of new knowledge and methods), the encouragement of the development of technological institutes and the publication of studies of the structure and operation of Australian manufacturing industries. The Division was attached to the Ministry of National Development when formed in March, 1950 to plan the development of national resources and to promote decentralization and regional development in conjunction with the States.

**4. Customs and Excise Tariffs and Bounties on Manufactures.**—Particulars of Australian customs and excise tariffs, and the constitution and functions of the Australian Tariff Board in relation to matters affecting the industrial development of Australia, are given in Chapter VIII.—Trade of this volume.

Bounties are paid by the Commonwealth Government to encourage local manufacture of certain products. The Statutory provisions usually fix a term of operation of the bounty, provide for payment at a rate varying according to changes in the corresponding customs duty, specify the annual maximum amount of bounty payable, and require the bounty to be withheld or reduced if a manufacturer's net profit in production of the commodity exceeds a certain rate or if rates of wages and conditions of employment in production of the commodity do not conform to prescribed standards.

**5. Scientific Research and Standardization.**—(i) *The Commonwealth Scientific and Industrial Research Organization.* The function of this Organization, reference to which also appears in Ch. XXIX., is to initiate and conduct research in connexion with industries in Australia, to train research workers, to establish industrial research studentships and fellowships, to make grants in aid of pure scientific research, to establish industrial research associations in various industries, to provide for testing and standardization of scientific equipment, to conduct an information service relating to scientific and industrial matters, and to act for Australia in liaison with other countries in matters of scientific research.

(ii) *The Standards Association of Australia.* This Association, which is referred to also in Ch. XXIX., acts as the national standardizing organization of Australia and issues standard specifications for materials and codes of practice. Specifications and codes are prepared and revised periodically in accordance with the needs of industry, and standards are evolved and accepted by general consent.

(iii) *The National Association of Testing Authorities.* The National Association of Testing Authorities organizes national testing facilities throughout Australia to serve private and governmental needs. Laboratories may register voluntarily in respect of tests within their competence and the Association is to ensure the maintenance of their standards of testing. It is expected that there will be general acceptance of certificates of tests issued in the name of the Association by the registered laboratories.

6. **Definitions in Factory Statistics.**—The statistics relating to factories have been compiled from returns supplied annually by manufacturers to, and tabulated by, the several State Statisticians, in the terms of the Statistical Acts of the States. A return must be supplied in respect of every factory, which is defined for this purpose as an establishment where four or more persons are employed or where power (other than manual) is used in any manufacturing process. This definition includes factories in educational and charitable institutions, reformatories, and other public institutions (except penitentiaries) but does not cover smallgoods makers, laundries, farriers, photography studios, florists and seedsmen, and most abattoirs.

If a manufacturing business is conducted in conjunction with any other activity particulars relating to the manufacturing section only are included in the statistics. Where two or more industries are conducted in the same establishment, a separate return is obtained if practicable for each industry.

Manufacturers are requested to state in their returns particulars as to the number, age, wages, etc., of their employees, the value of premises and equipment, the horse-power of machinery, the value, and in most cases the quantities, of raw materials and fuel used, and quantities and values of principal materials and articles produced. The returns obtained from manufacturers are not intended to show a complete record of the income or expenditure of factories nor to show the profits or losses of factories collectively or individually.

The *average number of persons* employed is quoted on two different bases: the average during the period of operation and the average over the whole year. Of these the former is simply the aggregate of the average number of persons employed in each factory during its period of operation (whether the whole or only part of the year). This average is used only in respect of details relating to classification according to number of persons employed. The latter, which is used in all other instances, is calculated by reducing the average number working in the factories (irrespective of period of operation) to the equivalent number working for a full year.

*Working proprietors* are included in all employment figures other than those relating to monthly employment and age dissections, but salaries and wages paid in all cases exclude drawings by working proprietors.

The *value of factory output* is the value of the goods manufactured or their value after passing through the particular process of manufacture and includes the amount received for repair work, work done on commission and receipts for other factory work. The basis of valuation of the output is the selling value of the goods at the factory, exclusive of all delivery costs and charges and excise duties, but inclusive of bounty and subsidy payments to the manufacturer of the finished article.

The *value of production* is the value added to raw materials by the process of manufacture. It is calculated by deducting from the value of factory output the value (at the factory) of the materials used, containers and packing, power, fuel, and light used, tools replaced, and materials used in repairs to plant (but not depreciation charges).

In the process of manufacture, many goods are treated in several industries, the output of one becoming the raw materials of another, so that such commodities are counted more than once in the aggregate value of output and of raw materials. Examples are raw sugar passing from the mills to the refinery, metals from the smelters which become raw materials in establishments concerned in the production of metal goods, and timber from the sawmills used in furniture factories and in joinery. On the other hand, the aggregate value of production is assessed without duplication, the value added by each industry being taken into account once only. For this reason the value of production, and not the value of the output, is used as a measure of activity in the manufacturing industries as a whole.

In the special case of Government factories and workshops, the value of output is, in most cases, estimated by adding 10 per cent. to the value of materials and fuel used and other factory costs, including salaries and wages paid.

7. **Classification of Factories.**—In the compilation of statistical data relating to factories in Australia, a standard classification of manufacturing industries, formulated at a conference of Australian statisticians in 1902 and revised from time to time, was used until the year 1929-30. A new classification was introduced in 1930-31, and this in turn, was revised and extended (principally in regard to the placement and composition of sub-classes) in accordance with decisions of the Statistician's Conference, 1945.

Owing to limitations of space, details published in general tables in this chapter are confined either to the sixteen classes of industry or total factory activity. Particulars of certain of the sub-classes shown below are published in the latter portion of this chapter and full details for all sub-classes may be found in the *Secondary Industries Bulletin*, published annually.

The principal classes and sub-classes in the current classification of factories are as follows:—

### CLASSIFICATION OF FACTORIES.

#### CLASS I.—TREATMENT OF NON-METALLIFEROUS MINE AND QUARRY PRODUCTS.

Coke Works.  
Briquetting and Pulverized Coal.  
Carbide.  
Lime, Plaster of Paris, Asphalt.  
Fibrous Plaster and Products.  
Marble, Slate, etc.  
Cement.  
Asbestos Cement Sheets, etc.  
Other Cement Goods.  
Other.

#### CLASS II.—BRICKS, POTTERY, GLASS, ETC.

Bricks and Tiles, Fire Bricks and Fire-clay Goods.  
Earthenware, China, Porcelain, Terra-cotta.  
Glass (other than Bottles).  
Glass Bottles.  
Other.

#### CLASS III.—CHEMICALS, DYES, EXPLOSIVES, PAINTS, OILS, GREASE.

Industrial and Heavy Chemicals and Acids.  
Pharmaceutical and Toilet Preparations.  
Explosives.  
White Lead, Paints, Varnish.  
Oils, Vegetable.  
Oils, Mineral.  
Oils, Animal.  
Boiling Down, Tallow Refining.  
Soap and Candles.  
Chemical Fertilizers.  
Inks, Polishes, etc.  
Matches.  
Other.

#### CLASS IV.—INDUSTRIAL METALS, MACHINES, CONVEYANCES.

Smelting, Converting, Refining and Rolling of Iron and Steel.  
Foundries—Ferrous.  
Plant, Equipment and Machinery.  
Other Engineering.  
Extracting and Refining of other Metals, Alloys.  
Electrical Machinery, Cables and Apparatus.  
Construction and Repair of Vehicles (no groups).  
Ship and Boat Building and Repairing, Marine Engineering.  
Cutlery and Small Hand Tools.  
Agricultural Machines and Implements.  
Non-Ferrous Metals—  
Rolling and Extrusion.  
Foundries, Casting, etc.  
Iron and Steel Sheets.  
Sheet Metal Working, Pressing, and Stamping.  
Pipes, Tubes and Fittings—Ferrous.  
Wire and Wire Netting (including Nails).  
Stoves, Ovens and Ranges.  
Gas Fittings and Meters.  
Lead Mills.

#### CLASS IV.—INDUSTRIAL METALS, MACHINES, CONVEYANCES—continued.

Sewing Machines.  
Arms, Ammunition (excluding Explosives).  
Wireless and Amplifying Apparatus.  
Other Metal Works.

#### CLASS V.—PRECIOUS METALS, JEWELLERY, PLATE.

Jewellery.  
Watches and Clocks (including Repairs).  
Electroplating (Gold, Silver, Chromium).

#### CLASS VI.—TEXTILES AND TEXTILE GOODS (NOT DRESS).

Cotton Ginning.  
Cotton Spinning and Weaving.  
Wool—Carding, Spinning, Weaving.  
Hosiery and other Knitted Goods.  
Silk, Natural.  
Rayon, Nylon and other Synthetic Fibres.  
Flax Mills.  
Rope and Cordage.  
Canvas Goods, Tents, Tarpaulins, etc.  
Bags and Sacks.  
Other.

#### CLASS VII.—SKINS AND LEATHER (NOT CLOTHING OR FOOTWEAR).

Furriers and Fur Dressing.  
Woolscouring and Fellmongery.  
Tanning, Currying, and Leather Dressing.  
Saddlery, Harness, Whips.  
Machine Belting.  
Bags, Trunks, etc.

#### CLASS VIII.—CLOTHING (EXCEPT KNITTED).

Tailoring and Ready-made Clothing.  
Waterproof and Oilskin Clothing.  
Dress-making.  
Millinery.  
Shirts, Collars, Underclothing.  
Foundation Garments.  
Handkerchiefs, Ties, Scarves.  
Hats and Caps.  
Gloves.  
Boots and Shoes (not rubber).  
Boot and Shoe Repairing.  
Boot and Shoe Accessories.  
Umbrellas and Walking Sticks.  
Dyeworks and Cleaning.  
Other.

#### CLASS IX.—FOOD, DRINK AND TOBACCO.

Flour Milling.  
Cereal Foods and Starch.  
Animal and Bird Foods.  
Chaffcutting and Corn Crushing.  
Bakeries (including Cakes and Pastry).  
Biscuits.  
Sugar Mills.

CLASS IX.—FOOD, DRINK AND TOBACCO—  
*continued.*

Sugar Refining.  
Sugar Confectionery (including Chocolate).  
Jam, Fruit and Vegetable Canning.  
Pickles, Sauces, Vinegar.  
Bacon Curing.  
Butter Factories.  
Cheese Factories.  
Condensed and Dried Milk Factories.  
Margarine.  
Meat and Fish Preserving.  
Condiments, Coffee, Spices, etc.  
Ice and Refrigerating.  
Salt Refining.  
Aerated Waters, Cordials, etc.  
Breweries.  
Distilleries.  
Wine Making.  
Cider and Perry Making.  
Malting.  
Bottling.  
Tobacco, Cigars, Cigarettes, Snuff.  
Dehydrated Fruit and Vegetables.  
Ice-cream.  
Sausage Skins.  
Arrowroot.  
Other.

CLASS X.—SAWMILLS, JOINERY, BOXES, ETC.,  
WOOD TURNING AND CARVING.

Sawmills.  
Plywood and Veneer Mills.  
Bark Mills.  
Joinery.  
Cooperage.  
Boxes and Cases.  
Basketware and Wickerware (including Sea-grass and Bamboo Furniture).  
Perambulators.  
Wall and Ceiling Boards (not Plaster or Cement).  
Other.

CLASS XI.—FURNITURE OF WOOD, BEDDING, ETC.

Billiard Tables, Cabinet and Furniture Making and Upholstery.  
Bedding and Mattresses.  
Furnishing Drapery, etc.

CLASS XII.—FURNITURE OF WOOD, BEDDING,  
ETC.—*continued.*

Picture Frames.  
Blinds.  
Other.

CLASS XIII.—PAPER, STATIONERY, PRINTING,  
BOOKBINDING, ETC.

Newspapers and Periodicals.  
Printing—  
Government.  
General, including Bookbinding.  
Manufactured Stationery.  
Stereotyping and Electrotyping.  
Process and Photo Engraving.  
Cardboard Boxes, Cartons and Containers.  
Paper Bags.  
Paper Making.  
Pencils, Penholders, Chalks, Crayons.  
Other.

CLASS XIII.—RUBBER.

Rubber Goods and Tyres Made.  
Tyre Retreading and Repairing.

CLASS XIV.—MUSICAL INSTRUMENTS.

Gramophones and Gramophone Records.  
Pianos, Piano-Players, Organs.  
Other.

CLASS XV.—MISCELLANEOUS PRODUCTS.

Linoleum, Leather Cloth, Oil Cloth, etc.  
Bone, Horn, Ivory and Shell.  
Plastic Moulding and Products.  
Brooms and Brushes.  
Optical Instruments and Appliances.  
Surgical and other Scientific Instruments and Appliances.  
Photographic Materials, including Developing and Printing.  
Toys, Games and Sports Requisites.  
Artificial Flowers.  
Other.

CLASS XVI.—HEAT, LIGHT, AND POWER.

Electric Light and Power.  
Gas works.

8. Factory Development since 1901—Australia.—The development of the manufacturing industries in Australia at intervals since 1901 is summarized in the following table :—

FACTORIES : AUSTRALIA.

Year.	Fac-tories.	Employ-ment.(a)	Salaries and Wages Paid.(b)	Value of—				
				Materials and Fuel Used.	Output.	Pro-duction. (c)	Land and Build-ings.	Plant and Mach-inery.
	No.	'000.	£'000. (d)	£'000. (d)	£'000. (d)	£'000. (d)	£'000. (d)	£'000. (d)
1901 .. ..	11,143	198						
1911 .. ..	14,455	312	27,528	81,763	133,022	51,259	32,701	31,516
1920-21 .. ..	17,113	367	62,932	213,579	323,993	110,434	60,831	68,653
1930-41 .. ..	21,751	339	62,455	172,489	290,799	118,310	112,211	124,498
1938-39 .. ..	26,941	565	106,743	297,004	500,420	203,416	130,930	143,662
1945-46 .. ..	31,184	745	205,819	515,325	867,648	354,323	186,939	185,545
1946-47 .. ..	34,768	805	237,174	600,164	1,011,026	410,862	183,152	189,693
1947-48 .. ..	37,356	849	285,765	720,822	1,210,119	480,297	211,143	213,719
1948-49 .. ..	40,070	890	339,287	856,610	1,425,325	568,715	232,740	246,494
1949-50 .. ..	41,596	918	385,896	983,923	1,645,411	661,488	259,549	285,602
1950-51 .. ..	43,147	969	491,857	1,306,963	2,150,568	843,605	303,406	338,930

(a) 1901 and 1911—average employment during period of operation. Later years relate to average employment over whole year. Working proprietors included in all years. (b) Excludes drawings by working proprietors. (c) Value of output less value of materials and fuel, etc., used. (d) Not available.

Single year tables in this issue relate to the year 1950-51 and in the immediately preceding issue to the year 1949-50.

## § 2. Number of Factories.

1. Number of Factories in each State.—The following table shows the number of factories operating in each State in the years 1938-39, 1945-46 and 1947-48 to 1950-51 :—

### FACTORIES : NUMBER.

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	Aust.
1938-39 .. ..	9,464	9,250	3,087	2,067	2,129	944	26,941
1945-46 .. ..	12,287	10,195	2,945	2,395	2,280	1,082	31,184
1947-48 .. ..	15,194	11,642	3,642	2,865	2,788	1,225	37,356
1948-49 .. ..	16,087	12,702	4,083	2,927	2,925	1,346	40,070
1949-50 .. ..	16,346	13,231	4,494	3,046	3,023	1,456	41,596
1950-51 .. ..	17,129	13,504	4,776	3,141	3,111	1,486	43,147

2. Number of Factories in Industrial Classes.—(i) *Australia.* The next table shows the number of factories in Australia during 1938-39, 1945-46 and 1947-48 to 1950-51 classified in the industrial classes agreed upon by the Conference of Statisticians in 1930. This classification, which was introduced during 1930-31, superseded the grouping which had been in use since 1902. Details of some of the principal industries included in the table will be found in § 11 hereunder.

### FACTORIES : NUMBER IN INDUSTRIAL CLASSES, AUSTRALIA.

Class of Industry.	1938-39.	1945-46.	1947-48.	1948-49.	1949-50.	1950-51.
I. Treatment of Non-metalliferous Mine and Quarry Products .. ..	564	591	933	1,025	1,126	1,235
II. Bricks, Pottery, Glass, etc. .. ..	471	410	517	544	561	583
III. Chemicals, Dyes, Explosives, Paints, Oils and Grease .. ..	666	886	975	1,010	1,006	1,020
IV. Industrial Metals, Machines, Conveyances .. ..	7,255	8,816	10,910	11,801	12,362	13,106
V. Precious Metals, Jewellery and Plate .. ..	290	337	555	623	619	629
VI. Textiles and Textile Goods (not Dress) .. ..	611	383	982	1,065	1,155	1,190
VII. Skins and Leather (not Clothing or Footwear) .. ..	533	651	727	746	751	761
VIII. Clothing (except Knitted) .. ..	4,314	5,215	6,069	6,533	6,620	6,684
IX. Food, Drink and Tobacco .. ..	5,202	5,865	6,475	6,659	6,796	6,865
X. Sawmills, Joinery, Boxes, etc., Wood Turning and Carving .. ..	2,822	3,148	4,001	4,530	4,893	5,165
XI. Furniture of Wood, Bedding, etc. .. ..	1,149	1,140	1,568	1,726	1,820	1,936
XII. Paper, Stationery, Printing, Book-binding, etc. .. ..	1,816	1,703	1,852	1,942	1,981	2,010
XIII. Rubber .. ..	299	308	371	391	404	411
XIV. Musical Instruments .. ..	34	41	56	64	59	66
XV. Miscellaneous Products .. ..	413	714	899	947	985	1,032
Total, Classes I. to XV. .. ..	26,439	30,708	36,890	39,606	41,138	42,693
XVI. Heat, Light and Power .. ..	502	476	466	464	458	454
Grand Total .. ..	26,941	31,184	37,356	40,070	41,596	43,147

Although not the best index of manufacturing activity, the number of factories affords some indication of the development of secondary industries. Except for the two war years 1941-42 and 1942-43, when there were decreases, the number of factories increased each year from 1931-32 to 1950-51; in the latter year the number of factories in Australia reached the record total of 43,147 or 60.2 per cent. greater than in 1938-39.

(ii) *States, 1950-51.* The following table shows the number of factories in each State classified according to the nature of the industry :—

**FACTORIES : NUMBER IN INDUSTRIAL CLASSES, 1950-51.**

Class of Industry.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Aust.
I. Treatment of Non-metalliferous Mine and Quarry Products ..	438	399	90	140	111	57	1,235
II. Bricks, Pottery, Glass, etc. ..	277	138	49	59	43	17	583
III. Chemicals, Dyes, Explosives, Paints, Oils and Grease ..	513	303	63	69	49	23	1,020
IV. Industrial Metals, Machines, Conveyances ..	5,297	3,966	1,459	1,013	994	377	13,106
V. Precious Metals, Jewellery and Plate ..	265	218	38	52	50	6	629
VI. Textiles and Textile Goods (not Dress) ..	435	630	32	46	35	12	1,190
VII. Skins and Leather (not Clothing or Footwear) ..	346	272	53	44	36	10	761
VIII. Clothing (except Knitted) ..	2,965	2,360	469	397	427	66	6,684
IX. Food, Drink and Tobacco ..	2,376	1,961	1,028	648	552	300	6,865
X. Sawmills, Joinery, Boxes, etc., Wood Turning and Carving ..	1,942	1,268	874	272	338	471	5,165
XI. Furniture of Wood, Bedding, etc. ..	643	624	273	150	158	88	1,936
XII. Paper, Stationery, Printing, Book-binding, etc. ..	833	725	179	122	123	28	2,010
XIII. Rubber ..	152	122	57	41	23	16	411
XIV. Musical Instruments ..	30	20	4	7	5	..	66
XV. Miscellaneous Products ..	488	393	47	44	50	10	1,032
Total Classes I. to XV. ..	17,000	13,399	4,715	3,104	2,994	1,481	42,693
XVI. Heat, Light and Power ..	129	105	61	37	117	5	454
Grand Total ..	17,129	13,504	4,776	3,141	3,111	1,486	43,147

**§ 3. Classification of Factories according to Number of Persons Employed.**

1. *General.*—The size classification of factories is based on the average weekly number of persons employed during the period of operation (including working proprietors). Prior to 1945-46 there was no dissection of the "over 100 employees" group, but for that and subsequent years this group was subdivided into the seven size groups as shown in the table below.

2. *States, 1950-51.*—The following table shows, for each State, the number of factories classified according to the average number of persons employed :—

**FACTORIES : CLASSIFICATION ACCORDING TO SIZE OF FACTORY, 1950-51.**

Size of Factory (Persons employed).	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	Aust.
<b>NUMBER OF FACTORIES.</b>							
Under 4 ..	5,129	4,087	1,469	852	1,251	605	13,393

### § 4. Power Equipment in Factories.

1. **General.**—In 1936-37 statistics of power equipment in factories were collected on a basis different from that previously in use. Information now obtained relates to the "rated horse-power" of engines ordinarily in use and of engines in reserve or idle, omitting obsolete engines. In addition, particulars of the power equipment of Central Electric Stations are collected in greater detail. To avoid duplication it is essential that some distinction should be made between Central Electric Stations and other classes of industries. In the following tables Central Electric Stations have been treated separately from other factories.

In par. 2 below, 883 factories are shown in 1950-51 as using no power other than hand-power, the distribution of these factories among the various industries being as follows: Lime, Plaster and Asphalt, 10; Industrial and Heavy Chemicals and Acids and Pharmaceutical and Toilet Preparations, 11; Galvanized Ironworking, Tinsmithing, 39; Tailoring and Ready-made Clothing, 246; Dressmaking, 59; Millinery, 20; Bakeries, 89; Cabinet and Furniture Making, 25; all other industries, 384.

2. **Rated Horse-power of Engines in Factories other than Central Electric Stations.**—The following table shows the number of factories using power-driven machinery, those using manual labour only, and the total rated horse-power of engines and electric motors ordinarily in use and in reserve or idle during 1950-51:—

#### FACTORIES(a): TOTAL RATED HORSE-POWER OF ENGINES AND ELECTRIC MOTORS, 1950-51.

State.	Number of Establishments.(a)			Rated Horse-power of Engines and Motors.	
	Using Power.	Others.	Total.	Ordinarily in use.	In Reserve or Idle (omitting obsolete)
New South Wales ..	16,980	59	17,039	1,451,191	186,003

## § 5. Employment in Factories.

1. *Number Employed.*—(i) *General.* All persons employed in the manufacturing activities of a factory, including proprietors who work in their own business and “outworkers” (see par. 4 (ii) hereinafter), are counted as factory employees, while those employed in selling and distributing, such as salesmen, travellers, collectors, carters employed solely on outward delivery of manufactured goods and retailing storemen are excluded. Prior to 1945–46 the occupational grouping collected was (i) working proprietors; (ii) managers and overseers; (iii) accountants and clerks; (iv) enginedrivers and firemen; (v) workers in factory, skilled and unskilled; (vi) carters and messengers; and (vii) persons working regularly at home for the establishment. This grouping did not record separate details for technical staff (e.g., chemists, draftsmen, etc.) and supervisory staff and in 1945–46 the set-up on the collection form was amended to obtain the following groupings :—(i) Working proprietors; (ii) managerial and clerical staff including salaried managers and working directors; (iii) chemists, draftsmen and other laboratory and research staff; (iv) foremen and overseers; (v) skilled and unskilled workers; (vi) carters (excluding delivery only), messengers and persons working regularly at home.

Prior to the year 1928-29 average employment in factories was computed by dividing the sum of the number employed each week by the number of weeks worked. The figures therefore, represented the average number employed over the period worked, which, for many factories, was less than a full year. Commencing with the year 1928-29 the figures represent the equivalent average number employed over a full year of fifty-two weeks. The classification of factories according to the number of persons employed (*see* § 3 *ante*), however, is still based on the old method, but for all other purposes the average number engaged over the full year is used.

(ii) *Australia.* Particulars of the numbers employed, the increase in employment and the rate per cent. of such increase are given for years 1938-39, 1945-46 and 1947-48 to 1950-51 in the following table:—

**FACTORIES : EMPLOYMENT, AUSTRALIA.**

Year.	Males.			Females.			Persons.		
	Number Em- ployed.	Increase on Preceding Year.		Number Em- ployed.	Increase on Preceding Year.		Number Em- ployed.	Increase on Preceding Year.	
		Number.	Per Cent.		Number.	Per Cent.		Number.	Per Cent.

4. *Persons Employed According to Occupational Status.*—(i) *General.* In the following table the average number of persons employed in each State during 1950-51 are classified according to their occupational status. As mentioned previously, persons employed in factories are now classified on a basis different from that adopted prior to 1945-46. The nature of this change is indicated in § 5, par. 1.

**FACTORIES : PERSONS EMPLOYED—OCCUPATIONAL STATUS, 1950-51.**

State.	Average Number of Persons Employed.						Total.
	Working Proprietors.	Managerial and Clerical Staff, etc.(a)	Chemists, Draftsmen, etc.	Foremen and Overseers.	Workers in Factory (Skilled and Unskilled).	Carters (excluding Delivery only) and Messengers, etc. (b)	
New South Wales ..	13,503	42,258	5,001	16,258	327,454	2,491	406,965
Victoria ..	11,526	31,089	3,745	13,343	254,555	2,534	316,792
Queensland ..	4,169	8,308	764	3,133	77,386	819	94,579
South Australia ..	2,217	8,814	1,034	3,346	67,397	361	83,169
Western Australia	2,302	3,175	285	1,606	36,254	139	43,761
Tasmania ..	980	2,238	292	974	19,223	120	23,827
Australia ..	34,697	95,882	11,121	38,660	782,269	6,464	969,093

(a) Includes salaried managers and working directors.  
at home.

(b) Includes persons working regularly

(ii) *Outworkers.* The term "outworker" or "homeworker" has acquired a special meaning in connexion with manufacturing industries, and embraces only persons to whom work is given out by factories to be done at home. Owing to the amended employment groupings adopted in 1945-46 (see § 5. 1.) persons working regularly at home for factories are now included with carters, messengers and others and separate details are no longer available. The number of "outworkers" employed by factories in 1944-45 was 1,049.

5. *Monthly Employment, 1938-39, 1945-46 and 1948-49 to 1950-51.*—The following table shows the number of persons (excluding working proprietors) employed in factories on the pay-day nearest to the 15th of each month for years up to 1949-50 and on the last pay-day of the month thereafter.

**FACTORIES : MONTHLY EMPLOYMENT, AUSTRALIA.**  
(EXCLUDING WORKING PROPRIETORS.)

6. **Distribution of Employees According to Age.**—(i) *States.* The extension of statistics of employment in factories, decided upon at the Conference of Australian Statisticians held in 1945, permits of a distribution of employees (excluding working proprietors) into seven age-groups from 1945-46 onwards, instead of three as in previous years. The particulars are collected as at June. The numbers employed in each age-group in June, 1951, are given below :—

**FACTORIES : DISTRIBUTION OF EMPLOYEES ACCORDING TO AGE, JUNE, 1951.**

**§ 6. Sex Distribution in Factories.**

1. *Distribution According to Sex of Persons Employed.*—(i) *General.* In New South Wales the ratio of the number of females engaged in factories to the number of males during 1886 was about one to seven; in 1891 one to six; in 1903 it became about one to four; and in 1950-51 was one to three. In Victoria the ratio of females to males during the year 1886 was about one to five. Five years later (1891) it was somewhat less, but in 1896 had increased to about one to three, and in 1950-51 was about two to five. For Australia as a whole the ratio of females employed in factories was highest in 1943-44 at about two females to five males but by 1946-47 the ratio had declined to the level of one female to three males, where it has since remained.

(ii) *Average Number of Males and Females Employed.* The following table shows the average number of males and females employed in factories in each State for 1938-39, 1945-46 and 1947-48 to 1950-51 :—

**FACTORIES : MALES AND FEMALES EMPLOYED.**

NOTE.—The minus sign (—) indicates decrease.

3. **Masculinity of Persons Employed in Factories.**—The extent to which females are employed in the factories of Australia may perhaps be more clearly shown by giving the masculinity of persons employed in each State. The following table shows particulars for the years 1938-39, 1945-46 and 1947-48 to 1950-51 :—

**FACTORIES : MASCULINITY<sup>(a)</sup> OF PERSONS EMPLOYED.**

Year.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Aust.

(a) Number of males per 100 females.

For a number of years prior to 1926-27 there were on the average 300 males employed in factories for every 100 females, but by 1932-33, as a result of the particularly severe effect of the depression on the heavier industries where males predominate in number, there were only 239 males employed to every 100 females. With the subsequent recovery of employment in the heavier industries the proportion of males per 100 females increased to 271 in 1937-38 and 1938-39. The enlistment of men in the armed services and the expansion of industry and the consequential absorption of women brought about by the 1939-45 War caused a decrease in masculinity from 1938-39 to 1943-44. However, following the cessation of hostilities in 1945 and the return of servicemen to civilian life, the number of females employed in factories declined and masculinity increased, and in 1950-51 there were 299 males to every 100 females employed in factories.

4. **Employment of Females in Particular Industries.**—(i) *General.* The greater number of females in manufacturing industries are employed in four classes, namely :— IV., Industrial Metals, Machines, etc.; VI., Textiles; VIII., Clothing; and IX., Food, Drink and Tobacco. In 1950-51 these industries accounted for 80.44 per cent. of all females in factories. In two classes only did the number of females exceed the number of males, namely, in Class VI., Textiles, where there were 125 females to every 100 males and in Class VIII., Clothing, with 251 females per 100 males. The following tables show the average number of males and females employed in each of these classes in 1950-51 :—

**MALES AND FEMALES EMPLOYED IN PARTICULAR INDUSTRIES, 1950-51.**

(a) Number of females per 100 males.

### § 7. Child Labour in Factories.

1. *Conditions of Child Labour.*—The employment of young persons in factories in the States is regulated by Acts of Parliament, as is the case with the employment of female labour. The object of the restrictions imposed is to ensure, amongst other things, that a proper period shall be devoted to primary education, and that the early years of labour shall not exhaust the worker before the attainment of full growth.

2. *Number of Children Employed, 1939, 1946 and 1948 to 1951.*—In the returns for the various States, the term "child" denotes any person under sixteen years of age. The decline in the number of children employed from the peak of 33,553 reached in June, 1940 to 14,455 in June, 1951, which is most marked in all States excepting Western Australia, was probably caused by several factors, including (i) the raising of the school leaving age in New South Wales and Tasmania, (ii) fewer children available for employment owing to the decline in the birth rate which occurred about 1929, and (iii) the high level of employment which enabled parents to keep their children at school beyond the statutory leaving age.

The following table shows the number of children of each sex employed in manufacturing industries in June of the years mentioned.

(a) Excludes working proprietors.

5. Apprenticeship.—In all the States, acts are in force for the regulation of the age at which children may be employed in gainful occupations. Legislative provision is also made for the regulation of apprenticeship under the various State Factories Acts or Arbitration Acts. These acts, while laying down general principles, leave to the wages tribunals the actual determination of the conditions under which apprentices may be employed.

### § 8. Salaries and Wages Paid and Value of Production.

Note.—In all tables relating to salaries and wages paid in factories the amounts drawn by working proprietors are excluded.

1. **General.**—The importance of the manufacturing industries of Australia is indicated by the fact that the total value of the output for 1950–51 was £2,151,000,000, of which amount £1,235,000,000 represented the value of the materials used, including containers, etc., tools replaced and repairs to plant and buildings, and £72,000,000 the value of the power, fuel and light used. The difference between the sum of the last two amounts and the value of the output, namely £344,000,000, represents the value of production as defined by the Conference of Statisticians at Sydney in 1925, i.e. “the value of consumable commodities produced during the year, deducting, so far as possible, the value of goods consumed in process of production.” The total amount of salaries and wages paid in factories in 1950–51 was £492,000,000. This figure, which excludes amounts drawn by working proprietors, was the highest ever recorded and shows an increase of £106,000,000 or 27.5 per cent. on that for the previous year.

2. **Salaries and Wages Paid.**—(i) *In Classes of Industry, 1950–51.* The amounts of salaries and wages paid in the various classes of industry in each State are shown in the following table:—

FACTORIES : SALARIES AND WAGES PAID, 1950-51.

(ii) *Totals and Averages, 1938–39, 1945–46 and 1947–48 to 1950–51.* The following statement shows the total amount of salaries and wages paid, and the average amount paid per employee in each State, for each of the years indicated. The figures exclude working proprietors and the amounts drawn by them

## FACTORIES : TOTAL AND AVERAGE SALARIES AND WAGES PAID.

Year.	Particulars.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Aust.
1938-39	Total amount paid £'000	44,606	36,027	10,887	8,169	4,574	2,480	106,743
	Average per employee £	201.77	185.64	210.78	195.57	207.90	188.31	196.31
1945-46	Total amount paid £'000	87,647	70,499	18,012	16,770	7,884	5,007	205,819
	Average per employee £	290.75	284.09	285.00	272.71	273.01	269.85	285.17
1947-48	Total amount paid £'000	125,346	93,802	24,163	24,853	10,736	6,865	285,765
	Average per employee £	357.03	349.36	327.72	348.42	316.26	337.45	348.95
1948-49	Total amount paid £'000	146,536	112,410	29,447	29,510	12,928	8,456	339,287
	Average per employee £	401.06	399.86	371.11	399.22	357.18	389.57	395.60
1949-50	Total amount paid £'000	162,147	130,255	34,748	33,807	15,293	9,646	385,896
	Average per employee £	439.04	446.05	408.67	442.05	397.13	428.30	436.59
1950-51	Total amount paid £'000	211,339	163,207	42,837	43,079	19,658	11,737	491,857
	Average per employee £	537.13	534.64	473.80	532.15	474.15	513.74	526.39

In comparing the figures in the preceding table, regard should be paid to the nature of certain industries which are carried on to a greater extent in some States than in others. In Victoria, for instance, there is a large number of hands employed in Class VIII., Clothing, comprising a relatively high percentage of women and children. The highest average wages per employee in 1950-51 were paid in New South Wales, Victoria and South Australia, in that order.

The average earnings per employee rose annually from 1938-39 to 1943-44 when a record high level of £291 was attained as a result of war-time conditions. In 1944-45 the average dropped to £285 and remained at this level in 1945-46. From 1945-46 average earnings rose each year and in 1950-51 reached a new record level of over £526.

(iii) *Earnings of Males and Females, 1950-51.* The following table shows the amount of salaries and wages paid to males and females in each class of industry in each State :—

3. Power, Fuel and Light Used.—(i) *In Classes of Industry, 1950-51.* The expenditure by factories on power, fuel and light, including the value of lubricants and water, is of considerable importance; in 1950-51 it amounted to a new high level of £71,682,000, an increase of £16,852,000 as compared with the previous year and approximately four and one half times the corresponding value in 1938-39. The following table shows the value of power, fuel and light, etc., used in the different classes of industry:—

FACTORIES : VALUE OF POWER, FUEL AND LIGHT USED(a), 1950-51.

1949-50 .. ..	25,536	13,695	5,119	5,942	3,184	1,354	54,830
1950-51 .. ..	35,381	17,371	6,295	7,267	3,759	1,609	71,682

(a) Includes value of lubricants and water.

4. *Value of Materials Used.—(i) In Classes of Industry, 1950-51.* The value of materials used (which includes the value of containers, packing, etc., the cost of tools replaced and repairs to plant) in factories in Australia in 1950-51 reached £1,235,281,000, representing 57.4 per cent. of the value of the final output (see par. 5). The following table shows the value of the materials used in various classes of industry in each State:—

**FACTORIES : VALUE OF MATERIALS USED, 1950-51.**  
(£'000.)

Class of Industry.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	Aust.

5. *Value of Output.*—(i) *In Classes of Industry, 1950-51.* The value of the output of factories in the various classes in each State in 1950-51 is shown in the following table. It represents the selling value at the factory of goods made or processed during the year, including by-products. In addition, it includes the amount received for other work done such as repair work, assembling and making up for customers. The difference between the sum of the values of the materials and of the power, fuel and light used, and the value of output is the real value of factory production (*see par. 6*).

**FACTORIES : VALUE OF OUTPUT, 1950-51.**

6. Value of Production.—(i) *In Classes of Industry, 1950-51.* The value of production for any industry was defined at the Conference of Statisticians at Sydney in 1925 as "the value of consumable commodities produced during the year, deducting, so far as possible, the value of goods consumed in process of production".

In accordance with this definition, it was agreed that a deduction consisting of the costs of raw material, containers, power, fuel, light, lubricants, water, tools replaced, repairs to plant and depreciation should be made from the "value of output". All these deductions with the exception of depreciation are included in the items "value of materials used" and "value of fuel used" as defined above. On account of the difficulty experienced in securing accurate figures for depreciation, it was agreed that no deduction should be made on this account for the present. The value of production as given in the following tables is obtained, therefore, by deducting "value of materials used" and "value of fuel used" from the "value of the output".

The figure thus calculated is, however, not the net value of production. The deduction for depreciation, particulars of which are shown in § 9, par. 4, was estimated at £37,014,000 for 1950-51. Many miscellaneous expenses, such as taxation, insurance, advertising and other sundry charges have not been taken into account. Therefore, it must not be inferred that when wages and salaries are deducted from the value of production the whole of the "surplus" is available for interest and profit.

The value of factory production therefore approximates "net value added" in the manufacturing process. It amounted in 1950-51 to £843.6 million to which Class IV., Industrial Metals, etc., with £327 million or more than five times the value of production of this class in 1938-39, made the greatest contribution. This total value of production in 1950-51 represented an increase of £182.1 million over the figure for 1949-50 and £640 million (315 per cent.) over the value of production recorded in 1938-39.

The following table shows the value of production in 1950-51 in each State for the various classes of industry:—

FACTORIES : VALUE OF PRODUCTION, 1950-51.  
(£'000.)

(ii) *Total and Averages, 1938-39, 1945-46 and 1947-48 to 1950-51.* The value of production and the amount per person employed and per head of population are shown in the following table. For Australia as a whole the value of production per head of population increased from £29.41 per head in 1938-39 to £101.5 per head in 1950-51. For value per person employed, the increase was not quite so pronounced (from £360 per head in 1938-39 to £871 in 1950-51) owing to the considerable increase in the numbers of persons employed in 1950-51 as compared with 1938-39.

7. *Value of Output and Cost of Production.*—As the total value of the output for Australia for 1950-51 was estimated at £2,150,568,000, there remained, after payment of £1,235,281,000 for the value of the materials used, £491,857,000 for salaries and wages, and £71,682,000 for power, fuel and light, a balance of £351,748,000 to provide for all other costs and overhead expenses such as rent, interest, insurance, pay-roll tax, income tax, depreciation, etc., as well as drawings by working proprietors and profit. The following table gives corresponding particulars for each State expressed absolutely and as percentages of the total value of the output for the year 1950-51 :—

**FACTORIES : VALUE OF OUTPUT AND COST OF PRODUCTION, 1950-51.**

State.	Materials Used. (a)	Power, Fuel and Light. (b)	Salaries and Wages.	Balance (Output less Materials, Fuel and Wages.)(c)	Total Value of Output.
VALUE AND COST, ETC. (£'000.)					
New South Wales .. ..	522,422	35,381	211,339	154,770	923,912
Victoria .. ..	382,002	17,371	163,207	112,453	675,033
Queensland .. ..	134,457	6,295	42,837	32,623	216,212

(a) Includes the value of containers, packing, etc., also the cost of tools replaced and repairs to plant.  
(b) Includes lubricants and water. (c) See paragraph preceding this table.

**§ 9. Value of Land, Buildings, Plant and Machinery.**

1. **General.**—The following statement shows the value of land and buildings and of plant and machinery used in connexion with manufacturing industries during the year 1950-51:—

FACTORIES: VALUE OF LAND, BUILDINGS, PLANT AND MACHINERY(a), 1950-51.  
(£'000.)

Value of—	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	Australia.
Land and buildings	130,468	101,326	23,958	23,303	13,380	10,971	303,406
Plant and machinery	136,492	107,261	34,235	26,759	14,713	19,470	338,930
Total ..	266,960	208,587	58,193	50,062	28,093	30,441	642,336

(a) Includes estimated value of rented premises and plant.

The values recorded in this section are generally the values apportioned in the books of the individual firms after allowance has been made for depreciation, but they include estimates of the capital value of premises and plant rented. The totals shown in the table consequently do not represent the actual amount of capital invested in the items specified.

2. **Value of Land and Buildings.**—(i) *Total for Australia.* The following table shows for Australia as a whole the approximate value of land and buildings occupied in connexion with manufacturing industries for 1938-39, 1945-46 and 1947-48 to 1950-51.

**FACTORIES : VALUE OF LAND AND BUILDINGS(a), AUSTRALIA.**  
(£'000.)

Class of Industry.	1938-39.	1945-46.	1947-48.	1948-49.	1949-50.	1950-51.
I. Treatment of Non-metalliferous Mine and Quarry Products ..	2,779	3,020	3,860	4,331	4,851	6,281

Total, Classes I. to XV. . .	121,252	98,006	22,357	20,701	12,359	9,729	284,404
XVI. Heat, Light and Power ..	9,216	3,320	1,601	2,602	1,021	1,242	19,002
Grand Total ..	130,468	101,326	23,958	23,303	13,380	10,971	303,406

(a) Includes estimated value of rented premises.

(iii) *Totals in each State.* The following table shows the value of land and buildings in each State for the years 1938-39, 1945-46 and 1947-48 to 1950-51 :—

**FACTORIES : VALUE OF LAND AND BUILDINGS.(a)**  
(£'000.)

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	Australia.
1938-39..	57,353	42,026	12,299	8,711	6,814	3,717	130,920
1945-46..	80,308	60,265	14,331	18,447	8,283	5,305	186,939
1947-48..	91,860	66,229	16,609	20,691	9,483	6,271	211,143
1948-49..	101,241	73,384	18,508	22,218	10,054	7,335	232,740
1949-50..	110,597	84,124	20,806	24,317	11,055	8,650	259,549
1950-51..	130,468	101,326	23,958	23,303	13,380	10,971	303,406

(a) Includes estimated value of rented premises.

Prior to 1929-30 the increase in the value of land and buildings was uninterrupted, rising from £23 million in 1903 to £118 million in 1929-30, a growth of £95 million in 27 years. During the three years ended 1932-33, there was a decline of £12 million to £105.8 million, but since that year the value has risen annually and stood at £303.4 million in 1950-51.

3. *Value of Plant and Machinery.*—(i) *Total for Australia, 1938-39, 1945-46 and 1947-48 to 1950-51.* The following table shows for Australia the approximate value of plant and machinery used in factories.

**FACTORIES : VALUE OF PLANT AND MACHINERY(a), AUSTRALIA.**  
(£'000.)

Class of Industry.	1938-39.	1945-46.	1947-48.	1948-49.	1949-50.	1950-51.

XII. Paper, Stationery, Printing, Bookbinding, etc. ..	9,188	8,556	11,517	15,027	19,193	27,616
XIII. Rubber ..	1,368	1,219	1,855	2,244	2,754	3,456
XIV. Musical Instruments ..	12	23	80	134	154	227
XV. Miscellaneous Products ..	758	1,856	2,356	2,806	3,275	4,008
Total, Classes I. to XV. ..	108,412	143,939	168,896	196,504	228,493	273,103
XVI. Heat, Light and Power ..	35,250	41,606	44,823	49,990	57,109	65,827
Grand Total ..	143,662	185,545	213,719	246,494	285,602	338,930

(a) Includes estimated value of rented plant and machinery.

Except for the years 1930-31 to 1933-34, when decreases were recorded, there has been a continuous increase in the value of plant and machinery in Australia. The increase in 1950-51 of £53.3 million over 1949-50 extended over all industrial classes. The greatest increase occurred in Class IV., Industrial Metals, Machines, Implements and Conveyances.

(ii) *Totals in each State.* The following table shows the value of plant and machinery in each State during the years 1938-39, 1945-46 and 1947-48 to 1950-51. During 1950-51 increases occurred in all States, New South Wales showing the largest increase, £22.6 million.

(a) Includes estimated value of rented premises, plant and machinery.

## § 10. Principal Factory Products.

The monthly factory production of certain commodities is shown in the monthly and quarterly publications of this Bureau and in the *Secondary Industries Bulletin*.

The following table shows the total recorded production of some of the principal articles manufactured in Australia during the years ended 30th June, 1949 to 1951. A more complete list, together with values, where available, is published in the *Secondary Industries Bulletin*.

(a) Excludes Wheatmeal for Baking Included with Flour.

## § 11. Individual Industries.

1. General.—Particulars in pages 968-97, §§ 2-9 afford a general view of the magnitude of industries in the sixteen groups adopted by the Conference of Statisticians in 1930. While it is not possible, within the limits of this work, to give a detailed account of each industry, particular industries dealt with hereunder are of special importance because of the employment which they provide for labour and capital or for other features of special interest. Where there are only one or two establishments in a particular industry in the State or the Commonwealth, details of activities are not published, but are combined with some other factory group so that operations of individual concerns will not be disclosed.

The statistics in the following tables should be read in the light of the following definitions.

*Factory.* A factory is taken to be a manufacturing establishment in which four or more persons are employed or in which power other than hand is used.

*Average Number of Persons Employed.* All persons employed in the manufacturing activities of a factory are counted as factory employees, including working proprietors and "out-workers". The average number of persons employed, means in general the average number over the whole year and not the average over the period worked.

*Value of Materials Used.* This item includes the value, in the usual sense, of the materials used, stores used, containers, tools replaced, and materials used in repairs to plant.

*Value of Fuel, etc., Used.* This item includes also the cost of power and light used, of lubricants and of water.

*Value of Output.* The amounts given under this heading represent the selling value at the factory of goods made or processed during the year, including by-products, also the value of other work done.

*Value of Production.* The value of production is obtained by deducting "Value of materials used" and "Value of fuel used", as defined above, from the "Value of output". This method of valuing factory production has been adopted by the Statistical offices throughout Australia.

*Rated Horse-power of Engines Used.* Statistics of power used in factories other than Central Electric Stations relate to the "rated horse-power" of engines ordinarily in use.

For more detailed definitions see § 1, par. 6 of this Chapter, page 965.

Details of some of the principal articles produced in factories in Australia during the years 1948-49 to 1950-51 are shown in the table in the preceding pages (§ 10).

2. **Portland Cement and Cement Goods.**—The manufacture of portland cement and cement goods is an important industry included in Class I. Particulars for the three industries under this general heading are shown for 1950-51 and for a selected number of years in the following table.

**PORTLAND CEMENT, ASBESTOS CEMENT SHEETS, ETC., AND OTHER CEMENT GOODS.**

AUSTRALIA, 1950-51.

3. **Chemicals, Drugs and Medicines.**—In 1945-46 the classification of factories was amended to provide for the separate tabulation of factories engaged in the production of Industrial and Heavy Chemicals and Acids and those engaged in producing Pharmaceutical and Toilet Preparations, which previously had been combined. Details for each of these industries are given in the next two tables for 1950-51 with comparisons with previous years. However, it should be noted that in order to avoid the publication of confidential information, particulars relating to Industrial and Heavy Chemicals include details for the Explosives industry.

7. **Iron and Steel Works and Engineering.**—(i) *General.* In 1945-46 the classification of factories was amended to provide for the tabulation in four separate groups of those industries previously included under Iron and Steel and Engineering. The first group (Smelting, Converting, Refining and Rolling of Iron and Steel) covers blast furnaces, steel works and rolling mills. The second group, Foundries (Ferrous), covers those engaged in the founding of iron and steel. The third group (Plant, Equipment and Machinery including Machine Tools) covers those industries engaged in the production

of boilers, engines, machines and machinery, machine tools, structural steel fabrications, steel furniture, etc. The fourth group (Other Engineering) includes jobbing and general engineers, not elsewhere included.

(ii) *Smelting, Converting, Refining and Rolling of Iron and Steel.* In the following table particulars are shown for 1950-51 for each State and for Australia in selected years for the group Smelting, Converting, Refining and Rolling of Iron and Steel.

### SMEETING, CONVERTING, REFINING AND ROLLING OF IRON AND STEEL.

(a) Government and Local Authority only.

A railway workshop in the Northern Territory is chiefly engaged in making repairs to rolling stock, etc., no new goods being manufactured. Particulars of this establishment are not included in any of the tables in this chapter.

11. **Motor Vehicles.**—The industries catering for the motor trade are included in Class IV., Industrial Metals, Machines and Conveyances. In the table below a summary is given of the principal statistics for 1950-51 for each branch of industry associated with the motor trade of Australia.

(a) Excludes sidecars.

12. Agricultural Machines and Implements.—Owing to the extensive agricultural activities conducted in Australia and the demand for modern mechanized farm equipment, the manufacture of agricultural implements constitutes an important branch of Australian industry. The articles manufactured include a wide range of implements for tillage, seeding, and planting and the harvesting of crops. Other farm machinery made includes windmills, chaff-cutters and machinery used in the dairying industry.

The following table shows details of agricultural implement works in each State for 1950-51 and for Australia for a series of years :—

13. **Wireless and Amplifying Apparatus.**—The introduction of wireless broadcasting in 1923 gave rise to a new industry in Australia. Early statistical details of the industry are not available as they were grouped together with other electrical apparatus. In 1930-31 a new classification of factories was adopted and "Wireless Apparatus" was shown as a separate industry. The industry is confined mainly to New South Wales and Victoria, but is becoming increasingly important in South Australia. The number of broadcast listeners' licences increased from a third of a million in 1930-31 to about two millions at December, 1952, and this increase reflects the advancement of the industry during that period. During the war years considerable expansion took place in the industry to meet the requirements of the fighting services and apart from a slight drop in output in 1945-46, this expansion has continued.

14. **Cotton.**—(i) *General.* Cotton has been grown in Australia since 1860, but never on a very large scale. The average annual quantity of unginned cotton produced during the five years ended 1938-39 was 18 million lb. and slightly under 1½ million lb. in the five years ended 1950-51. Arising out of the development in the local manufacture of cotton materials and the further expansion following the outbreak of war in 1939, plans were completed for an extension of the area devoted to the cultivation of this crop, but the downward trend which commenced with the war in the Pacific has persisted. The growing of cotton, which is restricted to Queensland, is referred to in some detail in Chapter XX.—Agricultural Production.

(ii) *Ginning.* The ginning and marketing of cotton is controlled by the Queensland Cotton Board. The Board operates ginneries and processes by-products. The production of raw cotton is insufficient for local factory requirements and is supplemented by imports from overseas, chiefly (1950-51) from India, Pakistan, Brazil, Egypt and the United States of America.

(iii) *Spinning and Weaving.* The recent expansion in the spinning and weaving section of the cotton industry marks an important event in its development. New factories have been established and Australia is now producing an extensive range of cotton goods, including duck and canvas from cotton or flax, denims, drill, etc., tyre

cord and tyre cord fabric. The number of establishments engaged in cotton spinning and weaving in Australia and other particulars of the industry are shown in the following table for the years 1938-39, 1945-46 and 1947-48 to 1950-51.

15. Wool Carding, Spinning and Weaving.—The importance of this industry is emphasised by the fact that Australia is the world's chief source of wool and the development of the woollen industry since its establishment at an early period in Australian history is of singular interest. The production consists chiefly of woollen cloth and tweed worsted cloth, rugs, blankets and yarn, all of which have acquired a reputation for purity and durability.

(a) Includes 15,697 females.

The following quantities of yarn were used in these establishments during 1950-51, viz. :—Worsted, 8,282,599 lb. ; woollen, 124,838 lb. ; cotton, 8,850,834 lb. ; mercerised cotton, 650,967 lb. ; rayon, 8,271,091 lb. ; silk, 122,670 lb. ; nylon, 718,699 lb. ; other, including mixtures, 611,723 lb. Production of garments and stockings is shown in § 10.

17. **Tanning, Currying and Leather Dressing.**—(i) *Details of Industry.* In Class VII. the most import industry is tanning. Formerly the production of tanneries in Australia was confined to the coarser sorts of leathers, but there are now very few kinds which cannot be produced locally, and an export trade has been built up in some varieties.

21. **Boots and Shoes.**—(i) *Details of Industry.* The boot and shoe factories hold an important place both in regard to employment afforded and extent of output. The following tables refer to boot and shoe factories as distinct from those devoted to repairing. It has been necessary to include details of Boot and Shoe Repairing in Tasmania, in order to conceal confidential information for that State. Factories engaged in the manufacture of rubber boots and shoes are excluded, being classified under Rubber Goods, see par. 38.

(a) Includes Wheatmeal for Baking.

In addition, 641,296 tons of bran and pollard were made. The quantity of wheat ground was 80,368,016 bushels.

23. *Bakeries.*—Information regarding establishments in which the manufacture of bread, cakes, etc., was carried on is given in the table below. It should be noted, however, that the details refer only to establishments coming within the definition of a factory as explained at the beginning of this section. For that reason the tables do not give complete details of the industry, as a large number of bakehouses not coming within the definition is excluded. This is true of all other industries covered by the statistics of manufacturing production, but, in view of the omission of such a large number of establishments in this instance, special mention is deemed necessary.

## BAKERIES (INCLUDING CAKES AND PASTRY).

24. *Sugar-mills.*—(i) *General.* Sugar-cane is grown in New South Wales and Queensland and particulars of area, yield, etc., are given in extended detail in Chapter XX.—Agricultural Production.

The products of the sugar-mill are raw sugar and molasses, the former being sent to the refineries in different parts of Australia for further treatment. Particulars of cane crushed and sugar produced embodied in the following table refers to the quantities treated during the years ended 30th June, irrespective of the season in which the cane was grown; consequently the figures relating to cane crushed and sugar produced may differ slightly from those given in Chapter XX.—Agricultural Production, which relate to harvest years.

(ii) *Details for States.* The following table shows details of the operations of sugar mills in New South Wales and Queensland for the years 1938-39, 1945-46 and 1947-48 to 1950-51:—

## SUGAR-MILLS.

(a) Not available for publication.

25. *Sugar-refining.*—The establishment of the sugar-refining industry considerably antedates the establishment of the sugar-milling industry, the raw material operated on in the earlier years coming chiefly from Mauritius and the East. In 1950-51 there were two sugar refineries in Queensland and one each in New South Wales, Victoria, South Australia and Western Australia. The quantity of raw sugar treated amounted to 470,824 tons, for a yield of 451,170 tons of refined sugar.

26. Confectionery.—The figures for 1950-51 for each State and for Australia for a series of years are shown hereunder:—

(ii) *Production.* During the 1939-45 War, production of jams increased greatly and a high level of output of 171 million lb. was attained in 1943-44. Production afterwards decreased, but attained a new record of 198.5 million lb. in 1947-48. It dropped to 125.3 million lb. in 1950-51. The peak output of preserved fruit occurred in 1950-51 with 233.5 million lb., compared with the previous highest level of 211.4 million lb. attained in the previous year.

There has also been a marked development in the production of canned vegetables. In 1938-39 output totalled 10,255,000 lb. but, as a result of the war-time demand by the armed services, production reached the record level of 119,149,000 lb. in 1944-45. However, it has since declined and in 1950-51 amounted to 79,510,000 lb.

The following table shows the total quantity and value of jams, pickles, sauces and other items manufactured in each State in 1950-51 :—

**JAMS, PRESERVED FRUIT AND VEGETABLES, PICKLES AND SAUCES : OUTPUT, 1950-51.**

(a) Not available for publication; figures are included in total for Australia. (b) Includes Whole Milk equivalent of cream and butter fat purchased as such. (c) Includes 265 tons of cheese valued at £34,776, made in establishments not classified as factories.

The butter, cheese and condensed milk industries are dealt with more fully in Chapter XXI.—Farmyard, Dairy and Bee Products.

30. *Meat and Fish Preserving.*—The industries included in this group are engaged chiefly in the freezing and preserving of meat. Works have been established at the seaports for the purpose of handling beef, lamb and mutton for export, and insulated space for the carriage of chilled and frozen produce is provided by shipping companies trading between Australia and other parts of the world. The substitution of chilled for frozen meat exported has already been referred to in Chapter XIX.—Pastoral Production. In recent years there has been considerable expansion in the canning of meat and fish.

**MEAT AND FISH PRESERVING.**

Particulars of the quantities and values of beef, mutton and lamb preserved by cold process exported from Australia over a series of years will be found in Chapter XIX.—Pastoral Production.

31. **Breweries.**—(i) *Details of Industry.* The following table gives particulars of breweries in each State for the year 1950-51 and for Australia for a series of years. It should be noted, however, that the data shown are not strictly comparable throughout, owing to the inability or failure of some breweries to furnish a separate return for each branch of activity. Consequently the figures for some States include details of employment, wages, output, etc., not connected with the brewing of beer, although associated with it. These extraneous activities include cooperage, malt works, aerated waters, etc.

(b) Excludes Excise Duty.

(ii) *Production, Consumption, Materials Used.* The quantity of ale, stout and beer brewed fell from 73.7 million gallons in 1928-29 to 49.8 million gallons in 1931-32, but thereafter increased each year to 109.2 million gallons in 1941-42. Under the Control of Liquor Order which operated between March, 1942 and March, 1946, the production of beer was restricted and consequently output remained static at about 100 million gallons from 1942-43 to 1944-45. Thereafter production increased, and in 1951-52 amounted to 185 million gallons.

The average annual consumption of ale, stout and beer prior to the economic depression of the early thirties exceeded 11 gallons per head of the population: it dropped to 7.32 gallons in 1931-32, increased to 13.76 gallons in 1941-42 and declined again to about 13 gallons during the period of control. The consumption per head had increased to 20.46 gallons by 1951-52.

The table below shows the quantities of raw materials used and the quantity and value of ale, stout and beer (excluding waste beer) brewed in each State during 1950-51 :—

**BREWERIES : MATERIALS USED AND PRODUCTION, 1950-51.**

(a) Not available for publication; figures are included in total for Australia.

For many years the production of locally-grown leaf was comparatively small, and manufacturers were dependent on imported leaf for the supply of their raw material. Increased import duties stimulated local production, and the quantity of Australian leaf used by manufacturers rose from 1.2 million lb. in 1929-30 to over 3 million lb. in 1930-31. During the 1939-45 War about 4.7 million lb. of Australian-grown leaf was used annually, but in subsequent years the figure fell, and the 1950-51 usage was 3.8 million lb. In this connexion, see Chapter XX.—Agricultural Production.

Imports of tobacco during 1950-51 comprised—manufactured tobacco, 540,407 lb.; cigars, 46,413 lb.; cigarettes, 10,594,207 lb.; unmanufactured tobacco, 26,605,311 lb.

34. *Sawmills, etc.*—The most important industry in Class X. is that of sawmilling. Because of difficulties associated with the classifying of sawmills into forest and town, they have been combined in the following table, together with plywood and bark mills.

## SAWMILLS, PLYWOOD AND BARK MILLS.

The sawmill output of native timber, which declined from 740 million super. feet in 1925-26 to the abnormally low figure of 237 million super. feet during the depth of the depression, recovered to 717 million super. feet in 1938-39 and by 1950-51 had risen to 1,261 million super. feet. Further reference is made to the sawmilling industry in Chapter XXII.—Forestry.

35. **Cabinet and Furniture Making and Upholstery.**—These industries constitute the principal manufactures in Class XI. The following table shows particulars for each State in 1950-51:—

36. **Printing Works.**—Printing and bookbinding rank high in importance among the industries of Australia, and in 1950-51 afforded employment for 35,292 employees, and paid £18,558,000 in salaries and wages, while the value of output amounted to £61,043,000. The first table below gives particulars of establishments engaged in general printing in each State for 1950-51. These establishments include those engaged in lithographic printing, bookbinding, paper ruling and linotyping and Government printing works. Establishments producing newspapers and periodicals are shown separately in the second table to follow:—

37. **Paper Making.**—Although the paper manufacturing industry has been established in Australia for many years it was not until the manufacture of paper pulp from indigenous timber commenced in 1938-39 that any marked development occurred.

Plants producing pulp from eucalypt timber are operating in Victoria and Tasmania, whilst in South Australia pulp is being produced from locally-grown softwoods. The production of pulp rose from 6,000 tons in 1938-39 to 88,000 tons in 1946-47, and remained about this level until 1950-51, when production totalled 95,000 tons.

The number of factories operating in 1950-51 comprised two in New South Wales, seven in Victoria, one in Queensland, South Australia and Western Australia and two in Tasmania. In the latter State, newsprint, writing and printing papers are produced, and in the other States wrappings, other papers and boards. Particulars for this industry are shown in the following table.

39. Electric Light and Power Works.—(i) *Details of Industry.* The increased demand for electrical energy has been responsible for considerable development in electric light and power works during recent years. For further information on this subject see Chapter XXV.—Electric Power Generation and Distribution. Particulars of the industry for each State during the year 1950-51 and for Australia for a series of years are shown below:—

Coke produced (b) .. tons	586,605	364,925	54,817	70,679	(a)	(a)	1,111,854

(a) Not available for publication ; figures are included in total for Australia. (b) In addition, 1,515,782 tons of metallurgical coke were made in Coke Works in 1950-51.

Since 1938-39, when the output of gas was 21 thousand million cubic feet, production has increased each year and reached 38 thousand million cubic feet in 1950-51.

## CHAPTER XXV.

## ELECTRIC POWER GENERATION AND DISTRIBUTION.

This chapter is based on an article which was dealt with in greater detail in Official Year Book No. 39 and was originally contributed by the Division of Industrial Development of the Commonwealth Ministry of National Development. The chapter is divided into three major parts, viz. :—A.—Introduction, which deals briefly with the resources, generation and distribution, and future developments, of electric power in Australia ; B.—The Snowy Mountains Hydro-electric Scheme ; and C.—The origins, development, present situation and new projects of electrical systems in each Australian State and Territory (internal and external). A Statistical Summary is appended. A Bibliography listing publications dealing with various aspects of the subject, and maps showing the generating capacity installed, under construction and proposed in the several States and for the whole of Australia, were included in Official Year Book No. 39.

It should be noted that the information contained in the chapter relates to situations existing and projects contemplated early in 1953 and that it may be considerably affected by changes in policy or plans, or by developments in the projects themselves.

## A. INTRODUCTION.

1. **Distribution of Population and Location of Power Resources.**—The geographical pattern of electric power generation and distribution in Australia has been affected by two main influences—the distribution of population, with a resulting distribution of industry, and the location of fuel and water resources.

The Australian population between 1939 and 1952 increased by approximately 1,750,000 to reach a total of 8,750,000. The two principal centres of population and industry, the metropolitan areas of Sydney and Melbourne, make the greatest demands for electric power. Their growth has been associated with the development of large deposits of coal located in relatively close proximity to the source of demand. This, together with the fact that the major water resources are also located in the south-eastern portion of the Commonwealth, is of paramount significance in influencing the distribution of industrial population and the location of major electric power stations.

By far the most important source of energy used in the production of electric power in Australia is coal. At 30th June, 1952, thermal power stations represented 81 per cent. of the total installed generating capacity. The balance, 19 per cent., was distributed between hydro and internal combustion equipment in the proportions of 12 per cent. and 7 per cent., respectively.

Most of Australia is poorly supplied with water, only 15.2 per cent. receiving an annual rainfall of 30 inches and over. This is confined largely to the narrow coastal strip on the east coast and to Tasmania. The possibility of establishing large thermal stations in inland areas is therefore strictly limited by the lack of sufficient water for feed and condensing purposes.

The only region on the mainland of Australia where land is high enough to receive reliable winter snowfall, and from which reasonably constant water supplies throughout the year can therefore be expected, is the mountain chain which stretches from the high plateaux of south-eastern New South Wales through to the north-eastern highlands of Victoria. The hydro-electric potential of this area is considerable, and plans have been formulated to develop more than 3,000,000 kW. within the next 25 years. The two major construction schemes in this area are the Snowy Mountains and Kiewa projects. Other hydro-electric potential does exist on the mainland on the rivers of the coastal areas of New South Wales and Queensland, but the amount there available is only a small proportion of the potential of the Alpine region. In Tasmania hydro-electric resources have been estimated at about 50 per cent. of the total Australian hydro-electric potential. Whereas on the mainland the chief source of energy is coal, water occupies this position in Tasmania.

2. **Electric Power Generation and Distribution.**—(i) *Ownership of Undertakings.* At the beginning of this century, Australia's electrical undertakings were carried on mainly by private enterprise, but some measure of governmental control was exercised through various electric light and power Acts. This legislation was designed to provide standards of safety, and to define the scope and obligations of the private organizations engaged in production of electric power for sale. As the demand for power increased, particularly from manufacturing industries, supply facilities were expanded and the industry grew rapidly. A trend towards public ownership commenced during the 1914–18 War and became more pronounced after the 1939–45 War. By 1953, all major generating stations supplying the public were, in varying degrees, under the control of State statutory organizations, constituted with the object of unifying and co-ordinating the generation and distribution of electricity supplies within the various States. There are however, still a large number of small private and municipal enterprises generating power for supply to country towns, but, where practicable, central authorities are extending supply to these places. In many areas, however, it has been and remains the practice for central authorities to sell power in bulk to local distributing organizations who undertake local reticulation.

In addition to the private, local government and statutory organizations who generate and/or distribute electricity for sale, there are numerous firms generating power for use in their own establishments, particularly those engaged in mining pursuits remote from the main centres of population. This chapter, however, is concerned mainly with the activities of central electric stations, and the power regularly produced for such internal consumption is, in any case, a relatively small proportion of total power produced.

(ii) *Power Production and Generating Capacity.* In the twenty year period 1931–32 to 1951–52, production of electric power in Australia increased by about 350 per cent. from 2,507 to 11,304 million kilowatt hours. A comparison of the relative amounts produced in each State is shown in the following table :—

PROPORTION OF ELECTRIC POWER PRODUCED IN EACH STATE.  
(Per Cent.)

Year.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Total.
1931–32 .. ..	42.9	28.1	4.9	5.3	5.1	13.7	100.0
1951–52 .. ..	41.0	25.9	11.2	7.1	4.6	10.2	100.0

During the 1920's, the demand increased very rapidly as supply was extended to new areas and electricity usage considerably diversified. In that period, consumption increased at a rate of 15 per cent. per annum, which amounted to a doubling of the load about each five years. As the net population increase averaged a little less than 2 per cent. per annum, this was not a significant contribution to the comparatively rapid increase in consumption.

During the depression of the early 1930's demand remained fairly constant, but from 1934 to 1939, as industrial activity regained momentum, consumption increased rapidly each year at a rate of from 8 to 10 per cent. per annum. During the 1939–45 War, power restrictions were imposed on commerce and industry, very few houses were built and, in general, new domestic electric appliances were either in short supply or not available. Despite these conditions, consumption continued to increase, but this was due mainly to rising demand caused by war production.

Since the 1939–45 War, industry and commerce have expanded rapidly, many new houses have been built and the population has increased by approximately 18 per cent. These factors, together with extension of electricity supplies to rural areas and the increased use of domestic electric appliances, have all contributed to bring about a position where the inflated demand for power cannot be satisfied by the existing installed capacity

of central generating stations. During the period 1941-42 to 1951-52 the capacity of electrical machinery installed by secondary industries and utilizing purchased electricity, increased by 100 per cent., namely, from 1.4 million horse-power to 2.8 million horse-power.

At 30th June, 1952, installed generating capacity in Australia totalled approximately 2.6 million kW. compared with 1.6 million kW in 1939, an increase of about 63 per cent. In 1938-39 each kW. of installed capacity produced an average of 3,000 kWh. per annum, compared with an average of 4,300 kWh. in 1951-52. These figures are based on Commonwealth totals; figures for the States vary, depending on such factors as the distribution of demand, number of consumers, and type of equipment employed. In Tasmania, for example, average output per kW. installed was 5,000 kWh in 1938-39 and 5,200 kWh in 1951-52 compared with 2,300 and 3,350 kWh respectively in South Australia.

3. **Future Developments.**—Each central authority has embarked upon constructional programmes to overcome the lag between supply and demand. However, industrial and commercial expansion has continued on a high level, and several projects have been commenced or planned in various parts of the Commonwealth for suburban and main railway line electrification. Other fields directly connected with the demand for power, such as house building, must also be taken into account.

Increases in population, even if unaccompanied by increases in consumption of power per head, would result in overall increases in consumption. The rise in industrial demand, which was very great during the period 1930 to 1952, may be expected to continue, even though the rate of increase slows down; this will further add to the demand for power.

An important factor to be considered in regard to future development is the increasing relative importance of the generation of electric power from water resources.

## B. SNOWY MOUNTAINS HYDRO-ELECTRIC SCHEME.\*

1. **Geography of Area.**—The Snowy country in south-eastern New South Wales is the only part of the continent in which any altitudes exceed 7,000 feet, and in which there is a substantial area over the altitude of 6,000 feet. The precipitation which results from the presence of this barrier on the line of the prevailing winter depressions of Antarctic origin amounts to as much as 120 inches a year in the vicinity of Mt. Kosciuszko, the highest point in Australia. The drainage from the snowfields is practically all to three systems—those of the Murray and Murrumbidgee Rivers, which flow inland, and that of the Snowy, which flows southwards to Bass Strait.

2. **Historical.**—The Murray and Murrumbidgee have been subject to control and intensive development for irrigation for many years; the Snowy, however, flows through mountainous and practically uninhabited country until debouching onto the river flats of East Gippsland, not many miles above its mouth. It has never been controlled in any way, either for the production of power or for irrigation, and a very great proportion of its waters flows to waste into the sea. As a result, attention has long been directed towards this river, which has the highest source of any in Australia and which conducts away a very large proportion of the waters from the south-eastern New South Wales snowfields, and it has been consecutively considered as a means of supplementing the flow of the great inland rivers, a source of water supply to the rapidly growing metropolitan area of Sydney, a means for developing hydro-electric power and, again, as a source of increasing agricultural production in the rich Murray and Murrumbidgee valleys.

The 1939-45 War, and the plans for post-war reconstruction which then originated, led to a proposal by the State of New South Wales for diversion for irrigation and agricultural purposes of the waters of the Snowy to the Murrumbidgee River—a scheme in which little emphasis was placed on the generation of power. The Victorian Government proposed a counter-scheme, involving very much greater generation of power, and involving diversion, not to the Murrumbidgee, but to the Murray.

\* See also Chapter XXVI.—Water Conservation and Irrigation, §3, para. 4.

The Commonwealth Government, however, being seized with the national implications of these proposals, brought about a meeting in 1946 of Commonwealth and State representatives to discuss the general utilization of Snowy waters, and subsequently a Committee was set up to examine the whole question on the broadest possible basis. This Committee, in a report submitted in November, 1948, suggested consideration of a far greater scheme than any previously put forward. It involved not only the simple question of utilization of the waters of the Snowy, but a general consideration of the possible diversion of a number of rivers in the area, tributaries, not only of the Snowy, but of the Murray and Murrumbidgee. The recommendations of the Committee were generally agreed to by a conference of Ministers representing the Commonwealth and States of New South Wales and Victoria, and it was also agreed that the Committee should continue its investigations. A further report was submitted by the Committee in June, 1949, as a result of which the Commonwealth Parliament passed the Snowy Mountains Hydro-electric Power Act. In the next month the Snowy Mountains Hydro-electric Authority was constituted, and thus was inaugurated the greatest engineering scheme in Australian history.

3. Description of Scheme.—(i) *General*. The proposals at present being implemented fall into two groups, Tumut Development and Snowy-Murray Development—each having its associated plans for hydro-electric power production. The features described hereunder may be identified by reference to the map on page 1039. It should be remembered that, as the final designs for practically every element of the scheme have not yet been completed, and in many cases will not be completed for many years, any figures which are now quoted in respect of those elements will undoubtedly be subject to modification in the future.

(ii) *Tumut Development*. The central feature of this part of the plan is diversion to, and regulation of, the waters of the Tumut River, a stream at present completely unregulated, but which contributes approximately half of the flow of the Murrumbidgee River at Gundagai below the existing main storage on the Murrumbidgee at Burrinjuck. To the Tumut will be diverted the waters of the Eucumbene, a major tributary of the Snowy, and the headwaters of the Tooma, a tributary of the Upper Murray. The headwaters of the Murrumbidgee itself will also be diverted to the Tumut, principally to secure desirable electric power.

A major dam is to be constructed on the Eucumbene River at Adaminaby, creating a storage of at least 3.5 million acre feet, and from this, water will be conveyed by a 14-mile tunnel to Tumut Pond on the upper reaches of the Tumut River, where it will be joined by the waters from the Tooma, diverted by racelines and tunnels. From Tumut Pond, another tunnel will convey the water to power station T.1 with an installed capacity of about 320,000 kW., and a further tunnel to power station T.2 with a capacity of 280,000 kW., thence discharging into a smaller storage at Lob's Hole.

To the Lob's Hole Reservoir will also be brought the waters of the Upper Murrumbidgee from another major storage at Tantangara, holding 600,000 acre feet. From it, waters will be led by tunnel to power station T.3 with an installed capacity of 140,000 kW., which will discharge into a pond on the Yarrangobilly River, a tributary of the Tumut, and from Yarrangobilly Pond by further tunnel to power station T.4 with an installed capacity of 160,000 kW. which, in turn, will discharge into the Lob's Hole Reservoir.

