PREFACE

By the Constitution of the Commonwealth of Australia, the Parliament of the Commonwealth is empowered, subject to the Constitution, 'to make laws for the peace, order, and good government of the Commonwealth, with respect to . . . Census and statistics.' In the exercise of the power so conferred, a Census and Statistics Act was passed in 1905, and in the year following the Commonwealth Bureau of Census and Statistics was created. The first Official Year Book was published early in 1908. The publication here presented is the fifty-second Official Year Book issued under the authority of the Commonwealth Government.

The synopsis included in former issues showing the general arrangement of the work has in this issue been incorporated in the table of contents (pages vii to xii). The special index (preceding the general index) provided at the end of the volume, together with certain references given in the various chapters, will assist in tracing in previous issues special articles and other more or less important miscellaneous matter which, in order to conserve space, have been omitted or abbreviated in the present volume. Where, in the general index, more than one reference to a subject is given, the chief reference (or references) has been specially indicated wherever possible.

This volume has been revised throughout; new matter has been added and several chapters have been considerably amended and rearranged. The following items may be especially mentioned.

Chapter 3. General Government. Rearrangement of text, new sections showing members of the Commonwealth Parliament and conspectus of referendums for alteration of the Constitution.

Chapter 12. Labour, Wages and Prices. New section dealing with Wholesale Price Index of Electrical Installation Materials.

Chapter 13. Oversea Transactions. Revised material covering trade legislation and trade agreements. Section relating to oversea investment by private investors transferred from former chapter Private Finance.

Chapter 16. Public Justice. New section giving particulars of serious crime reported or becoming known to police.

Chapter 17. Public Health. Revised and enlarged section relating to public health legislation and administration.

Chapter 18. Education, Cultural Activities and Research. New section on outline of research in Australia.

Chapter 20. Private Finance. Revised sections relating to the adoption by Australia of a decimal currency, and the Australian note issue. New sections dealing with volume of money and finance companies.

Chapter 21. Public Finance. Revised material relating to Commonwealth finance including new tables dealing with the Commonwealth Public Account.

Chapter 23. Rural Industry. Special article, The Soils of Australia, prepared by officers of the Commonwealth Scientific and Industrial Research Organization.

Chapter 26. Mineral Industry. Re-arrangement of chapter and amplification of descriptive sections; new section reviewing recent developments in the mineral industry.

Chapter 29. The Territories of Australia. Increased tabular matter, particularly as regards production statistics.

Special article on Travel and Tourism in Australia, prepared by Mr. R. D. Piesse of the Australian National Travel Association.

The material in the Year Book has been carefully checked throughout, but I shall be grateful to those who will be kind enough to point out defects or make suggestions.

The statistics contained in the majority of the chapters of this volume relate to the years ended June or December 1965. More detailed statistics on subjects dealt with in the Year Book are available in the various annual printed reports published by this Bureau, and more recent statistics are contained in the *Digest of Current Economic Statistics* (monthly), the *Monthly Review of Business Statistics*, the *Quarterly Summary of Australian Statistics*, and in other publications issued monthly, quarterly, half-yearly, or yearly. These publications are listed in Statistical Publications of Australia (see the chapter Miscellaneous), and the last pages of this volume contain a list of current and recent printed publications, showing issue numbers, dates and prices.

The Appendix to this issue of the Year Book has been restricted, in order to conserve time and space, to only a few items instead of the former general advancing of series in the body of the book. The issue of chapters or groups of chapters as separate parts has also been discontinued.

With the issue this year of the first Official Year Book of South Australia, State Year Books are now published by the Deputy Commonwealth Statisticians of all States except Tasmania, and in that State the preparation of the first Official Year Book is nearing completion. Apart from Year Books, the Deputy Commonwealth Statisticians of all States issue a number of printed and mimeographed publications. These are listed on pages 1163-5 of the 1962 issue of the Year Book, and, together with publications of the central Bureau, in *Publications of the Commonwealth Bureau of Census and Statistics* issued by this Bureau.

My thanks are tendered to the Deputy Commonwealth Statisticians of the several States, who have collected and compiled the data on which a great part of the information given in the Year Book is based. Thanks are also tendered to the responsible officers of the various Commonwealth and State Departments and to others who have kindly, and often at considerable trouble, supplied information, and to the Government Printer and his staff for their services in printing this Year Book and in assisting and advising throughout its preparation.

K. M. ARCHER
Commonwealth Statistician

Commonwealth Bureau of Census and Statistics
Canberra, A.C.T., September 1966

CONTENTS

PAGE

CHAPTER 1. DISCOVERY, COLONIZATION AND FEDERATION OF AUSTRALIA 1

Early knowledge and discovery of Australia (1); The annexation of Australia (2); The creation of the several Colonies (3); The establishment of the Commonwealth of Australia (4); The Constitution of the Commonwealth (5); The External Territories of Australia (22).

Plate—1, Map of Australia and Commonwealth Arms. Frontispiece.

CHAPTER 2. PHYSICAL GEOGRAPHY AND METEOROLOGY 24

General description of Australia (24); Climate and meteorology of Australia—precipitation (27), temperature (34), humidity, evaporation (36), sunshine and cloud (37), wind, storms (38), climatological tables (39), weather of 1965 (50).

Plates—2-4, Rainfall; 5-8, Temperatures; 9, Frost free period; 10, Evaporation; 11-12, Hours of sunshine; 13-14, Wind roses; 15, Thunderdays (between pages 32 and 33).

CHAPTER 3. GENERAL GOVERNMENT 52

Parliamentary Government—Governors-General, Governors, Ministries (52-9); Parliaments and elections (59-69); Commonwealth referendums (65); Commonwealth legislation (70); Cost of parliamentary government (76).

CHAPTER 4. LAND TENURE AND SETTLEMENT 78

Disposal of Crown lands (78); Closer settlement and war service land settlement (80); Alienation and occupation of Crown lands (82); Advances to settlers (86).

CHAPTER 5. MANUFACTURING INDUSTRY 91

Definitions in factory statistics (92); Factory development since 1901 (94); Number of factories (95); Number of persons employed (96); Distribution of sexes (103); Children employed (105); Power equipment (106); Value of production, materials used, salaries and wages (109); Value of land, buildings, plant and machinery (115); Principal factory products (119); Individual industries (124).

Plates—16, Production and employment in factories; 17, Value of production, by class of industry (between pages 96 and 97).

CHAPTER 6. ELECTRIC POWER GENERATION AND DISTRIBUTION 143

Snowy Mountains Hydro-electric Scheme (144); New South Wales (146); Victoria (149); Queensland (151); South Australia (153); Western Australia (154); Tasmania (155); Statistical Summary (156); Commonwealth Territories (157).

CHAPTER 7. WATER CONSERVATION AND IRRIGATION 159

Water resources and their utilization (159); National and interstate aspects (164); International aspects (168); New South Wales (168); Victoria (173); Queensland (177); South Australia (181); Western Australia (184); Tasmania (186); Northern Territory (188); Papua and New Guinea (189).

Plates—18-19, Snowy Mountains Scheme (Map and sectional plan) (between pages 160 and 161).

	PAGE
CHAPTER 8. POPULATION	191
Population statistics (191); The census (191); Growth and distribution (193); Mean population (198); Elements of increase (198); Density (201); General characteristics (202); Oversea arrivals and departures (207); Assisted migration (215); Regulation of immigration (219); Passports, citizenship and naturalization (221); Population of External Territories (224); Aboriginal population (225); International population statistics (225).	
<i>Plates—20, Population of Australia; 21, Oversea arrivals and departures (between pages 192 and 193).</i>	
CHAPTER 9. VITAL STATISTICS	229
Provisions for registration and compilation of statistics (229); Marriages (230); Fertility and reproduction—births and confinements (234), fertility (236), masculinity of births (239), ex-nuptiality (239), multiple births (241), characteristics of parents (242), stillbirths (245); Mortality—deaths (246), rates (247), life tables (249), ages at death (252), infant mortality (254), causes of death (258); Vital statistics of External Territories (268); International vital statistics (268).	
<i>Plates—22, Births, deaths and marriages; 23, Rates of births, deaths and natural increase; 24, Age-specific birth rates; 25, Infant mortality rates (between pages 256 and 257).</i>	
CHAPTER 10. HOUSING AND BUILDING	271
Census dwellings (271); Building (278); Government activities in the housing field (288); Advances to home purchasers (300).	
<i>Plates—26–27, New houses and flats (between pages 288 and 289).</i>	
CHAPTER 11. EMPLOYMENT AND UNEMPLOYMENT	308
Population censuses (308); The work force survey (317); Wage and salary earners in employment (322); Commonwealth Employment Service (327).	
<i>Plates—28, Wage and salary earners in civilian employment; 29, Unemployment (between pages 320 and 321).</i>	
CHAPTER 12. LABOUR, WAGES AND PRICES	329
Retail prices and price indexes (329); Consumer Price Index (330); Tabular statements (332); International comparisons (336); Wholesale prices and price indexes (336); Export prices and price indexes (340); Arbitration and Wages Boards Acts and associated legislation (344); Rates of wage and hours of work (347); Average weekly earnings (356); Surveys of wage rates, earnings and hours (357); Basic wages in Australia—Commonwealth judgments, inquiries, cases (364), rates (375); Wage margins (380); Annual leave (382); Long service leave (385); Industrial disputes (387); Labour organizations (392).	
<i>Plates—30, Average weekly earnings; 31, Industrial disputes (between pages 384 and 385).</i>	
CHAPTER 13. OVERSEA TRANSACTIONS	397
Oversea trade, constitutional provisions and legislation (397); Government trade authorities (400); Trade agreements (400); Trade services (403); Export Payments Insurance Corporation (404); Collection and presentation of trade statistics (404); Total oversea trade (406); Direction of oversea trade (408); Trade with the United Kingdom (411); Trade with eastern countries (416); Trade at principal ports (418); Classified summary of oversea trade (419); Ships and aircraft stores (423); Movement of bullion and specie (423); Imports, by economic class (424); Exports, by industry (426); Trade of Australia and other countries (427); Trade in calendar years (428); Excise (429); Oversea investment by private investors (429); Balance of payments—explanatory notes (435), tables (437), international reserves (440); indexes of value of imports and exports at constant prices (441).	
<i>Plates—32 to 34, Total trade, exports, and imports; 35, Exports of principal commodities; 36, Imports, by economic class; 37, Trade with eastern countries (between pages 416 and 417).</i>	

CHAPTER 14. TRANSPORT AND COMMUNICATION**442**

Control of shipping (442); System of record (444); Oversea shipping (444); Interstate shipping (446); Shipping at principal ports (449); Shipping cargo (450); World shipping tonnage (452); Vessels registered (452); Shipping freight rates (453); Shipping casualties (456); Government railways—standardization of gauges (457), mileage (458), operations (459), finances (460), traffic (463), rolling stock (467), accidents (468), fuel used (468), employees (469); Tramway, trolley-bus and omnibus services (469); Ferry services (472); Motor vehicles on register, licences (473); Registrations of new motor vehicles (475); Road traffic accidents (476); Australian Road Safety Council (479); Civil aviation—international activity (480), regular air services within Australia (482), pilots, aerodromes, facilities, registrations, accidents (483–5); Postmaster-General's Department, facilities, employees, finances (485–8); Postal services (489); Internal telecommunication services (491); Oversea telecommunication services (493); Radio-communication stations authorized (495); Broadcasting services (496); Television services (497); Broadcast listeners' and television viewers' licences (498).

Plates—38, Railway systems (map); 39, Civil aviation (between pages 480 and 481).

CHAPTER 15. WELFARE SERVICES**501**

Expenditure (501); Commonwealth social services—benefits provided (504), age and invalid pensions (505), child endowment (507), Commonwealth Rehabilitation Service (511), funeral benefits (512), maternity allowances (513), unemployment and sickness benefits (514), widows' pensions (516), reciprocal agreements with other countries (517), assistance to homes for aged and disabled persons (518); Non-government welfare organizations (519).

CHAPTER 16. PUBLIC JUSTICE**520**

The Australian legal system (520); Lower (magistrates') courts (522); Higher (judges') courts (526); Serious crime (526); Civil cases (532); Transactions of the High Court (532); Divorce (533); Bankruptcy (539); Police (541); Prisons (543); Patents, trade marks and designs (543); Copyright (544); Cost of administration of law and order (544).

CHAPTER 17. PUBLIC HEALTH**547**

State public health legislation and administration (547); Supervision and care of infant life (554); Medical inspection of school children (555); Cremations (557); National health benefits (558); Commonwealth organizations concerned with health (565); Control of infectious and contagious diseases (569); Commonwealth grants to organizations associated with public health (573); Public hospitals and nursing homes (575); Mental hospitals (577); Private hospitals and nursing homes (580); Repatriation hospitals (581); Isolation (leper) hospitals (581).

CHAPTER 18. EDUCATION, CULTURAL ACTIVITIES AND RESEARCH**582**

Education in Australian schools (582); Numbers of schools, teachers and pupils (585); Teacher training and recruitment (592); Other aspects of school education (594); Pre-school education (597); Technical education (597); Government expenditure on schools and technical education (600); Non-government schools' finance (602); Universities (602), staff (604), students (605), degrees conferred, etc. (608), finance (610); Other tertiary institutions (616); Commonwealth activities in education (617); Adult education (620); Oversea students (622); Organizations associated with education (622); Commonwealth libraries (623); State libraries (626); University libraries (630); Children's libraries and school libraries (632); Museums and art galleries (633); Botanical and zoological gardens (638); Book publishing (639); Film production and censorship (641); Arts Council of Australia (643); Australian Elizabethan Theatre Trust (644); Historic Memorials Committee (644); Commonwealth Art Advisory Board (645); Outline of research in Australia (645); Commonwealth Scientific and Industrial Research Organization (647); Mount Stromlo Observatory (649); Australian Atomic Energy Commission (650); Standards Association of Australia (651); National Association of Testing Authorities (652); Scientific societies (652); State Government expenditure on education, etc. (653).

Plates—40, Schools, grades and examinations; 41, University students enrolled (between pages 608 and 609).

	PAGE
CHAPTER 19. NATIONAL ACCOUNTS	655
Description of National Accounts (655); National Accounts and tables (659); Description of items in National Accounts (667).	
<i>Plate—42, Articulation of Australian National Accounts (656).</i>	
CHAPTER 20. PRIVATE FINANCE.	671
Pre-decimal currency (671); Decimal currency (671); Australian coinage (675); Australian note issue (677); Rates of exchange (680); Volume of money (680); Banking (681); Reserve Bank of Australia (682); Commonwealth Development Bank of Australia (686); Cheque-paying banks (687); Savings banks (706); Finance companies (715); Life insurance (719); Fire, marine and general insurance (733); Export Payments Insurance Corporation (735); Instalment credit for retail sales (735); New capital raisings by companies in Australia (739); Unit trusts, land trusts and mutual funds (741); Pastoral finance companies (743); Rural debt (744); Short-term money market (745); Friendly societies (747); Building societies (747); Co-operative societies (749); Lotteries (750); Betting (751); Pension and superannuation schemes (751); Probates and letters of administration (754).	
<i>Plates—43, Banking; 44, Insurance (between pages 704 and 705).</i>	
CHAPTER 21. PUBLIC FINANCE	756
Financial provisions of the Constitution (756); Commonwealth Public Account (756); All Commonwealth funds—receipts and expenditure (758), expenditure by function (758), main components of expenditure (760), receipts (772); Commonwealth Consolidated Revenue Fund—expenditure (777), receipts (782); Commonwealth trust funds (783); Commonwealth Loan Fund (783); State finance (785); State Consolidated Revenue Fund—expenditure (786), receipts (788); State receipts—taxation (790), business undertakings (792), other (794); State surplus revenue (794); State Loan Funds (795); Commonwealth and State finance (798); Government securities on issue (799); Commonwealth loan raisings (807); National Debt Sinking Fund (812); Taxes on income—system (814), assessable income (815), concessional deductions (816), exemptions (817), rates, individuals (817), taxes on specified incomes (819), company income taxes (820), income tax assessments (821), yield of income taxes (824).	
<i>Plates—45–46, All Commonwealth Funds and State Consolidated Revenue Funds (between pages 768 and 769).</i>	
CHAPTER 22. LOCAL GOVERNMENT	826
Local government authorities (826); Semi-governmental authorities (826); Local government—areas, population, dwellings, valuations, etc. (828), finances (829); Local and semi-governmental authorities' debt (833); Roads and bridges (835); Water supply, sewerage and drainage (846); Harbour boards and trusts (860); Fire brigades (865).	
CHAPTER 23. RURAL INDUSTRY	868
Number and area of rural holdings (868); Employment on rural holdings (870); Technical aspects of rural industry (871); Soils of Australia—nature and development of Australian soils (873), types of Australian soils (875); Soil improvement and conservation (879); Agricultural production—progress, assistance and control (882), distribution, production and value of crops (884), wheat (890), other cereal crops (902), fodder crops (911), industrial crops (913), vegetables, fruit and vineyards (923); Pastoral production—livestock numbers (935), value of production (936), indexes of quantum and price (937); sheep (938), cattle (939), horses (942), wool (943), meat (953), other pastoral products (959); The dairying industry (960); The poultry industry (972); The bee-farming industry (975); Value of dairy, poultry and bee production and indexes of price and quantum of farm production (977).	
<i>Plates—47–51, Soils (map and photographs) (between pages 896 and 897); 52, Area of crops; 53, Wheat (between pages 928 and 929); 54, Livestock; 55, Sheep numbers and wool production (between pages 960 and 961).</i>	
CHAPTER 24. FORESTRY	980
Source of statistics (980); Forestry in Australia (980); Employment in forestry (987); Forest production (988); Timber and timber products (990); Oversea trade in forest products, etc. (992).	

CHAPTER 25. FISHERIES 994

Fisheries resources and their commercial exploitation (994); History of the development of Australian fisheries (995); Fisheries administration and research (996); Collection and presentation of fisheries statistics (997); Boats and equipment used in fisheries (998); Employment in fisheries (999); Production, processing and domestic marketing of fisheries products (1000); Consumption of edible fisheries products (1008); Oversea trade in fisheries products (1008).

Plate—56, Fisheries, principal ports and localities (map) (facing page 992).

CHAPTER 26. MINERAL INDUSTRY 1011

Geology (1011); Mineral resources (1013); History (1015); Administration (1016); Government assistance (1020); Research (1025); International relations (1026); Scope and sources of statistics (1028); Mineral exploration (1029); Mining and quarrying (1031); Mineral processing and treatment (1043); Oversea trade (1044); Review of recent developments (1047).

Plates—57, Mineral industry, principal localities (map); 58, Mine production of principal metals; 59, Mine production of principal metals and coal; 60, Main sedimentary basins and locations of oil and gas discoveries (map) (between pages 1024 and 1025).

CHAPTER 27. DEFENCE 1051

Department of Defence (1051); Naval defence (1056); Military defence (1057); Air defence (1060); Department of Supply (1061).