Between the foot of the Lob's Hole storage and the top of the Blowering storage will be power stations T.5 and T.6. The total capacity of these stations will be 410,000 kW.

The Blowering storage with its capacity of about 800,000 acre feet, is an adjunct to the Snowy Mountains Hydro-electric Scheme and will be required for the regulation both of the Tumut waters and of the waters diverted into the Tumut. This regulation is essential if the waters impounded are to be fully utilized for irrigation purposes. At the foot of the Blowering Dam will be the last of the Tumut Power stations, T.7, with a capacity of some 50,000 kW., but this station will operate only when water is released for irrigation. The State of New South Wales will be responsible for the construction of the Blowering works.

The total extra new water which will reach the Murrumbidgee is expected to average 528,000 acre feet per annum and the total installed capacity of the various power stations is estimated at 1,310,000 kW. (excluding T.7).

(iii) *Snowy-Murray Scheme.* The central feature of this part of the scheme is the diversion of the waters of the Upper Snowy itself from a major dam to be constructed at Jindabyne on that river, a little below its junction with the Eucumbene and the Crackenback Rivers. This reservoir will have a storage capacity of approximately 1,200,000 acre feet and from it will run right through the Great Dividing Range a tunnel approximately 32 miles in length, finally discharging into Swampy Plains River, not far above its junction with the Murray proper.

Into this tunnel will be collected a considerable quantity of water from the very high altitude country of the Kosciusko area, and from a number of smaller tributaries of the Murray. The collection from the Kosciusko area commences at the Kosciusko Reservoir at an altitude of 5,725 feet, not many miles below the source of the Snowy. A tunnel will convey water from this reservoir to power station M.1.A. with an installed capacity of 60,000 kW., and thence to a pond on the Snowy River, at its junction with the Guthega River.

From the Guthega Pond, a further tunnel and penstock will lead to station M.1.B. with a capacity of 90,000 kW., which discharges into a pond at the junction of the Munyang and Snowy Rivers. Construction of this part of the scheme has already commenced. Munyang Pond will discharge into a tunnel leading to station M.2 H. and L. with installed capacity of 60,000 kW., thence into a reservoir at Island Bend on the main stream of the Snowy.

From the Island Bend reservoir, a vertical shaft, 1,000 feet deep, will lead to the main tunnel from Jindabyne reservoir previously referred to, passing on its way through power station M.3 with installed capacity of 250,000 kW. Into this main tunnel will also be collected waters from the Upper Murray tributary streams previously mentioned.

Of these, the most important is the Windy Creek-Geehi River series. A pond on Windy Creek, a small tributary of the Geehi, situated at an altitude of over 5,000 feet, will provide water through a tunnel to station M.4 with an installed capacity of 50,000 kW., thence by racelines and tunnel to station M.5.H. with an installed capacity of 65,000 kW., discharging into Geehi River Pond.

A vertical shaft will lead this water into the main tunnel, passing through station M.5.L with an installed capacity of 20,000 kW. The combined waters thus collected into the main tunnel will pass through station M.6 with an installed capacity of 540,000 kW., and then discharge into a pond on Bogong Creek, another of the Upper Murray tributaries. At this point, the water is still at an altitude of nearly 2,000 feet, and the main tunnel will thence continue to station M.7 with a capacity of 540,000 kW.

From M.7 the total collected waters will flow into the Swampy Plains River at a point some seven miles, in a direct line, above its confluence with the Murray. It will be necessary, however, to provide on the Murray a further storage for the proper regulation of these waters for irrigation purposes.

The total water flowing to the Murray from these works will amount on the average to 722,000 acre feet per annum, but as 280,000 acre feet which now reaches the Murray from the Tooma will be, as indicated previously, diverted to the Tumut, the total extra water actually reaching the Murray will be, on the average 442,000 acre feet per annum; the total installed capacity of the power stations will be 1,700,000 kW.

An integral part of each development is the construction of hundreds of miles of racelines, to collect and divert water from the many streams in the area into storages and tunnels.

4. *Utilization of Power.*—The total capacity of all stations in the scheme will be of the order of 3,000,000 kW., which is greater than the present total installed capacity of all the generating stations in the Commonwealth.

If, however, the demand for power continues to increase as is expected, the major source of power must still be thermal stations. The operation of the whole scheme is dependent on the appropriate development and integration of these stations, as otherwise there would be a serious loss in ultimate economy; all economic estimates therefore postulate that thermal capacity will be expanded so as to preserve an appropriate ratio.

For the purposes of general comparison, the ratio of 38 per cent. for effective capacity of hydro power to 62 per cent. thermal has been adopted. This, however, is only tentative and may be departed from as the scheme proceeds. It has, however, been estimated with a reasonable degree of probability that the power available from the scheme will save coal to the order of five million tons annually.

The first call on the power generated under the Snowy Scheme will be by the Commonwealth Government for supply to the Australian Capital Territory of power which it needs in that area, particularly for certain projects with defence significance, and no indication can at present be given as to how great that call will be. It is not likely, however, to amount to more than a relatively small fraction of the total power available, and it has been agreed that the balance will be divided between the States of New South Wales and Victoria in a proportion of two-thirds to New South Wales and one-third to Victoria.

The project has not yet proceeded so far that plans can be formulated for the actual scheme of power distribution, but transmission lines from the Australian Capital Territory via Cooma are under construction and, whereas this is primarily to supply power from the existing New South Wales network to the operational sites for construction purposes, it is anticipated that, when station M.r.B. comes into operation, power will then be fed from that station back to the interconnected network. The original estimates for transmission costs in the proposal were based on transmission to load centres at 220,000 volts, but it is probable that much higher voltages will be used.

## C. STATES AND TERRITORIES.

### § 1. New South Wales.

1. **General.**—In the previous issue of this Year Book (No. 39) an account is given in some detail of the origin and development of electricity generation and distribution in New South Wales, describing in particular the growth of the systems of the Sydney County Council, the Department of Railways, the Electric Light and Power Supply Corporation Ltd., the Southern Electricity Supply and the Clarence River County Council. A description is also given of the legislation existing prior to, and that which constituted, the Electricity Authority of New South Wales and the Electricity Commission of New South Wales. At present, the three main Acts governing electricity supply in New South Wales are :—

- (i) The Local Government Act 1919 which lays down the various rights and responsibilities of local government bodies in the establishment and operation of electricity trading undertakings.
- (ii) The Electricity Development Act 1945–1948 which established the Electricity Authority of New South Wales as the body responsible for the co-ordination of electricity supply throughout the State.
- (iii) The Electricity Commission Act 1950 which constituted the Electricity Commission of New South Wales as the major generating authority and not subject to the provisions of the Electricity Development Act.

2. **Organization.**—(i) *The Electricity Commission of New South Wales.*—The Commission, which was constituted under the Electricity Commission Act 1950, consists of five members of whom one is a full-time Chairman. In its administration the Commission is directly responsible to the Minister for Local Government.

When the Commission was established, 93 per cent. of the State's power requirements were generated by four bodies—the Sydney County Council, the Department of Railways, Southern Electricity Supply (a division of the Department of Public Works) and the

privately-owned Electric Light and Power Supply Corporation Ltd. The Electricity Commission Act 1950 and the Electricity Commission (Balmain Electric Light Company Purchase) Act 1950 provided for the acquisition of the power stations and main transmission lines of those bodies. The transfer of the power stations and transmission lines of the Sydney County Council, Southern Electricity Supply and the Department of Railways has now been effected. The date of transfer of the undertaking owned by the Electric Light and Power Supply Corporation Ltd. is dependent upon the determination of the valuation of the undertaking by the Land and Valuation Court.

The main function of the Commission is the generation and transmission of electricity which it sells in bulk to distribution authorities (mainly local government bodies) throughout a large part of the State, to the government railways and tramways and to certain large industrial consumers. As the major generating authority, it is also responsible for the development of new power sources. An important exception is the hydro-electric resources of the Snowy Mountains region which are being developed by the Snowy Mountains Hydro-electric Authority, a Commonwealth Government body.

(ii) *Other Electricity Supply Authorities.* The retail sale of electricity to the public is, in general, carried out by separate electricity supply authorities—municipal and shire councils, electricity county councils (consisting of a grouping of shire and/or municipal councils) or private franchise holders. There are 141 of these supply authorities throughout the State of which 46 also generate part or the whole of their power requirements. A few authorities—the most notable being Tamworth City Council and Northern Rivers County Council—also supply in bulk to other councils. The great majority of country power stations are, however, small oil engine plants which are becoming increasingly costly to operate. Consequently, they are gradually being closed down as the main transmission network is extended further afield.

Over the past few years there has been a distinct trend towards the consolidation of supply areas, many of which have been regarded as being too weak individually to form satisfactory areas for distribution. Generally these consolidations have taken the form of a county district consisting of a number of neighbouring shire and municipal areas grouped for electricity supply purposes only and administered by a county council of representatives elected by the constituent shire and municipal councils.

It is interesting to note that of the 243 shires and municipalities in New South Wales, 121 are included in one or other of the nineteen electricity county districts. Thirteen of these county districts have been constituted since 1945. The largest of the county councils is the Sydney County Council which at the close of the year 1952 was supplying 315,000 consumers in the Sydney Metropolitan Area. Unlike the other county councils, which are constituted under the provisions of the Local Government Act 1919, the Sydney County Council was specially constituted under the Gas and Electricity Act 1935.

(iii) *The Electricity Authority of New South Wales.*—The Electricity Authority was constituted under the Electricity Development Act 1945 for the stated purpose of promoting and regulating the co-ordination, development, expansion, extension and improvement of electricity supply throughout the State. The Authority, which is a regulatory body only, consists of seven members of whom one is a full time Chairman. Like the Commission, it is responsible to the Minister for Local Government.

The main functions of the Authority are as follows :—

- (a) *Distribution.* Under the Act the approval of the Authority is required, *inter alia*, for the establishment or extension of power stations and main transmission lines (except those controlled by the Electricity Commission of New South Wales); for the establishment or acquisition of an electricity trading undertaking by a local government council; for the granting or renewing by such a council of electricity franchise agreements or corresponding agreements with other councils; and for the giving or taking of bulk supplies of electricity. It also has power to formulate proposals for the establishment of county councils.

In exercising these powers the Authority is mainly concerned to see that distributing authorities are sufficiently strong to provide an economical, efficient and satisfactory service. Its most important activities in this regard are in investigating supply areas and in making recommendations to the Minister for the consolidation of such areas into county districts. Many of the new county districts referred to earlier have been formed largely as a result of the Authority's advice.

- (b) *Rural Electrification.* The Authority administers the rural electricity subsidy scheme under which rural electrification throughout the State is progressing very rapidly (see below).
- (c) *Safety.* The Electricity Development Act 1945-1948 contains provisions for the making of regulations relating to most aspects of safety and these powers are being used more and more extensively. Safety regulations now in force cover such matters as inspection of consumer's installations, licensing of electricians and electrical contractors, approval of electrical appliances and safety of linesmen.
- (d) *Generation and Transmission.* The approval of the Authority is required for the establishment of new power stations or the extension of existing power stations (with the exception of those of the Electricity Commission). The Authority may, for example, refuse approval for the establishment of a new power station if it is more economical and in the general interest for the supply authority concerned to purchase in bulk from another body.

3. *Generation and Transmission.*—(i) *General.* Except in the Snowy Mountains district, and in one or two other areas, New South Wales is lacking in major water power potential and for the generation of electricity, the State is, therefore, mainly dependent on steam power stations. Coal-fired stations generate 93 per cent. of the State's requirements, hydro-electric stations 3 per cent. and internal combustion plant 4 per cent.

The proportion of power generated in hydro-electric stations will increase considerably in the future with the development of the Snowy Mountains Scheme by the Commonwealth Government. The possibility of developing the hydro-electric potential of the Clarence River and other rivers is also being investigated. Nevertheless, coal-fired steam power stations will continue to supply the greater part of requirements.

(ii) *Major Generating Stations.* In New South Wales the generation of electricity has followed the general world trend towards large centralized power stations supplying large areas through inter-connected networks. The greater part of the coal-fired generating plant is now concentrated within the bounds of the major coal fields, where the big industrial centres and most of the population are also located.

The major power stations within the main inter-connected system and their installed capacities are as follows:—*Steam*—Bunnerong "A" and "B" (Sydney), 328,000 kW.; White Bay (Sydney), 140,000 kW.; Pyrmont "A" and "B" (Sydney), 98,000 kW.; Ultimo (Sydney), 79,500 kW.; Zarra-street (Newcastle), 79,250 kW.; Balmain (Sydney), 48,000 kW.; Port Kembla, 33,500 kW.; Lithgow, 22,500 kW.; *Hydro*—Burrinjuck (near Yass), 20,000 kW. There are also various other steam, hydro and internal combustion stations aggregating 23,000 kW. The total installed capacity of the main inter-connected system is 871,750 kW.

It will be seen therefore that the greater part of the State's generating plant is concentrated within a hundred mile radius of Sydney—that is, at Sydney itself (five stations), Port Kembla, Newcastle and Lithgow. The largest single station outside this area is located at Tamworth. At present there is only one hydro-electric station in New South Wales with an installed capacity of more than 10,000 kW. This is the Burrinjuck station in south-eastern New South Wales with an installed capacity of 20,000 kW. Other hydro-electric stations are located at Wyangala (near Cowra), Nymboida (near Grafton), Brown Mountain (near Bega), Mullumbimby, Batlow and Tumbarumba. These stations are, however, very small compared with the major steam power stations.

(iii) *Interconnected Network.* About 92 per cent. of electricity consumers in New South Wales are now supplied through the interconnected systems. In this network, transmission lines operating mainly at 66,000 or 33,000 volts interconnect the various power stations and distribute power to load centres throughout most of the south-eastern portion of the State and the north coast region. Three 132,000 volt transmission lines have also been completed—one, completed in 1952, linking Burrinjuck and Port Kembla; one, completed in 1952, between Sydney and Newcastle; and one, just completed, between Sydney and Port Kembla. The totalled installed capacity of the interconnected systems, which includes an aggregated capacity of 36,872 kW. for various stations, including the Northern Rivers County District, linked with the main system, is 908,622 kW.

(iv) *Separate Systems and Total State Installed Capacity.* There are a number of separate systems and isolated plants which have not yet been interconnected with the main network and which have an aggregate installed capacity of 53,788 kW. The most notable are the Tamworth system and that of the Bega Valley County Council on the far south coast. The Tamworth system (18,000 kW.) supplies power to an extensive district in the north-east of the State through 66,000 volt and 33,000 volt transmission lines. Some councils along the Victorian border receive bulk supplies from Victorian authorities.

The aggregate installed capacity for the whole of the New South Wales systems and isolated plants is 962,410 kW.

(v) *Future Development.* The following major power stations in Sydney are at present being extended by the installation of additional generating plant:—Pymont "B", 150,000 kW.; Balmain, 73,000 kW.; Bunnerong, 50,000 kW.; White Bay, 50,000 kW. Construction is also proceeding on new major power stations on the coalfields at Lake Macquarie, near Newcastle (300,000 kW.), Tallawarra, near Port Kembla (120,000 kW.), and Wallerawang, near Lithgow (120,000 kW.). These stations will be linked with Sydney by 132,000 volt transmission lines, and extensive additions to the 132,000 volt system to supply increasing loads at various centres are also planned. A 132,000 volt system will be established around the outer Sydney Metropolitan Area for the supply of load centres at present fed through 33,000 volt circuits direct from the inner Sydney power stations. In order to help overcome the post-war power shortage as quickly as possible, the Electricity Commission ordered the construction of four 20,000 kW. "package" steam power stations, at Port Kembla, Maitland, Penrith and Liverpool respectively. The first units are now in operation and all should be completed in 1953. Future plans provide for the construction of a hydro-electric power station on the Hume Reservoir of 25,000 kW. capacity to be connected to the State network through a 132,000 volt transmission line between Hume and Wagga Wagga.

In addition to the power stations mentioned above which are under construction or planned for the system controlled by the Electricity Commission, a number of local government bodies have plans in hand for the development of independent power stations. Of these the more important are as follows:—The Northern Rivers County Council is constructing a steam power station at Koolkhan (near Grafton). Immediate plans provide for an installed capacity of 25,000 kW. The first unit of 5,000 kW. is now in operation. The Tamworth City Council is planning the construction of a new steam power station at Gunnedah for the augmentation of supply to the separate system now supplied from Tamworth power station. The initial installation will be 30,000 kW. and the ultimate now envisaged will be 75,000 kW. The North-West County Council has made tentative plans for the establishment of a 10,000 kW. steam power station on the Ashford coalfield. The Ulan County Council is constructing a steam power station of 6,250 kW. capacity on the Ulan coalfield. The New England County Council and the Bega Valley County Council are constructing small hydro-electric power stations on the Oakey River (near Armidale), and Georges Creek (near Bega) respectively.

Preliminary investigations have also been made of the possibilities of developing substantial hydro-electric schemes on the Clarence and Shoalhaven Rivers but no concrete proposals have as yet been adopted.

4. **Rural Electrification.**—When the Electricity Authority of New South Wales was constituted in 1946, one of its first tasks was the devising of a scheme for subsidizing

the cost of rural electrification. At that time only 16,000 New South Wales farms were being served with electricity—less than one-third of those within reasonable reach of public electricity supply systems. In August, 1946 a subsidy scheme was approved by the Government and put into immediate operation. The initial objective of the scheme was the connexion of 24,000 farms and 9,500 other rural consumers. It was estimated that this work (to be carried out by local supply authorities) would cost £6,000,000 of which the Electricity Authority of New South Wales would provide nearly half by way of subsidy. The Electricity Authority derives its funds for the payment of subsidies partly from levies on the major electricity supply undertakings and partly from Consolidated Revenue. The amount of subsidy is based on the estimated cost of a proposed extension and the number of consumers able to be served by the new lines. In order that the funds available for subsidy purposes might be used to the best possible advantage, the scheme is designed to encourage local electricity supply authorities to construct the more economic extensions first.

The scheme has given a remarkable stimulus to electrification in rural areas and it is now evident that the initial objective will be reached well within the scheduled ten-year period. In six years the total number of farm connexions has been doubled—an average of 2,500 farms being connected each year, at an annual cost of about £1,000,000. New South Wales now has the highest percentage of electrified farms on the Australian mainland. At 30th June, 1952 an additional 15,231 farms and 13,140 other rural consumers had been connected, the length of line involved being 8,864 miles. The capital cost of these extensions was £4,500,000 and the amount of subsidy paid, £735,000.

Surveys indicate that with the aid of subsidies, it should be possible to supply, from the public mains, about 70 per cent. of the farms in New South Wales. At the moment that appears to be somewhat near the limit of farm connexions on a reasonably economic basis.

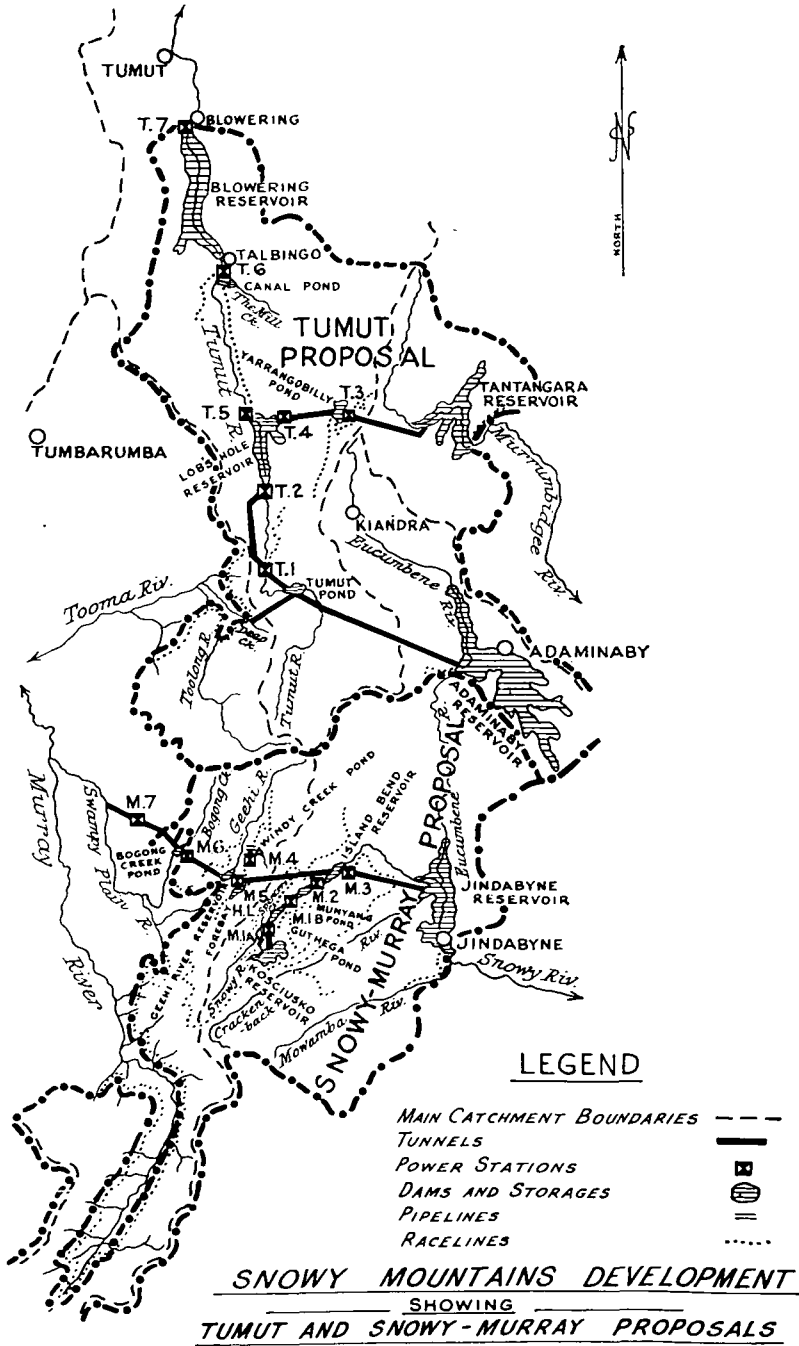

## § 2. Victoria.

1. **General.**—In the previous issue of this Year Book (No. 39) a detailed description is given of the development of electricity generation in the cities of Melbourne, Geelong, Bendigo and Ballarat up to the time of transfer of control of electricity undertakings in these cities to the State Electricity Commission of Victoria. An account is also given of the events culminating in the establishment of the Commission in 1919, and of the early developments in the Commission's undertakings.

2. **The State Electricity Commission of Victoria.**—(i) *Functions of Commission.* Under the terms of the State Electricity Commission Act, three Commissioners were appointed, who took up duty on 4th March, 1919. Their powers authorized them to erect and operate electrical undertakings; to supply electricity in bulk to any corporation; to supply electricity to any person outside any area in which there was an existing undertaking; to carry on any business associated with an electrical undertaking; to make regulations as to precautions to be adopted in the use of electricity and arrange for the licensing of wiremen; and to establish and operate State coal winning projects.

In addition to these powers, the Commissioners were to enquire into and report to the Government as to the steps which should be taken to co-ordinate and concentrate all electrical undertakings in Victoria; to secure the efficient inter-connexion of such undertakings by adopting the necessary standards of plant, voltages, etc.; to encourage and promote the use of electricity for industrial purposes; to report to the Government on the prospects of establishing new industries in Victoria requiring large quantities of electrical energy; and to carry out investigations of coal deposits or hydro-potential that could be used for the generation of electrical energy.

(ii) *Newport and Yallourn Power Stations.* Action was taken to investigate the practicability of utilizing the State's brown coal and water power resources for the production of electricity. In a Report dated 26th November, 1919, the Commissioners concluded, *inter alia*, that the Morwell brown coal field should be developed and a power house established thereon by 1923, with an initial capacity of 50,000 kW. As to water

power, they were of the opinion that consideration of hydro-electric power schemes should be deferred until further investigations then being undertaken were completed. It was further concluded that in order to obtain maximum economy, the proposed station in the neighbourhood of Morwell (known since 1920 as Yallourn Power Station) and any other power house to be erected in connexion with the proposed State electricity supply scheme should be interconnected with the Railways Department power station at Newport and operated under the control of a single authority.

The actual transfer of the Railways Department station at Newport did not take place until 1951, and in the meantime two new stations (and subsequent extensions) had been constructed by the Commission and were in operation. By the early months of 1953, the total installed generator capacity of the Newport power station, consisting of Newport "A" (originally under the control of the Railways Department), Newport "B" and Newport "C", was 311,000 kW., which, added to Spencer Street (44,000 kW.) and Richmond (53,000 kW.), made a total of 408,000 kW. installed in the Melbourne metropolitan area, of which all but the 113,000 kW. in Newport "A" power station were included in the 50-cycle inter-connected State generating system.

To implement one of the main purposes for the establishment of the State Electricity Commission, namely, development of Victoria's brown coal resources, particularly for production of electrical energy, construction commenced in 1920 of the Yallourn power station designed for an initial capacity of 50,000 kW., but increased within a few years by the addition of two further machines. On 24th June, 1924, power was first transmitted on a commercial basis from Yallourn to Melbourne. Main metropolitan terminal stations were constructed at Yarraville and later at Richmond.

The site chosen for the power station on the bank of the Latrobe River, about 6 miles from Morwell, had numerous advantages. Adequate water was available for the station's requirements, land nearby provided a good town site, whilst, most important of all considerations, an area of one square mile, adjacent to the proposed station, contained proved reserves of brown coal totalling about 150 million tons with averages of 174 feet thickness and 33 feet overburden. By the use of mechanized methods for open-cut coal winning, the coal could be extracted and delivered to the power station at a cost of only a few shillings a ton. Development of these resources was designed to ensure to a large degree the State's independence in fuel requirements for the production of electrical energy.

Estimated to contain about 10,000 million tons of brown coal, all capable of being won by mechanized open-cut methods, the Yallourn-Morwell brown coal field forms part of the very large brown coal deposits in the Latrobe Valley, where boring has revealed more than 20,000 million tons of brown coal capable of being won by open-cut methods of extraction.

As the Yallourn station was intended to carry the base load of the system, steps were taken to augment its capacity to keep pace with the anticipated and continually increasing demand for electric power, and by 1938, Yallourn "A" and "B" had a total capacity of 175,000 kW. (In addition, an average of 8,000 kW. of by-product electricity is fed into the system from the Yallourn briquette factory.)

(iii) *Hydro-electric Development.* Development of the State's hydro-electric potential the necessity of which was foreseen in the Commissioners' initial Report of November, 1919, but deferred pending further investigations, commenced in 1922. The project selected was dependent on the waters of the Goulburn River and adjacent mountain streams in the Cerberean Range, about 65 miles north of Melbourne. These two sources of water power provided a distinct advantage in that one was mainly summer flow and the other winter flow, thus permitting the continuous generation of power. Five small stations, namely, Sugarloaf (Eildon Weir, 13,500 kW.), Rubicon (9,100 kW.), Lower Rubicon (2,700 kW.), Royston (840 kW.), and Rubicon Falls (275 kW.), were installed totalling approximately 26,400 kW. The complete project was in service by 1929. In conjunction with the building of the new Eildon Dam, the Sugarloaf station is being replaced by one having a total installed capacity of 135,000 kW. It will comprise two

new generators, totalling 120,000 kW. capacity, while the two 6,750 kW. machines in the former Sugarloaf power station are being re-built and re-installed at the revised rating of 7,500 kW. each.

In a Report to Parliament during 1920, the Commissioners included details of a large-scale project for harnessing the Kiewa River in the valleys and tablelands of the Bogong High Plains area of the Main Dividing Range, located approximately 150 miles north-east of Melbourne. At that time the Commission was not prepared to recommend adoption of the plan, but, on the other hand, suggested further consideration of the smaller Sugarloaf and Rubicon scheme. However, during the following 17 years, hydrological investigations were carried out in the Kiewa area which greatly facilitated the subsequent planning of a major hydro-electric project. On 12th June, 1937, a further Report was submitted to Parliament recommending adoption of a plan to provide an ultimate capacity of 117,000 kW. from the Kiewa project. The plan, which included construction of four power stations with an initial installation comprising 20,000 kW. to be in service by 1942, was approved and its provisions embodied in the State Electricity Commission (Extension of Undertaking) Act 1937. Construction commenced during 1938, but the war delayed progress and it was not until September, 1944 that the first station came into partial operation with 13,000 kW.—a second unit of 13,000 kW. was placed in service in April, 1945.

The 1937 Kiewa project, prior to its submission to the Government, was critically reviewed by a group of oversea consulting engineers, and their report confirmed that an enlarged scheme might be possible after further detailed investigation of the water power resources of the terrain adjacent to the Bogong High Plains. On 21st November, 1947, the Commission submitted proposals for expanding the original Kiewa scheme of 117,000 kW. to one of 289,000 kW. with an annual output, averaged over a typical period of wet and dry years, of about 1,000 million kWh. Approval for the amended scheme was contained in the State Electricity Commission Act 1948. Work was begun on the project, but it has since been drastically curtailed because of the shortage of capital funds, and the design is now likely to be somewhat modified.

(iv) *State Supply System.* (a) *Growth and Extent.* Since its inception, the Commission has gradually extended the State's system of supply so that it now serves two-thirds of the populated area of the State, in which nine-tenths of the population reside, and certain towns in New South Wales, including Albury. The following comparative table indicates the growth of the Commission's State system between 1929 and 1952.

## VICTORIA : STATE ELECTRICITY COMMISSION SYSTEM.(a)

Particulars.	Year ended 30th June—			
	1929.	1939.	1949.	1952.
Installed Capacity .. .. kW.	148,000	(b)281,400	480,300	{ 517,300 (50 cycle) 113,000 (25 cycle) 2,598 (50 cycle) 193 (25 cycle)
Units Generated .. .. m.kWh.	422	898	2,148	
No. of consumers (approx.) (including bulk supply areas) .. ..	230,000	368,000	500,000	590,000
Country and Provincial Centres Served	141	419	699	797
Farms Served .. ..	700	4,985	14,419	19,953

(a) About 98 per cent. of electricity produced in Victoria is now generated by the State Electricity Commission, which also supplies 95 per cent. of consumers. Statistics for 1949 and 1952 include the Commission's regional diesel-electric power station at Hamilton which is not at present connected with the State system. (b) Includes Geelong power station (acquired 1st September, 1930) and Ballarat power station (acquired 1st July, 1934, but not in 1939 connected with the rest of the State system); excludes Spencer Street power station, which was not connected with the State system until 1st January, 1941.

During 1951-52 electricity was reticulated to the various classes of consumers in the following proportions—domestic, 36 per cent.; commercial, 14 per cent.; industrial, 44 per cent.; public lighting, 2 per cent.; and traction (excluding railways), 4 per cent.

Since its inception, the Commission has acquired 79 country undertakings in addition to those acquired in the metropolitan area and in provincial cities, and carries out retail distribution throughout its area of supply, except for part of the metropolitan area where 11 municipal undertakings, operating under Orders-in-Council granted before the foundation of the Commission, purchase their electricity in bulk from the Commission. Bulk supply is also given to five New South Wales border municipalities and shires, Albury, Berrigan, Corcen, Corowa and Moama. There remained, in 1952, 54 independent undertakings in various country towns in Victoria generating and distributing their own supplies. Operations of independent undertakings are governed by the Electric Light and Power Act 1928, which the Commission administers.

(b) *Composition and Control of Inter-connected Generating System.* Included in the inter-connected State generating system there were at 30th June, 1952 fourteen steam-electric, hydro-electric and diesel-electric power stations located at different centres in the State, and all comprised in one State-wide system. The distribution system comprised more than 16,000 miles of high and low voltage power lines, nine terminal receiving stations and nearly 7,600 distribution sub-stations. The Commission's inter-connected generating system comprises three principal groups of power stations, namely:—

*Steam stations.*

Yallourn—burning raw brown coal; Metropolitan and provincial stations—burning mainly briquettes and brown coal. (Newport power station also burns black coal, and oil fuel is consumed in all three Metropolitan power stations.)

*Hydro stations.*

Eildon-Rubicon; Kiewa. (With the closing down of the former Sugarloaf power station, and pending the completion of the new Eildon power station, only the four mountain stream stations in the Eildon-Rubicon group are at present operating.)

*Diesel stations.*

Shepparton; Warrnambool.

In meeting the total demand on the system which, of course, fluctuates throughout the day and from month to month throughout the year, each group of stations is assigned a predetermined function dependent upon the availability of power from each group and the overall economics of generation. The various stations are utilized in a combination that will most economically meet the system load at a given time. For a description of the arrangement of the system thus involved see Official Year Book No. 39, p. 1170.

(c) *Organization.* In the Commission's organization, the functions of generating and distributing electrical energy are under the control of two separate departments—the Production Department in charge of power stations, brown coal winning, briquette manufacture, terminal stations and main substations, and the Electricity Supply Department, responsible for distribution to consumers. The territory covered by the latter Department is divided into nine areas, each constituting a supply branch. The Metropolitan Branch supplies Melbourne and suburbs, with the exception of certain areas supplied by City Councils reticulating Commission electricity. Energy is supplied by the Production Department to the Metropolitan Branch, and those metropolitan municipal supply authorities which purchase electricity in bulk, at metropolitan terminal stations and a number of main transmission substations. Supply to the Eastern Metropolitan Branch (which has its headquarters at Dandenong) is on similar lines.

Headquarters of the Electricity Supply Department's branches outside the metropolis are located at Ballarat, Bendigo, Geelong, Dandenong (Eastern Metropolitan), Traralgon (Gippsland), Castlemaine (Midland), Benalla (North Eastern) and Colac (South Western).

Supply to the Gippsland Branch is obtained from Yallourn power station at 22,000 volts and by 66,000 volt transmission lines extending within the branch to Maffra in the east, Leongatha in southern Gippsland and Warragul in western Gippsland.

Supply to the Geelong Branch is obtained from the two Geelong power stations and Geelong terminal station, the latter being connected with the rest of the system by a 66,000 volt transmission line to Newport power station.

Supply to the South Western Branch is obtained through Geelong terminal station by a 66,000 volt transmission line extending through Colac to Warrnambool, where the new peak load power station to reinforce supply began operating during 1952.

Ballarat Branch obtains its supply from the two Ballarat power stations which are inter-connected, the larger and more modern power station being connected with the rest of the system by a 66,000-volt transmission line from Sunshine terminal station in the Melbourne Metropolitan area.

Both the Midland and Bendigo Branches obtain their supply through the 66,000-volt power line from Thomastown terminal station, one of the major metropolitan terminal stations in the system.

For the North Eastern Branch, supply is obtained through Rubicon "A" terminal station and the Kiewa hydro-electric undertaking, while local reinforcement of supply is provided by Shepparton power station. Inter-connexion with the rest of the system is provided by the 66,000-volt transmission line extending from Thomastown terminal station to Kiewa via Rubicon "A" and Benalla, with branches to Shepparton and Kyabram, Yarrowonga and Mulwala (New South Wales), and via Wangaratta to Wodonga for supply to Albury.

The Commission also operates a diesel station at Hamilton of 3,020 kW., which is not at present part of the inter-connected system.

(v) *New Capacity.* The Commission is to undertake electric power projects which, provided constructional programmes can be maintained, are designed to increase the installed capacity of the State generating system to approximately 1,000,000 kW. by 1958. This total is exclusive of hydrogenerating plant at the Hume and Eildon Reservoirs, since their use is conditioned by irrigation requirements and they cannot, therefore, be counted upon to meet peak loading on the system which occurs in winter-time. The total is exclusive also of by-product electricity, obtained from the power station to be constructed as part of the Commission's Morwell briquette project.

Major works brought into service since 30th June, 1952, or now under construction include—

(a) *Thermal stations.*

Yallourn extension—206,000 kW. (under construction—first set (50,000 kW.) due for completion in 1954).

Morwell—90,000 kW. for the new power station in conjunction with the Morwell briquette project. Of this, approximately 35,000 kW. of by-product electricity will be available to the State system in the first stage (on completion of the first and second factories). A further 35,000 kW. will be available in the second stage (on completion of the third and fourth factories), when an additional 60,000 kW. will be installed.

Metropolitan—83,000 kW. This includes a 38,000 kW. generator at Richmond Power Station completed early in 1953 and 45,000 kW. of new plant at Spencer Street (Melbourne City Council) power station due for completion in 1953 and 1954.

Geelong—30,000 kW. "packaged" units (due for completion, 1953).

Ballarat—20,000 kW. "packaged" units (due for completion, 1953).

Shepparton—10,500 kW. (completed early 1953).

Warrnambool—5,000 kW. (completed early 1953).

(Plant on order also includes a 40,000 kW. steam-electric generator, the location of which has not yet been determined).

(b) *Hydro stations.*

Kiewa—126,000 kW. (62,000 kW. station under construction and tunnelling started for a 64,000 kW. station; further power stations projected at a later date).

Hume—25,000 kW. representing Victoria's share of a 50,000 kW. power station shared equally by Victoria and New South Wales (under construction).

Eildon Dam—121,500 kW.—comprising 120,000 kW. of new plant and an additional 1,500 kW. from re-designed plant (under construction).

(c) *Thermal regional stations.*

Mildura (Red Cliffs)—10,000 kW. This will be a "packaged" power station and is due for completion in 1953. It will not for the present be connected to the State system, but will operate as a regional unit serving the Mildura area.

A 220 kV. transmission line is under construction from the Kiewa project to Thomastown terminal station; and another from Yallourn to Malvern terminal station to reinforce the existing 132,000 volt circuits already linking Yallourn with Metropolitan terminal stations.

The Commission's long-term plans for State-wide extension of electricity supply involve the ultimate construction of a 220 kV. transmission line from Kiewa to Mildura by way of Shepparton—a distance of approximately 350 miles. The new regional station at Mildura will function primarily as a peak-load station when the plan is implemented.

The Commission has submitted to the State Parliament its plan for the final phase of rural electrification of Victoria, extending supply to all populated regions of the State. The plan provides for the extension of State Electricity Commission supply to every home in Victoria except for about 15,000 homes located in the most isolated parts of the State. Implementation of this plan has been deferred on account of finance.

### § 3. Queensland.

1. *General.*—In Official Year Book No. 39 an account is given of the growth of electricity generation in Queensland, with particular reference to the City Electric Light Co. Ltd., of Brisbane (now the Southern Electric Authority of Queensland), the Brisbane City Council and the Toowoomba Electric Light and Power Co. Ltd.

The first of these organizations, which was operating in Brisbane well before the end of the last century, now supplies a large part of Brisbane's electric power requirements and a considerable rural area south-east of the city. By 1933 this organization was operating a modern power station at Bulimba, a suburb of Brisbane, with an installed generator capacity of 37,500 kW., from which it supplied more than 16,000 consumers and generated about 60 million kWh. of energy per annum. Capacity at Bulimba "A" is now 95,000 kW.; with this, 449 million units were generated in 1951, while the number of its consumers at 31st January, 1952 totalled 66,862.

The Brisbane City Council established an electricity supply service after the 1914-18 War, and by 1938 it was supplying an area of about 365 square miles, purchasing energy in bulk from a power station located at New Farm (administered by the Tramways and Power House Department) and from the City Electric Light Co. Ltd. Growth of the Council's electrical undertaking and power production is indicated by the following comparisons between 1937-38 and 1951-52 figures, respectively :—Installed capacity, 56,250 kW. and 75,000 kW.; units purchased and generated, 71 million kWh. and 381 million kWh.; consumers, 57,000 and 99,000. In 1951-52 New Farm power house generated 381 million units and the Department of Transport (Tramways) consumed 39 million units.

During 1905, the Toowoomba Electric Light and Power Co. Ltd. established supply in Toowoomba, and now supplies a considerable area including portion of the Darling Downs. Power is generated at the Company's diesel stations of 3,520 kW. supplemented with bulk supplies purchased from the City Electric Light Co. Ltd. In 1940 the company purchased the power undertakings at Warwick, and in 1946 the Killarney undertaking.

The generation and distribution of electric power in Queensland had, until the last decade, tended to lag behind developments in this field in other States of Australia. The comparatively slow growth in the production and consumption of electricity can be attributed to some extent to the absence, prior to 1938, of a central statutory authority constituted to undertake the functions of co-ordinating, unifying and controlling the production and transmission of electric power. In addition, Queensland's vast area, coupled with a low population density, made large-scale rural electrification, elsewhere than in the south-eastern portion of the State which surrounds the major centres of industry and population, an uneconomic proposition.

Before establishment of the Regional Electricity Board in 1945, no attempts had been made to unify or co-ordinate electricity supplies, and rural electrification, apart from reticulation within certain townships, was practically unknown.

**2. Royal Commission on Generation and Distribution of Electric Power in Queensland, 1936.**—On 5th December, 1935, the Queensland Government, being concerned with the need to develop the State's power resources in the public interest, appointed a Royal Commission to inquire into and make recommendations on matters relating to the generation and distribution of electric power in Queensland. The Commission throughout the inquiry tended to concentrate mainly on proposals for electrification of south-eastern Queensland and establishment of a suitable statutory authority to control and unify the development of electrical undertakings in the State. (An account of the results of its investigations and of the alternative proposals put before it will be found on p. 1182 of Official Year Book No. 39.)

The Commission recommended that, in order to achieve a properly planned scheme for the electrification of the south-eastern area, control of generation and distribution of electric power be vested in the State, or, alternatively, if establishment of an operating commission were not found practicable, that electrification under public control with ultimate public ownership be implemented. The Commission concluded that in areas of Queensland outside the south-eastern portion of the State, except for a section of the country from Townsville north to Mossman and west to Herberton where immediate and detailed investigations should be made, there existed only local problems of generation and distribution, not justifying further consideration at that time.

**3. The State Electricity Commission of Queensland.**—In 1937, the State Government legislated to constitute a State Electricity Commission (legislation administering the generation and distribution of electricity in Queensland prior to the establishment of the Commission is referred to on p. 1181 of Year Book No. 39), which commenced to function during January, 1938—to it was passed administration of the Electric Light and Power Acts 1896–1938. The Commission's main powers were :—to secure a proper and efficient supply of electric power; review tariffs; grant licences to supply electricity; secure the safety of the public; and control and advise electrical undertakings generally. It was thus a controlling authority as distinct from an operating authority. In addition, the Commission was empowered to co-ordinate the industry's development throughout Queensland. Between 1938 and 1952, the number of private companies was reduced by absorption and acquisition from twenty-one to seven, and publicly owned undertakings, by amalgamation into Regional Authorities, from forty-seven to twenty-eight.

By agreement with the Commission in 1939, the City Electric Light Co. Ltd. became co-ordinating authority for provision of electricity in an area of some 10,062 square miles, extending from the New South Wales-Queensland border to Gympie, north of Brisbane. The Company acquired the undertakings at Boonah, Beaudesert, Gympie, Coolangatta, Ipswich, Nambour, Southport, Redcliffe and the Somerset Dam supply and transmission line to Brisbane. Certain restrictions were placed on the Company's

dividend rate, namely, limitation to the rate on Commonwealth bonds plus 2 per cent. During 1940, a similar agreement was made with the Toowoomba Electric Light and Power Co. Ltd. for the supply of electricity in the Toowoomba, Warwick, Killarney and Allora districts, subsequently being extended to cover a comprehensive area of 9,324 square miles, including Stanthorpe and other districts. Transmission line extensions since that year have made supply available to a number of adjacent districts on the Darling Downs. The City Electric Light Co. Ltd. was converted to a public authority by legislation as from 1st February, 1953 (*see* para. 5 below), and the Government has the right to acquire the Toowoomba company in 1954 or later.

Amending legislation, passed by the Queensland Parliament in March, 1948, changed the constitution of the State Electricity Commission from a body corporate to a corporation sole. On 1st July, 1948, a Commissioner for Electricity Supply was appointed in lieu of the previous Commission of four Commissioners. Since its inception in 1938, the Commission has made considerable progress in its task of developing the State's power resources and promoting a more widespread use of electric power. The degree of utilization of electrical energy in Queensland now compares favorably with other States in the Commonwealth.

4. **Regional Electricity Boards.**—With a view to facilitating the control and development of electricity supply in areas of low population density or those having a predominantly primary producing economy, the Government in 1945 passed the Regional Electric Authorities Act. This legislation, as later amended, provides for the creation of regions of electricity supply and constitution of Regional Electricity Boards. The Act provided for transfer to the Boards of local authority electricity undertakings in their regions, and for acquisition by the Boards of privately owned undertakings when purchasing rights fell due. Each Board comprises representatives of local authorities in the region and a representative of the Commission. Financial operations of the Boards are under the control of the Commission.

Soon after passage of the Regional Electric Authorities Act, four regions were defined and four Regional Boards constituted, namely, Wide Bay, Capricornia, Townsville and Cairns. A fifth Board, entitled South Burnett, became an operating authority in October, 1947, but on 1st July, 1951 was absorbed in the Wide Bay Regional Board and the organization is now known as the Wide Bay-Burnett Regional Electricity Board. As power was to be obtained from the Wide Bay Regional Board's station at Howard, the Commission decided that development of the two regions could be planned more effectively by a single authority.

Activities of the four Regional Boards in 1951-52 compared with operations of the stations located in regions in 1945-46, and totals for Queensland as a whole, are shown in the following table:—

**QUEENSLAND : REGIONAL OPERATIONS.**

Region.	1945-46.		1951-52.	
	Units Generated.	No. of Consumers.	Units Generated.	No. of Consumers.
	m.kWh.		m.kWh.	
Wide Bay-Burnett .. .. .	13.7	11,467	34.9	18,687
Capricornia .. .. .	19.5	11,196	41.2	15,777
Townsville .. .. .	25.8	11,612	62.9	16,475
Cairns .. .. .	22.7	9,722	52.2	14,654
<b>Total .. .. .</b>	<b>81.7</b>	<b>43,997</b>	<b>191.2</b>	<b>65,593</b>
<b>Queensland .. .. .</b>	<b>487.0</b>	<b>194,429</b>	<b>1,242.0</b>	<b>257,576</b>

Generator capacity of the four existing Regional Boards installed at 31st December, 1952 was:—Wide Bay-Burnett, 23,541 kW.; Capricornia, 29,729 kW.; Townsville, 14,350 kW.; Cairns, 12,770 kW.; total, 80,390 kW.

5. **Creation of Southern Electric Authority of Queensland.**—A further major step in electrical progress, comparable with that taken when the agreements with the City Electric Light Co. Ltd. and Toowoomba Electric Light and Power Co. Ltd. were first entered into, was taken by the passing of the Southern Electric Authority of Queensland Act of 1952. This Act constituted the City Electric Light Co. Ltd. as a public authority to be known as the Southern Electric Authority of Queensland.

Two Government representatives are included on the Board of the new Authority, whose establishment prepares the way for the complete amalgamation, in due course, of the electrical undertakings serving the south-eastern Queensland area of supply.

An important advantage gained by the creation of this Authority is that on 30th June, 1968, acquisition of the Authority by the State Government can be effected without the necessity of a cash payment as the Government will have the power to convert the Authority's existing stock to inscribed stock. Furthermore, the replacement of the City Electric Light Co. Ltd. by the Southern Electric Authority as a public body relieves electricity consumers in the Authority's area of supply from the burden of taxation which has hitherto been payable by the City Electric Light Co. Ltd., but will not require to be met by the new Authority. An agreement has been signed between the State Government and the Southern Electric Authority giving effect to the principles contained in the new legislation.

6. **New Capacity.**—(i) *Regions.* To provide for development of the electric power resources in the regions, the State Electricity Commission formulated a ten-year programme divided into two five-year periods. In the first, it was planned to erect main transmission systems to connect existing power stations located within the regions and supplement generating capacity by the construction of new stations. Work on this section of the plan is now nearing completion. In the second period, the transmission system will be extended to more sparsely settled areas, the ultimate purpose being the provision of "ring" transmission lines throughout each region and inter-connexion between the regions.

Work has commenced on a number of new generating stations, including Howard (Wide Bay Region), of which 15,000 kW. was placed in service during September, 1951, Rockhampton (Capricornia Region) of which 22,500 kW. was placed in service during September, 1952 and Townsville (Townsville Region). Each of these stations will have an ultimate capacity of 52,500 kW. and be steam-operated. In the Cairns Region, construction has commenced on the Tully Falls hydro-electric scheme, which is designed for an ultimate installed capacity of 92,400 kW. To augment existing capacity, pending operation of Tully Falls, the Cairns Regional Board has installed sixteen diesel units with a total capacity of 10,310 kW. In addition further plant of a capacity of 1,250 kW. has been ordered to meet anticipated demands.

At Mackay, where supply was first given in 1924, and Bowen, both situated on the coast between the Capricornia and Townsville Regions, the local Councils operate power stations of 5,000 kW. and 1,000 kW., respectively. The Mackay City Council is embarking on a scheme for rural development under an arrangement with the State Electricity Commission. To cater for the anticipated growth in demand, the capacity of its station will be increased to 10,000 kW. by 1954. At Bowen, the Town Council, which established the service in 1925, is extending the station's capacity by installation of one 1,000 kW. unit. During 1935, a small (3,800 kW.) power house—Australia's first underground hydro station—was placed in service at Barron Falls near Cairns. When the Cairns Regional Board was established during 1946, operation of the station passed to the Board's control and now comprises part of its generating plant, supplying an area of approximately 42,000 square miles.

(ii) *Western Queensland.* In Western Queensland, where a number of small isolated generating stations supply power to some of the larger towns, the Commission has evolved a plan to increase and modernize existing capacity. It involves installation of small internal combustion units ranging in size from 100 kW. to 600 kW. according to the load likely to be experienced, and conversion from direct to alternating current supply. The Government is assisting the scheme by subsidy—a feature of electrical development in Queensland. In general, the assistance provided comprises subsidies of up to one-third of capital costs on annual loan charges, with special subsidies of up to 50 per cent. for authorities in isolated areas.

In addition to improving supplies to the larger western towns, a scheme has been devised for electricity supplies for smaller towns in the western districts, where consumers range from 50 to 200. Subsidies of 65 and 60 per cent. will apply in those cases where the number of consumers supplied is less than 100 and 200, respectively. This plan is now being implemented and ten townships in the west of Queensland have been provided with the amenities of electricity. Work is at present proceeding on similar schemes for a further four townships and such supply is expected to be available before the close of 1953. The power is being supplied by small oil driven generating sets with automatic controls, which can be run with a minimum of operating attendance.

(iii) *South-eastern Queensland.* To increase the availability of electric power in the south-eastern area of the State, the two major generating authorities, in conjunction with the Commission, have power station projects under construction which are designed to place in service by 1956 new generating units totalling 203,200 kW. The Southern Electricity Authority is building a station known as Bulimba "B" on a site adjacent to Bulimba "A"—the initial installation comprises 60,000 kW. but the ultimate capacity may reach 180,000 kW. A 3,200 kW. unit at Somerset Dam near Brisbane is expected to be in service during 1953. At Tennyson in the Brisbane area the City Council is constructing a new power station—initial capacity 60,000 kW. which may ultimately be increased to 180,000 kW. To supplement capacity pending operations of these projects, "packaged" generating units totalling 20,000 kW. have been obtained from overseas; of these 10,000 kW. has been installed at Tennyson and 10,000 kW. at Ipswich, both of these "packaged" stations being commissioned early in 1953. In addition to catering for the anticipated increase in demand from industrial and domestic sources, this new capacity will be called on to supply energy for the electrified suburban railways—a project upon which preliminary work has commenced.

(iv) *The Burdekin River Hydro-electric Project.* In the vicinity of Townsville, the Commission, acting on behalf of the Burdekin River Authority, has investigated the proposed hydro-electric development of the Burdekin River. This project is linked with the plan to conserve the waters of the river for irrigation, and surveys undertaken indicate that approximately 80,000 kW. could be generated. It has been estimated that a station approaching this size should meet the requirements of Townsville and the adjacent areas, including the coal mines in the region of Collinsville, for at least 20 years, and by obviating the continuous operation of thermal plant, achieve significant savings in fuel. In addition, construction of this hydro station will obviate the need to install new thermal capacity at Townsville within a relatively short time.

#### § 4. South Australia.

1. *General.*—An account referring to the companies generating electric power in South Australia prior to the advent of the Adelaide Electric Supply Co. Ltd., and describing the development of that company's activities, is given in Official Year Book No. 39. Also included in the account is some reference to the early measures of public control over electricity supply in South Australia and the extent to which they were applied, and also to the inquiries into the activities of the Adelaide Electric Supply Co. Ltd. in 1932 and 1935.

Following upon an inquiry instituted by the Government in 1943 relative to measures for increasing electricity supply to the metropolitan area and country districts the Electricity Act 1943 was passed which, *inter alia*, established the South Australian Electricity Commission. However, until the State assumed full responsibility for the supply of electric power, this body was not able to do much more than exercise the formal functions conferred on it by the Act.

Under the provisions of Section 3 of the Adelaide Electric Supply Company Act 1944, a Royal Commission was appointed to inquire into and report upon the supply of electricity by the Company and upon all matters concerning it. The Commission presented its report on 28th August, 1945, the main substance of which was, subject to certain considerations and assumptions, that the Government acquire the assets and liabilities of the Adelaide Electric Supply Co. Ltd., and the responsibility for the generation and transmission of electric power in South Australia be vested in a public authority to be called the South Australian Electricity Trust, or, alternatively, if acquisition were not considered desirable, that prices charged for the supply of electricity by the Company be fixed by regulation and determined from time to time by a Committee appointed by the Governor in Council, giving due regard to the interests of the public and a fair return to the shareholders of the Company. The Commission also recommended that an inquiry be held forthwith by the South Australian Electricity Commission regarding the co-ordination of electricity supplies in the State, and that the Commission have power to veto any proposals for the construction of works to generate and transmit electric power.

2. **The Electricity Trust of South Australia.**—Early in 1946, a Bill was passed transferring the assets of the Adelaide Electric Supply Co. Ltd. to the newly formed Electricity Trust of South Australia, which became responsible for unification and co-ordination of the major portion of the State's electricity supplies. This legislation provided that the Trust should take over the powers vested in the South Australian Electricity Commission under the 1943 Act, which, after establishment of the Trust, would cease to exist. In addition to the powers specified in the Adelaide Electric Supply Company's Acts 1897-1931, the Trust may, *inter alia*, supply electricity direct to consumers within a district or municipality with the approval of the local authority, and by agreement with other persons who generate or supply electricity, arrange to interconnect the mains of the Trust with those of other persons, and give or receive supplies of electricity in bulk.

3. **Capacity and Production.**—There are three main categories of organizations generating electric power in South Australia, namely :—(a) Governmental, which include the Electricity Trust ; (b) Local Authorities, e.g., municipal and district councils, Renmark Irrigation Trust, Municipal Tramways Trust ; and (c) Other, including individuals and firms primarily engaged in generating power for sale, firms generating power primarily for their own use but supplying outside consumers, and firms generating power for their own use.

In 1951-52 total installed capacity in South Australia was 221,450 kW. and units generated totalled 761 million kWh. compared with 361 million kWh. in 1941-42.

Of the total installed capacity, the Electricity Trust of South Australia operated plant with a capacity of 158,700 kW. It is thus the most important single authority supplying electricity in the State. There were approximately 191,200 consumers of electricity, of whom about 165,600 were supplied by the Trust. Its major steam stations were Osborne "A" (79,000 kW.) and Osborne "B" (75,000 kW.—since increased to 120,000 kW.) while the balance of the capacity controlled consists of a number of small internal combustion plants located in rural districts.

No hydro-electric potential exists in South Australia. Steam generating units comprise 92 per cent. of installed capacity and the balance, 8 per cent., is internal combustion equipment. Until recently, all fuel consumed in the thermal stations was obtained from sources outside the State, and at times power restrictions were necessary owing to the inadequacy of supplies.

4. **Leigh Creek and other new Capacity.**—With a view to achieving independence of external sources, steps are being taken to install boilers designed to burn locally-mined fuel. Fairly extensive deposits of low-grade sub-bituminous coal are obtainable at Leigh Creek, about 370 miles north of Adelaide. Under the Electricity Trust of South Australia Act Amendment Act 1946, the Trust was given authority to develop Leigh Creek coal for use in its own undertakings and to sell or otherwise dispose of any surplus production.

In order to cope with the rapidly increasing demand for power, the Electricity Trust is installing two additional 30,000 kW. units at Osborne "B". These will complete the "B" station which will then have a total capacity of 180,000 kW. Another major work under construction is the regional power station at Port Augusta, where three 30,000 kW. units will be installed, the first of which is due to be commissioned in 1954. One of the principal reasons for locating the station at Port Augusta is its proximity to the Leigh Creek coal, thus eliminating a considerable part of the long and costly haul to Adelaide. A new standard gauge line is to connect Leigh Creek with Port Augusta; a system of power transmission lines is to inter-connect the metropolitan stations with Port Augusta by way of Port Pirie; supply to country areas will also be facilitated or increased. The Trust is responsible for electricity supply from Port Lincoln and, as at 30th June, 1952, operated diesel stations with an installed capacity of 1,725 kW. This will be supplemented by further diesel and steam plant in the Trust's new power station at Kirton Point. Extensions are planned to the existing steam station at Leigh Creek, which include the installation of two steam units each of 1,500 kW.

Present works are expected to increase installed capacity to 230,000 kW. by the end of 1954. Total plant installed and on order is 334,000 kW.

5. **The Municipal Tramways Trust.**—In addition to the instrumentalities mentioned above which are engaged in the generation and distribution of electric power in South Australia, the Municipal Tramways Trust operates a power station of 26,000 kW. at Port Adelaide, which supplies energy for traction purposes. In 1943 a 5,500 kW. frequency changer was installed to form a link between the power stations of the Trust and the Electricity Trust of South Australia to permit interchange of power when necessary. In 1952 the service consumed approximately 36 million kWh. of electricity.

## § 5. Western Australia.

1. **General.**—Electrical undertakings in Perth and Fremantle formerly owned by the Perth City Council, the Western Australian Government Electricity Supply, the Fremantle Municipal Tramways and Electric Lighting Board and other metropolitan municipal and road board supply authorities have now been taken over by the State Electricity Commission of Western Australia. For information on the early history of electricity supply in the metropolitan area see Official Year Book No. 39, p. 1189.

2. **Metropolitan Undertaking.**—Statistics relating to activities at the Metropolitan undertaking are shown in the following comparative table:—

WESTERN AUSTRALIA : METROPOLITAN UNDERTAKING.

Particulars.	1928-29.	1938-39.	1951-52.
Plant capacity .. .. kW.	32,000	57,000	103,000
Maximum load .. .. kW.	21,500	33,000	76,000
Units generated .. .. Mill. kWh.	80	137	338
Coal used per unit generated .. .. lb.	3.1	2.77	1.92
Coal used—			
Collie small.. .. tons	110,460	165,355	289,419
Imported .. .. "	427	3,367	..

As a result of a separate inquiry conducted at the same time as the early investigations into the proposed new station at South Fremantle, a recommendation was made favouring conversion of the East Perth 40 cycle system to the British and Australian Standard Frequency of 50 cycles per second. The recommendation was adopted and implemented by making the frequency of generation at South Fremantle 50 cycles and installing at East Perth a frequency changer able to convert 25,000 kW. of energy from one frequency to the other. Change-over of consumers' plant is proceeding and a large number of important loads are now supplied at 50 cycles.

3. **Kalgoorlie.**—In Kalgoorlie, the Municipal Council in 1895 first established electricity supply and by 1945 it was supplying 3,350 consumers with direct current from a diesel station of 1,350 kW. generating capacity. Primarily established to supply power for the gold mines and for traction, the Kalgoorlie Electric Power and Lighting Corporation operates a steam station of 18,750 kW. and maintains a 22 kV. line of 21 miles to the Celebration mine. Alternating current is also supplied to about 1,000 consumers, and bulk supplies are provided to the Kalgoorlie Electric Tramways Limited. The Corporation's undertaking generates approximately 45 million kWh. and consumes about 100,000 tons of wood fuel per annum.

4. **General Pattern of Electricity Supply.**—The pattern of the generation and distribution of electric power in Western Australia consisted until recently of a number of isolated systems each supplying a particular area. Except in the metropolitan area and in the area embraced by the South-West Power Scheme (*See* para. 6 below), where in both cases electricity supply is in the hands of the State Electricity Commission of Western Australia, local authorities are generally responsible for the supply of electricity for domestic, industrial and traction purposes. In the area between the Great Southern Railway from Northam to Albany and the west coast, however, the State Electricity Commission has now constructed transmission lines to give central station supply to the towns and their surrounding rural areas. In addition, there are several mining companies which generate electricity for use in their mines. In order to cater for the expected growth in demand, capacity of the State's major generating stations is being increased and designs are proceeding for the inter-connexion of the Perth-Fremantle system with the south-western area.

The main load centre of the State is, of course, the Perth-Fremantle area into which is concentrated the major portion of the State's population and industry. The pending inter-connexion between the Metropolitan and Country systems is, however, expected to lead to a gradual decentralization of load.

5. **The State Electricity Commission of Western Australia.**—(i) *Origin and Aims.* In order to ensure an organized and co-ordinated future growth of electricity generation and distribution throughout the State, the Government introduced a Bill in 1945 to establish the State Electricity Commission, which, together with an Electricity Bill, became law early in 1946. Under these Acts, the Commission was given power, *inter alia*, to secure the ultimate co-ordination of all State or other electrical undertakings in the State, to construct and operate power stations and transmission lines and purchase as a going concern and carry on the undertaking of any supply authority. Under the Electricity Act, which should be read in conjunction with, and is subject to, the State Electricity Commission Act, no person or organization is permitted to construct or extend an electricity supply undertaking without consent from the Commission. Local authorities are empowered to operate and construct power stations and other works associated with the supply of electricity, provided that authority is first obtained from the Commission and any proposals are not inconsistent with the Commission's plans.

(ii) *New Projects.* Since its inception in 1946, the Commission has proceeded with the task of increasing generating capacity in an endeavour to cater for a greatly increased demand for power. Long-range plans have been formulated to inter-connect the south-western portion of the State with the Perth-Fremantle system. One of its most important and immediate problems was to increase the capacity of the generating equipment serving Perth and Fremantle. During the 1939-45 War years, it became

evident that growth of demand for electric power would necessitate provision of additional generating equipment in the metropolitan area as soon as possible. Accordingly, the Government Electricity Supply authority commenced design work for a new station of 50,000 kW. capacity. Contracts were let in 1945 and construction commenced on a site selected at South Fremantle, on the coast south of Fremantle proper. Responsibility for completion of this project was given to the Commission under the Act of 1946. As it was considered that an even larger station would be required, provision was made for the installation of two additional units giving an ultimate capacity of 100,000 kW. Steam is furnished by eight boilers designed to use pulverized coal from Collie, which is located about 120 miles from the station. By 1951, two units had been placed in service and the output was being fed into the metropolitan system. The Commission plans to have all units in operation during 1953 and 1954.

Most of the plant at the East Perth power station, which passed to the Commission's control in 1946, is due for retirement. Work is now proceeding upon dismantling the oldest boilers and generators in order to make room within the existing buildings for new and modern plant which will possess the merit of high efficiency, yet may be cheaply installed by requiring a minimum of site preparation, building and distribution expenditure. Current contracts provide for the installation of 30,000 kW. of new plant in this station. A new cooling plant is also being provided.

6. *South-west Development.*—At the request of the Government, the Electricity Advisory Committee in 1945 submitted a report recommending, amongst other things, that a National Power Scheme for the south-west be proceeded with (implementation of the recommendation of a previous Committee in 1939 had been prevented by the conditions then prevailing). The plan provided for acquisition of the existing Collie power station and installation of additional generating capacity, construction of a power station at Bunbury and inter-connexion of the south-west scheme with the metropolitan system. On 12th October, 1946, the State Electricity Commission acquired the Collie power station, which prior to 1946 was owned and operated by the Collie Power Company Limited. At the date of acquisition, the station's installed capacity was 5,000 kW., comprising two steam units. The capacity of the station was increased to 12,500 kW. in 1952.

Since 1950, the Commission has acquired a number of electrical undertakings from municipal bodies and private organizations in the south-west area and is proceeding with arrangements for the purchase of others. In August, 1951, the first portion of the South-West Power Scheme was officially opened at Collie, and many of the south-west towns have now been connected by transmission line to the Collie Power Station. When completed, a system of power lines will reticulate electricity over an area of approximately 1,800 square miles. Tenders have been called for the first two 30,000 kW. units for a new power station at Bunbury, which will be inter-connected by transmission lines to the Collie and South Fremantle stations, permitting an interchange of power between the metropolitan and south-west systems.

## §. 6. Tasmania.

1. *General.*—A considerable part of the catchment in Tasmania is at high level, with a substantial natural storage available, and this has made it possible to produce energy at lower cost than elsewhere in Australia, or in most other countries. Other contributing factors to the low costs are that rainfall is distributed fairly evenly throughout the year, with comparatively small yearly variations. The cheap power has caused several large electro-chemical works with high load factor to become established in Tasmania, and as a consequence the system load factor is also very high and at present is 65 per cent.

For information on hydro-electric development in Tasmania prior to the establishment of the Hydro-Electric Commission in 1930 see Official Year Book No. 39, pp. 1192-3.

2. **The Hydro-Electric Commission.**—(i) *Present System.* In 1929 the Government passed the Hydro-Electric Commission Act, under which was established the Hydro-Electric Commission, and which vests in the Commission, with some minor exceptions, the right to use the waters of the State of Tasmania and authorizes it to develop and reticulate electric power for all purposes. In 1930 this corporate body took over the State hydro-electric undertaking and the business of the Hydro-Electric Department.

After the creation of the Commission it was decided to utilize the controlled flow of water from the Great Lake and the fall in the level existing between there and the Waddamana forebay lagoon. An earthen dam was built to divert the water from the Shannon River, first into a canal, and then by two pipelines to the Shannon Power Station 258 feet below, where 10,800 kW. was added to the system in 1934. The water, after passing through Shannon Power Station, discharges into the Waddamana Canal, to be used again at Waddamana Power station. It soon became necessary to consider a larger scheme, and in 1933 it was decided to utilize the run-off of a catchment to the west of the Great Lake nearer the regions of heavy rainfall. Construction was started in 1934 and the initial installation of three 15,700 kW. Pelton Wheel turbines operating under a head of 980 feet was placed in service in February, 1938. This and other works made it economical to increase the turbine capacity of the Tarraleah Station to 94,000 kW.

Before the outbreak of the 1939-45 War, it was decided that in order to make better use of the Great Lake storage it would be necessary to increase the capacity of the Waddamana Station and to duplicate the Waddamana canal. Although the war impeded progress, two units of 12,500 kW. had been installed by its termination, while a third unit was put into commission during 1946.

The power station was brought to its ultimate development by the installation of a fourth unit in 1949, which brought the total capacity to 49,800 kW. at Waddamana "B".

Work on the Clark Dam started in 1939, and is now completed. The Butler's Gorge power station at the foot of the dam was put into commission in September, 1951. The single turbine operates at a maximum rated output of 12,800 kW. and to increase the security of the system and to permit variable seasonal loading of Tarraleah, a second canal will be constructed from the Clark Dam to Tarraleah.

(ii) *New Capacity.* The Hydro-Electric Commission is at present engaged upon the most progressive construction programme in its history, and it is expected that the present generating capacity will be almost doubled in 1955, and nearly trebled by 1960. It is considered that at least 1,865,000 kW. of continuous power can be economically developed. So far 218,700 kW. of generating plant is in commission, while present construction is planned to bring this total to 404,500 kW. by 1955. Further construction which has been approved by Parliament and is about to be commenced will increase this to 566,400 kW. There will remain, however, very considerable resources for future development.

The Trevallyn Power Development is being undertaken primarily to meet the requirements of the aluminium industry. It involves the construction of a power station at sea level—though 30 miles from the sea—together with civil engineering works to divert water from the Second Basin in the South Esk River to a power station on the River Tamar, about two miles from Launceston.

The extensive plateau area between the Great Lake and Lake St. Clair drains into two main catchment areas—the Nive River and the Lake Echo—Dee River Catchments. The Tungatinah Power Development will regulate most of these waters and following its completion practically the whole run-off from the Central Plateau will have been brought under control.

The difference in levels between Lake Echo and Dee Lagoon will be about 600 feet and in order to utilize this head, a power station (to be known as Lake Echo Power Station) will be built on the banks of the New Dee Lagoon. It is proposed to install a single generating set in this station and the turbine will have a capacity of 31,300 kW.

Lake Echo will provide the main storage reservoir for Tungatinah Power Station and it will be drawn upon mainly in times of drought. Lake Echo power station will therefore not operate continuously but only when water is needed to augment the natural run-off from the Nive River Catchment.

The Tungatinah Power Development will regulate the run-off from approximately 400 square miles of country. The safe continuous flow will enable about 48,500 kW. to be generated.

However, in view of the considerable pondage available, the station will be used to provide peak load and spare plant capacity. Turbines with a total capacity of 130,550 kW. will therefore be installed. The first two units each of 26,100 kW. were scheduled to be in operation in mid-1953.

Originally the Wyatinah Power Development Scheme called for one power station to be located on the Derwent River near its junction with the Florentine River. It has recently been decided to vary the original plan and, instead of a single power station on the Derwent River near the junction with the Florentine, there will be two power stations, the first on the Nive River about half a mile downstream from the Nive crossing by the Ouse-Tarralcah Road, and the second near the Derwent River approximately one mile downstream from the Florentine junction. The lower station will have a capacity of 38,300 kW. while the upper station will probably have a capacity of 67,100 kW. so that the total capacity of the development will be about 105,400 kW.

There is every indication that the demand for electric power in Tasmania will increase rapidly. The Commission is conducting extensive surveys and investigation of other schemes with a view to further construction after the completion of the present programme

3. **Power Usage by Secondary Industry.**—After 1930, every effort was made to keep pace with anticipated increases in demand by means of a progressive construction policy. The abundant and comparatively cheap supplies of electricity and other natural resources attracted to Tasmania a number of important secondary industries for which energy costs constitute a significant proportion of the total cost of production. Some of the more important organizations and their continuous power demands when plant is operating are as follows:—Electrolytic Zinc Company of Australasia Ltd., 51,000 kW.; Australian Commonwealth Carbide Company Ltd., 6,500 kW.; Goliath Portland Cement Company Ltd., 1,800 kW.; Associated Pulp and Paper Mills Ltd., 8,600 kW.; Australian Newsprint Mills Ltd., 24,000 kW.; and Australian Aluminium Production Commission, 30,000 kW. (when in production).

## § 7. Commonwealth Territories.

1. **Internal Territories.**—(i) *General.* The electricity supply undertakings at Canberra in the Australian Capital Territory and at Darwin, Katherine, Tennant Creek and Alice Springs in the Northern Territory are operated by the Commonwealth Government. Administration and control of these undertakings is vested in the Commonwealth Department of Works.

(ii) *Australian Capital Territory.* Supply was first established at Canberra during 1915. The Department owns steam stand-by plant of 2,100 kW. capacity which is operated in conjunction with the New South Wales Electricity Commission's generating equipment. The major portion of the Capital City's power requirements are supplied in bulk from the New South Wales inter-connected system. Within the next few years, defence projects at present under construction in Canberra will greatly increase the demand for electrical energy. These requirements will be met from the Snowy Scheme, the first section of which was scheduled for operation in June, 1954, and the power produced is to be fed into the New South Wales inter-connected system at Cooma.

(iii) *Northern Territory.* At Darwin, supply was established by the Town Council in October, 1934, but later, during April, 1937, responsibility for generation and supply was placed in the hands of the Northern Territory Administration. The power station is equipped with diesel generating plant of 2,010 kW. capacity. During 1951, the first

of two new 850 kW. diesel sets was placed in service—it is expected that the second set will be operating in 1953. Small diesel generating units supply the requirements of Katherine, Tennant Creek and Alice Springs.

In 1948 it was announced that the Department of Works and Housing (now the Department of Works) had selected a site for a hydro-electric station on the Adelaide River, 72 miles from Darwin. The scheme is designed to augment supply to Darwin and suburbs when the diesel equipment at present installed is unable to cope with the demand for power. No constructional work has yet been undertaken on the project.

2. **External Territories—Papua and New Guinea.**—Responsibility for the operation and establishment of electrical undertakings in Papua and New Guinea is vested in the Administration of the Territory of Papua-New Guinea, whose headquarters are located at Port Moresby. Diesel equipment totalling 1,372 kW. is in operation at Port Moresby (750 kW.), Samarai (52 kW.), Lae (360 kW.), Madang (50 kW.) and Rabaul (160 kW.). At Wau, New Guinea, supply is provided to a small number of residents in the town by New Guinea Goldfields Ltd., operating under franchise from the New Guinea Administration. At Bulolo, near Wau, Bulolo Gold Dredging Ltd., operates a hydro station of 5,500 kW. Power produced is used to operate the Company's dredges and bulk supplies are provided to the New Guinea Goldfields Ltd.