Plates—61, 62, Deep space stations, Island Lagoon and Tidbinbilla (between pages 1056 and 1057).

CHAPTER 28. REPATRIATION 1067

War pensions (1067); Service pensions (1074); Medical treatment for ex-servicemen and their dependants (1077); General repatriation benefits and miscellaneous (1079); The Services Canteens Trust Fund (1081).

CHAPTER 29. THE TERRITORIES OF AUSTRALIA 1083

The Northern Territory—general description (1083), population (1084), production (1084), trade, transport and communication (1088), education (1089), Aboriginal welfare (1090), finance (1090); The Australian Capital Territory—general description (1091), National Capital Development Commission (1092), works and services (1092), production (1093), transport and communication (1094), social (1095), finance (1095); Norfolk Island (1096); Papua and New Guinea—administration (1098), judiciary (1099), agriculture and animal industry (1099), survey of indigenous agriculture (1104), native labour (1110), secondary industries (1111), finance (1112); Papua—general description (1113), population (1113), land tenure (1113), production (1114), trade, transport and communication (1115), education and health (1116), finance (1117); New Guinea—general description (1119), population (1119), land tenure (1119), production (1120), trade, transport and communication (1121), education and health (1123), finance (1123); Nauru (1124); Heard Island and Macdonald Islands (1127); Australian Antarctic Territory (1128); Cocos (Keeling) Islands (1128); Christmas Island (1129).

Plates—63 and 64, Illustrations of census-taking in Papua and New Guinea (between pages 1120 and 1121).

CHAPTER 30. INTERNATIONAL RELATIONS 1131

Relations with Commonwealth and other countries (1131); The Colombo Plan (1132); Participation in the United Nations (1134); Diplomatic representation (1135); Oversea trade representation (1138); Commonwealth Migration Offices (1139).

CHAPTER 31. MISCELLANEOUS 1140

Valuation of Australian production (1140); Indexes of farm production (1143); Consumption of foodstuffs and beverages (1145); Retail trade (1150); Interstate trade (1151); Statistical organization in Australia (1152); Statistical and other official publications of Australia (1153).

Plates—65, Central Office; 66, Computer installation (between pages 1152 and 1153).

	PAGE
TRAVEL AND TOURISM	1158
Introduction (1158); Organization of travel and tourism in Australia—structure, organization and roles of official, etc., and voluntary associations (1160), organization and development of travel and tourist industry facilities (1164); Measures of travel volume and flow and visitor spending—oversea movement (1171), interstate and other internal movement (1177), visitor spending (1179); Plans for development of travel statistics (1182); Research into travel and tourism (1182); Future prospects for travel and tourism (1183); Bibliography (1184).

SYMBOLS AND OTHER FORMS OF USAGE IN THIS YEAR BOOK

The following symbols, where shown in columns of figures, mean :

- n.a. --not available.
- .. —nil or less than half the final digit shown, or not applicable.
- p —preliminary—figure or series subject to revision.
- r —figure or series revised since previous issue.
- n.e.i.—not elsewhere included.
- n.e.c.—not elsewhere classified.
- n.s. —not stated.

A blank space in a column of figures means that the figure concerned is not yet available.

The following abbreviations are used for the titles of the Australian States and Territories and the Commonwealth of Australia: N.S.W. (New South Wales), Vic. (Victoria), Qld (Queensland), S.A. (South Australia), W.A. (Western Australia), Tas. (Tasmania), N.T. (Northern Territory), A.C.T. (Australian Capital Territory), T.P.N.G. (Territory of Papua and New Guinea), Aust. (Australia), Cwth (Commonwealth).

Yearly periods shown as e.g. 1965 refer to the year ended 31 December 1965; those shown as e.g. 1964-65 refer to the year ended 30 June 1965. Other yearly periods are specifically indicated. The range of years shown in table headings, e.g. 1901 to 1964-65, indicates the period covered, but does not necessarily imply that each intervening year is included.

Unless otherwise indicated, the British system of weights and measures is used. One short ton equals 2,000 lb.

Values are expressed in dollars (\$) or cents (c) Australian, with or without the letter A, unless another currency is specifically stated.

Any discrepancies between totals and sums of components in tables are due to rounding.

AUSTRALIAN DECIMAL CURRENCY DOLLAR (\$) / CENT (c) SYSTEM

On 14 February 1966, under the *Currency Act 1965*, a dollar/cent decimal currency system, with one dollar equal to 100 cents, was introduced in Australia.

The relationship between pounds, shillings and pence and dollars and cents as prescribed in the Act, is as follows:

1 pound = 2 dollars

1 shilling = 10 cents

1 penny = $\frac{1}{8}$ ths of a cent

In this issue of the Year Book monetary amounts have been converted to the equivalent amounts in the new system.

For further information see pages 671-4 of the chapter Private Finance.

DECIMAL CURRENCY CONVERSION TABLES

Conversion tables issued by the Decimal Currency Board are reproduced hereunder and on pages xv-xvii.

The conversions shown in these tables should not be taken as an official direction on the manner in which prices should be fixed or charges made. The Decimal Currency Board has no authority to fix prices or other charges.

EXACT EQUIVALENTS TABLE CONVERSION OF AMOUNTS OF £ s. d. TO \$ c

Pence	Cents*	Shillings	Cents	£ s. d.	\$
1	$\frac{1}{8}$ or .83333	1	10	10 0	1.00
2	$1\frac{1}{4}$ 1.66667	2	20	11 0	1.10
3	$2\frac{1}{2}$ 2.5	3	30	12 0	1.20
4	$3\frac{1}{2}$ 3.33333	4	40	13 0	1.30
5	$4\frac{1}{2}$ 4.16667	5	50	14 0	1.40
6	5 5	6	60	15 0	1.50
7	$5\frac{3}{4}$ 5.83333	7	70	16 0	1.60
8	$6\frac{1}{2}$ 6.66667	8	80	17 0	1.70
9	$7\frac{1}{2}$ 7.5	9	90	18 0	1.80
10	$8\frac{1}{2}$ 8.33333	10	100	19 0	1.90
11	$9\frac{1}{2}$ 9.16667	1 0 0	2.00
12	10 10

* Taken to nearest 5th decimal place.

The Exact Equivalents Table shows the relationships between pounds, shillings and pence, and dollars and cents as prescribed in the *Currency Act 1965*, namely:

1 pound = 2 dollars 1 shilling = 10 cents 1 penny = $\frac{1}{8}$ ths of a cent

This table should be used where it is necessary to obtain EXACT equivalents in decimal currency of amounts expressed in £ s. d. For example, where rates or unit prices are expressed in £ s. d. in agreements between contracting parties, this table may be used to convert them to their exact equivalents in \$ c.

BANKING AND ACCOUNTING TABLE
CONVERSION OF AMOUNTS OF £ s. d. TO DOLLARS AND WHOLE CENTS

Pence	Cents	Shillings	Cents	£ s. d.	\$
1	1	1	10	10 0	1.00
2	2	2	20	11 0	1.10
3	2	3	30	12 0	1.20
4	3	4	40	13 0	1.30
5	4	5	50	14 0	1.40
6	5	6	60	15 0	1.50
7	6	7	70	16 0	1.60
8	7	8	80	17 0	1.70
9	8	9	90	18 0	1.80

11	9	1 0 0	2.00
12	10

The Banking and Accounting Table converts £ s. d. amounts expressed in whole pence to \$ c amounts expressed in whole cents. To convert an amount of £ s. d. to dollars and cents—multiply the pounds by two—to give dollars. Add the equivalent of the shillings and pence,

e.g. £23 17s. 10d.
 £23 (× 2) = \$46.00
 17s. 10d. = \$1.78 (from table)
 £23 17s. 10d. = \$47.78

'NEAREST PENNY' CONVERSION FOR USE WITH PRICE COMPUTING INSTRUMENTS

Cents	Pence	Cents	Shillings
1	1	10	1
2	2	20	2
3	4	30	3
4	5	40	4
5	6	50	5
6	7	60	6
7	8	70	7
8	10	80	8
9	11	90	9
10	12	100 (= \$1)	10

NOTE. The exact value of 1c is 1½ pence. Pence amounts have been rounded to the nearest penny; e.g. 2c = 2½d. or 2d. (to nearest penny).

To convert an amount of \$ c to £ s. d.
 Divide the dollars by two—to give pounds.
 Add the equivalent of the cents, e.g.
 \$47.78
 \$47 (÷2) = £23 10s. 0d.
 78c = 7s. 10d. (from table)
\$47.78 = £23 17s. 10d.

QUICK METHOD OF CONVERSION
 \$2.83 = 283 cents
 Place a stroke before the units of cents—
 28/3
 Convert the units of cents—
 28/4 (nearest penny)
 or £1 8s. 4d.

Convert the units of cents—

28/3½ (nearest halfpenny)

or £1 8s. 3½d.

The two preceding tables have been produced as a guide for owners of decimal price computing instruments who may need to convert \$ c amounts to £ s. d.

COMPREHENSIVE CONVERSION TABLE

CONVERSION OF AMOUNTS OF £ s. d. INTO DECIMAL CURRENCY TO
NEAREST WHOLE CENT

The Comprehensive Conversion Table is in no sense designed to give official direction as to how prices expressed in £ s. d. should be converted into dollars and cents after the changeover to decimal currency. The Decimal Currency Board has no authority to fix prices or other charges and the Comprehensive Conversion Table merely shows the nearest whole cent equivalent of various £ s. d. amounts expressed to the nearest halfpenny. The only exceptions are threepence and ninepence where the cent equivalent is shown as half a cent below the exact value in the case of the threepence and half a cent higher in the case of the ninepence. Because the Comprehensive Conversion Table in most cases gives approximations only, it is not suitable for converting unit rates or prices. It should be used only for converting the final balance of an account or the amount due for payment by a debtor.

CHAPTER 1

DISCOVERY, COLONIZATION AND FEDERATION OF AUSTRALIA

Early knowledge and discovery of Australia

The following paragraphs contain only a bare outline of the more important facts relating to the early history of Australian discovery. A more detailed summary of these facts may be found in Year Book No. 39 (*see* p. 1) and earlier issues.

Terra Australis

Although references to an Austral land are found in the works of writers in the early centuries after Christ, and evidence appeared in maps, globes and manuscripts from the Middle Ages onward, there is no definite evidence connecting this so-called *Terra Australis* with Australia. Cornelius Wytfliet's map of 1597, however, indicates roughly the eastern and western coasts of Australia, as well as the Gulf of Carpentaria.

Early discoverers of Australia

The Portuguese may have discovered part of the Australian coast before 1542, and it has been suggested that the Arabs may have come to Australia even earlier, though there is no evidence to support this theory. For all practical purposes, however, the coastal exploration of Australia may be taken as having begun with the Spaniards and the Dutch.

In 1606 the Spaniard Quiros, on reaching the island that has retained the name of *Espiritu Santo* (the largest island of the New Hebrides group), thought he had discovered the great land of the south, and therefore named the group *La Australia del Espiritu Santo*. After leaving the New Hebrides Quiros sailed eastward, but Torres, his second-in-command, took a westerly course and passed through the strait that now bears his name. In all probability he sighted the Australian continent but no mention of it is made in his records. This voyage marks the close of Spanish activity in the work of discovery in the South Seas.

The Dutch discovered Australia when the Dutch East India Company sent the *Duyfken* from Bantam, Java, to explore the island of New Guinea. During March 1606 the *Duyfken* coasted along the southern shores of New Guinea and followed the west coast of Cape York peninsula as far as Cape Keer-Weer (Turn Again).

During the following thirty years there were nine visits of Dutch navigators to Australian waters; by 1636, through their efforts, the coast of Australia from Cape York westward around to the Great Australian Bight had been discovered.

In 1642 Abel Janszoon Tasman set out from Batavia to ascertain the extent of the great southern continent. He named Van Diemen's Land, imagining it to be part of Australia proper, and sailing north-easterly discovered New Zealand and returned to Batavia. In his second voyage, in 1644, Tasman visited the northern coast of Australia, sailing round the Gulf of Carpentaria and along the north-west coast as far south as the tropic of Capricorn. This voyage of Tasman's may be said to have ended the period of Dutch discoveries, although there were subsequent visits by the Dutch to Australia (de Vlamingh in 1696 and Van Delft in 1705).

Discoveries by the English

In the meantime the English had made their first appearance on the Australian coast in 1688, when the north-westerly shores were visited by William Dampier, as supercargo of the *Cygnar*, a trading vessel whose crew had turned buccaneers. In 1699 he again visited Australia, in command of H.M.S. *Roebuck*, and on his return to England published an account in which a description is given of trees, flowers, birds and reptiles observed, and of encounters with natives.

At the end of the seventeenth century it was uncertain whether Tasmania and New Zealand were parts of Australia, or whether they were separated from it but themselves formed part of a great Antarctic Continent. Lieutenant (later Captain) James Cook's first voyage, though undertaken primarily for the purpose of observing the transit of Venus from Tahiti, had also the objective of ascertaining whether the unexplored part of the southern hemisphere was only an immense mass of water or contained another continent. In command of H.M.S. *Endeavour*, and accompanied by Sir Joseph Banks, the botanist, Dr. Solander the naturalist, Green the

astronomer, draftsmen and servants, Cook, after observing the transit of Venus at Tahiti, turned towards New Zealand, sighting that land on 7 October 1769, in the neighbourhood of Poverty Bay. Circumnavigating the North and South Islands, he proved that New Zealand was connected neither with the supposed Antarctic Continent nor with Australia, and took formal possession thereof in the name of the British Crown. On 20 April 1770 Cook sighted the Australian mainland at a place he called Point Hicks, naming it after his first-lieutenant, who first saw it. Coasting northwards, on the 29 April 1770 he discovered Botany Bay, where he landed. Cook sailed along the coast in a northerly direction for nearly 1,300 miles until 11 June 1770, when the *Endeavour* was seriously damaged by striking a coral reef in the vicinity of Trinity Bay. Repairs occupied nearly two months, and the *Endeavour* then again set her course to the north, sailing through Torres Strait and anchoring in the Downs on 13 July 1771. In 1772 Cook was put in command of the ships *Resolution* and *Adventure*, with a view to ascertaining whether a great southern continent existed. Having satisfied himself that, even if it did, it lay so far to the south as to be useless for trade and settlement, he returned to England in 1774. Cook's last voyage was undertaken in 1776, and he met his death on 14 February 1779, by which date practically the whole coast of Australia had been explored. The only remaining discovery of importance, the existence of a channel between Tasmania and Australia, was made by Bass and Flinders in 1798.

The annexation of Australia

Annexation of the eastern part of Australia, 1770

Although representatives of the nations mentioned in the previous section landed or claimed to have landed on the shores of Australia on various occasions during the sixteenth and seventeenth centuries, it was not until 23 August 1770 that the history of Australia was brought into definite political connection with western civilization. It was on that date that Captain Cook took possession 'of the whole eastern coast, from latitude 38° S. to this place, latitude 10½° S., in right of His Majesty King George the Third'. Cook, however, proclaimed British sovereignty over only what are now the eastern parts of New South Wales and Queensland, and formal possession, on behalf of the British Crown, of the whole of the eastern part of the Australian continent and Tasmania was not taken until 26 January 1788, when Captain Phillip's Commission, first issued to him on 12 October 1786, and amplified on 2 April 1787, was read to the people whom he had brought with him in the 'First Fleet'.

The commission appointed Phillip 'Captain-General and Governor-in-Chief in and over our territory called New South Wales, extending from the Northern Cape or extremity of the coast called Cape York, in the latitude of ten degrees thirty-seven minutes south, to the southern extremity of the said territory of New South Wales or South Cape, in the latitude of forty-three degrees thirty-nine minutes south and of all the country inland westward as far as the one hundred and thirty-fifth degree of east longitude reckoning from the meridian of Greenwich, including all the islands adjacent in the Pacific Ocean within the latitudes aforesaid of ten degrees thirty-seven minutes south and forty-three degrees thirty-nine minutes south'.

Although Captain Cook had taken possession of the North Island of New Zealand in November 1769, and of the South Island in January 1770, it is doubtful whether, at the time when Captain Phillip's commission was drawn up, New Zealand was considered as one of the 'islands adjacent in the Pacific Ocean'. The fact that under the Supreme Court Act (Imperial) of 1823, British residents in New Zealand were brought under the jurisdiction of the Court at Sydney, and that in 1839 there was a proposal on the part of the British Government to appoint a consul in New Zealand, leaves this an open question, as nothing more than extra-territorial jurisdiction may have been intended. New Zealand does not appear to have become British territory unequivocally until 1840, when Captain Hobson arrived at the Bay of Islands, and on 30 January read his commission, which extended the boundaries of the Colony of New South Wales so as to embrace and comprehend the islands of New Zealand. On 5 February the Treaty of Waitangi, made with the native chiefs, was signed. Finally, on 21 May British sovereignty over the islands of New Zealand was explicitly proclaimed.

Extension of New South Wales westward, 1825

On 17 February 1824 Earl Bathurst notified Sir Thomas Brisbane that he had recommended to His Majesty the dispatch of a ship of war to the north-west coast of New Holland for the purpose of taking possession of the coast between the western coast of Bathurst Island and the eastern side of Coburg Peninsula. Captain James J. Gordon Bremer of H.M.S. *Tamar*, who was selected for the purpose, took possession on 20 September 1824 of the coast from the 135th to the 129th degree of east longitude. On 16 July 1825 the whole territory between those boundaries was described in Darling's commission as being within the boundaries of New South Wales, thus increasing its area by 518,134 square miles, and making it, including New Zealand and excluding Tasmania, 2,076,308 square miles, or also excluding New Zealand, 1,972,446 square miles.

Annexation of Western Australia, 1827

An expedition under Major Lockyer, sent by Lieutenant-General Sir Ralph Darling, then Governor of New South Wales, to found a settlement at King George Sound, sailed from Sydney on 9 November 1826, landed at the Sound on 26 December following, and on 21 January 1827 hoisted the British flag. Captain Stirling, in command of H.M.S. *Success*, arrived at Sydney a few weeks after the departure of the expedition to King George Sound. He obtained the Governor's permission to visit Swan River with a view to seizing a position on the western coast and reporting upon its suitability as a place of settlement. Captain Stirling left Sydney on 17 January 1827, and on his return in the following April submitted a glowing report on what he described as a 'rich and romantic country', urging its occupation for the purpose of settlement. He left for England in July 1827, continuing his advocacy—notwithstanding much discouragement—with unabated enthusiasm. He was at last successful, the result being due mainly to the formation of an association of prospective settlers having capital at their disposal. He was appointed Lieutenant-Governor and with a party of settlers arrived at Garden Island, near the Swan River, in the ship *Parmelia* in June 1829. On the 2nd of the preceding month, Captain Fremantle, in command of H.M.S. *Challenge*, arrived and hoisted the British flag on the south head of Swan River, again asserting possession of 'all that part of New Holland which is not included within the territory of New South Wales'. Thus, before the middle of 1829, the whole territory now known as the Commonwealth of Australia had been constituted a dependency of the United Kingdom.

The creation of the several Colonies

New South Wales

In Governor Phillip's commission of 1786 the mainland of Australia was divided by the 135th meridian of east longitude into two parts. The earliest colonists believed that the present State of Tasmania was actually joined to the mainland, and it was not until 1798 that the contrary was known. In that year Bass and Flinders proved that it was an island by sailing through Bass Strait. The territory of New South Wales, as originally constituted, and of New Zealand, which may be included although Cook's annexation was not properly given effect to until 1840, consisted of 1,584,389 square miles. A further area of 518,134 square miles was added in 1825, when the western boundary was extended to the 129th east meridian. The territory was subsequently reduced by the separation of various areas to form the other colonies, and at the time of the establishment of the Commonwealth the area of New South Wales was 310,372 square miles. Following the transfer of the Australian Capital Territory to the Commonwealth in 1911, the area was further reduced to 309,433 square miles.

Lord Howe Island, which is a dependency of New South Wales, and for political purposes is included in one of the electorates of Sydney, is situated in latitude 31° 30' south, longitude 159° 5' east, about 436 miles north-east of Sydney, and has an area of 3,220 acres.

Tasmania

Van Diemen's Land, first settled in 1803, was politically separated from New South Wales in 1825, being constituted a separate colony on 14 June. The area of the colony was 26,215 square miles. The name of the colony was officially changed to Tasmania in 1856, when responsible government was established. Following a resurvey of local government areas, the area of Tasmania was determined at 26,383 square miles at the end of 1964.

Macquarie Island, about 1,000 miles south-east of Hobart, together with a few rocky islets nearby, has been a dependency of Tasmania since the nineteenth century. In December 1911 five members of the Australasian Antarctic Expedition landed on the island and remained there until 1915. On 3 March 1948 another party was landed to man a new station which has since been maintained as a scientific base. The island is about 21 miles long and two miles wide.

Western Australia

The territory westward of the 129th meridian, comprising 975,920 square miles, was constituted a colony under the name of Western Australia in June 1829. It was always distinct and independent of New South Wales, except for the settlement on King George Sound (*see above*), which remained under the jurisdiction of New South Wales until 1831.

South Australia

On 15 August 1834 the Act 4 and 5 William IV., cap. 95, was passed, creating South Australia a 'province', and settlement took place towards the end of the year 1836. The first Governor, Captain Hindmarsh, R.N., arrived at Holdfast Bay on 28 December 1836 and on the same day the new colony was officially proclaimed. The new colony embraced 309,850 square miles of territory, lying south of the 26th parallel of south latitude and between the 141st and 132nd meridians of east longitude. On 10 December 1861, by authority of the Imperial Act 24 and 25 Vict., cap. 44, the western boundary of South Australia was extended to coincide with the eastern

boundary of Western Australia, namely, the 129th east meridian. The area of the extension was approximately 70,220 square miles. Nearly two years later, on 6 July 1863, the Northern Territory, comprising 523,620 square miles, was brought under the jurisdiction of South Australia, which thereupon controlled an area of 903,690 square miles. The Territory was transferred to the Commonwealth on 1 January 1911 (*see below*).

New Zealand

New Zealand, nominally annexed by Captain Cook and formally declared by proclamation in 1840 as a dependency of New South Wales by letters patent of 16 November of that year, was constituted a separate colony under the powers of the Act 3 and 4 Vict., cap. 62, of 7 August 1840. Proclamation of the separation was made on 3 May 1841. The area of the colony was 103,862 square miles.

Victoria

In 1851 the 'Port Phillip District' of New South Wales was constituted the colony of Victoria, 'bounded on the north and north-west by a straight line drawn from Cape Howe to the nearest source of the River Murray and thence by the course of that river to the eastern boundary of the colony of South Australia'. The area of the new colony was 87,884 square miles, and its separate existence took effect from 1 July 1851.

Queensland

The northern squatting districts of Moreton, Darling Downs, Burnett, Wide Bay, Maranoa, Leichhardt and Port Curtis, together with the reputed county of Stanley, were granted an independent administration and formed into a distinct colony under the name of Queensland by letters patent dated 6 June 1859, although separation from New South Wales was not completed until 10 December of the same year. The territory comprised by the new colony was 'so much of the colony of New South Wales as lies northwards of a line commencing on the sea-coast at Point Danger in latitude about 28° 8' south, running westward along the Macpherson and Dividing Ranges and the Dumaresq River to the MacIntyre River, thence downward to the 29th parallel of south latitude, and following that parallel westerly to the 141st meridian of east longitude, which is the eastern boundary of South Australia, together with all the adjacent islands, their members, and appurtenances in the Pacific Ocean'. The area of the colony thus constituted was 554,300 square miles. By letters patent dated 13 March 1861, forwarded by the Colonial Secretary to the Governor of Queensland on 12 April 1862, the area of Queensland was increased by the annexation of 'so much of the colony of New South Wales as lies to the northward of the 26th parallel of south latitude, and between the 141st and 138th meridians of east longitude, together with all and every the adjacent islands, their members, and appurtenances, in the Gulf of Carpentaria'. With this addition, the area of Queensland became 670,500 square miles. Following a thorough revision of the area of each local government area of Queensland, based on the most recent maps available, the Surveyor-General, in 1958, determined the area of Queensland as 667,000 square miles—a reduction of 3,500 square miles from the area previously determined.

The establishment of the Commonwealth of Australia

Federation

On 1 January 1901 the colonies mentioned, with the exception of New Zealand, were federated under the name of the 'Commonwealth of Australia', the designation of 'Colonies'—except in the case of the Northern Territory, to which the designation 'Territory' applied—being at the same time changed to that of 'States'.

Transfer of the Northern Territory to the Commonwealth

On 7 December 1907 the Commonwealth and the State of South Australia entered into an agreement for the transfer of the Northern Territory to the Commonwealth, subject to approval by the Parliaments of the Commonwealth and the State. This approval was given by the South Australian Parliament under The Northern Territory Surrender Act, 1907 (assented to on 14 May 1908) and by the Commonwealth Parliament under the *Northern Territory Acceptance Act* 1910 (assented to on 16 November 1910). The Territory was formally transferred to the Commonwealth on 1 January 1911, and became the Northern Territory of Australia.

By Imperial Order in Council dated 23 July 1931 Ashmore Islands, known as Middle, East and West Islands, and Cartier Island, situated in the Indian Ocean off the north-west coast of Australia, were placed under the authority of the Commonwealth. The islands were accepted by the Commonwealth on 10 May 1934, in the *Ashmore and Cartier Islands Acceptance Act* 1933, under the name of the Territory of Ashmore and Cartier Islands. The Act authorized the Governor

of Western Australia to make ordinances having the force of law in and in relation to the Territory. An amendment to the Act in July 1938 annexed the islands to the Northern Territory, whose laws, ordinances and regulations, wherever applicable, thereupon applied.

The area of Ashmore Reef is approximately 60 square miles (to the limit of the reef), and it is situated 220 statute miles off the western coast of Australia and 520 statute miles west of Darwin. Cartier Islands are approximately 17 square miles in area (to the limit of the reef), and are situated 184 statute miles off the western coast of Australia and 490 statute miles west of Darwin.

Transfer of the Australian Capital Territory to the Commonwealth

On 18 October 1909 the Commonwealth and the State of New South Wales entered into an agreement for the surrender to and acceptance by the Commonwealth of an area of 911 square miles as the Seat of Government of the Commonwealth. In December 1909, Acts were passed by the Commonwealth and New South Wales Parliaments approving the agreement, and on 5 December 1910 a proclamation was issued vesting the Territory in the Commonwealth on and from 1 January 1911. By the *Jervis Bay Territory Acceptance Act* 1915 an area of 28 square miles at Jervis Bay, surrendered by New South Wales according to an agreement made in 1913, was accepted by the Commonwealth, and was transferred as from 4 September 1915.

Present composition of the Commonwealth

Following the revision of the area of Queensland and Tasmania as mentioned on pages 3 and 4, and of the area of the Northern Territory during 1964, the total area of the Commonwealth of Australia has been determined as 2,967,909 square miles. The dates of creation and the areas of its component States and Territories are shown below.

THE COMMONWEALTH OF AUSTRALIA: YEAR OF FORMATION AND AREA OF COMPONENT STATES AND TERRITORIES

State or Territory	Year of formation into separate Colony or Territory	Present area in square miles	State or Territory	Year of formation into separate Colony or Territory	Present area in square miles
New South Wales	1786	309,433	Northern Territory	1863	520,280
Victoria . . .	1851	87,884	Australian Capital Territory . . .	1911	939
Queensland . . .	1859	667,000			
South Australia . . .	1834	380,070			
Western Australia . . .	1829	975,920	Commonwealth of Australia	2,967,909
Tasmania . . .	1825	26,383			

The Constitution of the Commonwealth

Information regarding the development of the Constitutions of the various Colonies (now States), together with a brief history of the federal movement in Australia, was embodied in this chapter in issues of the Year Book up to and including No. 22.

Commonwealth Constitution Act

The Commonwealth of Australia Constitution Act, 63 and 64 Vict., Chapter 12, namely: 'An Act to constitute the Commonwealth of Australia', as amended by the *Constitution Alteration (Senate Elections)* 1906, the *Constitution Alteration (State Debts)* 1909, the *Constitution Alteration (State Debts)* 1928, and the *Constitution Alteration (Social Services)* 1946, is given in *extenso* hereunder, and the text contains all the alterations of the Constitution which have been made up to and including 31 December 1965.

**THE COMMONWEALTH OF AUSTRALIA CONSTITUTION ACT.
63 & 64 VICT., CHAPTER 12.**

An Act to Constitute the Commonwealth of Australia. (9th July, 1900.)

WHEREAS the people of New South Wales, Victoria, South Australia, Queensland, and Tasmania, humbly relying on the blessing of Almighty God, have agreed to unite in one indissoluble Federal Commonwealth under the Crown of the United Kingdom of Great Britain and Ireland, and under the Constitution hereby established:

And whereas it is expedient to provide for the admission into the Commonwealth of other Australasian colonies and possessions of the Queen:

Be it therefore enacted by the Queen's Most Excellent Majesty, by and with the advice and consent of the Lords Spiritual and Temporal, and Commons, in this present Parliament assembled and by the authority of the same, as follows:—

1. This Act may be cited as the Commonwealth of Australia Constitution Act.
2. The provisions of this Act referring to the Queen shall extend to Her Majesty's heirs and successors in the sovereignty of the United Kingdom.
3. It shall be lawful for the Queen, with the advice of the Privy Council, to declare by proclamation that, on and after a day therein appointed, not being later than one year after the passing of this Act, the people of New South Wales, Victoria, South Australia, Queensland, and Tasmania, and also, if Her Majesty is satisfied that the people of Western Australia have agreed thereto, of Western Australia, shall be united in a Federal Commonwealth under the name of the Commonwealth of Australia. But the Queen may, at any time after the proclamation, appoint a Governor-General for the Commonwealth.
4. The Commonwealth shall be established, and the Constitution of the Commonwealth shall take effect, on and after the day so appointed. But the Parliaments of the several colonies may at any time after the passing of this Act make any such laws, to come into operation on the day so appointed, as they might have made if the Constitution had taken effect at the passing of this Act.
5. This Act, and all laws made by the Parliament of the Commonwealth under the Constitution, shall be binding on the courts, judges, and people of every State and of every part of the Commonwealth, notwithstanding anything in the laws of any State; and the laws of the Commonwealth shall be in force on all British ships, the Queen's ships of war excepted, whose first port of clearance and whose port of destination are in the Commonwealth.
6. "The Commonwealth" shall mean the Commonwealth of Australia as established under this Act.
 "The States" shall mean such of the colonies of New South Wales, New Zealand, Queensland, Tasmania, Victoria, Western Australia, and South Australia, including the northern territory of South Australia, as for the time being are parts of the Commonwealth, and such colonies or territories as may be admitted into or established by the Commonwealth as States; and each of such parts of the Commonwealth shall be called "a State."
 "Original States" shall mean such States as are parts of the Commonwealth at its establishment.
7. The Federal Council of Australasia Act, 1885, is hereby repealed, but so as not to affect any laws passed by the Federal Council of Australasia and in force at the establishment of the Commonwealth.
 Any such law may be repealed as to any State by the Parliament of the Commonwealth, or as to any colony not being a State by the Parliament thereof.
8. After the passing of this Act the Colonial Boundaries Act, 1895, shall not apply to any colony which becomes a State of the Commonwealth; but the Commonwealth shall be taken to be a self-governing colony for the purposes of that Act.
9. The Constitution of the Commonwealth shall be as follows:—

THE CONSTITUTION.

This Constitution is divided as follows:—

- Chapter I.—The Parliament:
 - Part I.—General:
 - Part II.—The Senate:
 - Part III.—The House of Representatives:
 - Part IV.—Both Houses of the Parliament:
 - Part V.—Powers of the Parliament:
- Chapter II.—The Executive Government:
- Chapter III.—The Judicature:
- Chapter IV.—Finance and Trade:
- Chapter V.—The States:
- Chapter VI.—New States:
- Chapter VII.—Miscellaneous:
- Chapter VIII.—Alteration of the Constitution.
- The Schedule.

CHAPTER I.—THE PARLIAMENT.

PART I.—GENERAL.

1. The legislative power of the Commonwealth shall be vested in a Federal Parliament, which shall consist of the Queen, a Senate, and a House of Representatives, and which is hereinafter called "The Parliament", or "The Parliament of the Commonwealth".

2. A Governor-General appointed by the Queen shall be Her Majesty's representative in the Commonwealth, and shall have and may exercise in the Commonwealth during the Queen's pleasure, but subject to this Constitution, such powers and functions of the Queen as Her Majesty may be pleased to assign to him.

3. There shall be payable to the Queen out of the Consolidated Revenue Fund of the Commonwealth, for the salary of the Governor-General, an annual sum which, until the Parliament otherwise provides, shall be ten thousand pounds.

The salary of a Governor-General shall not be altered during his continuance in office.

4. The provisions of this Constitution relating to the Governor-General extend and apply to the Governor-General for the time being, or such person as the Queen may appoint to administer the Government of the Commonwealth; but no such person shall be entitled to receive any salary from the Commonwealth in respect of any other office during his administration of the Government of the Commonwealth.

5. The Governor-General may appoint such times for holding the sessions of the Parliament as he thinks fit, and may also from time to time, by Proclamation or otherwise prorogue the Parliament, and may in like manner dissolve the House of Representatives.

After any general election the Parliament shall be summoned to meet not later than thirty days after the day appointed for the return of the writs.

The Parliament shall be summoned to meet not later than six months after the establishment of the Commonwealth.

6. There shall be a session of the Parliament once at least in every year, so that twelve months shall not intervene between the last sitting of the Parliament in one session and its first sitting in the next session.

PART II.—THE SENATE.

7. The Senate shall be composed of senators for each State, directly chosen by the people of the State, voting, until the Parliament otherwise provides, as one electorate.

But until the Parliament of the Commonwealth otherwise provides, the Parliament of the State of Queensland, if that State be an Original State, may make laws dividing the State into divisions and determining the number of senators to be chosen for each division, and in the absence of such provision the State shall be one electorate.

Until the Parliament otherwise provides there shall be six senators for each Original State.* The Parliament may make laws increasing or diminishing the number of senators for each State, but so that equal representation of the several Original States shall be maintained and that no Original State shall have less than six senators.

The senators shall be chosen for a term of six years, and the names of the senators chosen for each State shall be certified by the Governor to the Governor-General.

8. The qualification of electors of senators shall be in each State that which is prescribed by this Constitution, or by the Parliament, as the qualification for electors of members of the House of Representatives; but in the choosing of senators each selector shall vote only once.

9. The Parliament of the Commonwealth may make laws prescribing the method of choosing senators, but so that the method shall be uniform for all the States. Subject to any such law, the Parliament of each State may make laws prescribing the method of choosing the senators for that State.

The Parliament of a State may make laws for determining the times and places of elections of senators for the State.

* The Parliament has otherwise provided, by means of the *Representation Act* 1948, that the number of senators shall be ten for each State from the first meeting of Parliament after the first dissolution of the House of Representatives occurring after the commencement of the Act (18 May 1948).

10. Until the Parliament otherwise provides, but subject to this Constitution, the laws in force in each State, for the time being, relating to elections for the more numerous House of the Parliament of the State shall, as nearly as practicable, apply to elections of senators for the State.

11. The Senate may proceed to the despatch of business, notwithstanding the failure of any State to provide for its representation in the Senate.

12. The Governor of any State may cause writs to be issued for elections of senators for the State. In case of the dissolution of the Senate the writs shall be issued within ten days from the proclamation of such dissolution.

13. As soon as may be after the Senate first meets, and after each first meeting of the Senate following a dissolution thereof, the Senate shall divide the senators chosen for each State into two classes, as nearly equal in number as practicable; and the places of the senators of the first class shall become vacant at the expiration of [the third year] *three years*,* and the places of those of the second class at the expiration of [the sixth year] *six years*,* from the beginning of their term of service; and afterwards the places of senators shall become vacant at the expiration of six years from the beginning of their term of service.

The election to fill vacant places shall be made [in the year at the expiration of which] *within one year before** the places are to become vacant.

For the purposes of this section the term of service of a senator shall be taken to begin on the first day of [January] *July** following the day of his election, except in the cases of the first election and of the election next after any dissolution of the Senate, when it shall be taken to begin on the first day of [January] *July** preceding the day of his election.

14. Whenever the number of senators for a State is increased or diminished, the Parliament of the Commonwealth may make such provision for the vacating of the places of senators for the State as it deems necessary to maintain regularity in the rotation.

15. If the place of a senator becomes vacant before the expiration of his term of service, the Houses of Parliament of the State for which he was chosen shall, sitting and voting together, choose a person to hold the place until the expiration of the term, or until the election of a successor as hereinafter provided, whichever first happens. But if the Houses of Parliament of the State are not in session at the time when the vacancy is notified, the Governor of the State, with the advice of the Executive Council thereof, may appoint a person to hold the place until the expiration of fourteen days after the beginning of the next session of the Parliament of the State, or until the election of a successor, whichever first happens.

At the next general election of members of the House of Representatives, or at the next election of senators for the State, whichever first happens, a successor shall, if the term has not then expired, be chosen to hold the place from the date of his election until the expiration of the term.

The name of any senator so chosen or appointed shall be certified by the Governor of the State to the Governor-General.

16. The qualifications of a senator shall be the same as those of a member of the House of Representatives.

17. The Senate shall, before proceeding to the despatch of any other business, choose a senator to be the President of the Senate; and as often as the office of President becomes vacant the Senate shall again choose a senator to be the President.

The President shall cease to hold his office if he ceases to be a senator. He may be removed from office by a vote of the Senate, or he may resign his office or his seat by writing addressed to the Governor-General.