Vast hydro-electric potential exists in New Guinea—it has been estimated at 15,000,000 kW., but because of the island's location, absence of large load centres and lack of industrialization, only a very small proportion could, at present, be economically developed. However, there are indications that some industrial expansion will be effected in the main centres of population within the next few years.

In 1950 it was announced that the Commonwealth Government had joined with British Aluminium Co. Ltd. of London to locate and develop large capacity hydro-electric schemes in New Guinea. A new company has been formed, known as New Guinea Resources Prospecting Co. Ltd., with a capital of £100,000. The Commonwealth holds 51 per cent. of the shares and has a controlling interest on a board of five members. The agreement for formation and operation of the Company is administered by the Commonwealth Department of Supply, except in matters requiring compliance with the law of New Guinea, when responsibility for administration rests with the Department of Territories. Surveys and comprehensive investigations are in progress.

With a view to providing cheap power in the near future for domestic purposes and also to industry in the Port Moresby, Lae and Rapopo areas, the Department of Territories has drawn up a plan to construct a number of small hydro-electric schemes in Papua and New Guinea. These projects involve expenditure of more than £1,000,000 over the next three years.

The more important projects and estimated costs are as follows:—Port Moresby (Papua), £192,000; Lae (New Guinea), £200,000; Rapopo (New Guinea), £440,000; Madang (New Guinea), £200,000.

Work has commenced on the Port Moresby project which will have a capacity of approximately 10,000 kW. The estimated cost of smaller schemes is £186,000.

#### D. STATISTICAL SUMMARY, 1941-42 AND 1951-52.

The following tables which show statistics for each State separately and for the six States combined, relate to:—(i) the numbers and installed capacity of central electric generating stations, (ii) the values of production and output and the average numbers of persons employed in the electricity supply industry and (iii) the amount of electricity generated in both years and the number of ultimate consumers of electricity in 1951-52.

For further statistics of the electricity supply industry (years 1938-39 and 1945-46 to 1950-51) see Chapter XXIV.—Manufacturing Industry, pp. 1027-8.

(a) Approximate figures. An "ultimate consumer" is a person, business, undertaking, etc., that has contracted to receive electric power from a public or private organization supplying this service. The number of ultimate consumers is not synonymous with the number of persons served with electricity because one ultimate consumer may embrace three or four persons, e.g., in a household.

## CHAPTER XXVI.

## WATER CONSERVATION AND IRRIGATION.

## A. RESOURCES, UTILIZATION AND NATIONAL AND INTERSTATE ASPECTS.

## § 1. Introduction.

Official Year Book No. 37, pp. 1096-1141, contained a special article "The Conservation and Use of Water in Australia" prepared by Mr. Ulrich Ellis of Canberra. In subsequent issues much of Mr. Ellis's article of a statistical nature has been advanced, as has the general information on the more important developments in this field, but for details of general, descriptive and historical matter reference should be made to the original article. Appended to the special article was a bibliography of selected books, reports, papers, etc. dealing with the development of the water resources of Australia and their conservation (*see pp. 1140-41*).

For further details on (a) geographical and climatic features determining the Australian water pattern reference should be made to Chapter II.—Physiography; on (b) water supply and sewerage in metropolitan areas, cities and towns to Chapter XV.—Local Government; and on (c) the generation of hydro-electric power to Chapter XXV.—Electric Power Generation and Distribution.

## § 2. Water Resources and their Utilization.

1. **Surface Supplies.**—Though river gaugings have been recorded over considerable periods in some parts of Australia, records elsewhere are intermittent, of short duration, or non-existent. Therefore, it is impossible at present to estimate, with any degree of reliability, the total average annual flow of Australian streams but it has been doubted whether the total average annual flow of all Australian rivers would exceed 60,000,000 acre feet, a figure small in comparison with the flow of rivers in other continents, some examples of which are given below expressed as mean annual discharges in millions of acre feet: Nile, 72; Danube, 228; Amazon, 1,780; Volga, 148; Mississippi, 474; and the ten main rivers of the United States of America, 900 (in the aggregate).

2. **Major Dams and Reservoirs.**—The table below lists existing major dams and reservoirs, together with those under construction or projected, as at the middle of 1952.

## MAJOR DAMS AND RESERVOIRS IN AUSTRALIA.

Name.	Location.	Capacity (Acre feet).	Height of Wall (Feet).	Remarks.
EXISTING DAMS AND RESERVOIRS.				
Humo .. ..	Murray River near Albury	1,250,000	106	Part of Murray River Scheme— storage for domestic, stock and irrigation purposes. To be increased to 2,000,000 acre feet. Hydro-electric power to be developed.
Miena .. ..	Great Lake, Tas- mania	1,125,000	40	Regulates water to Waddamana hydro-electric power station.
Burrinjuck ..	Murrumbidgee River, New South Wales	771,640	247	Storage for irrigation and pro- duction of hydro-electric power.
Lake Victoria	Murray River near South Australian border, in New South Wales	551,700	..	Natural storage for irrigation in South Australia.
Waranga .. ..	Goulburn River, Victoria	333,400	..	Earthen embankment, 23,800 feet long. Irrigation storage.
Eildon .. ..	Upper Goulburn River, Victoria	306,000	..	Rock filled embankment, 2,300 feet long and concrete spillway, 700 feet. Irrigation storage.
Wyangala	Lachlan River, New South Wales	303,900	190	Storage for domestic, stock and irrigation purposes and for generation of hydro-electric power.
Clark .. ..	Derwent River, Tas- mania	243,000	200	Serves Tarraleah hydro-electric power station.
Avon .. ..	Nepean River, New South Wales	173,800	230	Part of Sydney water supply.
Glenmaggie	Gippsland, Victoria	106,000	100	Storage for irrigation.

MAJOR DAMS AND RESERVOIRS IN AUSTRALIA—*continued.*

Name.	Location.	Capacity (Acre feet).	Height of Wall (Feet).	Remarks.
DAMS AND RESERVOIRS UNDER CONSTRUCTION OR PROJECTED.				
Burdekin Falls ..	Burdekin River, North Queensland	6,584,000	150	Projected for generation of hydro- electric power, irrigation and flood mitigation.
Adaminaby ..	Eucumbene River, New South Wales	3,500,000	330	Projected as part of Snowy Mountains Hydro-electric Scheme.
Eildon ..	Upper Goulburn River, Victoria	2,750,000	..	Existing dam being enlarged for irrigation storage and pro- duction of hydro-electric power.
Menindee Lakes Pro- ject	Darling River near Menindee, New South Wales	2,000,000	..	Part of Darling River water conservation scheme—under construction.
Warragamba ..	Warragamba River, New South Wales	1,678,500	415	Under construction for Sydney water supply.
Jindabyne ..	Snowy River, New South Wales	1,200,000	260	Projected as part of Snowy Mountains Hydro-electric Scheme.
Burrendong ..	Macquarie River, near Wellington, New South Wales	914,000	193	Under construction for rural water supplies.
Blowering ..	Tumut River, New South Wales	846,000	300	Projected as part of Snowy diversion scheme.
Somerset ..	Stanley River, Queensland	724,000	130	Under construction for Brisbane- Ipswich water supply.
Tantangara ..	Murrumbidgee River, New South Wales	600,000	150	Projected as part of Snowy Mountains Hydro-electric Scheme.
Warkworth ..	Wollombi Brook (Hunter Valley), New South Wales	400,000	100	Projected as a flood mitigation dam for the Hunter Valley.
Keepit ..	Namoi River, near Gunnedah, New South Wales	345,000	135	Under construction for rural water supplies.
Tinaroo Falls ..	Barron River, North Queensland	320,000	133	Under construction for irrigation purposes in the Mareeba-Dim- bulah area.
Glenbawn ..	Hunter River, near Scone, New South Wales	296,000	240	Under construction as part of Hunter Valley conservation work.
Rocklands ..	Glencg River, Vic- toria	272,000	..	Under construction as part of Wimmera-Mallee domestic and stock water supply system.
Koombooloomba ..	Tully River, North Queensland	146,000	123	Under construction for hydro- electric and possibly irrigation purposes.
Cairn Curran ..	Loddon River, Vic- toria	120,000	..	Under construction as part of Murray-Loddon supply system.
Upper Yarra ..	Yarra River, Vic- toria	110,000	270	Under construction for Melbourne water supply.
Lake Brewster ..	Lachlan River, near Hillston, New South Wales	108,000	..	Storage of rural water supplies for the Lower Lachlan—works almost complete.

The maps on pp. 1073-9 show the positions of the above-mentioned dams and reservoirs.

3. Irrigation.—(i) *History.* For some brief remarks on the history of irrigation in Australia referring to the efforts of the Chaffey Brothers and to the Victorian Irrigation Act in 1886 see previous issues.

(ii) *Extent and Nature of Irrigated Culture.* About half of Australia's irrigated acreage is now in Victoria, and about two-thirds is situated along the Murray and its tributaries (including the Murrumbidgee) in the three States of New South Wales, Victoria and South Australia. In these areas served by the Murray and its tributaries irrigation water is used extensively for vines, orchards, pastures, foddors, and for domestic and stock purposes. Approximately half of Queensland's irrigated acreage is devoted to sugar cane. Western Australia's small irrigated acreage is confined to areas in the south-west where foddors and pastures are served. Irrigation schemes have not been developed in Tasmania or the Northern Territory.

The following table shows the area of land irrigated in each State during the years 1938-39 and 1947-48 to 1951-52 :-

AREA OF LAND UNDER IRRIGATED CULTURE.  
(Acres.)

(a) Source: Water Conservation and Irrigation Commission. (b) Included in Other Crops.  
(c) Includes tobacco, 3,996 acres. (d) Includes lucerne for pasture, 23,302 acres.

For the locations of these areas see maps on pp. 1073-9.

(iii) *Irrigation Trends.* In Official Year Book No. 37, p. 1099, the following trends in irrigation practice were described, viz. :-the improvement of irrigation techniques in established areas, a growing appreciation of the benefits and necessity of irrigation in humid and sub-humid areas with a flush annual rainfall, the use of irrigation to stabilize the stock industries, especially on an "extensive" basis, consideration regarding the provision of weirs to prevent the entry of salt water, the increasing quest for cheap electric power to aid pumping operations for stock, domestic and irrigation purposes, and an increase in the extent of spray irrigation.

(iv) *Research.* Comprehensive programmes of research and investigation are being pursued by State water and agricultural authorities and the Commonwealth Scientific and Industrial Research Organization, often in collaboration. Special attention is being given to the following :-high water tables due to the application of water; surface accumulation of salt and other soil changes associated with irrigation; methods of applying water efficiently; increasing density of stock on irrigated pastures which leads to the spread of such diseases as foot rot and fluke in sheep, and mastitis and contagious abortion in cattle; and growth problems affecting plants and trees.

The Commonwealth Scientific and Industrial Research Organization maintains the following research stations:—Merbein (Victoria)—horticultural problems, particularly of the dried vine fruits industry; Griffith (New South Wales)—influence of irrigation on plant life (using horticultural trees and vegetables as test plants), irrigation methods, land drainage and soil structure; Deniliquin (New South Wales)—pastures; Werribee (Victoria)—diseases of dairy cattle; Ayr (Queensland) and the Kimberley Research Station (Western Australia)—tropical crops and pastures. In the maintenance of Merbein and Griffith Stations the Commonwealth is assisted, financially and otherwise, by the New South Wales Water Conservation and Irrigation Commission, by the Dried Fruits Export Control Board and by private organizations.

The Soils Division of the Organization has made detailed surveys of more than a million acres since 1927, with less detailed reconnaissance surveys over many millions of acres. The Division works closely with State authorities. The keynote of soil investigations is relationship between soil and land use, and there is an increasing tendency to seek such surveys before irrigation districts are established.

The Irrigation Research and Extension Committee plays an important part in the agricultural activity of the Murrumbidgee Irrigation areas. It is representative of the State Department of Agriculture, the Commonwealth Scientific and Industrial Research Organization, the Rural Bank of New South Wales, the Soil Conservation Service of New South Wales and certain farmers' organizations (including Extension Groups). Finance is provided by these authorities on an agreed basis. The objectives are:—to enable the agricultural extension services to the farmers in the defined sub-region to be continued and developed; to provide a system for advising on local agricultural policy and organization; to provide means for farmer opinion to have due weight in the consideration of regional agricultural administration and policy; to achieve a unified approach to sub-regional extension in all branches of agriculture; to advise on the research needs of the sub-region and the co-ordination of the agricultural research of the various rural institutions working therein; to achieve close liaison between research and extension; and to conduct research in extension methods.

4. **Preservation of Catchments.**—As water conservation commences on the catchments it is becoming increasingly recognized that anything which interferes with catchment efficiency affects the quantity of water available for all purposes. Active steps are being taken to counteract soil erosion to conserve soil generally, and to minimize effects of floods, overstocking, bush fires, and destruction of vegetative cover. All States and the Commonwealth have initiated forestry policies which provide for reforestation and the preservation of catchments. In recent years efforts to counteract soil erosion have been intensified and there is some evidence of a more unified approach to catchment, water, forestry, and land use factors regarded as parts of a single problem.

5. **Sub-surface Supplies.**—(i) *General.* While a more or less complete general picture of the available and potential surface water resources exists, much remains to be done with regard to the location and development of sub-surface supplies (artesian, sub-artesian and ground water), in view of their importance as the basis of settlement over large areas of Australia.

The extent and potentials of the artesian basins—particularly the Great Artesian Basin—have been fairly accurately determined, and the use of sub-artesian supplies is extensive and more development is possible. The shallower ground-water supplies, however, particularly along alluvium valleys and coastal sandbed areas, have not been investigated and developed in any degree, except in a few localities.

(ii) *Artesian and Sub-artesian Supplies.* Pressure water, variable in quantity and quality, either artesian or sub-artesian, is obtainable in many parts of Australia, the various artesian basins extending over approximately one-third of the continent. A map of Australia showing the extent of the known artesian basins appears on page 1211 of Official Year Book No. 39.

The Great Artesian Basin, the most extensive in the world, underlies an area of approximately 550,000 square miles, comprising about 350,000 in Queensland, 76,000 in New South Wales, 100,000 in South Australia and 24,000 in the Northern Territory. Of the numerous defined major and minor water-bearing basins in Australia, the following are the principal:—

## PRINCIPAL WATER-BEARING BASINS: AUSTRALIA.

Name.	State.	Geological Age.	Area.	Depth of Water.
			Square Miles.	Feet.
Great Artesian..	Queensland, New South Wales, South Australia and Northern Territory	Cretaceous-Jurassic..	550,000	Up to 7,000
Murray ..	Victoria, New South Wales, and South Australia	Miocene .. ..	107,000	100 to 900
Torrens ..	South Australia	Recent Pleistocene ..	4,000	Up to 600
Coastal Plain ..	Western Australia	Recent Jurassic ..	10,000	200 to 2,500
Adelaide ..	South Australia..	Recent Oligocene ..	1,100	100 to 500
Gippsland ..	Victoria ..	Pleistocene-Oligocene	1,800	200 to 1,800
Port Phillip ..	Victoria ..	Pleistocene-Oligocene	300	Up to 600
Eucla ..	Western Australia, South Australia	Pliocene-Miocene ..	68,000	300 to 2,000
North-west ..	Western Australia	Tertiary Permian ..	40,000	400 to 4,000
Collie ..	Western Australia	Permian .. ..	500	..
Desert ..	Western Australia	Permian .. ..	130,000	200 to 3,000

More than 3,000 artesian bores have been constructed within the Great Artesian Basin and the daily free discharge from all bores continuing to flow in Australia has been stated to exceed 350 million gallons, of which the loss by evaporation and seepage has been estimated at more than 90 per cent. Sub-artesian bores and wells throughout Australia number more than 200,000.

Artesian water generally is good stock water, but it is unsuitable for plant life; while in certain areas sub-artesian waters are suitable for all uses including irrigation. In some districts a considerable amount of irrigation is carried out from shallow ground-water supplies.

In common with other countries possessing artesian supplies, Australia has been faced with the problem of flow diminution. It was recognized early that flows were diminishing as more bores were drilled, but it is now considered that while many of the bores will ultimately cease to flow, many will not cease, but will assume a perpetually steady rate of flow, corresponding with the average intake of water from rainfall absorbed by sandstone outcrops. Diminution in flows from artesian bores has emphasized the need to eliminate wastage as much as possible, and investigations have been made regarding wasteful methods of distribution of artesian water by open channels or "bore drains" and the careless use of water. (For greater detail on this subject see Official Year Book No. 37, pp. 1103-4.)

(iii) *Ground Water.* Ground water supplies are used in various parts of Australia for industry, irrigation, stock and domestic purposes, the most notable scheme being that conducted by the Hunter District Water Board where ground water from the Tomago sandbeds near the mouth of the Hunter River, New South Wales, is used to supplement water storages fed from surface sources. For further information on ground water see Official Year Book No. 37, p. 1104.

### § 3. National and Interstate Aspects.

1. *General.*—As the Government of Australia is conducted under a Federal system, and as the Commonwealth Constitution makes special reference to water problems, both the Federal and the State Governments have an interest in the control and conservation of water. As main responsibility for control of water resources resides in the State governments, and as political boundaries sometimes intersect river valleys and catchments, co-operation between governments has been necessary to develop resources in certain cases. Specific examples of Commonwealth-State and interstate co-operation and approach are given in the following sections.

In the Report on Irrigation, Water Conservation and Land Drainage presented to the Commonwealth Government by the Rural Reconstruction Commission in 1945 national aspects of water conservation and use were emphasized. The report recommended the adoption of an all-Australian plan, having the assent of the various governments, to obviate lack of co-ordination, and that the Commonwealth should endeavour to promote interstate co-operation and co-ordinated development generally.

Following a resolution of the Australian Agricultural Council, the Irrigation Production Committee was established in 1938 for the purpose of carrying out comprehensive investigations into the various agricultural activities of lands irrigable by the River Murray and its tributaries in order to co-ordinate developmental activity there but its work was interrupted by the war. Resuscitated in 1946 as the Irrigation Production Advisory Committee, and representative at first of the Commonwealth and the States of New South Wales, Victoria and South Australia, and later also of such other States as desired representation and with the Commonwealth representative, the Assistant Secretary, Division of Agricultural Production, as chairman, its functions are :—(a) to prepare for the consideration of the Australian Agricultural Council, or any Committee of Ministers appointed by the Council, conclusions formed from investigations to be carried out by Commonwealth and State Officers into the various agricultural industries which it is possible to develop on irrigated lands ; (b) to undertake long-term co-ordination of land utilization in irrigable areas served by the River Murray and its tributaries, this involving co-ordination of all available lands and the carrying out of such supplementary investigations as may prove necessary.

2. *Murray River Scheme.*—(i) *General.* The Murray River and its tributaries form the largest river system in Australia. The catchment is approximately 414,000 square miles or one-seventh of the area of the Australian continent, comprising five-sixths of New South Wales, over one-half of Victoria, one-sixth of Queensland and one-fortieth of South Australia. The Murray proper is 1,600 miles long. Its main tributaries are the Murrumbidgee (1,050 miles), the Darling (1,760 miles), and the Goulburn (280 miles). The average annual flow of each of the chief contributory streams is as follows :—Upper Murray, including the Mitta Mitta and Kiewa Rivers, 3,400,000 acre feet ; Murrumbidgee River, 2,600,000 acre feet ; Goulburn River, 2,250,000 acre feet ; Darling River, 2,150,000 acre feet ; and Oxens River, 1,200,000 acre feet. Irrigated production in the River Murray basin is mainly in the form of wine, dried fruits, fresh fruits, dairy produce, wool, fat lambs, rice, vegetables, poultry, eggs and pigs.

For a brief summary of the historical events leading up to the River Murray Agreement (1915) by the Governments of the Commonwealth, New South Wales, Victoria, and South Australia see issues of the Year Book prior to No. 39. The Agreement provided for the construction of works, the allocation of the water between the three States, and the appointment of a Commission to implement the Agreement. The Commission comprises four Commissioners, representing the Commonwealth and the three States respectively. The Commonwealth representative presides.

(ii) *River Murray Waters Agreement.* Under the Agreement construction works are carried out by the States (who are also responsible for maintenance) subject to the approval and direction of the Commission. The Agreement provides that the minimum quantity of water to be allowed to pass for supply to South Australia in each year shall be sufficient to fill Lake Victoria storage once, and with the aid of water returned from Lake Victoria, to maintain certain specified flows in the lower river varying from 47,000 acre feet per month in the winter months to 134,000 acre feet per month in the four summer months of maximum demand—the total amounting to 1,254,000 acre feet over twelve months. These flows are to meet domestic and stock requirements in South Australia, losses of

water in lockages and evaporation losses other than in the lakes at the Murray mouth, together with 603,000 acre feet per annum for diversion from the Murray for irrigation in South Australia. The flow at Albury is shared equally by New South Wales and Victoria, and each of these States has full control of its tributaries below Albury, subject in each case to the fulfilment of the South Australian allocation.

Under the original agreement the major works comprised two large storages—one on the Upper Murray above Albury (the Hume Reservoir) and the other at Lake Victoria in New South Wales near the South Australian border. In addition, provision was made for a number of weirs and locks along the Murray and Murrumbidgee Rivers. In 1934 the Agreement was varied to provide for the construction of a diversion weir at Yarrawonga (145 miles downstream from the Hume Reservoir), and the provision of barrages at the mouth of the River to prevent the entry of salt water. The amendment also limited the original proposal for 26 weirs and locks on the Murray and 9 on the Murrumbidgee to 13 on the Murray and two on the Murrumbidgee. At the same time it was agreed that the Hume Reservoir should be completed to a capacity of 1,250,000 acre feet with provision for later increase to 2,000,000. As a result of the amendment, continuous navigation is limited to a route of 600 miles, extending from the mouth to a point some 50 miles above Mildura. All works authorized under the amended Agreement (except the enlargement of the Hume Reservoir to 2,000,000 acre feet) have been carried out at a total cost of £12,000,000, of which approximately half represents the cost of the Hume Reservoir. Expenditure has been shared equally by the Commonwealth and the three States.

At a Ministerial Conference held in October, 1948, the four parties to the Agreement resolved that the enlargement of the Hume Reservoir to 2,000,000 acre feet and the doubling of the capacity of the inlet channel to Lake Victoria storage should be proceeded with immediately at a further estimated cost of £2,000,000. The resolutions of the Conference were subsequently incorporated in an amending agreement which was ratified by legislation by all parties. Under the terms of the amending agreement, the States of New South Wales and Victoria are required to report annually on the condition of the Hume Reservoir catchment and to take any special action recommended by the River Murray Commission in regard thereto. The River Murray Commission has also power to initiate proposals for the better conservation and regulation of the waters of the Murray, and may cause surveys and investigations concerning such proposals to be undertaken.

At the Conference of Ministers held in July, 1949, to consider the diversion of the Snowy River, Conference decided that, by diversion of streams in the Snowy Mountains area, an average of approximately 400,000 acre feet per annum would be added to the Murray River. Although a minimum storage of 250,000 acre feet would be necessary to regulate this additional water, Conference considered it would be unwise to limit to this capacity any storage which might be constructed, and felt that a storage of not less than 1,500,000 acre feet should be provided, in order to give additional regulation of the Murray River itself as well as to provide for regulation of the diverted waters. Hydro-electric potentialities would also affect the size of the storage.

The River Murray Commission investigated the position and found that an increase in capacity of 500,000 acre feet in storage on the Upper Murray River above Albury is the maximum that is economically justifiable for the regulation for irrigation purposes of the waters of the Upper Murray River and of waters added from the Snowy River. The Commission agreed that this increase could best be provided by increasing the capacity of the Hume Reservoir to 2,500,000 acre feet, but if for hydro-electric purposes additional storages become justified in the future further increases would best be provided at some other site. It subsequently recommended to the Contracting Governments that the River Murray Waters Agreement be amended to provide for this enlargement of the Hume Reservoir to 2,500,000 acre feet.

The total estimated quantity of water diverted in 1951-52 for irrigation and other purposes from the Murray and its tributaries (under the River Murray Agreement) was as follows (in acre feet):—New South Wales, 2,069,000; Victoria, 1,841,000; South Australia, 158,000; a total of 4,068,000 acre feet.

(iii) *River Murray Works.* One of the major works of the Murray River Scheme is the Hume Reservoir, situated just below the junction of the Murray and Mitta Mitta Rivers, 10 miles above Albury, forming a lake of 33,000 acres. The design comprises a

mass concrete spillway and outlet works extending 1,000 feet and an earthen embankment 106 feet high extending for 4,000 feet across the river flats. The length of the total structure is approximately 1 mile. Ultimate plans include provision for hydro-electric generation, and preliminary works associated with the construction of the power station are now in hand. Work is proceeding on the completion of the reservoir to its designed capacity of 2,000,000 acre feet and also on the enlargement of the inlet channel to Lake Victoria, necessary to permit greater storage of periodic flood flows of short duration.

The Yarrowonga Diversion Weir was completed in 1939 to raise the river level so that water could be diverted by gravitation into main channels constructed on either side of the river. Between the Yarrowonga Weir and the Murray mouth, thirteen weirs and locks have been built. Two flood diversion weirs have been constructed on the Murrumbidgee—one between Hay and the Lachlan Junction; and the other below the Lachlan Junction.

The Mulwala Canal, served by the Yarrowonga Weir, has an off-take capacity of 2,500 cubic feet per second, and will serve 1,500,000 acres of land in New South Wales. The Yarrowonga Channel, on the Victorian side, has an off-take capacity of 1,250 cubic feet per second, and is designed to serve 270,000 acres. Only a portion of both these areas will be irrigated.

Adjoining the river in New South Wales and 35 miles from the Murray-Darling Junction, Lake Victoria storage, with a capacity of 551,700 acre feet and a surface area of 27,670 acres, was completed in 1928. The water released from Lake Victoria is used by the South Australian settlements.

Five barrages across channels near the Murray River mouth connecting Lake Alexandrina with the sea were completed in 1940 to prevent ingress of salt water to Lakes Alexandrina and Albert and to the lower river, thereby increasing the productivity of adjacent lands. The structures maintain a sufficiently high level for 50 miles up river to permit watering by gravitation of a considerable area of reclaimed river flats. The total distance across the barrages and intervening islands is 15 miles.

In addition to the works carried out under the auspices of the Commission, the separate States have constructed thousands of miles of distribution channels and provided a number of storages on the tributaries, thereby contributing very materially to the large amount of irrigation development in the Murray Basin. The total capacities of such main storages are: New South Wales—Burrinjuck (Murrumbidgee), 771,640 acre feet; Wyangala (Lachlan), 303,900 acre feet; Victoria—Eildon (Goulburn), 306,000 acre feet (now being increased to 2,750,000 acre feet); Waranga (Goulburn), 333,400 acre feet. No storages exist on the Murray in South Australia. More details of these and other State works on Murray tributaries will be found in the sections dealing with State systems.

**3. New South Wales—Queensland Border Rivers Agreement.**—The New South Wales—Queensland Border Rivers Agreement provides for the construction of certain works on parts of those portions of the Severn, Dumaresq, Macintyre and Barwon Rivers which constitute part of the boundary between New South Wales and Queensland, for the furtherance of water conservation, water supply and irrigation in those States. The Agreement, which was ratified by the Parliaments of both States, was executed on 27th November, 1946 and came into effect on 1st July, 1947. However, the Dumaresq-Barwon Border Rivers Commission, which is charged with the duty of giving effect to the Agreement and the ratifying Acts, was not constituted until 1st May, 1948.

The works to be constructed comprise a dam on the Dumaresq River at a site to be selected by the Commission to give a storage basin with a capacity as large as is reasonably practicable and not less than six nor more than twelve weirs as may be found necessary to meet the requirements of irrigation along the rivers. Provision is also made for the construction of not more than four regulators in the effluents from the carrier rivers and for the taking over of the existing weir in the Macintyre River at Goondiwindi and the existing weir in the Barwon River at Mungindi. The costs of these works and of administration are to be borne by the States in equal shares. The agreement further provides that the water discharged from the Dumaresq storage, whether by regulated or unregulated flow, shall be available to the two States in equal shares.

The Water Conservation and Irrigation Commission of New South Wales, which is the constructing authority for the dam, has for some time past been carrying out investigations of alternate dam sites on the Dumaresq River near Mingoola Station Homestead

which is approximately 39 miles from Tenterfield. Although well advanced, these investigations have not proceeded sufficiently far to enable the Border Rivers Commission to determine the most suitable site, the height of the dam wall or the capacity of the storage.

The Irrigation and Water Supply Commission of Queensland, which is the constructing authority for the new weirs and regulators, has carried out detailed investigations as to sites for such works. The construction of Bonshaw Weir on the Dumaresq River near Bonshaw, which was authorized by the Border Rivers Commission and commenced in June, 1949 was completed in January, 1953.

The Border Rivers Commission also authorized the construction of a further weir, to be known as the Cunningham Weir, at a site at mileage 42.25 in the Dumaresq River, and work commenced in May, 1953. Investigations are proceeding in regard to the remaining weirs and regulators. The existing Goondiwindi and Mungindi Weirs are being maintained, operated and controlled by the Queensland Irrigation and Water Supply Commission.

The catchments for the border streams (2,000 square miles) extend to the granite areas in the vicinity of Tenterfield (New South Wales) and Stanthorpe (Queensland), and elevation rises to 3,000 feet. Average rainfall is 30 inches. The catchments and the areas suitable for irrigation are approximately equal in each State. Climatic conditions are such that it is necessary to supplement rainfall from April to October by irrigation to stabilize and increase production. The capacity of the area to grow lucerne and tobacco under irrigation has already been demonstrated. Irrigation of cotton, root crops, cereals, and citrus fruit, and expansion of the fat stock industry, is being examined.

4. *Snowy Mountains Hydro-electric Scheme.*\*—(i) *General.* Following a comprehensive investigation into both the water and power potential of the Snowy River waters by a Technical Committee representative of the Commonwealth and the States of New South Wales and Victoria in 1947 and 1948, and the submission by the committee of reports in 1948 and 1949, the Commonwealth Parliament in July, 1949 passed the Snowy Mountains Hydro-electric Power Act (No. 25 of 1949) setting up an Authority to implement the proposals agreed upon.

The basis of the proposals is to impound the Snowy River waters at high elevations and, by diverting them into tunnels passing under the Alps, to use their potential power for the generation of electricity and then to discharge them into the Murray and Murrumbidgee River systems for use in the irrigation areas.

The scheme will be constructed in two parts, the first being known as the Snowy-Murray system, where the water is to be diverted by tunnel from a large dam across the Snowy River at Jindabyne, to the Swampy Plains River in the Murray Valley; and the second as the Snowy-Tumut system, the water in which will be diverted by tunnel from a dam on the Eucumbene River—a tributary of the Snowy—at Adaminaby to the Tumut River, a tributary of the Murrumbidgee. The whole scheme will involve the construction of:—seven major dams (with a total storage capacity of approximately 7,000,000 acre feet); sixteen power stations; 86 miles of tunnels varying in diameter from 18 feet to 42 feet—one projected tunnel 30 miles long under the Alps will be one of the largest in the world; nearly 500 miles of racelines at high elevations.

The total expenditure was originally estimated to be £225,000,000 but latest expectations are that the cost will be approximately £422,000,000. The scheme will form the greatest engineering and developmental work ever undertaken in Australia and one of the major engineering projects of the world.

(ii) *Snowy Mountains Hydro-electric Power Act 1949.* The Snowy Mountains Hydro-electric Authority is constituted by a Commissioner; he is assisted by two Associate Commissioners. The functions of the Authority are defined in the Act as follows:—(a) to generate electricity by means of hydro-electric works in the Snowy Mountains area and (b) to supply electricity so generated to the Commonwealth (i) for defence purposes and (ii) for consumption in the Australian Capital Territory. The general powers of the Authority as defined in the Act are as follows:—For the purpose of performing its functions the Authority shall have power to construct, maintain, operate, protect, manage and control works—(a) for the collection, diversion and storage of water in the Snowy Mountains Area; (b) for the generation of electricity in that area; (c) for the transmission of electricity generated by the Authority; and (d) incidental or

\* See also Chapter XXV.—Electric Power Generation and Distribution, pp. 1031-4.

related to the construction, maintenance, operation, protection, management or control of any of the works specified above. The Act provides that the Authority may sell to a State, or to an authority of a State, electricity generated by the Authority which is not immediately required by the Commonwealth for defence purposes or for consumption in the Australian Capital Territory.

(iii) *The Authority's Objectives and Programme.* The two basic objectives are the early production of electricity and the early diversion of water inland.

It is anticipated that the first instalment of power, estimated at approximately 60,000 kW. will be available by 1954 and additional generating capacity is scheduled to become available gradually up to 660,000 kW. by 1962.

The Snowy Scheme will by 1958 or 1959 supply the Murrumbidgee River with 500,000 acre feet per annum of additional water. Ultimately the scheme will provide approximately 1,818,000 acre feet per annum to the two rivers of which 1,020,000 acre feet per annum will go to the Murrumbidgee and 798,000 acre feet to the Murray.

The Department of Public Works, New South Wales, has undertaken the design and construction of Adaminaby Dam on which work has already commenced, and the Department of Main Roads, New South Wales, and the Snowy Shire have undertaken the reconstruction of over 70 miles of existing roads. A contract has been placed with an oversea firm for the design and construction of the complete Guthega Project on the Upper Snowy River. This work is already well advanced and is expected to be completed by 1954. Contracts for the construction of the Adaminaby Tunnel of the dam at Tumut Pond and of the power station on the Tumut River were placed during 1953-54.

## B. STATES AND TERRITORIES.

### § 1. Australian Local Pattern of Water Conservation and Use.

The foregoing sections deal generally with water conservation and irrigation in Australia and with national and interstate projects. The following survey indicates the local pattern of water resources and the steps taken by the State Governments to bring about their development. It will be seen that water policies in the various States tend to assume a distinctive and characteristic pattern closely allied with climatic conditions and specific local needs.

In Victoria almost every form of water scheme is in operation. In New South Wales major emphasis at present is on irrigation and stock development in the dry areas along the Murray and Murrumbidgee Rivers, though a substantial scheme of intensive irrigation is being conducted in the Murrumbidgee Irrigation Areas. In Queensland, up to the present, the predominant emphasis has fallen on water for the stock industries (mainly underground sources), and the development of small irrigation schemes in sub-humid and humid areas, especially to stabilize sugar production.

Apart from regular irrigation practices along the Murray River, South Australian authorities are vitally concerned with reticulated supplies for rural areas and towns. Western Australia has developed unique rock catchments and piped supplies for agricultural areas and towns in dry districts. Tasmanian interest appertains to hydro-electric generation almost exclusively. The Northern Territory is primarily concerned with stock supplies and the safeguarding of long stock routes.

### § 2. New South Wales.

1. *General.*—(i) *Rainfall and History.* In issue No. 37 of this publication (p. 1110) information on the pattern of rainfall and the history of irrigation in New South Wales preceded the description of water conservation and use in that State, but it has now been omitted. Chapter II.—*Physiography*, of this issue, however, contains particulars of climatic conditions in each State.

(ii) *Administration.* Under the amendment of the Irrigation Act, made by the Conservation Authority of New South Wales Act, 1949, which came into force on 1st July, 1949, the Water Conservation and Irrigation Commission of New South Wales now consists of three members appointed by the Governor, one of whom is appointed as Chairman. The operations of the Commission cover water conservation, control of irrigation areas, establishment, operation and maintenance of works for domestic and stock water supply, irrigation districts, flood control districts, sub-soil drainage districts,

constitution of water trusts, the issue of licences for private irrigation, artesian and shallow boring, and a farm water supply scheme.

Under the Water Act the right to the use and flow, and the control of water in all rivers and lakes which flow through, or past, or are situated within, the land of two or more occupiers, is vested in the Crown. A system of licences also operates for the protection of private works of water conservation, irrigation, water supply, drainage, and prevention of inundation.

For particulars of the New South Wales-Queensland Border Rivers Agreement ratified by Acts of both States in 1947 *see* page 1066 *ante*.

2. Schemes Summarized.—(i) *Location and Type*. The bulk of irrigated land is along the Murray and its tributary the Murrumbidgee. Smaller areas are served by the Wyangala Dam and Lake Brewster on the Lachlan, another tributary. (*See* maps on pp. 1073-4.) None of the other rivers is regulated by large head storages, though weirs and dams have been provided for town supplies, etc., in many places, and head storages have been commenced on the Macquarie, Namoi and Hunter Rivers. Substantial use is made of artesian and sub-artesian water in pastoral areas.

New South Wales legislation provides for the constitution and control of various schemes having different characteristics and including Irrigation Areas, Irrigation Districts, Water Trust Districts, and Flood Control and Irrigation Districts. There are five Irrigation Areas:—The Murrumbidgee Irrigation Areas consisting of 403,256 acres served with water through a channel system off-taking from the river at Berembded Weir; the Coomealla Irrigation Area of 35,450 acres, served by pumping from the Murray; the Curlwaa Irrigation Area of 10,243 acres, supplied from the Murray by pumping; the Hay Irrigation Area of 6,806 acres, supplied with water pumped from the Murrumbidgee; and the Tullakool Irrigation Area of 16,305 acres supplied from the Edward River at Stevens Weir. All these areas are administered by the Commission, and details of the various schemes are given in sub-section (iii) below.

(ii) *Works*. The capacities of the main storages (in acre feet) are:—

*Murray*:—Half share of Hume Reservoir, weirs and locks to Wentworth (736,420); Stevens Weir, Edward River (7,165).

*Murrumbidgee*:—Burrinjuck Dam (771,640); Berembded Weir (10,000); Maude Weir (6,740); Redbank Weir (7,360).

*Lachlan*:—Wyangala Dam (303,900); Lake Cargelligo (29,435); Jemalong Weir (1,790); Lake Brewster (108,000).

Water from the Hume Reservoir is used for domestic and stock purposes, to provide bulk supplies for country towns, for the irrigation of vines, fruits and fodder in the Curlwaa and Coomealla areas, for rice and other cereals and for pastures in the Tullakool Irrigation Area, for domestic and stock supply and irrigation in the Berriquin, Wakool and Denimein Districts, and for water trusts for domestic and stock purposes and/or irrigation.

The Wyangala Dam is 30 miles upstream from Cowra in the Central West. It has a catchment of 3,200 square miles. Water from the dam, supplemented by the unregulated flow of the Belubula River, provides for domestic and stock purposes along the full length of the river (over 700 miles) and also for irrigation by land holders operating licensed pumps. The towns of Cowra, Forbes, Condobolin, Hillston and Booligal are supplied. Balance storages at Lake Cargelligo and at Lake Brewster conserve water during periods of high flow for release as required. Water from the Lachlan, diverted at Jemalong Weir, supplies the districts of Jemalong and Wyld's Plains, serving an area of 225,196 acres. Wyangala is now producing hydro-electric power. Proposals for future development include provision of a head storage at Belubula River.

The approximate total length of channels (including main canals) in New South Wales is 2,630 miles. The approximate length of drains and escape channels is 930 miles, and the approximate total length of pipe lines is 10 miles, making a grand total of 3,570 miles of channels and pipe lines, etc.

(iii) *Extent of Systems and Nature of Irrigated Culture*. The following table shows the areas of the various irrigation systems and the areas under irrigated culture in New South Wales during 1951-52, the latter according to the nature of irrigated culture.

## AREAS OF SYSTEMS AND OF LAND UNDER IRRIGATED CULTURE : NEW SOUTH WALES, 1951-52.

(a) Includes grazing and cutting. (b) Perennial and annual self-seeding. Perennial amounted to 20,149 acres of which 8,629 acres were in the Berriquin Irrigation District. (c) Citrus and deciduous. Deciduous amounted to 7,954 acres, of which 7,451 acres were in the Murrumbidgee Irrigation Area. (d) Not available. (e) Incomplete. (f) Works incomplete. (g) Area irrigable; details of area actually irrigated are not available. (h) Excludes domestic and stock supplies for which particulars are not available. (i) Tobacco. (j) Includes Flood Control Districts—see (g). For the locations of the foregoing irrigation areas, districts, etc., see maps on pp. 1073-4.

3. **Murrumbidgee Irrigation Areas.**—(i) *Description.* These areas comprise about a third of the State's irrigated acreage and in 1951-52 received 287,479 acre feet of the total water allocated for stock, domestic supply and irrigation (811,827 acre feet). They are served by the Burrinjuck Dam (capacity 771,640 acre feet), 40 miles north-west of Canberra, on the Murrumbidgee. The catchment above the dam is 5,000 square miles. The river rises on the high plateau north of Mount Kosciusko where rainfall exceeds 60 inches. Flow for the irrigation districts is supplemented by unregulated flow below the dam from the Tumut River. The dam also provides town supplies for Gundagai, Wagga, Narrandera, Hay, Balranald, and for towns served by the South-West Tablelands scheme.

Domestic and stock water and water for irrigation are supplied for the Irrigation Districts of Tabbita, Benerembah and Wah Wah and the Flood Control and Irrigation District of Lowbidgee. Flood flows are relied on to serve the Lowbidgee district and water is not released from the dam for that purpose. For the other undertakings, however, water is stored during the winter and spring freshets, fed by melting snows, and is released during the September-April irrigation season. It passes along the river channel to Berembed Weir, 240 miles westward, where it is diverted to the main canal with an off-take capacity of 1,600 cubic feet per second. The main canal has been completed to beyond Griffith, 96½ miles from the off-take. Reticulation channels aggregate 840 miles and drainage channels 810 miles.

In addition, 380 miles of supply channel run through adjacent irrigation districts in which the water supply is operated and maintained by the Commission, but land transactions are not under its control. The land on which the Murrumbidgee Irrigation Areas are situated originally comprised large sheep stations with a sparse population.

Population was 12,000 in 1923, 15,000 in 1929 and 20,000 at the 1947 Census. The population of the Yanco district (with Lecton as the centre) was then 9,000; and the population of the Mirrool Area (with Griffith as the centre) was 11,000.

(ii) *Administration.* The Water Conservation and Irrigation Commission controls land transactions and water supplies for the Murrumbidgee Irrigation Areas, also the distribution of electricity throughout those areas. Other local government services, including town water supply, are provided by Shire Councils. Land is disposed of by the Commission under freehold or perpetual lease tenure or leased for short terms for grazing or cultivation. The area under occupation at 30th June, 1952 was 353,117 acres, including 42,150 held for short lease grazing, agriculture, etc.

(iii) *Production.* Since the scheme was inaugurated in 1911 the value of total production has aggregated approximately £68,000,000. During the year ended 30th June, 1952, production was valued at £7,763,350.

Livestock contributed £935,000 (comprising sheep, £656,000; cattle, £222,200; pigs, £56,800); wool, £1,170,000; and other pastoral and dairying products, £148,300.

Rice (£1,572,000) and wheat and oats (£453-100) contributed a total of £2,025,100. Horticulture accounted for £2,766,400, comprising almonds, apricots, citrus, drying grapes, table grapes, wine grapes, figs and olives, peaches and nectarines, pears, plums and prunes, quinces and apples. The greatest individual contributions were made by grapes, £563,200, peaches and nectarines, £625,300 and citrus £725,300.

The total value of all vegetables was £606,950, including root crops, £213,900, tomatoes, £192,200, peas and beans, £106,000, cabbages, cauliflowers, onions and other products. A total of £111,600 represented the value of miscellaneous products.

Rice growing was initiated on the Murrumbidgee Irrigation Areas in 1924. Since then, aggregate production from those areas and from the other localities mentioned hereunder has been approximately 1,076,300 tons, valued at about £15,330,000 to the grower. In 1951-52 total area sown was 35,589 acres, including 26,029 acres on the Murrumbidgee Irrigation Areas and adjoining districts, 7,430 acres at Wakool and 2,130 acres at Tullakool. The total quantity of water delivered for the rice crops during the 1951-52 season was 210,702 acre feet. Water supplied for rice represents about two-thirds of the total delivered in the areas and a quarter of the water artificially supplied for

irrigation in New South Wales. Before the war the rice crop was more than sufficient for Australian requirements. During and after the war the area planted was increased to the limit of water available. Rice has also been grown in the adjoining districts of Benerembah and Tabbita and in each of the years 1944, 1945 and 1946 some 4,000-odd acres were sown by the Water Conservation and Irrigation Commission at Wakool as a war-time project. Approval has been given for some rice to be grown by individual landholders within the Wakool Irrigation District during and since the 1948-49 season; this arrangement, however, is of a temporary nature only. On Tullakool Irrigation Area rice growing is expected to become a regular feature of primary development; 2,130 acres were sown during the 1951-52 season.

Co-operation is a prominent feature in the Murrumbidgee Areas. Co-operative organizations in the Mirrool section handle 300,000 bushels of fruit per year (compared with 54,600 in 1927-28). Sales turnover of the Leeton cannery in each of the past five years was over £1,000,000. Settlers and government agencies co-operate extensively in all matters relating to irrigation practice.

4. **Other Irrigation Areas.**—The Curlwaa, Coomealla, Hay and Tullakool Irrigation Areas follow the same administrative pattern as the Murrumbidgee Areas—that is, land transactions are administered by the Water Conservation and Irrigation Commission which also is responsible for operation and maintenance of works to supply water at rates determined by the Commission.

Curlwaa Area, on the Murray near Wentworth, consists of 10,243 acres of which 2,534 acres at 30th June, 1952, comprised irrigated holdings. Production consists of dried vine fruits, deciduous fruits and fodder crops of a total estimated value in 1951-52, of £283,800.

Coomealla Area, 9 miles upstream from Curlwaa, comprises 35,450 acres of which 4,229 acres at 30th June, 1952 comprised irrigated holdings. Other land in the undeveloped part is leased for grazing. Production consists of vines and citrus of an estimated value, in 1951-52 of £436,200. Works are now under construction to provide 100 horticulture farms for ex-servicemen, 74 of whom were in occupation of their new holdings towards the end of 1952.

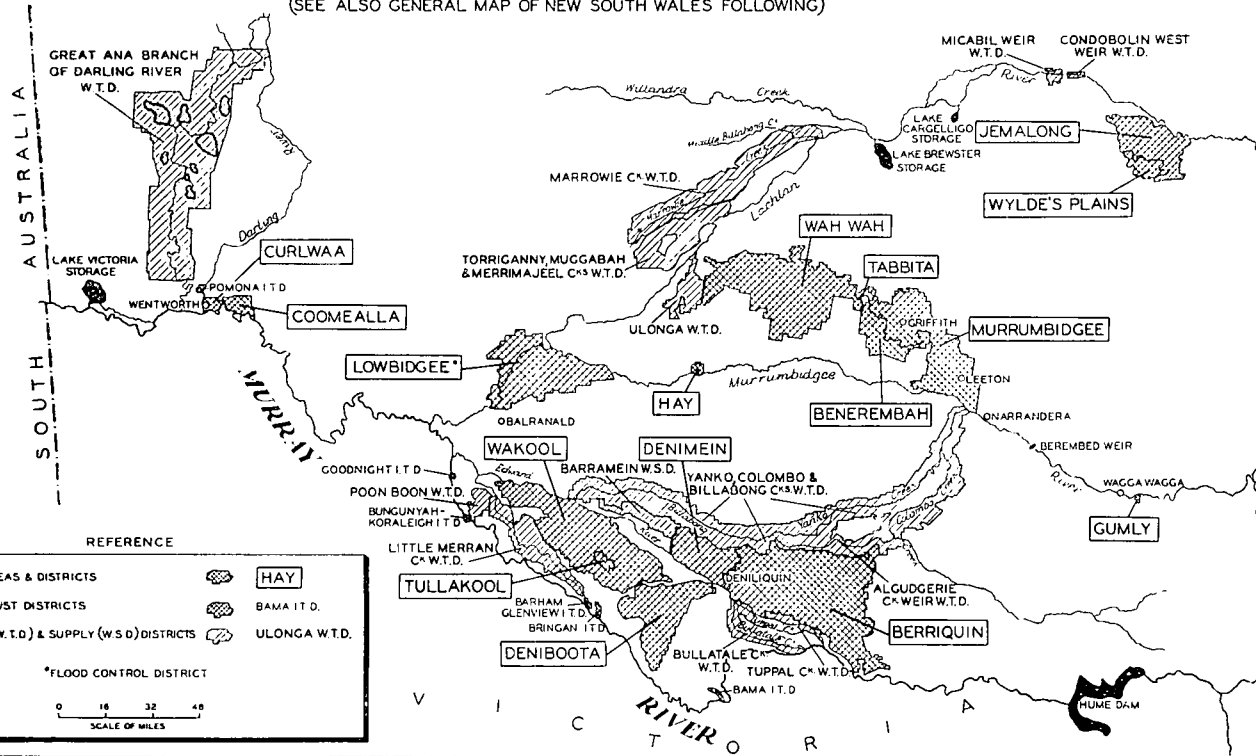

Hay Area, on the lower Murrumbidgee, consists of 6,806 acres, of which 1,164 acres are occupied as irrigated holdings. Annual production, valued in 1951-52 at £32,000, comprises dairy products, fat lambs, sheep, wool and fodders.

5. **Irrigation Districts.**—These Districts are set up under the Water Act for (a) domestic and stock water supply and (b) irrigation. They differ from water trusts as the cost of the works is not required to be repaid over a period, but annual charges are made by the State for water supplied to landholders. The following are the districts or provisional districts constituted and the areas of land benefited:—*Murray River*—Wakool District (completed) 486,192 acres, Berriquin Provisional District (almost complete) 654,050 acres, Denibootea Provisional District (in progress) 303,064 acres, Denimein Provisional District (in progress) 156,830 acres, Jernargo Provisional District (now to be included within the Berriquin District) 130,850 acres, Barramein Provisional District (domestic and stock supply only—works not yet commenced) 88,651 acres; *Murrumbidgee River* (completed)—Benerembah District 111,586 acres, Tabbita District 5,980 acres, Wah Wah Provisional District 583,111 acres, Gumly Provisional District 345 acres; *Lachlan River* (completed)—Jemalong and Wylde's Plains District 225,196 acres.

Since the completion of the Hume Reservoir several such districts have been established along the Murray to utilize the New South Wales share of the storage. Water is not available for the whole of the 5,000,000 acres adjacent to the Murray in New South Wales, and therefore the schemes are based on "extensive" irrigation—that is, water rights are allotted to holdings on the basis that only a portion of each holding (one acre in three, five or ten, according to the district, etc.) will be irrigated, but additional water, when available, may be obtained by landholders. "Water right" means right to such a quantity annually of water, 12 inches deep, as will cover an area of one acre.

SCALE OF MILES

Detailed description: A legend box containing symbols for dams/weirs and irrigation districts, a scale bar from 0 to 20 miles, and the title 'REFERENCE'.

Water to serve Berriquin and Wakool Districts is diverted through a main canal which will be 100 miles long when completed. At 30th June, 1952 the total length of completed canal and channels was 780 miles, including Mulwala Canal 75 miles, Berrigan channel 22 miles, subsidiary channels 641 miles, escape channels 33 miles and cross drainage channels 9 miles. Off-take capacity of the Mulwala Canal is 5,000 acre feet per day. Ultimately the water will serve Deniboota and other districts for which works have yet to be completed.

Wakool, with 361 miles of channel, contains 251 holdings and it is expected that the area developed by irrigation will comprise about one acre in 13 of the total area. The total area irrigated in 1951-52 was 45,597 acres and water supplied was 75,230 acre feet. Crops comprised fodders, pastures, rice, cereals and vegetables, but sheep raising is the main industry.

Considerable subdivision has occurred within the Berriquin District and it is expected that the proportion of total area to be developed for irrigation will be considerably higher than in the case of Wakool. Total irrigated acreage was 105,000 at 30th June, 1952. Sheep and wheat growing are the main industries. The fat lamb industry is well developed and expanding. Dairying is making headway, and a butter factory has been established at Finley.

In the Benerembah, Tabbita and Wah Wah Districts, supplied from the channels of the Murrumbidgee Irrigation Areas, the quantity of water supplied during the 1951-52 season for irrigation, etc. was 60,226 acre feet, and the area irrigated was 50,165 acres, including rice and other cereals, pastures and fodder crops. The estimated value of production, included in the amount (viz., £7,763,350) for the Murrumbidgee Irrigation Area, was £822,900 including wool, livestock, wheat and oats and rice.

For the same season 9,787 acre feet of water were supplied from the Lachlan River to irrigate a total area of 9,535 acres within the Jemalong and Wylde's Plains Districts. The total estimated value of production was £1,657,800 including wool and lambs £1,342,200, bullocks £104,400, wheat £74,900 and lucerne £29,800.

#### 6. Water Trust Districts, Irrigation Trusts and Flood Control and Irrigation Districts.—

The Water Act provides for the constitution of Trust Districts for domestic and stock water and irrigation and empowers the Commission to construct, acquire or utilize necessary works. When the works are completed they are handed over to trustees to administer. The trustees are elected by the occupiers of the land and act with a representative of the Commission. They are empowered to levy and collect rates covering the cost of the works repayable to the Crown by instalments and also the cost of operation and maintenance of the works. The rates are struck according to the area of land which benefits. The following water trusts—other than irrigation—have been constituted (the area in acres of each district is shown in parentheses)—*Murray River*—Tuppall Creek (78,080), Bullatole Creek (68,320), Little Merran Creek (157,440), Poon Boon (32,985), Minnie Bend Flood Prevention (2,190); *Murrumbidgee River*—Yanko, Colombo and Billabong Creeks (1,001,210); *Lachlan River*—Torrigan, Muggabah and Merrimajeel Creeks (170,240) Condobolin West Weir (4,480), Marrowie Creek (295,040), Ulonga (71,655), Micabil Weir (11,500); *Miscellaneous*—Algdudgerie Creek (9,760), Nidgerly Weir (46,880), Great Ana Branch of Darling River (995,200), Collarenebrri town water supply (117)—making in all a total area of 2,945,097 acres. Thirteen of these trusts have been formed for the provision of water for domestic and stock purposes, one for a town supply and one for flood prevention.

Irrigation Trusts are established under the same Act and are administered by trustees in a similar way. The following are the Trust Districts (area in acres is shown in parentheses):—*Hunter River*—Blairmore (315); *Murray River*—Bama (3,446), Goodnight (1,167), Bungunyak—Koraleigh (1,804), Glenview (661), Bringan (4,933); *Darling River*—Pomona (1,241)—making in all a total area of 13,567 acres.

The Lowbidgee Provisional Flood Control and Irrigation District (375,000 acres) was constituted in 1945, being the first of its kind. Its purpose is to provide flood irrigation for pasture lands on the lower Murrumbidgee by water diverted from the Maude and Redbank Weirs. There are 49 holdings. Another district (Medgun near Moree in the North-West) is in operation. Its total area is 272,800 acres, and a levee is being constructed to extend flood irrigation to an area larger than that commanded by the original works.

7. **River and Lake, and Farm Water Supplies.**—During recent years the numbers of licences and permits issued to individuals to draw water from rivers and lakes for irrigation have increased substantially, especially along the coastal streams in sub-humid districts where the value of supplementary irrigation is becoming more recognized as a means of stabilizing production in lean months. There has also been a considerable increase along the Murrumbidgee and Lachlan.

The Farm Water Supplies Act was passed in 1946. Technical advice and assistance, and also financial assistance, are made available to aid individual farmers and groups of farmers to provide and improve water supplies for domestic, stock and irrigation purposes by means of wells, bores, excavated tanks, weirs or dams.

8. **Underground Water.**—Extensive use is made of artesian, sub-artesian, and shallow underground water. Eighty thousand square miles in the northern and western portions are covered by the Great Artesian Basin. Eighty-one Bore Water Trusts and twelve Artesian Wells Districts have been constituted. The Bore Trusts are administered in the same way as Water Trusts, but in Artesian Wells Districts settlers maintain the drains. Bore Trusts and Artesian Districts cover about 5,000,000 acres and water is distributed through 3,378 miles of open earth drains. The number of artesian bores giving a flowing or pumping supply at 30th June, 1952 was 953 and the estimated total daily flow from 541 flowing bores was 62,578,000 gallons. The estimated flow in 1914–15 was 99,350,000 gallons per day for 372 bores. The deepest bore is Boronga No. 2 (4,570 feet), which also has the greatest flow, namely, 1,115,000 gallons per day. Of the total number of bores sunk, 222 have been installed by the Government in connexion with public watering places, Bore Water Trusts or Artesian Wells Districts.

Since 1912 the Government has assisted settlers in shallow boring operations for which repayments are required over a period. To 30th June, 1952, the total constructed by the Commission's plants was 4,260 and their average depth was 299 feet.

9. **Future Programme.**—The programme of post-war development already in hand includes the provision of eighteen dams and storages, eight diversion weirs and flood mitigation and river protection works in various parts of the State. Construction has been commenced on head storages at Keepit on the Namoi, Glenbawn on the Hunter and Burrendong on the Macquarie, while legislation has been passed authorizing the construction of a flood control dam at Warkworth in the Hunter Valley and a conserving dam at Blowering on the Tumut River. The Menindee Lakes storage project—part of the scheme for conserving the waters of the Darling River—is well advanced. The Hunter River development concerns an exceptionally fertile coastal valley, forming the hinterland to Newcastle, where the annual rainfall is not heavy and variations from month to month are considerable. This is the first coastal scheme initiated in New South Wales. Total estimated capacity of all proposed new storages is 5,500,000 acre feet.

10. **Hydro-electricity.\***—The largest hydro-electric installation in New South Wales, of 20,000 kW., is that located at Burrinjuck Dam on the Murrumbidgee River. The output of this plant is dependent on the release of waters for irrigation purposes.

The Nymboida hydro-electric scheme, controlled by the Clarence River County Council was opened in 1924 to supply Grafton, South Grafton and Ulmarra. The power station is situated on a tributary of the Clarence River in northern New South Wales and now has a capacity of 5,600 kW.

\* See also Chapter XXV.—Electric Power Generation and Distribution, pp. 1031–7.

The Bega Valley scheme was opened in 1944 to supply an area of 2,700 square miles extending from Bermagui to Eden. The power is derived from the waters of Rutherford Creek, a tributary of the Bembooka River, and the capacity of the present installation is 500 kW. Two 750 kW. generating units are also being installed in conjunction with a further development on George's Creek, another tributary of the same river. This system is controlled by the Bega Valley County Council.

The New England County Council is constructing a small hydro-electric power station on the Oakey River near Armidale.

Wyangala Dam power station was brought into operation in 1947. This station utilizes the irrigation waters released from the dam to generate electricity, and in addition is designed to provide an essential stabilizing feature in the transmission system between Burrinjuck and Lithgow to which the station is inter-connected. The output of the station at any time is dependent on the release of water for irrigation purposes.

Major projects which are being investigated by the New South Wales Government include the hydro-electric development of the Clarence River at the Gorge and other locations, the hydro-electric development of the Shoalhaven River and the hydro-electric development of the Styx River, a tributary of the Macleay River.

The Clarence Gorge Scheme, situated 140 miles from Brisbane and 240 miles from Newcastle, embraces not only hydro-electric development, but also may offer considerable benefits by reason of the flood mitigation effects of a large dam built at this location.

Investigations have shown that a dam 245 feet high would impound 4,500,000 acre feet of water and would enable the production of more than 100,000 kW. of power. It is expected that eventually some 400,000 kW. of power might be obtained from the Clarence River and its tributaries.

The Commonwealth and States agreed in 1945 on hydro-electric development at the Hume Reservoir on the Murray River near Albury. The New South Wales Public Works Department is installing at this site two 25,000 kW. water turbines and generators, half the output from which will be fed into the State system.

Investigations are also taking place into the possibilities of developing hydro-electric power in association with the Warragamba Dam which is being built for water supply purposes for the Sydney metropolitan area, at Keepit Dam which is being constructed for irrigation purposes on the Namoi River near Gunnedah, and at the Burrendong Dam which is to be constructed for irrigation purposes on the Macquarie River near Dubbo.

### § 3. Victoria.

1. *General.*—(i) *Rainfall.* Particulars of the rainfall pattern of Victoria were given on page 1117 of Official Year Book No. 37, while Chapter II.—Physiography, of this issue, contains information on climatic conditions in each State.

(ii) *Administration.* Although practical steps were taken to organize Victoria's water resources before the turn of the century, the passage of the Water Act in 1905 marked the commencement of sustained progress. The State Rivers and Water Supply Commission established by this Act is vested with the control of all irrigation, rural domestic and stock supplies, town water supplies and flood protection and drainage undertakings outside the Metropolitan area, with the exception of the irrigation area operated by the First Mildura Irrigation Trust and the town water supplies operated by locally constituted Waterworks Trusts or local governing bodies.

The operations of the First Mildura Irrigation Trust and the various Waterworks Trusts and local governing bodies, as well as the various Sewerage Authorities which control sewerage undertakings in country towns, are also subject to general supervision by the Commission.

2. *Systems Summarized.*—(i) *Works.* Since 1902, when a great drought emphasized the need for a concerted attack on water problems, the total capacity of water storages has increased from 172,000 to 1,977,320 acre feet (including Victoria's share of the Hume Reservoir). By means of channels, bores, etc., one-fourth of the State is artificially supplied for stock and domestic purposes. Large areas, which would be largely unproductive without water, are now contributing to the State's wealth. The area actually irrigated has increased from 110,000 acres in 1906 to 723,797 in 1951-52, and irrigation channels command 2,086,565 acres.

The Commission controls 35 large reservoirs and 238 subsidiary storages. The capacities of the storages in acre feet within the various systems at 30th June, 1952 were as follows :—

*Goulburn System* :—Eildon Reservoir, 306,000; Goulburn Weir, 20,700; Waranga Basin, 333,400; *Murray-Loddon System* :—Half share of River Murray Commission storages including Hume, Yarrowonga, Torrumbarry, Euston, Mildura and Wentworth, 736,420; Kow Swamp, Laanecoorie, Kerang-North-West Lakes, Lake Boga and Lake Cullulleraine, 148,210; total, 884,630; *Wimmera-Mallee* :—206,860; *Maffra-Sale* :—106,040; *Coliban* :—62,730; *Werribee* :—34,900; *Bellarine Peninsula* :—10,850; *Mornington Peninsula* :—5,800; *Otway* :—1,080; *Miscellaneous* :—4,330; *Total* :—1,977,320.

Irrigation channels extend 4,745 miles, domestic and stock channels 8,027 miles and drainage and flood protection channels 2,087 miles, a total of 14,859 miles. In addition, the Commission controls 1,180 miles of piping, comprising 264 miles of mains and 916 miles of reticulation. Farm holdings served with water total 42,401. Urban districts supplied by the Commission's channels and pipelines have a population of 155,310 persons in 130 towns, and a further 138 towns with a total population of 356,310 persons are supplied by Trusts under the supervision of the Commission.

To 30th June, 1952, the total capital expenditure on irrigation, rural water supply, country town water supply, and flood protection and drainage works amounted to £59,328,000, one-half of which was in respect of irrigation.

The total capital liability in respect of works under the control of the Commission at 30th June, 1952 was £56,649,000 of which £50,133,000 was borne by the State and £6,516,000 by water-users. Waterworks Trusts and local governing bodies had a total capital liability of £6,333,000 at 30th June, 1952, of which £3,473,000 was borne by the State and £2,860,000 by the Authorities.

(ii) *Extent of Systems and Nature of Irrigated Culture.* Although the area irrigated is less than 2 per cent. of the State, it yields approximately 11 per cent. of Victoria's rural production. The following table shows the areas of the various irrigation systems and the areas under irrigated culture during 1951-52. For the locations of water supply and irrigation systems see map on p. 1075.

#### AREAS OF SYSTEMS AND OF LAND UNDER IRRIGATED CULTURE: VICTORIA. 1951-52.

(Acres.)

System.	Total Area.	Area under Irrigated Culture.									Total.
		Cereals.	Lucerne.	Other Fodder Crops.	Pastures.		Vineyards.	Orchards.	Market Gardens.	Fallow and Miscellaneous.	
					Sown.	Natural.					
Goulburn .. ..	1,256,575	8,051	23,062	3,575	243,830	34,189	399	19,254	4,199	2,797	339,356
Murray—											
Torrumbarry Weir .. ..	377,805	7,083	5,622	3,735	113,839	47,947	5,283	1,895	1,810	5,791	192,405
Yarrowonga Weir .. ..	267,310	126	11,197	165	28,650	2,863	38	2,792	604	20	46,455
By Pumping .. ..	50,754	102	239	278	286	135	22,769	1,463	273	20	25,563
Total .. ..	695,869	7,311	17,058	3,578	142,775	50,945	28,090	6,150	2,687	5,831	264,423
Loddon and other Northern Systems .. ..	(a) 19,736	402	1,100	131	4,351	1,475	1	4,382	1,152	3,522	16,516
Southern Systems .. ..	70,789	34	2,105	313	28,332	1,009	..	547	4,113	1,237	37,690
Mildura and Private Diversions .. ..	(b) 45,000	4,836	5,221	2,161	23,080	3,020	15,094	5,792	4,125	2,481	65,810
Grand Total .. ..	2,087,969	20,634	48,546	9,758	442,368	90,638	43,584	36,125	16,276	15,868	723,797

(a) Area of Campaspe District only.

(b) Area of First Mildura Trust District only.

(iii) *Production.* The influence of irrigation on Victorian production is illustrated by the following estimates, prepared by the Commission, of the value of production from irrigated areas :—1905–6, £500,000 ; 1925–26, £5,000,000 ; 1949–50, £22,500,000, 1950–51, £29,250,000. Detailed classification of the 1950–51 irrigation production estimates is as follows :—*Livestock* :—Dairying, beef and veal meats, etc., £6,600,000 ; Wool, lamb and mutton, £9,720,000 ; Pigmear, poultry and eggs, £2,750,000 ; total Livestock, £19,070,000. *Horticulture* :—Vine fruits, £3,650,000 ; Fresh and canning fruits, £2,620,000 ; total Horticulture, £6,270,000. *Vegetables and other primary products*, £3,910,000.

3. **Goulburn System.**—The Eildon and Waranga Reservoirs on the Goulburn River supply half the irrigated acreage, and form the largest system in Victoria. Annual rainfall in the valley is only 18 inches and the annual discharge has varied from 567,000 acre feet in a drought year to 6,202,171 acre feet in a particularly wet season. Total regulated supply is 960,100 acre feet which will be practically doubled on completion of the Eildon Reservoir Enlargement programme.

Water from Eildon Reservoir flows down the Goulburn for 150 miles to the Goulburn Weir, which raises the summer level of the river about 45 feet to 408 feet above sea level, and where water is diverted to two main channels. The eastern main channel conveys water to four irrigation districts surrounding Shepparton and the western main channel fills Waranga Basin in addition to supplying the eastern portion of the Rodney Irrigation District.

Two main outlet channels issue from the Waranga Reservoir, one serving the Western part of the Rodney district ; while the other serves districts as far west as Boort, and continuing to Beulah East, about 230 miles by channel from Waranga Basin or some 400 miles from Eildon, supplements the Wimmera-Mallee system.

Districts served comprise 196,225 acres east of the Goulburn ; 600,720 acres between the Goulburn and Campaspe ; 379,395 acres between the Campaspe and Loddon Rivers ; and 80,235 acres west of the Loddon—a total of 1,256,575 acres. Main channels of the system have a total length of 213 miles and in addition there are 2,344 miles of distributaries, a total of 2,557 miles for the whole system.

The development of the fruit-canning industries in the Goulburn Valley is an index of the results of irrigation policy. Annual production from the Shepparton, Kyabram and Mooroopna canneries, together with that of city canneries—from Goulburn Valley fruit—amounts to an aggregate which represents 70 per cent. of Australia's total production of canned peaches, pears and apricots. Other main products of the Goulburn districts are fat lambs, foddors, wine and table grapes and dairy products.

4. **Murray River System.**—The waters of the River Murray are used to supply an area of more than 600,000 acres between Yarrawonga and Merbein, and channels totalling 1,450 miles are in service. The districts between Yarrawonga and Swan Hill, except Tresco, are supplied by gravitation and those down the river (Red Cliffs, Merbein, Nyah and Mildura) are supplied by pumping.

The Murray Valley Irrigation District, supplied from Yarrawonga, will serve 280,000 acres when completed. At 30th June, 1951, 450 miles of main and distributary channels were completed and supplied 267,400 acres west of Yarrawonga.

The gravitation system based on Torrumbarry Weir (52 miles downstream from Echuca) serves an area of 415,500 acres with 846 miles of supply channels. The weir raises the level of the river some 16 feet and enables water to be diverted throughout the year.

Red Cliffs Irrigation District comprising 31,000 acres, of which, at present, 12,000 acres are irrigated, ranks first in importance among Victoria's pumping schemes. A system of main and distributary channels commands every holding in the district. The district, originally for soldier settlement, has been subdivided into 700 blocks. The area planted is composed mainly of vines and citrus. The first harvest (1924) returned 570 tons of dried fruit in addition to table grapes. The average harvest is now 18,000 tons of raisins, currants and sultanas as well as large quantities of grapes for dessert and distillation.

Merbein Irrigation District comprises 10,526 acres and contains 436 holdings averaging 24 acres each. A reticulated pipe system supplies the town of Merbein, and the pumps also supply the Yelta Waterworks District of 51,200 acres.

Nyah Irrigation District is supplied with water diverted from the Murray by a high-lift pumping plant, serving 3,840 acres in 220 holdings devoted mainly to orchards and vineyards.

5. **First Mildura Trust District.**—The First Mildura Irrigation Trust—which is the only Irrigation Trust operating in Victoria—controls an area of 45,000 acres, of which 15,000 acres are irrigated. This area irrigated includes 12,000 acres of vines, 960 acres of citrus trees and small areas of apricots, peaches, prunes, figs, almonds, olives, lucerne and other fodders. It produces approximately 15,000 tons of raisins, currants and sultanas each year. The irrigation water is pumped from the River Murray and distributed through 168 miles of channels.

6. **Wimmera-Mallee System.**—The Wimmera-Mallee scheme is regarded as the most extensive domestic and stock supply system in the world. The main supply is drawn from the Grampians storages with a capacity of 206,860 acre feet. Supplementary water is drawn from the Goulburn channels and the Loddon River. The system serves an area of 11,000 square miles or nearly one-eighth of the State, which is largely devoted to wheat and pastoral industries. Without the artificial supply of water, development would be meagre.

Once a year, in the winter or spring, a volume of 75,000 acre feet of water is distributed through 6,600 miles of open channel and some 3,000 miles of farm channels. It is the responsibility of farmers to provide storages sufficient in size to meet their stock and domestic requirements for the ensuing year. At least 16,000 tanks are served. In addition, forty-five towns with a total population of 40,000 obtain their water from the system. A total population of 80,000 depends upon the scheme. In the vicinity of Horsham and Murtoa, near the main storages, 3,000 acres are irrigated for soft fruits and pastures, but the limited water resources at present available will not permit any extension of irrigation.

The northern part of the system is affected by sand drifting into the channels, particularly in years of dry weather conditions, and the Commission is involved in substantial annual expenditure to remove this sand drift before the annual water distribution can be made. It is considered that this expenditure could be reduced by better farming methods, and efforts in this direction such as the sowing of rye-corn, and including the use of compulsory powers to prohibit the fallowing of land or burning of stubble within three chains of channels in light sandy country, have resulted in marked savings in maintenance costs.

7. **Farm Water Supplies.**—The Rural Finance Corporation Act 1949 is designed, *inter alia*, to give farmers an opportunity of establishing or improving domestic and stock water supplies on their farms. Water may be obtained from underground sources, from catchment and gully dams by diversion from existing streams and channels, by storage of sufficient water to meet a year's requirements and by installation of windmills or hydraulic rams.

A Farm Water Supplies Branch has been set up by the State Rivers and Water Supply Commission to advise farmers on farm water supply matters even if finance is not required. Comprehensive booklets entitled "Farm Water Supplies for Domestic and Stock Purposes" and "Farm Irrigation and Drainage" prepared by this Branch have been widely circulated to landholders.

8. **Underground Resources.**—A comprehensive survey of the underground water resources of Victoria has been commenced. It will provide records of bores in the Mallee, Wimmera and Glenelg regions, and also a detailed description of the Murray Artesian Basin. Investigations have also been made into the underground water resources of local areas such as Orbost Flats, Llowalong Estate on the Avon River and at Bacchus Marsh where a number of observation bores have been installed.

The Murray Artesian Basin underlies an area of 107,250 square miles, of which 26,808 square miles are in Victoria, 28,269 square miles in South Australia and 52,173 square miles in New South Wales. The quality of the water varies in different parts of the basin. Over 300 bores exist in Victoria, with an average daily flow of 3,000,000 gallons. Bores range in depth from 50 to 3,000 feet.

9. **Future Programme.**—Victoria has now reached the stage when the demand for water is far greater than the supply, and a programme which envisages an expenditure of £25,000,000 has been launched. This includes the Rocklands storage on the Glenelg River (272,000 acre feet) and the Cairn-Curran Reservoir on the Loddon (120,000 acre feet). Work has been commenced on the enlargement of the Eildon Reservoir on the Goulburn from 306,000 to 2,750,000 acre feet by the building of a large earthen embankment 260 feet high and 3,300 feet long at an estimated cost of £12,000,000.