18. Before or during any absence of the President, the Senate may choose a senator to perform his duties in his absence.

19. A senator may, by writing addressed to the President, or to the Governor-General if there is no President or if the President is absent from the Commonwealth, resign his place, which thereupon shall become vacant.

20. The place of a senator shall become vacant if for two consecutive months of any session of the Parliament he, without the permission of the Senate, fails to attend the Senate.

21. Whenever a vacancy happens in the Senate, the President, or if there is no President or if the President is absent from the Commonwealth the Governor-General, shall notify the same to the Governor of the State in the representation of which the vacancy has happened.

* As amended by Section 2 of the *Constitution Alteration (Senate Elections) 1906*. The words in square brackets have been repealed: amendments are shown in italics.

22. Until the Parliament otherwise provides, the presence of at least one third of the whole number of the senators shall be necessary to constitute a meeting of the Senate for the exercise of its powers.

23. Questions arising in the Senate shall be determined by a majority of votes, and each senator shall have one vote. The President shall in all cases be entitled to a vote; and when the votes are equal the question shall pass in the negative.

PART III.—THE HOUSE OF REPRESENTATIVES.

24. The House of Representatives shall be composed of members directly chosen by the people of the Commonwealth, and the number of such members shall be, as nearly as practicable, twice the number of the senators.

The number of members chosen in the several States shall be in proportion to the respective numbers of their people, and shall, until the Parliament otherwise provides, be determined, whenever necessary, in the following manner:—

- (i) A quota shall be ascertained by dividing the number of the people of the Commonwealth, as shown by the latest statistics of the Commonwealth, by twice the number of the senators;
- (ii) The number of members to be chosen in each State shall be determined by dividing the number of the people of the State, as shown by the latest statistics of the Commonwealth, by the quota; and if on such division there is a remainder greater than one-half of the quota, one more member shall be chosen in the State.

But notwithstanding anything in this section five members at least shall be chosen in each Original State.

25. For the purposes of the last section, if by the law of any State all persons of any race are disqualified from voting at elections for the more numerous House of the Parliament of the State, then, in reckoning the number of the people of the State or of the Commonwealth, persons of that race resident in that State shall not be counted.

26. Notwithstanding anything in section twenty-four, the number of members to be chosen in each State at the first election shall be as follows:—

New South Wales . . . twenty-three Victoria twenty Queensland eight	South Australia . . . six Tasmania five
---	--

Provided that if Western Australia is an Original State, the numbers shall be as follows:—

New South Wales . . . twenty-six Victoria twenty-three Queensland nine	South Australia . . . seven Western Australia . . . five Tasmania five
--	--

27. Subject to this Constitution, the Parliament may make laws for increasing or diminishing the number of the members of the House of Representatives.

28. Every House of Representatives shall continue for three years from the first meeting of the House, and no longer, but may be sooner dissolved by the Governor-General.

29. Until the Parliament of the Commonwealth otherwise provides, the Parliament of any State may make laws for determining the divisions in each State for which members of the House of Representatives may be chosen, and the number of members to be chosen for each division. A Division shall not be formed out of parts of different States.

In the absence of other provision, each State shall be one electorate.

30. Until the Parliament otherwise provides, the qualification of electors of members of the House of Representatives shall be in each State that which is prescribed by the law of the State as the qualification of electors of the more numerous House of Parliament of the State; but in the choosing of members each elector shall vote only once.*

31. Until the Parliament otherwise provides, but subject to this Constitution, the laws in force in each State for the time being relating to elections for the more numerous House of the Parliament of the State shall, as nearly as practicable, apply to elections in the State of members of the House of Representatives.

* The Parliament has otherwise provided, by means of the *Commonwealth Electoral Act 1918-1965*, Sections 39 and 39A (repealing an earlier provision made by the *Commonwealth Franchise Act 1902*). For present qualifications see Chapter 3, General Government.

32. The Governor-General in Council may cause writs to be issued for general elections of members of the House of Representatives.

After the first general election, the writs shall be issued within ten days from the expiry of a House of Representatives or from the proclamation of a dissolution thereof.

33. Whenever a vacancy happens in the House of Representatives, the Speaker shall issue his writ for the election of a new member, or if there is no Speaker or if he is absent from the Commonwealth the Governor-General in Council may issue the writ.

34. Until the Parliament otherwise provides, the qualifications of a member of the House of Representatives shall be as follows:—

- (i) He must be of the full age of twenty-one years, and must be an elector entitled to vote at the election of members of the House of Representatives, or a person qualified to become such elector, and must have been for three years at the least a resident within the limits of the Commonwealth as existing at the time when he is chosen:
- (ii) He must be a subject of the Queen, either natural-born or for at least five years naturalized under a law of the United Kingdom, or of a Colony which has become or becomes a State, or of the Commonwealth, or of a State.*

35. The House of Representatives shall, before proceeding to the despatch of any other business, choose a member to be the Speaker of the House, and as often as the office of Speaker becomes vacant the House shall again choose a member to be the Speaker.

The Speaker shall cease to hold his office if he ceases to be a member. He may be removed from office by a vote of the House, or he may resign his office or his seat by writing addressed to the Governor-General.

36. Before or during any absence of the Speaker, the House of Representatives may choose a member to perform his duties in his absence.

37. A member may by writing addressed to the Speaker, or to the Governor-General if there is no Speaker or if the Speaker is absent from the Commonwealth, resign his place, which thereupon shall become vacant.

38. The place of a member shall become vacant if for two consecutive months of any session of the Parliament he, without the permission of the House, fails to attend the House.

39. Until the Parliament otherwise provides, the presence of at least one-third of the whole number of the members of the House of Representatives shall be necessary to constitute a meeting of the House for the exercise of its powers.

40. Questions arising in the House of Representatives shall be determined by a majority of votes other than that of the Speaker. The Speaker shall not vote unless the numbers are equal, and then he shall have a casting vote.

PART IV.—BOTH HOUSES OF THE PARLIAMENT.

41. No adult person who has or acquires a right to vote at elections for the more numerous House of the Parliament of a State shall, while the right continues, be prevented by any law of the Commonwealth from voting at elections for either House of the Parliament of the Commonwealth.

42. Every senator and every member of the House of Representatives shall before taking his seat make and subscribe before the Governor-General, or some person authorized by him, an oath or affirmation of allegiance in the form set forth in the schedule to this Constitution.

43. A member of either House of the Parliament shall be incapable of being chosen or of sitting as a member of the other House.

44. Any person who—

- (i) Is under any acknowledgment of allegiance, obedience, or adherence to a foreign power, or is a subject or a citizen or entitled to the rights or privileges of a subject or a citizen of a foreign power: or
- (ii) Is attainted of treason, or has been convicted and is under sentence, or subject to be sentenced, for any offence punishable under the law of the Commonwealth or of a State by imprisonment for one year or longer: or

* The Parliament has otherwise provided, by means of the *Commonwealth Electoral Act 1918-1965*, Section 69. For present qualifications see Chapter 3, General Government.

- (iii) Is an undischarged bankrupt or insolvent: or
- (iv) Holds any office of profit under the Crown, or any pension payable during the pleasure of the Crown out of any of the revenues of the Commonwealth: or
- (v) Has any direct or indirect pecuniary interest in any agreement with the Public Service of the Commonwealth otherwise than as a member and in common with the other members of an incorporated company consisting of more than twenty-five persons:

shall be incapable of being chosen or of sitting as a senator or a member of the House of Representatives.

But sub-section (iv) does not apply to the office of any of the Queen's Ministers of State for the Commonwealth, or of any of the Queen's Ministers for a State, or to the receipt of pay, half-pay, or a pension by any person as an officer or member of the Queen's navy or army, or to the receipt of pay as an officer or member of the naval or military forces of the Commonwealth by any person whose services are not wholly employed by the Commonwealth.

45. If a senator or member of the House of Representatives—

- (i) Becomes subject to any of the disabilities mentioned in the last preceding section: or
- (ii) Takes the benefit, whether by assignment, composition, or otherwise, of any law relating to bankrupt or insolvent debtors: or
- (iii) Directly or indirectly takes or agrees to take any fee or honorarium for services rendered to the Commonwealth, or for services rendered in the Parliament to any person or State:

his place shall thereupon become vacant.

46. Until the Parliament otherwise provides, any person declared by this Constitution to be incapable of sitting as a senator or as a member of the House of Representatives shall, for every day on which he so sits, be liable to pay the sum of one hundred pounds to any person who sues for it in any court of competent jurisdiction.

47. Until the Parliament otherwise provides, any question respecting the qualification of a senator or of a member of the House of Representatives, or respecting a vacancy in either House of the Parliament, and any question of a disputed election to either House shall be determined by the House in which the question arises.

48. Until the Parliament otherwise provides, each senator and each member of the House of Representatives shall receive an allowance of four hundred pounds a year, to be reckoned from the day on which he takes his seat.*

49. The powers, privileges, and immunities of the Senate and of the House of Representatives, and of the members and the committees of each House, shall be such as are declared by the Parliament, and until declared shall be those of the Commons House of Parliament of the United Kingdom, and of its members and committees, at the establishment of the Commonwealth.

50. Each House of the Parliament may make rules and orders with respect to—

- (i) The mode in which its powers, privileges, and immunities may be exercised and upheld;
- (ii) The order and conduct of its business and proceedings either separately or jointly with the other House.

PART V.—POWERS OF THE PARLIAMENT.†

51. The Parliament shall, subject to this Constitution, have power to make laws for the peace, order, and good government of the Commonwealth with respect to—

- (i) Trade and commerce with other countries, and among the States:
- (ii) Taxation; but so as not to discriminate between States or parts of States:
- (iii) Bounties on the production or export of goods, but so that such bounties shall be uniform throughout the Commonwealth:

* The Parliamentary allowance has been varied from time to time (*see* Chapter 3, General Government). In 1964, it was increased to £3,500 (\$7,000), while additional allowances of £2,000 (\$4,000) and £4,250 (\$8,500), respectively, were granted to the Leaders of the Opposition in the Senate and the House of Representatives, and an additional allowance of £1,000 (\$2,000) to the Leader in the House of Representatives (other than the Leader of the Opposition) of a recognized political party which has not less than ten members in the House of Representatives and of which no member is a Minister.

† Particulars of proposed laws which were submitted to referendums are referred to in Chapter 3, General Government, of this Year Book.

- (iv) Borrowing money on the public credit of the Commonwealth:
- (v) Postal, telegraphic, telephonic, and other like services:
- (vi) The naval and military defence of the Commonwealth and of the several States, and the control of the forces to execute and maintain the laws of the Commonwealth:
- (vii) Lighthouses, lightships, beacons and buoys:
- (viii) Astronomical and meteorological observations:
- (ix) Quarantine:
- (x) Fisheries in Australian waters beyond territorial limits:
- (xi) Census and statistics:
- (xii) Currency, coinage, and legal tender:
- (xiii) Banking, other than State banking; also State banking extending beyond the limits of the State concerned, the incorporation of banks, and the issue of paper money:
- (xiv) Insurance, other than State insurance; also State insurance extending beyond the limits of the State concerned:
- (xv) Weights and measures:
- (xvi) Bills of exchange and promissory notes:
- (xvii) Bankruptcy and insolvency:
- (xviii) Copyrights, patents of inventions and designs, and trade marks:
- (xix) Naturalization and aliens:
- (xx) Foreign corporations, and trading or financial corporations formed within the limits of the Commonwealth:
- (xxi) Marriage:
- (xxii) Divorce and matrimonial causes; and in relation thereto, parental rights, and the custody and guardianship of infants:
- (xxiii) Invalid and old-age pensions:
- (xxiiiA) **The provision of maternity allowances, widows' pensions, child endowment, unemployment, pharmaceutical, sickness and hospital benefits, medical and dental services (but not so as to authorize any form of civil conscription), benefits to students and family allowances:*
- (xxiv) The service and execution throughout the Commonwealth of the civil and criminal process and the judgments of the courts of the States:
- (xxv) The recognition throughout the Commonwealth of the laws, the public Acts and records, and the judicial proceedings of the States:
- (xxvi) The people of any race, other than the aboriginal race in any State, for whom it is deemed necessary to make special laws:
- (xxvii) Immigration and emigration:
- (xxviii) The influx of criminals:
- (xxix) External affairs:
- (xxx) The relations of the Commonwealth with the islands of the Pacific:
- (xxxi) The acquisition of property on just terms from any State or person for any purpose in respect of which the Parliament has power to make laws:
- (xxxii) The control of railways with respect to transport for the naval and military purposes of the Commonwealth:
- (xxxiii) The acquisition, with the consent of a State, of any railways of the State on terms arranged between the Commonwealth and the State:
- (xxxiv) Railway construction and extension in any State with the consent of that State:
- (xxxv) Conciliation and arbitration for the prevention and settlement of industrial disputes extending beyond the limits of any one State:
- (xxxvi) Matters in respect of which this Constitution makes provision until the Parliament otherwise provides:
- (xxxvii) Matters referred to the Parliament of the Commonwealth by the Parliament or Parliaments of any State or States, but so that the law shall extend only to States by whose Parliaments the matter is referred, or which afterwards adopt the law:

* Under Section 2 of the *Constitution Alteration (Social Services) 1946*, the Constitution was amended by the insertion of this paragraph.

(xxxviii) The exercise within the Commonwealth, at the request or with the concurrence of the Parliaments of all the States directly concerned, of any power which can at the establishment of this Constitution be exercised only by the Parliament of the United Kingdom or by the Federal Council of Australasia:

(xxxix) Matters incidental to the execution of any power vested by this Constitution in the Parliament or in either House thereof, or in the Government of the Commonwealth, or in the Federal Judicature, or in any department or officer of the Commonwealth.

52. The Parliament shall, subject to this Constitution, have exclusive power to make laws for the peace, order, and good government of the Commonwealth with respect to—

- (i) The seat of Government of the Commonwealth, and all places acquired by the Commonwealth for public purposes:
- (ii) Matters relating to any department of the public service the control of which is by this Constitution transferred to the Executive Government of the Commonwealth:
- (iii) Other matters declared by this Constitution to be within the exclusive power of the Parliament.

53. Proposed laws appropriating revenue or moneys, or imposing taxation, shall not originate in the Senate. But a proposed law shall not be taken to appropriate revenue or moneys, or to impose taxation, by reason only of its containing provisions for the imposition or appropriation of fines or other pecuniary penalties, or for the demand or payment or appropriation of fees for licences, or fees for services under the proposed law.

The Senate may not amend proposed laws imposing taxation, or proposed laws appropriating revenue or moneys for the ordinary annual services of the Government.

The Senate may not amend any proposed law so as to increase any proposed charge or burden on the people.

The Senate may at any stage return to the House of Representatives any proposed law which the Senate may not amend, requesting, by message, the omission or amendment of any items or provisions therein. And the House of Representatives may, if it thinks fit, make any of such omissions or amendments, with or without modifications.

Except as provided in this section, the Senate shall have equal power with the House of Representatives in respect of all proposed laws.

54. The proposed law which appropriates revenue or moneys for the ordinary annual services of the Government shall deal only with such appropriation.

55. Laws imposing taxation shall deal only with the imposition of taxation, and any provision therein dealing with any other matter shall be of no effect.

Laws imposing taxation, except laws imposing duties of customs or of excise, shall deal with one subject of taxation only; but laws imposing duties of customs shall deal with duties of customs only, and laws imposing duties of excise shall deal with duties of excise only.

56. A vote, resolution, or proposed law for the appropriation of revenue or moneys shall not be passed unless the purpose of the appropriation has in the same session been recommended by message of the Governor-General to the House in which the proposal originated.

57. If the House of Representatives passes any proposed law, and the Senate rejects or fails to pass it, or passes it with amendments to which the House of Representatives will not agree, and if after an interval of three months the House of Representatives, in the same or the next session, again passes the proposed law with or without any amendments which have been made, suggested, or agreed to by the Senate, and the Senate rejects or fails to pass it, or passes it with amendments to which the House of Representatives will not agree, the Governor-General may dissolve the Senate and the House of Representatives simultaneously. But such dissolution shall not take place within six months before the date of expiry of the House of Representatives by effluxion of time.

If after such dissolution the House of Representatives again passes the proposed law, with or without any amendments which have been made, suggested, or agreed to by the Senate, and the Senate rejects or fails to pass it, or passes it with amendments to which the House of Representatives will not agree, the Governor-General may convene a joint sitting of the members of the Senate and of the House of Representatives.

The members present at the joint sitting may deliberate and shall vote together upon the proposed law as last proposed by the House of Representatives, and upon amendments, if any, which have been made therein by one House and not agreed to by the other, and any such amendments which are affirmed by an absolute majority of the total number of the members of

the Senate and House of Representatives shall be taken to have been carried, and if the proposed law, with the amendments, if any, so carried is affirmed by an absolute majority of the total number of members of the Senate and the House of Representatives, it shall be taken to have been duly passed by both Houses of the Parliament, and shall be presented to the Governor-General for the Queen's assent.

58. When a proposed law passed by both Houses of the Parliament is presented to the Governor-General for the Queen's assent, he shall declare, according to his discretion, but subject to this Constitution, that he assents in the Queen's name, or that he withholds assent, or that he reserves the law for the Queen's pleasure.

The Governor-General may return to the House in which it originated any proposed law so presented to him, and may transmit therewith any amendments which he may recommend, and the Houses may deal with the recommendation.

59. The Queen may disallow any law within one year from the Governor-General's assent, and such disallowance on being made known by the Governor-General by speech or message to each of the Houses of the Parliament, or by Proclamation, shall annul the law from the day when the disallowance is so made known.

60. A proposed law reserved for the Queen's pleasure shall not have any force unless and until within two years from the day on which it was presented to the Governor-General for the Queen's assent the Governor-General makes known, by speech or message to each of the Houses of the Parliament, or by Proclamation, that it has received the Queen's assent.

CHAPTER II.—THE EXECUTIVE GOVERNMENT.

61. The executive power of the Commonwealth is vested in the Queen and is exercisable by the Governor-General as the Queen's representative, and extends to the execution and maintenance of this Constitution, and of the laws of the Commonwealth.

62. There shall be a Federal Executive Council to advise the Governor-General in the government of the Commonwealth, and the members of the Council shall be chosen and summoned by the Governor-General and sworn as Executive Councillors, and shall hold office during his pleasure.

63. The provisions of this Constitution referring to the Governor-General in Council shall be construed as referring to the Governor-General acting with the advice of the Federal Executive Council.

64. The Governor-General may appoint officers to administer such departments of State of the Commonwealth as the Governor-General in Council may establish.

Such officers shall hold office during the pleasure of the Governor-General. They shall be members of the Federal Executive Council, and shall be the Queen's Ministers of State for the Commonwealth.

After the first general election no Minister of State shall hold office for a longer period than three months unless he is or becomes a senator or a member of the House of Representatives.

65. Until the Parliament otherwise provides, the Ministers of State shall not exceed seven in number, and shall hold such offices as the Parliament prescribes, or, in the absence of provision, as the Governor-General directs.*

66. There shall be payable to the Queen, out of the Consolidated Revenue Fund of the Commonwealth, for the salaries of the Ministers of State, an annual sum which until the Parliament otherwise provides, shall not exceed twelve thousand pounds a year.*

67. Until the Parliament otherwise provides, the appointment and removal of all other officers of the Executive Government of the Commonwealth shall be vested in the Governor-General in Council, unless the appointment is delegated by the Governor-General in Council or by a law of the Commonwealth to some other authority.

68. The command in chief of the naval and military forces of the Commonwealth is vested in the Governor-General as the Queen's representative.

* The number of Ministers of State has been increased from time to time and has been 25 since 1964. The annual appropriation for Ministers' salaries has been correspondingly increased and has been £95,650 (\$191,300) since 1964.

69. On a date or dates to be proclaimed by the Governor-General after the establishment of the Commonwealth the following departments of the public service in each State shall become transferred to the Commonwealth:—

Posts, telegraphs, and telephones:	Lighthouses, lightships, beacons, and buoys:
Naval and military defence:	Quarantine.

But the departments of customs and of excise in each State shall become transferred to the Commonwealth on its establishment.

70. In respect of matters which, under this Constitution, pass to the Executive Government of the Commonwealth, all powers and functions which at the establishment of the Commonwealth are vested in the Governor of a Colony, or in the Governor of a Colony with the advice of his Executive Council, or in any authority of a Colony, shall vest in the Governor-General, or in the Governor-General in Council, or in the authority exercising similar powers under the Commonwealth, as the case requires.

CHAPTER III.—THE JUDICATURE.

71. The judicial power of the Commonwealth shall be vested in a Federal Supreme Court, to be called the High Court of Australia, and in such other federal courts as the Parliament creates, and in such other courts as it invests with federal jurisdiction. The High Court shall consist of a Chief Justice, and so many other Justices, not less than two, as the Parliament prescribes.*

72. The Justices of the High Court and of the other Courts created by the Parliament—

- (i) Shall be appointed by the Governor-General in Council:
- (ii) Shall not be removed except by the Governor-General in Council, on an address from both Houses of the Parliament in the same session, praying for such removal on the ground of proved misbehaviour or incapacity:
- (iii) Shall receive such remuneration as the Parliament may fix; but the remuneration shall not be diminished during their continuance in office.†

73. The High Court shall have jurisdiction, with such exceptions and subject to such regulations as the Parliament prescribes, to hear and determine appeals from all judgments, decrees, orders, and sentences—

- (i) Of any Justice or Justices exercising the original jurisdiction of the High Court:
- (ii) Of any other federal court, or court exercising federal jurisdiction; or of the Supreme Court of any State, or of any other court of any State from which at the establishment of the Commonwealth an appeal lies to the Queen in Council:
- (iii) Of the Inter-State Commission, but as to questions of law only:

and the judgment of the High Court in all such cases shall be final and conclusive.

But no exception or regulation prescribed by the Parliament shall prevent the High Court from hearing and determining any appeal from the Supreme Court of a State in any matter in which at the establishment of the Commonwealth an appeal lies from such Supreme Court to the Queen in Council.

Until the Parliament otherwise provides, the conditions of and restrictions on appeals to the Queen in Council from the Supreme Courts of the several States shall be applicable to appeals from them to the High Court.

74. No appeal shall be permitted to the Queen in Council from a decision of the High Court upon any question, howsoever arising, as to the limits *inter se* of the Constitutional powers of the Commonwealth and those of any State or States, or as to the limits *inter se* of the Constitutional powers of any two or more States, unless the High Court shall certify that the question is one which ought to be determined by Her Majesty in Council.

The High Court may so certify if satisfied that for any special reason the certificate should be granted, and thereupon an appeal shall lie to Her Majesty in Council on the question without further leave.

* The *Judiciary Act* 1903 provided for a Chief Justice and two other Justices, increased by subsequent amendments to six.

† The *Judiciary Act* 1903 provided for the payment of a salary of £3,500 (\$7,000) a year to the Chief Justice and of £3,000 (\$6,000) a year to each other Justice, increased by subsequent amendments to £12,000 (\$24,000) and £10,500 (\$21,000) a year, respectively.

Except as provided in this section, this Constitution shall not impair any right which the Queen may be pleased to exercise by virtue of Her Royal prerogative to grant special leave of appeal from the High Court to Her Majesty in Council. The Parliament may make laws limiting the matters in which such leave may be asked, but proposed laws containing any such limitation shall be reserved by the Governor-General for Her Majesty's pleasure.

75. In all matters—

- (i) Arising under any treaty:
- (ii) Affecting consuls or other representatives of other countries:
- (iii) In which the Commonwealth, or a person suing or being sued on behalf of the Commonwealth, is a party:
- (iv) Between States, or between residents of different States, or between a State and a resident of another State:
- (v) In which a writ of Mandamus or prohibition or an injunction is sought against an officer of the Commonwealth:

the High Court shall have original jurisdiction.

76. The Parliament may make laws conferring original jurisdiction on the High Court in any matter—

- (i) Arising under this Constitution, or involving its interpretation:
- (ii) Arising under any laws made by the Parliament:
- (iii) Of Admiralty and maritime jurisdiction:
- (iv) Relating to the same subject-matter claimed under the laws of different States.

77. With respect to any of the matters mentioned in the last two sections the Parliament may make laws—

- (i) Defining the jurisdiction of any federal court other than the High Court:
- (ii) Defining the extent to which the jurisdiction of any federal court shall be exclusive of that which belongs to or is invested in the courts of the States:
- (iii) Investing any court of a State with federal jurisdiction.

78. The Parliament may make laws conferring rights to proceed against the Commonwealth or a State in respect of matters within the limits of the judicial power.

79. The federal jurisdiction of any court may be exercised by such number of judges as the Parliament prescribes.

80. The trial on indictment of any offence against any law of the Commonwealth shall be by jury, and every such trial shall be held in the State where the offence was committed, and if the offence was not committed within any State the trial shall be held at such place or places as the Parliament prescribes.

CHAPTER IV.—FINANCE AND TRADE.

81. All revenues or moneys raised or received by the Executive Government of the Commonwealth shall form one Consolidated Revenue Fund, to be appropriated for the purposes of the Commonwealth in the manner and subject to the charges and liabilities imposed by this Constitution.

82. The costs, charges, and expenses incident to the collection, management, and receipt of the Consolidated Revenue Fund shall form the first charge thereon; and the revenue of the Commonwealth shall in the first instance be applied to the payment of the expenditure of the Commonwealth.

83. No money shall be drawn from the Treasury of the Commonwealth except under appropriation made by law.

But until the expiration of one month after the first meeting of the Parliament the Governor-General in Council may draw from the Treasury and expend such moneys as may be necessary for the maintenance of any department transferred to the Commonwealth and for the holding of the first elections for the Parliament.

84. When any department of the public service of a State becomes transferred to the Commonwealth, all officers of the department shall become subject to the control of the Executive Government of the Commonwealth.

Any such officer who is not retained in the service of the Commonwealth shall, unless he is appointed to some other office of equal emolument in the public service of the State, be entitled to receive from the State any pension, gratuity, or other compensation, payable under the law of the State on the abolition of his office.

Any such officer who is retained in the service of the Commonwealth shall preserve all his existing and accruing rights, and shall be entitled to retire from office at the time, and on the pension or retiring allowance, which would be permitted by the law of the State if his service with the Commonwealth were a continuation of his service with the State. Such pension or retiring allowance shall be paid to him by the Commonwealth; but the State shall pay to the Commonwealth a part thereof, to be calculated on the proportion which his term of service with the State bears to his whole term of service, and for the purpose of the calculation his salary shall be taken to be that paid to him by the State at the time of the transfer.

Any officer who is, at the establishment of the Commonwealth, in the public service of a State, and who is, by consent of the Governor of the State with the advice of the Executive Council thereof, transferred to the public service of the Commonwealth, shall have the same rights as if he had been an officer of a department transferred to the Commonwealth and were retained in the service of the Commonwealth.

85. When any department of the public service of a State is transferred to the Commonwealth—

- (i) All property of the State of any kind, used exclusively in connexion with the department, shall become vested in the Commonwealth; but, in the case of the departments controlling customs and excise and bounties, for such time only as the Governor-General in Council may declare to be necessary:
- (ii) The Commonwealth may acquire any property of the State, of any kind used, but not exclusively used in connexion with the department; the value thereof shall, if no agreement can be made, be ascertained in, as nearly as may be, the manner in which the value of land, or of an interest in land, taken by the State for public purposes is ascertained under the law of the State in force at the establishment of the Commonwealth:
- (iii) The Commonwealth shall compensate the State for the value of any property passing to the Commonwealth under this section; if no agreement can be made as to the mode of compensation, it shall be determined under laws to be made by the Parliament:
- (iv) The Commonwealth shall, at the date of the transfer, assume the current obligations of the State in respect of the department transferred.

86. On the establishment of the Commonwealth, the collection and control of duties of customs and of excise, and the control of the payment of bounties, shall pass to the Executive Government of the Commonwealth.

87. During a period of ten years after the establishment of the Commonwealth and thereafter until the Parliament otherwise provides, of the net revenue of the Commonwealth from duties of customs and of excise not more than one-fourth shall be applied annually by the Commonwealth towards its expenditure.

The balance shall, in accordance with this Constitution, be paid to the several States, or applied towards the payment of interest on debts of the several States taken over by the Commonwealth.

88. Uniform duties of customs shall be imposed within two years after the establishment of the Commonwealth.

89. Until the imposition of uniform duties of customs—

- (i) The Commonwealth shall credit to each State the revenues collected therein by the Commonwealth.
- (ii) The Commonwealth shall debit to each State—
 - (a) The expenditure therein of the Commonwealth incurred solely for the maintenance or continuance, as at the time of transfer, of any department transferred from the State to the Commonwealth;
 - (b) The proportion of the State, according to the number of its people, in the other expenditure of the Commonwealth.
- (iii) The Commonwealth shall pay to each State month by month the balance (if any) in favour of the State.

90. On the imposition of uniform duties of customs the power of the Parliament to impose duties of customs and of excise, and to grant bounties on the production or export of goods, shall become exclusive.

On the imposition of uniform duties of customs all laws of the several States imposing duties of customs or of excise, or offering bounties on the production or export of goods, shall cease to have effect, but any grant or agreement for any such bounty lawfully made by or under the authority of the Government of any State shall be taken to be good if made before the thirtieth day of June, one thousand eight hundred and ninety-eight, and not otherwise.

91. Nothing in this Constitution prohibits a State from granting any aid to or bounty on mining for gold, silver, or other metals, nor from granting, with the consent of both Houses of the Parliament of the Commonwealth expressed by resolution, any aid to or bounty on the production or export of goods.

92. On the imposition of uniform duties of customs, trade, commerce, and intercourse among the States, whether by means of internal carriage or ocean navigation, shall be absolutely free.

But notwithstanding anything in this Constitution, goods imported before the imposition of uniform duties of customs into any State, or into any Colony which, whilst the goods remain therein, becomes a State, shall, on thence passing into another State within two years after the imposition of such duties, be liable to any duty chargeable on the importation of such goods into the Commonwealth, less any duty paid in respect of the goods on their importation.

93. During the first five years after the imposition of uniform duties of customs, and thereafter until the Parliament otherwise provides—

- (i) The duties of customs chargeable on goods imported into a State and afterwards passing into another State for consumption, and the duties of excise paid on goods produced or manufactured in a State and afterwards passing into another State for consumption, shall be taken to have been collected not in the former but in the latter State:
- (ii) Subject to the last sub-section, the Commonwealth shall credit revenue, debit expenditure, and pay balances to the several States as prescribed for the period preceding the imposition of uniform duties of customs.

94. After five years from the imposition of uniform duties of customs, the Parliament may provide, on such basis as it deems fair, for the monthly payment to the several States of all surplus revenue of the Commonwealth.

95. Notwithstanding anything in this Constitution, the Parliament of the State of Western Australia, if that State be an Original State, may, during the first five years after the imposition of uniform duties of customs, impose duties of customs on goods passing into that State and not originally imported from beyond the limits of the Commonwealth; and such duties shall be collected by the Commonwealth.

But any duty so imposed on any goods shall not exceed during the first of such years the duty chargeable on the goods under the law of Western Australia in force at the imposition of uniform duties, and shall not exceed during the second, third, fourth, and fifth of such years respectively, four-fifths, three-fifths, two-fifths and one-fifth of such latter duty, and all duties imposed under this section shall cease at the expiration of the fifth year after the imposition of uniform duties.

If at any time during the five years the duty on any goods under this section is higher than the duty imposed by the Commonwealth on the importation of the like goods, then such higher duty shall be collected on the goods when imported into Western Australia from beyond the limits of the Commonwealth.

96. During a period of ten years after the establishment of the Commonwealth and thereafter until the Parliament otherwise provides, the Parliament may grant financial assistance to any State on such terms and conditions as the Parliament thinks fit.

97. Until the Parliament otherwise provides, the laws in force in any Colony which has become or becomes a State with respect to the receipt of revenue and the expenditure of money on account of the Government of the Colony, and the review and audit of such receipt and expenditure, shall apply to the receipt of revenue and the expenditure of money on account of the Commonwealth in the State in the same manner as if the Commonwealth, or the Government or an officer of the Commonwealth, were mentioned whenever the Colony, or the Government or an officer of the Colony, is mentioned.

98. The power of the Parliament to make laws with respect to trade and commerce extends to navigation and shipping, and to railways the property of any State.

99. The Commonwealth shall not, by any law or regulation of trade, commerce, or revenue, give preference to one State or any part thereof over another State or any part thereof.

100. The Commonwealth shall not, by any law or regulation of trade or commerce, abridge the right of a State or of the residents therein to the reasonable use of the waters of rivers for conservation or irrigation.

101. There shall be an Inter-State Commission, with such powers of adjudication and administration as the Parliament deems necessary for the execution and maintenance, within the Commonwealth, of the provisions of this Constitution relating to trade and commerce, and of all laws made thereunder.

102. The Parliament may by any law with respect to trade or commerce forbid, as to railways, any preference or discrimination by any State, or by any authority constituted under a State, if such preference or discrimination is undue and unreasonable, or unjust to any State; due regard being had to the financial responsibilities incurred by any State in connexion with the construction and maintenance of its railways. But no preference or discrimination shall, within the meaning of this section, be taken to be undue and unreasonable, or unjust to any State, unless so adjudged by the Inter-State Commission.

103. The members of the Inter-State Commission—

- (i) Shall be appointed by the Governor-General in Council;
- (ii) Shall hold office for seven years, but may be removed within that time by the Governor-General in Council, on an address from both Houses of the Parliament in the same session praying for such removal on the ground of proved misbehaviour or incapacity;
- (iii) Shall receive such remuneration as the Parliament may fix; but such remuneration shall not be diminished during their continuance in office.

104. Nothing in this Constitution shall render unlawful any rate for the carriage of goods upon a railway, the property of a State, if the rate is deemed by the Inter-State Commission to be necessary for the development of the territory of the State, and if the rate applies equally to goods within the State and to goods passing into the State from other States.

105. The Parliament may take over from the States their public debts [as existing at the establishment of the Commonwealth],* or a proportion thereof according to the respective numbers of their people as shown by the latest statistics of the Commonwealth, and may convert, renew, or consolidate such debts, or any part thereof; and the States shall indemnify the Commonwealth in respect of the debts taken over, and thereafter the interest payable in respect of the debts shall be deducted and retained from the portions of the surplus revenue of the Commonwealth payable to the several States, or if such surplus is insufficient, or if there is no surplus, then the deficiency or the whole amount shall be paid by the several States.

105A.† (1.) *The Commonwealth may make agreements with the States with respect to the public debts of the States, including—*

- (a) *the taking over of such debts by the Commonwealth;*
- (b) *the management of such debts;*
- (c) *the payment of interest and the provision and management of sinking funds in respect of such debts;*
- (d) *the consolidation, renewal, conversion, and redemption of such debts;*
- (e) *the indemnification of the Commonwealth by the States in respect of debts taken over by the Commonwealth; and*
- (f) *the borrowing of money by the States or by the Commonwealth, or by the Commonwealth for the States.*

(2.) *The Parliament may make laws for validating any such agreement made before the commencement of this section.*

(3.) *The Parliament may make laws for the carrying out by the parties thereto of any such agreement.*

(4.) *Any such agreement may be varied or rescinded by the parties thereto.*

(5.) *Every such agreement and any such variation thereof shall be binding upon the Commonwealth and the States parties thereto notwithstanding anything contained in this Constitution or the Constitution of the several States or in any law of the Parliament of the Commonwealth or of any State.*

(6.) *The powers conferred by this section shall not be construed as being limited in any way by the provisions of section one hundred and five of this Constitution.*

* Under Section 2 of the *Constitution Alteration (State Debts) 1909*, the words in square brackets were omitted.

† Under Section 2 of the *Constitution Alteration (State Debts) 1928*, the Constitution was amended by the insertion of this section.

CHAPTER V.—THE STATES.

106. The Constitution of each State of the Commonwealth shall, subject to this Constitution, continue as at the establishment of the Commonwealth, or as at the admission or establishment of the State, as the case may be, until altered in accordance with the Constitution of the State.

107. Every power of the Parliament of a Colony which has become or becomes a State, shall, unless it is by this Constitution exclusively vested in the Parliament of the Commonwealth or withdrawn from the Parliament of the State, continue as at the establishment of the Commonwealth, or as at the admission or establishment of the State as the case may be.

108. Every law in force in a Colony which has become or becomes a State, and relating to any matter within the powers of the Parliament of the Commonwealth, shall, subject to this Constitution, continue in force in the State: and, until provision is made in that behalf by the Parliament of the Commonwealth, the Parliament of the State shall have such powers of alteration and of repeal in respect of any such law as the Parliament of the Colony had until the Colony became a State.

109. When a law of a State is inconsistent with a law of the Commonwealth, the latter shall prevail, and the former shall, to the extent of the inconsistency, be invalid.

110. The provisions of this Constitution relating to the Governor of a State extend and apply to the Governor for the time being of the State, or other chief executive officer or administrator of the government of the State.

111. The Parliament of a State may surrender any part of the State to the Commonwealth; and upon such surrender, and the acceptance thereof by the Commonwealth, such part of the State shall become subject to the exclusive jurisdiction of the Commonwealth.

112. After uniform duties of customs have been imposed, a State may levy on imports or exports, or on goods passing into or out of the State, such charges as may be necessary for executing the inspection laws of the State; but the net produce of all charges so levied shall be for the use of the Commonwealth; and any such inspection laws may be annulled by the Parliament of the Commonwealth.

113. All fermented, distilled, or other intoxicating liquids passing into any State or remaining therein for use, consumption, sale, or storage, shall be subject to the laws of the State as if such liquids had been produced in the State.

114. A State shall not, without the consent of the Parliament of the Commonwealth, raise or maintain any naval or military force, or impose any tax on property of any kind belonging to the Commonwealth, nor shall the Commonwealth impose any tax on property of any kind belonging to a State.