10. **Hydro-electricity.\***—The Kiewa (the Kiewa River is a tributary of the Murray) project in the Australian Alps, to comprise a series of power stations with a total installed capacity of 289,000 kW., will be one of the largest hydro-electric developments in Australia. The authority responsible for its construction and operation is the State Electricity Commission of Victoria. Work is now in progress on this undertaking, but in view of prevailing financial conditions, the project is likely to be somewhat modified. The first of the Kiewa power stations has been operating since 1944. Its installed capacity is 26,000 kW. and it is contributing annually between 40 and 50 million kWh. of electricity to the State system.

Further utilization is to be made by the State Electricity Commission of irrigation waters from the Goulburn River by the erection of a very much larger power station of 135,000 kW. capacity, which will operate on the increased flow of water from the new Eildon Reservoir now being constructed by the State Rivers and Water Supply Commission of Victoria (*see above*).

Irrigation waters from the existing Eildon Reservoir have been utilized for approximately 25 years to operate Sugarloaf power station which, until it was closed down in the latter months of 1953, was the largest power station in the State Electricity Commission's Sugarloaf-Rubicon group of five hydro-electric power stations. With a total installed capacity of 26,400 kW., this group had been in operation since 1928, and contributed on the average between 130 and 150 million kWh. of electricity per annum to the State system. Power is generated at Eildon during the summer months when water is being released for irrigation, and at other times of the year when storage is full. The four associated mountain stream stations on the Rubicon and Royston Rivers generate maximum power in the winter and spring, when water flow is at its greatest. They will continue to operate in conjunction with the new Eildon power station.

Irrigation water will also be utilized at the Hume Reservoir where a new power station being erected by the New South Wales Public Works Department will serve both Victoria and New South Wales. Initially, the installed capacity of the power station will be 50,000 kW. Output of electricity, averaging about 200 million kWh. a year, will be shared equally by the two States, each contributing its quota of the annual cost. Victoria's share of the electricity generated will be fed into the State system.

## § 4. Queensland.

1. **General.**—(i) *Rainfall.* Particulars of the rainfall pattern of Queensland were given in Official Year Book No. 37, page 1122, while Chapter II.—Physiography, of this issue, contains information on climatic conditions in each State.

(ii) *Administration.* The first comprehensive Water Act in Queensland was the Water Act of 1926 which vested in the Crown the right to the use and flow of all streams, lakes, watercourses, etc. which flowed through or were within the boundaries of two or more occupiers, and also vested in the Commissioner of Irrigation and Water Supply the bed and banks of all boundary streams. The Irrigation Act of 1922 provided for the

\* *See also* Chapter XXV.—Electric Power Generation and Distribution pp. 1041-5.

establishment of Irrigation Areas in approved localities. From 1922 to 1931 the Commissioner of Irrigation and Water Supply administered the Acts, but in 1931 the Land Administration Board was appointed to act as the Commissioner and continued to act until the Irrigation and Water Supply Commission Act of 1946 was proclaimed in 1947. Under this Act the Corporation of the Commissioner of Irrigation and Water Supply was reconstituted. The Commissioner is responsible for carrying out the provisions of the Irrigation Acts 1922 to 1949 and the Water Acts 1926 to 1942. He is also responsible for investigations into, and the planned development of, water resources of Queensland under the Land and Water Resources Development Acts 1943 to 1946. For particulars of the New South Wales-Queensland Border Rivers Agreement ratified by Acts of both States in 1947 see page 1066.

(iii) *Water Utilization in Queensland.* Queensland's predominant interest in the past in the field of water conservation has been the provision of stock and domestic water supplies in its great pastoral areas which contain nearly half the Commonwealth's cattle, a seventh of the sheep and a third of the horses. More than half the State's rural production is derived from cattle and sheep. The cattle are distributed throughout the State, but most thickly between the east coast and the 20-inch average annual isohyet. Sheep are mainly pastured on the inland areas west of this isohyet, whilst dairying is concentrated in the south-eastern quarter of the State. In addition to the stabilization of water supplies in the pastoral areas and the provision of water along stock routes for travelling stock, the development of irrigated pastures on the eastern seaboard for fattening stock adjacent to meat works and markets has lately received much attention.

The State's agricultural crops differ from those of other States in that a large proportion is tropical. Sugar-cane is the greatest individual crop, representing in value some 40 per cent. of total agricultural production. Approximately 12 per cent. of the sugar-cane acreage is irrigated and represents some 54 per cent. of the total irrigated area in Queensland. Queensland is Australia's major tobacco-producing State, and plans are in hand to increase greatly annual production of this crop by means of development under irrigation.

2. **Great Artesian Basin.**—(i) *General.* Western Queensland beyond the 22 inch rainfall belt is predominantly pastoral and is mainly dependent for water supplies on artesian and sub-artesian bores and, where surface storage is not readily available, on excavated tanks. The Great Artesian Basin in Queensland corresponds approximately with the area lying west and south of the Great Dividing Range, but excluding the Cloncurry Mineral Field and the Barkly Tableland. It comprises 350,000 square miles of the total State area of 670,500 square miles. Statistics of bores and flow as at 31st December, 1951 are:—Artesian bores drilled, 2,271; artesian bores still flowing, 1,546; total depth drilled, 3,321,610 feet; deepest bore, 7,009 feet; total estimated flow, 231,000,000 gallons per day. Artesian pressure and flow are both steadily diminishing despite new bores drilled. The rate of diminution varies widely throughout the basin. Present general average rates of diminution are:—pressure, 1-2 feet/head, total flow,  $1\frac{1}{2}$ -2 per cent. per annum.

There are some 19,000 miles of bore drains and the greatest length served by one bore is 121 miles. This method of watering is somewhat wasteful, owing to evaporation and soakage, but it is the most economical in first cost. Not more than 5 per cent. of the water is actually used by stock, and present policy is to restrict working flows to serve limited drain systems of smaller dimensions and reduce evaporation and soakage losses. The average loss per mile of drain is 10,000 gallons per day; with smaller drains this is reduced to 7,000 gallons per day. Pipe lines are very rarely used for distribution owing to high initial cost.

Although artesian beds underlie such a large area of the State, only 87,500 square miles are primarily watered by bore drains. The remaining area is watered by artesian bores (with small or no flow and limited drains), sub-artesian bores, excavated tanks, dams and natural waterholes. In many districts, artesian bores are not economical watering facilities, because of depth, limited area to be watered, and difficult terrain, for distribution of water by drains. High costs have restricted deep drilling. Very few new bores exceed 2,000 feet in depth, and a new bore greater than 3,000 feet in depth is exceptional.

Shallow sub-artesian supplies, of variable quality and volume, are available at depths less than 1,000 feet over a large area of the basin. These beds are not connected with the artesian beds. An essential practical consideration is that the main artesian beds are continuous and the sub-artesian beds are not continuous.

In 1939, a special Committee was appointed to inquire into the geology and hydrology of the Basin and economic use of artesian supplies. A first progress report has been issued by this Committee and its final report is now being prepared. It has been established that the rate of diminution of flow is declining.

In the past, many excavated tanks failed in dry seasons, because of insufficient original depth and capacity, and subsequent silting. Mechanical plant is now almost exclusively in use and much larger tanks are being excavated, even in areas where artesian water may be obtained at a reasonable depth. New tanks with capacities of 20,000 cubic yards and depths of 25 feet are not uncommon. Two tanks with capacities of 65,000 cubic yards each, and depths of 42 feet and 46 feet have recently been completed for watering stock in an area where a good artesian flow may be obtained at a depth less than 2,000 feet.

(ii) *Bore Water Areas.* The Constitution of Bore Water Areas was inaugurated in 1913 to aid pastoral settlement in districts where large flows were available at a cost beyond individual capacity and to conserve artesian supplies by fully utilizing the flows from existing bores resumed with the land for closer settlement. Bores and drains are constructed from loan funds repayable over a period of years. The areas are administered by Local Boards or by the Commissioner of Irrigation and Water Supply, acting as a Board. Rates are levied to meet interest, redemption, maintenance and administration costs. Statistics for the year 1951-52 are:—Areas constituted, 65; administered by Commissioner, 54; administered by Local Boards, 11; area benefited, 4,934,552 acres; average rate per acre, 1.2d.; number of flowing bores, 58; total flow, 27,815,000 gallons per day; drains served, 2,872 miles.

3. *Stock Route Watering.*—During 1935, a scheme was inaugurated to water adequately stock routes in the western portion of the State including main trunk routes connecting Eromanga to Burketown, Charleville to Normanton, and Clermont to Einasleigh, with branches to railheads, a total distance of 3,117 miles. Watering facilities were also provided on subsidiary routes. Under the Stock Routes and Rural Lands Protection Act of 1944 a co-ordinating board was constituted, representative of Government departments and pastoral interests, under the direction of the Minister for Lands, and with an officer of that Department as superintendent, whose duty was, *inter alia*, to investigate and implement a long-range, co-ordinated plan for adequate watering of all stock routes throughout the State. Natural waters are being supplemented by artificial facilities at intervals of about 9 miles. Construction is supervised by the Irrigation and Water Supply Commission and by local authorities. Completed facilities are vested in local authorities for control and maintenance. From 1935 to 30th June, 1952, 251 facilities had been completed and at 30th June, 1952, 209 facilities were under construction or investigation.

4. *Irrigation.*—(i) *General.* Irrigation as a means of stabilizing and increasing agricultural production is receiving growing attention in Queensland. However, with the exception of the Theodore Irrigation Area, orthodox projects served by a channel system have not so far been developed, though construction of the Clare Irrigation Area on the Burdekin River is well advanced and investigations of several schemes are being carried out. Because of the large variations in both monthly and annual river flows, major developments cannot be undertaken until large storage works are provided. Most irrigation in Queensland is performed by private farmers operating under licence, and obtaining water by pumping from streams or from natural underground storages. Where available, electricity is the most popular source of power for pumping; the principal areas supplied with electricity comprise the Burdekin Delta and the Lockyer Valley.

Furrow irrigation is used for cotton, sugar-cane, most tobacco and some other crops. Spray irrigation is adopted to a considerable extent for fruit, vegetables, fodder

crops and a small part of the tobacco. Spraying is well suited to the application of water on deep soils by small pumping plants, particularly when the quantity of water available is limited. Experimental use of the border check method in the irrigation of pasture and fodder crops during the last three years has proved successful and may supersede other methods.

The following table shows for each division of the State the number of irrigators and the areas under irrigated culture for the year ended 31st March, 1952.

AREA OF LAND UNDER IRRIGATED CULTURE : QUEENSLAND. 1951-52.(a)

Division.	No. of Irrigators.	Area under Irrigated Culture (Acres).							Total.
		Vegetables.	Fruit.	Sugarcane.	Tobacco.	Cotton.	Other Crops.	Pastures.	
Southern Queensland ..	3,495	17,864	2,491	10,366	1,188	24	21,743	3,698	57,374
Central Queensland ..	330	812	132	50		398	2,324	548	4,264
Northern Queensland ..	1,354	3,270	662	44,150	2,808	65	369	138	51,402
Total .. ..	5,179	21,946	3,225	54,566	3,996	487	24,436	4,384	113,040

(a) Year ended 31st March, 1952.

For the locations of existing and projected irrigation areas see map on p. 1076.

The growth of irrigation is illustrated by the following figures for the total area of irrigated land :—1906, 9,922 acres ; 1916, 10,886 acres ; 1926, 24,250 acres ; 1936-37 44,509 acres ; 1946-47, 79,030 acres ; 1951-52, 113,040 acres.

The pattern of irrigation in Queensland is unlike that in southern States ; the more important developments in tropical and sub-tropical areas are therefore discussed briefly in the sub-sections following. It should be noted that the spring to autumn " irrigation season " of the temperate southern irrigated lands is not applicable, and that round-the-year irrigation is required throughout most of the State, the timing and duration of the summer " wet " season being too variable to enable a definite non-irrigation season to be fixed.

(ii) *Lockyer Valley.* West of Brisbane and within 50 miles of that metropolitan market is the Lockyer Valley, which is portion of the Brisbane River Basin. The Valley comprises an extensive flood plain where heavy black alluvial soil thickly overlies gravels and sands carrying water suitable for irrigation. Despite a mean rainfall of 30 inches the variation is great, and irrigation is necessary for continuous agricultural production. Surveys suggest that some 60,000 acres of land highly suitable for irrigation are available. Of this area only about 30 per cent. is under irrigation, the number of pumps operating from wells and open water exceeding 550 and 500 respectively. Over 60 per cent. of the farmers operate electric pumps for irrigation purposes and a special policy designed to encourage such development is fostered by the Southern Electric Authority of Queensland which serves the Valley. The Irrigation and Water Supply Commission has constructed a number of small weirs on Lockyer Creek with a total storage of 1,370 acre feet. These also tend to augment and conserve underground supplies. To study local problems, an Irrigation Research Station was established at Gatton in 1946 by the Bureau of Investigation.

The Lockyer Valley produces a substantial proportion of Queensland's onions, potatoes, pumpkins, lucerne, hay, green fodder, maize and dairy products.

(iii) *Burdekin River.* The Burdekin River, which joins the sea between Townsville and Bowen, is a major factor in the life of North Queensland. In most years heavy floods from a catchment twice the size of Tasmania cause extensive damage and traffic disabilities. On the other hand, the fertile Delta Area with its underground water supplies at shallow depth has contributed greatly to the agricultural prosperity of North Queensland. The projected irrigation, hydro-electric and flood mitigation scheme, together with the high level railway bridge at present under construction, will change the Burdekin from a mixed blessing to one of the Commonwealth's greatest resources for agricultural

and industrial production. Present development is confined to the Delta Area. The average annual rainfall of this area is some 41 inches, but the major part falls in the months December to March. Consequently sugar growers and other farmers have tapped the underground water resources of the Delta to obtain supplies in the dry periods. Sugar is the main irrigated crop, though citrus, pineapples, vegetables and tobacco are also irrigated. The irrigated area is in excess of 30,000 acres, up to 1,000 acre feet of water being drawn daily from underground sources.

In the Home Hill-Inkerman areas on the south side of the Burdekin, water is obtained from shallow wells by electric pumps supplied from a local power station now controlled by the Townsville Regional Electricity Board. Around Ayr, on the north side of the river, electric power from the mains of the Townsville Regional Electricity Board is now being adopted in place of the individual internal combustion engines previously used. At both Home Hill and Ayr water for domestic supply is raised by a windmill on each property.

In 1940 the Burdekin River Trust was formed to safeguard the sugar areas of the Delta from erosion and floods. An Irrigation Research Station has recently been established to study the development of pastures and irrigated crops under local conditions.

A major multi-purpose scheme, involving irrigation, flood control and hydro-electric power generation, is being investigated by the various interested Government Departments under the general supervision of the Burdekin River Authority. The development envisaged would include a dam storing 6,584,000 acre feet, which would make water available for the irrigation of at least 250,000 acres. The principal industries anticipated are tobacco-growing, dairying and cattle fattening, with sorghum, sunflowers, peanuts, cotton and sugar-cane as other possible forms of production.

The Clare Irrigation Area, constituted in 1949, and the Millaroo Irrigation Area, constituted in 1952, are at present being developed for tobacco production. Located from 25 to 65 miles upstream from the mouth of the Burdekin these areas comprise 12,000 acres and will obtain irrigation waters from central pumping stations drawing initially on the unregulated flow of the Burdekin. A temporary storage of 6,700 acre feet capacity is at present under construction about 79 miles upstream from the mouth of the Burdekin. To 1st January, 1953, 68 farms had been opened for selection in the Clare Area.

(iv) *Dawson Valley.* The Dawson River, a 392-mile long tributary of the Fitzroy River, rises in the Carnarvon Range and joins the Mackenzie River to form the Fitzroy 50 miles west of Rockhampton. Lands bordering the river in its northerly course of about 170 miles before its confluence with the Mackenzie River are commonly termed the Dawson Valley. A scheme for the development of the Dawson Valley under irrigation was inaugurated in 1923, providing for the irrigation of 70,000 acres. Storage for the scheme was to be provided by a dam at Nathan Gorge of 2,000,000 acre feet capacity. Much investigational and survey work on the scheme was carried out, but the general financial depression and limited loan funds brought about the cessation of this work. However, the initial step in construction had been completed, comprising a weir on the river at Theodore and irrigation works to serve an area of 3,500 acres supplied from a central pumping station. Two additional weirs have since been built, giving a total storage of 12,000 acre feet. Pasture, vegetables, cotton, fruit and dairying products are the principal produce. The cheese factory established at Theodore has been closed, but there is a ready market for all cream produced, and with the increase in dairying based on irrigated lucerne and pasture, the future of the area appears assured. Attention has recently been given to the former plans for the Valley and earlier work is now under close scrutiny as a prelude to future development.

(v) *Mareeba-Dimbulah Area.* The existence of large areas of sandy soils suitable for tobacco production in the valleys of the Walsh and Barron Rivers in the neighbourhood of Mareeba and Dimbulah has led to large-scale investigations into possible irrigation development in the area. Surveys indicate that 40,000 acres of land suitable for irrigated culture, including 32,000 acres suitable for tobacco, are available. At present some 800 acres of high-grade tobacco are grown annually. Six weirs of combined capacity of 1,800 acre feet have been completed on a number of streams to store

water for irrigation and a seventh, to store an additional 800 acre feet, is now under construction. During 1952 a report on the utilization of waters of the Barron and Walsh Rivers was prepared and establishment of an irrigation undertaking approved by the Queensland Government. The projected undertaking provides for construction of a major storage at Tinaroo Falls on the Barron River to store 320,000 acre feet, and construction of irrigation works to serve 78,000 acres commanded by this storage. Further development by construction of a second storage at Nullinga on the Walsh River has been deferred for the present. Tobacco will be the basic crop while peanuts, vegetables, maize, cotton and stock fattening also appear suitable.

(vi) *Border Rivers Project.* The development of the rivers constituting portion of the border between Queensland and New South Wales is under the authority of the Dumaresq-Barwon Border Rivers Commission on which each State is represented. For information on the project see page 1066.

5. **Bureau of Investigation.**—Under the Land and Water Resources Development Act of 1943 a Bureau of Investigation has been set up for the co-ordinated investigation of land and water resources development.

The Bureau consists of representatives from the authorities controlling water resources, lands and agriculture, under the chairmanship of the Co-ordinator-General of Public Works. Among notable work carried out by the Bureau of Investigation since its inception has been the trial planting of irrigated pastures with a view to developing mixtures suited to the special conditions of each part of the State. Other valuable work has included the mapping of the ultimate land uses of the State, and the detailed investigation of the agricultural and pastoral potentialities of many regions.

6. **Channel Country.**—Extensive investigations of the Channel Country fed by inland rivers in the south-western corner of the State have been made by the Bureau of Investigation. This country is intersected by shallow and irregular flood channels through which huge volumes of flood waters pass in favourable seasons; consequent on the flooding, a heavy growth of natural pastures is produced on the flooded lands, providing feed in quantities far in excess of that required for the normal stock population of the area. If the occurrence of flooding could be made more reliable by means of storages to create artificial floods, the pastoral resources of the area would be enormous. However, inquiries directed on these lines have revealed that little can be done to increase or stabilize the turn-off of fat cattle by artificial storage, but that improved transport facilities are essential.

At 30th June, 1952, 41 watering facilities, at an estimated cost of approximately £277,000, had been proposed under a Federal-State agreement for stock routes through, and in the approaches to, the Channel Country. Two had been completed, progress in general having been delayed by wet weather and lack of contractors for bore drilling.

7. **Hydro-electricity.\***—Behind the coastal plain of the Cairns-Ingham area is an extensive plateau, the elevation ranging from 2,000 to 3,000 feet, although isolated peaks exceed 4,000 feet. The short coastal streams which rise on the plateau descend rapidly into deep gorges, which they have cut through the old divide. With heavy monsoonal rainfall on their catchments and concentrated fall, these streams represent a considerable potential source of power, but storage, which can in most cases be provided, is essential to control the very variable flow.

The Barron Falls Scheme, 14 miles north-west of Cairns, came into operation in 1935. The installed plant operates under a head of 410 feet and comprises three 2,000 h.p. turbines each connected to a 1,320 kW. generator. Average rainfall varies from 80-150 inches along the ranges to less than 35 inches in the western portion of the catchment. There is extreme variation from year to year, resulting in great fluctuation of stream flow which, at Kuranda, has varied from a maximum of 117,000 cusecs in 1911 to a minimum of 30 in 1915. Storage to regulate the flow is possible but has not yet been provided. During periods of low flow the supply of electricity is supplemented by fuel plants at Cairns, Atherton and Innisfail. Power is distributed over 22,000 volt transmission lines serving the tableland and extending southward along the coast to Tully.

\* See also Chapter XXV.—Electric Power Generation and Distribution, pp. 1048-9..

A small hydro-electric scheme on the Mossman River, 5 miles from Mossman, North Queensland, comprises two 120 h.p. turbines operating under a head of 200 feet.

A hydro-electric power scheme at Tully Falls is being constructed. Water controlled by Koombooloomba Dam to be built on the upper Tully River will be diverted, a short distance above Tully Falls, through a tunnel and steel penstocks to Pelton-driven generators under a head of 1,485 feet. Ultimate installation will be four 18,000 kW. sets, two of which will be installed initially. Future automatic power plants upstream and downstream from Tully Falls will consist of two 7,500 kW. sets under 405 feet head and one 5,400 kW. set under 230 feet head. The combined peak load for the three plants will be 69,000 kW.

Other northern schemes which have been investigated include Freshwater Creek (3,900 kW.); North Johnstone-Russell Rivers (32,000 kW.); Beatrice-North Johnstone Rivers (9,000 kW.); South Johnstone River (25,000 kW.); extension of Barron Falls scheme (22,000 kW.); Herbert River (90,000 kW.). The total potential of the plateau region is therefore about 250,000 kW. at 50 per cent. load factor.

A power plant immediately below the Burdekin Falls Dam of the proposed Burdekin River Irrigation Scheme will operate under an average head of 225 feet. The output of firm power will depend upon the varying demand for water for irrigation, but it is expected to average about 50,000 kW.

South of the Burdekin River no appreciable hydro-electric development is practicable. A plant of 3,200 kW. capacity is being installed to utilize the outflow from Somerset Dam on the Stanley River a few miles above its confluence with the Brisbane River.

## § 5. South Australia.

1. *General.*—(i) *Rainfall.* Brief particulars of the climatic conditions in South Australia were given on page 1129 of Official Year Book No. 37, while Chapter II.—*Physiography*, of this issue, contains information on the climatic conditions in each State.

(ii) *Administration.* Water supplies, other than irrigation works, are under the control of the Engineering and Water Supply Department, which administers the Waterworks Act governing the supply of water through mains in water districts for townships and farm lands. The Water Conservation Act provides for the construction of storages in non-reticulated areas and authorizes the Minister to “divert and impound the water from any streams or springs or alter their courses, and take water therefrom, or any other waters as may be found in, under or on any land entered upon for the purpose of supplying water to the inhabitants of any water district”.

(iii) *Methods of Catchment and Conservation.* Early steps were taken to vest all running streams, springs and “soaks” in the Crown. Since the Water Conservation Act was passed in 1886 more than 550 dams, tanks and “rainsheds” have been built or acquired by the State, in addition to 460 wells and 340 bores, at a total cost of £1,271,552. The rainsheds comprise timber frameworks roofed with galvanized iron to catch precipitation which is delivered to storage tanks. Rainshed catchments vary from a few hundred square feet to four acres, discharging water into tanks ranging in capacity from 2,000 to 500,000 gallons. Over most of the State extraordinary precautions are taken to counteract evaporation. Pipelines in preference to open channels are used to reduce seepage and evaporation. Meters are attached to practically all services to check usage by individual consumers.

2. *Irrigation.*—In South Australia irrigation is almost exclusively confined to the Murray Valley. Except for that held in various lock pools, no water from the Murray is stored in South Australia. Water is either pumped on to the land or gravitated from the river. The upper Murray of South Australia and the Mildura area of Victoria formed the cradle of Australian irrigation. South Australian irrigation commenced with an agreement between the Government and the Chaffey Brothers in 1837 whereby 250,000 acres at Renmark were made available for irrigation settlement. Including land allotted for War Service Land Settlement purposes, the Department of Lands administers an area of 31,343 acres of irrigable high land, together with 9,422 acres of reclaimed swamp and

167,062 acres of non-irrigable land in the irrigation areas and 33,750 acres of land temporarily leased and reserved for commonage or other purposes, amounting in all to 241,577 acres. In addition, the Renmark Irrigation Trust controls 20,557 acres, of which more than 8,800 are irrigated. Water used for irrigation purposes in 1951-52 in the high land irrigation areas controlled by the Department of Lands was approximately 100,000 acre feet, in addition to which approximately 60,000 acre feet were used on reclaimed areas by gravitational watering. In the Renmark area water used for irrigation in 1951-52 was 24,215 acre feet. The production of the upper Murray areas is almost exclusively fruit and vines. Principal crops are sultanas, currants, lexiacs, apricots, peaches, nectarines, pears and figs (mainly for dried fruit), wine grapes and citrus fruits. Before irrigation, these semi-arid lands were of little productive value. The following tables show the acreage devoted to various crops in the government-controlled and Renmark Irrigation Trust areas on the upper Murray, and in the government-controlled reclaimed swamp districts near the mouth of the Murray, which are devoted to dairying.

(a) For the locations of these Irrigation areas see map on p. 1077.

The expenditure incurred by the Government to 30th June, 1952, in purchase of land, reclamation of swamps, preparation of irrigable lands for fruit growing, and purchase of pumping plants for drainage and water supply is approximately £5,081,000. Further irrigation development is being undertaken as a part of the Commonwealth-wide War Service Land Settlement Scheme. South Australia's share of horticultural plantings under the Scheme is 13,000 acres, comprising citrus 3,500 acres, vines 5,300 acres, and deciduous tree fruits 1,200 acres. Schemes already approved and under construction will absorb between 7,000 and 8,000 acres, and further areas are being selected to take up the balance. Holdings will be provided for about 500 settlers, and annual production from the 13,000 acres of plantings mentioned is estimated at :—Citrus, 750,000 bushels; deciduous tree fruits—fresh, 6,000 tons; dried vine fruits, 2,500 tons; wine grapes, 11,000 tons. On present-day prices, the value of this production would approximate £1,500,000.

Renmark Irrigation Trust is administered by a local board of management consisting of seven members. This area differs from other South Australian irrigation areas in that the land is freehold instead of leasehold, self-contained and self-controlled. Every settler is entitled to vote for the election of Trust members. The Trust maintains 80 miles of channel for the reticulation of 8,800 acres.

3. **Water Supply Schemes.**—(i) *Summary.* Water conservation and distribution works in South Australia have cost £28,574,140 (exclusive of river control and irrigation works on the River Murray which are dealt with above). A summary of statistical information concerning country supplies in 1951–52 follows :—Length of water mains, 5,639 miles; capacity of storages, 9,517 million gallons; approximate population served 260,000; area served, approximately 4,500,000 acres; and total capital cost, £17,961,538.

Areas extending for a distance of 90 miles north of Adelaide are supplied from the Warren and Barossa Reservoirs in the Barossa Ranges, and agricultural towns and areas further north are supplied from Beetaloo, Bundaleer and Baroota Reservoirs, with a connexion to the Warren system. Eyre Peninsula has, up to the present, been supplied from the Tod River Reservoir (9,167 acre feet) and three small reservoirs near the Franklin Harbour District, but demands have increased to such an extent in recent years that further sources of supply are necessary, and with this end in view a water-bearing area known as the Uley-Wanilla Basin has been developed, and water from it is now being used in the Tod River system.

(ii) *Morgan-Whyalla Water Supply Scheme.* For particulars of the construction and works of the 223-mile pipe line bringing water from the Murray at Morgan to Whyalla on Spencer Gulf see Official Year Book No. 37, page 1132. The Morgan-Whyalla Water Supply Scheme forms part of the South Australian Country Water Supply system referred to above.

4. **Underground Water.**—The occupied portion of South Australia is, on the whole, well endowed with underground water. The extent of the several artesian basins is tolerably well-known. There are also considerable areas, notably in the south-east of the State, in which ground water occurs. Quality varies widely, but a great deal is at least useful for watering stock, the major use to which it is put. Apart from numerous boreholes and wells tapping underground water for farms, stations and towns, two notable basins are being developed on Eyre Peninsula—one at Flinders (Streaky Bay) and the other at Uley-Wanilla, near Port Lincoln. Leigh Creek coalfield, some 350 miles north of Adelaide, derives its supply from a borehole at Sliding Rock mine, the water being pumped through a pipeline 25 miles long.

The deepest portion of the Great Artesian Basin (in the north-east) is not extensively developed because development costs are large in proportion to the carrying capacity of the arid land. Deep boreholes have been drilled by the Government, however, to provide watering places along stock routes, and pastoralists rely largely on supplies in suspended basins at shallower depths.

The use of the waters of the Murray Basin is essential to settlement in the Murray Mallee country and in the south-east, especially for farms, but also for township supplies for Mount Gambier, Naracoorte, Bordertown and Pinnaroo. The maximum depth of boreholes is 235 feet and the minimum 71 feet. Average tested yield is 14,808 gallons per day.

Pastoralists, farmers, market gardeners and others have been assisted with expert advice on drilling, for which the Government maintains about 40 drills. A large area within the Murray River Basin has been examined critically to ascertain the extent of land which could be used for lucerne, and an examination of a large part of Kangaroo Island and Southern Eyre Peninsula has been completed in connexion with Soldier Settlement schemes. Examination of large areas in the Upper South-East has been undertaken in connexion with land development schemes.

The results of comprehensive surveys of underground supplies undertaken by geologists of the South Australian Government have been published in the State's geological survey bulletins in recent years.

5. **Farm Water Schemes.**—While the Department of Mines and the Engineering and Water Supply Department give assistance to individual farmers in the provision of supplies from underground sources, a great part of the farming areas derive water supply under pressure from the extensive distribution systems connected to various reservoirs or the Murray River.

6. **South-Eastern Drainage.**—For some information on the drainage schemes necessary for the disposal of surplus water in areas in the south-east of South Australia see Official Year Book No. 37, page 1133.

## § 6. Western Australia.

1. **General.**—(i) *Rainfall.* Brief particulars of the climatic conditions in Western Australia were given on page 1133 of Official Year Book No. 37, while Chapter II.—Physiography, of this issue, contains information on the climatic conditions in each State.

(ii) *Administration.* Irrigation districts are administered under the Rights in Water and Irrigation Act 1914-1945 and the Government is advised by an Irrigation Commission representing the local irrigationists and government technical and financial branches. The Goldfields Water Supply is administered by a branch of the Public Works Water Supply Department and its responsibilities include control of water from this scheme for agricultural purposes. The metropolitan water supply is controlled by a separate department under the control of the Minister for Water Supply, Sewerage and Drainage. Under the Water Boards Act 1904-1953 twelve towns are administered by local water boards and 36 are under direct Ministerial control. The Minister also controls three District Farming Schemes. Water rights over water flowing in streams and water courses are vested in the Crown unless specifically appropriated for irrigation purposes under the irrigation legislation.

2. **Irrigation.**—The main irrigation districts—Harvey, Waroona and Collie—are along the south-west railway line between Waroona (70 miles from Perth) and Dardanup (116 miles from Perth) (see map on p. 1078). The total area irrigated in these districts during 1951-52 was 19,842 acres and the total water used was 62,472 acrefeet. The total acre waterings (i.e., the number of acres watered multiplied by the average number of waterings) was 95,831. Investigations are being carried out with a view to irrigating a further 30,000 acres south of the existing Collie Irrigation District.

Harvey Districts (Nos. 1 and 2—32,663 acres) are supplied from the Harvey Weir (8,300 acrefeet) and Stirling Dam (44,344 acre-feet), Waroona District (10,325 acres) from Drakesbrook Dam (1,855 acrefeet) and Samson Brook Dam (6,540 acrefeet), and Collie District (28,762 acres) from Wellington Dam (27,800 acrefeet).

The following table, which shows acre waterings supplied to crops in the irrigation districts of Harvey, Waroona and Collie during the seasons 1938-39 and 1947-48 to 1951-52 illustrates the growth of these irrigation schemes.

IRRIGATION, WESTERN AUSTRALIA : ACRE WATERINGS.

Year.	Pasture.	Fodd.r.	Potatoes.	Vegetables.	Orchard.	Flax and Broom Millet, etc.	All Crops.
1938-39 .. ..	31,049	934	3,142	602	922	..	36,739
1947-48 .. ..	57,450	508	3,714	3,433	1,190	..	66,295
1948-49 .. ..	71,687	640	2,692	3,562	1,448	..	80,029
1949-50 .. ..	79,373	685	4,591	4,207	1,369	4	90,319
1950-51 .. ..	76,431	793	2,946	4,090	1,180	..	85,440
1951-52 .. ..	88,091	1,417	2,793	2,442	1,088	..	95,831

3. *Water Supply Schemes.*—(i) *Goldfields Scheme.* Western Australia has one of Australia's most spectacular water supply schemes, and a brief account of its development will be found on page 1134 of Official Year Book No. 37, and an account in greater detail on page 576 of No. 6. Mundaring reservoir on the Helena River, 26 miles from Perth, is the source of water supplied to the goldfields, and has a capacity of 15,100 million gallons and a catchment of 569 square miles. The water now passes through 346 miles of steel main, mostly of 30-inch diameter, aided by eight pumping stations and one booster station, involving a total net lift of 1,280 feet.

Maximum pumping capacity from No. 1 Pumping Station at Mundaring is now 9,500,000 million gallons per day. The total capacity of all receiving and regulating tanks, etc., along the pipe line is 129 million gallons, which includes two standby reservoirs at Kalgoorlie having a combined capacity of 35 million gallons.

Hundreds of miles of branch mains and pipes have been laid to mining districts, towns and farming districts, the most important being the Norseman extension of 101 miles. The system serves 50 towns and water is reticulated to 1,500,000 acres of farming lands. Total length of mains is 1,802 miles and the population served is 65,000. Total quantity of water pumped from Mundaring in 1951-52 was 2,677 million gallons. Total cost of system to the end of 1951-52 was £7,700,000.

(ii) *South-West Scheme (Comprehensive).* The Commonwealth Government has agreed to assist a scheme to extend water for agricultural areas and towns in the south-west of Western Australia, which will be administered by the State Government. Twenty-three towns and over 4,000,000 acres of agricultural country will benefit. The original estimated cost of this scheme was £4,300,000 of which the Commonwealth Government agreed to contribute 50 per cent., £2,150,000. The revised estimate at 1953 is £9,000,000. These estimates exclude the cost of the raising of Mundaring and Wellington Dams, which works form the headworks of the scheme and are financed solely by the State Government.

The work of raising Mundaring Weir 32 feet in height giving a total capacity of 15,100 million gallons was completed in 1951 and preparations are well in hand for commencing work in the raising of Wellington Dam 50 feet in height, increasing storage to 42,000 million gallons capacity. Thirty-seven miles of 30-inch pipe line from Wellington Dam to Narrogin have been laid, i.e., about half the total distance, and contracts let for the new electric pumping station at Mundaring, having a maximum capacity of 16 million gallons per day and two electric stations on the Wellington Dam-Narrogin pipe line with a maximum capacity of nearly 7 million gallons per day.

(iii) *Rock Catchments.* An interesting feature of the State's conservation system is found in the Barbalin, Narembeen and Kondinin District Farming Land Schemes in the wheat belt, where extensive granite outcrops have been used as catchments. The rain is caught at the foot of the rocks, and pumped to tanks from which the water is reticulated to farms and to a number of small towns. For further particulars see Official Year Book No. 37, page 1135.

4. *Underground Water.*—Individual farmers, orchardists, market gardeners and others derive water from wells using windmills or, where power is available, pumps and

motors are used to tap such supplies. The Department of Public Works has twelve boring plants which are lent out to farmers to facilitate boring operations to an average depth of 150 feet. The Department also contracts with private firms to bore for communal farm supplies. During the past 59 years 301 artesian and sub-artesian bores have been sunk, mostly for private purposes. The total depth of all recorded bores in Western Australia is 246,775 feet; daily flow is 88,692,500 gallons; and the average depth at which water is struck is 819 feet. Maximum depth of any bore is 4,006 feet and minimum 21 feet.

5. *Ord River Scheme.*—The Ord River in the north-west of Western Australia traverses a tropical area served with monsoonal rains of irregular incidence and quantity, varying from 20 inches in the south to 30 in the north. The hottest months (December to March) are also months of highest rainfall. Communications and population are sparse. The Western Australian Government is considering a proposal to build a dam to conserve 2,000,000 acre feet of water, equipped with hydro-electric plant, which might supply irrigation water for an area of 100,000 acres, if investigations show that the climate and soil conditions are suitable for vegetables, tropical fruits and rice. The economic production of these and other crops, as well as the possible use of such irrigation areas for interim fattening of cattle, is being examined at the Kimberley Research Station on the Ord River.

## § 7. Tasmania.

1. *General.*—(i) *Rainfall.* Brief particulars of the rainfall pattern in Tasmania were given on page 1136 of Official Year Book No. 37, while Chapter II.—Physiography, of this issue, contains information on the climatic conditions in each State.

(ii) *Main Purposes of Conservation and Utilization.* Owing to its fortunate rainfall position, scarcity of water is not a serious problem in normal seasons. Conservation of water for hydro-electric generation is the predominant interest, and conservation for domestic and industrial purposes is more important than irrigation. Conservation of water on farms is not practised to the same extent as on the mainland, probably because running streams and good rainfall are on a more generous scale. Provision of artificial storages (apart from house tanks) is rare, but progressive landowners are beginning to take advantage of modern plant, such as bulldozers, to provide small excavated storages on their properties. Underground water is of poor quality and a small quantity exists over an area in the Midlands which has been exploited to a limited extent only by bores and windmills. Geological conditions do not appear to favour the utilization of ground water except on a minor scale. There is only one known flowing bore—at Spreyton—which yields 1,690 gallons per hour.

(iii) *Administration.* The State does not own all natural waters as in Victoria, and consequently the subject of water rights is a difficult one. The Mines Department has power to grant certain rights for mining operations, and the Hydro-Electric Commission must approve the abstraction of water from any stream or lake of potential value for power generation. Legislation was enacted during 1952, empowering Local Authorities to take water from specific sources of supply and to construct waterworks. The Act does not cover irrigation which is practised to a limited extent only by private interests. Provision has been made in the Act for the protection of riparian rights, but there is no general legislation for the control of water courses.

2. *Hydro-electricity.\**—Tasmania depends entirely on water for power development. The Hydro-Electric Commission, the authority controlling the generation of electricity in Tasmania, conducts a continuous survey of the water power resources of the State assisted by modern methods such as aerial photography and geophysical exploration. Although the survey is not yet conclusive it is considered that at least 1,865,000 kW. of continuous power can be economically developed. At present only 218,700 kW. of generating plant is in commission, but plant under construction will raise this total to 404,500 kW. by 1955. Further construction, approved by Parliament, is about to be commenced and will increase this to 566,400 kW.

\* See also Chapter XXV.—Electric Power Generation and Distribution, pp. 1053-5.

Most of the water potential is located on the Central Plateau (*see map on p. 1079*) with an area of about 1,500 square miles at an altitude of from 2,000 to 4,000 feet and subject to rainfall of from 30 inches a year in the east to 80 inches on the western perimeter. On the plateau are a large number of lakes which provide the means for storage at low cost. These include Great Lake with an area of 58 square miles, Lake St. Clair and Lake Echo, each more than 12 square miles, and others of smaller area.

The Derwent River and its tributaries which flow south-easterly carry off by far the greater part of the water which falls on the plateau and these rivers are therefore the most abundant source of power. They have been the cheapest to develop to date and most of the existing generating stations are located on them.

The three main rivers running westerly from the plateau—the Arthur, Pieman and Gordon—have only a small portion of their catchment areas at high level, but they run through regions of high rainfall and their power potentials are considerable. However, because of inaccessibility and climate, development of these rivers may be rather expensive and has been deferred in favor of more convenient schemes.

Rivers draining from the plateau towards the north and north-west coast, including the Emu, Forth and Mersey, have small catchments at high levels and no natural storages.

Two other important water power sources, independent of the Central Plateau, are the Esk River in the north and the Huon River in the south. A power station now under construction at Trevallyn, near Launceston, will utilize water from the Esk. The Huon has a large low-level catchment in the high-rainfall area near the west coast. Storage could be provided on it at a reasonable cost and because of the proximity to Hobart of a future power station, it has considerable value for peak load development.

3. **Industrial.**—Three principal industrial schemes have been installed privately. The Australian Newsprint Mills pump approximately 6,000,000 gallons a day from the Derwent River at Lawitta for the Boyer Mills. Associated Pulp and Paper Mills pump several million gallons a day from Emu River at Burnie, and Titan Products Pty. Ltd. reticulate water from Chasm Creek to their factory at Weybridge. In addition the State is actively engaged in the construction of a regional water scheme which will serve the Australian Aluminium Production Commission's plant at Bell Bay on the River Tamar. Potential sources capable of greater development without storage exist on the Derwent, South Esk, Huon, Lake, Mersey and Forth Rivers. There is also a great reserve of untapped permanent streams in the western half of the State, at present largely unsettled. Diversion to the eastern side of the watersheds is not regarded as practicable.

4. **Irrigation.**—There are no State irrigation projects, but preliminary inquiries as to the possibility of establishing one in the Coal River Valley have been made and legislation is under consideration. All systems operating are privately owned, and with one exception (at Bushy Park), are single-farm units. At Bushy Park a small system serves a group of properties. The larger proportion of the area under irrigation is watered by gravitational systems and the remainder comprises areas devoted to vegetables and served by municipal water supplies. Irrigation, as practised in Tasmania, was applied in 1951-52 to 6,830 acres devoted to: hops (1,065 acres); fruit (803 acres); pastures (4,320 acres); green fodder, etc. (154 acres) and other crops (488 acres).

## § 8. Northern Territory.

1. **Climate and Topography.**—Some particulars of the climate and main topographical features of the Northern Territory were given on page 1138 of Official Year Book No. 37, and in this issue information on climatic conditions will be found in Chapter II.—Physiography, and a brief outline of contour and physical characteristics in Chapter VII.—The Territories of Australia.

2. **Administration.**—Under the Control of Waters Ordinance (1938) of the Northern Territory natural waters are vested in the Crown. Where a watercourse or lake forms a boundary of any land alienated by the Crown, the beds and banks are deemed to remain the property of the Crown (except in special cases) and diversion of water is prohibited except under conditions prescribed.

3. **Underground Water.**—Artesian water is found mainly in the south-east where the Great Artesian Basin enters the Territory. Pastoral (beef) production accounts for the bulk of the Territory's income, and the marked seasonal conditions affect the industry's economy. During the wet summer season there is adequate water, but during the winter most natural watering points disappear, and pastures dry. Bores supplement the permanent watering points, which are mainly along river frontages. The cattle industry is concentrated in the area in which the feed retains an appreciable nutritive value during the winter despite the dry conditions. This area is not in the wetter coastal regions, but in the inland belt of 15 to 25 inch rainfall and to the north of Alice Springs. Lack of bores is a limiting factor in the industry's economy, as cattle are able to thrive only within certain distances of reliable water.

Some 600 bores have been recorded, but complete records are not available. Maximum depth is more than 600 feet. For further information see Official Year Book No. 37, p. 1139.

4. **Irrigation.**—There are no large-scale water conservation projects in the Territory with the exception of the Manton Dam (80,350 acre feet) which serves Darwin with a reticulated supply. Irrigation has therefore assumed no current importance. For particulars of present activity and potentialities see p. 1138 of Official Year Book No. 37.

## § 9. Papua and New Guinea.

1. **Rainfall.**—When all localities (32 stations) where gauges are kept are taken into consideration, the average annual rainfall over periods varying from two to ten years is about 159 inches. This figure includes both inland and coastal stations.

2. **General.**—For a general description of these territories see Chapter VII.—The Territories of Australia, pp. 244–5, 250 and 255 of this Year Book. Irrigation has not been developed on any organized basis owing to the availability of high rainfall and the nature of agricultural development. The main water conservation interest in New Guinea at present is the hydro-electric potential.

Those portions of New Guinea administered by Australia are well served with large rivers deriving their water from heavy tropical rains and high mountains which rise to 13,000 feet. Complete data concerning water resources are not available, but it is known that the opportunities for production of hydro-electric power are extensive. Some authorities estimate that 20,000,000 h.p. could be generated. Present investigations have been limited to those areas where a demand for power is likely to arise. New Guinea has a substantial native population and few major industries.

Explorations over the southern portion, known as Papua, have resulted in the collection of much information concerning water resources. The largest stream is the Fly River, at least 500 miles long, which is situated in the western division. Its large tributaries extend to the northern boundary of the Territory rising among lofty mountain ranges. Records show that at a point above the tidal influence, where the river is 600 yards wide and 40 feet deep, the stream travels at a rate of  $3\frac{1}{2}$  miles per hour and discharges 105,200,000 gallons per minute. All the principal rivers flow from the main range in a southerly direction. Most of them carry a large volume from a great height over relatively short distances. They have a total catchment of about 50,000 square miles having an elevation between 2,000 and 13,000 feet. The Government Geologist has estimated that if only 50 per cent. of the annual rainfall were utilized through a height of only 500 feet a total of 8,500,000 h.p. would be produced.

## CHAPTER XXVII.

## DEFENCE.

## § 1. Department of Defence.

1. **Introduction.**—At the outbreak of the 1939–45 War, the Department of Defence comprised the three Fighting Services and a Central Secretariat. In November, 1939, separate Departments, each with its own Minister, were created for the control and administration of the Navy, Army and Air Force. The Defence Department as then reconstituted retained responsibility for over-all defence policy and for the conduct during the war of the business of the War Cabinet, set up in September, 1939, and the Advisory War Council, set up in October, 1940. These bodies ceased to function after the war.

2. **Functions and Organization.**—(i) *The Cabinet.* The determination of defence policy is the responsibility of Cabinet.

(ii) *Functions of Department of Defence.* Subject to the authority of Cabinet, the Minister and Department of Defence are responsible for :—

- (1) The formulation and general application of a unified defence policy relating to the Defence Forces and their requirements, including :—(a) co-operation in British Commonwealth and regional defence and the defence aspect of the Charter of the United Nations ; (b) the supply aspect of defence policy, including the review of production programmes and capacity ; (c) the scientific aspect of defence policy ; and (d) the financial requirements of defence policy, and the allocation of funds made available.
- (2) The defence aspect of Armistice and Peace Terms, Control Commissions, and Forces of Occupation.
- (3) Matters of policy or principle and important questions having a joint service or inter-departmental defence aspect.
- (4) The higher defence machinery, and the control of the joint service machinery.
- (5) The defence aspect of questions relating to the organization and machinery for :—(a) co-operation in British Commonwealth defence ; (b) co-operation in regional security, including obligations under the United Nations Charter ; (c) higher direction in war ; and (d) higher direction of the Services.
- (6) The Commonwealth War Book, which is a summary of national plans for an emergency as developed in Departmental War Books.
- (7) The administration of inter-service organizations, such as the joint intelligence machinery.
- (8) The defence aspect of :—the strength and organization of the Forces, higher appointments in the Services, Honours and Awards.
- (9) Advice on the military aspect of civil defence.

(iii) *Joint Service and Inter-departmental Machinery.* The joint service and inter-departmental advisory machinery of the Department consists of various committees headed by the Defence Committee, the Chiefs of Staff Committee and the Joint War Production Committee. The Defence Committee is a statutory body consisting of the Secretary, Department of Defence, who is Chairman, and the Chiefs of Staff of the three Services. In general, its function is to advise on defence policy as a whole, and on matters of policy or principle and important questions having a joint service or inter-

departmental-defence aspect. The main responsibility of the Chiefs of Staff Committee in peace is the preparation of strategic appreciations and military plans. The function of the Joint War Production Committee is, briefly, to examine the relation between strategic plans and their requirements to ensure that the war potential for them exists. The major committees subordinate to the Defence Committee and/or the Chiefs of Staff Committee comprise the Principal Administrative Officers Committee (Maintenance and Materials), the Principal Administrative Officers Committee (Personnel), the Defence Research and Development Policy Committee, the Joint Planning Committee, the Joint Intelligence Committee and the Joint Administrative Planning Committee.

(iv) *Defence Business Board.* In view of the heavy defence expenditure, the Government, in July, 1953, established the Defence Business Board in the Department of Defence. The Board will deal with joint Service matters of common interest to the three Services, or important subjects on which the collective advice of the Board is desired. The Board comprises businessmen who serve in a part-time honorary capacity and consists of an independent chairman and the business advisers of the three Service Departments.

3. **Basis of Current Defence Policy.**—The principal strategic considerations influencing the Government's defence policy as described by the Minister for Defence include the following features :—

(i) *Cold War.* It is essential to check the form of aggression that has occurred in Korea and Malaya, and an adequate Australian contribution to the "cold war" is essential both to our relations with our powerful friends and to the Allied strategic starting point should war occur.

(ii) *Global War.* If there is war on a global scale, it will be won or lost outside Australia. Since no one country can win without the co-operation of all the others, Australia must, in its own and the general interest, play a full part in its allotted place in the general Allied strategy, and the employment of its forces must be planned in advance, in co-operation with these Allies.

(iii) *Local Defence.* The local security of Australia, at least during the next two decades, is likely to depend on the control of sea and air communications in the Pacific and Indian Oceans and in the seas joining them.

4. **The Defence Programme.**—(i) *Financial.* The total provision made for Defence in 1952-53, £216,000,000 (including £10,000,000 transferred to the Korean Operations Pool Trust Account), is a peace-time record for Australia. The following table gives details of the expenditure incurred against this provision :—

## DEFENCE EXPENDITURE, 1952-53.

( £'000.)

Service or Department.	Maintenance.	Material Requirements, Machinery, Plant and Equipment.	Buildings, Works and Sites.	Miscellaneous Non-Programme Expenditure.	Total.
Defence .. ..	598	46	27	..	671
Navy .. ..	32,905	12,298	2,082	..	47,285
Army .. ..	(a) 70,218	14,211	6,038	1,067	91,534
Air .. ..	33,309	17,439	4,521	..	55,269
Defence Production .. ..	4,644	2,591	1,501	412	9,148
Supply .. ..	7,663	701	2,200	821	11,385
<b>Total .. ..</b>	<b>149,337</b>	<b>47,286</b>	<b>16,369</b>	<b>2,300</b>	<b>215,292</b>

(a) Includes £10,000,000 transferred to the Korean Operations Pool Trust Account.

(ii) *Personnel Strengths.* The personnel strengths of the Services at 30th June, 1953, were :—

Category.	Navy.	Army.	Air Force.	Total.
Permanent Forces .. .. .	(a) 14,273	27,180	15,517	56,970
Citizen Forces—				
Volunteers .. .. .	5,009	15,640	2,595	23,244
National Service Personnel .. .. .	2,080	54,644	(b) 9,584	66,308
Total Citizen Forces .. .. .	7,089	70,284	12,179	89,552
Total Strength .. .. .	21,362	97,464	27,696	146,522

(a) Excludes 110 Cadet Midshipmen not in receipt of pay. personnel who have completed training and are on the reserve.

(b) Includes 7,118 National Service

5. *Australian Participation in Korea, Malaya and the Middle East.*—(i) *Korea.* In accordance with the resolutions of the Security Council calling on members of the United Nations to assist the Republic of Korea in resisting aggression, Australia has furnished forces as follows :—

*Navy*—Since 29th June, 1950, a Royal Australian Naval Force of two ships has been engaged in operations. This force has consisted from time to time either of two destroyers or a frigate and a destroyer. In addition, H.M.A.S. *Sydney* relieved H.M.S. *Glory* in October, 1951, for a period of three months.

*Army*—At 30th June, 1953, the forces in Korea consisted of :—

- (i) 2 and 3 Infantry Battalions, The Royal Australian Regiment.
- (ii) A proportion of a Brigade Headquarters and of the Headquarters 1st Commonwealth Division
- (iii) An element of the British Commonwealth Communications Zone.

3 Infantry Battalion, with necessary reinforcements, had been on active service in Korea since September, 1950, and during March, 1953, 2 Battalion relieved 1 Battalion, which had been in the Korean theatre since March, 1952.

*Air Force*—No. 91 (Composite) Wing, formed of No. 77 (Fighter) Squadron (which had been in Korea since June, 1950), and No. 36 (Transport) Squadron, together with the necessary administrative and maintenance units for their support.

Over-all operational control of the United Nations Forces in Korea is the responsibility of the American Unified Command which was established by the Security Council. The Commander-in-Chief, British Commonwealth Forces, Korea, is responsible for the non-operational control and administration of the British Commonwealth Forces in Korea, the land forces of which comprise 1st Commonwealth Division, United Nations Forces.

The number of Australian personnel serving in the Japan-Korea area at 30th June, 1953, was 5,113.

(ii) *Malaya.* No. 1 (Bomber) Squadron and No. 38 (Transport) Squadron of the R.A.A.F. were engaged in anti-bandit operations in Malaya from June, 1950. At the end of 1952 the Transport Squadron was withdrawn, but No. 1 (Bomber) Squadron is continuing operations in Malaya.

(iii) *Middle East.* In June, 1952, No. 78 (Fighter) Wing left Australia for service as part of the peace-time Air Force garrison in the Middle East.

For further details see sections relating to the respective Services.

6. **National Service Training.**—(i) *Liability.* Compulsory military training under the Defence Act was in operation from January, 1911 to November, 1929, when the Citizen Forces were re-constituted on the basis of voluntary enlistment. In March, 1951, the National Service Act was passed to enable effect to be given to the Government's policy of National Service training.

Under the National Service Scheme, every male person ordinarily resident in Australia, who attains the age of 18 years or who has attained the age of 18 years since 1st November, 1950, is required to register when called upon to do so by notice published in the *Gazette*. The only exceptions are certain officials in the service of international bodies, diplomatic personnel, men already serving in the Permanent Forces and aboriginal natives of Australia.

Every registrant who complies with the standards of fitness laid down is liable to be called up for service unless he is exempt from service. The exempt classes, apart from persons subject to prescribed physical or mental disabilities, are theological students, ministers of religion, members of religious orders and conscientious objectors. There is provision for call up of conscientious objectors for non-combatant duties only, and for deferment of call up, while the ground of deferment continues, for such cases as apprentices, students, and individual cases of exceptional hardship.

(ii) *Conditions of Service.* Service under the National Service Scheme is with the Citizen Naval Forces, the Citizen Military Forces or the Citizen Air Force. In determining in which part of the Citizen Forces a person is to serve, effect is given as far as possible to the personal preferences indicated. No person is called up for service with the Citizen Naval Forces or the Citizen Air Force unless he has volunteered for service beyond the limits of Australia. Originally the National Service scheme provided for members of all Services to perform a total period of 176 days' training. Following a review of the scheme, changes in the periods of training were announced in September, 1953. In the Navy and Air Force, the total period is now 154 days, which is performed in one continuous period except in the case of students, who may complete their service in two periods of 77 days in successive years. In the case of the Army, the total period of training is 140 days, consisting of 98 days' continuous training and 21 days' training in camps or week-end bivouacs in each of the following two years. (See also sections dealing with the respective Services.)

(iii) *Strength.* To 30th June, 1953, 69,700 trainees had been called up for training.

## § 2. Naval Defence.

1. **State Systems.**—Information regarding naval defence systems prior to 1901 will be found in Official Year Book No. 2, p. 1084.

2. **The Present System.**—(i) *General.* (a) *Royal Australian Navy up to end of 1939-45 War.* An outline of the development of Australian Naval policy was given in Official Year Book No. 3, p. 1060 and No. 12, p. 1012. Some account of the building of the Australian Navy, the proposed and modified cost thereof, the compact with the Imperial Government, etc., appears in Official Year Book No. 15, pp. 921 *et seq.* An account of the growth and activities of the Royal Australian Navy during the 1939-45 War is given in Official Year Book No. 36, pp. 1023 *et seq.*

(b) *Post-war Programme.* The following is a summary of the Naval Programme :—

(1) Ships in Commission—The Fleet consists of :—

Carrier Force : 2 Light Fleet Carriers, 1 Cruiser, 4 Destroyers.

Escort Forces : 4 Frigates.

Surveying Duties : 2 Survey ships and their tenders.

Training Ships : 2 Frigates, 6 Ocean Minesweepers.

Auxiliary Vessels : 3 Boom Defence Vessels, 1 Ocean-going Tug, 1

Armament Store Carrier, 3 Patrol Vessels, 2 General Purpose Vessels,  
5 Search and Rescue Vessels.

(2) In addition to the ships in Commission, a substantial reserve fleet will be maintained in good condition against any future emergency.

(3) Personnel—The strength of the Royal Australian Navy has been pegged at 14,550, comprising 1,400 Officers and 13,150 ratings.

(4) Reserve and National Service Training—Reserve training was resumed as from 1st January, 1950, for members of the Royal Australian Naval Reserve. Training consists of 45 two-hourly drill attendances at night or on Saturdays in naval training establishments in each of the capital cities, plus 13 days' continuous training each year in H.M.A. ships or training establishments, including special schools. In addition, payment is made for further voluntary home training up to a maximum of 12 days. Selected members may undergo special courses up to a limit of six months during the whole of their service in the Reserve, whilst up to 12 months, training or service may be performed in H.M.A. ships or establishments with similar qualifications. Engagements are for three years. Rates of pay have been aligned (with minor modifications) with those applicable to the Permanent Naval Forces. The training for members of the Royal Australian Naval Reserve (Sea-going) is normally 28 days every two years whilst members of the Royal Australian Naval Volunteer Reserve are under no training obligations.

Naval National Service personnel commenced training on 30th July, 1951. On completion of their 154 days' initial training in naval establishments and H.M.A. ships, personnel will be attached to the Naval Reserve Training Establishment in their State and will carry out annual continuous training within the next four years in a manner similar to the members of the Royal Australian Naval Reserve, in order to comply with their National Service liability of five years. The present annual intake of National Servicemen is 1,200.

Revised post-war conditions of service in the Royal Australian Fleet Reserve were introduced as from 13th December, 1950. This Reserve is comprised of two classes, viz. :—(a) former ratings who receive full benefits under the Defence Forces Benefits Act and are required to serve five years in the Royal Australian Fleet Reserve as a consideration for receipt of these benefits, and (b) former ratings who have previously served in the Permanent Naval Forces of the Royal Australian Navy, Royal Navy, or a Dominion Navy subject to a minimum period of three years' service and an absence of not more than five years. No retainer is payable to members under (a) and no training is carried out. Members under (b) receive an annual retainer of £24 subject to completing 14 days' annual training. Ratings receive pay applicable to Royal Australian Navy personnel whilst under training.

- (5) **Fleet Air Arm**—The Fleet Air Arm of the Royal Australian Navy consists of two Naval Air Stations, H.M.A.S. *Albatross* at Nowra, New South Wales and H.M.A.S. *Nirimba* at Schofields, New South Wales; and two light fleet aircraft carriers, H.M.A.S. *Sydney* and H.M.A.S. *Vengeance*. In May, 1953, H.M.A.S. *Sydney* carried the Commonwealth Coronation Contingent to the United Kingdom and was present at the Spithead Coronation Review in June, returning to Australia via the United States in August, 1953.
- (6) **Ship Construction and Repair**—Provision is made for the maintenance in Australia of a nucleus ship construction and repair industry capable of rapid expansion in time of war. The present approved programmes provide for the construction of four destroyers (three being built) and six anti-submarine frigates (work on four in progress); the conversion of five "Q" class destroyers to fast anti-submarine frigates (one completed and work on four in progress); the modernization of three "Tribal" class destroyers (one completed and work on one in progress); and an extensive refit of H.M.A.S. *Hobart*.

(c) *The Relation of New Weapons.* Careful consideration has been given to the implications of new weapons, and the decisions in regard to the Navy are based on the broad conclusions of great naval powers that these weapons should be introduced by the normal process of evolution, first into existing ships, and later perhaps into an entirely new form of fighting ship. The same authoritative opinion is of the view that there will be no rapid development which will render vessels such as carriers, cruisers and destroyers obsolete within the near future.

(ii) *Naval Board.* The Australian Navy is administered by a Board consisting of the Minister for the Navy with four Naval Members, and the Secretary, Department of the Navy; the seat of administration is at Melbourne.

(iii) *Naval College.* Sixty-four Cadet Midshipmen (including five from the Royal New Zealand Navy) entered the Naval College for training in the year commenced January, 1953. At 30th June, 1953, there were 141 Cadet Midshipmen undergoing training.

(iv) *Training Establishments.* Flinders Naval Depot, Victoria, remains the principal training establishment for ratings in the permanent forces, while several advanced training schools are established in Port Jackson, New South Wales. Air training is carried out at Nowra, New South Wales.

(v) *The Australia Naval Station.* Defined limits of the Australia Station are as follows :—

Eastern—

From 3° 30' North 169° East, south to 1° South, thence east to 170° East, thence south along this meridian to 30° South, thence to 45° South, 160° East, thence south along this meridian.

Northern—

From 3° 30' North 169° East, west to 125° East, thence south to the Coast of Celebes, thence west along the Coast of Celebes to 120° East, thence south to 11° 30' South, thence west to 11° 30' South 95° 15' East.

Western—

From 11° 30' South 95° 15' East, south along this meridian to 30° South, thence west along this parallel to 80° East, thence south along this meridian.

(vi) *Foreign Service.* The R.A.N. is represented in Japan by H.M.A.S. *Commonwealth* base establishment in Kure. During the year ended June, 1953, the following ships of the R.A.N. served in Korean waters :—H.M.A. Ships, *Warramunga*, *Bataan*, *Anzac*, *Condamine* and *Culgoa*.

(vii) *Papua and New Guinea Division of the Royal Australian Navy.* A Papua and New Guinea Division of the Royal Australian Navy, consisting of native ratings, was inaugurated in July, 1951, as a separate part of the Permanent Naval Forces, for employment in Papua and New Guinea and waters adjacent thereto.

3. Ships of the Royal Australian Navy.—The following ships were in commission or in reserve in June, 1953 :—

4. **Strength of Royal Australian Navy.**—The serving strength of the Royal Australian Naval Forces, both permanent and reserves, at 30th June, 1953, was 1,178 officers and 12,767 ratings including 60 native ratings of the Papua and New Guinea Division of the Royal Australian Navy. In addition, ten officers and 248 ratings of the Women's Royal Australian Naval Service were serving and 180 Cadet Midshipmen were undergoing training, including 141 at the Naval College. Reserve strength comprised 1,200 Officers and 5,722 ratings.

### § 3. Military Defence.

1. **State Systems.**—A detailed historical account of the Australian defence forces prior to Federation will be found in Official Year Book No. 2, pp. 1075–1080. *See also* Official Year Book No. 12, p. 999.

The strength of the military forces of the States on 31st December, 1900 (the eve of Federation) was:—New South Wales, 9,338; Victoria, 6,335; Queensland, 4,028; South Australia, 2,932; Western Australia, 2,696; Tasmania, 2,024; total for Australia, 27,353. This total is exclusive of cadets, reservists and rifle club members.

2. **Commonwealth Systems.**—(i) *General.* Under the terms of the Constitution Act 1900, the Commonwealth took over control of defence matters in March, 1901. The growth of the Commonwealth Military Forces may be considered to have taken place in sixteen phases. For particulars of the phases which cover the period from the welding together of the military forces of the States into one homogeneous army in 1902 up to the decision to increase the training strength of the militia to 70,000 in the year before the 1939–45 War (phases 1–7), *see* Official Year Book No. 36 and earlier issues.

Phases 8–10, covering the period immediately prior to, and just following, the outbreak of the 1939–45 War, relate to the initial steps necessary to put the Australian Military Forces on a war-time basis, and to its organization into commands.

The eleventh phase, in January, 1942, was the division of Northern, Eastern and Southern Commands into separate commands and base headquarters to handle operational and administrative matters respectively, and the twelfth phase was the revision of the

machinery for command administration of lines of communication areas. The thirteenth phase was the appointment of Lieutenant-General Sir Iven Mackay as G.O.C.-in-C. Home Forces commanding the forces in Northern, Eastern and Southern Commands. The fourteenth phase covers the period following the outbreak of war with Japan and the entry of United States of America Forces into the South-West Pacific Area, and relates to the appointment of General Sir Thomas Blamey as Commander-in-Chief, Australian Military Forces, the cessation of the Military Board, and the replacement of the system of commands and bases by the field army and lines of communication areas. In March, 1943, First and Second Armies took over from Queensland, New South Wales and Victoria Lines of Communication Areas the command of all coast and static anti-aircraft artillery defences and training establishments. On 16th June, 1944, Western Command was re-established and took over the combined responsibilities of Third Australian Corps and Western Australia Line of Communication Area.

The fifteenth phase was the re-introduction in March, 1946, of the Military Board and the organization of commands and military districts, and the sixteenth phase was the commencement of the National Service Training Scheme in August, 1951 (see § 1, para. 6 *ante* and sub-para. (iv) (c) following).

For greater detail on phases 8-14 see Official Year Book No. 38 and earlier issues.

(ii) *Estimated Population of Military Age, 30th June, 1952.* The following particulars show the estimated numbers of males of military age in the population of Australia as at 30th June, 1952. The total number of cadet age, 14 and over, and under 18, was 235,648; of citizen soldier age, 18 and over, and under 26, 519,130; and 26 and over, and under 35, 638,534; making a total of 1,157,664, 18 and over, and under 35, which is considered the best period for military service. In addition to the above-mentioned it was estimated that there were 1,337,775 males 35 and over, and under 60, in Australia at 30th June, 1952.

(iii) *Allotment of Units.* Under the Command Organization (*see above*) units are raised on a territorial basis, each State supplying its proportion of the personnel required for the fighting services, the organization at 30th June, 1953 being as follows:—

COMMAND ORGANIZATION.

Army Headquarters.

Northern Command	Eastern Command	Southern Command	Central Command	Western Command	Tasmania Command	Northern Territory Command
All formations and units in 1st Military District and New Guinea.	All formations and units in 2nd Military District.	All formations and units in 3rd Military District.	All formations and units in 4th Military District.	All formations and units in 5th Military District.	All formations and units in 6th Military District.	All formations and units in 7th Military District.

Military Districts conform generally to State or Territory areas, as follows:—1st Military District, Queensland; 2nd, New South Wales; 3rd, Victoria; 4th, South Australia; 5th, Western Australia; 6th, Tasmania; 7th, Northern Territory. Third Military District includes a considerable portion of Southern New South Wales, and 4th includes Broken Hill.

(iv) *Military Training Systems.* (a) *General.* Particulars of the military training systems in operation prior to the 1939-45 War, first on a compulsory basis and later voluntary, will be found in Official Year Book No. 38 and earlier issues.

The present plan for the raising of the Australian Regular Army envisages a total of 26,000 soldiers and 5,000 civilians. The plan for the Citizen Military Force contemplates a strength of 72,000 including National Servicemen, by December, 1954.

(b) *The Australian Cadet Corps.* The Australian Cadet Corps is a voluntary organization comprised of School Cadet units and Regimental Cadet units. It serves as a training ground to provide, to some extent, the future officers and non-commissioned officers of the Australian Military Forces, and, as such, occupies an important position in the scheme of national defence. School Cadet units are raised at educational establishments in all States of the Commonwealth. The minimum age for enrolment is the year in which the applicant reaches the age of 14 years, and cadets, who in the large majority of schools receive a free issue of A.M.F. pattern uniform, may remain in the Cadet Corps until they cease to be pupils of the educational establishments concerned. A few units retain their own pattern school uniform and are not issued with A.M.F. pattern uniforms. Provision is made for the appointment of officers, warrant and non-commissioned officers on an authorized establishment scale from within school units. School cadet units are not affiliated with Citizen Military Force Units.

Regimental Cadet units have been raised in close affiliation with Citizen Military Force units, whose uniform they wear with the addition of the word "Cadets" directly under the title of the parent unit. These units are manned by boys who have either left school or are students at schools where no School Cadet unit has been raised. However, Regimental Cadet units were being disbanded late in 1953.

The establishment for the whole Corps is 35,000 all ranks, and by April, 1953, comprised 272 School Cadet units with a posted strength of 32,492 all ranks and 3,067 Regimental Cadets posted to Citizen Military Force units.

(c) *National Service Training Scheme.* Under the National Service Scheme (see § 1, para. 6 above) the Army is required to train 29,250 trainees per year, effected by three intakes each of 9,750 trainees. The first intake commenced training in August, 1951.

(v) *Women's Services.* In November, 1950, approval was given for the enlistment of women into the Australian Regular Army, on a limited scale. Enlistment commenced immediately into the Australian Women's Army Corps. During June, 1950, the Australian Women's Army Corps was re-designated the Women's Royal Australian Army Corps (W.R.A.A.C.). Members are employed in establishments in direct substitution for male soldiers. The Women's Services in the Australian Regular Army now comprise two Corps only:—(a) Royal Australian Army Nursing Corps; (b) Women's Royal Australian Army Corps.

Women's Services have been incorporated in the Citizen Military Forces; it is proposed to raise sixteen companies of the Women's Royal Australian Army Corps and twelve companies of the Royal Australian Army Nursing Corps, a total of 3,900 all ranks, within the C.M.F.

(vi) *Korea.* On 2nd August, 1950, the Commonwealth Government announced its decision to raise and despatch to Korea one infantry battalion as part of Australia's contribution of military assistance to the United Nations. 3 Battalion, the Royal Australian Regiment, stationed in Japan, brought up to strength by special enlistments flown to Japan from Australia, became the Special Korean Force, and on 27th September, 1950, sailed from Japan for Korea where it joined 27 British Brigade. For its gallantry on 24th and 25th April, 1951, 3 Battalion was awarded the United States Presidential Citation by the United States of America. On 4th October, 1951, the Commonwealth Government announced that a second infantry battalion would be sent to Korea to join 3 Battalion. On 3rd March, 1952, 1 Battalion, The Royal Australian Regiment, which had been brought up to strength at Ingleburn, New South Wales, embarked for Japan where it was equipped before moving to Korea. 1 Battalion joined 3 Battalion, under operational control of 28 British Brigade, 1st Commonwealth Division, on 1st June, 1952. 2 Battalion, The Royal Australian Regiment, after training at Puckapunyal, Victoria, relieved 1 Battalion in Korea on 21st March, 1953, the latter battalion returning to Australia.

(vii) *The Staff College.* Until 1938 the training of staff officers was carried out in the various Military Districts throughout Australia, except in cases where officers were selected from time to time to attend courses abroad. In 1938 an Australian Command and Staff School, located in the original Officers' Mess at Victoria Barracks, Sydney,

was established. Between 1939 and 1945 the training of staff officers was carried out under varying conditions by different schools in accordance with the changing needs of the war.

Early in 1946 the Staff School (Australia) was established at Seymour in Victoria and re-designated the Staff College in conformity with other Empire training establishments for training officers for command and staff appointments. The College was later moved to Queenscliff, Victoria, where it is at present situated. The courses are of ten months' duration and are held from January to November each year. The normal intake is 30 students and, on successfully completing the course, an officer is awarded the symbol "psc". The course is designed to train selected officers for war, and in so doing to fit them for Command or Grade II. staff appointments. Each course includes among the students, Army representatives of the United Kingdom and other Dominions and countries. Included in the 1953 course were students from the United Kingdom, Canada, New Zealand, India, Pakistan, the United States of America and Burma. Vacancies on each course are reserved also for officers who may be nominated by the Royal Australian Navy, the Royal Australian Air Force and the Commonwealth Public Service.

In order to ensure common standards in tactical doctrine and staff and command training throughout the Empire, liaison is maintained with other Staff Colleges; and to this end there is also a reciprocal exchange of instructors. To this extent it may be said that the Staff College is imperial in character.

(viii) *Royal Military College.* The Royal Military College was established in 1911 at Duntroon in the Australian Capital Territory for the purpose of providing trained officers for the Army. The conditions of entry are laid down in the Royal Military College Regulations and provide for admission by "normal", "service" and "special" entries. The length of the normal course is four years; "service" entry cadets attend for three years; and "special" entries for one year.

While at the College, cadets receive pay and allowance of 14s. 1d. per day in their first year, rising to 22s. 9d. per day in their fourth. Uniform maintenance allowance of 1s. 9d. per day is additional, and a further 6d. per day is paid to cadets on attaining the age of 18 years. The course of instruction is organized into military and civil departments and the instructional staff comprises officers of the army and civilian professors. On graduation, cadets are appointed lieutenants in the Australian Regular Army. The College also trains New Zealand cadets for commissions in the New Zealand Permanent Forces under an agreement made with the Government of that Dominion.