115. A State shall not coin money, nor make anything but gold and silver coin a legal tender in payment of debts.

116. The Commonwealth shall not make any law for establishing any religion, or for imposing any religious observance, or for prohibiting the free exercise of any religion, and no religious test shall be required as a qualification for any office or public trust under the Commonwealth.

117. A subject of the Queen, resident in any State, shall not be subject in any other State to any disability or discrimination which would not be equally applicable to him if he were a subject of the Queen resident in such other State.

118. Full faith and credit shall be given, throughout the Commonwealth, to the laws, the public Acts and records, and the judicial proceedings of every State.

119. The Commonwealth shall protect every State against invasion and, on the application of the Executive Government of the State, against domestic violence.

120. Every State shall make provision for the detention in its prisons of persons accused or convicted of offences against the laws of the Commonwealth, and for the punishment of persons convicted of such offences, and the Parliament of the Commonwealth may make laws to give effect to this provision.

CHAPTER VI.—NEW STATES.

121. The Parliament may admit to the Commonwealth or establish new States, and may upon such admission or establishment make or impose such terms and conditions, including the extent of representation in either House of the Parliament, as it thinks fit.

122. The Parliament may make laws for the government of any territory surrendered by any State to and accepted by the Commonwealth, or of any territory placed by the Queen under the authority of and accepted by the Commonwealth, or otherwise acquired by the Commonwealth, and may allow the representation of such territory in either House of the Parliament to the extent and on the terms which it thinks fit.

123. The Parliament of the Commonwealth may, with the consent of the Parliament of a State, and the approval of the majority of the electors of the State voting upon the question, increase, diminish, or otherwise alter the limits of the State, upon such terms and conditions as may be agreed on, and may, with the like consent, make provision respecting the effect and operation of any increase or diminution or alteration of territory in relation to any State affected.

124. A new State may be formed by separation of territory from a State, but only with the consent of the Parliament thereof, and a new State may be formed by the union of two or more States or parts of States, but only with the consent of the Parliaments of the States affected.

CHAPTER VII.—MISCELLANEOUS.

125. The seat of Government of the Commonwealth shall be determined by the Parliament and shall be within territory which shall have been granted to or acquired by the Commonwealth, and shall be vested in and belong to the Commonwealth, and shall be in the State of New South Wales, and be distant not less than one hundred miles from Sydney.

Such territory shall contain an area of not less than one hundred square miles, and such portion thereof as shall consist of Crown lands shall be granted to the Commonwealth without any payment therefor.

The Parliament shall sit at Melbourne until it meet at the Seat of Government.

126. The Queen may authorize the Governor-General to appoint any person, or any persons jointly or severally, to be his deputy or deputies within any part of the Commonwealth, and in that capacity to exercise during the pleasure of the Governor-General such powers and functions of the Governor-General as he thinks fit to assign to such deputy or deputies, subject to any limitations expressed or directions given by the Queen; but the appointment of such deputy or deputies shall not affect the exercise by the Governor-General himself of any power or function.

127. In reckoning the numbers of the people of the Commonwealth, or of a State or other part of the Commonwealth, aboriginal natives shall not be counted.

CHAPTER VIII.—ALTERATION OF THE CONSTITUTION.

128. This Constitution shall not be altered except in the following manner:—

The proposed law for the alteration thereof must be passed by an absolute majority of each House of the Parliament, and not less than two nor more than six months after its passage through both Houses the proposed law shall be submitted in each State to the electors qualified to vote for the election of members of the House of Representatives.

But if either House passes any such proposed law by an absolute majority, and the other House rejects or fails to pass it or passes it with any amendment to which the first-mentioned House will not agree, and if after an interval of three months the first-mentioned House in the same or the next session again passes the proposed law by an absolute majority with or without any amendment which has been made or agreed to by the other House, and such other House rejects or fails to pass it or passes it with any amendment to which the first-mentioned House will not agree, the Governor-General may submit the proposed law as last proposed by the first-mentioned House, and either with or without any amendments subsequently agreed to by both Houses, to the electors in each State qualified to vote for the election of the House of Representatives.

When a proposed law is submitted to the electors the vote shall be taken in such manner as the Parliament prescribes. But until the qualification of electors of members of the House of Representatives becomes uniform throughout the Commonwealth, only one-half the electors voting for and against the proposed law shall be counted in any State in which adult suffrage prevails.

And if in a majority of the States a majority of the electors voting approve the proposed law, and if a majority of all the electors voting also approve the proposed law, it shall be presented to the Governor-General for the Queen's assent.

No alteration diminishing the proportionate representation of any State in either House of the Parliament, or the minimum number of representatives of a State in the House of Representatives, or increasing, diminishing, or otherwise altering the limits of the State, or in any manner affecting the provisions of the Constitution in relation thereto, shall become law unless the majority of the electors voting in that State approve the proposed law.

SCHEDULE.

OATH.

I, *A.B.*, do swear that I will be faithful and bear true allegiance to Her Majesty Queen Victoria, Her heirs and successors according to law. SO HELP ME GOD !

AFFIRMATION.

I, *A.B.*, do solemnly and sincerely affirm and declare that I will be faithful and bear true allegiance to Her Majesty Queen Victoria, Her heirs and successors according to law.

(NOTE.—*The name of the King or Queen of the United Kingdom of Great Britain and Ireland for the time being is to be substituted from time to time.*)

The Royal Proclamation

The preceding Act received the Royal assent on 9 July 1900. This made it lawful to declare that the people of Australia should be united in a Federal Commonwealth. This proclamation, made on 17 September 1900, constituted the Commonwealth as from 1 January 1901; it read as follows.

BY THE QUEEN.

A PROCLAMATION.

(Signed) VICTORIA R.

WHEREAS by an Act of Parliament passed in the Sixty-third and Sixty-fourth Years of Our Reign, intituled "An Act to constitute the Commonwealth of *Australia*," it is enacted that it shall be lawful for the Queen, with the advice of the Privy Council, to declare by Proclamation, that, on and after a day therein appointed, not being later than One year after the passing of this Act, the people of *New South Wales, Victoria, South Australia, Queensland, and Tasmania*, and also, if Her Majesty is satisfied that the people of *Western Australia* have agreed thereto, of *Western Australia*, shall be united in a Federal Commonwealth under the name of the Commonwealth of Australia.

And whereas We are satisfied that the people of *Western Australia* have agreed thereto accordingly.

We therefore, by and with the advice of Our Privy Council, have thought fit to issue this Our Royal Proclamation, and We do hereby declare that on and after the First day of *January* One thousand nine hundred and one, the people of *New South Wales, Victoria, South Australia, Queensland, Tasmania, and Western Australia* shall be united in a Federal Commonwealth under the name of the Commonwealth of *Australia*.

Given at Our Court at *Balmoral* this Seventeenth day of *September*, in the Year of Our Lord One thousand nine hundred, and in the Sixty-fourth Year of Our Reign.

GOD SAVE THE QUEEN.

The External Territories of Australia

Norfolk Island

In 1856 Norfolk Island was created a distinct and separate settlement under the jurisdiction of New South Wales. Later, in 1896, it was made a dependency under the Governor of that colony, and finally by the passage of the *Norfolk Island Act* 1913 it was accepted as a Territory of the Commonwealth of Australia. The island is situated in latitude 29° 3' 3" S., longitude 167° 57' 5" E., and comprises an area of approximately 14 square miles.

Papua

Under the administration of the Commonwealth, but not included in it, is British New Guinea or Papua, finally annexed by the British Government in 1884. This Territory was for a number of years administered by the Queensland Government, but was transferred to the Commonwealth by proclamation on 1 September 1906, under the authority of the *Papua Act* 1905. The area of Papua is about 86,100 square miles.

Trust Territory of New Guinea

In 1919 it was agreed by the Principal Allied and Associated Powers that a mandate should be conferred on Australia for the government of the former German territories and islands situated in latitude between the Equator and 8° S., and in longitude between 141° E. and 159° 25' E. The mandate was issued by the League of Nations on 17 December 1920. The Governor-General of the Commonwealth was authorized to accept the mandate by the *New Guinea Act 1920*, which also declared the area to be a Territory under the authority of the Commonwealth by the name of the Territory of New Guinea. The Territory comprises about 92,160 square miles, and the administration under the mandate dated from 9 May 1921. New Guinea is now administered under a Trusteeship Agreement with the United Nations, approved on 13 December 1946.

Trust Territory of Nauru

In 1919 the Governments of the United Kingdom, Australia and New Zealand entered into an agreement to make provision for the exercise of the mandate conferred on the British Empire for the administration of the island of Nauru, and for the mining of the phosphate deposits thereon. The island is situated in latitude 0° 32' S., and longitude 166° 55' E. and is about 8½ square miles in area. The agreement provided that the administration of the island should be vested in an administrator, the first appointment to be made by the Commonwealth Government, and thereafter in such manner as the three Governments decided. The agreement was approved by the Commonwealth Parliament in the *Nauru Island Agreement Act 1919*, and a supplementary agreement of 30 May 1923, which gave the Government immediately responsible for the administration greater powers of control over the Administrator, was approved in 1932. So far, the administrators have been appointed by the Commonwealth Government. The administration under the mandate operated from 17 December 1920 to 1 November 1947, since when Nauru has been administered under a Trusteeship Agreement with the United Nations.

Australian Antarctic Territory

An Imperial Order in Council of 7 February 1933 placed under Australian authority 'all the islands and territories other than Adelie Land which are situated south of the 60th degree of South Latitude and lying between the 160th degree of East Longitude and the 45th degree of East Longitude'.

The Order came into force with a proclamation issued by the Governor-General on 24 August 1936, after the passing of the *Australian Antarctic Territory Acceptance Act 1933* by the Commonwealth Parliament. The boundaries of Adelie Land were definitely fixed by a decree of 1 April 1938, as latitude 60° S., longitude 135° E. and longitude 142° E.

Heard and McDonald Islands

Heard and McDonald Islands, about 2,500 miles south-west of Fremantle, were transferred from United Kingdom to Australian control as from 26 December 1947. Heard Island is approximately 27 miles long and 13 miles wide, and McDonald Islands, about 26 miles to the west of Heard Island, are small, rocky and precipitous.

Cocos (Keeling) Islands

The Cocos (Keeling) Islands Act 1955 provided for the acceptance of the Cocos Islands, in the Indian Ocean, as a Territory under the authority of the Commonwealth of Australia and was parallel to an Act of the United Kingdom Parliament transferring authority over the islands to the Commonwealth. Consequent on the passing of these Acts, Her Majesty, by Order in Council, specified 23 November 1955 as the date of transfer. From that date the islands came under Australian administration and an Official Representative of Australia was appointed to take charge of the local administration of the islands. Their approximate area is about 5½ square miles.

Christmas Island

The Christmas Island Act 1958 provided for the acceptance of Christmas Island, in the Indian Ocean, as a Territory under the authority of the Commonwealth of Australia. Complementary legislation having been passed by the Parliament of the United Kingdom, the island was transferred to the Australian administration on 1 October 1958, and an Official Representative was appointed to administer the Territory. The area of the island is about 52 square miles.

CHAPTER 2

PHYSICAL GEOGRAPHY AND METEOROLOGY

General description of Australia

Geographical position

The Australian Commonwealth, which includes the island continent of Australia and the island of Tasmania, is situated in the Southern Hemisphere, and comprises an area of 2,967,909 square miles, the mainland alone containing 2,941,526 square miles. Bounded on the west and east by the Indian and Pacific Oceans respectively, it lies between longitudes 113° 9' E. and 153° 39' E., while its northern and southern limits are the parallels of latitude 10° 41' S. and 43° 39' S., or, excluding Tasmania, 39° 8' S. On its north are the Timor and Arafura Seas and Torres Strait, on its south the Southern Ocean*. The extreme points are Steep Point on the west, Cape Byron on the east, Cape York on the north, and South-East Cape or, if Tasmania be excluded, Wilson's Promontory, on the south. The difference in latitude between Cape York and Wilson's Promontory is 1,959 miles, and in longitude between Steep Point and Cape Byron 2,489 miles.

Tropical and temperate regions

Of the total area of Australia, nearly 39 per cent lies within the tropics. Taking the latitude of the Tropic of Capricorn as 23° 30' S., the areas within the tropical and temperate zones are approximately as follows.

AREAS OF TROPICAL AND TEMPERATE REGIONS: STATES AND TERRITORIES (Square miles)

Area	N.S.W. (a)	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	Total
Within tropical zone . . .			360,642		364,000		422,980	1,147,622
,, temperate zone . . .	310,372	87,884	306,358	380,070	611,920	26,383	97,300	1,820,287
Total area . . .	310,372	87,884	667,000	380,070	975,920	26,383	520,280	2,967,909

(a) Includes Australian Capital Territory (939 square miles).

Fifty-four per cent of Queensland lies within the tropical zone and 46 per cent in the temperate zone; 37 per cent of Western Australia is tropical and 63 per cent temperate; while 81 per cent of the Northern Territory is tropical and 19 per cent temperate. All the remaining States lie within the temperate zone. The tropical part of Australia thus comprises about 39 per cent of the whole of the continent.

Area of Australia compared with areas of other countries

The area of Australia is almost as great as that of the United States of America excluding Alaska, four-fifths of that of Canada, more than half as large again as Europe excluding the U.S.S.R., and about twenty-five times that of Great Britain and Ireland. The areas of Australia and of certain other countries are shown in the table on the following page. The areas shown are in the main obtained from the *Demographic Yearbook*, 1964, published by the Statistical Office of the United Nations, and the countries have been arranged in accordance with the continental groups used therein.

* The Southern Ocean is a local designation for that part of the Indian Ocean lying between the southern shores of Australia and Antarctica.

Geographical features of Australia

The following description is a broad summary of the main physical characteristics of the Australian continent.

A section through the Australian continent from east to west, at the point of its greatest breadth, shows first a narrow belt of coastal plain. This plain, extending north and south along the whole east coast, is well watered by rivers. It is of variable width, seldom more than sixty or seventy miles, and occasionally only a few miles, the average being roughly about forty to fifty miles. Bordering this plain is the Great Dividing Range, which extends from the north of Queensland to the south of New South Wales, and thence one branch sweeps westwards towards the boundary of Victoria and South Australia, and the other, the main branch, terminates in Tasmania. This range, which rises, often abruptly, from the plain, frequently presents bold escarpments on its eastern face, but the descent on its western slopes is gradual, until, in the country to the north of Spencer's Gulf, the plain is not above sea-level and occasionally even below it. Thence there is another almost imperceptible rise until the mountain ranges of Western Australia are reached, and beyond these lies another coastal plain. The mountains of Australia are relatively low, the highest peak, Mount Koscuisko, in New South Wales, being only about 7,300 feet. Three-quarters of the land-mass of Australia lies between the 600 and 1,500 feet contours in the form of a huge plateau, constituting the most distinctive feature of the Australian continent, to which the peculiarities of Australia's climate can probably be largely ascribed.

The rivers of Australia may be divided into two major classes, those of the coastal plains with moderate rates of fall and those of the central plains with very slight fall. Of the former not many are navigable for any distance from their mouths, and bars make many of them difficult of access or inaccessible from the sea.

The two longest rivers of the northern part of the east coast are the Burdekin and the Fitzroy in Queensland. The Hunter is the largest coastal river of New South Wales, and the Murray River, with its great tributary the Darling, drains part of Queensland, the major part of New South Wales, and a large part of Victoria, finally flowing into the arm of the sea known as Lake Alexandrina, on the eastern side of the South Australian coast. The total length of the Murray

is about 1,600 miles, 400 being in South Australia and 1,200 constituting the boundary between New South Wales and Victoria. The total length of the Murray-Darling from the source of the Darling to the mouth of the Murray is about 2,300 miles. The rivers of the north-west coast of Australia (Western Australia), e.g. the Murchison, Gascoyne, Ashburton, Fortesque, De Grey, Fitzroy, Drysdale and Ord are of considerable size. So also are those in the Northern Territory, e.g. the Victoria and Daly, and those on the Queensland side of the Gulf of Carpentaria, such as the Gregory, Leichhardt, Cloncurry, Gilbert and Mitchell. The rivers of Tasmania have short and rapid courses, as might be expected from the configuration of the country.

The 'lakes' of Australia may be divided into three classes: true permanent lakes; lakes which, being very shallow, become mere morasses in dry seasons or even dry up and finally present a cracked surface of salt and dry mud; and lakes which are really inlets of the ocean, opening out into a lake-like expanse. The second class is the only one which seems to demand special mention. These are a characteristic of the great central plain of Australia. Some of them, such as Lakes Torrens, Gairdner, Eyre and Frome, are of considerable extent.

For further information on the geographical features of Australia earlier issues of the Year Book should be consulted. The list of special articles, etc., at the end of this volume indicates the nature of the information available and its position in the various issues.

Climate and meteorology of Australia

This section has been prepared by the Director of the Commonwealth Bureau of Meteorology, and the various States and Territories have been arranged in the standard order adopted by that Bureau. The section concludes with a brief summary of the weather of 1965.

Introduction

Australia extends from about latitude 10° S. to latitude 44° S., but owing largely to the moderating effects of the surrounding oceans and the absence of very pronounced and extensive mountain masses it is less subject to extremes of climate than are regions of similar size in other parts of the world. The average elevation of the land surface is low—probably close to 900 feet above the sea; while the maximum altitude is just above 7,300 feet. Latitude for latitude the Australian climate is generally more temperate than that of the other large land masses of the earth, although it varies considerably from the tropical to the alpine.

The Australian meteorological seasons are: Summer—December, January, February; Autumn—March, April, May; Winter—June, July, August; Spring—September, October, November.

The following general discussion of the climate of Australia is necessarily brief. However, extensive records of Australian climatic data are held and published in various forms by the Bureau of Meteorology. A programme of regional climatic survey has been in progress for some years, and a large number of studies have been published by the Bureau of Meteorology and by the Department of National Development and State Development Authorities. The Bureau of Meteorology welcomes inquiries for climatic information, which may be made at its Central Office in Melbourne or through the Regional Offices which are situated in each of the State capital cities and in Darwin. Reference may also be made to various bulletins and research papers mentioned in this text for more detailed information on particular topics.

Precipitation

Precipitation of moisture from the atmosphere may take various forms depending chiefly on the thermal conditions existing at the time. Within the Australian region, precipitation occurs chiefly as rain because of the generally mild temperatures, but may also occur as snow or hail. Broadly, the immediate physical cause of rainfall may be said to be the lifting of moist air with resultant cooling, condensation into cloud, and eventual precipitation of the heavy water droplets

as rain. This process may be achieved by three different means each of which may be combined with either or both of the others:

- (a) Orographic lifting caused by winds blowing onto rising terrain;
- (b) convective lifting resulting in the development of individual rain clouds of the cumulus or cumulonimbus type producing showers and thunderstorms;
- (c) lifting of a warm air mass as it rises over cooler air—known as a 'frontal' process.

Average annual rainfall. The distribution of the average annual rainfall over Australia is shown in plate 2 (between pages 32 and 33), while plate 3 shows the distribution in 1965.

While Australia is a continent of comparatively low relief, the orographic processes in rain production are very marked in the chain of the Great Dividing Range bordering the whole east coast of the continent, in the ranges of the south-western corner of Western Australia, and in Tasmania. Thus on the east coast the higher rainfall areas lie between the ranges and the Pacific Ocean in the region of prevailing south-east wind circulation. In Tasmania and the south-west of Western Australia the region of high rainfall lies between the ranges and the ocean to the west, these areas lying in a region of predominantly westerly wind flow.

The north-western part of the continent and to some extent the whole region of the Northern Territory and inland north Queensland comes under the influence of the Australian-Asian monsoon. This results in high rainfalls in a summer wet season with the inflow of moist air from the north-west, and a winter dry season with predominantly south-east winds blowing across the dry regions of the interior and producing little rainfall. Tropical cyclones affect the waters adjacent to the north-east and north-west of Australia between December and April. Their frequency varies greatly from season to season, but on the average about three of these disturbances occur in the Coral Sea each season and about two in the eastern Indian Ocean adjacent to the west coast of the continent. When tropical cyclones move close to the tropical coast of the continent they cause very heavy rainfalls over the coastal regions. On occasions these cyclones move over the land and lose intensity, but may still continue to be accompanied by heavy rainfall along their path.

Southern Australia lies in the region of the mid-latitude westerlies for the winter half of the year and is subject to the rain-producing influences of the great depressions of the Southern Ocean and their associated frontal systems. The combined effects of these systems and the topography lead to high winter rainfalls in south-western and south-eastern Australia and in Tasmania, with the highest falls occurring on the windward side of the mountains. The rainfall generally decreases inland with distance from the coast, although the 10-inch isohyet reaches the shore of the Great Australian Bight and the central western coast of Western Australia in regions which are of very flat relief and which because of their position and the orientation of the coastline are only rarely exposed to moist winds.

**AREA DISTRIBUTION OF AVERAGE ANNUAL RAINFALL:
STATES AND TERRITORIES
(Per cent)**

Average annual rainfall	W.A.	N.T.	S.A.	Qld	N.S.W. (a)	Vic.	Tas.	Total
Under 10 inches	58.0	24.7	82.8	13.0	19.7	Nil	Nil	39.0
10 and under 15 inches	22.4	32.4	9.4	14.4	23.5	22.4	Nil	20.6
15 and under 20 "	6.8	9.7	4.5	19.7	17.5	15.2	0.7	11.2
20 and under 25 "	3.7	6.6	2.2	18.8	14.2	17.9	11.0	9.0
25 and under 30 "	3.7	9.3	0.8	11.6	9.1	18.0	11.4	7.2
30 and under 40 "	3.3	4.7	0.3	11.1	9.9	16.1	20.4	6.1
40 inches and over	2.1	12.6	Nil	11.4	6.1	10.4	56.5	6.9
Total	100.0	100.0	100.0	100.0	100.0	100.0	100.0	100.0

(a) Includes Australian Capital Territory.

The region with the highest average annual rainfall is the east coast of Queensland between Port Douglas and Cardwell, where Tully has an annual average of 177 inches. A further very high rainfall region is the mountainous west coast of Tasmania, where Lake Margaret has the highest average annual total of 145 inches. The area of lowest average annual rainfall is that

of some 180,000 square miles surrounding Lake Eyre in South Australia, where on the average only 4 to 6 inches are received annually. The lowest average over a long period of record is at Troudaninna—4.13 inches. Rain occurs very irregularly, averaging only about one or two days a month in this region.

Of all the continents (excluding Antarctica), Australia receives the least average depth of rainfall and has the least run-off from its rivers into the oceans. Only in relatively small areas of the continent could the rainfall be described as abundant.

Seasonal distribution of rainfall. The average monthly distribution of rainfall in the various Australian rainfall districts is shown by the histograms of plate 4.

The following are the most marked features.

- (a) The clearly defined wet summer and dry winter of the monsoon region of northern Australia.
- (b) The more regular distribution of rainfall throughout the year in south-eastern Australia. In the region to the south and west of the Great Dividing Range, a less pronounced maximum of rainfall is noticeable in the winter or early spring. On the Gippsland (eastern Victoria) coast the rainfall is fairly evenly distributed throughout the year but further along the east coast of the continent the rainfall minimum in late winter and early spring begins to appear and becomes more marked as the tropical regions are approached.
- (c) The marked maximum of rainfall in the south-western districts of Western Australia in winter—the period of the most active southern depressions and frontal systems in this region.

For further information on monthly rainfalls reference may be made to the various Australian rainfall bulletins, to the Climatological Surveys of particular districts and to the annual rain maps and books of normals (standard 30 year periods), all published by the Bureau of Meteorology.

Variability of rainfall. For most agricultural pursuits a more important criterion of the value of rainfall is its variability or reliability. The adequate description of rainfall variability over an extensive geographical area is a matter of some difficulty. Probably the best available measures are to be found in the tables which have been calculated for a number of individual stations in some of the Climatological Survey districts. These tables show the percentage chances of receiving specified amounts of rainfall in monthly seasonal or annual time spans. Statistical indexes of rainfall variation based on a number of different techniques have been used to produce maps which show the main features of the variability of annual rainfall over Australia. A discussion of these methods and the maps is given by F. Loewe in *Some Considerations Regarding the Variability of Annual Rainfall in Australia*, Bureau of Meteorology Bulletin No. 39 (1948).

In general it may be stated that the regions of most reliable rainfall are the south-west of Western Australia, western Tasmania, and western and southern Victoria south of the divide. These areas have one of the most reliable rainfalls in the world. Elsewhere in Australia the degree of variability, in general, increases inland but the region of the highest variability for low average annual rainfalls extends across the central part of the continent from south-western Queensland to the central coast of Western Australia. Some outstanding examples of the numerous instances of high rainfall variability throughout Australia are given below.

At Onslow (Western Australia) annual totals vary from 0.05 inches to 28 inches, and in the four consecutive years 1921 to 1924 the annual totals were 22.25, 2.71, 26.82, and 2.18 inches respectively. At Whim Creek, where 29.41 inches have been recorded in a single day, only 17 points (0.17 inches) were received in the whole of 1924. Great variability can also occur in the heavy rainfall areas, e.g. at Tully the annual rainfalls have varied from 310.92 inches in 1950 to 104.98 inches in 1943.

The following table of annual rainfall for the Australian Capital cities for the past thirty years indicates the variation in rainfall at these sites.

RAINFALL: AUSTRALIAN CAPITAL CITIES, 1935 TO 1964

Year	Perth		Adelaide		Brisbane		Sydney		Canberra(a)		Melbourne		Hobart(b)

(a) Commonwealth Forestry Bureau; records in issues of the Year Book prior to No. 36 were for the station at Acton which closed down in 1939. (b) Records taken from present site commenced 1883. (c) 1911-1940. (d) Thirty years to 1957 inclusive.

Prolonged dry spells are fairly common in much of Australia particularly in inland areas. A detailed discussion of the history of droughts and the frequency in particular areas may be found in Foley, J. C., *Droughts in Australia*, Bureau of Meteorology Bulletin No. 43 (1957). A shorter account of droughts in Australia will be found in a special article in Year Book No. 45, pages 51-6.

Rainfall and vegetation. In general, the three main climatic zones of the continent exert a particular controlling influence on the general vegetation. These are the northern third of the continent where rainfall is almost always restricted to the warmer months of the year, the southern third where rainfall is predominantly a winter and spring event, and a transitional zone which experiences rainfall from both sources, although in greatly reduced quantity over the interior, which is subject to frequent drought.

The length of the growing season, or conversely the extent of dry periods during the year, decides the type of vegetation which establishes in a region. The climatic influence on vegetative response is primarily through soil moisture and temperature. Thus in colder south-eastern areas the growing season is mainly temperature dependent, but elsewhere the availability of soil

moisture is the prime factor. All rainfall is not equally effective in increasing the soil moisture, its availability from the soil storage to plants depending on the extent of surface run-off, seepage beyond the root zone, and loss by surface evaporation. Furthermore, the effectiveness of available soil moisture depends on the evaporative demand of the local climate; for example, an inch of stored moisture may maintain vigorous plant growth for twice as long in Tasmania as in the warmer, drier atmosphere of inland New South Wales. Thus it is not a sound practice to assess the agricultural potential of different areas simply by reference to average rainfall.

Generally speaking, the length of the growing season exceeds nine months over the far south-west of Western Australia and in all eastern coastal districts from Cape York Peninsula to Western Victoria, and within this region humid and semi-humid plant formations thrive. Soil types, of course, also play a part in the distribution of vegetation, but they too are, to a considerable extent, the result of climate and weather.

The climate of Arnhem Land (Northern Territory) is such that there is a considerable surplus of moisture for about five months of the warm season, followed regularly by a virtual drought which frequently reaches severe intensity, and this special combination of meteorological conditions results in annual and perennial vegetation adapted to this cycle.

Over the interior the position is more complex because of the lower levels of the rainfall, its greater variability, and the high evaporative power of the drier, warmer atmosphere. In this vast section of the continent the climatic demands are so severe that the vegetative formations of the moister zones (i.e. the mesophytes, requiring about five months or longer growing season) are unable to exist. Thus a plant species adapted to these very dry and variable conditions (xerophytes), e.g. spinifex, salt bush, blue bush and stunted eucalypts capable of maintaining a cattle population, predominates over the arid interior.

The arid and semi-arid lands of Western Australia and inland New South Wales which border the desert carry the majority of the sheep in these States. In New South Wales the most important vegetative formations in these areas are savannah (treeless plains), savannah woodland, mulga scrub and mallee scrub. In Western Australia sclerophyllous grass steppe and mulga scrub border the deserts and are succeeded to the south by zones of mallee scrub and mallee heath.

Rainfall intensity. The study of extremely high rainfall intensities is important in the investigation of the flow characteristics of river systems and flood prevention measures, the design of irrigation works and hydro-electric schemes. Some of the more notable falls in a period of 24 hours are listed for the various States in the following tables. Most of the very high intensities have occurred in the coastal strip of Queensland, where the combination of a tropical cyclone moving close to mountainous terrain provides ideal conditions for spectacular falls. The highest fall recorded in 24 hours, 35.71 inches, occurred at Crohamhurst, Queensland, on 3 February 1893.

Rainfall at most reporting stations in Australia is recorded only for the 24-hour period from 9 a.m. to 9 a.m. The data in this table are based on these records. Where automatic recording gauges are installed, more detailed intensity data are available for shorter and exactly measured time intervals. For other very heavy falls at various localities, reference may be made to Year Book No. 14, pages 60-4, No. 22, pages 46-8 and No. 29, pages 43, 44 and 51.

BUREAU OF METEOROLOGY.

MONTHLY DISTRIBUTION OF RAINFALL OVER AUSTRALIA.

ALL YEARS OF RECORD TO 1957.

EXPLANATION— THE GRAPHS SHOW THE AVERAGE RAINFALL IN EACH MONTH OF THE YEAR IN THE VARIOUS RAINFALL DISTRICTS. THE BOUNDARIES OF WHICH ARE SHOWN BY THE BROKEN LINES ON THE MAP. THE NUMBERS ON THE MAP REFER TO THE DISTRICTS. THE CORRESPONDING DISTRICT NAMES ARE GIVEN IN THE INSERT ON PAGE 89. THE COLUMNS FOR THE SUCCESSIVE MONTHS, JANUARY TO DECEMBER, RUN FROM LEFT TO RIGHT.

THE LENGTH OF A VERTICAL COLUMN REPRESENTS THE AVERAGE MONTHLY RAINFALL ACCORDING TO THE SCALE GIVEN BELOW.

9 A.M.

SHOWING MONTHLY PERCENTAGE
FREQUENCY DISTRIBUTION OF
WIND DIRECTIONS TO EIGHT
POINTS OF THE COMPASS

EXPLANATION.

The sides of the octagons face towards the cardinal and semi-cardinal points. Projecting from each side are twelve columns representing the twelve months of the year, and the lengths of the columns are proportional to the percentage frequencies of the winds from the given direction in the successive months, working round clockwise from January to December. The scale is shown above, and the outer octagons have been drawn, separated from the inner octagons by a distance representing 12%. The tops of the columns would all be on these outer octagons if winds from the eight directions were equally frequent and there were no calms. The percentage frequency of calms in the 12 months is shown by figures within the octagons. Small dashes within the inner octagons indicate months when the percentage of winds from that direction is practically zero.

Snow and hail. For varying periods from late autumn to early spring snow usually covers the ground to a great extent on the Australian Alps above a level of about 4,500 to 5,000 feet, where in both New South Wales and Victoria ski-ing resorts operate throughout the season.

In Tasmania also the highlands are frequently covered above the 3,500 feet level for extended periods of the winter. There are, however, some years when snowfalls are much lighter than normal and even fail completely. Light snow has been known to fall occasionally as far north as the New England plateau in New South Wales (latitude 31° S.), and in exceptional seasons much of the dividing range from Victoria to Toowoomba (Queensland) has been covered above a level of about 4,000 feet. In ravines around Mount Kosciusko small areas of snow may persist throughout the summer after a heavy winter fall. This winter snowfall of south-eastern Australia is important in aiding the reliable flow of many streams which are utilized in the hydro-electric schemes of the Snowy Mountains, northern Victoria, and Tasmania. Snowfall at low terrain elevations occurs from time to time, particularly in Tasmania and Victoria, but falls are usually light and rarely lie more than a few days.

Hail is most frequent in winter and spring along the south-eastern coastal region of the continent and in Tasmania, where it is usually of a relatively small size. Summer storms, however, which are quite frequent, particularly in the highland plateau regions of eastern Australia, often produce stones of large size and of destructive intensity. Very large stones capable of piercing light gauge galvanized iron are reported from time to time, and damage to fruit crops in south-eastern Australia from large hail stones is quite frequent.

Floods. In general, flooding in Australia is most pronounced on the shorter streams flowing from the Great Dividing Range into the Pacific Ocean along the seaboard of Queensland and New South Wales. These floods are particularly destructive on the more densely populated coast of New South Wales. The chief rivers in this area are the Tweed, Richmond, Clarence, McLeay, Nepean, Hawkesbury, Hunter and Shoalhaven, all of which experience quite frequent and considerable flooding. These floods occur chiefly in summer but may occur at any time of the year.

The great Fitzroy and Burdekin river systems in Queensland are also subject to floods during the summer wet season, while much of the heavy monsoon rain in northern Queensland flows southward through the normally dry channels of the network of rivers draining into Lake Eyre. This water may cause extensive floods over a vast area, but it is soon lost by seepage and evaporation and rarely reaches the lake in any quantity. The Condamine and the other tributaries of the Darling also carry considerable volumes of water south through western New South Wales to the Murray, and flooding along their courses occurs from time to time.

Flooding also occurs from time to time, usually in autumn, winter and spring, in the Murray-Murrumbidgee system of New South Wales and Victoria and on the smaller coastal streams of southern Victoria. In Tasmania, flooding of the north coast streams, particularly the South Esk system, is common in the same seasons. In South Australia, some flooding has occurred in the lower reaches of the Murray owing to rainfall as far away as Queensland and south-eastern New South Wales. In the north of Western Australia and the Northern Territory, flooding of the coastal streams occurs frequently in summer but is not of such economic importance as the flooding of the eastern coastal streams of the continent, where many localities are more vulnerable to damage.

Temperature

The accurate measurement of the temperature of the air is not easy, as temperature sensitive devices also absorb radiant heat or can lose heat by radiation. Following international practice, air temperature measurements in Australia are made by thermometers freely exposed in a double louvred box (the Stevenson screen). Maximum and minimum air temperatures during each day are measured by means of special thermometers exposed in the Stevenson screen. The minimum air temperature at the surface of the earth as the ground cools at night by outgoing radiation (the terrestrial or grass minimum) is also measured at many stations. Such temperature recordings measure a theoretical physical quantity which bears only an indirect relation to the comfort or discomfort a person feels. Temperature measurements alone may be regarded only as a first approximation to a measurement of personal comfort. The actual degree of personal comfort is related to a number of meteorological factors such as air temperature, windspeed, humidity, exposure to the sun's rays, and the temperature of surrounding surfaces (i.e. the radiation balance of the body).

In addition to these quantities which are all physically measurable, a number of personal quantities are involved which vary greatly from person to person and which cannot be precisely expressed, e.g., race and acclimatization, age and state of health, type of clothing, and degree of physical activity in work and recreation. Conditions thus vary greatly for a particular individual even in a fixed location, so that it is difficult to describe general comfort variability uniquely throughout a region as varied climatically as Australia. A number of indexes which attempt to incorporate some of the factors described above have been used experimentally from time to time, and further research continues on this very difficult problem. Generally speaking, there is an increase in discomfort northwards within the tropical regions of Australia in summer, owing to the heat and high absolute humidity which reach a maximum in the extreme north of the continent. Such conditions are, however, ameliorated to a large extent in highland areas such as the Atherton Tableland in Queensland. No part of Australia is uncomfortably hot in winter, and only in a small area of the Australian Alps and highland Tasmania does bodily strain due to cold exist in winter. The history of the settlement of the northern regions of Queensland and the Northern Territory indicates that with accelerating development of studies and experience in the arrangement of living and working accommodation, clothing, and general way of life, the effects of extremes of climate can be minimized.

For some further discussion of the problems of temperature and comfort conditions reference may be made to Ashton, H. T., *Meteorological Data for Air Conditioning in Australia*, Bureau of Meteorology Bulletin No. 47 (1964).

Average seasonal temperature distribution. Plates 5 to 8 show the normal daily maximum and minimum temperature for January and July, which may be taken as indicative respectively of the summer and winter seasons in Australia. Further detailed temperature data are presented on pages 40-49 for the capital cities and more important country towns of the Commonwealth.

On the basis of average annual mean temperatures, and latitude for latitude, Australia is somewhat cooler than the other land masses of the southern hemisphere and considerably cooler than the same latitudes in the large continental areas of the northern hemisphere. This is due to the insular nature of Australia and the stronger general circulation of the atmosphere in the southern hemisphere resulting in the transport of higher latitude (cooler) air into the subtropical regions.

July is the month with the lowest mean temperature in all parts of the continent, while the month with the highest mean temperature varies from February in Tasmania and southern Victoria to December in the northern part of the continent and November in Darwin. The

lateness of the month of highest average temperature in the extreme south of the continent is due in part to the effect of the Southern Ocean, where the sea surface temperature reaches its maximum in February. The cooler period of the late summer in the north is due largely to increased cloudiness associated with the inflow of north-west winds with the onset of the monsoon season.

In January average maximum temperatures exceed 95° F. over a vast area of the interior of the continent, and over large areas exceed 100° F. The hottest part of Australia is situated in the north of Western Australia around the Marble Bar and Nullagine area, where the daily maximum screen temperature during the summer frequently exceeds 100° F. for weeks at a time.