(ix) *The Officer Cadet School.* The Officer Cadet School was established in 1951 at Portsea, Victoria, for the purpose of speeding up the supply of junior regimental officers for the Australian Regular Army. Serving members of the Australian Regular Army, the Citizen Military Forces, National Servicemen, and civilians between the ages of 18 and 23 years, are eligible to apply for entrance. The course is of six months' duration, and on graduation, cadets are appointed second-lieutenants in the Australian Regular Army. They then normally proceed to further training at the Army School of the Arm or Service to which they have been allotted before being posted to regimental duties.

(x) *The Women's Royal Australian Army Corps School.* The W.R.A.A.C. School was established in 1952 at Mildura, Victoria. It has two wings, one whose primary task is the training of Officer Cadets for the W.R.A.A.C., the other being for the training of non-commissioned officers at all levels and for other special courses. The Officer Cadets are selected from eligible applicants, who may be serving members between 21 and 32 years of age, or civilians between 21 and 30 years of age. The course is of six months' duration, and on graduation, cadets are appointed lieutenants in the Women's Royal Australian Army Corps.

(xi) *The Army Apprentices' School.* The Army Apprentices' School was opened in 1948 at Balcombe, Victoria, with the aim of training youths as skilled tradesmen for the Australian Regular Army, and to form a background for an Army career with prospects of promotion. The course is open to boys between the ages of 15 and 17 years

and provides training in a number of highly skilled trades. A three-year course of intensive theoretical and practical work at the Apprentices' School is followed by one year in an appropriate Army workshop or technical unit. At the end of their third year, boys are given their Army trade test and also take the Victorian Apprenticeship Commission final grade public examinations, which ensures that they will be accepted as qualified tradesmen in civil life when they eventually leave the Army. In addition to trade training, the Apprentices' School provides general educational facilities up to the School Leaving Standard.

(xii) *Army Schools.* Army Schools have been established for the major Arms and Services for the purpose of training officers and other ranks in the up-to-date techniques of their own Arm or Service, to qualify them for promotion requirements, and to produce trained instructors. In addition, a School of Tactics and Administration which has been established at Seymour, Victoria, provides qualifying and instructional courses in current tactical and administrative doctrine for members of all Arms and Services. Courses at Army Schools are conducted for members of both the Australian Regular Army and the Citizen Military Forces.

The following Army Schools have been established :—School of Tactics and Administration; Armoured School; School of Artillery; School of Military Engineering; School of Survey; School of Signals; School of Infantry; Royal Australian Army Medical Corps School of Army Health; Royal Australian Army Service Corps School; Royal Australian Army Ordnance Corps School; Royal Australian Electrical and Mechanical Engineers Training Centre; Transportation Training Centre.

(xiii) *Rifle Clubs.* The Australian Rifle Club movement, which had its origin in 1888, is provided for in the Defence Act and comprises an Australian Council of State Rifle Associations (which functions in an advisory capacity to the Minister and in the promotion of inter-empire and interstate rifle competitions), State Rifle Associations, District Rifle Club Unions and Rifle Clubs. When placed in recess, the efficient strength of the rifle club movement was 1,018 clubs and 36,478 members. Approximately 20 per cent. of this number served overseas and a further 60 per cent. performed home service duties during the recent war. Rifle shooting activities were resumed in 1946 and the strength of the movement as at 31st December, 1953 was 1,077 clubs and 50,000 members.

(xiv) *The Australian Battles Nomenclature Committee.* The Minister for the Army gave approval on the 25th July, 1947 for the formation of the Australian Battles Nomenclature Committee to tabulate and classify the operations fought in the Pacific Zones in the 1939-45 War which involved the Australian Military Forces, to define their geographical and chronological limits and to advise the United Kingdom Battles Nomenclature Committee regarding operations in zones other than the Pacific Zone in which the Australian Military Forces participated. Sub-committees were later appointed to study the various campaigns in order to classify the operations into battles, actions and engagements.

3. **Strength of Australian Military Forces.**—The effective strength of the Australian Military Forces at 31st December, 1953 was as follows :—Australian Regular Army, 21,327; Regular Army Special Reserve, 4,256; Citizen Military Force (including National Service Trainees), 69,928; Australian Cadet Corps, 29,509.

## § 4. Air Defence.

1. **General.**—A statement respecting the preliminary steps taken in connexion with the development of air defence will be found in Official Year Book No. 18, p. 610, and one on the expansion and development and zones and operations of the Royal Australian Air Force during the 1939-45 War appears in Official Year Book No. 36, p. 1027.

2. **Operations in Korea and Malaya.**—At the conclusion of the 1939-45 War, the R.A.A.F. provided part of the air component of the British Commonwealth Occupation Forces in Japan. Soon after the 38th parallel was violated by the North Koreans on 25th June, 1950, No. 77 Squadron in Japan was made available as part of the United Nations Forces opposing this aggression. Within one week from the commencement of

hostilities, No. 77 Squadron R.A.A.F. already operationally trained and equipped, had completed its first mission. From that date until 27th July, 1953, the Squadron, operating continuously from different bases in Korea, carried out 21,032 individual sorties.

The Squadron is equipped with Meteor aircraft and is based in Korea.

Australian assistance has been provided, in the form of two R.A.A.F. Squadrons (one transport and one bomber), to the Malayan authorities against Communist bandit action. The first Australian aircraft, a Dakota of No. 38 Squadron, left Darwin on 18th June, 1950. The Lincolns of No. 1 Squadron arrived in July, 1950, and both Squadrons were soon in action. On 2nd December, 1952, the transport squadron was withdrawn from Malaya. Up to this date it had flown 14,792 hours. Up till January, 1954, No. 1 Squadron had dropped more than 18,356,000 lb. of bombs during these operations. Working in close co-operation with the ground forces, this bombing was mainly on jungle hideouts frequented by the insurgents. Such bombing and strafing of bandit hideouts calls for extreme accuracy.

**3. Administration and Organization.**—The Department of Air is responsible for policy for organization and control of the Royal Australian Air Force. The Air Board is responsible, subject to approved policy, for the control and administration of the Royal Australian Air Force, and is constituted as follows:—Chief of the Air Staff, Air Member for Personnel, Air Member for Technical Services, Air Member for Supply and Equipment, Citizen Air Force Member and the Secretary, Department of Air.

Headquarters of the Royal Australian Air Force is located at Melbourne. An Overseas Headquarters is located at London and an Air Attaché at Washington, United States of America.

The units of the Royal Australian Air Force are organized in three functional Commands throughout Australia and its territories.

The Commands are:—

**Home Command.**—Home Command is responsible for the command of operational units and the conduct of their operations within Australia and its territories.

**Training Command.**—Training Command is responsible for the command of training units, recruitment and individual training in the R.A.A.F.

**Maintenance Command.**—Maintenance Command is responsible for the command of supply and servicing units, and supply and servicing, including technical services, of the R.A.A.F. in Australia.

The organization of the Royal Australian Air Force includes the following types of formations and units:—

- (a) Area Headquarters. There are three Area Headquarters (North Eastern, North Western and Western) responsible to Home Command for the command of units within their geographical areas.
- (b) Sub-formations, comprising a headquarters unit to control the activities of a number of units at one location. Each formation has a base squadron which provides common services to all units at the location.
- (c) Flying Squadrons. These bomber, fighter, transport, target-towing and maritime reconnaissance squadrons undertake the operational and operational training flying commitments of the R.A.A.F.
- (d) Aircraft Depots. These units specialize in major overhauls, etc., of aircraft and equipment and relieve flying unit ground staff of these commitments.
- (e) Stores Depots. Stores and equipment ordered by the R.A.A.F. are delivered to these centrally located depots for distribution to units.
- (f) Flying Training, Ground Training, Navigation, Radio and Air Armament Training Units, which specialize in the aircrew and ground training required by the R.A.A.F.

- (g) Airfield Construction Squadrons. These units specialize in the construction of R.A.A.F. aerodromes and associated buildings and works services.
- (h) Royal Australian Air Force College. This unit is the training college for officer cadet entrants to the R.A.A.F.
- (i) Telecommunications Units. These units are responsible for the communications services of the R.A.A.F.
- (j) R.A.A.F. Staff College. This college trains specially selected R.A.A.F. officers for higher staff and command posts.

4. **National Service Training Scheme.**—Under the National Service Training Scheme, 3,330 personnel undergo training each year (*see also* § 1, para. 6 above).

5. **Aircraft.**—Some of the aircraft which are at present being used in the Royal Australian Air Force are : bomber squadrons—Lincoln and Canberra ; fighter squadrons—Mustang, Vampire and Meteor ; transport squadrons—Dakota ; maritime reconnaissance squadrons—Lincoln and Neptune ; tactical reconnaissance—Mustang and Auster ; training—Tiger Moth, Wirraway, Mustang, Dakota, Lincoln, Beaufighter and Winjeel.

6. **Establishment.**—The Royal Australian Air Force establishment, as proposed, comprises—(a) a Home Defence Organization, (b) Task Force elements and (c) a Training Organization, consisting in all of approximately 16,450 personnel.

7. **Strength of Royal Australian Air Force.**—At 1st January, 1954, the strength of the Royal Australian Air Force was as follows :—Permanent Air Force, 14,831 ; Active Citizen Air Force, 330 ; Active Reserve, 1,790 and General Reserve, 17,541. In addition, 3,330 National Service Trainees undergo 154 days' training each year and are then transferred to the Reserve.

## § 5. Casualties : Australian Services, 1939-45 War.

1. **General.**—This section contains revised information, in detail similar to that published in Official Year Book No. 37, on casualties to members of each of the Australian Fighting Services during the 1939-45 War. The information is dissected into nature of casualty, theatre of war and zone of operations. A separate table is devoted to each of the following classes of casualties—(i) Battle Casualties, (ii) Non-battle Casualties on Operations or in Operational Areas, and (iii) Casualties not on Operations or in Operational Areas. A summary table is also included, showing all casualties in each Service according to the nature of casualty. The figures for the respective Services are as comparable as inherent differences in the nature of the Services, their methods of operation and their systems of records will permit. The letterpress accompanying each table contains such explanation as is considered necessary to amplify or qualify the figures shown.

All casualties to servicemen and women during the 1939-45 War are included in these tables. Deaths and illnesses, etc., from natural causes are *not* included, and complete information for all Services is not available. Deaths, however, numbered 3,725 (R.A.N., 145 ; A.M.F., 3,216 ; R.A.A.F., 364) and illnesses for the A.M.F. alone numbered 1,557,651 cases.

It should be noted that while the figures for "Killed" and "Prisoners-of-war escaped, etc." refer to *persons*, those for "Wounded and injured" refer to *cases*. Thus totals represent the number of casualties, and not the number of persons who suffered therein.

2. **All Casualties, Australian Services, 1939-45 War.**—The following table is a summary of all casualties to members of the Fighting Services during the 1939-45 War.

## ALL CASUALTIES : AUSTRALIAN SERVICES, 1939-45 WAR.(a)

Particulars.	Royal Australian Navy.	Australian Military Forces.	Royal Australian Air Force.	All Services.
Killed, died of wounds, injuries, etc. . .	2,077	21,929	10,277	34,283
Prisoners-of-war escaped, recovered or repatriated . . . . .	263	20,746	1,255	22,264
Wounded, injured, etc. (cases) . . . . .	579	177,312	3,236	181,127
<b>Total . . . . .</b>	<b>2,919</b>	<b>219,987</b>	<b>14,768</b>	<b>237,674</b>

(a) Excludes deaths and illnesses from natural causes.

3. **Battle Casualties, Australian Services, 1939-45 War.**—The table hereunder shows particulars of battle casualties under the headings of "War against Germany" and "War against Japan". The following brief explanations are considered necessary for the sake of preciseness.

R.A.N. : "Wounded and injured" includes all cases of wounded and injured in action *and on service*. Separation into operational and non-operational areas is not practicable.

A.M.F. : Figures include 222 deaths and 34 wounded in sinking of A.H.S. *Centaur* off the east coast of Australia and 15 deaths and 138 wounded in air raids on Darwin and Port Hedland.

R.A.A.F. : Figures refer to casualties incurred in operations against the enemy.

## BATTLE CASUALTIES : AUSTRALIAN SERVICES, 1939-45 WAR.(a)

Particulars.	Royal Australian Navy.	Australian Military Forces.	Royal Australian Air Force.	All Services.
<b>WAR AGAINST GERMANY.</b>				
<b>Killed—</b>				
Killed in action and missing, presumed dead . . . . .	900	2,610	5,036	8,546
Died of wounds . . . . .	3	700	58	761
Died of wounds while prisoner-of-war . . . . .	..	56	9	65
Died of sickness, disease and injury while prisoner-of-war . . . . .	..	95	} 14	200
Presumed died while prisoner-of-war . . . . .	..	(b) 91		
<b>Total killed . . . . .</b>	<b>903</b>	<b>3,552</b>	<b>5,117</b>	<b>9,572</b>
Prisoners-of-war escaped, recovered or repatriated . . . . .	25	6,874	1,020	7,919
Wounded and injured in action (cases)	26	8,925	529	9,480
<b>Total . . . . .</b>	<b>954</b>	<b>19,351</b>	<b>6,666</b>	<b>26,971</b>

(a) Excludes deaths and illnesses from natural causes.

(b) Includes 79 "Killed in action".

## BATTLE CASUALTIES: AUSTRALIAN SERVICES, 1939-45 WAR(a)—continued.

Particulars.	Royal Australian Navy.	Australian Military Forces.	Royal Australian Air Force.	All Services.
WAR AGAINST JAPAN.				
Killed—

Wounded and injured in action (cases) ..	553	13,191	253	13,997
Total .. .. .	1,788	42,224	1,831	45,843

## ALL THEATRES OF WAR.

Killed—				
Killed in action and missing, presumed dead .. .. .	1,740	8,904	6,176	16,820
Died of wounds .. .. .	44	1,790	123	1,957
Died of wounds while prisoner-of-war	116	106	161	8,296
Died of sickness, disease and injury while prisoner-of-war .. .. .		5,431		
Presumed died while prisoner-of-war		(c) 2,482		
Total killed .. .. .	1,900	18,713	6,460	27,073
Prisoners-of-war escaped, recovered or repatriated .. .. .	263	20,746	1,255	22,264
Wounded and injured in action (cases) ..	579	22,116	782	23,477
Total .. .. .	2,742	61,575	8,497	72,814

(a) Excludes deaths and illnesses from natural causes.  
(c) Includes 551 "Killed in action".

(b) Includes 472 "Killed in action".

4. Non-Battle Casualties on Operations or in Operational Areas, Australian Services, 1939-45 War.—The next table shows particulars of casualties, other than in battle, incurred on operations or in operational areas, classified according to theatre of war.

R.A.N.: "Killed, etc." represents mainly fatal accidents on service, including drownings. All personnel injured on service are included in the previous table.

A.M.F.: Figures include all casualties in operational areas other than actual battle casualties.

R.A.A.F. : Figures represent casualties in operational areas, but not directly the result of operations. They include all casualties in the United Kingdom other than those incurred in operations.

**NON-BATTLE CASUALTIES ON OPERATIONS OR IN OPERATIONAL AREAS :  
AUSTRALIAN SERVICES, 1939-45 WAR.(a)**

Particulars.	Royal Australian Navy.	Australian Military Forces.	Royal Australian Air Force.	All Services.
<b>WAR AGAINST GERMANY.</b>				
Killed, died of injuries, etc. . .	42	343	1,496	1,881
Wounded, injured, etc. (cases)	..	9,196	845	10,041
<b>Total</b>	<b>42</b>	<b>9,539</b>	<b>2,341</b>	<b>11,922</b>
<b>WAR AGAINST JAPAN.</b>				
Killed, died of injuries, etc. . .	57	822	689	1,568
Wounded, injured, etc. (cases)	..	24,200	633	24,833
<b>Total</b>	<b>57</b>	<b>25,022</b>	<b>1,322</b>	<b>26,401</b>
<b>ALL THEATRES OF WAR.</b>				
Killed, died of injuries, etc. . .	99	1,165	2,185	3,449
Wounded, injured, etc. (cases)	..	33,396	1,478	34,874
<b>Total</b>	<b>99</b>	<b>34,561</b>	<b>3,663</b>	<b>38,323</b>

(a) Excludes deaths and illnesses from natural causes.

5. Casualties not on Operations or in Operational Areas, Australian Services, 1939-45 War.—The figures hereunder relate to all casualties other than those in paras. 3 and 4 above.

R.A.N. : "Killed, etc." represents fatal accidents mainly ashore. All personnel injured on service are included in Battle Casualties.

A.M.F. : Figures include all casualties during training and from traffic accidents, etc.

R.A.A.F. : Figures for "Australia" include all training casualties in Australia ; those for "Overseas" include all casualties incurred in Canada and Rhodesia. Only the more serious cases which were reportable to next-of-kin are represented. Figures for others are not available.

## CASUALTIES NOT ON OPERATIONS OR IN OPERATIONAL AREAS : AUSTRALIAN SERVICES, 1939-45 WAR.(a)

Particulars.	Royal Australian Navy.	Australian Military Forces.	Royal Australian Air Force.	All Services.
AUSTRALIA.				
Killed, died of injuries, etc. . .	58	2,049	1,441	3,548
Wounded, injured, etc. (cases) . .	..	121,800	873	122,673

OVERSEAS.				
Killed, died of injuries, etc. . .	20	2	168	190
Wounded, injured, etc. (cases) . .	..	..	60	60
Total . . . . .	20	2	228	250
TOTAL.				
Killed, died of injuries, etc. . .	78	2,051	(b) 1,632	(b) 3,761
Wounded, injured, etc. (cases) . .	..	121,800	(c) 976	(c) 122,776
Total . . . . .	78	123,851	2,608	126,537

(a) Excludes deaths and illnesses from natural causes. (b) Includes 23 members of the W.A.A.A.F. not allocated between Australia and Overseas. (c) Includes 42 members of the W.A.A.A.F. and one of the R.A.A.F.N.S. not allocated between Australia and Overseas.

## § 6. War Gratuities.

1. 1914-18 War.—Reference is made in earlier issues of the Official Year Book (*see* No. 15, p. 930) to the bonus payable in accordance with the War Gratuity Acts of 1920 as a war service gratuity to soldiers and sailors who served in the 1914-18 War. Owing to limitations of space this information cannot be repeated, but it may be noted that the gratuity was paid in Treasury Bonds, maturing not later than 31st May, 1924, and bearing interest at 5½ per cent. In necessitous cases payment was made in cash when desired by the person entitled. The first gratuities were made available about the beginning of June, 1920. The total amount paid to 30th June, 1953 was £27,515,036 and bonds amounting to £11,780 had not been redeemed at that date.

2. 1939-45 War.—Briefly the War Gratuity Act 1945-1947 provided for payment to members of the Forces of war gratuity (a) at the rate of £3 15s. per month of oversea service, subject to a qualifying period of 90 days continuous or 180 days in the aggregate in twelve months, and of certain subsequent periods in Australia, and (b) at the rate of 15s. per month of Australian service after 6th December, 1941, subject to a qualifying period of six months' service, other than that for which payment at the oversea rate was made. All members who performed oversea qualifying service were paid a minimum of twelve months' gratuity at the oversea rate, irrespective of whether the full period of twelve months had been completed or not.

In cases of death due to war service either overseas or in Australia, where members of the family were totally dependent on the deceased member, a minimum payment equivalent to three years' gratuity calculated at the overseas gratuity rate could be made. In respect of all other cases of death, overseas and in Australia, due to war service, gratuity at the rate accruing to the member at the date of notification of his death was continued for a further seven months.

The period of entitlement to gratuity terminated at the date of discharge or on 30th June, 1947, whichever was the earlier. The bulk of the payments were made on 3rd March, 1951, but in certain circumstances payments were made at earlier dates. Compound interest was allowed at the rate of 3.25 per cent. per annum on the yearly credit balances. For greater detail of the provisions of the Act *see* Official Year Book No. 36, pp. 1073-4.

A Registrar of War Gratuities controls the register in which are kept the accounts of all persons entitled to war gratuity. Provision was made for financing the Act by appropriation from Consolidated Revenue Fund and by borrowing. The War Gratuity Appropriation Act 1948 created a trust account for the payment of gratuities. Particulars of the operations of this fund during the years 1948-49 to 1952-53 were as follows:—

**WAR (1939-45) GRATUITY TRUST FUND.**  
(£'000.)

### § 7. Department of Defence Production.

1. **General.**—On 11th May, 1951, a Department of Defence Production and a Department of Supply were established by a decision of the Government. These Departments took over the functions previously undertaken by a joint Supply Department. The Department of Defence Production is responsible broadly for the production of munitions (including aircraft) required by the Services in government-operated factories and in industry under contract to the Government. It is also responsible for all those matters incidental to production, including the planning of production capacity to meet expected future Service requirements. References to previous operations of the various sections and establishments of the Department are given in Official Year Book No. 38, pp. 1200-9.

2. **Functions of the Department and Acts Administered.**—The functions of the Department of Defence Production, as defined in the Administrative Arrangements approved by the Governor-General, are:—

- (i) **Manufacture, acquisition, provision and supply of munitions for the defence forces, that is to say, armaments, aircraft, arms, ammunition, weapons, machine tools, war chemicals, radar (and such other items as may be mutually agreed with the Department of Supply as falling within the definition of munitions), including the materials and plant necessary for the production of those things and all matters incidental thereto, including:—**

The receipt from the Service Departments and other authorities or Departments, of orders and forecasts of requirements of munitions; appropriate liaison with the Higher Defence Machinery Service Departments and the Department of Supply to deal with Service

munitions programmes; operation and management of factories, workshops and undertakings concerned in the production of munitions; arrangements and all action necessary to secure the manufacture, processing and delivery of munitions; investigations and development of Australian sources of munitions production, including the establishment of annexes or special capacity in industry for that purpose; acquisition by the Commonwealth and the establishment of factories and workshops for the purpose of producing munitions; provision and maintenance of stocks of materials and goods for the purpose of producing munitions.

- (ii) Employment and training of technicians, workmen and others for the purpose of producing munitions.
- (iii) Formation of Industry Advisory Committees to advise the Minister for Defence Production regarding :—

The allocation to industry of production programmes of munitions; the establishing of additional munitions production facilities, including annexes and undertakings; the obtaining of appropriate details of Australian industrial capacity required by the Department of Defence Production in allocating munitions production to industry; any other matters associated with munitions production as specified by the Minister.

- (iv) Provision and control of stores, magazine and similar undertakings required in connexion with production of munitions and for other purposes as required.
- (v) Arrangements for ascertaining costs and the control and limitation of profits in connexion with the production of munitions.
- (vi) Development of inventions originating in Government factories in the interests of defence production.

The Act administered by the Department is the Supply and Development Act 1939-1948.

3. **Defence Production Planning.**—A Defence Supply Planning Branch was established in July, 1950, within the (then) Department of Supply to co-ordinate the planning of expansion of production capacity in government-owned factories and in industry. When the Department of Defence Production was created, the Branch was transferred to that Department as the Defence Production Planning Branch.

Broadly, the functions of the Branch are :—(i) to arrange production of requirements for the Defence Services on mobilization; (ii) to plan the expansion of production capacity to meet such requirements in war.

The following production and related sections exist within the Branch :—(a) Ammunition; (b) Radar and Telecommunications; (c) Materials; (d) Chemicals and Chemical Engineering; (e) Weapons and their Equipment including equipment involving optics; (f) Engineer Stores including Mobile Equipment and Small Craft; (g) Production Plant and Equipment; (h) Instruments; (i) Electrical. The production sections have a particular reference to the manufacture of defence stores and components by industry.

The Defence Production Planning Branch is the executive instrument of a Committee of the same name. The three Defence Services, the Departments of Defence, Defence Production, Supply and National Development are represented on the Committee. This enables a close liaison to be maintained with the Departments concerned directly and indirectly with defence in the formation of defence production planning policy.

4. **Munitions Factories.**—Munitions factories now in operation are :—Ammunition—Footscray, Victoria; Explosives—Maribyrnong, Victoria, Mulwala and St. Mary's, New South Wales; Ordnance—Maribyrnong, Bendigo, Echuca, Port Melbourne Marine Engine Works, all located in Victoria; Small Arms—Lithgow, New South Wales.

5. **Aircraft Production.**—(i) *General.* Matters relating to the production in Australia of military types of aircraft and aero engines and of other aircraft components required by the Royal Australian Air Force and the Royal Australian Navy are administered by the Division of Aircraft Production of the Department of Defence Production. Aircraft, repair and overhaul activities carried out for those Services in civilian establishments as distinct from Service workshops, are also the function of the Division, together with the responsibility of supplying aircraft and engine spare parts and airborne equipment generally.

(ii) *Aircraft, Engine and Other Production.* As at 1st July, 1953, the approved production programme for the major aircraft manufacturing organizations in Australia comprised Canberra jet-engined bombers, Lincoln heavy bombers and small radio-controlled jet-propelled target aircraft at the Government Aircraft Factory, Avon Sabre jet-engined fighters, C.A. 25 basic trainers and Rolls Royce Nene and Avon turbo-jet engines at Commonwealth Aircraft Corporation Pty. Ltd., and Vampire jet-trainers at De Haviland Aircraft Pty. Ltd.

Associated concurrent activities included the production and repair of retractable undercarriages at the Aircraft Engine Factory, the repair and overhaul of propellers at the Propeller Annexe and the production of heavy forgings at the Heavy Forge Annexe.

(iii) *Design and Development Projects.* Concurrently with the production programmes, projects involving original design studies in aircraft and aero engine fields were advanced during the year at the Government Aircraft Factory and at the works of Commonwealth Aircraft Corporation Pty. Ltd.

At the former, the first stage of the design and production of radio-controlled target aircraft for use at the Rocket Range, Woomera, South Australia, covering both piloted and unmanned versions of the aircraft, had been completed at 1st July, 1953, and the design and production of an improved version of the unmanned aircraft was in progress.

At the works of Commonwealth Aircraft Corporation Pty. Ltd., the design and development of a basic type of trainer aircraft and the construction of two prototypes had been successfully completed and arrangements were in hand for the manufacture of production aircraft to the same design. A light radial type aero engine—also designed and produced by the Company—for use as a power unit for the basic trainer was under test.

(iv) *Repair and Overhaul.* During the year the broad policy was continued by the R.A.A.F. of returning to the factories in which they were produced all Australian-made aircraft and aero engines requiring major overhaul and the incorporation of modifications. Repair and overhaul of R.A.A.F. aircraft of other types and of carrier-based aircraft operated by the R.A.N. were undertaken by civilian personnel in the aircraft factories or in the works of contractors specially equipped to handle this type of work.

Lincoln aircraft were repaired and extensively modified at the Government Aircraft Factory. Mustang and Wirraway aircraft and single and twin-row Wasp radial engines and Rolls Royce Nene turbo-jet engines were overhauled by Commonwealth Aircraft Corporation Pty. Ltd. in Melbourne, while Rolls Royce Merlin engines from the R.A.A.F. and Rolls Royce Griffon and Bristol Centaurus engines from the R.A.N. were overhauled at the Aircraft Engine Factory in Sydney.

At De Haviland Aircraft Pty. Ltd., Vampire, Mosquito and Tiger Moth aircraft and Gipsy Major engines were repaired and overhauled and at the Government workshops at Parafield, South Australia, Dakota transport and Wirraway aircraft were repaired and overhauled.

(v) *Naval Aircraft.* The repair and overhaul of carrier-based Fairey "Firefly" and Hawker "Sea Fury" aircraft operated by the R.A.N. were handled by the Fairey-Aviation Company of Australasia Ltd., in Sydney.

6. **Finance and Accounts.**—The expenditure on munitions, munitions factories, aircraft production, etc., during 1951–52 is shown in the following table :—

**DEFENCE PRODUCTION : TOTAL EXPENDITURE, 1951–52.**  
(£'000.)

Particulars.	Expenditure.
Parliamentary Appropriations .. .. .	(a) 7,140
Trust Fund Accounts—	
Government Factories and Establishments .. .. .	13,762
Manufacture of Munitions .. .. .	6,782
Munition Materials .. .. .	88
Defence Production Materials .. .. .	345
Aircraft .. .. .	12,036
 Total Trust Fund Accounts .. .. .	 33,013
 Total Expenditure .. .. .	 40,153

(a) Includes contribution under Superannuation Act.

### § 8. Department of Supply.

1. **General.**—Reference to the creation of the Department of Supply is contained in Official Year Book No. 39, p. 1257.

2. **Functions of the Department and Acts Administered.**—The functions of the Department include (a) the manufacture, acquisition, provision and supply of services and goods other than “munitions” (that is to say foodstuffs, textiles, clothing, hardware, boots and other like supplies) required by Service and other authorities; (b) research and scientific development in relation to war *matériel*, including the operation of the Long Range Weapons and other defence science establishments; (c) design and associated technical development and inspection of war *matériel*; (d) planning for and procurement of strategic materials; (e) planning and establishment of manufacturing facilities for production of goods other than munitions; (f) formation of industry advisory committees in respect of production and procurement matters; (g) arranging contracts for supply of goods and performance of services; (h) acquisition, maintenance and disposal of stocks; (i) sale or disposal of surplus or unserviceable property (except buildings or land); (j) provision of Commonwealth transport facilities (k) security service for Supply and Defence Production Departments; (l) arrangements for ascertaining costs and control and limitation of profits on production contracts; (m) co-ordinating estimates, allocation and commitment of resources for Defence Supply needs (including munitions) and liaison with the National Security Resources Board; (n) provision and control of stores required for or in connexion with matters administered by the Department of Supply; general storage for other Departments as required and to the extent facilities are available.

Acts administered by the Minister for Supply are the Aluminium Industry Act 1944–1952; Atomic Energy Act 1953; Supply and Development Act 1939–1948.

3. **Research and Development Branch.**—(i) *General.* Considerable success has been achieved in all fields of research undertaken by Research and Development Establishments. A number of new projects have been commenced and others are being planned. Progress has also been made in other directions of defence science. Considerable benefit continues to accrue from the Scientific Trainee Scheme adopted by this Department with the object of providing experienced and capable scientific and experimental personnel.

(ii) *Long Range Weapons Establishments, South Australia.* At Salisbury, work on missiles has proceeded in accordance with programmes agreed with the United Kingdom Government. The recruitment of scientific and technical staff is being pressed forward

urgently. A twice-monthly Hastings Ferry Aircraft Service between the United Kingdom and Australia has been introduced by the United Kingdom Ministry of Supply to facilitate the carriage of personnel and freight for the Project, and a radio-teleprinter link has been opened for communication between the two countries. Several United Kingdom industrial firms under contract to the Australian Government have established subsidiary sections at Salisbury for the purpose of assembling rounds preparatory to trials at the Range and reporting to their parent organizations in the United Kingdom regarding trials, results, etc.

Trials are being conducted at Woomera at regular and frequent intervals and the ranges are in constant use. An important stage will shortly be reached when trials of prototype weapons will commence. In addition the rate of firings will increase considerably. The construction of housing accommodation is almost completed and the majority of houses planned for the Village are occupied.

The Long Range Weapons Air Component, Mallala, continues to operate from the R.A.A.F. Station at Mallala but satisfactory progress is being made on the construction of the new airfield at Salisbury and the Air Component will ultimately be transferred to this new location.

(iii) *Aeronautical Research Laboratories and Defence Standards Laboratories (formerly Defence Research Laboratories)*. The Aeronautical Research Laboratories at Fishermen's Bend have continued investigations according to their approved programme with particular attention to defence problems. In addition these laboratories collaborate with the United Kingdom on aeronautical matters of mutual interest.

The title of Defence Research Laboratories, Maribryngong has been altered to Defence Standards Laboratories. The broad function is the application of scientific knowledge and research to the problems arising in design, development, manufacture, inspection, storage, and use of war material. Research is done on the development of new and improved materials, methods and equipment of known or potential interest.

(iv) *Electronics Research, Propulsion Research, and High Speed Aerodynamics Laboratories, Salisbury*. These newly-established laboratories now have a small staff of experienced scientific and experimental personnel and recruitment of additional staff is proceeding. The necessary equipment is being progressively installed to enable these laboratories to carry out their specialized functions, and they have now embarked actively on defence science investigations and are available for advice to the other laboratories in the Defence Group.

4. **Design and Inspection Branch.**—Since the previous issue of the Official Year Book the title of "Army Branch" has been changed to "Design and Inspection Branch". The word design is used here in the wider sense of a design authority. For instance, armament production in Australia is based on British designs, but it is necessary to have in Australia a design authority to which the production agencies can refer problems arising out of differences in British and Australian manufacturing practices, techniques, skills, materials and tooling. A high percentage of Army stores is of commercial or near-commercial pattern. Examples of these are trucks, earth-moving equipment, electrical and general engineering equipment, and general stores. In many of these items the amount of design may be small, or may be carried out by their manufacturers, but selection of types, makes and models, and their variation if necessary, calls for the existence of a design authority with facilities for testing, reporting and making recommendations to guide selection. In each field different problems arise for the design authority. For example, radio development for the Army is carried out by the trade, but a design authority is required as an executive link between the users and the designers and manufacturers.

To meet its responsibilities as a design authority, the Design and Inspection Branch is gradually setting up a design establishment with the following elements:—

Four design sections to deal with design problems relating to the selection and the manufacture of armaments, vehicles, signal equipment, and general engineering plant and equipment.

Common facilities for dealing with defects, standards, rationalization and standardization, production drawings, specifications, publications, testing of components and complete electrical and mechanical units, and the construction of mock-ups and models.

The ultimate objective of the design authority is to ensure, on mobilization, that selection has been made of each one of the many thousands of types of armament, vehicles, telecommunications equipment, general engineering equipment, general stores, and clothing and that up-to-date specifications, drawings or sealed samples of each type are always available to the Army to support its demands and orders on mobilization and so allow production to start without delay.

To meet its inspection responsibilities the Design and Inspection Branch includes an Inspection Service. This Inspection Service whilst primarily intended for the inspection of supplies for the Army, also undertakes inspection on behalf of other Departments—notably Air, Labour and National Service and External Affairs (inspection of items supplied under the Colombo Plan). It also undertakes all proof of armament stores on behalf of the three Services.

The Inspection Service is divided into three main Groups for Engineering, Ammunition and Small Arms. and General Stores and Clothing inspection. A Proof and Experimental Group and an Equipment Information Section are also included. The latter holds and issues a complete range of Army drawings and specifications and many others including United Kingdom and Australian Joint Service Specifications. It provides the data on which production is based.

Inspection and proof activities increased during 1951-52 owing to large Service orders for equipment being placed under the expanded Defence Programme. Orders for stores to the value of £39,900,000 were received for the attention of the Army Inspection Service during this period, representing an increase of £25,147,000 over the orders placed in the previous year. Examination staff increased from 445 to 650.

5. **Contract Board**—(i) *General.* The Contract Board and its State Organization under the Supply and Development Act 1939-1948 and Regulations is the authority responsible for purchasing supplies or arranging services for the Military, Naval and Air Forces of the Commonwealth. Under this Act and Regulations it is also charged with the responsibility of arranging for the sale or disposal on behalf of Commonwealth Departments of all surplus or unserviceable war matériel, goods and services approved for disposal.

(ii) *The Board and its Administrative Organization.* The Contract Board meets in Melbourne, and comprises representatives of the Departments of Supply, Defence Production, Navy, Army and Air. The Board's administrative organization is the Directorate of Contracts. In each State other than Victoria there is a District Contract Board with an administrative organization similar to the Directorate of Contracts. The table following shows, in respect of the Contract Board Organization, the purchases and realizations from disposals for the years 1950-51 and 1951-52.

**CONTRACT BOARD ORGANIZATION: PURCHASES AND REALIZATIONS FROM DISPOSALS.**

6. **Tinplate.**—An account of this Section was given in Official Year Book No. 39, pp. 1259–60. Since then the services of the Tinplate Advisory Committee have been retained but the appointment of a Controller of Tinplate has been terminated.

Australia's tinplate supplies are drawn from the United Kingdom and the United States of America, but the system of country-wise allocation was discontinued by both sources early in 1953. During the ten years ended 30th June, 1952, Australian consumption of tinplate averaged 112,000 tons per annum.

7. **Stores and Transport Branch.**—This Branch now functions as the central authority which is responsible for providing all storage and transport facilities necessary to meet the official requirements of Commonwealth Departments and authorities. It has branches in all States and agents in Canberra and Darwin.

At the 30th June, 1952, it had under its control land, buildings, plant and machinery valued at over £5,030,000 and 4,500,000 square feet of storage space, of which 4,000,000 square feet was Government-owned and the balance held under tenancy.

8. **Finance Branch.**—The expenditure for Department of Supply activities during the year 1951–52 is shown in the following table. Expenditure for previous years appearing in Year Book No. 39, p. 1257 covered both the Department of Defence Production and the Department of Supply.

**SUPPLY : TOTAL EXPENDITURE, 1951–52.**

(a) Includes amount appropriated for Strategic Stores and Equipment Reserve Trust Account, and audit, superannuation and debt charges.

9. **Australian Aluminium Production Commission.**—Basic plans for the manufacture of aluminium ingot in Australia were approved by the Commonwealth Government in April, 1941 as a defence measure designed to make this country independent of overseas supplies. In April, 1944 an agreement was made between the Commonwealth and Tasmanian Governments for the establishment of the industry in Tasmania. The Australian Aluminium Production Commission, consisting of representatives of each of the two Governments, was constituted on 1st May, 1945. By legislation passed in 1952, the original fund of £3,000,000 to finance the undertaking was increased to £7,250,000 of which the Commonwealth Government will contribute £5,750,000 and the Tasmanian Government £1,500,000.

Workable deposits of bauxite (aluminium ore) have been proved in New South Wales, Victoria and Tasmania. The largest deposits are located in the Inverell district of northern New South Wales, where reserves exceeding 8,000,000 tons have been brought under Commission control. In the Wessel Islands, off the coast of Arnhem Land, the recent discovery of bauxite led to the proving of approximately 10,000,000 tons of ore of good grade, and extensive bauxite areas have been found on the Northern Territory mainland. Sufficient local reserves for the establishment of a permanent aluminium industry are now assured. The combined Bayer-Hall alumina and reduction plant being erected at Bell Bay, Northern Tasmania, will be supplied with power from a new

generating station at Trevallyn, near Launceston. The main portions of the works have now been erected, and installation of plant is proceeding with the object of bringing the project into production in 1954. The design capacity of the plant is 13,000 tons of aluminium ingot annually.

### § 9. Australian Atomic Energy Commission.

In November, 1952, a Commission of three members was appointed to control the Commonwealth's activities in relation to uranium and atomic energy, and in April, 1953, upon the enactment of the Atomic Energy Act 1953, the Commission was established as a statutory authority, with powers and functions as defined in the Act. The Commission is a corporate and autonomous body, controlling its own service. It functions under the direction of the Minister for Supply.

Commonwealth arrangements for securing collective advice on atomic energy matters date from 1949, when the Industrial Atomic Energy Policy Committee was established to study possible industrial applications of atomic energy, and to recommend a programme of development. This committee functioned until 1952, when it was disbanded at its own suggestion and succeeded by the Atomic Energy Policy Committee, a re-constituted body with enlarged terms of reference. In the light of recommendations by the 1952 Committee, and scientific and organizational developments overseas in relation to atomic energy, the Government decided on the establishment of the Commission, and legislation was enacted in 1953 to give effect to this decision.

The functions of the Commission are broadly as follows:—Firstly, it is responsible for promoting the search for and production of uranium, and it has wide powers to take action to this end. Secondly, it is given authority to develop the practical uses of atomic energy, by constructing and operating plant for this purpose, carrying out research, and generally fostering the advancement of atomic energy technology. These powers and functions are set out in detail in Part II. of the 1953 Act. In general, and subject to the Commonwealth's defence powers and particular provisions of the Act, they are to be exercised in or in relation to the Territories of the Commonwealth. The development of the uranium resources of the States is a State matter, and it is likewise open to the States to take such action as they wish to develop the peaceful uses of atomic energy.

On the mining side of its activities the Commission has the co-operation of the Bureau of Mineral Resources of the Department of National Development, and under these arrangements the Bureau is carrying out a vigorous programme of exploration in the Northern Territory. The object of this programme, which is being carried out by geophysical, geological and radiometric surveys, is to distinguish the areas in which there are indications of the presence of uranium ores, with a view to making these areas available for development by private enterprise. One large ore deposit at Rum Jungle, discovered by a private prospector in 1949, is already being worked, finance for the project having been provided by the Combined Development Agency, a joint United States-United Kingdom authority operating from Washington. While this is a governmental project, the Commission's objective is to interest private capital in developing other prospects which have been located elsewhere in the Territory. The response of private enterprise has been active and is growing rapidly, and there are good grounds for the hope that the industry will grow to large dimensions.

As regards developmental work on the scientific side, the Commission has been carrying out investigations overseas, and is laying the foundations of a research and development programme. As part of this programme a group of Australian scientists who have been doing research at the United Kingdom Atomic Energy Research Establishment at Harwell is being taken on to the Commission's staff, and research groups who have been working in Australia are likewise being recruited. Arrangements for having research carried out by universities and other institutions are also envisaged. The general object in view is a full participation by Australia in the advancement of atomic energy technology, in order that it may be possible to take advantage of the expected practical uses of this new source of power as soon as they are realizable.

## CHAPTER XXVIII.

### REPATRIATION.

#### § 1. General.

An outline of the activities leading up to the formation of the Commonwealth Repatriation Commission was given in Official Year Book No. 15, p. 931. Some account was given also in the Official Year Book referred to, and in subsequent issues, of the policy and general activities of the Department, while detailed information was incorporated in regard to such matters as sustenance rates and pensions to members of the Forces and dependants. (See Official Year Book No. 17, pp. 598-601.) In 1943 the Australian Soldiers' Repatriation Act was amended by the incorporation of the recommendations of the Parliamentary Committee appointed to inquire into pensions and repatriation benefits. A general increase was made of approximately 20 per cent. in the rates of war pensions and increases were also made in other repatriation benefits.

Under the Australian Soldiers' Repatriation Act 1950, rates of pension and medical sustenance were increased, and pensions and benefits under the Act were extended to those members of the Forces (and their dependants) engaged in operations in Korea and Malaya. Provision was also made for payment to a war widow, on re-marriage, of a gratuity equal to one year's war pension. In addition, an important amendment was a change in the basis of war pensioning. Previously, the basis was the daily rate of service pay, but under this legislation the rank, not the pay, of the service man or woman became the basis. This change was brought about as the result of the increased rates of pay of members of the Forces under the new pay code from 1st July, 1947, and the further increases since then. The constantly rising rates of pay made it evident that the basis of pensioning on the daily rate of pay would be unworkable; for example, the rates of pay of more or less senior officers of the 1914-18 War and of the 1939-45 War, discharged before 1st July, 1947, were less than the new rates of pay for present day lower ranks, with a consequent disparity in the rates of pension. To avoid this disparity, the daily rate of pay basis—which had been in operation since the original war pension legislation of 1914—was abandoned in favour of the basis of pensioning according to the rank of the member, the basis adopted by other countries.

Under the Statute Law Revision Act 1950 the title "Australian Soldiers' Repatriation Act 1920-1950" was amended to "Repatriation Act 1920-1950".

The main activities of the Repatriation Commission at 30th June, 1953 were confined to the grant, review and assessment of war and service pensions, the provision of medical treatment, vocational training of the more seriously disabled members, the renewal and repair of artificial replacements and surgical appliances, the grant and review of sustenance and living allowances and the administration of the Soldiers' Children Education Scheme.

## § 2. War Pensions.

1. **General.**—The first provision for the payment of war pensions to members of the Forces and their dependants was made by the Commonwealth Parliament in the War Pensions Act 1914, which came into operation on 21st December, 1914. This Act was repealed in 1920 by the Australian Soldiers' Repatriation Act (amended from 31st December, 1950 to the Repatriation Act). Owing to limitations of space, only some of the main features relating to war pensions under the Repatriation Act 1920–1953 are shown in the following paragraphs :—

(i) *Eligibility for Pension.* There has been a considerable widening of the provision in this respect, to the benefit, mainly, of members of the Citizen Military Forces who have not served outside Australia. These provisions are summarized as follows :—

- (a) A member of the Forces who served (1) outside Australia, (2) in the Territories of Australia, such as Papua and New Guinea, or (3) within Australia in circumstances which can be regarded as actual combat against the enemy, is covered for war pension purposes in respect of incapacity or death which may result from any occurrence happening during the whole period of service.
- (b) In other cases where a member served only in Australia, incapacity or death to be pensionable must have been attributable to service.
- (c) There is a third ground applicable to all in (a) and (b) who have had at least six months' camp service. This provides that, where a condition pre-existed enlistment, a pension may accrue if it is considered that such condition was aggravated by service.

(ii) *Pensions for Incapacity.* From 2nd October, 1952 the 100 per cent. pension rate for a member's incapacity was increased from £7 to £8 per fortnight (higher rates were payable in respect of certain commissioned ranks) and the rates for wives and children of such members were increased to £3 11s. and £1 7s. 6d. per fortnight respectively. From 5th November, 1953 a further increase of 5s. was made in the member's 100 per cent. incapacity rate to £8 5s. per fortnight (or higher according to rank). The rates for wives and children were unchanged.

(iii) *Supplementation of Pension.* Where a member in receipt of a pension at the maximum rate is, because of his war disability, temporarily (for at least three months) precluded from earning, an additional pension may be granted to bring the total pension to the member up to £18 10s. per fortnight.

(iv) *Women's Nursing and Auxiliary Services.* Members of Women's Services are entitled to pensions and other benefits as prescribed in the Act on the same basis as male members of the Forces.

(v) *Tuberculosis.* In the case of a member of the Forces who served in a theatre of war, and, at any time after discharge became or becomes incapacitated, or died or dies, from pulmonary tuberculosis, war pension is payable, and medical treatment is provided on application as if the incapacity or death resulted from an occurrence on service. (*See also* § 3. Service Pensions.)

(vi) *Special Rates.* Those who have been totally blinded as the result of war service and those who are permanently totally incapacitated receive as from 5th November, 1953, special pensions of £18 10s. per fortnight. The rates for Tuberculars, Class "B" (fit for light employment) were increased from £12 to £13 per fortnight. In addition to the special pension from 2nd October, 1952, an attendant's allowance of £3 10s. per fortnight may be granted to the war-blinded and to certain others who are deemed to be

in need of an attendant. A war-blinded member who is also affected with total loss of speech or total deafness is entitled from 2nd October, 1952 to an attendant's allowance of £7 per fortnight in lieu of that referred to above. The wife and any children under 16 years of age receive the same rates as shown in sub-para. (ii).

(vii) *Specified Disabilities.* Where the disability is amputation of a limb or limbs or total loss of vision in one eye, amounts ranging from 17s. to £10 5s. per fortnight in addition to the statutory rate of pension are payable as from 5th November, 1953. In addition, allowances of either £3 10s. or £7 per fortnight are payable in certain double amputation cases.

(viii) *Time Limit for Wives and Children Removed.* Prior to the 1950 amending Act, wives who were married and children who were born after 1st July, 1938 were ineligible to receive a war pension. This time limit was removed as from 2nd November, 1950.

(ix) *Rates of Pensions for Death.* (a) *Widows.* As already indicated, rates of pension, which were previously based on the daily rate of pay of the member, are now based on the rank of the member. From 5th November, 1953 the rates were increased by 5s. per fortnight, the minimum rate being increased from £7 to £7 5s. per fortnight. In addition to the pension, the widow receives an allowance if she has dependent children, if she is permanently unemployable, or if she is over 50 years of age; this allowance was increased to £3 9s. per fortnight.

(b) *Children.* From 2nd October, 1952, the rate of pension for the eldest child (under 16 years of age) was increased to £2 13s. per fortnight, and that of each younger child to £1 17s. In addition to the pension, an amount of 12s. per fortnight may be paid in certain circumstances. Where both parents are dead each child is pensioned at the rate of £4 16s. per fortnight.

(x) *Widowed Mother on Death of Member.* A pension ranging from £4 10s. to £8 6s. per fortnight, according to the rank of the member, may be granted to a widowed mother of a deceased unmarried son, provided widowhood occurred either prior to or within three years after the death of the member. The pension may be supplemented by payment of an additional amount constituting the difference between the statutory pension and £9 15s. per fortnight or part thereof, according to the extent of other income of the pensioner. The value of property possessed by the widowed mother does not affect the issue. This rate, which took effect from 5th November, 1953, represents an increase of £1 per fortnight on the previous rate of £8 15s. which operated from 2nd October, 1952.

2. *Appeals Tribunals.*—The principal Act was amended as from 1st June, 1929 to create tribunals to hear appeals in regard to war pensions. The War Pensions Entitlement Appeal Tribunal is empowered to hear and decide any appeal by or on behalf of ex-members of the Forces or their dependants against a decision of the Repatriation Commission that an incapacity or the death of an ex-member did not arise out of war service. Assessment Appeal Tribunals were created to hear and decide any appeal against a current assessment or a "Nil" assessment of war pension made by the Repatriation Commission in respect of an incapacity of an ex-member of the Forces which had been accepted as arising out of war service. Provision was made by subsequent legislation to enable the Tribunals to hear appeals by certain members for service pensions.

3. *Summary of War Pensions, 1952-53.*—At 30th June, 1953, the number of war pensions for the 1914-18 War was 143,496, for the 1939-45 War, 399,734, and for the Korea and Malaya Operations 744, making a total of 543,974 with a liability of £34,230,567 per annum. The amount paid in pensions during the year 1952-53 was £34,355,795. The outstanding features for 1952-53 for each war were as follows:—

## WAR PENSIONS : SUMMARY, AUSTRALIA, 1952-53.

Particulars.	1914-18 War.	1939-45 War.	Korea and Malaya Operations.	Total.
New claims granted .. ..	3,090	33,944	399	37,433

## § 3. Service Pensions.

1. **General.** The payment of service pensions is provided for in the Repatriation Act 1920-1953 and has operated since 1st January, 1936.

Originally fixed on a lower scale, the rate of service pension for a member of the Forces now conforms to the rate of the age or invalid pension, which from 5th November, 1953 was £7 per fortnight. The maximum rate for the wife of a member is £3 10s. per fortnight; the rate for the first child under 16 years of age is 23s. per fortnight and 5s. per fortnight is payable for each of the younger children up to three in number. The actual rate payable in any case is determined after taking into consideration all other income received and property (apart from the home and certain other exemptions) owned by the pensioner, and no service pension can be paid where the other income and/or property exceeds certain specified limits. From 5th November, 1953 the "allowed income" was £286 per annum for a single man and £572 per annum in the case of a member and eligible wife. If a member has property (apart from the home and certain other exemptions) exceeding in value £1,250 (£2,500 for a member and eligible wife), that alone precludes payment of a pension. Pension is assessed according to the amount of income; if the income from all sources is less than the amount shown above, service pension is assessed at such rate as will, with that other income, bring the total income (including service pension) of the pensioner up to the "allowed income" provided that the pension cannot exceed the maximum rate specified for the particular class of case. If assessable property is held, then a deduction is made from the pension assessed according to income only, the deductions being made at so much for each complete £10 of property in excess of £150 (or £300 in the case of member and eligible wife). The deductions are as follows:—for each £10 from £150 to £450, 9d. per fortnight; for each £11 of the portion from £450 to £1,250, 1s. 6d. per fortnight.

Female members of the forces were made eligible in 1936 for consideration of service pensions if they embarked for service abroad; previously they must have served in a theatre of war. In the same year an institutional rate of service pension not exceeding 12s. per fortnight was made available. This pension rate from 5th November, 1953 was £2 9s. per fortnight, and benefits particularly inmates of mental hospitals.

Eligibility for service pensions may be established on the following grounds :—

- (a) Sixty years of age or more, provided the member served in a theatre of war, but eligibility on this ground applies only to the member and not to his wife or children. In the case of a female member of the forces, the qualifying age is 55 years, and service abroad, not necessarily in a theatre of war, is sufficient.
- (b) Permanently unemployable, provided the member served in a theatre of war (or, in the case of a female member, served abroad). Under this class pensions may be paid to the member, his wife and children up to four in number.
- (c) Pulmonary tuberculosis, whether the member served in a theatre of war or not. Under this class, also, pensions are payable to the wife and children up to four in number.

Only those members who qualify under Class (c) are entitled to receive both service and invalid pensions at the same time.

From 1st November, 1941, service pensions were extended to veterans of the South African War 1899–1902, and in 1943 to members of the Forces of the 1939–45 War.

2. Operations, 1952–53.—The following table gives a summary relating to service pensions during 1952–53 :—

Claims granted during year—

Members of the Forces .. .. .	2,804
Wives .. .. .	880
Children .. .. .	392
<b>Total .. .. .</b>	<b>4,076</b>

Claims rejected during year—

Members of the Forces .. .. .	643
Wives .. .. .	342
Children .. .. .	226
<b>Total .. .. .</b>	<b>1,211</b>

Service pensions cancelled or discontinued during year ..	1,608
Deaths of pensioners during year .. .. .	950
Pensions in force at 30th June, 1953 .. .. .	19,177
Annual pension liability on 30th June, 1953 .. .. .	£2,405,744
Amount paid in pensions during the year .. .. .	£2,225,044

3. *Number of Service Pensioners and Amount Paid.*—(i) *Summary, Australia, 1943-44 to 1952-53.* The following table shows the number of service pensions in force and the amount paid in pensions for the ten years 1943-44 to 1952-53 :—

(a) Includes Australian Capital Territory.

(b) Includes Northern Territory.

#### § 4. Medical Treatment of Returned Soldiers Suffering from War Service Disabilities.

At 30th June, 1953 there were 5,745 in-patients, including a number whose care was undertaken by the Repatriation Commission on behalf of other countries or Commonwealth Departments. There were 305,820 out-patient attendances for treatment during the year, excluding 606,401 treatments by the 3,127 local medical officers resident in metropolitan and country areas and New Guinea. The expenditure to 30th June, 1953 was £54,215,910.

#### § 5. General Benefits and Miscellaneous.

1. **Other Departmental Activities.**—(i) *General.* During the 1939–45 War, the ordinary activities of the Department in the way of general benefits for the welfare of members and dependants were carried on without interruption. They were mainly education and training of children under the Soldiers' Children Education Scheme, medical benefits for widows and children of deceased members and for widowed mothers of deceased unmarried members, funeral expenses for certain classes of members and dependants, and allowances to certain classes of dependants in lieu of pension.

By legislation passed in June, 1940, these benefits were extended to members engaged in the 1939–45 War and in November, 1950 to those engaged in the Korea and Malaya Operations and new benefits designed for the re-establishment of members after discharge from the Forces were made available. The re-establishment benefits administered by the Repatriation Commission are:—payments of re-employment allowance while awaiting employment; provision of tools of trade and equipment where such are necessary to the member's employment; transportation expenses to meet the cost of fares and removal of household belongings, where a member, or member and family, take up training, employment, a business, or settle on the land; supplementation of wages of apprentices whose apprenticeships were interrupted by war service; re-establishment loans to enable members and widows to establish themselves in businesses, practices or other occupations, including (until the Division of War Service Land Settlement began operations early in 1946) agricultural occupations; payment of re-establishment allowance during the early stages of establishment in business; gifts up to £75 for furniture to members who are blinded or totally and permanently incapacitated, also to widows with children under 16 years of age; and free passages to Australia for wives, widows and children of members who married abroad (and passages outward from Australia in certain cases of members and dependants).

In 1949 the Commission took over the functions of the Re-establishment Division of the former Department of Post-war Reconstruction, and is responsible for the co-ordination of all matters relating to training under the Commonwealth Reconstruction Training Scheme. Re-establishment of the more seriously disabled where ordinary training is not sufficient continues to be a function of the Commission, and special means have to be found to overcome each problem.

(ii) *Review of General Benefits.* The following paragraph gives particulars of the more important general benefits for each war (those for Korea and Malaya Operations are included under the 1939–45 War) for the period from 8th April, 1918 to 30th June, 1953.

(a) *Employment*—

1914-18 War : Number of applications, 251,200 ; Expenditure—sustenance while awaiting employment, £1,768,000 ; tools of trade and fares, etc. (gift), £554,000 ; tools of trade (loan), £21,800.

1939-45 War : The placing of members in employment was carried out by the Commission for only a short period prior to the inauguration of the Department of Labour and National Service, but the Commission has the responsibility of payment of re-employment allowance, provision of tools of trade and payment of fares and removal expenses. Number of cases and expenditure to 30th June, 1953 were as follows :—Re-employment allowances—66,653, £1,027,402 ; tools of trade (gift)—260,914, £1,889,794 ; (loan)—19,394, £290,062 ; fares and removal expenses, 16,328, £232,093.

(b) *Vocational Training*—

1914-18 War : Number of members completed training in full-time courses, 27,696 ; expenditure, £4,849,600.

1939-45 War : Wages paid by way of supplementation to apprentices £3,872,899.

(c) *Business Loans*—

1914-18 War : 6,130, £421,800.

1939-45 War : 27,485, £7,223,954. Allowances pending productivity of business—1,382, £83,884. Fares and removal expenses to member proceeding to a business, £495.

(d) *Furniture Grants*—

1914-18 War : Expenditure—gift (to members blinded or totally and permanently incapacitated and to widows), £75,190 ; loan (to other classes of members), £1,031,570 ; total number of cases, 35,400.

1939-45 War : Gift (no loan cases)—widows, 5,675, £392,347 ; members, 372, £22,883.

(e) *Free Passages*—

1914-18 War : £509,120.

1939-45 War : To Australia—4,749, £310,582 ; from Australia—67, £10,134.

(f) *Soldiers' Children Education Scheme*—

*Main Scheme* : Full-time training as from 12 years of age.

Particulars.	1914-18 War.	1939-45 War.
Applications .. .. .	32,461	13,249
Approved .. .. .	30,779	12,948
Completed training .. .. .	24,699	5,210
Withdrawn during training .. .. .	4,068	462
Awaiting next stage of training .. .. .	48	125
In training .. .. .	1,964	7,151
Expenditure .. .. .	£4,048,076	

*Minor benefits prior to entrance to main scheme* : For all Wars, £88,094.

(iii) *Total Expenditure on General Benefits.* The total expenditure on general benefits, apart from war and service pensions, from 8th April, 1918 to 30th June, 1953, for all wars since 1914 was £88,672,322 (including loan £9,200,335). Of this total the largest amounts were absorbed by medical treatment with £54,215,910, vocational training with £8,797,652, and expenses in providing employment, £5,859,574.

2. *Expenditure of Repatriation Commission, 1952-53.*—The expenditure of the Commission for the year ended 30th June, 1953 was £50,515,138, distributed as follows :—

Repatriation benefits—	£
Loans to members .. .. .	269,352
Grants to members and general expenditure (including maintenance of training schools, medical institutions, etc.) ..	10,550,086
Assistance to members in necessitous circumstances .. ..	2,251
	<hr/>
Total .. .. .	10,821,689
	<hr/>
Soldiers' Children Education Scheme .. .. .	287,283
War and Service Pensions .. .. .	36,577,056
Administrative costs—	£
Salaries .. .. .	2,375,293
Contingencies .. .. .	453,817
	<hr/>
	2,829,110
	<hr/>
Grand total .. .. .	50,515,138
	<hr/>

3. *Settlement on the Land of Returned Service Personnel.*—Reference to the settlement on the land of returned service personnel will be found in Chapter IV.—Land Tenure and Settlement.

## CHAPTER XXIX.

## MISCELLANEOUS.

This chapter comprises miscellaneous statistics and other descriptive information not directly related to the subjects of the preceding chapters, arranged in sections as follows:—

1. Valuation of Australian Production; 2. Indexes of Production; 3. New Building; 4. Consumption of Foodstuffs and Beverages; 5. Retail Trade; 6. Patents, Trade Marks and Designs; 7. Copyright; 8. Australian Ship-building Board; 9. War Service Homes Division; 10. Commonwealth Scientific and Industrial Research Organization; 11. Australian Institute of Anatomy; 12. Commonwealth Observatory; 13. Standards Association of Australia; 14. Film Censorship Board; 15. Australian National Film Board and the Film Division; 16. National Safety Council of Australia; 17. Australian Road Safety Council; 18. Lord Howe Island; 19. The United Nations; 20. Diplomatic and other Representatives Overseas and in Australia.

## § 1. Valuation of Australian Production.

1. **General.**—The value of production for Australia is computed in accordance with the decisions reached at the Conferences of Australian Statisticians and principally at the Conference held in 1935. The figures published below have been compiled by the State Statisticians from the best data available, and relate to 1951–52. Comparable details for 1950–51 may be found in *Primary Industries Bulletin No. 45, Part II.—Non-Rural Industries and Value of Production*. The adoption of substantially uniform methods of valuing production and of estimating elements of costs of production and marketing renders the results comparable as between States.

Attention is directed to the fact that the values shown in the tables herein refer only to *recorded* production and exclude the building and construction industry, those industrial establishments not classified as factories, and agricultural and farmyard produce obtained from areas of less than one acre.

The following is a brief explanation of the terms used:—

- (a) *Gross Value* is the value placed on recorded production at the wholesale price realized in the principal markets. (In cases where primary products are consumed at the place of production or where they become raw material for a secondary industry, these points of consumption are presumed to be the principal markets.)
- (b) *Local Value* is the gross production valued at the place of production and is ascertained by deducting marketing costs from the gross value. (Marketing costs include freight, cost of containers, commission and other charges incidental thereto.)
- (c) *Net Value* represents the net return to the producer after deducting from the gross value costs of marketing and of materials used in the process of production. Materials used in the process of production include seed, power, power kerosene, petrol and other oils, fodder consumed by farm stock, manures, dips, sprays and other costs. No deduction has been made for depreciation and maintenance costs.

It should be noted that costs of maintenance of farm buildings and fences have not been deducted from the value of production of rural industries, as particulars are not available for all States. In addition, there is an overstatement in the net value of production for New South Wales and Tasmania by the inclusion of power costs in rural industries. These costs, which amounted to £1,892,000 in New South Wales in 1940-41 and £86,510 in Tasmania in 1941-42 have not been ascertained in later years. The value shown for Mines and Quarries in Tasmania is understated owing to the omission of Quarries. This understatement, however, is more or less offset by the inclusion of production costs in Mining. Production costs are not available for all States in respect of Fisheries, and local values have been used for this industry with consequent overstatement.

2. **Value of Production, Australia, 1951-52.**—The following table shows particulars of the gross, local and net values of production in Australia by industries during the year 1951-52 :—

**GROSS, LOCAL AND NET VALUE OF RECORDED PRODUCTION : AUSTRALIA, 1951-52.**

(b) Local value.

In the chapters dealing with the respective industries (except trapping and mines and quarries) tables will be found showing the total and *per capita* values of production for the industry by States for a series of years ended 1951-52.

On page 878 of this issue is a graph showing the Net Value of Production, Australia for all recorded industries for the years 1928-29 to 1951-52.

## § 2. Indexes of Production.

In the tables below, indexes of price and quantity production are given for the following industrial groups, namely:—Agriculture, Pastoral, Farmyard and Dairying, and All Farming combined (including separate indexes for Wool and Products other than Wool). Indexes previously published in respect of Gold and Other Minerals, and All Mining combined, are under review and pending completion of investigations the publication of these results has been temporarily discontinued.

1. Farm Production Price Index-Numbers.—The Farm Production Price Index-Numbers shown in the following table relate to average "prices" of agriculture, pastoral, farmyard and dairying products realized in the principal markets of Australia. The "price" data used are average unit values for the total quantities of the relevant commodities produced or marketed in each year and the index-numbers therefore measure both the effects of changes in prices (as such) and of variations in the quality, type, usage, etc. of products marketed. The index-numbers for any year relate to the average values of products produced or marketed in that year, irrespective of the periods in which payment is received by producers.

The indexes have been calculated by the fixed-base weighted aggregative method. "Prices" for each commodity in any year are obtained by dividing gross value of production by the quantity produced in that year. In the original published series of Production Price Index-Numbers the average quantities of the relevant commodities produced in the period 1923-24 to 1927-28 were used as fixed weights. This series has been retained for years up to 1935-36, but re-computed to the base, average 1936-37 to 1938-39 = 100. For 1936-37 and later years, the original series was replaced in December, 1952 by a revised series in which average quantities of each product marketed during the period 1946-47 to 1950-51 are used as fixed weights. In the revised series, the regimen was extended and modified to include farm products (as defined by Australian Statisticians) in all cases. Certain other refinements were also incorporated in the revised indexes, the principal of which was the omission from the weights used for the All Farming Index of quantities of crops marketed for livestock feeding in Australia.

(c) Revised.

2. **Farm Production Quantity Index-Numbers.**—The Farm Production Quantity Index-Numbers shown in the following table relate to gross output of farm products. They have been calculated by the fixed-base weighted aggregative method, the weights used being weighted average unit values obtained by dividing total gross value by total quantity produced for each commodity for the base period.

In the original published series of Farm Production Quantity Index-Numbers, the period 1923-24 to 1927-28 was adopted as the base for weighting purposes. This series has been retained for years up to 1935-36, but the index-numbers have been re-computed to the base, average 1936-37 to 1938-39 = 100. For 1936-37 and later years, the original series was replaced in December, 1952 by a revised series in which average unit values for the period 1936-37 to 1938-39 are used as fixed weights. The regimen used for the revised series was extended and modified to include farm products (as defined by Australian Statisticians) in all cases. Certain other refinements were incorporated in the revised indexes, the principal of which was the omission, in calculating the All Farming Index, of quantities of crops fed to live-stock in Australia.

### § 3. New Building.

1. **General.**—The statistics in this section relate to the operations of private contractors, Government authorities and owner-builders, with the exception of those relating to employment, which exclude the numbers of persons working on owner-built houses. In general, they relate to *new building only*, and data on alterations, additions, renovations and repairs to buildings are excluded, because of the difficulty in obtaining complete lists of persons who engage in these operations. Figures for houses exclude converted military huts, flats and shop dwellings. Some houses built on farms are excluded but these do not affect the figures materially.

These statistics are available for the quarter ended 30th September, 1945 and onward.

The following definitions of terms used in this section are necessary for interpretation of the data presented:—

*Owner-Builder.* A person who is actually building his own house or is having his house built under his own direction without the services of a contractor.

*Commenced.* A building is regarded as having been commenced when work on foundations has begun. Owing to the difficulty of defining the exact point that this represents in building operations, it is probable that interpretations placed upon it by informants are not entirely uniform.

*Completed.* A building is regarded as having been completed when the builder has fulfilled the terms of the contract. As with commencements, the interpretations placed upon this definition may vary.

*Under Construction.* A building remaining uncompleted at the end of a period is regarded as being under construction, regardless of whether construction was actively proceeding on that particular date.

*Employment.* The figures of employment relate to persons actually working on new buildings on a specified day. They include working principals, employees, men working as, or for, sub-contractors and men temporarily laid off on account of weather. In addition, they include some employees engaged on alterations, additions, renovations or repairs to buildings *when these jobs are undertaken by a contractor who builds new buildings*. The figures exclude persons working on owner-built houses.

*Values.* All values shown exclude the value of land and represent the estimated value of buildings on completion.

2. **Value of New Buildings.**—(i) *Completed, 1952-53.* The following table shows the value of all new buildings completed in each State during 1952-53, according to the kind of building. It should be remembered that all values shown exclude the value of land and represent the estimated value of buildings on completion.

#### NEW BUILDINGS COMPLETED : VALUE, 1952-53.

4. Numbers of New Flats.—The figures in the foregoing two tables do not include particulars of new flats. The summary below shows the numbers of new flats commenced, completed and under construction in Australia for the years 1947-48 to 1952-53, together with State details for 1952-53. It should be noted : (i) that the figures are additional to the numbers of houses shown in other tables, (ii) that each flat is counted as a separate unit, and the numbers shown therefore relate to individual flats, and (iii) that new flats only are included, i.e., the conversions of old buildings into flats are omitted.

**NEW FLATS : NUMBER.**  
(Individual Flats.)

5. Persons engaged in New Building.—The following table shows, by States, the number of persons (including contractors and sub-contractors actually working on jobs) engaged on jobs carried out by builders of new buildings at 30th June of the years 1948 to 1953. Particulars for 30th June, 1953 show the numbers of tradesmen, contractors, sub-contractors and wage earners engaged. For an explanation of the field of employment covered see para. 1 of this section.

**§ 4. Consumption of Foodstuffs and Beverages.**

1. Quantities Consumed.—Previous issues of the Official Year Book up to No. 36 included a statistical survey of the movement in the consumption in Australia, in total and per head of population, of a selected number of commodities over a period of years up to 1940-41 (see Official Year Book No. 36, pp. 1098-1100). In issue No. 37 these long-term comparisons were replaced by more detailed information covering consumption of the principal foodstuffs and beverages in annual periods since 1944 in comparison with average annual consumption during the three years ended 1938-39. In this issue the annual periods extend from 1948-49 to 1952-53.

The estimates of total consumption and consumption per head of population in Australia in the two tables following have been compiled by deducting net exports from production and allowing for recorded movements in stocks of the respective commodities. While the estimates may generally be accepted as reasonably accurate, there are some deficiencies to which attention should be directed. These relate chiefly to the quantities of poultry, game and fish (fresh and shell) and the quantities of visible oils and other fats entering consumption. In addition, little information is available on the quantities of vegetables, fruit, eggs, etc., which householders produce for their own requirements and the extent of wastage occurring in the marketing of foodstuffs. In all these cases careful estimates have been compiled from the best available data, and the quantities shown as entering consumption in Australia have been adjusted to allow for these circumstances. Other difficulties occur in the compilation of statistics of consumption for which no allowance has been made. These include (i) the absence of particulars of stock movements in a limited number of cases, and (ii) the purchase of foodstuffs for despatch overseas as gifts in bulk and by parcel post. These deficiencies, however, do not seriously impair the accuracy of the estimates compiled.

The estimates of consumption per head of population shown in the second table following have been checked, wherever possible, with data from other sources which confirm the reliability of the methods used. The data were obtained principally from the Food Consumption Survey conducted in 1944 by the Nutrition Committee of the National Health and Medical Research Council.

There has been a general upward movement in the consumption per head of population of most foodstuffs and beverages in Australia from the levels of consumption during the three years immediately preceding the 1939-45 War, but there are some notable exceptions, viz., mutton, pig-meats and cream.

More detailed information on the consumption of foodstuffs and beverages is contained in the publication, *Report on Food Production and the Consumption of Foodstuffs and Nutrients in Australia*, issued by this Bureau.

2. Level of Nutrient Intake.—The table below shows details of the estimated supplies of nutrients available for consumption in Australia during annual periods since 1948-49 in comparison with the annual average for the three years 1936-37 to 1938-39. The table has been compiled by the Nutrition Section of the Commonwealth Department of Health and is based on the estimates of quantity consumption per head of population shown in the preceding table.

### § 5. Retail Trade.

1. **General.**—The statistics in this section relate to the operations of all types of retail establishments throughout the Commonwealth.

Information of this nature was first collected in respect of the year ended 30th June, 1948 by a full Census of all retail establishments. As this was the first Census of its type in Australia its scope and the data sought were the minima consistent with the objective of securing a record of the number of such establishments, their type, their geographical distribution, their aggregate sales of goods and a simple commodity dissection together with a record of the value of certain services provided. This Census was followed by a second Census of all retail establishments trading during the year ended 30th June, 1949, and a third Census has been taken for the year ended 30th June, 1953. In this recent Census, retailers were asked to furnish more detailed information concerning the dissection of their turnover into commodity groups and question: were asked about stocks of goods on hand, the number of persons engaged in the business and credit sales. A summary of the results of the 1953 Census will be found in the Appendix.

In general terms, the Censuses covered those establishments which normally sell goods at retail in shops, rooms, kiosks and yards. Certain types of establishments which sell services at retail (including repairs and materials therein) were also included, e.g., boot repairers, hairdressers, motor garages and service stations and cafes. The Censuses included the retail sales of those factories or wholesalers who conducted a regular retail business, but excluded those who only occasionally sold goods at retail. Both new and second-hand goods were included in sales recorded by relevant retail establishments.

In 1953, figures on turnover were also collected from licensed premises such as clubs, canteens, etc., laundry and dry cleaning plants and bread delivery businesses without retail premises. These businesses were excluded from the Census by definition, but supplementary collections were made to increase the data available concerning consumer expenditure.

In order to maintain up to date records of retail trade conducted in Australia, it is proposed to take Censuses of retail establishments periodically. During the periods intervening between Censuses, the nature, extent and periodic variations in retail trade are being measured by means of sample surveys. Consequently, for the year ended 30th June, 1950 and subsequent quarterly periods, collections have been made on a sample basis. In the initial sample approximately 6,500 establishments were chosen from the total of over 100,000 retail businesses and the number in the sample was increased approximately 9,000 in September, 1952. By the use of sampling techniques, including

the scientific selection of these establishments of representative size and type, estimated figures of the total sales of all retail businesses have been calculated for each period. The sales of businesses from which these totals have been calculated represent approximately 40 per cent. of all retail sales in Australia. The figures obtained in the 1953 Census will be used as a new base for the sample survey.

2. Value of Retail Sales, 1947-48 to 1952-53, and Quarters ended 30th September, 1950 to 30th June, 1953.—(i) States. The following table shows the total value of goods sold by retail establishments in each State during the years 1947-48 to 1952-53 and the quarters ended 30th September, 1950 to 30th June, 1953.

(a) Excludes Australian Capital Territory and Northern Territory. (b) Includes tobacco, cigarettes, etc., newspapers, books and stationery, chemists' goods, etc.

## § 6. Patents, Trade Marks and Designs.

1. Patents.—(i) *General* The granting of patents is regulated by the Commonwealth Patents Act 1903-1950, which, in regard to principle and practice, has the same general foundation as the Imperial Statutes, modified to suit Australian conditions. The Act is administered by a Commissioner of Patents. Fees totalling £10 are sufficient to obtain letters patent for the Commonwealth of Australia and the Territories of Papua, New Guinea and Norfolk Island. Renewal fees are payable as follows:—£1 before the expiration of the fifth year and an amount progressively increasing by ten shillings before the expiration of each subsequent year up to the fifteenth, when the fee becomes £6. If a renewal fee is not paid when it becomes due, an extension of time up to twelve months may be granted on grounds specified in the Act, and subject to the payment of prescribed fees. An amendment to the Act in September, 1946 permits the public to inspect an application, complete specification and provisional specification (if any) after the complete specification has been lodged. Previously, specifications were made public only after an application had been accepted, in many cases as much as a year after the date of lodgment.

(ii) *Summary.* The number of separate inventions in respect of which applications were filed, the number of letters patent sealed, and revenue of the Commonwealth Patent Office during the years 1939 and 1948 to 1952 are shown in the following table.

PATENTS : AUSTRALIA.

Particulars.	1939.	1948.	1949.	1950.	1951.	1952.
Applications .. ..	5,740	7,709	6,724	7,051	7,135	8,073
Applications accompanied by provisional specifications ..	3,161	3,302	3,174	3,359	2,894	3,406
Letters patent sealed ..	3,141	3,381	3,550	3,115	4,291	5,248
Revenue—						
Fees collected under Patents Act .. .. £	45,581	92,500	85,972	95,089	107,899	121,927
Receipts from publications .. .. £	1,828	2,000	1,826	1,260	1,889	4,361
Total Revenue £	47,409	94,500	87,798	96,349	109,788	126,288

2. *Trade Marks and Designs.*—(i) *Trade Marks.* Under the Trade Marks Act 1905–1948 the Commissioner of Patents is also Registrar of Trade Marks. This Act has been amended from time to time, the last amendment having been made in 1948. Special provisions for the registration of a “Commonwealth Trade Mark” are contained in the Act of 1905, and are applicable to all goods included in or specified by a resolution passed by both Houses of Parliament that the conditions as to remuneration of labour in connexion with the manufacture of such goods are fair and reasonable. The Act of 1948 provides for the registration of users of trade marks, and also for assignment of trade marks with or without the goodwill of the business concerned.

(ii) *Designs.* Under the Designs Act 1906–1934 the Commissioner of Patents is also Registrar of Designs.

(iii) *Summary.* The following table shows the applications for trade marks and designs received and registered, together with the revenue of the Trade Marks and Designs Office, during the years 1939 and 1948 to 1952.

TRADE MARKS AND DESIGNS : AUSTRALIA.

Particulars.	1939.	1948.	1949.	1950.	1951.	1952.
Trade Marks—						
Received .. ..	1,992	3,724	3,732	3,796	3,583	3,988
Registered .. ..	1,580	2,386	1,165	1,003	2,649	4,044
Designs—						
Received .. ..	865	990	948	1,187	773	1,186
Registered .. ..	736	1,005	962	304	579	1,388
Fees collected under Commonwealth Acts—

Designs .. .. £	1,082	1,228	1,386	1,371	1,521	2,165
Publications .. .. £	19	20	18	10	4	8

No fees in respect of trade marks have been collected under State Acts since 1922.

### § 7. Copyright.

1. **Legislation.**—Copyright is regulated by the Commonwealth Copyright Act 1912–1935 wherein, subject to modifications relating to procedure and remedies, the British Copyright Act of 1911 has been adopted and scheduled to the Australian law.

Reciprocal protection of unpublished works was extended in 1918 to citizens of Australia and of the United States of America, under which copyright may be secured in the latter country by registration at the Library of Congress, Washington. The Commonwealth Government promulgated a further Order in Council which came into operation on 1st February, 1923, and extended the provisions of the Copyright Act to the foreign countries of the Copyright Union, subject to the observance of the conditions contained therein.

2. **Applications and Registrations.**—The following table shows under the various headings the number of applications for copyright received and registered, and the revenue obtained for the years 1939 and 1948 to 1952 :—

#### COPYRIGHT : AUSTRALIA.

### § 8. Australian Shipbuilding Board.

1. **Constitution.**—Previous reference to the constitution of the Australian Shipbuilding Board appeared in Official Year Book No. 37, page 1170. Originally established in 1941 under National Security Regulations, the Board has been reconstituted a number of times since its inception and in 1948 was constituted on a permanent basis under the Supply and Development Act. At present it operates under the control of the Minister for Shipping and Transport. In order to link the activities of the Board more closely with the Department of Shipping and Transport, the constitution of the Board was altered in April, 1952, to provide for representation by senior departmental officers. The present membership of the Board consists of a Chairman who is General Manager of Shipbuilding, a Deputy Chairman, a Finance Member and two other members, one of whom represents the Naval Board.

2. **Functions.**—The functions of the Board relate to merchant shipping. Originally, they were to (i) report on the capacity of the industry; (ii) control building, repair and maintenance of ships and shipyards, etc.; (iii) arrange construction of vessels and yards, etc.; (iv) order and direct repair and docking of vessels and; (v) arrange supply of engines and other equipment for ships.

The first actions of the Board were to survey existing shipbuilding potentials and decide upon a construction programme. (See Official Year Book No. 37, p. 1170).

The Board also established facilities for the manufacture of marine engines at Rocklea in Queensland, and Port Melbourne. The Rocklea plant, which produced engines for "A", "B" and "D" class freighters, was closed in 1949, but the Port Melbourne works are still in operation and in August, 1953, had eleven Doxford diesel engines under construction.

Since its establishment the Board has become the ordering authority for all vessels to be constructed on behalf of the Commonwealth Government and private shipowners and has also undertaken the preparation of plans and drawings for the various yards, as the level of ship construction in Australia does not warrant each yard employing specialists in naval architecture. In this way the Board has increased the efficiency of the industry as a whole and has assisted in the development of individual yards.

The Board is now responsible for—(i) the design of vessels; (ii) calling of tenders and placement of orders; (iii) co-ordination of the Board's supplies to shipbuilders, e.g., machinery and certain equipment; (iv) supervision of construction; (v) acceptance of vessels after sea trials; and (vi) administration associated with ship repairs, marine engines, spare parts, etc.

To bring the cost to purchasers of Australian tonnage more into line with the cost of comparable vessels built in the United Kingdom the Board is empowered to sell new Australian-built tonnage to private owners at prices up to 25 per cent. below their total construction cost.

3. **Construction Programme.**—At 30th June, 1953, the Board had 23 vessels under construction or on order in Australian shipbuilding yards. These comprised: 5 "M.B.C." class, 10,000 d.w.t. motor bulk carriers; 3 "S.B.C." class, 10,000 d.w.t. steam bulk carriers; 4 "B.H.T." class, 10,000 d.w.t. steam iron-ore carriers; 3 "M.C." class, 7,000 d.w.t. motor colliers; 2 "S.C.O. 4" class, 4,000 d.w.t. steam colliers; 3 "B" class, 6,000 d.w.t. freighters; 1 "D/A" class, 3,000 d.w.t. freighter; and 2 "M.G.C." class 2,000 d.w.t. motor bulk grain carriers. At the same date, 40 vessels exceeding 300 gross tons had been built to the order of the Board, as follows:—13 "A" class, 9,000 d.w.t. freighters, 8 "B" class, 6,000 d.w.t. freighters; 10 "D" class, 3,000 d.w.t. freighters; 5 "E" class, 700 d.w.t. freighters; 2 "U/S" class, 3,000 d.w.t. freighters; 1 "D/A" class, 3,000 d.w.t. freighter; and 1 "M/M" class, 2,000 d.w.t. motor collier. The Board has been responsible also for the construction of 24 wooden vessels of 300 tons gross, together with a 1,000 ton floating dock.

## § 9. War Service Homes Division.

The provision of War Service Homes is a function of the Department of Social Services, and the administration of the War Service Homes Act is under the control of the Director of War Service Homes.

The War Service Homes Act 1918–1951 is a measure for the provision of homes for Australian ex-servicemen who served during the 1914–18 War or during any war in which His Majesty became engaged on or after 3rd September, 1939, including, subject to the statutory provisions of the Act, service in Korea or Malaya. Provision is also made for assistance to the female dependants of Australian ex-servicemen and other classes of eligible persons as defined in the Act. Assistance may be granted to an eligible person and the wife or husband of that person, as the case may be, as joint tenants.

The maximum amount of loan or advance which may be granted under the Act is £2,750 for homes built under the Act and £2,000 in respect of other classes of available assistance. Periods of repayment may be approved up to 45 years. In the case of a widow or widowed mother of an Australian ex-serviceman the period may be extended to a maximum of 50 years.

The War Service Homes Division does not provide homes for occupation on a purely tenancy basis.

Since the inception of operations under the War Service Homes Act (figures in parenthesis indicate cases where eligibility has been established and assistance granted as a result of service during the 1939-45 War or in Korea or Malaya) 106,377 (58,640) applications have been approved; 37,232 (15,218) homes have either been built, or assistance to build them has been given; 41,344 (27,074) homes have been purchased; and 12,327 (8,981) mortgages have been discharged. The total number of homes provided under the War Service Homes Act to 30th June, 1952 was 90,903, including 51,273 to persons who served during the 1939-45 War or in Korea or Malaya.

In addition, the Division had approved 9,379 transfers and resales, of which 1,421 were in respect of persons whose eligibility had been established as a result of service during 1939-45 or in Korea or Malaya.

During 1951-52, 14,108 (13,413) applications were approved; 4,205 (4,032) homes were either built or assistance to build them was given; 8,281 (7,876) homes were purchased; and 2,902 (2,841) mortgages were discharged. The total number of homes provided during the financial year 1951-52 was 15,388 (14,749). Transfers and resales approved numbered 429 (340).

At 30th June, 1952, 3,801 homes, including 1,368 group projects, were in course of construction; 883 contracts, of which 235 were for group homes, had been let but work had not started; and 1,246 tenders, including 458 for group homes, had been called but not finally dealt with. The majority of these homes are being provided for persons who served during the 1939-45 War.

The total capital expenditure from inception to 30th June, 1952, was £114,481,967, including £27,607,279 for 1951-52. Receipts from inception to 30th June, 1952 amounted to £55,551,456, including £6,473,954 during 1951-52. Of the total receipts, £28,092,833 has been paid to the National Debt Sinking Fund, including £4,045,907 for 1951-52.

At 30th June, 1952, the total amount of insurances in force, including cover notes, amounted to £119,568,792. From 1st May, 1951 to 31st October, 1952 the premium income amounted to £87,601, and expenditure from the War Service Homes Insurance Trust Account to £33,849.

At 30th June, 1952, arrears of instalments outstanding amounted to £245,181 or 0.48 per cent. of the total instalments due.

## § 10. Commonwealth Scientific and Industrial Research Organization.

1. **General.**—By the Science and Industry Research Act 1949, the previously existing Commonwealth Council for Scientific and Industrial Research was reorganized under the title of the Commonwealth Scientific and Industrial Research Organization. An account of the organization and work of the former Council, and of the earlier Commonwealth Institute of Science and Industry from which the Council was formed, was given in earlier issues of the Official Year Book. (See No. 14, p. 1061 and No. 37, p. 1183).

2. **Science and Industry Research Act 1949.**—This Act provides for—

- (a) an Executive of the Organization consisting of five members to be appointed by the Governor-General, at least three of whom shall be persons possessing scientific qualifications; and
- (b) an Advisory Council of the Organization, consisting of the members of the Executive, the Chairman of each State Committee constituted under the Act, and such other members as the Advisory Council, with the consent of the Minister, co-opts by reason of their scientific knowledge.

The powers and functions of the Organization are as follows :—(a) To initiate and carry out scientific researches in connexion with primary or secondary industries in Australia ; (b) to train research workers and to establish industrial research studentships and fellowships ; (c) to make grants in aid of pure scientific research ; (d) to establish and make grants to industrial research associations in any industry ; (e) to test and standardize scientific apparatus and instruments ; (f) to collect and disseminate scientific and technical information ; (g) to publish scientific and technical reports and periodicals ; and (h) to act as a means of liaison between Australia and other countries in matters of scientific research.

3. **Science and Industry Endowment Act 1926–1949.**—Under this Act, the Government established a fund of £100,000, the income from which is used to provide assistance (a) to persons engaged in scientific research ; and (b) in the training of students in scientific research. Provision is made for gifts or bequests to the fund, which is controlled by a trust consisting of the Executive of the Organization. In accordance with the Act, arrangements have been made to send a number of qualified graduates abroad for training in special fields of work.

4. **Work of the Organization.**—The activities of the Commonwealth Scientific and Industrial Research Organization have necessitated a widespread and adaptable arrangement of its research laboratories. Undesirable centralization has been avoided mainly in two ways. In the first place, the policy has been followed of establishing laboratories in different places in the Commonwealth wherever the necessary facilities, contacts and other suitable conditions could best be found. Secondly, the Act provides for the establishment of a State Committee in each of the six States. These Committees are widely representative of scientific and industrial interests, and advise the Executive or the Advisory Council on general matters and on particular questions of investigation and research.

For about twelve years after its establishment, the work of the previous Council was devoted mainly to the solution of problems affecting the agricultural and pastoral industries. Unlike manufacturing concerns, which can often employ their own scientific staffs, the farmers and the pastoralists are dependent on outside help for the solution of their problems which require research. It was a recognition of the greater need of the primary producer which directed the Council's early policy. However, in 1937, the Commonwealth Government decided to extend the activities of the C.S.I.R. so as to provide assistance to secondary industries, and several laboratories have been established for work in that field ; it was thus in the fortunate position of being able to render to these industries assistance of vital importance almost immediately after the outbreak of war. In fact, the remarkable technological advances and developments in secondary industrial production during the war would to a large extent have been impossible had it not been for the assistance rendered by scientific research, and this may well serve as a forceful illustration of what may be accomplished in times of peace.

For the purpose of carrying out its research work there are established within the Organization a number of Divisions and Sections. The Divisions, of which there are now fifteen, comprise the major establishments for which special laboratory buildings have been erected and equipped ; the Sections generally include establishments which have not reached a stage of development, so far as the scope and magnitude of their operations are concerned, to justify their designation as Divisions. As the Organization's investigations extend on a Commonwealth-wide basis and as many of the investigations which are being conducted—particularly those concerned with problems affecting the agricultural and pastoral industries—necessitate experimental work in the field, a number of field stations have been established in various parts of Australia.

The Divisions which have been established are as follows :—

- (1) Plant Industry, with main laboratories at Canberra and field stations.
- (2) Entomology, with main laboratories at Canberra and field stations.
- (3) Animal Health and Production, with main laboratories in Melbourne, Sydney and Brisbane and field stations.

- (4) Biochemistry and General Nutrition, with main laboratories at Adelaide and field stations.
- (5) Soils, with main laboratories at Adelaide and extensive operations in the field.
- (6) Forest Products, with main laboratories in Melbourne and field experiments.
- (7) Food Preservation and Transport, with main laboratories at Homebush, New South Wales, and a subsidiary laboratory in Brisbane.
- (8) Fisheries, with main laboratories at Cronulla, New South Wales, subsidiary laboratories in Perth (Western Australia) Dunwich (Queensland) and Thursday Island, and experimental work in coastal waters of Australia.
- (9), (10), (11) Metrology, Physics and Electrotechnology, comprising the National Standards Laboratory at Sydney.
- (12) Radiophysics, with main laboratory at Sydney.
- (13) Industrial Chemistry, with laboratories in Melbourne.
- (14) Tribophysics, with laboratories in Melbourne.
- (15) Building Research, with laboratories in Melbourne.

The following are the Sections :—

- (1) Commonwealth Research Station, Murray Irrigation Area, Merbein, Victoria.
- (2) Irrigation Research Station, Griffith, New South Wales.
- (3) Radio Research Board, Sydney.
- (4) Dairy Research, Melbourne.
- (5) Mathematical Statistic, Adelaide.
- (6) Mineragraphic Investigations, Melbourne.
- (7) Ore-dressing Investigations, Melbourne and Kalgoorlie.
- (8) Plant Fibre, Melbourne.
- (9) Physical Metallurgy, Melbourne.
- (10) Meteorological Physics, Melbourne.
- (11) Wool Textile Research Laboratories, Geelong, Melbourne and Sydney.
- (12) Oenological Research, Adelaide.
- (13) Coal Research, Sydney.
- (14) Mathematical Instruments, Sydney.
- (15) Wildlife Survey, with main laboratory in Canberra, subsidiary laboratory at Albury, and field experiments.
- (16) Land Research and Regional Survey, with head-quarters in Canberra, and field stations at Ayr (Queensland), Katherine (Northern Territory) and Ivanhoe (Kimberley, Western Australia).

In addition to its investigational work, the Organization deals with inquiries covering a wide range of scientific and technical subjects and maintains Scientific Research Liaison Offices in London and Washington.

An Agricultural Research Liaison Section established at the Organization's Head Office assists in making results in agricultural research speedily available to State Departments of Agriculture for use in their extension work.

The Organization's Head Office, with administrative and executive staff, is in Melbourne, and associated with it are the Organization's Central Library, Agricultural Research Liaison Section and Central Experimental Workshops. The funds for the Organization are provided from two main sources, viz., from Commonwealth revenue by Parliamentary appropriation, and from industry directly or indirectly by way of contributions and special grants. The fact that contributions and grants account for over one-eighth of the total annual expenditure indicates that C.S.I.R.O. has succeeded in a very large measure in gaining the confidence of the public.

The activities of C.S.I.R.O. are now so comprehensive in their scope and so widely distributed that it is not an easy matter to present in a concise form an adequate picture of them. For details of the investigations in progress, reference should be made to the Annual Report of the Organization.

## § 11. Australian Institute of Anatomy.

1. **Foundation of Institute.**—The Australian Institute of Anatomy, situated in Canberra, occupies a monumental building erected by the Commonwealth Government under the Zoological Museum Agreement Act of 1924. Prior to the passing of this Act, the Commonwealth Government had expressed regret that the Australian nation possessed neither a collection of specimens of the unique and fast disappearing fauna of Australia, nor a museum in which such specimens could be preserved for future generations. Comparative anatomy is the basis of medical science, and while the importance of a study of Australian animals in the solution of various medical problems had for years been recognized by other countries and steps taken by them to procure specimens for their museums, rational effort in this direction was neglected in Australia. The late Sir Colin MacKenzie, the first Director of the Institute of Anatomy, however, very kindly presented to the Commonwealth Government his entire private collection, and this magnificent gift was acquired and provision was made for its proper housing under special legislation by the Commonwealth Government. In 1931 the Institute became an integral part of the Commonwealth Department of Health.

2. **Additions to Original Collection.**—The original collection has been greatly augmented. A list of gifts to the Australian nation may be found in Official Year Book No. 39, p. 1277.

3. **Endowments for Orations and Lectures.**—In addition to the aforementioned donations of material, there have been several endowments for orations and lectures, particulars of which are shown in previous issues of the Official Year Book.

4. **The Scope of the Institute.**—The building occupies a site which adjoins that reserved for the Australian National University.

The Institute consists of two separate and distinct entities. Portion of the original collection of anatomical specimens assembled by the late Sir Colin MacKenzie is arranged in two large museums which are open to the general public. The material in these museums has been arranged so as to present simple lessons in human hygiene as well as to display the anatomical features and especially the peculiarities of Australian fauna.

The remainder of the building houses research units which are studying problems in the biological and medical sciences. The large collections of bony anatomical material donated by Murray Black have provided most interesting and valuable data on aboriginal diseases.

In 1938, following upon the retirement due to ill-health of Sir Colin MacKenzie, the activities of the Institute were extended to interpret more fully the ideas of the founder. In the later years of his life Sir Colin had been keenly interested in the relationship of nutrition to the development of the child. In recent years the work of the staff has developed in laboratory and field research in problems of nutrition, and this work is being continued and developed, particularly in association with the Institute of Child Health of the Commonwealth Department of Health, situated at the Sydney University.

## § 12. Commonwealth Observatory.

1. **Foundation of Observatory.**—The Observatory was founded primarily to prosecute astrophysical research, including the study of the relations between solar and terrestrial phenomena. A short history of the foundation of the Observatory appears in Official Year Book No. 19, p. 979.

2. **Site of Observatory.**—The Observatory is situated on Mount Stromlo, which forms part of a ridge of hills about seven miles west of Canberra. The highest point in the ridge is 2,560 feet above sea level, that is about 700 feet above the general level of the surrounding country.

3. **Equipment.**—Some of the major items of astrophysical equipment have been obtained through the generosity of private donors. Thus a 30-inch reflector was donated by the late J. H. Reynolds, Esq.; a 9-inch refractor was presented by the late Mr. James

Oddie; and the trustees of the late Lord Farnham made available a 6-inch refractor. Other major equipment comprises a solar tower telescope with an 18-inch coelostat and a 3-inch reversible transit instrument. The Observatory was the successful tenderer at a public sale for the purchase from the Victorian Government of the long-disused 48-inch reflector of the now closed Melbourne Observatory. This instrument is being modernized by conversion into a Schmidt Gregorian telescope with a 50 inch primary mirror. A 74-inch reflector has been nearly completed in the works of Sir Howard Grubb Parsons and its installation at Mount Stromlo will be completed shortly.

4. **Functions of Observatory.**—Investigations in the fields of stellar spectroscopy, stellar photometry, and variable stars are being carried out. In addition to covering the type of astrophysical research for which the Observatory was founded, the field of work has been extended to include experimental and theoretical investigations of the ionosphere, and the determination of time. The observatory is now responsible for the accuracy of the Australian Time Service. Considerable attention is being given to the development of this work, and a highly accurate quartz clock system has been installed.

### § 13. Standards Association of Australia.

The Standards Association of Australia is the national standardizing organization of Australia, and issues Australian standard specifications for materials and codes of practice.

The Association was established in July, 1929 by the amalgamation of the Australian Commonwealth Engineering Standards Association and the Australian Commonwealth Association of Simplified Practice. It is an independent body in close touch with modern industrial requirements and has the full recognition and support of the Commonwealth and State Governments and industry.

The sole executive authority of the Association is vested in the Council, on which industry is fully represented, together with official representatives of the Commonwealth and State Governments and their technical departments, and of scientific, professional and commercial organizations. Voluntary assistance is rendered in the drafting of specifications and codes by more than 4,500 individuals who are experts in their particular fields, and are organized into more than 500 committees. These committees are grouped under an internationally established classification, covering civil engineering and building construction, mechanical engineering, electrical engineering, automotive industry (including aircraft), transportation, naval architecture and marine engineering, ship-building, ferrous metallurgy, non-ferrous metallurgy, chemical industry, textile industry, mining, agriculture, wood industry, pulp and paper industry, glass and pottery, dairying industry, medical and dental, household and domestic economy, miscellaneous and general.

These committees are comprised of nominated representatives of manufacturing, distributing and purchasing organizations, and of scientific and other expert authorities in the particular field of the project being dealt with. The operations of these committees are co-ordinated and supervised by committees broadly representative of the whole industry, according to the foregoing classification, within which the respective projects are included.

The specifications of the Association provide a suitable standard of performance, quality and dimension and an equitable basis for tendering. They help to eliminate redundant qualities and sizes. They enable purchasers to obtain their requirements with greater assurance of satisfaction, with more rapid delivery and without the necessity of drafting individual specifications.

The underlying principles covering the preparation of the specifications and codes are that they shall be in accordance with the needs of industry; that the common interests of producer and consumer be maintained; that periodical revision should keep the work abreast with progress; and that standardization be arrived at by general consent without coercion.

Organizations, companies, firms and individuals interested in the work of the Association are eligible for subscription membership. Members are entitled to free copies of the publications of the Association and to the use of the library and its Special Information Service. Bibliographical research is undertaken for committees, members of the Association, and industry in general. Many hundreds of inquiries are answered each year.

The Association has international affiliations and the standards of all British and foreign countries are filed in the library and are accessible to members. It also administers the Australian National Committees of the International Electrotechnical Commission, the World Power Conference and the International Commission on Large Dams. The Association is also a member, representing Australia, of the International Organization for Standardization (I.S.O.).

The Association is also the representative of the British Standards Institution, and all British standards may be purchased from headquarters and branch offices in the various States.

The headquarters of the Association are at Science House, Gloucester-street, Sydney, and branches of the Association are situated at Temple Court, 422 Collins-street, Melbourne; School of Arts Building, 162 Ann-street, Brisbane; Alliance Building, Grenfell-street, Adelaide; Gledden Building, Hay-street, Perth; c/o Engineering Department, Hobart Technical College, Hobart; Department of Works, Canberra; and Howard Smith Chambers, Watt-street, Newcastle.

## § 14. Film Censorship Board.

1. **Legislation.**—The censorship of imported films derives its authority from Section 52 (g) of the Customs Act which gives power to prohibit the importation of goods. Under this section, regulations have been issued prohibiting the importation of films except under certain conditions and with the consent of the Minister. The regulations provide, *inter alia*, that no film shall be registered which in the opinion of the Censor is (a) blasphemous, indecent or obscene; (b) likely to be injurious to morality, or to encourage or incite to crime; (c) likely to be offensive to the people of any friendly nation; (d) likely to be offensive to the people of the British Empire; or (e) depicts any matter the exhibition of which is undesirable in the public interest.

The regulations governing the exportation of Australian-made films are similar with the addition that no film may be exported which in the opinion of the Censorship is likely to prove detrimental or prejudicial to the Commonwealth of Australia.

The Censorship consists of a Censorship Board of three persons and an Appeal Censor, the headquarters being in Sydney. There is also a right of appeal to the Minister.

In addition to the censorship of moving pictures, the Censorship may refuse to admit into Australia any advertising matter proposed to be used in connexion with the exhibition of any film. In regard to films and advertising matter produced in Australia, legislation of a uniform nature is now operative in all States except South Australia. Under the State legislation the Commonwealth Film Censorship Organization acts as censor for the States concerned by virtue of agreements entered into between the Commonwealth and the respective State Government.

2. **Import of Films.**—Imported standard size (35-millimetre) films dealt with by the Censorship for the year 1952 were as follows:—1,289 films of 3,417,222 feet passed without eliminations and 76 films of 547,757 feet passed after eliminations and 2 films of 18,292 feet rejected in the first instance, making a total of 1,367 films of 3,983,271 feet. Of the films rejected, one of 9,649 feet was passed after reconstruction; there was no appeal against the other rejection. The countries of origin were as follows:—United States of America, 754 films of 2,739,665 feet; United Kingdom, 358 films of 755,466 feet; and other countries, 255 films of 488,140 feet.

The films which chiefly concern the Censorship are the feature or dramatic films. Of these, 390—3,103,696 feet were imported during 1952 (290—2,291,081 feet from the United States of America and 72—584,888 feet from the United Kingdom). Three hundred and twenty-four—2,581,867 feet were passed without eliminations, 65—512,180

feet were passed with eliminations and one film of 9,649 feet was rejected in the first instance but subsequently passed after reconstruction. During 1951, 427 feature films were dealt with, 340 being passed without eliminations and 86 passed with eliminations, while there was one absolute rejection.

There were also imported, during 1952, 4,406 miniature films (16 millimetres) of 2,948,508 feet and 3,691 miniature films (9.5 and 8 millimetres) of 1,233,876 feet. Seven 8-millimetre films and eleven 16-millimetre films were rejected; one rejected 16-millimetre film was passed after cuts had been made.

3. **Export of Films.**—The number of films exported for the year 1952 was 1,365 of 1,290,175 feet, of which 872 films of 910,203 feet were sent to British countries, including Trust Territories.

### § 15. Australian National Film Board and the Film Division.

1. **The Australian National Film Board.**—The Australian National Film Board was inaugurated in April, 1945, on the recommendations of a Commonwealth Government inter-departmental committee which considered the suggestions of a conference of interested individuals and Commonwealth and State officials, including Directors of Education, called in November, 1944 by the Ministers for Information and Post-war Reconstruction. It was attached, for administrative purposes, to the Department of Information.

With the abolition of the Department of Information, in March, 1950, administration of the Board was transferred to the News and Information Bureau, Department of the Interior.

In November, 1950, the Board was reconstituted as an advisory body to the Minister for the Interior on matters concerned with the production, distribution and acquisition of film required by Commonwealth departments for the following purposes :—

- (a) for use within Australia on important matters of national interest and welfare, such as school and adult education, rehabilitation, social development, international understanding, trade and tourist expansion, and immigration;
- (b) for dissemination abroad to expand trade and commerce with other countries, encourage tourist traffic with Australia, improve Australia's relations with other countries and, where necessary, to explain Australia's national policies, and to encourage immigration.

The constitution provides for a membership of ten, with the Secretary of the Department of the Interior, Chairman, the Director of the News and Information Bureau, Deputy Chairman, and the remainder representative of Commonwealth Departments, State Government instrumentalities and organizations interested in the production, distribution or utilization of films for national publicity.

2. **The Film Division of the News and Information Bureau.**—Production and distribution of all films required by Commonwealth Departments is undertaken by the staff of the Film Division, News and Information Bureau, Department of the Interior, or by commercial enterprises under the supervision of officers of the Film Division. Theatrical distribution in Australia, and both theatrical and non-theatrical distribution overseas, of all Film Division productions are organized by the News and Information Bureau's home office or its oversea representatives. Non-theatrical distribution in Australia is organized by the National Library, Canberra, in co-operation with State film distribution agencies.

The first Australian Government organization for the production of motion pictures for national publicity purposes was the Cinema and Photographic Branch of the Department of Commerce, set up in Melbourne in 1920. Early in the 1939-45 War, the newly-established Department of Information was made responsible for the operation of the Cinema Branch and for an Official War Photography Unit.

Since 1946, the Film Division has produced 184 films for general exhibition, as well as training and special purpose films. Prints are dispatched to 32 overseas centres where distribution is arranged by News and Information Bureau officers or other Australian representatives. In Britain, there is regular distribution through more than a thousand theatres, and a large non-theatrical and educational series of circuits. By arrangement with the British Broadcasting Corporation, items of topical interest photographed by the Film Division are flown to London for television. In the United States of America there is wide non-theatrical distribution and considerable use of the films by television networks. An exchange arrangement with the National Film Board of Canada secures extensive distribution in Canada. French versions, prepared in Paris under the supervision of the Australian Embassy, circulate through France and French-speaking countries. Selected films have also been recorded in Dutch, German, Italian, Japanese, Hindustani, Tamil and other Indian dialects.

In addition to films made on the initiative of the News and Information Bureau, the Film Division has produced, or is producing, films under the sponsorship or with the co-operation of Commonwealth Departments and many other bodies such as the Commonwealth Bank of Australia, the Road Safety Council, Overseas Telecommunications Commission, Snowy Mountains Hydro-electric Authority, Australian Wine Board, the Australian National University and the Australian Broadcasting Commission.

The co-operation of the Australian motion picture industry with the Commonwealth, spontaneously offered at the outset of the 1939-45 War, continues. Special films for urgent national appeals are planned, produced and distributed with the assistance of the National Films Council of the motion picture industry and its Film Production Advisory Committee.

### § 16. National Safety Council of Australia.

The National Safety Council of Australia was founded in Melbourne in 1927 for the purposes of developing, mainly by means of education, safety on the road, at work and in the home, and its activities have developed in other directions wherever the need for reducing the toll of accidents has been shown. To this end it conducts continuous propaganda through the press and in other ways. It also forms Junior Safety Councils in the schools for developing a safety conscience among children. The children themselves are officers of these Councils and patrol the roads in the neighbourhood of the schools and conduct the scholars across in safety. Posters are available to schools in connexion with Health and Safety lessons. Films specially taken are available for children's and home safety instruction.

A "Safe Driving" campaign for individual motor drivers is conducted as well as a "Freedom from Accidents" competition among employee drivers, those completing a year free from any accident for which they are responsible being given a certificate to that effect. An industrial service of four posters per month, together with slips for pay envelopes, constitutes a regular service for the dissemination of safety advice, and was supplied to over 100,000 workers in factories last year. Committees deal with specific problems regarding traffic, films, safety in industry, air safety and home dangers. The Air Safety Committee has issued a 32-page booklet "Air Sense" for distribution with pilots' private licences through the Civil Aviation Department, and has a plan for assistance to aircraft in distress which is being implemented throughout Australia.

The Council is supported by Government grants, public subscription and sales of service, and is a non-profit organization. Its work is carried on by a small paid staff controlled by committees and governed by an executive. The following committees whose work is of an entirely honorary nature, are in operation, namely, Executive, Traffic, Industrial Safety, Home, Air Safety and Propaganda.

### § 17. Australian Road Safety Council.

1. *Origin and Organization.*—The Australian Road Safety Council was formed in June, 1947, through the instrumentality of the Australian Transport Advisory Council.

The prime movers for the establishment of the Council were the Australian Automobile Association, which submitted a comprehensive plan; the New South Wales Minister for Transport, who advocated expansion, on a nation-wide basis, of road safety activities on lines similar to those of the Road Safety Council of New South Wales; and the National Safety Council of South Australia, which conveyed recommendations from a Special Safety Convention held in Adelaide in 1946.

At that time, in addition to the above-mentioned organizations in New South Wales and South Australia, there was also a road safety organization in Victoria. Steps were immediately taken to form Councils in Queensland, Western Australia and Tasmania, and subsequently for the internal Territories.

The Australian Road Safety Council is the composite body of Road Safety Councils of the following States and Territories (internal) of Australia :—

*Governmental.*—New South Wales, Road Safety Council of New South Wales; Queensland, Road Safety Council of Queensland; Tasmania, Road Safety Council of Tasmania; Australian Capital Territory and Northern Territory, Road Safety Councils of Australian Capital Territory and Northern Territory respectively.

*Non-Governmental.*—Victoria, Victorian Road Safety Division, National Safety Council of Australia; South Australia, Road Safety Division, National Safety Council of South Australia; Western Australia, Road Safety Division, National Safety Council of Western Australia.

The Council is representative, geographically and technically, of the whole Commonwealth, and comprises nominees of practically all classes of road users, together with representatives of road transport, the Department of Defence and police administrations from each State. National organizations represented on the Council are :—The Federal Chamber of Automotive Industries, Council of Fire and Accident Underwriters, Australian Road Transport Federation, Australian Automobile Association, Transport Workers' Union of Australia, Federation of Motor Cycle Importers and Distributors of Australia, and Auto Cycle Council of Australia.

The Council meets annually, and an Executive Committee operates between conferences. Special committees on education, public relations and films meet as required.

An annual grant of £100,000 is made available by the Commonwealth Government under the Commonwealth Aid Roads Act. Of this £60,000 is allocated to the State road safety councils for local activities, and the remaining £40,000 is applied to the national campaign. This is supplemented by assistance, financial and otherwise, by State Governments, and indirectly by commercial organizations.

2. *Mode of Operation.*—The role of the Australian Road Safety Council is primarily in the field of education and public relations. Its task is to increase public awareness of the seriousness of the road accident problem, which, in the year ended December, 1952, resulted in 71,075 accidents involving casualties or damage in excess of £10 to property, the deaths of 1,983 persons and injuries to 38,027 persons. (For further information on the subject of Traffic Accidents see pp. 141-3 of this Year Book.)

The Council works in close collaboration with two other committees also established by the Australian Transport Advisory Council, namely, the Australian Motor Vehicle Standards and the Australian Uniform Road Traffic Code. All three committees are administered by the Commonwealth Department of Shipping and Transport, which is the executive department for the Australian Transport Advisory Council. The Australian Motor Vehicle Standards Committee develops essential basic motor vehicle standards, such as maximum lengths, weights, height, carrying capacity of vehicles, and minimum lighting, braking and other mechanical efficiencies. In addition to ensuring a greater safety factor, these standards will eliminate many conflicting State requirements

which had an adverse effect on design and production costs. The Australian Uniform Road Traffic Code Committee is charged with the responsibility of progressively preparing a "blue print" uniform national traffic code for incorporation in State legislation. Speed limits, right hand turns, rules governing approaches to intersections, qualifications of drivers, pedestrian behaviour, are a few of the numerous aspects which come within its purview.

The campaign for road accident prevention resolves broadly into three main elements relating to (i) the Road User, (ii) the Road, and (iii) the Vehicle. Similarly, the attack falls into three main divisions—(i) Education, (ii) Enforcement, and (iii) Engineering. The link between the components is, broadly:—

The Road User	{	Education (public relations media, instruction in schools, homes, etc.).
		Enforcement (of correct road usage—through the police and the courts, uniform traffic laws, etc.).
The Road	{	Engineering (technical improvements of all kinds, safer roads and vehicles, improved illumination, uniform vehicle standards, etc.).
The Vehicle		

In addition to the foregoing activities, the Council convenes special national conferences, as required by the Australian Transport Advisory Council, to consider specific road safety problems. Typical of these have been the special committee appointed in 1951 to discuss level crossing accidents which recommended, among other measures, the appointment in each State of a committee to investigate level crossings and report on safety provisions, the elimination of some railway level crossings and the closure of others where practicable and desirable, and a special meeting held in June, 1953, to discuss methods of reducing the high incidence of motor cycle accidents, at which various measures to offset the greater vulnerability of motor cyclists were recommended.

### § 18. Lord Howe Island.

Lord Howe Island is situated in latitude  $31^{\circ} 30'$  south, longitude  $159^{\circ} 5'$  east, about 436 miles north-east of Sydney, and has an area of 3,220 acres. The climate is mild and the rainfall abundant, but on account of the rocky formations of its surface only about 300 acres are suitable for cultivation, most of which are devoted to the production of *Kentia palm* seed. The land belongs to the Crown and is occupied *rent-free on sufferance*.

Discovered in 1788, the Island was first settled by a small party of Maoris in 1853; afterwards a colony was settled from Sydney. Constitutionally the Island is a dependency of New South Wales and is included in King, one of the electorates of Sydney. A Board of Control at Sydney manages the affairs of the Island and supervises the palm seed industry. The population was 179 at the Census of 30th June, 1947.

### § 19. The United Nations.

1. *General*.—The Moscow Declaration of 1943 concerning a new international organization for the maintenance of international peace and security marked the end of the League of Nations. The dissolution of the League, and the transfer of certain of its functions to the new body, the United Nations, took place over subsequent years. Information concerning the League of Nations was given in issue No. 35 and earlier issues of the Official Year Book.

The Charter of the United Nations was drawn up by the delegates of fifty nations at the United Nations Conference on International Organization at San Francisco from 25th April to 26th June, 1945. Australia's ratification was deposited on 1st November, 1945. There are now\* 60 member states: Afghanistan, Argentina, Australia, Belgium, Bolivia, Brazil, Burma, Byelorussia, Canada, Chile, China, Colombia, Costa Rica, Cuba, Czechoslovakia, Denmark, Dominican Republic, Ecuador, Egypt, El Salvador, Ethiopia, France, Greece, Guatemala, Haiti, Honduras, Iceland, India, Indonesia, Iran, Iraq, Israel, Lebanon, Liberia, Luxembourg, Mexico, Netherlands, New Zealand, Nicaragua,

\* January, 1954.

Norway, Pakistan, Panama, Paraguay, Peru, Philippine Commonwealth, Poland, Saudi Arabia, Siam, Sweden, Syria, Turkey, Ukraine, Union of South Africa, Union of Soviet Socialist Republics, United Kingdom, United States of America, Uruguay, Venezuela, Yemen, Yugoslavia.

The full record of the Conference is contained in the Report by the Australian Delegates on the United Nations Conference on International Organization held at San Francisco, United States of America, from 25th April to 26th June, 1945.

At San Francisco an Executive Committee and a Preparatory Commission were established, and when these bodies had completed their work of preparation for the first meeting of the United Nations, the General Assembly met in London on 10th January, 1946.

The principal organs of the United Nations are the General Assembly, the Security Council, the Economic and Social Council, the Trusteeship Council, the International Court of Justice, and the Secretariat.

2. **General Assembly.**—This is the forum of the United Nations. In it each member state is represented and has one vote. It meets in regular annual sessions and has provision for special sessions. With the exception of disputes which are before the Security Council and matters essentially within the domestic jurisdiction of any State, it has power to discuss any matter within the scope of the Charter and to make recommendations upon it. The Assembly elects the non-permanent members of the other major organs and considers annual reports from them. Upon the recommendation of the Security Council, it may expel a member which has persistently violated the principles of the Charter.

3. **The Security Council.**—This has the primary responsibility for the maintenance of international peace and security. It is composed of five permanent members, namely China, France, the United Kingdom, the Union of Soviet Socialist Republics and the United States of America, and six non-permanent members with two-year periods of office, of whom three retire at the end of each year. At the initial election three countries, including Australia, were elected for a term of two years and three others for a term of one year only. The following are the non-permanent members of the Security Council at present\* : Lebanon, Colombia and Denmark (retiring at the end of 1954) and New Zealand, Brazil and Turkey (retiring at the end of 1955). On procedural matters, decisions are taken by an affirmative vote of any seven members. But on all other matters decisions can only be made on the affirmative vote of seven members, including the concurring votes of all the permanent members. However, the powers which are parties to a dispute for peaceful settlement do not vote.

The Security Council is assisted by a Military Staff Committee consisting of the Chiefs of Staff of the permanent members of the Council or their representatives.

4. **The Economic and Social Council.**—This body consists of eighteen members, each elected for a period of three years. Its main functions are to make, or initiate, studies and reports, and to make recommendations to the General Assembly or to members of the United Nations, upon international, economic, social, cultural, educational, health and related matters. It may make recommendations for the purpose of promoting respect for, and observance of, human rights and fundamental freedoms for all.

The present\* members of the Economic and Social Council are : Belgium, China, France, Egypt, Cuba, Argentina (retiring 1954), Australia, Yugoslavia, Turkey, Venezuela, India, United States (retiring 1955), United Kingdom, Union of Soviet Socialist Republics, Ecuador, Pakistan, Czechoslovakia and Norway (retiring 1956).

5. **The Trusteeship Council.**—The Charter declares the political, social, cultural and economic advancement of the Trusteeship Territories to be a sacred trust. A Trusteeship Council has been set up composed of those members of the United Nations who are administering trust territories and an equal number of members who are not administering trust territories (including any permanent members of the Security Council who are not administering trust territories). Territories which may be placed under

\* January, 1954.

trusteeship in accord with individual trusteeship agreements are those previously held under mandate, those detached from enemy states as a result of the second World War and those dependent territories placed under the system by the states responsible for their administration. Australia is automatically a member of the Trusteeship Council, as the Power administering the Trust Territories of New Guinea and Nauru. The present\* members of the Trusteeship Council are: Australia, Belgium, France, New Zealand, United Kingdom and the United States of America (administering States), and China, Haiti, Union of Soviet Socialist Republics, El Salvador, Iraq and India (non-administering states). China and the Union of Soviet Socialist Republics are eligible for permanent membership of the Trusteeship Council by virtue of their permanent membership of the Security Council.

The Council has among its duties the consideration of annual reports submitted by the trustee state, the carrying out of periodic inspections by agreement with it, and the formulation of questionnaires on the welfare and advancement of the dependent peoples.

**6. The International Court of Justice.**—This consists of fifteen judges, no two of whom may be nationals of the same state. Its jurisdiction comprises all cases which the parties refer to it, and all matters especially provided for in the Charter or in treaties and conventions in force. Provision exists in the Statute of the Court whereby States parties to the Statute may accept the jurisdiction of the Court as compulsory, either conditionally, or unconditionally in certain international disputes.

The present\* members of the Court are: Judges Alvarez (Chile), Basdevant (France), Guerrero (El Salvador), Sir Archibald McNair (United Kingdom), Carniero (Brazil)—all retiring in 1955; Judges Badawi (Egypt), Hsu Mo (China), Read (Canada), Winiarski (Poland), Zoricitch (Yugoslavia)—all retiring in 1958; and Judges Hackworth (United States of America), Klaested (Norway), Koshernikov (U.S.S.R.), and Ugon (Uruguay)—all retiring in 1961. Sir Benegal Rau (India) died in 1953 and a special election is to be held for the appointment of a successor.

**7. The Secretariat.**—The Secretary-General is the head of the Secretariat of the organization. He is appointed by the General Assembly upon the recommendation of the Security Council, and he appoints his staff in accordance with the rules approved by the General Assembly. M. Trygve Lie (Norway) was appointed first Secretary-General, and at the Sixth Session of the General Assembly in 1950 was re-appointed for three further years as from 1st February, 1951. In November, 1952 Mr. Lie announced his intention of retiring and in April, 1953, Mr. Dag Hammarskjöld (Sweden) was appointed in his place.

**8. Specialized Agencies.**—In addition to these organs of the United Nations there are thirteen specialized agencies which co-operate closely with the United Nations in many fields on economic and social questions.

Those already in operation are: The International Labour Organization; Food and Agricultural Organization; United Nations Educational, Scientific and Cultural Organization; International Civil Aviation Organization; International Bank for Reconstruction and Development; International Monetary Fund; Universal Postal Union; World Health Organization; International Telecommunications Union; World Meteorological Organization.

To enable co-ordination of the work of the specialized agencies, arrangements have been made for them to submit reports on their activities and budgets to the United Nations where they are discussed by the Economic and Social Council and the General Assembly.

## § 20. Diplomatic and other Representatives Overseas and in Australia.

**1. General.**—The following statements show particulars of the various diplomatic and other representatives overseas and in Australia. Full details of British and foreign representation in Australia—diplomatic and consular—and of permanent Australian missions overseas may be obtained from publications issued by the Department of External Affairs, Canberra. A statement is issued each quarter by the Department of Commerce and Agriculture, showing the latest particulars of the Australian Trade Commissioner Service overseas.

\* January, 1954.

## 2. Australian Representation Overseas.—

## AUSTRALIAN DIPLOMATIC AND OTHER REPRESENTATIVES OVERSEAS.

## Her Majesty's Australian Ambassador Extraordinary and Plenipotentiary to—

*France*—Sir Keith Officer, O.B.E., M.C.

*German Federal Republic*—J. D. L. Hood.

*Indonesia*—(Vacant); Minister, J. C. G. Kevin (Chargé d'Affaires *ad interim*).

*Ireland*—(Vacant); W. T. Doig (Chargé d'Affaires *ad interim*).

*Japan*—Dr. E. R. Walker.

*Netherlands*—A. T. Stirling, C.B.E.

\* *Union of Soviet Socialist Republics*—(Vacant); B. C. Hill (Chargé d'Affaires *ad interim*).

*United States of America*—The Hon. Sir Percy Spender, K.B.E., Q.C.

## Her Majesty's Australian Envoy Extraordinary and Minister Plenipotentiary to—

*Brazil*—(Vacant); J. E. Ryan (Chargé d'Affaires *ad interim*).

*Burma*—(Vacant); H. D. White (Chargé d'Affaires *ad interim*).

*Egypt*—H. A. McClure-Smith.

*Indo-China*—J. P. Quinn.

*Israel*—(Vacant); H. W. Bullock (Chargé d'Affaires *ad interim*).

*Italy*—C. V. Kellway.

*Philippines*—Rear-Admiral G. D. Moore, C.B.E.

*Thailand*—B. C. Ballard.

## High Commissioners for Australia in—

*Canada*—Sir Douglas Copland, K.B.E., C.M.G.

*Ceylon*—A. R. Cutler, V.C.

*India*—W. R. Crocker.

*New Zealand*—P. R. Heydon.

*Pakistan*—L. F. Beavis, C.B., C.B.E., D.S.O.

*Union of South Africa*—Lt.-Col. W. R. Hodgson, C.M.G., O.B.E.

*United Kingdom of Great Britain and Northern Ireland*—The Hon. Sir Thomas White, K.B.E., D.F.C., V.D.

## Australian Military Mission—

*Berlin*—Head, J. D. L. Hood.

## Australian Mission—

*United Nations* (New York)—Minister, W. D. Forsyth.

*United Nations* (Geneva)—Permanent Delegate, R. L. Harry.

## Australian Commissioner in—

*Malaya*—A. S. Watt, C.B.E.

## Consuls-General—

*Switzerland*—(Geneva) R. L. Harry.

*United States of America* (New York)—Lieut.-General E. K. Smart, D.S.O., M.C.

*United States of America* (San Francisco)—S. W. Jamieson.

## Consuls—

*New Caledonia* (Noumea)—Dr. J. S. Cumpston, E.D.

*Portuguese Timor* (Dili)—F. J. A. Whittaker.

\* Mission withdrawn on 29th April, 1954.

## Trade Commissioner Service of the Commonwealth of Australia—

- British West Indies*—J. B. Todd (Port of Spain).  
*Canada*—C. L. Steel (Montreal); J. Payne (Vancouver).  
*Ceylon*—H. W. Goodger (Colombo).  
*Egypt*—S. D. Shubart, Commercial Counsellor and Trade Commissioner (Cairo).  
*France*—A. N. Wootton, Commercial Counsellor and Trade Commissioner (Paris).  
*Germany*—R. R. Ellen, Commercial Counsellor and Trade Commissioner (Bonn).  
*Hong Kong*—H. C. Menzies (Hong Kong).  
*India*—W. R. Hudspeth (Calcutta); H. Wrigley (Bombay).  
*Indonesia*—B. T. Connolly, Commercial Counsellor and Trade Commissioner (Djakarta).  
*Italy*—A. L. Senger, Commercial Counsellor and Trade Commissioner (Rome).  
*Japan*—C. J. Carne, Commercial Counsellor and Trade Commissioner (Tokyo).  
*Malaya*—G. S. Anderson, Commercial Counsellor and Trade Commissioner (Singapore).  
*New Zealand*—S. F. Lynch (Wellington).  
*Pakistan*—E. E. Jarvis (Acting), Commercial Secretary and Trade Commissioner (Karachi).  
*Union of South Africa*—A. J. S. Day (Johannesburg).  
*United Kingdom of Great Britain and Northern Ireland*—G. R. B. Patterson, Senior Trade Commissioner; H. K. H. Cook (London).  
*United States of America*—C. E. Critchley, O.B.E., Commercial Counsellor and Trade Commissioner (Washington, D.C.); F. R. Gullick (New York); Miss F. B. Cowie (temporarily in charge) (San Francisco).

3. **Oversea Representation in Australia.**—Consular representatives are not included in the following statement. Particulars of these are contained in a publication *Consular Representatives and Trade Commissioners in Australia*, issued by the Department of External Affairs, Canberra. There are more than 150 such representatives in Australia, and 39 countries are represented.

## DIPLOMATIC REPRESENTATIVES IN AUSTRALIA.

## Ambassador Extraordinary and Plenipotentiary of—

- China*—(Vacant); Dr. Chen Tai-chu (Chargé d'Affaires *ad interim*) (Canberra B 945).  
*France*—L. Roche (Canberra F 345).  
*German Federal Republic*—Dr. Walther Hess (Sydney FM 1041).  
*Indonesia*—(Vacant); Dr. Tamzil (Chargé d'Affaires *ad interim*) (Canberra B199).  
*Ireland*—Dr. the Hon. T. J. Kiernan (Canberra F 275).  
*Japan*—Haruhiko Nishi (Canberra B 290).  
*Netherlands*—A. M. L. Winkelman (Canberra X 1236).  
*\* Union of Soviet Socialist Republics*—N. I. Generalov (Canberra B 863).  
*United States of America*—Amos J. Peaslee (Canberra 655).

## Envoy Extraordinary and Minister Plenipotentiary of—

- Austria*—Dr. O. Eiselsberg (Chargé d'Affaires) (Canberra U 1367).  
*Belgium*—F. F. A. Jansen (Sydney FB 3934).  
*Brazil*—J. Cochrane de Alencar, O.B.E. (Canberra F 380).  
*Chile*—Juan Domeyko (Chargé d'Affaires) (Sydney FM 6356).  
*Denmark*—(Vacant); F. H. Hergcl, O.B.E., (Chargé d'Affaires *ad interim*) (Sydney BW 3547).  
*Finland*—P. I. Simelius (Chargé d'Affaires) (Sydney FM 3116).  
*Greece*—Dimitri N. Lambros (Canberra 543).  
*Ieract*—M. Nurock (Sydney BW 2082).  
*Italy*—Silvio Danco (Sydney FB 3639).  
*Philippines*—Dr. R. Rega'a (Sydney FA 1938).  
*Sweden*—J. M. Kastengren (Canberra F 306).  
*Thailand*—Nai Konthi Suphamongkhon (Canberra 676).

\* Mission withdrawn on 25th April, 1954.

**High Commissioner for—**

*Canada*—W. A. Irwin (Canberra 665).

*Ceylon*—J. A. Martensz. C.B.E. (Canberra F 623).

*India*—General K. M. Cariappa, O.B.E. (Canberra F 383).

*New Zealand*—G. E. L. Alderton (Canberra B 953).

*Pakistan*—Habibur Rahman (Sydney BL 3395).

*Union of South Africa*—(Vacant); G. C. Nel (Acting) (Canberra F 927).

*United Kingdom of Great Britain and Northern Ireland*—Sir Stephen Holmes, K.C.M.G., M.C. (Canberra F 451).

**Commissioner for—**

*Malta*—Captain G. F. L. Stivala, O.B.E. (Melbourne MU 1291).

**TRADE COMMISSIONERS OF OVERSEA GOVERNMENTS IN AUSTRALIA.**

*Canada*—Senior Canadian Government Trade Commissioner—C. M. Croft (Sydney BW 9351).

Canadian Government Trade Commissioner—R. W. Blake (Melbourne MU 4716).

Assistant Canadian Government Trade Commissioner—C. M. Forsyth-Smith (Sydney BW 9351).

*New Zealand*—Senior New Zealand Government Trade Commissioner—J. A. Malcolm (Sydney BL 3941).

New Zealand Government Trade Commissioner—R. Inglis (Melbourne MU 8111).

Assistant New Zealand Government Trade Commissioners—E. J. Sutch (Sydney BL 3941); G. F. Knowles (Melbourne MU 8111).

*United Kingdom of Great Britain and Northern Ireland*—United Kingdom Senior Trade Commissioner—Sir John Greaves, C.M.G., O.B.E. (Canberra F 188).

United Kingdom Trade Commissioners—J. N. McKelvie (Canberra F 188); J. R. Adams, C.B.E., A. Hartland (Sydney BW 8086); A. W. Burton, M.B.E., J. D. Leithead (Melbourne MU 5556); P. Ingleson, C.M.G., M.B.E., M.C. (Brisbane B 8588).

Assistant United Kingdom Trade Commissioners—A. Kitchen, W. Johnston (Sydney BW 8086); E. J. E. Newbold (Melbourne MU 5556); E. J. Jewesson (Brisbane B 8588).

## CHAPTER XXX.

## STATISTICAL ORGANIZATION AND SOURCES OF INFORMATION.

## § 1. Statistical Organization in Australia.

1. Development of Australian Statistics.—(i) *Crown Colony Blue Books*. Statistical organization in Australia was founded in the "Blue Books" which, in the Crown Colony days, were prepared annually for the information of the Colonial Office. Although primarily intended for administrative purposes, these documents have been important sources of statistical data, even though some important matters are not covered, and others only partially so. These Blue Books form the basis from which later statistical publications were developed. This led to an element of uniformity in statistical compilation within the British Empire.

(ii) *Statistical Registers*. Following the advent of Responsible Government which was granted during the period 1851-1860 to all Australian States except Western Australia—and to that State in 1890—the "Blue Book" was succeeded in all Australian States by "Statistical Registers". These were in many respects the old Blue Books in a new form, and were largely confined to summaries of the "by-product" statistics of Government administrative departments.

The first example of extensive Governmental organization for purely statistical purposes was the taking of periodic population censuses, which were initiated in all States under the Crown Colony régime. The growing need for quantitative data concerning the progress of the several young communities of Australia eventually led to the appointment of official Statisticians commissioned to prepare and publish such data.

(iii) *Statistical Conferences*. To enable the interchange of ideas between States, and to obtain uniform State Statistics which could be aggregated to Australian totals, conferences were held in the several States from as early as 1861. Altogether, six conferences were held prior to the formation of the Commonwealth Bureau of Census and Statistics in 1906. These were held in 1861, 1875, 1890, 1900, 1902 and 1903. The holding of these conferences has been continued subsequently to the formation of the Commonwealth Bureau, and a representative from New Zealand attended up to 1928.

2. Commonwealth Bureau of Census and Statistics.—(i) *Origin and Aims*. Under the provisions of section 51 of the Commonwealth Constitution, power is conferred on the Commonwealth Parliament "to make laws for the peace, order and good government of the Commonwealth with respect to—" (*inter alia*) "(XI.) Census and statistics". In compliance with this provision, the Census and Statistics Act 1905 was passed, and in 1906 the Commonwealth Bureau of Census and Statistics was created. A conference of Statisticians in 1906 defined the relations between the Commonwealth and State Bureaux, and in each case the State Statistician became the representative in his own State of the Commonwealth Statistician for the purpose of administering the Commonwealth Act. In addition, each State has its own "Statistics Act", and although these are not identical in all States, they embody common principles. With the establishment of the Commonwealth Bureau, the movement towards uniformity in information collected and statistical methods employed received a great stimulus. The Commonwealth Bureau did not attempt to duplicate the existing statistical organization, but endeavoured to use the services of the State statistical offices whenever possible, and to undertake the initial collection of statistics only in fields not already occupied by the States, or in which efficiency demanded complete centralization. Frequent statistical conferences (*see above*) have assisted the uniform development of existing statistics, and have facilitated expansion into new fields.

The scope of the Commonwealth Bureau has constantly been widened, more particularly during the 1939-45 War, when the Bureau responded to the urgent demands of administration for immediate and accurate statistical information in various fields. Since the war, requirements in the administrative, industrial, financial and scientific spheres have led to the development of many new statistical collections. All the activities of the Bureau are covered by the Census and Statistics Act, which confers authority to collect information and contains stringent provisions to ensure that the information obtained is treated in strictest secrecy.

(ii) *Organization.* For administrative purposes the Commonwealth Bureau is divided into a number of Divisions. These are:—Census, Compiling, Publications, Research and Analysis, and Administrative.

(a) *Census Division.* This Division of the Bureau is responsible for the taking of Population Censuses, and for all machine tabulation work in connexion therewith.

(b) *Compiling Division.* The Compiling Division is responsible for the compilation of all statistics other than those relating to the Census of Population. It is divided into the following Branches which deal with specific fields of statistical activity :—

Trade and Transport Branch—Responsible for the original compilation, tabulation and analysis of statistics relating to imports and exports, and for the compilation of statistics relating to road and rail transport, aviation, shipping, posts and telegraphs, telephones and wireless.

Prices Branch—Deals with the collection of retail and wholesale prices and the compilation of retail and wholesale price index-numbers. A staff of trained field officers is maintained in the several States to facilitate the collection of accurate information.

Employment and Labour Branch—Compiles all employment estimates, wage and labour statistics.

Primary Production Branch—Deals with statistics relating to agricultural and pastoral activities, mining, forestry and fishing. Original data are largely supplied by State Statisticians.

Secondary Production Branch—Compiles all factory statistics both annual and monthly. Collates on a Commonwealth basis original annual data supplied by State Statisticians.

Finance and Taxation Branch—Compiles statistics of private finance (banking, insurance, exchange rates, etc.), public finance (Commonwealth, State and Local and Semi-Governmental authorities), and statistics relating to all aspects of Commonwealth taxation.

Demography Branch—Concerned with statistics of births, deaths, marriages and migration, and is responsible for periodic estimates of population.

Social Statistics Branch—Compiles all statistics relating to education, unemployment and sickness benefits, public health and welfare, and public justice.

Development Branch—This Branch was created in 1947 in order to develop new statistical collections to meet post-war demands for more adequate and up-to-date statistics, and also to examine current collections in the light of such requirements. To date the activities of the Branch have been concerned with three major projects, quarterly building statistics, retail sales statistics (including hire purchase statistics) and all new monthly production statistics. In addition, research is undertaken into the applicability of sampling methods to statistical collections. A number of collections in the Bureau are now being done on a sample basis, the most important being Retail Sales and Taxation Statistics.

(c) *Publications Division.* This Division is responsible for the scrutiny, editing and graphical illustration of all Bureau publications, and, in collaboration with other Divisions, for the initiation, development and co-ordination of statistical publications. It also maintains a regular flow of statistical series to certain international organizations, and revises statistical material in certain oversea and local publications.

(d) *Research and Analysis Division.* This Division undertakes research into the theoretical and practical problems of statistical collection and interpretation. It is responsible for the development of new statistical series in particular fields. Statistics on Australia's balance of international payments and estimates of national income and expenditure are two important fields of its work. In this Division is the Bureau's own specialized library of official and unofficial publications on statistics and economics.

(e) *Administrative Division.* The Administrative Division is responsible for all aspects of staff recruitment and direction, supplies, payment of accounts, etc. The Reproduction Section of the Division is equipped with multilith and duplicating machines for processing statistical statements for more immediate requirements. In addition, a special section of this Division is responsible for the examination of statistical methods and systems, and the co-ordination of all statistics, in Commonwealth Departments (*see par. 3 below*). The Mechanical Tabulation Branch has now been transferred from the Census Division of the Bureau to the Administrative Division. This Branch is equipped with modern tabulating equipment and is responsible for all machine tabulating work required by other Divisions of the Bureau with the exception of Census.

3. *Relation of the Bureau to other Commonwealth Departments.*—In October, 1950 the Commonwealth Public Service Board issued a circular relative to the compilation of statistics in other Commonwealth Departments, in which it stated that the Commonwealth Statistician should be the co-ordinating authority on all statistics in Commonwealth Departments, and that, as a general principle, where any new statistical field is to be established involving the regular collection of statistics, the Commonwealth Statistician should be consulted to ensure that they are necessary and that they are based on sound statistical methods; furthermore, that the Commonwealth Statistician should make a regular inspection, at least once every twelve months, of all statistical work done by Departments to ensure that their needs are met by the most economical means and without duplication of effort.

This project of co-ordination is being implemented as time and circumstances permit.

## § 2. Statistical Publications of Australia.

1. *General.*—The official statistical publications of Australia may be divided bibliographically into two main divisions, namely:—(1) Commonwealth publications dealing both individually and collectively with the several States of Australia; and (2) State publications dealing with individual States only.

2. *Commonwealth Publications.*—Commonwealth publications may be grouped under two heads, namely:—(i) Publications issued by the Commonwealth Statistician; and (ii) Parliamentary and Departmental Reports and Papers.

(i) *Publications issued by the Commonwealth Statistician.* The following is a list of the principal statistical publications issued from the Commonwealth Bureau of Census and Statistics since its inauguration to February, 1954:—

- Australian Balance of Payments.*—Statements Nos. 1 and 2, 1928–29 to 1949–50.  
*Australian Life Tables, 1901–1910. Australian Joint Life Tables, 1901–1910.*  
*Australian Life Tables, 1920–1922.*  
*Australian Life Tables, 1932–1934. Australian Joint Life Tables, 1932–1934.*  
*Australian Life Tables, 1946–1948.*  
*Australian Primary Industries.*—Report prepared for the Empire Producers Conference, Sydney, March, 1938.

- Census (1911) Results.*—Bulletins. Vols. I. (Statistician's Report), II., and III., with Appendix "Mathematical Theory of Population."
- Census (1921) Results.*—Bulletins, Nos. 1 to 26. Parts I. to XVI., forming Vol. I., and Parts XVII. to XXIX., forming, with the Statistician's Report, Vol. II.  
NOTE.—Part XXVII., Life Tables.
- Census (1933) Results.*—Bulletins, Nos. 1 to 25. Parts I. to XIV., forming Vol. I., Parts XV. to XXVIII., forming Vol. II., and Parts XXIX. to XXXVII., forming, with Statistician's Report and Australian Life Tables 1932-1934, Vol. III.
- Census (1947) Results.*—Bulletins, Nos. 1 to 25. Parts I. to XVI., forming Vol. I., Parts XVII. to XIX., forming Vol. II., and Parts XX. to XXVIII., forming, with Statistician's Report and Australian Life Tables 1946-1948, Vol. III.
- \**Census of Retail Establishments (1947-48) Results.*—Bulletins, Nos. 1 to 7.
- \**Census of Retail Establishments (1948-49) Results.*—Bulletins, Nos. 1 to 7.
- \**Dairying Industry (formerly Summary of Dairying Industry).*—Statistical Bulletin, monthly; first issue, September, 1937.
- \**Factories, Principal Statistics, Summary.*—Annually, 1948-49 to 1951-52.
- Finance.*—Bulletins 1907 to 1916-17 annually; 1917-18 and 1918-19 (one vol.); 1919-20 and 1920-21 (one vol.); 1922-23 to 1951-52 annually.
- \**Food Production and the Consumption of Foodstuffs and Nutrients in Australia, Report.* Half-yearly, 1946-47 to 1947-48; annually, 1948-49 to 1951-52.
- \**Fruit Growing Industry Summary.*—Annually, 1944-45 to 1951-52.
- Labour and Industrial Statistics.*—Memoranda and Reports, various, to 1913.
- Labour Report.*—Annually, 1913 to 1952.
- \**Live-stock Numbers (formerly Summary of Live-stock Statistics).*—Statistical Bulletin, annually, 1943 to 1953.
- Local Government in Australia.*—July, 1919.
- \**Manufacturing Industries.*—Bulletins on Individual Industries, annually, 1936-37 to 1939-40, 1940-41 (issue incomplete), and 1944-45 to 1951-52.
- \**Monthly Review of Business Statistics.*—First issue, October, 1937.
- \**Occupation Survey (1945) Results.*—Detailed tables.
- Official Year Book of the Commonwealth of Australia.*—Annually, 1907 to present issue (No. 40). Issue No. 40 also published in parts.
- Oversea Trade.*—Bulletins, annually, 1906 to 1951-52.
- \**Oversea Trade.*—Preliminary Bulletin, 1952-53.
- \**Oversea Trade Statistics : Imports Cleared for Home Consumption classified according to Individual Items of the Customs Tariff 1950-51 to 1952-53.*
- Pocket Compendium of Australian Statistics (formerly Statistical Digest).*—1913, 1914, 1916, and 1918 to 1953 annually.
- Population and Vital Statistics.*—Bulletins and Reports, various, 1906-1910.
- Demography, 1911 to 1951 annually.*
- Primary Industries*—Bulletin, annual, 1950-51 first issue in two parts: Part I. Rural Industries; Part II. Non-Rural Industries and Value of Production.
- Production.*—Bulletin, annually, 1906 to 1947-48. From 1936-37 to 1949-50 issued in two parts.—Part I. Secondary Industries; Part II. Primary Industries (including Total Recorded Production); thereafter separate Bulletins (see *Primary Industries* and *Secondary Industries*).
- Professional Papers.*—Various. A full list appears in Official Year Book No. 13, p. 3.
- Quarterly Summary of Australian Statistics.*—First issue, No. 70, December, 1917, replacing *Monthly Summary of Australian Statistics* (Bulletins Nos. 1 to 69).
- \**Report of Proceedings of the Conference of British Commonwealth Statisticians, 1951.*

\* Obtainable from Commonwealth Statistician—for methods of obtaining other publications still in print see back page of this volume.

- \* *Rural Land Use and Crop Statistics* (formerly Summary of Crop Statistics).—Statistical Bulletin, annually, 1943-44 to 1951-52.
- Secondary Industries*.—Bulletin, annual, 1950-51.
- Social Insurance*.—Report to the Hon. the Minister of Trade and Customs, 1910.
- Social Statistics*.—Bulletins, 1907 to 1915 annually, and 1918.
- Superannuation for the Commonwealth Public Service*.—Report to the Hon. the Minister for Home Affairs, 1910.
- \* *Survey of Motor Vehicles (1947-48) Results*.—Bulletins Nos. 1 to 7.
- Transport and Communication*.—Bulletins, 1906, 1908 to 1916 annually, 1919 to 1930 annually, and 1932 to 1951-52 annually.
- \* *Vegetables Grown on Farms for Human Consumption*.—Statistical Bulletin, annually, 1942-43 to 1951-52.
- Wages and Prices*.—January, 1932.
- Wealth*.—The Private Wealth of Australia and its Growth as ascertained by various methods, together with a Report on the War Census in 1915.
- \* *Wheat Industry* (formerly Summary of the Wheat Situation).—Statistical Bulletin, periodically; first issue, July, 1936.

The foregoing list includes all the printed publications issued from the Bureau, and certain more important mimeographed publications issued for the most part annually. Other mimeographed statements, obtainable on application to the Commonwealth Statistician and dealing with a wide variety of subjects, are issued as follows:—

*Annually*—Bee Farming; Commonwealth and State Taxation Collections; Companies with Oversea Affiliations; Factory Statistics (Preliminary); Meat Production and Utilization; Milking Machines on Rural Holdings; Oversea Trade between Australia and Eastern Countries; Registrations of New Motor Vehicles; Social Services, Expenditure by States; Tractors on Rural Holdings; University Statistics; Value of Production; Wheat Forecast and Estimate.

*Half-yearly*—Australian Balance of Payments; Trade of Australia with United Kingdom.

*Quarterly*—Building; Minerals and Metals; Quarterly Business Survey; Retail Sale of Goods; Retail Price Variations—All Items ("C" Series) Index.

*Monthly*—Banking; Demographic Review; Employment; Exports of Wool from Australia; Export Prices Index; Gold Mining Industry; Life Assurance; Oversea Trade; Production Statistics; Registrations of New Motor Vehicles; Savings Bank Deposits and Savings Certificates.

A recent addition to the mimeographed publications refers to Wool Production\*. This statement will be issued periodically as data become available.

(ii) *Commonwealth Parliamentary and Departmental Reports and Papers*. Lists of the principal official reports and other documents containing statistical information issued from the inauguration of the Commonwealth appear in the Official Year Books up to No. 13, but it is not now practicable to undertake the preparation of such lists.

3. *State Publications*.—The chief statistical publications of each State are set out hereunder. As with the Commonwealth Parliamentary and Departmental Reports and Papers, it is not practicable to enumerate the various Departmental Reports, statements of accounts, etc., issued by officials, boards, local and semi-governmental authorities, etc., in each State.

- (a) New South Wales—Statistical Register (annual); Official Year Book of New South Wales (annual); Pocket Year Book (annual); Statistical Bulletin (monthly to December, 1919, quarterly to June, 1943, then discontinued to September, 1948); Monthly Summary of Business Statistics.

---

\* Obtainable from Commonwealth Statistician—for methods of obtaining other publications still in print see back page of this volume.

- (b) Victoria—Statistical Register (annual to 1916, then discontinued); Victorian Year-book (annual); Statistical Abstracts (quarterly to 1917, then discontinued to December, 1946).
- (c) Queensland—Statistical Register (annual); Official Year Book, 1901; A.B.C. of Queensland Statistics (annual to 1936, then discontinued); the Queensland Year Book (annual 1937 to 1941, then discontinued to 1945); Queensland Pocket Year Book (annual).
- (d) South Australia—Statistical Register (annual); Official Year Book, 1912 and 1913; Statesman's Pocket Year Book of South Australia (annual); Quarterly Summary of Statistics.
- (e) Western Australia—Statistical Register (annual); Statistical Abstracts (quarterly, previously issued monthly to July, 1917); Pocket Year Book of Western Australia (annual).
- (f) Tasmania—Statistical Register (annual); Pocket Year Book of Tasmania (annual); Monthly Review of Business Statistics.

### § 3. The Third Conference of British Commonwealth Statisticians, Canberra, 1951.

Conferences of the Government Statisticians of the British Commonwealth were held first in London in 1920 and then in Ottawa in 1935. The Third Conference was held in Canberra from 12th to 23rd November, 1951. Delegates were present from Australia, Canada, Ceylon, India, New Zealand and the United Kingdom (including a representative of the Colonial Office). Ireland, the Commonwealth Economic Committee and the United Nations were represented by observers, and the Australian State Government Statisticians were also present.

The Conference reviewed statistical requirements and modern practice on many aspects of the following matters:—Labour Statistics, Production Statistics, Agricultural Statistics, External Trade Statistics, Retail Trade and Census of Distribution, Application of Sampling Methods, Statistical Co-ordination, National Income, Indexes of Prices, Family Budget Inquiries, Road Transport Statistics, Recent Developments in Census Taking, Mineral Statistics.

Whereas the earlier conferences prepared reports and passed series of resolutions aiming at improving and co-ordinating statistics throughout the Commonwealth, the report prepared by the Third Conference aimed at reaching as firm an expression of views as was consistent with unanimity whilst at the same time mentioning different views which were expressed if unanimous conclusions were not possible.

The Conference provided an opportunity for an exchange of views which should lead to statistical improvements in all countries represented, and its report should be of assistance to the Statistical Office of the United Nations and other organizations in their work of improving statistics on an international scale. In view of the advantages to be gained from meetings of these Statisticians, Conference decided that Commonwealth conferences should be held every five years and a co-ordinating committee was appointed to make plans for the Fourth Conference.

### § 4. Select List of Works about, or published in, Australia.

(Compiled by the Librarian of the Commonwealth National Library.)

This list aims to meet the growing need, in Australia as publishing develops, and overseas as interest in Australia widens, for an authoritative current reference and reading list of books dealing with Australia or of Australian authorship, wherever published.

Australians will find these books in the National Library and in their State Libraries as well as in leading bookshops. Oversea readers may have access to them in the collections which the National Library maintains at 36 Australian posts abroad. They will be found also, increasingly, in leading libraries and bookshops in many countries. In the United States, for example, Australian books are included in the Farmington Plan in which 52 libraries and research institutions co-operate to ensure that at least one copy of all material published in any part of the world and likely to be required for a serious purpose will be available promptly somewhere in the country.

The list is classified broadly by subject and under each heading there is first a list of the principal standard books still in print, then a list of selected books and official publications (excluding annual reports) which were published during 1952. A few books published earlier, but received too late for inclusion in the previous list, are also included. Where known the retail price in the country of publication is given, but this is subject to fluctuation.

The Library also issues a series of select lists which include *Australian Public Affairs Information Service* (monthly): subject index of material in new books, pamphlets, current periodicals and government publications from English speaking countries, with an important bearing on investigations in Australian political, economic, cultural and social affairs, and the following full bibliographies:—

*Monthly list of Australian Government Publications*, covering both the Commonwealth and the States;

*Books published in Australia*: a monthly list of books supplied to the National Library under copyright.

The two last-mentioned publications are cumulated annually as the *Annual Catalogue of Australian Publications* which includes also a list of books published overseas of Australian interest or by authors resident in Australia, a select list of the more important Australian periodical and serial publications and a directory of publishers.

## DIARY OF PRINCIPAL ECONOMIC EVENTS, 1950 to 1953.

The principal economic events for the years 1931 to 1938 were shown on pp. 968 to 977 of the Official Year Book No. 33, those for the years 1939 to 1944 on pp. 1129 to 1141 of the Official Year Book No. 36 while those for the years 1945 to 1949 were included in the range of years—1945 to 1951—covered by the three Official Year Books following (Nos. 37 to 39). For reasons of space some of the items originally shown for the years 1950 and 1951 have been omitted from this issue. Previous issues should be consulted for additional information for these years.

### 1950.

Favorable economic conditions were maintained throughout the year. Employment rose every month with the exception of October, when a railway dispute started in Victoria, later extending to South Australia. The total increase in employment (other than rural, household domestic, and defence forces) was approximately 100,000 (70,000 males and 30,000 females). Again the bulk of the increase was due to immigration. Permanent arrivals exceeded permanent departures by about 154,000, 4,000 more than in the previous year. Average earnings per head continued to increase and in December quarter were approximately 15 per cent. higher than in the corresponding quarter of the previous year. Towards the end of the year the Commonwealth Court of Conciliation and Arbitration gave a judgment which brought about an increase of £1 per week in the male basic wage. This operated from the beginning of December, and so had little effect on conditions in 1950. Retail prices increased by about 12 per cent. and wholesale prices by about 16 per cent.

Secondary production continued to expand, and increases in production as compared with 1949 (affected by the coal strike) were recorded in such basic materials as coal (17 per cent.), pig-iron (29 per cent.), cement (22 per cent.) and electricity (14 per cent.). Home production, however, was inadequate and imports of the first three commodities increased. In the case of electricity, black-outs and other restrictions continued, particularly in New South Wales. House building activity continued to increase, with 76,000 houses started, and 62,000 finished. Substantial orders for prefabricated houses were placed overseas by various governmental authorities.

The run of good seasons continued, although exceptionally heavy rainfall several times caused serious flooding in parts of eastern Australia with damage to farm properties, particularly dairy and vegetable farms in coastal areas. Average export prices of wheat remained above the maximum under the International Wheat Agreement (16s. 1d.), ensuring a high return from the large 1949-50 crop, and the year closed with the harvesting of a crop which was well above average although less than the previous year. The 1949-50 wool selling season closed with firm prices, giving an average for the year of more than 63d. The 1950-51 season opened with prices about 50 per cent. higher than at the end of the previous season, and the year closed with prices still tending to rise. Production for 1950-51 was slightly lower than in 1949-50. Meat production in 1950, also, was about 5 per cent. lower, but the production of milk and butter was well maintained.

*2nd January.*—Uranium production to commence in South Australia. Mining operations already in progress at Radium Hill.

*8th February.*—Petrol rationing abolished for second time since the end of war.

Committee of experts appointed to review Commonwealth taxation legislation, particularly in relation to income tax.

*7th March.*—Bill introduced in New South Wales Legislative Assembly to create a Transport and Highways Commission to control all State transport services. (Act assented to 27th April.)

*15th March.*—Social Services Consolidation Bill introduced into Senate, providing for the endowment of the first or only child under 16 years of age, in each family at the rate of 5s. per week. (Act assented to 28th June.)

*16th March.*—Commonwealth Bank Bill introduced in House of Representatives to amend Banking Act 1945, to repeal Banking Act 1947, and to re-establish Commonwealth Bank Board. (Houses failed to agree on measure—*see* 4th October.)

*22nd March.*—Severest floodings for twenty-five years in south-east corner of New South Wales.

*30th March.*—Electricity Commission Bill, to acquire major electricity organizations in State, introduced in New South Wales Legislative Assembly. (Act assented to 12th July.)

*31st March.*—Decision at London Wool Conference to continue Joint Wool Organization scheme on present basis for time being. Principle of reserve price plan to replace Joint Organization accepted.

*13th April.*—Coal Industry Tribunal, after three months' hearing, granted permission to colliery proprietors in New South Wales, Victoria and Queensland to remove pillar coal by mechanical means.

*22nd April.*—Commonwealth Government to admit, duty free, all types of pre-fabricated houses and accessories imported during 1950, irrespective of country of origin.

*15th-19th May.*—British Consultative Committee meeting in Sydney to consider ways of assisting development of south and south-east Asia in co-operation with other interested countries.

*13th June.*—Bills introduced into House of Representatives providing for a scheme of reserve prices for wool to replace present Joint Organization system—to be financed by a levy on wool. (Act assented to 1st July. Validity challenged in High Court on 24th August, but hearing postponed pending result of referendum of wool-growers on wool levy. *See* 23rd August, 1951.)

*16th June.*—Abolition of butter rationing.

*25th June.*—Disastrous floods on north coast of New South Wales.

*30th June.*—Australian forces in vicinity of Korea placed at disposal of United Nations in Korean conflict.

*3rd July.*—Tea rationing abolished—end of retail rationing in Australia.

*6th July.*—Queensland Government to proceed with plans to build Burdekin Dam (to cost £30,000,000) and the Tully Falls Hydro-electric Scheme (£7,000,000).

*9th July-23rd August.*—Prime Minister visited Malaya, Egypt, Italy, Britain, United States of America, Canada, Japan and New Zealand. In Britain he had informal talks on defence, finance, and foreign policy and Commonwealth co-operation in these fields. In America he negotiated a \$100,000,000 loan for Australia with the International Bank for Reconstruction and Development. Loan will be used to finance capital goods and equipment to enable expansion of specific development projects.

*2nd August.*—Operations of Snowy Mountains Hydro-electric Scheme for first year have cost £2,500,000. Staff numbered 1,400 and progress up to expectations.

*22nd August.*—Contract with American company to construct Eildon Dam on Goulburn River, Victoria, at a cost of £11,400,000.

29th August.—Bill introduced in Victorian Legislative Assembly to constitute a Gas and Fuel Corporation to establish, purchase, acquire and operate gas undertakings and to co-ordinate gas production and distribution in Victoria. (Act assented to 6th December.)

7th September.—Loan programme approved by Loan Council for 1950-51 comprised Government loans, £175,400,000, and Local and Semi-Governmental loans, £70,700,000.

28th September.—Commonwealth Government to pay subsidy of up to £300 on each prefabricated house, to a maximum number of 3,000, imported by State Governments after 12th October, 1949.

4th October.—Commonwealth Bank Bill 1950 (No. 2) introduced in House of Representatives. (Referred by Senate to Select Committee on 14th March, 1951. Double dissolution of Parliament granted 17th March on grounds that Senate had failed to pass Bill. See 16th March, 1950.)

12th October.—Commonwealth Court of Conciliation and Arbitration ruled that male basic wage should be increased by £1 and female basic wage from 54 per cent. to 75 per cent. of male rate. Applications must be made to Court for new awards or alterations to existing awards.

Introduction of 1950-51 Budget. (For details, see Official Year Book No. 39, p. 1336.)

16th October.—Railway services in Victoria ceased following breakdown in discussions on abolition of passive time and payment of overtime on a daily basis. (Dispute extended to South Australia 23rd October; services resumed in South Australia 20th November; and in Victoria 9th December, after A.C.T.U. Disputes Committee had called off the stoppage.)

27th October.—Agreement announced for Britain to buy all surplus meat produced in Australia during next fifteen years.

29th November.—Australia allocated trade with Japan to value of £46,000,000 in 1950-51 under trade agreement with a number of sterling area countries and Japan.

Governor of Commonwealth Bank announced that Banks will be required to adopt a more selective advance policy in order to limit the inflationary effect of expenditure financed from bank advances.

6th December.—Defence (Transitional Provisions) Bill to extend for one year a number of national security regulations and orders introduced in Senate. (Act assented to 16th December.)

8th December.—Announcement of functions and personnel of National Security Resources Board, to advise Government on best use of Australia's resources in interests of national security.

20th December.—Commonwealth Government to contribute £31,250,000 to Colombo Plan for Co-operative Economic Development in South and South-East Asia, and £3,500,000 to technical assistance programme.

## 1951.

The year opened with exceedingly favorable economic conditions, wool prices rising to an all-time record of about 17s. per lb. in March. Towards the end of the season these prices fell sharply from this extreme but the average for the season was 12s. per lb. Wool prices were still lower at the beginning of the 1951-52 selling season, but even so maintained the high average of 7s. per lb. over the first half of the season. Export prices for wheat remained steady at the high level of more than 16s. throughout the year. Weather conditions generally were favorable except in Queensland and northern New South Wales, where droughts and, towards the end of the year, fires caused damage to pastures and losses of stock. The average wheat yield (1951-52) was estimated at about 15.5 bushels per acre, but the total crop was considerably lower than in the previous year, owing to the

reduced acreages sown. Milk production in 1951 declined by about 10 per cent. Beef production increased slightly, but there was a further sharp reduction in mutton and lamb production, which was below the pre-war level. Total meat production fell very slightly.

These trends in primary production and the general inflationary conditions were reflected in the balance of payments. The trade year 1950-51 ended with an excess of exports of about £240,000,000 (imports, £740,000,000, exports, £980,000,000), but the succeeding trade year opened with the usual excess of imports of the early months continuing, until by December the trend in the balance of payments showed imports running at more than £1,000,000,000 per year and exports at only about £700,000,000. Oversea reserves had been reduced by about £300,000,000 during the last six months.

To help counter inflation, a rigid control of new capital issues was re-imposed in February. A slight increase in bond rate was brought about in May by the issue of a loan at a discount of 1 per cent.; and in August a further increase was made to 3½ per cent. The Commonwealth Budget was designed to counter inflation and provided for increases in direct and indirect taxes and a surplus of £115,000,000, although at the same time the Commonwealth undertook to provide money out of this surplus to finance State works if sufficient loan money was not forthcoming. Despite the instructions issued late in 1950 about a more restrictive advance policy (see 29th November, 1950) bank advances increased by about 25 per cent. during the year.

The increase in employment slowed down during the first half of the year and practically ceased in the second half, despite continued net permanent migration of about 110,000 for the whole year. Prices and earnings, however, continued to increase. Wholesale and retail prices both increased by about 25 per cent. and cost of living adjustments added 38s. to the basic wage in addition to the increase of £1 at the end of 1950. Average earnings per head rose 30 per cent.

A series of one-day stoppages in the coal mines early in the year caused some temporary falling off in production in industries heavily dependent on coal, such as iron and steel and cement, but over the year production of these commodities was higher than, or up to, the level of the previous year, and black coal production was an all-time record of 17,600,000 tons. Eighty-five thousand houses were started, and 72,000 completed, 12 per cent. and 16 per cent., respectively, higher than in the previous year. About 9,000 imported pre-fabricated houses were delivered out of total orders for 21,000 placed by governmental authorities.

*8th January.*—Commonwealth Government decision to close down shale oil plant at Glen Davis, New South Wales; production to continue temporarily. (Tenders were called on 14th February, 1952 for the purchase of assets, in whole or part.)

*2nd February.*—Control of capital issues re-introduced in an effort to reduce inflationary pressure. (See 28th May and 2nd August.)

*5th February.*—Coal miners in eastern States began one day per week stoppages in protest against provisions of the Coal Industry Tribunal's award (20th December, 1950) for payments over and above the ordinary wage rate to employees who worked the full ten days of a pay-period. (Stoppages were discontinued in mid-March, see 3rd May.)

Meeting of Governors of central banks of Australia, Ceylon, Ireland, New Zealand, Pakistan, South Africa and the United Kingdom to discuss general banking problems and the international economic situation.

*3rd March.*—Commonwealth War Gratuities amounting to £52,800,000 paid to ex-service personnel of the 1939-45 War.

*15th March.*—Commonwealth Government to grant to States special financial assistance of £15,000,000 for 1950-51.

*4th April.*—Victorian Government acquired land in Gippsland as the site for the Lurgi Brown Coal Gasification Plant to supply Melbourne with gas.

9th April.—Appreciable drop in wool prices at Sydney after post-war rise to record levels.

30th April.—Electricity zoning commenced in New South Wales, a complete ban on the use of electricity for commerce and industry to apply between 7 a.m. and 9 p.m. on one day each week in five zones. (Subsequently modified, in general, to blackouts within previously specified zones.)

3rd May.—The Coal Industry Tribunal, in a review of certain portions of its decisions on a log of claims covering members of the Australian Coal and Shale Employees' Federation, rejected a claim for a wage increase, and directed that the "attendance allowance" was to stand. (See 5th February.)

15th May.—Industrial Arbitration (Amendment) Bill 1951 introduced into New South Wales Legislative Assembly providing for the inclusion in New South Wales industrial awards of three months' long-service leave on full pay after 20 years' continuous service. (Act assented to 12th September.)

28th May.—Capital Issues Control Regulations (see 2nd February) challenged in High Court. (On 12th September, 1952 the High Court declared the Regulations valid.)

17th June.—Announcement of signing of a trade agreement with Western Germany.

21st June.—Commonwealth Bank Bill 1951 providing for the restoration of the Commonwealth Bank Board, introduced into the House of Representatives. (Act assented to 16th July; operated from 21st August.)

29th June.—Conciliation and Arbitration Bill 1951, providing for secret union ballots in elections and on strike issues, greater control by the Arbitration Court, etc., introduced into House of Representatives. (Act assented to 19th July.)

5th July.—Defence Preparations Bill, providing authority until 31st December, 1953 for the Government to make regulations necessary for defence preparations and to adjust the economy to meet the threat of war, introduced into House of Representatives. (Act assented to 19th July.)

17th July.—Large upward cost of living adjustments in the basic wage announced by Commonwealth Court of Conciliation and Arbitration—increase of 13s. in the average weekly wage for the six capital cities.

19th July.—All States except Queensland fixed prices of controlled goods and services at levels ruling on 18th July. (The order was extended in New South Wales on 24th July to cover a wide variety of goods and services, but was relaxed on 20th August and removed on 9th October.)

20th July.—Final liquidation of the stock of the United Kingdom Dominion Wool Disposals Ltd. (Joint Organization) at London Wool Sales.

24th July.—Announcement of letting to a Norwegian firm of the first contract for the design and construction of a dam in the Snowy Mountains Hydro-electric Scheme. (The project, at Guthega, is to cost £5,800,000 and is to be completed by June, 1954.)

28th July.—Commonwealth Government to sell, for 45s. per share, its holdings of 863,596 ordinary shares in Amalgamated Wireless (Australasia) Ltd., comprising 51 per cent. of the issued capital.

30th July.—Conference of representatives of Commonwealth and State Governments, employers and trade unions, and other sections of the community, called by the Prime Minister, met in Sydney to discuss means of combating inflation.

2nd August.—New Capital Issues Control Regulations gazetted under the Defence Preparations Act 1951 to replace those operating under the Defence (Transitional Provisions) Act. (See 2nd February and 28th May.)

9th August.—The Prime Minister called a conference in Canberra of the Governor of the Commonwealth Bank, the heads of commercial banks, and the Secretary to the Treasury, to discuss bank credit policy.

10th August.—Conference in Canberra between the Government and representatives of insurance companies to consider general financial and investment policy.

14th August.—Announcement by Vacuum Oil Co. Pty. Ltd. that it will build a new oil refinery at Altona, near Melbourne, to be completed in about three years at a cost of £7,500,000.

15th August.—A new company to be formed to develop deposits of pyrites at Nairne, South Australia, for the production of sulphur.

16th–17th August.—The Loan Council approved a rise in the long-term bond rate from  $3\frac{1}{2}$  per cent. to  $3\frac{3}{4}$  per cent., to apply to the Thirteenth Security Loan for £40,000,000 to be opened on 22nd August. The loan programme for 1951–52, after State works programmes had been reduced by approximately 25 per cent., was decided as follows:—Commonwealth, £23,000,000; States, £202,000,000; Local Authorities, £96,000,000.

21st August.—The Commonwealth Government issued instructions for the reduction of the staff of Commonwealth Departments by 10,000 (5 per cent.).

The Victorian State Electricity Commission's loan, calling for £6,000,000 at  $3\frac{1}{2}$  per cent. interest, was closed, under-subscribed by £3,350,000.

23rd August.—Wool-growers rejected by referendum the proposal for a reserve price plan for wool. (See 13th June, 1950.)

27th–30th August.—New season's wool auctions in Sydney realize prices about 25 per cent. below those of June.

1st September.—Major hire purchase finance companies in New South Wales and South Australia announced new conditions for hire purchase agreements, increasing deposit rates and reducing repayment periods. (See also 8th November.)

11th September.—Interest rates on loans to local and semi-governmental authorities raised from  $3\frac{1}{2}$  per cent. to  $4\frac{1}{2}$  per cent.

26th September.—Commonwealth Budget for 1951–52 introduced into the House of Representatives. (For details, see Official Year Book No. 39, p. 1340.)

—October.—Extensive bush fires in Queensland, Northern Territory and northern New South Wales damaged wide areas of country.

7th October.—Announced that Australia is to spend about £700,000,000 on defence during next three years.

12th October.—Details announced of a fifteen-year meat agreement with the United Kingdom to commence on 18th July, 1952.

18th October.—The Victorian Industrial Appeals Court ruled that dairy farm employees would work a 48-hour week instead of the 40-hour week granted in August by the Dairy Farm Workers' Wages Board. The Court increased the basic rates of pay by 10s. to £10 19s. per week, and increased the annual leave granted by the Board from two to three weeks.

Australia signed the Torquay Protocol to the General Agreement on Trade and Tariffs.

Further large upward adjustments in the basic wage announced by the Arbitration Court—average weekly wage for the six capitals increased by 11s. (See 17th July.)

8th November.—The Commonwealth Bank ceased to make credit available for the purchase of cars other than new cars for commerce. Private hire purchase firms also restricted credit and shortened repayment periods. (See also 1st September.)

12th–23rd November.—The Third Conference of Government Statisticians of the British Commonwealth held in Canberra.

20th November.—Announcement that current Australian gold output may be sold on "premium markets overseas", providing that it is sold for dollars.

—December.—Serious bush fires in the Blue Mountains area of New South Wales.

21st December.—British Commonwealth Sugar Agreement signed in London; Australian export quota fixed at 600,000 tons of raw sugar per annum. The agreement is to operate until 31st December, 1959, prices to be negotiated annually.

## 1952.

Migration continued on a reduced scale during 1952, making a net addition to the population of 94,000, compared with 111,000 in 1951 and a post-war peak of 153,000 in 1950.

The decline in immigration was associated with unsettled employment conditions in Australia, which were reflected in the fall in employment, the total numbers employed (excluding rural and household domestic workers and the defence forces) dropping from 2,637,000 in December, 1951, to 2,533,000 in December, 1952. Except for small increases in February and December, this decline in the level of employment continued throughout each month of 1952, with the largest falls in the manufacturing, building and retail industries. The number of persons on unemployment benefit increased from 2,000 to 40,000.

New houses numbering 68,000 were started and 79,000 completed during the year, compared with 85,000 and 72,000 respectively in the previous year. Production of coal, gas, electricity, pig-iron and steel was maintained or increased, and electricity restrictions were much less severe than in recent years.

In the early part of the year continuing drought and bushfires, particularly in New South Wales, Queensland and Northern Territory, seriously affected pastures and restricted meat and butter production. Conditions improved during the year and meat and milk production increased quickly. For crops, weather conditions generally were favorable and wheat production in 1952-53 was considerably higher than in 1951-52, despite a slightly reduced acreage. Average yield per acre reached an all-time record of about 19 bushels. Wool production is estimated to have reached an all-time record in 1952-53, being 19 per cent. above 1951-52. More effective control of the rabbit pest through the spread of myxomatosis in recent years appears to have contributed to both an increase in sheep numbers and an increase in average clip per sheep.

Due to generally easier supply conditions the high level of imports reached in the latter half of 1951 continued into 1952. This increase in imports, together with a drop in the receipts for exports, had resulted in a balance of payments deficit on current account for the latter half of 1951 of £316 million, and the continuation of these conditions in 1952 led to the imposition of severe import restrictions (on 8th March) to safeguard overseas reserves. Licences to import goods from dollar areas were also recalled and reviewed. The value of imports was slightly lower in the first half of 1952 and fell by more than 50 per cent. in the second half of the year. There was a slight increase in the value of exports and the balance of payments deficit of £269 million in the first half of the year was changed to a surplus of £75 million in the second half of the year.

Average earnings per employee continued to rise and in the December quarter were about 11 per cent. above the corresponding level of the previous year. Retail prices increased by about 10 per cent. and wholesale prices by about 9 per cent. during the year. Proportionately, these price and wage increases were about one-third as great as those in the previous year.

During 1952 uncertainty about the future of interest rates for public authority borrowing resulted in a number of loan failures until some stability in interest rates was reached towards the end of the year. A Commonwealth Government cash and conversion loan of £75 million at  $3\frac{1}{2}$  per cent. was under-subscribed by £14 million. Later in the year a further loan of £20 million was raised at  $4\frac{1}{2}$  per cent. Semi-Government authorities floated a number of loans at  $4\frac{1}{8}$  per cent. with varying but frequently unsuccessful results and later in the year the rate was raised to  $4\frac{3}{4}$  per cent. in line with the trend in Commonwealth bond rates. Bank overdraft and deposit rates were also raised from the beginning of August.

*2nd January.*—The Australian Mutual Provident Society to take over a large low-rainfall area in the Mallee-Wimmera District for development and improvement for settlement under the Victorian Land (Development Leases) Act 1951. (*See also* 18th August, 1949, Official Year Book No. 39.)

*5th January.*—Australia and Pakistan signed a one-year trade agreement.

*17th January.*—Commonwealth Conciliation Commissioner Galvin refused an application by eleven metals trades unions for marginal wage increases. The decision affected more than 250,000 metal trades workers throughout Australia. (*See* 29th February, 1st March, 1952, and 14th–11th November, 1953.)

*18th January.*—Commonwealth Government to subsidize Air Beef Pty. Ltd. (operators of an inland slaughter works at Glenroy, Western Australia, transporting meat to the coast by air) to the extent of £10,000 a year.

*21st January.*—A conference of British Commonwealth Finance Ministers, attended by the Treasurer of Australia, issued a statement on the measures considered necessary to correct the sterling area situation.

*22nd January.*—Increase of 10s. in cost of living adjustment to the average weekly wage for the six capital cities announced by Commonwealth Court of Conciliation and Arbitration.

Publication of a report of Mr. H. B. Basten, a United Kingdom authority on ports and harbours, on "The Turn-round of Ships in Australian Ports".

*25th January.*—Widespread bushfires in New South Wales, Victoria and the Australian Capital Territory.

*19th February.*—Good rains in the northern areas of New South Wales end the worst drought experienced for many years, during which extensive areas of pastures and crops were destroyed by bushfires. Drought conditions continued in Queensland and Northern Territory.

*21st February.*—Announcement of a reduction in Commonwealth Public Service employment by 12,500 during the six months ended 31st December, 1951.

*23rd February.*—Conversion of all Australian sulphuric acid plants from the use of imported sulphur to the use of locally-produced pyrites projected by the end of 1953.

Discovery announced of important high-grade uranium deposits at Rum Jungle in the Northern Territory.

*26th February.*—Introduction into the House of Representatives of the Fisheries and Pearl Fisheries Bills to conserve swimming and sedentary fisheries in Australian waters. (Acts assented to 13th March.)

*29th February.*—Welders employed by Australian Iron and Steel Ltd. at Port Kembla protested against the Galvin award (*see* 17th January). (By 16th May about 3,500 workers were directly involved in the dispute, which resulted in the closing down of the Australian Iron and Steel Ltd. plant, while many in associated industries were also affected. Work was resumed on 6th June).

*1st March.*—Industrial dispute, involving maintenance workers of the State Electricity Commission of Victoria protesting against the Galvin award (*see* 17th January), caused the introduction of power restrictions in Victoria. (The dispute ended on 12th April. Severe restrictions were imposed on the use of power from 15th April, but were eased on 18th April.)

*6th March.*—Price control lifted from clothing and textiles in South Australia and Western Australia.

*7th March.*—The Commonwealth Bank prohibited the establishment of further import credits until licences had been obtained for the goods involved.

*8th March.*—Imposition of severe restrictions on imports from all sources and on amounts available for Australians travelling overseas.

*11th March.*—Arrival of the President of the International Bank for Reconstruction and Development to survey development progress and to discuss loan prospects with the Commonwealth Government.

*1st April.*—Agreement between the Commonwealth and South Australian Governments and the combined Development Agency of the British and American Governments on the development of uranium deposits at Radium Hill, South Australia.

9th April.—The Waterside Workers' Federation, in connexion with its claim for higher margins, imposed an Australia-wide ban on overtime. (Ban continued until 9th July.)

20th April.—Wages of about 50,000 workers in the pastoral industry in all States, except Queensland (where a State award is in operation), reduced by Commonwealth Conciliation Commissioner because of a decline in wool prices.

3rd May.—A special Loan Council meeting approved programmes amounting to £247,500,000 for Government loans and £128,000,000 for local and semi-governmental authorities loans, the Commonwealth Government being prepared to guarantee subscriptions to an extent of £125,000,000 (subsequently increased to £135,000,000) from Commonwealth sources.

7th May.—Introduction into the House of Representatives of the Aluminium Industry Bill, an amending bill designed to increase by £4,250,000 the capital originally contributed in 1944 (£3,000,000) for the establishment of the industry at Bell Bay, Tasmania, and provide for the annual production of 13,000 tons of aluminium ingots. (Act assented to 30th May.)

22nd May.—Modification of the Commonwealth Bank's advance policy to secure greater flexibility and to enable individual banks to apply the policy appropriately in individual cases.

The Conciliation and Arbitration Bill introduced into House of Representatives providing for a limited right of appeal from decisions of Conciliation Commissioners to a court of three Arbitration Court Judges, and an increase in the number of Arbitration Court Judges to at least seven, so that two full courts may sit at once. (Act assented to 17th June.)

23rd May.—Good rains brought relief to north and central Australia which had suffered from prolonged drought causing heavy losses in cattle industry.

29th May.—Bill introduced to approve agreement between the Commonwealth Government and the Bulolo Gold Dredging Ltd. to form a joint company to cut 10,000,000 super. feet of timber annually from pine forests at Bulolo, New Guinea. (Act assented to 17th June.)

10th June.—Announcement of New South Wales Government's conditional agreement to the establishment by Caltex Oil (Aust.) Pty. Ltd. of a £25,000,000 oil refinery at Kurnell, Botany Bay.

17th June.—Myxomatosis campaign against rabbits to be intensified during the following spring and summer.

18th June.—During one of the worst floods in the history of central and south-west New South Wales, Wagga, Forbes, Cowra and many other towns were badly flooded by water from the Murrumbidgee and Lachlan Rivers and their tributaries.

24th June.—Employers' organizations lodged a claim with the Commonwealth Court of Conciliation and Arbitration seeking the following adjustments to awards of 25 metal trades unions, affecting about 250,000 workers in all States except Western Australia:— (i) Reduction in basic wage by amounts of from £2 5s. to £2 7s. per week; (ii) Reduction of the female rate from 75 per cent. to 60 per cent. of the male rate; (iii) An increase in working hours from 40 to 44 hours per week, to be worked in either 5 or 5½ days; (iv) Abandonment of the system of automatic quarterly cost of living adjustments to the basic wage. (See 5th August, 1952 and 12th September, 1953.)

1st July.—New five-year Dairy Industry Stabilization Scheme commenced to operate.

7th July.—At a conference of the Prime Minister and State Premiers a total of £135,900,000 was decided on as tax reimbursement grant to the States for 1952-53, plus Special Grants to Victoria and Tasmania of £800,000 and £70,000 respectively. Announcement of the Commonwealth Government's intention to return powers for taxing incomes to the States at the end of 1952-53, provided agreement could be reached concerning the technical problems involved.

9th July.—The International Bank for Reconstruction and Development announced the granting of a further loan to Australia of \$50,000,000 for a twenty-year term at 4½ per cent. interest. (See 9th July, 1950.)

14th July.—Relaxation of bank advance policy to provide hire-purchase finance for farm equipment announced.

24th July.—Announced that as a result of present economic situation Australia would accept only 80,000 immigrants in 1953, and that the migration programme for 1952 would also be reduced.

28th July.—Price control removed from clothing and textiles in New South Wales and Victoria.

1st August.—Revocation of the order made by the Commonwealth Bank under National Security Regulations fixing maximum rates of interest. This was followed by a general increase in interest rates.

5th August.—Victorian State Government discontinued almost all building controls in Victoria.

Commonwealth Court of Conciliation and Arbitration commenced the Basic Wage and Standard Hours Inquiry in Melbourne. (See 24th June, 1952 and 12th September, 1953.)

6th August.—The Commonwealth Budget for 1952-53 introduced into the House of Representatives, providing for estimated expenditure of £959,430,000 and revenue of £959,890,000, allowing an estimated surplus of £460,000. Estimated expenditure from Consolidated Revenue Fund included:—Defence Services, £200,000,000; War and Repatriation Services, £111,000,000; National Welfare Fund, £164,000,000; Payments to or for the States, £178,000,000; Capital Works and Services, £107,000,000. In addition, an estimated £6,000,000 was provided for War Service Land Settlement from Loan Fund. The Budget included proposals for increases in Repatriation benefits (£2,400,000) and Social Service Benefits (£27,000,000). The special levy of 10 per cent. of income tax assessed, imposed on individual taxpayers in 1951-52, was discontinued, reducing income tax payable by individuals by £23,000,000 for the year. Other taxation reductions included:—Companies (£15,000,000) and Sales Tax (£5,000,000). In addition the Commonwealth Land Tax was discontinued.

26th August.—Arrival of Santa Gertrudis cattle from King Ranch, Texas, U.S.A., to start the breed on the Darling Downs, Queensland.

27th August.—The new blast furnace lit at Port Kembla, New South Wales, expected to increase output of pig iron at that centre by 1,500 tons daily.

1st September.—The Commonwealth Government to seek oversea markets for Australian coal.

11th September.—Announced that Consolidated Zinc Pty. Ltd. would develop the Rum Jungle, Northern Territory, uranium deposits on behalf of the Commonwealth Government, the United States of America Atomic Energy Commission to supply uranium refining plant to begin operating in 1954.

25th September.—The Joint Coal Board recommended the closing of several coal mines producing poor quality coal, because of lack of markets.

30th September.—New South Wales Building Operations and Building Materials Control Act 1945 expired, ending all controls over building operations and materials in New South Wales.

6th October.—The Commonwealth Bank announced the cessation of restrictions on bank advances for any purpose, except where the control of capital issues is involved. (See 29th November, 1950.)

14th October.—The Navigation Bill, proposing the transfer of jurisdiction over maritime industrial disputes from the Maritime Industry Commission to a single judge of the Commonwealth Court of Conciliation and Arbitration and the abolition of the Maritime Industry Commission, introduced into the House of Representatives. (Act assented to 8th December.)

Broken Hill Proprietary Steel Industry Agreement Bill introduced into the Western Australian Legislative Assembly to ratify an agreement for the establishment of a steel rolling mill and fence post factory at a cost of approximately £4,000,000 at Kwinana, near Fremantle, Western Australia. (Act assented to 18th December.)

16th October.—A Bill to provide for the sale of the Commonwealth's holding of shares in Commonwealth Oil Refineries Ltd. to the Anglo-Iranian Oil Co. Ltd. introduced into the House of Representatives. (Act assented to 6th November.) The Anglo-Iranian Oil Co. Ltd. is to construct an oil refinery with a capacity of about 3,000,000 tons a year, to cost about £40,000,000, at Kwinana, near Fremantle, Western Australia.

22nd October.—Owing to the increased production of coal, the Coal Industry Tribunal granted an application to advance the date for commencement of the long service leave scheme from 1st January, 1954 to 1st January, 1953. (See 7th September, 1949, Official Year Book No. 39.)

17th and 23rd November.—Export controls lifted from large number of primary and secondary products.

27th November–11th December.—The Prime Minister and other Australian Ministers attended the British Commonwealth Economic Conference in London. All subjects were discussed in the light of the necessity to curb inflation and rises in the cost of living, to encourage sound economic development, and to extend a multilateral trade and payment system over the widest possible area.

A group of financial, industrial and commercial concerns in the United Kingdom proposed to form a company to further development throughout the Commonwealth.

5th December.—The Coal Industry Stabilization Plan was announced by the Commonwealth Government, its main features being the financing by the Commonwealth of the stockpiling of surplus production, and of the sale of coal on a credit basis to major consumers; the forgoing by the Commonwealth of interest charges on mining plant which might become idle, and the daily review of production and demand.

31st December.—The first good rains for many months were recorded in Northern Territory drought-stricken areas.

### 1953.

The immigration programme was cut further during the year and net migration amounted to only about 43,000, compared with 94,000 in 1952 and over 100,000 in each of the preceding three years.

After the almost continuous decline in employment in 1952 there was an almost continuous increase in 1953 and total employment (excluding rural and household domestic employment and the defence forces) rose from 2,533,000 in December, 1952 to 2,612,000 in December, 1953—still below the peak of 2,643,000 in November, 1951. Numbers on unemployment benefit dropped to less than half the level of 41,600 reached in January.

Production of coal was down slightly from the 1952 level, but production of gas and electricity and of many basic materials (pig-iron and steel, lead, cement, superphosphate) continued to increase. Production of refrigerators, washing machines, radios and other domestic electrical goods, many clothing and textile lines and sporting goods increased substantially after the set back of the previous year. There was also some revival in house building, but the number of houses started, although some 3,000 higher than in the previous year, did not regain the 1951 level.

Seasonal conditions were satisfactory. Meat production was substantially increased. The average wheat yield was lower than the previous year's record but still high at 17 bushels per acre. Acreage was somewhat greater and total production was estimated at about 199 million bushels compared with 195 million bushels in the 1952–53 harvest. The wool clip for 1953–54 was only 3 per cent. under the record of the previous year.

After some weakness at the close of the 1952–53 season, wool prices firmed again at the opening sales in September and during the first half of the 1953–54 season averaged 85d. compared with 81.8d. in 1952–53. With rising wool, wheat, butter and meat prices offsetting other reductions, export prices generally remained above the previous year's level. The value of exports was considerably higher than in 1952. During the second half of the year imports also increased substantially over the low level of the previous twelve months, and the balance of payments credit on current account which reached about £100 million in the first half of the year dropped to about £20 million in the second half.

Rises in internal prices and earnings were much smaller. Average earnings per employee rose by 4 per cent., the basic wage by 2 per cent., retail prices by 4 per cent., and wholesale prices by 5 per cent. before falling towards the close of the year, compared with increases of about 10 per cent. in 1952.

Interest rates were kept stable during the year at  $4\frac{1}{2}$  per cent. on Commonwealth bonds,  $4\frac{3}{4}$  per cent. on local and semi-governmental securities and 5 per cent. on bank advances. Both Commonwealth loans raised during the year at  $4\frac{1}{2}$  per cent. were over-subscribed (the October one by £15 million), and during the second half of the year there was some speculation about a possible drop in interest rates.

*5th January.*—Announced that new deposits of coal, bauxite, tin and zinc had been discovered as a result of surveys carried out by the Bureau of Mineral Resources, Geology and Geophysics.

*8th January.*—Ten-year agreement signed with the Combined Development Agency for sale to the United States of America of uranium from deposits at Rum Jungle, Northern Territory.

*10th January.*—Announced that United Kingdom and Queensland Governments had agreed to abandon the Queensland-British Food Corporation's farming project in Central Queensland.

*22nd January.*—For first time since 1945, basic wage adjustment for December quarter showed no change in average for six capital cities.

*18th February.*—Television Bill introduced into House of Representatives to permit the establishment of both National and Commercial television transmitting stations. (Act assented to 20th March.)

*19th February.*—Commonwealth Bank Bill 1953 and Banking Bill 1953 introduced into House of Representatives. The Commonwealth Bank Bill sets up the Commonwealth Trading Bank under a General Manager, in place of the General Banking Division of the Commonwealth Bank. The Banking Bill provides for a new method of determining the maximum amounts which the trading banks may be required to lodge with the Commonwealth Bank as the central bank and requires the Commonwealth Bank to conform to the special accounts provisions of the Banking Bill. (Both Acts assented to 28th March.)

*20th February.*—Premiers' Conference in Canberra to discuss return of income tax powers to the States. No agreement reached.

*10th March.*—Prime Minister announced that a Census of Australia would be taken in 1954.

*1st April.*—Further relaxation of import restrictions to allow additional imports to the value of £50,000,000 during the next twelve months other than from the dollar area and Japan.

*13th April.*—New International Wheat Agreement signed in Washington fixing Australia's annual wheat export quota at 75,000,000 bushels—Australian signature not to be effective unless agreement also signed by United Kingdom and India. (Later legislation introduced into House of Representatives, 11th October.)

*17th April.*—Basic wage rise of 3s. per week announced.

*18th April.*—Commonwealth Scientific and Industrial Research Organization announced that, after ten years' research, a process had been developed to prevent shrinkage in wool.

*15th May.*—Australia and United States of America signed conventions to end double taxation between the two countries. (Acts ratifying these conventions were assented to 11th December.)

*19th May.*—Australian Loan Council meeting at Canberra adopted programme of £231,000,000 for State Government works during 1953-54 (Commonwealth will contribute, however, only on a basis of a £200,000,000 programme). Borrowing programme of £90,486,000 by Local Government and Semi-governmental authorities also approved. Loan Council decided to retain ruling interest rates on public loans for at least twelve months.

*8th June.*—Britain and Australia signed agreement for reciprocity in social services benefits.

*9th June.*—Conference of Commonwealth Prime Ministers on defence, economic and political issues concluded in London.

*24th June.*—Contract prices for sale of Australian butter and cheese to the United Kingdom Ministry of Food during 1953-54 increased by approximately  $3\frac{3}{4}$  per cent.

1st July.—Commonwealth Medical Benefits Scheme commenced, under which persons who are contributors to an approved medical benefits organization are entitled to receive part reimbursement by the Commonwealth of payments made for medical services to themselves or their dependants.

Conditions of purchase by Australian Atomic Energy Commission of acceptable uranium ores and concentrates from 1st July announced, including guaranteed minimum prices for five years.

Further relaxation of restrictions on imports from sterling countries came into operation. Some increases in imports from Japan also to be allowed.

10th July.—Price of petrol reduced by 1½d. per gallon.

15th July.—Announced that the United Kingdom Government would pay higher prices, representing increases of 7½ and 5½ per cent. respectively, for Australian lamb and mutton in 1953-54.

Export controls removed from further Australian products.

22nd July.—Announced that the United Kingdom Ministry of Food had declined to enter into a long-term contract for the purchase of Australian canned fruits. (Later in the year the Ministry agreed to the bulk purchase of the exportable surplus of canned apricots, peaches and pears for 1954 only. It was made clear, however, that it was the policy of the United Kingdom Government to return to open trading in all imported foodstuffs as rapidly as circumstances permit.)

7th August.—Shipping freights to United Kingdom rose by 7½ per cent.

13th August.—Commonwealth Government rejected a Japanese request for a conference to discuss trade relations between Australia and Japan.

5th September.—Drilling for oil began at Exmouth Gulf in Western Australia.

9th September.—The Commonwealth Budget for 1953-54 introduced into the House of Representatives, providing for an estimated expenditure of £986,542,000, revenue of £986,757,000 and an estimated surplus of £215,000. The major items of estimated expenditure from Consolidated Revenue Fund were:—Defence Services, £200,000,000; War and Repatriation Services, £116,000,000; National Welfare Fund, £184,000,000; Payments to or for the States, £189,000,000; Capital Works and Services, £101,500,000. Estimated expenditure from Loan Fund includes £7,000,000 for War Service Land Settlement and £7,000,000 for redemption of War Savings Certificates. The Budget included proposals for increases in expenditure on repatriation benefits (£1,000,000) and social services benefits (£18,500,000); and reductions in taxation of an estimated annual value to taxpayers of £82,000,000. Proposals for reductions in taxation included reduced rates of income tax with increased allowances and exemptions (£40,000,000), company tax (£23,000,000), sales tax (£9,000,000), increased annual exemption from pay-roll tax (£4,000,000), and the abolition of entertainments tax (£5,000,000).

10th September.—Pearl Fisheries Bill introduced, providing for a licensing system and other measures to control pearl fisheries (Act assented to 17th September). *See also* 11th September.

11th September.—Australian sovereignty proclaimed over sea-bed, subsoil, and continental shelf adjoining Australia and Australian territories. (Australia subsequently agreed to submit issues arising from the Pearl Fisheries Act to the International Court of Justice for adjudication.)

12th September.—Commonwealth Court of Conciliation and Arbitration in a judgment, refused applications by employers for reduction of current basic wages and for an increase of standard hours of work and also refused applications by unions for increases of basic wages. The employers' applications for abandonment of the system of automatic adjustment of the basic wage in accordance with retail price indexes were, however, granted. Later, the extension by the Court, on its own motion, of this decision to awards not the subject of an application before the Court was challenged in the High Court by the unions concerned but the power of the Arbitration Court to so vary awards was upheld.

24th September.—Australian Council of Trade Unions Congress withdrew its policy of unqualified opposition to incentive payments, leaving individual unions free to accept incentive payment schemes if they so desire.

*30th September.*—Announced that Commonwealth Finance Ministers would confer in Sydney in January, 1954, on such subjects as the balance of payments, world trade and the development of economic resources.

*1st October.*—Announced that Australia would receive an increase of 5½ per cent. in the price of beef and veal shipped to the United Kingdom during 1953-54 under the fifteen-year meat agreement with United Kingdom.

Further relaxation of import restrictions on goods from sterling areas came into operation, allowing additional annual imports valued at £45 million.

*7th October.*—All States agreed to a price of 14s. per bushel for wheat sold in Australia for the three years ending 1955-56.

*13th October.*—Wheat Marketing Bill providing for orderly marketing of wheat for next three harvests introduced into House of Representatives. (Act assented to 26th October.) All States have agreed to introduce complementary legislation but have not yet done so.

Bill providing for ratification of the International Wheat Agreement, under which portion of Australia's crop for the next three seasons will be exported within certain price limits, introduced into House of Representatives. (Act assented to 26th October.)

Queensland State Full Industrial Court rejected application by employers' organizations to end basic wage adjustments.

*15th October.*—First atomic weapon exploded at a proving ground north of Woomera.

*22nd October.*—Commonwealth Court of Conciliation and Arbitration refused New South Wales transport authorities permission to withdraw applications for relief from basic wage adjustments.

*26th October.*—Factories and Shops (Wages Boards) Bill 1953 introduced in Victoria to pay latest cost-of-living increase in basic wages. (Act assented to 25th November.)

*30th October.*—Tasmanian Government abolished price control on all goods other than copper.

*11th November.*—Commonwealth Court of Conciliation and Arbitration completed hearing of evidence by Australian Engineering Union and other organizations in the margins case and reserved its decision. (On 26th February, 1954, the Court announced that the case had been adjourned until November, 1954, for further hearing and determination.)

*12th November.*—Industrial Arbitration (Amendment) Bill, giving absolute preference to unionists, introduced in New South Wales Parliament. (Act assented to 17th December.)

*3rd December.*—Commonwealth Trading Bank of Australia commenced operations.

*4th December.*—Oil discovered at Exmouth Gulf, 680 miles north of Perth. The oil, discovered at a depth of approximately 3,600 feet, was stated to be a very high grade crude oil.

*31st December.*—With the expiration of the Defence Preparations Act, control of Capital Issues ceased.

Price control abandoned in Western Australia.

# CHRONOLOGICAL TABLE.

## CHRONOLOGICAL TABLE OF CHIEF EVENTS SINCE THE ESTABLISHMENT OF SETTLEMENT IN AUSTRALIA.

NOTES.—For each earlier year this Table contains rarely more than two or three items; for recent years, however, in order to provide a wide cover of events, etc., it includes a much greater number. Both the nature of the Table and considerations of space render necessary a continual reduction in these items, and for more information the reader should therefore consult earlier issues.

The Government was centralized in Sydney, New South Wales, up to 1825, when Tasmania (Van Diemen's Land) was made a separate colony. In the Table the names now borne by the States serve to indicate the localities.

Year.

- 1788 N.S.W.—Arrival of “First Fleet”, under Captain Arthur Phillip, at Botany Bay. Land in vicinity being found unsuitable for settlement, the expedition moved to Sydney Cove, and formal possession of the colony was taken on 26th January. Formal proclamation of colony and establishment of regular government on 7th February. Branch Settlement established at Norfolk Island. French navigator Lapérouse visited Botany Bay. First cultivation of wheat and barley. First grape vines planted.
- 1789 N.S.W.—First wheat harvest at Parramatta, near Sydney. Discovery of Hawkesbury River.
- 1790 N.S.W.—Scarcity of provisions. “Second Fleet” reached Port Jackson. Landing of the New South Wales Corps.
- 1791 N.S.W.—Arrival of “Third Fleet”. Territorial seal brought by Governor King.
- 1792 N.S.W.—Visit of *Philadelphia*, first foreign trading vessel.
- 1793 N.S.W.—First free immigrants arrived in *Bellona*. First Australian church opened at Sydney. Tas.—D’Entrecasteaux discovered the Derwent River.
- 1794 N.S.W.—Establishment of settlement at Hawkesbury River.
- 1795 N.S.W.—Erection of the first printing press at Sydney. Descendants of strayed cattle discovered at Cowpastures, Nepean River.
- 1796 N.S.W.—First Australian theatre opened at Sydney. Coal discovered by fisherman at Newcastle.
- 1797 N.S.W.—Introduction of merino sheep from Cape of Good Hope.
- 1798 Tas.—Insularity of Tasmania proved by voyage of Bass and Flinders.
- 1800 N.S.W.—Hunter River coal-mines worked. First Customs House in Australia established at Sydney. Flinders’ charts published.
- 1801 N.S.W.—First colonial manufacture of blankets and linen.
- 1802 Vic.—Discovery of Port Phillip by Lieut. Murray. Q’land.—Discovery of Port Curtis and Port Bowen by Flinders. S.A.—Discovery of Spencer’s and St. Vincent Gulfs by Flinders.
- 1803 N.S.W.—First Australian wool taken to England by Capt. Macarthur. Issue of “The Sydney Gazette”, first Australian newspaper. Vic.—Attempted settlement at Port Phillip by Collins. Discovery of Yarra by Grimes. Tas.—First settlement formed at Risdon by Lieut. Bowen.
- 1804 Vic.—Abandonment of settlement at Port Phillip. Tas.—Foundation of settlement at Hobart by Collins.
- 1805 N.S.W.—First extensive sheep farm established at Camden by Capt. Macarthur.
- 1806 N.S.W.—“The great flood” on the Hawkesbury. Shortage of provisions. Tas.—Settlement at Launceston.
- 1807 N.S.W.—First shipment of merchantable wool (245 lb.) to England.
- 1808 N.S.W.—Deposition of Governor Bligh.
- 1809 N.S.W.—Free school established.
- 1810 N.S.W.—Post Office officially established at Sydney.
- 1813 N.S.W.—Passage across Blue Mountains discovered by Wentworth, Lawson and Blaxland. Macquarie River discovered by Evans.
- 1814 N.S.W.—Flinders suggested the name “Australia”, instead of “New Holland”. Creation of Civil Courts.

- Year.
- 1815 N.S.W.—First steam engine in Australia erected at Sydney. Lachlan River discovered by Evans. Tas.—Arrival of first immigrant ship with free settlers. First export of wheat to Sydney.
- 1816 N.S.W.—Sydney Hospital opened.
- 1817 N.S.W.—Oxley's first exploration inland. Discovery of Lakes George and Bathurst and the Goulburn Plains by Meehan and Hume. First bank in Australia—Bank of New South Wales—opened at Sydney.
- 1818 N.S.W.—Liverpool Plains, and the Peel, Hastings and Manning Rivers discovered by Oxley, and Port Essington (N.T.) by Captain King.
- 1819 N.S.W.—First Savings Bank in Australia opened at Sydney.
- 1820 Tas.—First importation of pure merino sheep from Camden Park (N.S.W.) flocks.
- 1821 Tas.—Establishment of penal settlement at Macquarie Harbour.
- 1822 N.S.W.—Formation of Agricultural Society of New South Wales.
- 1823 N.S.W.—New South Wales Judicature Act passed. Discovery of gold at Fish River by Assistant-Surveyor McBrien. Qld.—Brisbane River discovered by Oxley.
- 1824 N.S.W.—Constituted a Crown Colony. Executive Council formed. Establishment of Supreme Court at Sydney, and introduction of trial by jury. First Australian Enactment (Currency Bill) passed by the Legislative Council. Proclamation of freedom of the press. First manufacture of sugar. Vic.—Hume and Hovell, journeying overland from Sydney, arrived at Corio Bay. Qld.—Penal settlement founded at Moreton Bay (Brisbane). Port Dundas Settlement formed at Melville Island, N. Terr.
- 1825 Tas.—Van Diemen's Land (Tasmania) proclaimed a separate colony. Qld.—Major Lockyer explored Brisbane River to its source and discovered coal.
- 1826 N.S.W.—Settlement in Illawarra District. Vic.—Settlement at Corinella, Western Port, formed by Captain Wright.
- 1827 Qld.—Darling Downs and the Condamine River discovered by Allan Cunningham. W.A.—Military settlement founded at King George's Sound by Major Lockyer. First official claim of British Sovereignty over all Australia.
- 1828 N.S.W.—Second constitution. First Census. Sturt's expedition down Darling River. Gas first used at Sydney. Richmond and Clarence Rivers discovered by Captain Rous. Vic.—Abandonment of settlement at Western Port. Qld.—Cunningham discovered a route from Brisbane to the Darling Downs, and explored Brisbane River.
- 1829 N.S.W.—Sturt's expedition down Murrumbidgee River. W.A.—Foundation of settlement at Swan River. Foundation of Perth.
- 1830 N.S.W.—Sturt, voyaging down Murrumbidgee and Murray Rivers, arrived at Lake Alexandrina. Tas.—Black line organized to force aborigines into Tasman's Peninsula, but failed. Small remnant subsequently (1830 to 1835) persuaded to settle on Flinders Island.
- 1831 N.S.W.—Crown lands first disposed of at auction. Mitchell's explorations north of Liverpool Plains. SS. *Surprise*, first steamship built in Australia, launched at Sydney. First coal shipped from Australian Agricultural Company's workings at Newcastle, N.S.W. First assisted immigration to N.S.W. S.A.—Wakefield's first colonization committee. W.A.—Appointment of Executive and Legislative Councils.
- 1832 N.S.W.—State Savings Bank established.
- 1833 N.S.W.—First School of Arts established at Sydney.
- 1834 N.S.W.—First settlement at Twofold Bay. Vic.—Settlement formed at Portland Bay by Henty Brothers. S.A.—Formation of the South Australian Association. W.A.—Severe reprisals against Murray River natives at Pinjarrah for continued attacks on settlers.
- 1835 Vic.—John Batman arrived at Port Phillip; foundation of Melbourne.
- 1836 N.S.W.—Mitchell's overland journey from Sydney to Cape Northumberland. Vic.—Proclamation of Port Phillip district as open for settlement. S.A.—Settlement founded at Adelaide under Governor Hindmarsh.

- Year.
- 1837 N.S.W.—Appointment in London of Select Committee on Transportation. Vic.—First overlanders from Sydney arrived at Port Phillip.
- 1838 N.S.W.—Discontinuance of assignment of convicts. Qld.—Settlement of German missionaries at Brisbane—first free colonists. S.A.—“Overlanding” of cattle from Sydney to Adelaide along the Murray route by Hawden and Bonney. Settlement at Port Essington, Northern Territory, formed by Captain Bremer.
- 1839 N.S.W.—Gold found at Vale of Clwydd by Count Strzelecki. S.A.—Lake Torrens discovered by Eyre. Port Darwin discovered by Captain Stokes. W.A.—Murchison River discovered by Captain Grey.
- 1840 N.S.W.—Abolition of transportation to New South Wales. Land regulations—proceeds of sales to be applied to payments for public works and expenditure on immigration. Vic.—Determination of northern boundary. Qld.—Penal settlement broken up and Moreton Bay district thrown open. S.A.—Eyre began his overland journey from Adelaide to King George’s Sound.
- 1841 N.S.W.—Gold found near Hartley. W.A.—Completion of Eyre’s overland journey from Adelaide to King George’s Sound. New Zealand proclaimed a separate colony.
- 1842 N.S.W.—Incorporation of Sydney. Vic.—Incorporation of Melbourne. S.A.—Discovery of copper at Kapunda.
- 1843 N.S.W.—First Representative Constitution (under Act of 1842). Qld.—Moreton Bay granted legislative representation as a distinct electoral division.
- 1844 Qld.—Leichhardt’s expedition to Port Essington (N.T.). S.A.—Sturt’s last expedition inland.
- 1845 N.S.W.—Mitchell’s explorations on the Barcoo. Qld.—Explorations by Mitchell and Kennedy. S.A.—Discovery of the Burra copper deposits. Sturt discovered Cooper’s Creek.
- 1846 N.S.W.—Initiation of meat-preserving. Qld.—Foundation of settlement at Port Curtis. S.A.—Proclamation of North Australia.
- 1847 N.S.W.—Iron-smelting commenced near Berrima. Overland mail established between Sydney and Adelaide. Qld.—Explorations by Leichhardt, Burnett and Kennedy.
- 1848 N.S.W.—National and Denominational School Boards established. Qld.—Leichhardt’s last journey. Kennedy speared by the blacks at York Peninsula. Chinese brought in as shepherds.
- 1849 N.S.W.—Indignation of colonists at arrival of convict ship *Hashemy*. Exodus of population to gold-fields of California. Vic.—*Randolph* prevented from landing convicts. Qld.—Assignment of *Hashemy* convicts to squatters on Darling Downs. W.A.—Commencement of transportation to Western Australia.
- 1850 N.S.W.—Final abolition of transportation. First sod of first Australian railway turned at Sydney. Sydney University founded. Vic.—Gold discovered at Clunes. Representative government granted. S.A.—Representative government granted. W.A.—Pearl oysters found by Lieut. Helpman at Saturday Island Shoal. Tas.—Representative government granted.
- 1851 N.S.W.—Payable gold discovered by Hargraves at Lewis Ponds and Summerhill Creek. Vic.—Port Phillip created an independent colony under the name of Victoria. Discovery of gold in various localities. W.A.—Proclamation of Legislative Council Act.
- 1852 N.S.W.—Arrival of *Chusan*, first P. and O. mail steamer from England. S.A.—First steamer ascended the Murray River to the junction with the Darling. Tas.—Meeting of first elective Council protested against transportation. Payable gold discovered at The Nook, near Fingal, and at Nine Mile Springs.
- 1853 Tas.—Abolition of transportation. Vic.—Melbourne University founded.
- 1854 Vic.—Opening of first Victorian railway—Flinders Street to Port Melbourne. Riots on Ballarat gold-fields. Storming of the Eureka Stockade, 3rd Dec. Telegraph first used.

- Year.
- 1855 N.S.W.—Opening of railway—Sydney to Parramatta. Mint opened.
- 1856 N.S.W.—Pitcairn Islanders placed on Norfolk Island. W.A.—A. C. Gregory's expedition in search of Leichhardt.  
Responsible Governments in N.S.W., Vic., S.A. and Tas. (Act of 1855).
- 1857 N.S.W.—Select Committee on Federation. Vic.—Manhood suffrage and vote by ballot. S.A.—Passage of Torrens' Real Property Act.
- 1858 N.S.W.—Establishment of manhood suffrage and vote by ballot. Telegraphic communication between Sydney, Melbourne and Adelaide. Qld.—Canoona gold rush.  
Population of Australia reached 1,000,000.
- 1859 Qld.—Proclamation of Queensland as separate colony. Tas.—First submarine cable, via Circular Head and King Island to Cape Otway.
- 1860 Vic.—Burke and Wills left Melbourne and crossed to Gulf of Carpentaria. S.A.—Copper discoveries at Wallaroo and Moonta. McDouall Stuart reached centre of continent and named "Central Mount Stuart".
- 1861 N.S.W.—Anti-Chinese riots at Lambing Flat and Burrangong gold-fields. Opening of first tramway in Sydney. Regulation of Chinese immigration. Vic.—Burke and Wills perished at Cooper's Creek, near Innamincka, S.A.
- 1862 N.S.W.—Abolition of State aid to religion. Real Property (Torrens) Act passed. S.A.—Stuart crossed the Continent from south to north. W.A.—First export of pearl-shell.
- 1863 Vic.—Intercolonial Conference at Melbourne. S.A.—Northern Territory taken over. W.A.—Initiation of settlement in the north-west district. Henry Maxwell Lefroy discovered and traversed area now comprised in the Coolgardie-Kalgoorlie gold-field.
- 1864 Qld.—First sugar made from Queensland cane.
- 1865 N.S.W.—Destruction by fire of St. Mary's Cathedral, Sydney.
- 1866 N.S.W.—Passage of Public Schools Act of (Sir) Henry Parkes. S.A.—Introduction of camels for exploration, etc.
- 1867 Vic.—Imposition of protective tariff. Qld.—Discovery of gold at Gympie.
- 1868 W.A.—Arrival of *Hougomont*, last convict ship.
- 1869 Vic.—Record gold nugget "Welcome Stranger" 2,284 oz. found near Dunolly. W.A.—First telegraph line opened from Perth to Fremantle.
- 1870 N.S.W.—Intercolonial Exhibition opened at Sydney. Imperial troops withdrawn. Vic.—Intercolonial Congress at Melbourne. S.A.—Commencement of transcontinental telegraph.
- 1871 N.S.W.—Permanent military force raised. W.A.—Forrest's explorations. Tas.—Discovery of tin at Mount Bischoff.
- 1872 Vic.—Mint opened. S.A.—Cable from Java to Port Darwin. Completion of transcontinental telegraph line.
- 1873 N.S.W.—Intercolonial Conference at Sydney. First volunteer encampment. Inauguration of mail service with San Francisco.
- 1874 N.S.W.—Triennial Parliaments Act passed. Intercolonial Conference. S.A.—University of Adelaide founded. W.A.—John and Alexander Forrest arrived at Overland Telegraph from Murchison.
- 1875 Qld.—Transfer of Port Albany Settlement to Thursday Island.
- 1876 N.S.W.—Completion of cable—Sydney to Wellington. W.A.—Giles crossed colony from east to west. Tas.—Death of Truganini, last representative of Tasmanian aborigines.
- 1877 W.A.—Opening of telegraphic communication with South Australia.  
Population of Australia reached 2,000,000.
- 1878 Qld.—Restriction of Chinese immigration.  
Introduction of telephone into Australia.
- 1879 N.S.W.—First artesian bore at Kallara Station, near Bourke. First steam tramway. W.A.—A. Forrest's explorations in the Kimberley district, and discovery of the Fitzroy pastoral country.

- Year.
- 1880 N.S.W.—Public Instruction Act passed. Vic.—First Australian Telephone Exchange opened in Melbourne.  
Federal Conference at Melbourne and Sydney.
- 1881 N.S.W.—Further restrictions on Chinese immigration.  
First Australia-wide censuses on same date taken.
- 1882 W.A.—Nugget of gold found between Roebourne and Cossack.
- 1883 N.S.W.—Discovery of silver at Broken Hill. Completion of railway between New South Wales and Victoria. Qld.—Annexation of New Guinea—repudiated by Imperial authorities.  
Federal Conference held at Sydney. Federal Council created.
- 1884 Federation Bill passed in Victoria and rejected in New South Wales. British protectorate declared over New Guinea.
- 1885 N.S.W.—Military contingent sent to the Sudan. Opening of the Broken Hill Proprietary Silver Mines. W.A.—Gold found by prospectors on the Margaret and Ord Rivers in the Kimberley district. Tas.—Silver-lead discovered at Mount Zeehan.
- 1886 Tas.—Discovery of gold and copper at Mount Lyell.  
First session of Federal Council held at Hobart on 26th January.
- 1887 W.A.—Gold discovered at Southern Cross.  
First "Colonial" Conference in London. Australasian Naval Defence Force Act passed.
- 1888 N.S.W.—Restrictive legislation against Chinese, imposing poll-tax of £100. Qld.—Railway communication opened between Sydney and Brisbane.  
Conference of Australian Ministers at Sydney to consider question of Chinese immigration. First meeting of the Australasian Association for the Advancement of Science held in Sydney.
- 1889 Qld.—Railway communication established between Brisbane and Adelaide.  
W.A.—Framing of new Constitution. Tas.—University of Tasmania founded.  
Population of Australia reached 3,000,000.
- 1890 W.A.—Responsible Government granted.  
Meeting at Melbourne of Australasian Federation Conference.
- 1891 N.S.W.—Arrival of Australian Auxiliary Squadron. Cessation of assisted immigration. W.A.—Discovery of gold on the Murchison.  
First Federal Convention in Sydney, draft bill framed and adopted.
- 1892 W.A.—Discovery of gold at Coolgardie.
- 1893 Financial crisis, chiefly affecting the eastern States.
- 1894 S.A.—Women's suffrage granted—first State to do so.
- 1895 N.S.W.—Free-trade tariff. Land and income taxes introduced.  
Conference of Premiers on Federation at Hobart.
- 1896 N.S.W.—People's Federal Convention at Bathurst. Vic.—Wages Board system established by Act of Parliament.
- 1897-8 Sessions of Federal Convention at Adelaide, Sydney and Melbourne.
- 1898 Draft Federal Constitution Bill submitted to electors in Victoria, New South Wales, South Australia and Tasmania. Requisite statutory number of votes not obtained in New South Wales.
- 1899 First contingent of Australian troops sent to South Africa. Conference of Premiers in Melbourne to consider amendments to Federal Constitution Bill. Referendum—Bill accepted by New South Wales, Victoria, Queensland, South Australia and Tasmania. First Labour Government (Queensland).
- 1900 N.S.W.—Old-age pensions instituted.  
Contingents of naval troops sent to China. Commonwealth Constitution Act received Royal Assent, 9th July. Proclamation of Commonwealth signed 17th September. Mr. (afterwards Sir) Edmund Barton formed first Federal Ministry.

## Year.

- 1901 Proclamation of the Commonwealth at Sydney. First Federal Parliament opened at Melbourne by the Duke of Cornwall and York. Interstate free-trade established.
- 1902 Completion of Pacific Cable (all-British). First Federal Tariff.
- 1903 Coolgardie and Kalgoorlie Water Supply Scheme completed. Inauguration of the Federal High Court.
- 1904 Commonwealth Conciliation and Arbitration Act.
- 1905 Population of Australia reached 4,000,000. Re-introduction of assisted immigration in New South Wales.
- 1906 Wireless telegraphy installed between Queenscliff, Vic., and Devonport, Tas. Papua taken over by Commonwealth. Excise Tariff Act imposed duties on agricultural machinery except when manufactured "under conditions as to the remuneration of labour which are declared . . . . . to be fair and reasonable . . . . ."
- 1907 First telephone trunk line service between Capital Cities, i.e., Sydney and Melbourne. Imperial Conference in London. Declaration of first basic wage in "Harvester Judgment".
- 1908 Canberra chosen as site of Australian Capital.
- 1909 Imperial Defence Conference in London. Visit of Lord Kitchener to report and advise on Australian military defence. Queensland University founded.
- 1910 Penny Postage. Arrival of *Yarra* and *Parramatta*, first vessels built for the Royal Australian Navy. Australian Notes Act passed and first Commonwealth notes issued. Admiral Sir R. Henderson visited Australia to advise on naval defence.
- 1911 First Federal Census. Transfer of Australian Capital Territory and Northern Territory to Commonwealth. Introduction of compulsory military training. University of Western Australia founded.
- 1912 Opening of Commonwealth Bank. First payments of Maternity Bonus. First sod turned at Port Augusta of Trans-Australian Railway.
- 1913 Australian Capital named Canberra and foundation stone laid. Appointment of Interstate Commission.
- 1914 Visit of General Sir Ian Hamilton to report on military defence scheme. Double dissolution of Federal Parliament. Transfer of Norfolk Island to Commonwealth.
- European War declared 4th August. Australian Navy transferred to British Navy. Australian offer to equip and furnish 20,000 troops accepted. Constitution Alteration Referendum granted powers in regard to social services to Commonwealth. Double taxation relief agreement between Australia and Britain. Approval for establishment of guided missile range in Central Australia. Defence (Transitional Provisions) Act. Expiry of National Security Act.
- 1947 End of demobilization. Post-war defence programme to extend over five years approved. Census of Australia—first since 1933. Full High Court declared invalid section of Banking Act 1945 prohibiting banks from conducting business for State authorities. Legislation to nationalize trading banks enacted (*see* 1948). Australian National Antarctic Research Expedition to establish scientific research station at Heard Island. First "displaced persons" reached Australia.

Year.

- 1948 Forty-hour week effective throughout Australia. Membership of Commonwealth Parliament increased. Constitution Alteration (Rents and Prices) proposal defeated. High Court declared invalid certain vital sections of Banking Act 1947. Tuberculosis Act. International Trade Organization Act (General Agreement on Tariffs and Trade and Havana Charter for International Trade Organization).
- 1949 Nationality and Citizenship Act operative. Broadcasting Control Board came into operation. New Guinea placed under international trusteeship and administrative union of Papua and New Guinea established. Certain Australian aborigines for first time granted franchise at Federal elections. Agreement reached on arrangements for increasing meat exports from Australia to United Kingdom (subsequent legislation to assist in facilitating movement of livestock in Australia). Establishment of New South Wales University of Technology. Ratification completed by all Governments concerned of Murray River Agreement for enlarging of Hume Weir. Dispute over claims for 35-hour week, 30s. a week wage increase, and long-service leave rendered all Australian black coal mines idle from 27th June until 15th August, causing restrictions in dependent services and unemployment. Australia ratified International Wheat Agreement. Conciliation and Arbitration Act amended to prevent irregularities in elections for offices in organizations registered under Act. Establishment of Australian Whaling Commission. Reduction of 25 per cent. in Australia's imports from dollar areas. Devaluation of sterling against American dollar, and commensurate devaluation of Australian pound to two dollars twenty-four cents. Establishment of Immigration Planning Council to assist in assimilation of migrants into industry and the community. Commencement of Snowy Mountains Hydro-electric Power Scheme. Agreement on rail standardization, replacing original agreement of 1946, ratified by Commonwealth and South Australian Governments. Australia's population reached 8,000,000.
- 1950 Projected commencement announced of uranium production in South Australia. Petrol rationing abolished for second time since end of war. Senate and House of Representatives failed to agree on Commonwealth Bank Bill. Severest flooding for twenty-five years in south-east corner of New South Wales. Appointment of first Australian Ambassador to United States (now Republic) of Indonesia. British Consultative Committee meeting in Sydney on ways of assisting development of south and south-east Asia in co-operation with other interested governments. Appointment of first Australian Minister to Philippines. Australian Dakota Transport Squadron to assist United Kingdom forces in Malaya; later decided to send squadron of heavy bombers also. Sir Thomas Blamey first Australian to be elevated to rank of Field-Marshal. Arrival of Field-Marshal Sir William Slim, Chief of Imperial General Staff, for defence talks. First Minister for Israel in Australia arrived. Abolition of butter rationing. Disastrous floods on north coast of New South Wales. Following attacks by forces of North Korea on forces of Republic of Korea and failure of Security Council's call for immediate cessation of hostilities, the Council called on members to furnish assistance to Republic of Korea. Australian naval and air forces in vicinity of Korea placed at disposal of United Nations, and decision to withdraw Australian troops with BCOF in Japan countermanded. Scheme of reserve prices for wool to replace existing Joint Organization system enacted (*see below*). Abolition of tea rationing ended retail rationing in Australia. Arrival of first Ambassador for United States (now Republic) of Indonesia. Loan of \$100,000,000 for Australia by International Bank for Reconstruction and Development. Validity of Commonwealth wool levy scheme challenged in High Court, but hearing subsequently postponed pending result of referendum of woolgrowers (*see 1951*). Inauguration of modified free medicine scheme. All volunteers in Australian Regular Army

Year.

1950—  
*contd.*

and Citizen Military Forces to be liable for service anywhere in the world (*see* below). Australian ground troops joined British Commonwealth Brigade in Korean conflict. Introduction of Commonwealth Bank Bill 1950 (No. 2) in House of Representatives (referred to Select Committee 14th March, 1951). Adult franchise for Victorian Legislative Council replaced existing franchise dependent on property qualifications. Commonwealth Court of Conciliation and Arbitration ruling of increase of £1 in male basic wage, and increase in female basic wage from 54 to 75 per cent. of male rate. Railway dispute caused cessation of railway services in Victoria from 16th October to 8th December, and in South Australia from 23rd October to 19th November. Communist Party Dissolution Bill 1950 (No. 2) assented to. Validity of Act challenged in High Court (declared invalid on 9th March, 1951). National Service Bill to establish a system of national training for defence forces of Australia introduced in House of Representatives—provides for compulsory registration and call-up at 18 years of age of all male British and certain non-British subjects resident in Australia (extended in 1954 to every male person ordinarily resident in Australia who attains, or who has attained, the age of 18 years since 1st November, 1950.) Volunteers in Australian Citizen Military Forces to be liable for oversea service only in the event of a major war. National Security Resources Board appointed to advise Government on best use of Australia's resources in interests of national security. Defence (Transitional Provisions) Act extending for one year a number of national security regulations and orders. Commonwealth Government to contribute £31,250,000 to Colombo Plan for Co-operative Economic Development in South and South-east Asia and £3,500,000 for technical assistance programme. Conference of Commonwealth Prime Ministers in London.

1951 Opening of Jubilee celebrations to mark the fiftieth year of Australian federation. Meeting of Governors of central banks of Australia, Ceylon, Ireland, New Zealand, Pakistan, South Africa and the United Kingdom to discuss general banking problems and the international economic situation. British Government's confirmation of transfer of Heard Island and the Macdonald Islands (Southern Indian Ocean) to Australia as from 26th December, 1947. Arrival in Canberra of President Truman's special Envoy, Mr. John Foster Dulles, for talks on a Japanese peace treaty. Governor-General granted double dissolution of nineteenth Parliament on the grounds that the Senate had "failed to pass" the Commonwealth Bank Bill (*see* 1950). Return of Menzies-Fadden Government after general election following double dissolution (*see* above). The Governor-General opened the twentieth Parliament with special Jubilee ceremonies. Melbourne became an international airport. Official cessation of hostilities with Germany. Large upward adjustments in federal basic wage (13s. in six capital cities average). Defence Preparations Act to adjust the nation's economy to meet the threat of war. Final liquidation of the stock of the United Kingdom—Dominion Wool Disposals Ltd. (Joint Organization). Conference of representatives of the Commonwealth and State Governments, employers and trade unions, and other sections of the community, called by the Prime Minister to discuss means of combating inflation. The Governor of the Commonwealth Bank, the heads of commercial banks and the Secretary to the Treasury in conference called by the Prime Minister to discuss bank credit policy. General financial and investment policy considered at conference between the Government and representatives of insurance companies. Woolgrowers at a referendum rejected the proposal for a reserve price plan for wool (*see* 1950). Security Treaty signed in Washington by the United States of America, Australia and New Zealand for action in the event of an armed attack in the Pacific. Japanese Peace Treaty signed at San Francisco by 49 nations, including Australia. Constitution Alteration (Powers to deal with Communists and Communism)

Year.

1951—  
*contd.*

referendum resulted in a decision against the proposed Act. Australia to provide an additional infantry battalion for United Nations forces in Korea. The Prime Minister announced that Australia would spend about £700,000,000 on defence during the next three years. Further large upward adjustments (*see above*) in federal basic wage—11s. for six capital cities' average. Third Conference of Government Statisticians of the British Commonwealth held in Canberra. Opening of new Legislative Council of Papua and New Guinea, which included, for the first time in the history of Australian Legislature, representatives of the native peoples. New mace presented to the House of Representatives by a delegation from the House of Commons, to commemorate the Jubilee of the Australian Commonwealth. Act to re-establish Commonwealth Joint Parliamentary Committee of Public Accounts.

1952 Nuclear experiments commenced at National University, Canberra. Refusal by Commonwealth Conciliation Commissioner of an application by eleven metal trades unions for marginal wage increases ("Galvin" Award) affected more than 250,000 metal trades workers throughout Australia. Widespread bushfires in New South Wales, Victoria and Australian Capital Territory. Prototype of first unmanned radio-controlled jet aircraft designed and built in Australia successfully tested. Death of His Majesty, King George VI; Princess Elizabeth proclaimed Queen. Third British Commonwealth Scientific Official Conference held in Canberra and Melbourne. Good rains in northern areas of New South Wales ended the worst drought experienced there for many years. Announcement that locally-produced pyrites would replace imported sulphur in Australian sulphuric acid industry by the end of 1953. Important high-grade uranium deposits discovered at Rum Jungle, Northern Territory. Japanese Peace Treaty ratified. 1st Battalion, The Royal Australian Regiment, sailed from Sydney for service in Korea (the second battalion of Australian troops to serve there). Australia ratified the Pacific Pact between United States of America, New Zealand and Australia. Commonwealth Bank prohibited the establishment of further import credits until licences had been obtained for the goods involved. Imposition of severe restrictions on imports from all sources and on amounts available for Australians travelling overseas. Agreement between the Commonwealth and South Australian Governments and the Combined Development Agency of the British and American Governments, on the development of uranium deposits at Radium Hill, South Australia. Sir Owen Dixon appointed Chief Justice of the High Court of Australia to succeed Sir John Latham. Australian ambassadors to Japan and West Germany appointed. At Berala, near Sydney, in the first collision between two electric trains in New South Wales to result in fatalities, ten persons were killed and more than 100 injured. Proclamation of termination of the war which commenced on 3rd September, 1939. Good rains brought relief to north and central Australia, which had suffered from prolonged drought conditions. Nine people died and 22 were injured in a level-crossing smash at Boronia in Victoria. An amendment to the Conciliation and Arbitration Act provided for a limited right of appeal to the Commonwealth Court of Conciliation and Arbitration from decisions of Conciliation Commissioners, and for an increase in the number of Judges. Agreement between the Commonwealth Government and Bulolo Gold Dredging Ltd. to cut timber from pine forests at Bulolo, New Guinea. Wagga, Forbes, Cowra and many other towns in central and south-west New South Wales experienced one of the worst floods in their history. In the Basic Wage and Standard Hours Inquiry before the Commonwealth Court of Conciliation and Arbitration, employers' organizations sought reductions in wages, longer hours and abandonment of the system of automatic quarterly cost of living adjustments to the basic wage. No. 78 Fighter Wing,

Year.

1952—  
*contd.*

R.A.A.F., departed for Malta to assist the R.A.F. in garrison duties in the Middle East. Reductions announced in Australia's 1952 and 1953 immigration programmes. Representatives of New Zealand, the United States of America and Australia met at Honolulu to consider the Pacific defence pact (A.N.Z.U.S.). Tenth General Assembly of the Union Radio Scientifique Internationale held in Sydney—the first meeting of an international scientific body outside Europe or America. Purchase by Commonwealth Government of one of the fourteen known authentic copies of "Magna Carta". Qantas Empire Airways began first direct service between Sydney and Johannesburg, South Africa, via Perth, Cocos Islands and Mauritius. Commonwealth legislation requiring employers to give preference in employment to ex-servicemen extended for three years. Consolidated Zinc Pty. Ltd. to begin development in 1954 of the Rum Jungle uranium deposits on behalf of the Commonwealth Government, using refining plant supplied by the United States Atomic Energy Commission. Commonwealth Government disposed of shares in Commonwealth Oil Refineries to the Anglo-Iranian Oil Co. which is to construct a £40,000,000 oil refinery at Kwinana, near Fremantle, Western Australia. Britain's first atomic weapon detonated on the Monte Bello Islands, near the north-west coast of Australia. Ratification by Western Australian Parliament of an agreement for the establishment at Kwinana, near Fremantle, by the Broken Hill Proprietary Co. Ltd., of a steel rolling mill and fence post factory at a cost of approximately £4,000,000. Announcement of projected visit to Australia and New Zealand by Queen Elizabeth and the Duke of Edinburgh early in 1954. Death of Rt. Hon. W. M. Hughes. Agreement between the Commonwealth Government and Australian National Airways Pty. Ltd. guaranteeing the latter a loan to purchase new aircraft and an equal share with Trans-Australia Airlines in government business and reducing air route charges. British Commonwealth Economic Conference in London attended by Prime Minister of Australia. Death of Sister Kenny, world renowned for treatment of poliomyelitis. Good rains in Northern Territory terminated prolonged drought there.

1953 Ten-year agreement signed with Combined Development Agency for sale to the United States of America of uranium from deposits at Rum Jungle, Northern Territory. First Minister to Australia for Thailand and First Japanese Ambassador to Australia presented credentials to Governor-General. For first time since 1945, basic wage adjustment for December quarter showed no change in six capitals' average. Inquiry by Royal Commission into the establishment of television in Australia. Television Bill introduced to permit the establishment of both National and Commercial television transmitting stations (Act assented to 20th March). Commonwealth Bank Bill 1953 and Banking Bill 1953 introduced (both Acts assented to 28th March). Premiers' Conference in Canberra failed to reach agreement on return of income tax powers to States. 2nd Battalion, The Royal Australian Regiment, sailed from Sydney for service in Korea. Prime Minister announced that a Census of Australia would be taken in 1954. Bill introduced into Northern Territory Legislative Council to give citizenship rights to Northern Territory aborigines, except those committed to State care (assented to 17th April). Atomic Energy Bill 1953, establishing Atomic Energy Commission, introduced (Act assented to 15th April). H.M.A.S. *Sydney* sailed from Melbourne for England with Coronation Contingent. National Health Bill 1953 introduced, consolidating legislation relating to pharmaceutical, medical and hospital benefits and other health services (Act assented to 18th December). Import restrictions further relaxed. New International Wheat Agreement signed in Washington. Commonwealth Scientific and Industrial Research Organization developed a process to prevent shrinkage in wool. Australian designed and

Year.

1953—  
*contd.*

built radio-controlled jet plane for use in guided missile research successfully tested. Field-Marshal Sir William Slim sworn in as Governor-General of Australia. Senate election resulted in Government parties retaining majority. Australia and United States of America signed conventions to end double taxation between the two countries. (Acts ratifying these conventions assented to 11th December.) Australian Loan Council adopted programme of £231,000,000 for 1953-54 (Commonwealth will contribute, however, only on basis of a £200,000,000 programme). Borrowing programme of £90,486,000 by Local Government and Semi-Governmental Authorities also approved. Loan Council decided to retain ruling interest rates on public loans for at least twelve months. Full Court of Victoria upheld validity of Electoral Reform Bill providing for two State seats for each Commonwealth Electorate. Coronation of Her Majesty Queen Elizabeth the Second. Britain and Australia signed agreement for reciprocity in social services benefits. First Australian-built Canberra bomber successfully tested. Conference of Commonwealth Prime Ministers on defence, economic and political issues held in London. New South Wales Parliament to introduce legislation to make New England University College a separate university, devoted mainly to agricultural studies and research. Commonwealth Medical Benefits Scheme commenced, under which persons who are contributors to an approved medical benefits organization are entitled to receive part reimbursement by the Commonwealth of payments made for medical services to themselves or their dependents. Korean armistice signed by United Nations and Communist Forces at Panmunjom, bringing to an end over three years of fighting. First Australian-built jet fighter made initial test flight. Pearl Fisheries Act providing for stricter control of pearl fisheries. Australia proclaimed sovereignty over sea-bed, subsoil and continental shelf adjoining Australia and Australian territories but agreed to submit issues arising from the Pearl Fisheries Act to the International Court of Justice for adjudication. Commonwealth Court of Conciliation and Arbitration refused applications by employers for reduction of current basic wages and for an increase of standard hours of work, and also refused applications by unions for increases of basic wages. The employers' applications for abandonment of the system of automatic adjustment of the basic wage in accordance with retail price index-numbers were, however, granted. Later, the extension by the Court, on its own motion, of this decision to awards not the subject of an application before the Court was challenged in the High Court by the unions concerned but the power of the Arbitration Court to so vary awards was upheld. Arrangements made with United Kingdom for sharing cost of guided missile research at Woomera, South Australia. Atomic weapons exploded north of Woomera. Commonwealth Trading Bank of Australia commenced operations. Oil, stated to be a very high grade crude oil, discovered at Exmouth Gulf, about 680 miles north of Perth.

# STATISTICAL SUMMARY, AUSTRALIA.

NOTE.—(1) In most cases where figures are available back to 1861, these were shown in Official Year Book No. 39, pp. xxviii-xxix.

(2) Most of the statistics in this Summary relate to the periods shown in the table headings. In those comparatively few cases where the statistics relate to other periods, this is indicated in footnotes.

(j) Excludes Australian National University. (k) Teaching and research staff. Includes part-time. (l) Year 1891-92 for Victoria. (m) Adelaide Hospital only included in South Australia.

## APPENDIX.

(Some recent information which has come to hand since the various chapters were sent to press is given hereunder in summarized form. For further or more detailed information, as also the latest available statistics, reference should be made to other publications issued by this Bureau (see pages 1175-7), notably the *Monthly Review of Business Statistics* and the *Quarterly Summary of Australian Statistics*.)

## CHAPTER II.—PHYSIOGRAPHY.

## § 2. Climate and Meteorology of Australia.

**Rainfall : Australian Capital Cities, p. 28.**—Rainfall recorded in Australian capital cities during 1953 (1952 in parentheses) was as follows :—Canberra, 19.40 ins. (37.87 ins.); Perth, 37.14 ins. (39.28 ins.); Adelaide, 20.00 ins. (19.99 ins.); Brisbane, 43.60 ins. (33.49 ins.); Sydney, 40.86 ins. (59.19 ins.); Melbourne, 28.38 ins. (34.39 ins.); Hobart, 28.06 ins. (30.35 ins.).

## CHAPTER III.—GENERAL GOVERNMENT.

## § 1. Scheme of Parliamentary Government.

**The Sovereign, p. 49.**—On 3rd February, 1954, Her Majesty Queen Elizabeth the Second, accompanied by His Royal Highness the Duke of Edinburgh, arrived in Australia on a visit to all States and the Australian Capital Territory, the first occasion on which the reigning Sovereign has visited Australia. Foremost amongst the official acts performed by Her Majesty was the opening of the Commonwealth Parliament in Canberra on 15th February, 1954.

**Number and Salary of Members of the Legislatures, p. 52.**—From 1st July, 1953, the annual salary of members of the South Australian Legislature was increased to £1,425-£1,500 for both Houses, according to distance of electorate from Adelaide. From April, 1953, the annual salary of members of the Western Australian Legislature was increased to £1,340 for both Houses, subject to adjustment in accordance with variations of the State basic wage (on every £20 per annum rise). As formerly, an allowance of £50 is also payable where any part of the electorate is more than 50 miles from Perth.

## § 2. Parliaments and Elections.

**Commonwealth Elections, p. 55.**—A Commonwealth election for the Senate was held on 9th May, 1953. Particulars of electors and voting in the several States are shown below :—

## COMMONWEALTH ELECTION : SENATE, 9th MAY, 1953.

<i>Premier, Treasurer and Minister of Immigration—</i>	<i>Minister of Works and Minister of Marine—</i>
THE HON. T. PLAYFORD.	THE HON. M. MCINTOSH.
<i>Chief Secretary, Minister of Health and Minister of Mines—</i>	<i>Minister of Agriculture and Minister of Forests—</i>
THE HON. A. L. MCEWIN, M.L.C.	THE HON. SIR GEORGE F. JENKINS, K.B.E.
<i>Attorney-General and Minister of Industry and Employment—</i>	<i>Minister of Education—</i>
THE HON. R. J. RUDALL, M.L.C.	THE HON. B. PATTINSON.
<i>Minister of Lands, Minister of Repatriation and Minister of Irrigation—</i>	<i>Minister of Local Government, Minister of Roads and Minister of Railways—</i>
THE HON. C. S. HINCKS.	THE HON. N. L. JUDE, M.L.C.

## WESTERN AUSTRALIA (from 23rd February, 1953).

<i>Premier, Treasurer and Minister for Child Welfare and Industrial Development—</i>	<i>Minister for Railways, Transport and Police—</i>
THE HON. A. R. G. HAWKE.	THE HON. H. H. STYANTS.
<i>Minister for Education, Works and Water Supplies—</i>	<i>Minister for Health and Justice—</i>
THE HON. J. T. TONKIN.	THE HON. E. NULSEN.
<i>Minister for Native Welfare, Labour and Prices—</i>	<i>Minister for Housing and Forests—</i>
THE HON. W. HEGNEY.	THE HON. H. E. GRAHAM.
<i>Chief Secretary and Minister for Local Government and Town Planning—</i>	<i>Minister for Mines and Fisheries—</i>
THE HON. G. FRASER, M.L.C.	THE HON. L. F. KELLY.
<i>Minister for Lands and Agriculture—</i>	<i>Minister for the North-West and Supply and Shipping—</i>
THE HON. E. K. HOAR.	THE HON. H. C. STRICKLAND, M.L.C.

The foregoing lists show the complete ministries as reconstituted following, respectively, the Legislative Assembly elections in New South Wales on 14th February, 1953, and in Queensland on 7th March, 1953, the appointment of two additional members to the South Australian Ministry on 15th December, 1953, and the Legislative Assembly election in Western Australia on 14th February, 1953. The following particulars refer to changes involving certain Ministers only :—

## VICTORIA.

Following the resignation of the Hon. R. W. Holt, the Hon. J. H. Smith, Minister without Portfolio, was elevated to the position of Commissioner of Crown Lands and Survey, Minister of Soldier Settlement, Minister for Conservation and President of the Board of Land and Works, and was succeeded as Minister without Portfolio by the Hon. M. J. Gladwin.

## § 5. Cost of Parliamentary Government, p. 71.

The cost of Parliamentary Government, Commonwealth and individual States, for the year 1951-52 was as follows :—

Commonwealth, £1,853,709 (4s. 4d. per head); New South Wales, £508,024 (3s.); Victoria, £407,278 (3s. 6d.); Queensland, £298,401 (4s. 11d.); South Australia, £215,673 (5s. 11d.); Western Australia, £294,441 (10s.); Tasmania, £156,982 (10s. 6d.); and total, £3,734,508 (8s. 9d.).

The amounts expended under the major headings for all Governments during 1951-52 were :—Governor-General or Governor, £356,865; Ministry, £245,540; Parliament, £2,384,205; Electoral, £707,816.

## CHAPTER IV.—LAND TENURE AND SETTLEMENT.

## § 9. Settlement of Returned Service Personnel: 1939-45 War.

War Service Land Settlement Scheme, pp. 82-5.—At 30th June, 1953, an area of 13,944,944 acres had been submitted by the several States for land settlement. Of this, 11,498,123 acres had been approved by the Commonwealth as suitable for soldier settlement and 9,294,722 acres had actually been acquired by the States. The acreages and holdings allotted to ex-servicemen by the States at 30th June, 1953 were as follows:—New South Wales, 5,603,961 (2,002); Victoria, 789,846 (1,847); Queensland, 216,480 (442); South Australia, 204,457 (536); Western Australia, 1,061,565 (679); Tasmania, 91,363 (136); total, 7,967,672 (5,642).

The total expenditure of the War Service Land Settlement Division to 30th June, 1953, £43,837,805, includes War Service Land Settlement, £33,112,502; agricultural loans, £6,201,644; agricultural allowances, £2,260,115; administrative expenses, £855,300; rural training, £1,408,244. Aggregate expenditure in the States and Territories to 30th June, 1953, was as follows:—New South Wales, £4,757,966; Victoria, £2,726,683; Queensland, £1,471,186; South Australia, £11,374,865; Western Australia, £17,962,304; Tasmania, £5,528,006; Northern Territory, £10,748; New Guinea, £6,047.

After deducting repayments of expenditure to 30th June, 1953, £4,890,309 and miscellaneous receipts, £3,597,987, the net expenditure to 30th June, 1953 was £35,349,509.

## § 11. Alienation and Occupation of Crown Lands.

Summary, p. 96.—The alienation and occupation of Crown lands in Australia at 31st December, 1952, were as follows:—

Private Lands—149,897,000 acres (7.87 per cent.) alienated; 33,296,000 acres (1.75 per cent.) in process of alienation.

Crown Lands—1,011,788,000 acres (53.15 per cent.) leased or licensed; 708,751,000 acres (37.23 per cent.) other Crown lands.

## CHAPTER V.—TRANSPORT AND COMMUNICATION.

## A. SHIPPING.

## § 2. Oversea Shipping and § 5. Interstate Shipping.

Summary of Movements, pp. 98, 105.—The following table summarizes the entrances of oversea and interstate shipping in the several States during the years 1951-52 and 1952-53:—

## OVERSEA AND INTERSTATE SHIPPING: ENTRANCES OF VESSELS, 1951-52 AND 1952-53.

State or Territory of Entry.	1951-52.						1952-53.

(a) Includes £82,375 Commonwealth proportion of Grafton-South Brisbane Line.  
(c) Partly estimated.

(b) Estimated.

NOTE.—Minus sign (—) denotes loss.

At 30th June, 1952, route mileage open was 26,847 and during the year 1951-52 gross revenue was £139,518,000, working expenses £148,174,000, net revenue —£8,656,000, interest £12,180,000, train-miles run 93,363,000, passenger-journeys 500,510,000 and goods, etc., carried 44,841,000 tons.

### C. TRAMWAYS.

**Summary of Operations, p. 130.**—The following is a summary of the operations of all electric tramways in Australia during the year 1952-53 (1951-52 in parentheses):—Route-mileage open for traffic at 30th June was 544 (560); gross revenue, £15,968,000 (£15,121,000); working expenses, £18,420,000 (£17,109,000); net revenue, —£2,452,000 (—£1,988,000); interest, £628,000 (£536,000); car-miles run, 65,895,000 (67,923,000); passenger-journeys, 647,417,000 (685,724,000).

### D. MOTOR OMNIBUS SERVICES.

**Government and Municipal Services, p. 133.**—The following is a summary of the operations of government and municipal motor omnibus services in Australia during 1952-53 (1951-52 in parentheses):—Length of route, 4,533 miles (4,458 miles); gross revenue, £9,320,000 (£8,542,000); working expenses, £11,465,000 (£10,298,000); bus-mileage run, 55,672,000 (54,124,000); passenger-journeys, 336,462,000 (333,200,000).

**Private Services, p. 134.**—The following is a summary of the operations of motor omnibus services under the control of private operators during 1952-53 (1951-52 in parentheses) in the States of New South Wales, Victoria, South Australia and Western Australia respectively:—Gross revenue, £2,347,000 (£2,342,000); £1,839,000 (£1,601,000); £633,000 (£593,000); £1,576,000 (£1,432,000); bus-mileage run, 20,613,000 (17,358,000); 17,548,000 (17,985,000); 5,972,000 (5,926,000); 11,976,000 (12,331,000); passenger-journeys, 87,274,000 (94,917,000); 84,006,000 (79,928,000); 12,816,000 (12,516,000); 34,592,000 (34,546,000)

### F. MOTOR VEHICLES.

**Motor Vehicle Registrations, pp. 139-40.**—Motor vehicles registered at 30th June, 1953 and new motor vehicles registered during 1952-53 were as follows:—

#### MOTOR VEHICLES : REGISTRATIONS, 1952-53.

(Excluding Defence Service Vehicles)

State or Territory.	Number of Motor Vehicles Registered at 30th June, 1953.(a)				Number of New Motor Vehicles Registered, 1952-53.(a)

(a) Excludes trailers, road tractors, etc., and dealers' plates. (b) Includes taxis and hire cars.  
 (c) Includes lorries, vans, buses and utilities. (d) Includes vehicles registered as primary producers' vehicles.  
 (e) Not available. (f) Excludes motor cycles, Northern Territory.

Drivers' and riders' licences in force at 30th June, 1953 numbered 2,288,370.

Gross revenue derived during 1952-53 from vehicles' registration and motor tax amounted to £18,779,761, and from licences, etc., £1,403,019, from miscellaneous receipts, £3,708,435—total, £23,891,215.

At 30th June, 1952 there were 1,032,358 motor cars, 583,247 commercial vehicles and 154,579 motor cycles on Australian registers—a total of 1,770,184 vehicles. New vehicles registered in Australia during 1951-52 numbered:—Motor cars, 125,319; commercial vehicles, 73,461; motor cycles, 22,155; total, 220,935.

During 1951-52 gross revenue derived from vehicles' registration and motor tax amounted to £15,995,554, from licences, etc., £1,336,530 and from miscellaneous receipts, £3,607,266—total, £20,939,350.

At 30th June, 1952 drivers' and riders' licences in force numbered 2,194,167.

### G. TRAFFIC ACCIDENTS.

**Total Accidents Reported, p. 141.**—The following table is a summary of the total number of accidents (known to the police) which occurred in public thoroughfares during the years 1951-52 and 1952-53, the number involving casualties and the number of persons killed or injured in each State and the Commonwealth excluding the Northern Territory.

#### ACCIDENTS (KNOWN TO THE POLICE) WHICH OCCURRED IN PUBLIC THOROUGHFARES: ACCIDENTS RECORDED AND CASUALTIES, 1951-52 AND 1952-53.

State or Territory.	1951-52.				1952-53.

Total ..	68,110	31,144	2,054	38,376	75,295	31,635	1,856	39,405

(a) Total accidents causing death or injury to persons or damage exceeding £10 to property. (b) Persons injured to an extent requiring surgical or medical treatment. (c) Includes, for the metropolitan area, all accidents causing death or injury to persons or damage exceeding £10 to property. For the remainder of the State, prior to 1st January, 1953, only those accidents causing fatal or "near-fatal" injuries are included. Since that date, statistics have been collected on a basis comparable with that for the other States.

### H. AVIATION.

**International Activity.**—(ii) *International Air Services*, p. 144. On 16th March, 1954, the British, Australian and New Zealand Governments jointly announced major changes in the organization of trans-Pacific and trans-Tasman airline operations. The following is a summary of the proposed changes:—

Qantas Empire Airways and British Overseas Airways Corporation will continue in parallel partnership on the Kangaroo route. British Commonwealth Pacific Airlines' trans-Pacific services between Australia and North America will be taken over by Q.E.A., and when B.O.A.C.'s services are extended to San Francisco, these Q.E.A. services will connect with them. (Q.E.A. took over the services to North America on 15th May, 1954.) Tasman Empire Airways will connect with these world routes at both Sydney and Nadi (Fiji). The services between Australia and New Zealand and between Auckland and

Nadi will be operated by Tasman Empire Airways, which is now owned by the Australian and New Zealand Governments as equal partners, the aircraft being based in New Zealand.

**Statistical Summaries, pp. 147-8.**—The following is a summary of civil aviation for Australia in 1951-52 and 1952-53:—At 30th June, 1953 (1952 in parentheses):—Registered aircraft owners, 369 (343); registered aircraft, 821 (786); pilots' licences—private, 1,677 (1,444), commercial, 518 (470), student, 2,639 (2,644), 1st class airline transport, 495 (513), 2nd class, 45 (35), 3rd class, 371 (400); flight navigators', 163 (155); during 1952-53 (1951-52 in parentheses)—Accidents—persons killed, 6 (37), persons injured, 19 (22).

Regular internal services' operations during 1952-53 (1951-52 in parentheses) showed the following results:—Hours flown, 237,640 (260,947); miles flown, 39,059,000 (41,831,000); paying passengers, 1,706,446 (1,828,506); paying passenger-miles, 667,321,000 (721,573,000). Freight—Actual short tons, 57,635 (57,464); ton-miles, 27,167,000 (26,684,000). Mail—Actual short tons, 3,311 (2,681); ton-miles, 1,166,000, (1,285,000).

The operations of services between Australia and oversea countries during 1952-53 (1951-52 in parentheses) were as follows:—Route-miles, 66,558 (43,455); hours flown, 54,148 (50,336); miles flown, 11,565,000 (10,664,000); paying passengers, 97,753 (95,134); paying passenger-miles, 275,206,000 (265,756,000); Freight—Actual short tons, 1,957 (2,138); ton-miles, 7,401,000 (6,716,000); Mail—Actual short tons, 1,168 (1,141); ton-miles, 6,122,000 (6,162,000).

## I. POSTS, TELEGRAPHS, TELEPHONES AND WIRELESS.

### § 1. General to § 4. Telephones.

**Summary of Operations, pp. 149-61.**—The following table is a summary of the operations of the Postmaster-General's Department during the years 1951-52 and 1952-53:—

#### POSTMASTER-GENERAL'S DEPARTMENT: SUMMARY OF OPERATIONS, 1951-52 AND 1952-53.

State.	Gross Revenue.	Expenditure.	Total Postal Matter Dealt with. (a)	Money Orders Issued, value.	Postal Notes Issued, value.	Telegrams Dispatched.	Telephones.

## CHAPTER VIII.—LABOUR, WAGES AND PRICES.

### A. RETAIL PRICES AND PRICE INDEXES.

#### § 6. Tabular Statements of Retail Price Index-Numbers.

"C" Series Retail Price Index, p. 269.—The following table shows the "C" Series index-numbers for the March to December quarters, 1953 for each capital city and for the six capital cities combined, showing separate series for each of the four main groups of items:—

#### "C" SERIES RETAIL PRICE INDEX-NUMBERS(a): CAPITAL CITIES.

(Base of each Group: Weighted average of Six Capital Cities, 1923-27 = 1,000.)

Period.	Sydney.	Mel-bourne.	Brisbane.	Adelaide.	Perth.	Hobart.	Six Capitals. (b)
GROUP I.—FOOD AND GROCERIES.							
Mar. Qtr., 1953 ..	2,664	2,598	2,361	2,371	2,492	2,641	2,572
June " " ..	2,669	2,653	2,372	2,411	2,594	2,698	2,605
Sept. " " ..	2,758	2,728	2,429	2,478	2,690	2,890	2,686
Dec. " " ..	2,751	2,757	2,488	2,514	2,656	2,981	2,702

For footnotes see next page.

"C" SERIES RETAIL PRICE INDEX-NUMBERS (a) : CAPITAL CITIES—  
continued.

Period.	Sydney.	Mel- bourne.	Brisbane.	Adelaide.	Perth.	Hobart.	Six Capitals. (b)
GROUP II.—HOUSING (4 AND 5-ROOMED HOUSES).(c)							
Mar. Qtr., 1953 ..	1,245	985	972	1,147	1,194	1,234	1,122
June " " ..	1,274	986	974	1,154	1,199	1,245	1,136
Sept. " " ..	1,287	989	986	1,157	1,210	1,251	1,144
Dec. " " ..	1,299	990	993	1,160	1,215	1,265	1,151

GROUPS I. AND II.—FOOD, GROCERIES AND HOUSING ("B" SERIES INDEX).

Mar. Qtr., 1953 ..	2,105	1,963	1,814	1,888	1,980	2,087	2,001
June " " ..	2,119	1,997	1,821	1,915	2,044	2,125	2,026
Sept. " " ..	2,178	2,044	1,861	1,957	2,107	2,244	2,079
Dec. " " ..	2,178	2,062	1,900	1,980	2,088	2,305	2,091

GROUP III.—CLOTHING.

Mar. Qtr., 1953 ..	3,246	3,188	3,083	3,195	3,172	3,162	3,200
June " " ..	3,305	3,225	3,104	3,254	3,192	3,210	3,245
Sept. " " ..	3,276	3,200	3,116	3,257	3,195	3,230	3,228
Dec. " " ..	3,263	3,191	3,110	3,235	3,181	3,247	3,217

GROUP IV.—MISCELLANEOUS.

Mar. Qtr., 1953 ..	2,039	2,086	1,903	2,104	2,033	2,086	2,048
June " " ..	2,044	2,089	1,908	2,095	2,039	2,088	2,051
Sept. " " ..	2,039	2,093	1,922	2,097	2,041	2,185	2,054
Dec. " " ..	2,040	2,093	1,980	2,096	2,042	2,188	2,060

GROUPS I. TO IV.—"C" SERIES INDEX.

Mar. Qtr., 1953 ..	2,338	2,250	2,105	2,210	2,247	2,317	2,268
June " " ..	2,360	2,279	2,115	2,238	2,290	2,351	2,293
Sept. " " ..	2,388	2,301	2,143	2,264	2,328	2,444	2,321
Dec. " " ..	2,385	2,310	2,176	2,272	2,314	2,485	2,327

(a) The index-numbers given in the separate parts of the table cannot be compared with each other in order to show the relative cost of food and groceries, housing, etc., since the cost in 1923-27 in each group or combination is made equal to 1,000. (b) Weighted average. (c) The rent index-numbers measure the proportionate rise and fall in the average weekly rentals paid for houses of four and five rooms taking corresponding houses throughout. See footnote (b) on page 265.

## B. WHOLESALE PRICES AND PRICE INDEXES.

### § 2. Wholesale Price (Basic Materials and Foodstuffs) Index.

Index-numbers, p. 276.—Index-numbers for each group of commodities and for all groups combined for the index of wholesale prices of basic materials and foodstuffs are shown below for the year 1952-53 and the six months ended December, 1953.

## WHOLESALE PRICE (BASIC MATERIALS AND FOODSTUFFS) INDEX-NUMBERS.

(Base of each group : Average of three years ended June, 1939 = 100.)

Period.	Basic Materials.							Food-stuffs and Tobacco.	Basic Materials and Foodstuffs.		
	Metals and Coal.	Oils, Fats and Waxes.	Textiles.	Chemicals.	Rubber and Hides.	Building Materials.	Total.		Goods principally Imported.	Goods principally Home Produced.	Total All Groups

31st December, 1953	7,302	7,392	6,940	7,342	7,007	7,226	7,285

(a) Weighted average for Australia.

## § 3. Basic Wages in Australia.

Basic Wage and Standard Hours Inquiry, 1952-53.—On 5th August, 1952 the Commonwealth Court of Conciliation and Arbitration began hearing claims by:—

(1) The Metal Trades Employers' Association and other employers' organizations—

- (a) that the basic wage for adult males be reduced ;
- (b) that the basic wage for adult females be reduced ;
- (c) that the standard hours of work be increased ;
- (d) that the system of adjusting the basic wages in accordance with variations occurring in retail price index-numbers be abandoned.

(2) The Metal Trades Federation, an association of employees' organizations, that the basic wage for adult males be increased, which would also result in increasing the amount, though not the proportion it bears to the basic wage for adult males, of the basic wage for adult females.

The Court consisted of Kelly *C.J.*, Foster, Kirby, Dunphy, Wright, McIntyre and Morgan *JJ.*, but before the hearing of evidence commenced Wright *J.* withdrew and during the hearing of the case Foster *J.* withdrew from the bench. The Court gave its decision on 12th September, 1953 and stated that reasons for its decision would be delivered later. Before the reasons for the judgment could be delivered McIntyre *J.*, who had been ill during the case, died.

The hearing of evidence for employers began on 16th September, 1952 and the hearing of evidence for employees concluded on 11th September, 1953. After the employers had finished their case and before the employees had commenced theirs, the counsel for employees applied to the Court to have the case dismissed on the grounds that "no case" had been made out by the employers. The Court, however, rejected this claim.

The decision of the Court, announced on 12th September, 1953. was expressed in the following terms :—

" 1. The employers' applications for reduction of the current basic wage for adult males and for reduction of the current basic wages for adult females are refused.

2. The employers' applications for an increase of the standard hours of work in the industries covered thereby are refused.

3. The employers' applications for omission or deletion of clauses or sub-clauses providing for the adjustment of basic wages are granted.

4. The Unions' application for increases of basic wages are refused.

The Court makes orders accordingly, to operate as from to-day.

The reasons for the above decision will be delivered at a later date.

The form of the appropriate orders will be settled by the Industrial Registrar."

This decision applied to awards within the jurisdiction of the Commonwealth Court of Conciliation and Arbitration.

The reasons for the decision were delivered on 27th October, 1953.

**Commonwealth Basic Wage Rates, p. 294.**—The following basic weekly wage rates for adult males for each capital city and the six capitals were operative during 1953 :—

**BASIC WAGE : WEEKLY RATES, CAPITAL CITIES, PRESCRIBED BY COMMONWEALTH COURT OF CONCILIATION AND ARBITRATION FOR ADULT MALES.**

Date Operative.(a)	Sydney.	Mel-bourne.	Brisbane.	Adelaide.	Perth.	Hobart.	Six Capitals.

1953—							
February ..	238 0	229 0	215 0	225 0	229 0	232 0	231 0
May ..	241 0	232 0	217 0	228 0	231 0	239 0	234 0
August(b) ..	243 0	235 0	218 0	231 0	236 0	242 0	236 0

(a) Generally from the beginning of the first pay-period commencing in the month indicated.  
 (b) By the decision of the Commonwealth Court of Conciliation and Arbitration, announced on 12th September, 1953, automatic adjustment of basic wages in accordance with variations occurring in retail price index-numbers was discontinued in Commonwealth awards either then the subject of applications before the Court or subsequently reviewed in this connexion.

State Basic Wage Rates, p. 299.—The table below shows the "basic" weekly wage rates of State industrial tribunals, operative in November, 1952 and 1953.

## STATE BASIC WAGE—WEEKLY RATES.

State.	November, 1952.			November, 1953.		
	Date of Operation.	Males.	Females.	Date of Operation.	Males.	Females.
		<i>s. d.</i>	<i>s. d.</i>		<i>s. d.</i>	<i>s. d.</i>
New South Wales—

Goldfields and other areas ..	27.10.52	244 2	158 9	(h)	249 4	162 1
Tasmania(c) .. .. .	(a)	230 0	172 6	(i)	242 0	181 6

(a) Beginning of first pay-period commencing in November, 1952.

(b) Automatic adjustment of basic wages was discontinued by the State Industrial Tribunal following the decision of the Commonwealth Court of Conciliation and Arbitration.

(c) None declared. Rates shown (capital city) are those commonly adopted by Wages Boards.

(d) The Victorian Factories and Shops (Wages Boards) Act 1953 (proclaimed 25th November, 1953) required Wages Boards in Victoria to provide for the automatic adjustment of wage rates and piece work prices in accordance with variations in retail price index numbers.

(e) Payable from date in November or December prescribed in determinations. (f) Allowances added for other areas:—Males—Southern Division (Western District), 7s. 4d.; Mackay Division, 5s. 6d.; Northern Division (Eastern District), 10s.; Northern Division (Western District), 17s. 4d.; Females—Half of these allowances.

(g) The "living wage" declared for the metropolitan area is also adopted in country areas except at Whyalla where a loading of 5s. is generally payable. The "living wage" is subject to quarterly variation according to the amount of the general automatic quarterly adjustment in the Commonwealth basic wage (discontinued on 12th September, 1953) for Adelaide.

(h) Following the suspension of quarterly adjustments to the Commonwealth basic wage, the State Arbitration Court declined on 13th November, 1953, to make any quarterly adjustment to the State basic wages.

(i) See note (c) above. However, in Tasmania, increases of 10s. for adult males and 7s. 6d. for adult females were paid from early November, but ceased to operate from 9th December, when automatic adjustments were discontinued.

**Average Weekly Total Wages Paid and Average Earnings.**—The following figures are derived from employment and wages recorded on Pay-roll Tax Returns (which cover approximately 80 per cent. of the total employment for Australia) and from estimates of the unrecorded balance. The figures relate to civilian wages and salaries only, pay and allowances of members of the armed forces being excluded. Quarterly figures, also, are published in the *Quarterly Summary of Australian Statistics* and in the *Monthly Review of Business Statistics*, which contains, in addition, an index of average weekly wage earnings, seasonally adjusted.

1950-51 .. ..	11.46	11.70	9.82	10.58	10.23	9.99	11.09
1951-52 .. ..	14.24	14.20	11.93	13.13	12.80	12.59	13.65
1952-53 .. ..	15.50	15.46	13.32	14.58	14.13	13.97	14.95

(a) Includes Australian Capital Territory. (b) Includes Northern Territory. (c) Male units represent total male employment plus a proportion of female employment based on the approximate ratio of female to male earnings. The same ratio has been used in each State, and because the average ratio of female to male earnings may vary between States, precise comparisons between average earnings in different States cannot be made on the basis of the figures above.

## E. EMPLOYMENT AND UNEMPLOYMENT.

### § 1. Employment.

**Wage and Salary Earners in Civilian Employment, pp. 303-4.**—The following are particulars of wage and salary earners in civilian employment, excluding rural wage earners, females in domestic work in private homes, persons on the paid strength of the Defence Forces and National Service trainees in camp, for the month of June, 1953:—

#### WAGE AND SALARY EARNERS IN CIVILIAN EMPLOYMENT, JUNE, 1953.

*(Excluding Rural Wage Earners, Female Domestic in Private Homes, Persons on Paid Strength of Defence Forces and National Service Trainees in Camp.)*

('000.)

Particulars.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Aust.(a)
Males .. ..	734.3	521.6	255.2	170.6	130.2	61.8	1,886.8
Females .. ..	266.2	205.9	83.7	53.4	41.0	20.1	673.7

Persons .. ..	679.8	1,880.7	58.9	869.2	331.3	234.9	262.5

(a) Includes Australian Capital Territory and Northern Territory. (b) Includes all employees of Governmental Authorities (Commonwealth, State, Local and Semi-Governmental) on services such as railways, tramways, banks, post office, air transport, education, broadcasting, police, public works, factories and munitions establishments, migrant hostels, etc., as well as administrative employees within Australia. (c) Subject to revision.

**Government Employees, p. 305.**—The number of Government employees in Australia in June, 1953 was as follows:—

Commonwealth Government: Males, 159,000; Females, 41,600; Persons, 200,600.

State Government and Semi-Government Bodies: Males, 349,100; Females, 65,100; Persons, 414,200.

Local Government Authorities: Males, 59,700; Females, 5,300; Persons, 65,000.

Total: Males, 567,800; Females, 112,000; Persons, 679,800.

## § 2. Unemployment.

**Unemployment in Reporting Trade Unions, pp. 307-8.**—The following particulars relate to unemployment of members of trade unions during the June quarter of 1953:—  
Australia: Unions reporting, 365; Membership, 853,668; Unemployed—Number, 26,417; Percentage, 3.1. States: Percentage Unemployed—New South Wales, 3.5; Victoria, 3.7; Queensland, 2.0; South Australia, 2.4; Western Australia, 1.2; Tasmania, 3.3.

## § 4. Industrial Disputes.

**Summary of Disputes (involving Stoppage of Work), p. 315.**—The following table shows particulars of industrial disputes in each State and Territory during 1953:—

### INDUSTRIAL DISPUTES: SUMMARY, 1953.

State or Territory.	Number.	Workpeople Involved.			Working Days Lost.	Estimated Loss in Wages.
		Directly.	Indirectly. (a)	Total.		
New South Wales(b)	1,050	302,007	6,375	308,382	759,391	£ 2,403,242
Victoria	53	65,962	2,164	68,126	57,160	176,330

Australia(b)	1,459	483,800	12,246	496,046	1,050,830	3,337,437

(a) Persons thrown out of work at the establishments where the stoppages occurred but not themselves parties to the dispute. (b) Includes disputes uncompleted at end of 1952.

## CHAPTER IX.—POPULATION.

### § 3. Growth and Distribution of Population.

**Growth of Population, pp. 328-30.**—The following table shows the estimated population of each State and Territory at 31st December, 1953:—

#### ESTIMATED POPULATION. (EXCLUDING FULL-BLOOD ABORIGINALS.)

Population—	N.S.W.	Vic.	Qld.	S.A.	W.A.	Tas.	N.T.	A.C.T.	Aust.
At 31st Decem-ber, 1953—									
Males	1,747,953	1,214,862	645,689	380,278	326,935	168,471	10,048	18,353	4,512,589
Females	1,724,341	1,190,434	624,692	385,242	306,596	154,341	6,898	12,630	4,405,174
Persons	3,472,294	2,405,296	1,270,381	765,520	633,531	322,812	16,946	30,983	8,917,763

### § 4. Mean Population.

Mean Population, p. 335.—Mean populations for the calendar year ended 31st December, 1953 and for the financial year ended 30th June, 1953 are as follows :—

MEAN POPULATION.  
(EXCLUDING FULL-BLOOD ABORIGINALS.)

Period.	N.S.W.	Vic.	Qld.	S.A.	W.A.	Tas.	N.T.	A.C.T.	Aust.
Year ended—									
30th June, 1953	3,420,171	2,362,440	1,248,823	749,500	612,735	308,926	16,353	28,428	8,747,376
31st Dec., 1953	3,445,165	2,385,011	1,261,435	757,765	622,697	313,196	16,747	29,712	8,831,728

### § 5. Elements of Increase.

Natural Increase, p. 336, Increase by Net Migration, p. 339 and Total Increase, p. 341.—The following table shows particulars of natural increase, increase by net migration and total increase during the year 1953 :—

#### POPULATION : NATURAL INCREASE, INCREASE BY NET MIGRATION AND TOTAL INCREASE, 1953.

(EXCLUDING FULL-BLOOD ABORIGINALS.)

Particulars.	N.S.W.	Vic.	Qld.	S.A.	W.A.	Tas.	N.T.	A.C.T.	Aust.
NATURAL INCREASE (EXCESS OF BIRTHS OVER DEATHS).									
Persons ..	43,183	30,911	19,776	11,194	10,790	5,185	344	664	122,047
Rate(a) ..	12.54	12.96	15.68	14.77	17.32	16.55	20.54	22.35	13.82
INCREASE BY NET MIGRATION.									
Persons ..	7,343	17,562	2,715	2,791	8,258	1,672	718	1,838	42,897
TOTAL INCREASE.									
Persons ..	50,526	48,473	22,491	13,985	19,048	6,857	1,062	2,502	164,944

(a) Excess of births over deaths per 1,000 of mean population.

### § 9. Oversea Migration.

Classes of Arrivals and Departures, p. 362.—Arrivals and departures during 1953 were :—Permanent new arrivals, 74,915 ; Australian residents returning from abroad, 42,695 ; temporary visitors arriving, 45,515 ; total arrivals, 163,125 : Australian residents departing permanently, 32,032 ; Australian residents departing temporarily, 39,946 ; temporary visitors departing, 48,250 ; total departures, 120,228.

## CHAPTER X.—VITAL STATISTICS.

## § 1. Marriages, § 2. Fertility and Reproduction, and § 3. Mortality.

Numbers and Rates, pp. 377-8, 382, 387, 398-9 and 403-4.—The following table shows totals and rates for marriages, live births, deaths and infant deaths for 1953 :—

## MARRIAGES, BIRTHS, DEATHS AND INFANT DEATHS, 1953.

Particulars.	N.S.W.	Vic.	Qld.	S.A.	W.A.	Tas.	N.T.	A.C.T.	Aust.
Marriages .. {									
Number	27,573	19,238	9,859	6,149	5,032	2,424	154	211	70,640

Summarized tables of Australian marriage statistics for 1952 will be found in the *Monthly Australian Demographic Review*, No. 31, July, 1953.

## § 2. Fertility and Reproduction.

**Gross and Net Reproduction Rates for Females, pp. 389-90.**—In 1952 the gross reproduction rate was 1.547 and the net reproduction rate (based on 1946-48 mortality experience) was 1.468.

**Fertility of Marriages, p. 391.**—For the year 1952 the number of nuptial confinements per marriage on the basis explained on p. 391 was 2.63. This figure must be read in conjunction with the text on that page.

**Age, Duration of Marriage and Issue of Mothers, p. 394.**—The following table shows for 1952 the number of married mothers according to each duration of marriage together with the total issue and average issue in each group.

Duration of Marriage (Years).	Total Married Mothers.	Total Issue.	Average Issue.	Duration of Marriage (Years).	Total Married Mothers.	Total Issue.	Average Issue.
0-1	25,169	25,632	1.02	14-15	2,388	11,259	4.71
1-2	24,346	29,162	1.20	15-16	1,971	9,919	5.03
2-3	21,797	36,403	1.67	16-17	1,634	8,822	5.40
3-4	20,007	40,052	2.00	17-18	1,219	6,845	5.62
4-5	18,415	42,251	2.29	18-19	896	5,381	6.01
5-6	15,787	41,202	2.61	19-20	707	4,467	6.32
6-7	12,209	34,707	2.84	20-21	537	3,509	6.53
7-8	9,006	27,496	3.05	21-22	345	2,476	7.18
8-9	7,514	24,837	3.31	22-23	318	2,223	6.99
9-10	7,381	25,430	3.45	23-24	203	1,596	7.86
10-11	6,998	25,317	3.62	24-25	141	1,178	8.35
11-12	5,241	20,687	3.95	25 and over	168	1,470	8.75
12-13	4,190	17,360	4.14				
13-14	3,083	13,798	4.48	<b>Total</b>	<b>191,670</b>	<b>463,479</b>	<b>2.42</b>

The average number of children born to mothers in the various age groups in 1952 was :—Under 20 years, 1.20; 20–24 years, 1.65; 25–29 years, 2.29; 30–34 years, 2.99; 35–39 years, 3.69; 40–44 years, 4.55; and 45–49 years, 5.53. The average for mothers of all ages was 2.42.

A classification of mothers by age group and previous issue is given for 1952 in the following table :—

**NUPTIAL CONFINEMENTS : AGE OF MOTHER AND PREVIOUS ISSUE, AUSTRALIA, 1952.**

Previous Issue.	Age of Mother (Years).							Total Married Mothers.
	Under 20.	20–24.	25–29.	30–34.	35–39.	40–44.	45 and over.

## CHAPTER XI.—EDUCATION.

## § 8. Universities.

**Commonwealth Grants, pp. 463-4.**—The States Grants (Universities) Act No. 75 of 1953 (assented to 10th December, 1953) repealed the 1951 Act, and shall be deemed to have come into operation on 1st January, 1953. The main provisions are summarized below :—

Section 5 (1).—If the sum of the fees and State grants received by a University during either of the years 1953 and 1954 exceeds the amount specified in column 2 of the table below, the grant to the State for that year is—

- (a) an amount equal to one-third of the excess, and
- (b) the amount shown in column 3 of the table.

Section 5 (2).—The maximum amount payable under Section 5 (1.) (a) above is shown in column 4.

Section 6.—The State will, in the year in which payment is received, pay to the University concerned an amount equal to the grants received and must ensure that—

- (a) the grant under Section 5 (1.) (a) is applied for expenditure, not being capital expenditure, on university purposes ;
- (b) of the grant under Section 5 (1.) (b), the amount shown in column 5 is applied towards the teaching and administrative costs of the residential colleges of the University and the remainder for expenditure, not being capital expenditure, on university purposes.

Section 9.—The provisions of the 1951 Act shall be deemed to have operated in respect of the year 1952 as if the amounts set out on page 464 of Chapter XI.—Education in relation to the New South Wales University of Technology had been the following :—  
£7,280 ; £81,885 ; £605,805 ; £30,826 ; £2,356.

## COMMONWEALTH GRANTS TO THE STATES FOR UNIVERSITY PURPOSES.

(£.)

(b) Included in New South Wales.

## CHAPTER XIII.—PUBLIC HEALTH AND RELATED INSTITUTIONS.

## A. PUBLIC HEALTH.

§ 9. Hospital Benefits Act, § 12. Pharmaceutical Benefits Act,  
 § 13. Pensioner Medical Service.

Hospital Benefits, pp. 529-30, Pharmaceutical Benefits, p. 531, Pensioner Medical Service, p. 531, The National Health Act 1953.—The Hospital Benefits Act 1951, the Pharmaceutical Benefits Act 1947-1952 and the National Health Service Act 1948-49 providing these respective benefits were repealed by the National Health Act 1953. This Act is largely a consolidating measure, designed to put into statute form all phases of the National Health Scheme. Parts I.—Preliminary and II.—National Health

Services came into operation on 18th December, 1953, Part VII.—Pharmaceutical Benefits commenced on 12th May, 1954 and the remainder on 14th April, 1954. Benefits payable under the former Acts were continued at existing rates and under the same conditions. Particulars of the hospital and pharmaceutical benefits and of the pensioner medical service provided under the scheme will be found in Chapter XIII.

**Medical Benefits.**—A national medical benefits scheme was introduced on 1st July, 1953. This scheme is based on the principle of voluntary insurance, persons who are contributors to an approved medical benefits organization being entitled under the scheme to receive part reimbursement by the Commonwealth of payments made for medical services to themselves or their dependants. The benefits were originally prescribed under the National Health (Medical Benefits) Regulations, now superseded by the National Health Act 1953.

Commonwealth medical benefits are set out in the First and Second Schedules of the National Health Act 1953. Benefits in the First Schedule which cover the ordinary services provided by a general medical practitioner must be matched by registered organizations. Second Schedule Commonwealth benefits are mainly of a specialist nature. Registered organizations do not have to match these benefits.

## B. INSTITUTIONS.

### § 2. Public Hospitals (other than Mental Hospitals).

**Number, Staff, etc., pp. 533-4.**—The following table gives a summary of details relating to public hospitals in each State for the year 1951-52 :—

Interminable Deposits or Deposit Stock amounted to £226,000 ; Deposits not bearing interest to £943,747,000 ; Deposits bearing interest to £218,699,000 ; Notes in Circulation to £158,000 ; Balances due to other Banks to £10,628,000 ; Other Liabilities to £14,247,000.

Average assets in Australia amounted to £1,188,699,000. These comprised Cash and Cash Balances, £74,712,000; Special Accounts with Commonwealth Bank, £211,737,000; Balances with other Banks, £22,580,000; Treasury Bills, £123,059,000; Other Australian Public Securities, £86,513,000; Other Securities, £2,313,000; Loans, Advances and Bills Discounted, £638,092,000; All Other Assets, £29,693,000.

**Classification of Advances within Australia—Commonwealth Bank and Private Trading Banks, p. 628.**—Advances within Australia at the end of June, 1953 dissected by industries were:—Business advances—Agriculture, Dairying and Grazing, £148,279,000; Manufacturing, £141,481,000; Transport, Storage and Communication, £12,710,000; Finance and Property, £64,615,000; Commerce, £109,565,000; Miscellaneous, £42,618,000; Not elsewhere specified, £9,345,000; Total Business advances, £528,613,000; Advances to Public Authorities, £13,551,000; Personal advances, £127,912,000; Total, £670,076,000.

**Clearing House Returns, p. 630.**—The average weekly bank clearings in each capital city for the year ended June, 1953 were as follows:—Sydney, £88,557,000; Melbourne, £78,965,000; Brisbane, £17,886,000; Adelaide, £16,794,000; Perth, £11,441,000; Hobart, £2,985,000; Total, £216,628,000.

**Debits to Customers' Accounts—All Cheque-paying Banks, p. 630.**—The average weekly debits to customers' accounts in each State for the year 1952–53 for all cheque-paying banks (excluding debits to accounts of Australian Governments in capital cities) were as follows:—New South Wales, £151,938,000; Victoria, £131,998,000; Queensland, £43,796,000; South Australia, £30,063,000; Western Australia, £22,091,000; Tasmania, £8,850,000; Australian Capital Territory, £580,000; Total, £389,316,000.

## § 2. Savings Banks.

**All Savings Banks, p. 633.**—The amounts on deposit in the several States at 30th June, 1953 were:—New South Wales, £319,149,000; Victoria, £319,971,000; Queensland, £109,360,000; South Australia, £113,875,000; Western Australia, £49,794,000; Tasmania, £32,078,000; Northern Territory, £1,116,000; Australian Capital Territory, £2,154,000; Total £947,497,000. Total excess of deposits over withdrawals during 1952–53 was £39,020,000, and interest added was £16,579,000.

The number of operative accounts in the several States at 30th June, 1953 was:—New South Wales, 2,280,000; Victoria, 2,079,000; Queensland, 838,000; South Australia, 726,000; Western Australia, 414,000; Tasmania, 269,000; Northern Territory, 9,000; Australian Capital Territory, 18,000; Total, 6,633,000.

## D. INSURANCE.

### § 2. Life Assurance.

**Life Assurance, pp. 646–51.**—The following is a summary of the life assurance business transacted in Australia during 1953 (figures for 1952 in parentheses) compiled from monthly returns collected from the 22 companies registered under the Life Assurance Act 1945–1950, and excluding the Government Insurance Office of New South Wales and the Queensland State Government Insurance Office which operate only within their respective States. Particulars shown are therefore not entirely comparable with those in Chapter XVI., which are derived from annual returns and include business of the State Government Offices.

**Taxation, 1953-54 Budget Proposals.**—Under legislation introduced to implement the 1953-54 Commonwealth Budget proposals, the following changes were made in Commonwealth taxation provisions :—

**Estate Duty, p. 670.**—From the 28th October, 1953 the statutory exemption on estates passing to the widow, children or grand-children of the deceased was increased to £5,000 (from £2,000) decreasing on a graduated scale and ceasing to apply when the net value of the estate reaches £20,000. On estates passing to persons other than those referred to above, the statutory exemption was increased to £2,500 (from £1,000) and ceasing to apply at £10,000. Where the estate passes partly to these relatives and partly to others a proportionate allowance is made. In all cases the statutory exemption was varied to diminish by £1 for every £3 of the excess value of the estate.

The legislation also provided, as from 27th June, 1950, for a special deduction of £5,000 from estates of persons serving in Korea or Malaya.

Under the Estate Duty Convention (United States of America) Act 1953, assented to on 11th December, 1953, relief was provided for double taxation on the estates of deceased persons.

**Gift Duty, p. 671.**—Under the Gift Duty Convention (United States of America) Act 1953, assented to on 11th December, 1953, relief was provided for double taxation on gifts under certain conditions.

**Income Taxes, pp. 737-46.**—The following changes and rates of tax apply for the 1953-54 financial year (income year 1953-54) for individuals :—

**Concessional Deductions, p. 737.** Changes in concessional deductions were (a) for a dependent spouse, daughter-housekeeper, housekeeper or parent, £130 (increased from £104); (b) for education expenses, £75 (increased from £50) and (c) for medical expenses, £150 (increased from £100), including dental expenses, £30 (increased from £20).

**Effective Exemptions from Tax, p. 738.** For the financial year 1953-54 the effect of the deductions for dependants was to exempt from taxation persons with incomes up to the amounts shown hereunder :—

#### RESIDENT TAXPAYERS : EFFECTIVE EXEMPTIONS FROM TAX.

( £.)

Taxpayers with—	Income Tax and Social Services Contribution.
No dependants .. .. .	104
Wife .. .. .	234
Wife and one child .. .. .	312
" two children .. .. .	364
" three children .. .. .	416
" four children .. .. .	468

An aged person will be exempt from Income Tax and Social Services Contribution if the person's net income does not exceed £375 or, if contributing to the maintenance of a spouse, £750.

**Rates of Income Tax and Social Services Contribution on Individuals, p. 739.**—Compared with 1952-53, rates for 1953-54 were reduced over all income ranges and the further tax on property incomes was abolished. For

the first time since the inception of Commonwealth Income Tax the same tax is payable on property as on personal exertion income. The rates of Income Tax and Social Services Contribution are—

16,000	upwards	9,157 5 10	168d.			16,000

Commencing with 1953-54, these graduated rates will not, however, wholly apply to the income of actors, artists, composers, and inventors whose taxable income, including any abnormal receipts, will be taxed at the rate appropriate to the normal taxable income plus one-third of the abnormal receipts.

The Income Tax (International Agreements) Act 1953 assented to on 11th December, 1953, provided for relief from double taxation of incomes flowing between Australia and the United States of America. It also provided similar relief in respect of the United Kingdom which had been covered by the Income Tax Assessment Act since 1947.

*Taxes on Specified Incomes*, p. 740.—The following table shows the Income Tax and Social Services Contribution payable by taxpayers with various incomes and numbers of dependants on income derived in 1953-54.

*Company Income Taxes* p. 743.—The rates of Primary and Additional Income Tax and Social Services Contribution payable by companies for the 1953-54 financial year (income year 1952-53) are shown in the following table :—

**RATES OF TAX : COMPANIES, 1953-54 FINANCIAL YEAR (INCOME DERIVED, 1952-53).**  
(Pence per £1.)

Type of Company.	Rate of Tax—		
	On Taxable Income.		On Undistributed Amount—Additional Tax.
	Up to £5,000.	On Remainder of Taxable Income.	
Private .. .. .	48	72	120
Co-operative and Non-profit(a) .. .. .	60	84	..
Life Assurance—			
Mutual .. .. .	48	72	..
Other—			
(1) Mutual Income .. .. .	48	72	..
(2) Other Income (b) .. .. .	(c) 72	84	..
Other .. .. .	(c) 72	84	..

(a) Non-profit companies with taxable incomes not exceeding £104 were exempted from tax and if the taxable income does not exceed £208 the tax may not exceed one-half of the amount by which the taxable income exceeds £104. (b) The rate of 72d. is levied on the amount by which the £5,000 exceeds the mutual income. (c) For non-resident companies dividends included in this part of taxable income are taxed at 60 pence per £1. (A resident company is allowed a rebate of tax in respect of dividends received.)

**Pay-roll Tax, p. 672.**—From the 1st October, 1953 the exemption was increased to £80 per week, i.e. £4,160 annually. The previous exemption limit was £20 per week, i.e. £1,040 annually.

**Entertainments Tax, p. 672.**—This tax was abolished from 1st October, 1953.

**Sales Tax, p. 673.**—From the 10th September, 1953 the special rates of sales tax, 50 per cent., 33½ per cent. and 20 per cent. were abolished. Most goods subject to those rates were then taxed at a special rate of 16½ per cent. The previous general rate of 12½ per cent. was not changed. An extension was made to the list of exemptions.

### C. COMMONWEALTH AND STATE FINANCE.

**Revenue and Expenditure, p. 717.**—The following table shows particulars of Commonwealth and State revenue and expenditure during the year 1952-53 and estimated revenue and expenditure for the year 1953-54.

#### COMMONWEALTH AND STATE REVENUE AND EXPENDITURE.(a)

March, 1953 .. .. .	Australia	77,000	{ 44,177 35,053	{ 3 4½	{ 1955 1962	State purposes, £17,810,000 Conversion and redemption loan, £47,211,000 Advances to States for Housing, £3,688,000 State purposes, £28,331,000 Advances to States for Housing, £15,327,000 State purposes, £107,673
June, 1953 .. .. .	Australia	123,000	{ 35,000 88,000	{ 3 4½	{ 1955 1962	

(a) During 1952-53 \$40,223,000 were drawn against the loan made available by the International Bank for Reconstruction and Development. (b) Australian Loans bearing interest at 4½ per cent. were issued at par and those at 3 per cent. at £99 10s. The London loan was issued at £98. (c) Sterling.

## CHAPTER XVIII.—MINERAL INDUSTRY.

## § 1. The Mineral Wealth of Australia.

Quantity and Value of Production, pp. 749-51.—In the table hereunder particulars are given of the quantity and value of production in Australia of the principal minerals during the years 1952 and 1953 :—

MINERAL PRODUCTION: QUANTITIES AND VALUES, AUSTRALIA.  
METALLIC MINERALS.

Year.	Principal Contents of Metallic Minerals Produced.								Total Value of Output of Metal Mining.
	Copper.	Gold.	Iron.	Lead.	Silver.	Tip.	Zinc.	Sulphur. (a)	
	Tons.	Fine oz.	Tons.	Tons.	'000 fine oz.	Tons.	Tons.	Tons.	£'000.
1952 ..	18,579	980,435	61883087	228,196	11,278	1,610	196,450	217,217	73,820
1953(b) ..	37,364	1,073,080	62132086	269,296	12,249	1,494	239,069	224,530	(d)

## NON-METALLIC AND FUEL MINERALS.

Year.	Quantities Produced.						Total Value of Output of Non-metal and Fuel Mining.
	Coal.		Gypsum.	Limestone. (e)	Mica.	Salt.	
	Black.	Brown.					Tons.
1952 ..	19,405	8,104	351,678	2,720,730	71,929	277,000	61,717
1953(b) ..	18,441	8,257	327,204	3,029,584	72,227	239,285	(d)

(a) Includes sulphur content of spent oxide roasted. (b) Subject to revision. (c) Estimated.  
(d) Not yet available. (e) Excludes limestone used as a construction material. (f) Incomplete.

The total value of output of all mining and quarrying in 1952 was £135,450,000.

## CHAPTER XIX.—PASTORAL PRODUCTION.

Live Stock, Meat and Wool Produced.—The following table shows, for each State, the numbers of live stock at 31st March, 1953, and the amounts of meat and wool produced during 1952-53 :—

## CHAPTER XX.—AGRICULTURAL PRODUCTION.

§ 3. *Distribution, Production and Value of Crops.*

Principal Crops, pp. 835-8.—The following table shows the area, production and average yield per acre of wheat in each State for 1952-53 and 1953-54.

## WHEAT FOR GRAIN: AREA, PRODUCTION AND AVERAGE YIELD.

Season.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	A.C.T.	Aust.
AREA ('000 ACRES).								
1952-53 ..	2,702	2,232	724	1,544	2,999	7	1	10,209
1953-54(a) ..	3,470	2,400	500	1,510	2,800	10	1	10,691
PRODUCTION ('000 BUSHELS).								
1952-53 ..	56,670	50,335	18,662	33,919	35,458	156	8	195,208
1953-54(a) ..	65,000	54,000	9,800	30,000	40,000	200	15	199,015
AVERAGE YIELD PER ACRE (BUSHELS).								
1952-53 ..	20.97	22.55	25.76	21.97	11.82	23.39	12.75	19.12
1953-54(a) ..	18.70	22.50	19.60	19.90	14.30	20.00	15.00	18.60

(a) Subject to revision.

The area, production and average yield per acre of other principal crops in Australia during 1952-53 are set out hereunder:—

Area ('000 acres): Oats, 2,764; Maize, 174; Hay, 1,761; Sugar-cane, 434; Total Crops, 20,371.

Production ('000): Oats, 43,623 bush.; Maize, 4,967 bush.; Hay, 2,765 tons; Sugar-cane crushed, 6,967 tons; Cane-sugar, 949 tons.

Average Yield per Acre: Oats, 15.78 bush.; Maize, 28.53 bush.; Hay, 1.57 tons; Sugar-cane, 24.89 tons; Cane-sugar, 3.39 tons (Sugar-cane and Cane-sugar yields are per acre of productive crop).

## CHAPTER XXI.—FARMYARD, DAIRY AND BEE PRODUCTS.

Principal Farmyard, Dairy and Bee Products.—Particulars of the total production of these products in each State during 1952-53 are shown below:—

## PRODUCTION OF PRINCIPAL FARMYARD, DAIRY AND BEE PRODUCTS.

Season.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	A.C.T.	Aust.
TOTAL WHOLE MILK PRODUCED ('000 GALS.), p. 918.								
1952-53 ..	317,385	436,417	285,757	84,247	49,830	44,269	688	1,218,595

1952-53 .. ..	8,046	6,235	2,166	7,656	3,393	309	5	27,810

(a) Includes an estimate of farm production.

(b) Includes Northern Territory, 60 tons.

(c) Receivals from consignors and sales by producer agents.

### CHAPTER XXIV.—MANUFACTURING INDUSTRY.

**Summary, p.967.**—The table following gives a summary of operations in manufacturing industries during 1951-52. Particulars for 1952-53, which became available too late for inclusion herein, will be found in the *Quarterly Summary of Australian Statistics*, March, 1954, and also in *A Summary of Principal Statistics of Factories, 1952-53*, issued by this Bureau:—

#### FACTORIES: SUMMARY, 1951-52.

Particulars.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Aust.
1. Factories .. .. No.	18,144	14,758	4,918	3,245	3,266	1,512	45,843
2. Persons employed(a) .. ..	495,994	324,143	94,349	84,189	45,071	24,027	977,773
3. Salaries and wages paid(b) £'000	263,651	202,586	51,906	53,798	25,369	14,704	612,014
4. Value of power, fuel light, etc., used .. .. £'000	48,664	21,990	8,287	10,408	5,172	2,107	96,628
5. .. materials used .. .. £'000	647,291	477,617	150,427	139,198	58,512	40,025	1,513,070
6. .. production(c) .. .. £'000	443,391	334,360	91,329	82,409	42,693	29,794	1,023,976
7. .. output of factories .. .. £'000	1,139,346	833,967	250,043	232,015	106,377	71,926	2,633,674
8. .. land and buildings .. .. £'000	153,662	119,465	28,610	28,507	16,732	13,210	360,186
9. .. plant and machinery .. .. £'000	166,437	128,934	41,290	32,177	20,700	22,994	412,532

(a) Average over whole year; includes working proprietors.

(b) Excludes amounts drawn by working proprietors.

(c) Value of production equals figures in line 7 less totals of figures in lines 4 and 5.

**Value of Production in Classes of Industry, p. 991.**—The following table shows, for the year 1951-52, the value of production in Australia for the various classes of factories. Particulars for 1952-53 will be found in the two publications referred to in the preceding paragraph:—

#### FACTORIES: VALUE OF PRODUCTION, AUSTRALIA, 1951-52.

(£.)

Class of Industry.	Value of Production.	Class of Industry.	Value of Production.
I. Treatment of Non-metalliferous Mine and Quarry Products .. ..	21,892,811	VIII. Clothing .. ..	81,057,556
II. Bricks, Pottery, Glass, etc., .. ..	20,946,063	IX. Food, Drink and Tobacco .. ..	141,053,124
III. Chemicals, Dyes, Explosives, Paints, Oils and Grease .. ..	63,662,399	X. Woodworking and Basket-ware .. ..	58,082,368

Fibrous Plaster Sheets	Mill. sq. yds.	16.5	14.6	Gas .. .. .		51.0	34.4
Flour, Wheaten .. .. .	'000 short tons	1,721	1,721	Solid Fuel .. .. .		71.7	46.6
Fruit, Preserved(e) .. .. .	Mill. lb.	256.1	218.5	Sugar, Refined .. .. .	'000 tons	493	422
Gas(f) .. .. .	'000 mill. cub. ft.	40.4	41.3	Sulphate of Ammonia .. .. .		63.8	70.2
Ice Cream .. .. .	Mill. gal.	17.3	13.6	Superphosphate .. .. .		1,597	1,581
Iron and Steel—				Tiles, Roofing—			
Pig Iron .. .. .	'000 tons	1,430	1,692	Cement .. .. .	Mill.	66.5	42.7
Ingot Steel .. .. .		1,521	1,801	Terra-cotta .. .. .		48.9	58.2
Jam .. .. .		48.4	34.2	Timber, Sawn Native	Mill. sup. ft.	1,392	1,308
				Tobacco, Cigars and Cigarettes .. .. .	Mill. lb.	33.5	36.2
				Vegetables, preserved(g)		100.4	65.1
				Wool, Scoured .. .. .		121	125
				Yarn, Woolen and Worsted .. .. .		36.5	35.2

(a) Subject to revision. (b) Includes waste beer. (c) Other than Diesel type. (d) Excludes motor car, motor cycle, truck, tractor and aero engines. (e) Includes all types of preserved apples. (f) Made in gas-works only. (g) Includes preserved tomatoes.

CHAPTER XXVII.—DEFENCE.

Australian Participation in Korea, Malaya and the Middle East, p. 1103.—(i) Korea. (a) Casualties. The number of casualties sustained by the Australian forces in the Korean campaign is shown in the following table :—

Particulars.	Royal Australian Navy.	Australian Military Forces.	Royal Australian Air Force.	All Services.
Battle Casualties—				
Killed (including died of wounds) .. .. .	1	252	23	266
Missing (all categories) .. .. .	2	21	6	39
Prisoners-of-war .. .. .		16	6	(a) 22
Wounded in action (including shell shock) .. .. .	6	1,062		1,068
Total Battle Casualties .. .. .	9	1,351	35	1,395
Other Casualties—				
Accidental and other deaths .. .. .		14	10	24
Accidental wounds and injuries .. .. .		172		172
Total Casualties .. .. .	9	1,537	45	1,591

(a) Includes 21 prisoners-of-war repatriated since the armistice and one who died while a prisoner-of-war.

(b) *Prisoner-of-War Exchange Agreement.*—As a result of talks between United Nations and Chinese delegates at Panmunjom during April, 1953, the Chinese agreed to release 600 United Nations sick and wounded prisoners-of-war in exchange for 5,100 North Korean and 700 Chinese prisoners. The exchange programme commenced on 23rd April, 1953 and 100 United Nations personnel were exchanged daily. The only Australians released were four captured on 25th January, 1953, and one captured on 14th January, 1953. All were released at Panmunjom on 23rd April, 1953. Under the terms of the Armistice Agreement signed at Panmunjom at 1000 hours on 27th July, 1953, all prisoners-of-war who insisted on repatriation were to be handed over within 60 days to the side to which they belonged at the time of capture. Fifteen Australian Army personnel and six R.A.A.F. personnel were released as a result of the agreement.

(c) *Awards.*—The following table shows the number of operational awards granted for services in the Korean campaign :—

Award.	Royal Australian Navy.	Australian Military Forces.	Royal Australian Air Force.	All Services.
<b>British—</b>				
Commander Order of British Empire (C.B.E.)	1	1	..	2

<b>Grand Total</b> ..	<b>54</b>	<b>208</b>	<b>376</b>	<b>638</b>

In addition, the following unit citations were awarded :—

*Army.*—For its part in the Battle of Kapyong on 23rd–24th April, 1951, the 3rd Battalion, Royal Australian Regiment, was awarded the Distinguished Unit Citation by the President of the United States of America.

*Air Force.*—The Government of the Republic of Korea awarded a Presidential Unit Citation to No. 77 (Interceptor/Fighter) Squadron.

## CHAPTER XXIX.—MISCELLANEOUS.

## § 5. Retail Trade.

Value of Retail Sales, p. 1153.—The number of retail establishments and the total value of retail sales for the year ended 30th June, 1953, are classified in the following tables according to thirty broad commodity groups. These are the preliminary results of the Census of Retail Establishments, 1952-53, and are subject to revision.

The first table shows the number of retail establishments which recorded retail sales in each commodity group. Many establishments showed sales in more than one group, so that the aggregate of the number of establishments in all commodity groups is greater than the total number of establishments as shown. The value of retail sales is classified by commodity groups in the second table.

CENSUS OF RETAIL ESTABLISHMENTS : NUMBER OF RETAIL ESTABLISHMENTS  
CLASSIFIED BY COMMODITY GROUP(a), 1952-53.

Commodity Group.	N.S.W.	Vic.	Q'land.	S.A.	W.A.	Tas.	Total.(b)
Groceries .. .. .	7,185	4,428	2,704	2,320	1,227

Other Goods .. .. .	2,878	964	776	732	310		
<b>Total .. .. .</b>	<b>32,879</b>	<b>15,050</b>	<b>9,688</b>	<b>8,476</b>	<b>3,635</b>		

(a) Excludes establishments with retail turnover of less than £500 during the year ended 30th June, 1953. Sales of basic building materials (e.g. timber, roofing tiles, etc.), farm machinery, farm implements and earth-moving equipment were excluded from the Census by definition but establishments selling these goods are included in so far as they sell goods in other commodity groups. (b) Excludes the Australian Capital Territory and the Northern Territory, results for which are not yet available.

## § 9. War Service Homes Division.

War Service Homes Division, p. 1157.—During 1952-53, 13,776 applications were approved, 5,848 homes were either built or assistance to build them was given, while homes purchased or mortgages discharged numbered 6,574. The total number of homes provided during 1952-53 was 12,422. Transfers and resales approved numbered 648.

At 30th June, 1953, 4,250 homes were under construction, 1,034 contracts had been let but work not started and 1,031 tenders had been called but not finally dealt with. Capital expenditure for 1952-53 amounted to £27,976,575 and receipts to £7,263,453. £4,049,887 was paid to the National Debt Sinking Fund.

## GENERAL INDEX.\*

NOTE.—This index is preceded by an index of maps, graphs and diagrams, also a list of special articles, etc., in previous issues of the Official Year Book. Area, population, etc., of particular localities are indexed under the locality concerned. Subject matter extending continuously over more than one page is indexed according to the first page only. Where more than one reference to a subject is given, the chief reference, wherever it has been possible to determine it, is indicated by *italic type*. Two references to a subject so indicated signify major, and approximately equal, importance.