The marked change of maximum temperature in summer with distance from the sea, in areas close to the coasts, particularly along the Great Australian Bight and the Indian Ocean coast of Western Australia, is due to the penetration inland of the vigorous sea breezes which are initiated by the considerable temperature contrast between land and sea surface temperatures. The 75° F. isotherm of January mean maximum temperature skirts the southern coast of the continent from south-western Western Australia to Gippsland.

In January the mean minimum temperatures in the tropics, except for some highland regions, exceed 72° F., with a gradual decrease southward to values of 55° F. in Victoria and 50° F. in Tasmania. Highland regions in the south have mean values of 45° F. and lower. In July a more regular latitudinal distribution of mean maximum temperature is evident, only the extreme north of the continent having mean maxima higher than 80° F. Values lower than 60° F. are general over the south-eastern part of the continent, with mean maxima falling below 40° F. in small alpine areas. Average night minimum temperatures in July fall below 45° F. in areas south of the tropics and away from the coast. Alpine regions again record the lowest temperatures with some areas experiencing means lower than 25° F.

Extreme variation and daily range. Only at a few inland places in Australia does the absolute range of temperature (i.e. the range from the highest maximum to the lowest minimum) exceed 100° F. Generally it is in the range 70° F. to 90° F. in the inland areas and somewhat less on the coasts. The highest temperature recorded in Australia was 127.5° F. at Cloncurry (Queensland) on 16 January 1889 and the lowest -8° F. at Charlotte Pass in the southern Alps on 14 July 1945 and again on 22 August 1947. The world record maximum temperature is 136° F. at Azizia (Tripoli) on 13 August 1922 and the world record minimum temperature -126.9° F. at Vostok on the Antarctic plateau on 24 August 1960.

High temperatures. Heat waves with a number of successive days higher than 100° F. are relatively common in many parts of Australia. With the exception of the north-western coast of Western Australia, however, most coastal areas do not usually experience more than a few days in succession of such conditions. The frequency of such conditions increases inland, and periods of up to twenty days have been recorded over most of the settled areas. This figure increases in western Queensland and north-western Western Australia to more than sixty days in places. The central part of the Northern Territory and the Marble Bar-Nullagine area of Western Australia have recorded the most prolonged heat waves for the Australian region. The longest consecutive period of daily maxima greater than 100° F. was 160 consecutive days recorded in Marble Bar during the summer of 1923-24.

Frosts. Injury to the tissues of growing plants is not caused until the temperature has fallen considerably below the freezing point of water (32° F.), and a ground frost is regarded as having occurred when the grass thermometer has fallen below 30.4° F. However, as terrestrial minima are not recorded at all stations, it is usual for statistical purposes to regard the registration of a screen thermometer of 36° F. as indicating a 'light' frost. A map showing frequency of days with screen minima higher than 36° F. (i.e. the frost free period) is reproduced in plate 9. A 'heavy' frost is taken as a screen reading of less than 32° F. A 'black' frost occurs with a combination of low temperature and low humidity, and, although frost crystals are not observed on the ground, damage takes place to the plant cells by the freezing and expansion of the moisture they contain.

The frequency of frost depends largely on altitude, latitude, and proximity to the sea, and locally, to a very large extent, on even minor variations in contour of the land. The parts of Australia which are most subject to frost are the eastern highlands from north-eastern Victoria to the western Darling Downs in southern Queensland. Most stations in this region experience more than ten nights a month with readings of 32° F. or under for three to five months of the year. On Tasmania's Central Plateau similar conditions occur for three to six months of the year. Heavy frosts are comparatively infrequent in Western Australia, except in parts of the south and south-west. In South Australia frosts are most frequent in the agricultural areas of the south-east.

Frosts may occur within a few miles of the coast over the whole continent except the Northern Territory and most of north Queensland. Regions subject to frost at all times of the year comprise the whole of Tasmania, the tablelands of New South Wales, much of inland Victoria, particularly the north-east, and a small part of south-western Western Australia. Over most of the interior of the continent, and on the highlands of Queensland as far north as the Atherton Plateau, frosts commence in April and end in September, but they are infrequent in these months. Minimum temperatures below 32° F. are experienced in most of the sub-tropical interior in June and July.

For further details of frost conditions in Australia reference should be made to Foley, J. C., *Frost in the Australian Region*, Bureau of Meteorology Bulletin No. 32 (1945).

Humidity and saturation deficit

The amount of water vapour in the atmosphere is determined mainly by the temperature. The higher the temperature the more water vapour may be contained in a given mass of air. Vapour pressure is the pressure exerted by the water vapour of the atmosphere. At any given temperature there is a definite upper limit to the amount of water that can exist as vapour in the air. When this limit is reached the air is said to be saturated and the pressure of the water vapour is the saturation vapour pressure. Both these quantities may be expressed in millibars or in inches of mercury. The usual measure of humidity or moistness of the air is the relative humidity (which is measured by means of wet and dry bulb screen thermometers). This term is applied to the ratio of the existing vapour pressure to the saturated vapour pressure at the existing temperature and expressed as a percentage. However, from the point of view of physical comfort and in many industrial and agricultural problems, the more important measure of atmospheric water vapour is the absolute humidity or the actual mass of moisture contained in a fixed mass of air.

The annual variation of vapour pressure for regions outside the tropics closely follows that of temperature. However, the mean relative humidity in the temperate regions is generally highest in winter and lowest during the summer. In northern Australia the highest relative humidity occurs during the rainy summer season. The relative humidity variation during the day closely follows the diurnal variation of temperature, being highest with low temperatures and lowest with high temperatures. The relative humidity at 9 a.m. for Australian conditions may be considered as a close approximation to the mean for the whole day. In the tables for the capital cities, pages 40-47, the mean monthly vapour pressure and relative humidity for 9 a.m., together with the monthly extremes, are listed. The order of the stations in descending values of mean annual vapour pressure at 9 a.m. is Darwin, Brisbane, Sydney, Perth, Melbourne, Adelaide, Canberra, and Hobart, while the annual mean of the 9 a.m. relative humidities diminishes in the order Hobart, Melbourne, Sydney, Darwin, Brisbane, Canberra, Perth, and Adelaide.

Another method of humidity measurement which may be employed is the saturation vapour deficit. This may be defined as the difference between the saturation vapour pressure and the actual vapour pressure both referred to the dry bulb temperature. It is thus a measure of the drying power of the air and like vapour pressure may be expressed in millibars or inches of mercury.

In January the mean saturation deficit at the mean temperature for the month has a maximum value of over 0.90 inches in the central parts of Western Australia and in south-eastern Queensland. Gradual decreases occur towards the coast, where values close to the north, east, and south coastlines are around 0.20 inches. On the western coast values are somewhat higher, and a strong gradient exists in the saturation deficit in the narrow region bordering the Indian Ocean. In July the variation is less, with maxima of 0.40 inches in the dry north of the Northern Territory and Western Australia, slowly decreasing generally to the south, with values over most of the south-east and extreme south-west of the continent being less than 0.10 inches. Extremely low values (less than 0.025 inches) exist in July over the highlands of south-eastern Australia and Tasmania.

Evaporation

Evaporation is a process which results in the transfer of water vapour from the surface of the earth into the atmosphere and takes place from free water surfaces, from moist soil, and by the process of transpiration from plants. The figures quoted in this section, however, refer to evaporation as measured from an Australian standard evaporation tank. This instrument consists of a copper tank surrounded by a 6-inch water jacket sunk in the ground to a depth of 36 inches and exposing at ground level a water surface 36 inches in diameter from which the evaporation loss of water is measured. Earlier estimates of Australian evaporation data were supplemented by calculations based on an empirical formula dependent on saturation deficit, but more recent measurements have enabled charts of monthly and annual evaporation to be constructed wholly

from observational records. Such a map is plate 10. The rate and quantity of evaporation in any territory are influenced by the net radiation, prevailing temperature, vapour pressure, and turbulent diffusion by wind.

In Australia the study of evaporation is of great importance, since in its drier regions water conservation must be practised by the use of tanks and dams. The magnitude of the economic loss by evaporation may be appreciated from plate 10, which shows that the yearly amount varies from 20 inches over the highland areas of central Tasmania to more than 130 inches in the northern and north-western part of South Australia.

Over an area of some 70 per cent of the continent, comprising most inland districts and extending to the coast in the north-west of Western Australia and to the head of the Great Australian Bight, the rainfall does not exceed the evaporation loss in any month of the year. The central and north-western portions of the continent experience evaporation far in excess of their rainfall. Vegetation over these areas is characterized by acacia, scrub steppe, and arid scrub, while many areas are merely sand hills and stony desert. Over many of the drier areas, however, particularly in the inland areas of south-eastern Australia, the loss of rainfall by evaporation is made good to some extent by the development of irrigation schemes. Some of these schemes, such as those at the Murrumbidgee Irrigation Area in New South Wales and at Mildura in Victoria and Renmark in South Australia, have been very successful. The Snowy Mountains Hydro-electric Scheme will also result in the large scale supply of water from the south-eastern highlands of Australia for use in the drier areas to the west of the ranges in New South Wales and Victoria. The future development of such schemes as these holds promise for the reclamation of many marginal areas in Australia, which because of low rainfall and high evaporation are at present of little economic value.

Since the loss by evaporation depends largely on the net radiation absorbed and consequently on the extent of the exposed area, tanks and dams so designed that the surface area shall be a minimum are advantageous. Further, the more protected they are from the direct rays of the sun and from winds by means of suitable tree planting the less will be the evaporation loss. The Mansfield process for the treatment of tanks and dams by a mono-molecular chemical film which materially reduces evaporation is a recent development which is already giving beneficial results, particularly on large water storage areas. Such improvements are of considerable importance to the pastoralists of the drier regions of Australia and to water supply authorities.

Further information on evaporation may be found in Hounam, C. E., *Evaporation in Australia*, Bureau of Meteorology Bulletin No. 44 (1961).

Sunshine and cloud

The proportion of the sky covered by cloud is of considerable meteorological and climatological importance. A cloud cover inhibits both incoming and outgoing radiation and thus profoundly affects the temperature distribution and other factors at the earth's surface. Cloud amount is measured in eighths of the sky covered.

In Australia the seasonal changes in cloudiness correspond closely to that of rainfall. In the southern or more temperate parts of the continent, particularly in the coastal and low lying areas, the winter months are generally more cloudy than the summer. This is due to the formation of extensive areas of stratiform cloud and fog during the colder months, when the structure of the lower layers of the atmosphere favours the physical processes resulting in this type of cloud. A particularly strong annual periodicity exists in the monsoonal regions of northern Australia, where it is heavily clouded during the summer wet season and practically cloudless during the winter 'dry'. Cloudiness is higher near coasts and on the windward slopes of the mountains of eastern Australia and is least over the dry interior parts of the continent.

A close relationship exists between cloud amount and number of sunshine hours, and it is possible to estimate from cloud data the equivalent number of sunshine hours over a given period. These data can be incorporated with records of direct measurement of sunshine hours, and approximate distribution maps produced for Australia. Maps of the mean sunshine distribution for January and July are reproduced in plates 11 and 12 and indicate the main features of the variation over Australia in these months.

Except for Tasmania and a narrow fringe bordering the southern, eastern and northern coasts, the greater part of the continent receives more than 3,000 hours of sunshine each year, and in Central Australia and the mid-western coast of Western Australia, totals in excess of 3,500 hours occur. The extreme south coast receives in the main 2,000 to 2,500 hours annually, while the east coast regions of New South Wales and Queensland receive 2,500 to 3,000 hours. A minimum of less than 1,750 hours occurs on the west coast and highlands of Tasmania.

Mean amounts of cloud for each month at the capital cities are included in the tables on pages 40-47, as are the mean daily hours of sunshine. The latter figure is a good single measure of the relative climatic characteristics of the individual cities for different months of the year.

Wind

Australia lies in those latitudes of the southern hemisphere where it is influenced largely by two wind systems:

- (a) the south-east trade winds blowing on the equatorial side of the mid-latitude anticyclones; and
- (b) the westerlies south of the mid-latitude anticyclones in which successive low pressure systems move eastward over the Southern Ocean.

The only pronounced seasonal variations of atmospheric pressure in the middle and high latitudes of the southern hemisphere are related to the latitudinal shift in the axes of the sub-tropical high pressure systems and to the change in the tracks of the migratory anticyclones. The latter systems move generally from west to east in the Australian region between the semi-permanent oceanic anticyclones of the Indian and Pacific Oceans. The mean path of these systems lies over southern Australia during the summer but moves northwards during the winter with the thermal equator. The movement is only of a few degrees of latitude but it is of very great importance to the climate of the Australian continent. During the summer months, when the anticyclones move on a more southerly track, the south-east trades affect the whole coast of eastern Australia north of around latitude 30° S., the westerlies retreating to higher latitudes, and conditions are more settled over southern Australia which then lies close to the axis of the anticyclones. In winter the anticyclones move further north, the trades affect only the northern parts of the continent, and southern Australia is exposed to the westerlies of the Southern Ocean.

In summer, with the retreat of the anticyclones to the south, the whole of northern and north-western Australia is exposed initially to light wind systems, and then during the period from December to April to the effects of the north-west monsoon. This process, which is associated with an inflow of north-west winds and intensive rains, is not as regular or persistent as the south-west monsoon of south-east Asia. However, it is a sufficiently regular feature of the climate of northern Australia to be designated as the north-west season, or, as it is best known in the area, 'the wet'. Its influence affects areas as far south as central Queensland, but southern Queensland and the area east of the Great Dividing Range are largely still under the influence of the south-east trades. Fringe or marginal areas on the southern limits of the monsoonal penetration over the continent have a shorter and more uncertain 'wet' season, which in some years fails to appear at all. With the northward advance of the anticyclones in autumn, the monsoon gives way again to the trades, and 'the dry' of northern and north-western Australia commences.

The general features of these wind patterns may be seen in the wind rose diagrams of plates 13 and 14. It is important, however, to note the dynamic nature of the atmosphere, and that the continual growth, decay and motion of the pressure systems result in a wide diversity of wind-flow types. Descriptions of wind conditions for particular geographical areas and seasons can thus be only of a very generalized kind. Further, local features can also be imposed on the overall wind pattern — channelling of winds due to topography (e.g. the high frequency of north-west winds in Hobart) and the marked summer sea breeze characteristics of most of the Australian coast, particularly near the Great Australian Bight as shown in the diagrams of 3 p.m. wind frequencies.

Storms and tropical cyclones

In general there are two types of weather systems in Australia which produce very strong winds and heavy rainfalls over large areas of the continent:

- (a) the active depressions which move westwards over the Southern Ocean; and
- (b) the tropical cyclones or hurricanes of north-eastern and north-western Australia.

During the winter the southern shores of the continent are subject to the deep depressions of the southern low pressure belt. They are felt most severely over the south-west of Western Australia, the south-east of South Australia, southern Victoria, and Tasmania, and may move inland in all these regions bringing strong winds and heavy rainfall. Further extensions of this type of system frequently develop close to the coast of New South Wales, often bringing severe weather to this region and to southern Queensland. These are generally known as 'east coast lows'.

The frontal systems (i.e. the narrow zones characterized by cloud and bad weather separating two air masses of different density) which are associated with these depressions vary widely in character. A common type in south-east Australia is a cold front located in a \wedge shaped trough. Such a system usually brings very strong north to north-west winds in advance of the front with a very abrupt backing of the wind to colder west to south-westerly winds after the frontal passage. Such frontal passages are, in their most severe form, associated with thunderstorms and line squalls, heavy rain, and a change to cold winds and showers. These violent changes with the passage of a cold front and strong southerly winds frequently affect the New South Wales coast as far north as Newcastle during the winter, and are popularly known as 'southerly busters'.

The most extensive rains of inland Australia occur when moist tropical air which has moved inland is lifted by convergence ahead of a slow moving colder air mass moving from the southern Ocean. The coast of Queensland, particularly the section from Cooktown to Mackay and the adjacent waters, is subject to visitations by tropical cyclones (the 'hurricanes' of the Caribbean and 'typhoons' of the China Sea). These destructive systems can affect this region from December to April, normally forming in the Coral Sea, moving south-west close to the coast and then passing away to the south-east into the Pacific. They may, however, cross the coast from time to time and bring torrential rain and violent winds (often more than 100 m.p.h.) to the coastal regions.

Similar systems affect the north-west coast of Western Australia where they bear the local name of 'willy willies', a name which is, however, often used generally in Australia for minor local whirlwinds or dust devils. The season in this region generally lasts from November to April, the storms originating in the Timor or Arafura Seas travelling usually south-west and approaching the coast most commonly between latitudes 20° S. and 22° S. Thence the systems may move southward following the coast, or sometimes cross inland bringing high rainfalls to the otherwise dry interior of the continent. A further region which is affected somewhat less frequently by tropical cyclones is the coast of Arnhem Land in the Northern Territory and the waters and coasts of the Gulf of Carpentaria.

Tropical cyclones, in general, soon lose their intensity on crossing from sea to land, but, although the wind force rapidly abates, they are still capable of producing the heavy rainfall which leads to flooding of coastal rivers, damage to stock and property, and general disruption of transport.

Thunderstorms which bring local heavy rain and strong winds are common to most of Australia. They are also of particular importance because of the lightning damage which they cause to power transmission lines, and have been extensively studied for the purpose of siting electrical installations as far as possible in areas of low thunderstorm occurrence. Plate 15 shows the number of days annually on which thunder is heard, which is a better observational criterion than lightning observed. The region of maximum thunderstorm activity is the extreme north-west of the continent and the region south-east of the Gulf of Carpentaria. In the more settled areas, maximum thunderstorm occurrence is in central western and south-eastern Queensland and the highland areas of New South Wales. The minimum number of storms occur over the interior of South Australia, western New South Wales, and eastern Tasmania.

Climatological tables

The averages and extremes for a number of elements which have been determined from long series of observations at the Australian capitals up to and including the year 1963 are given in the following pages, together with more limited data for the larger country towns of the Commonwealth. The following points apply throughout:

- (a) Where records are available, mean or average values have been calculated on a standard period of thirty years from 1911 to 1940.
- (b) Extreme values have been extracted from all available years of actual record, but the number of years quoted does not include intervening periods when observations were temporarily discontinued.

(a) The average index of mean relative humidity has been derived from the ratio of the average 9 a.m. vapour pressure to the saturation vapour pressure at the average mean temperature of the month. Being thus related to the mean temperature this value of relative humidity is a good approximation to the daily mean.

The table on the next page gives the latitude, longitude, and altitude of the weather recording station at each of the above towns.

The weather of 1965 (December 1964 to November 1965)

The following is a brief summary of weather experienced during the four seasons ended in November 1965. Plate 3 showing the rainfall distribution for 1965 is to be found between pages 32 and 33.

In the summer of 1964-65 the trend of pressure distributions in the Australian continental region was mostly normal, but there were some abnormalities in the Tasman-New Zealand area and southward to Macquarie Island. The outstanding meteorological feature of 1964-65 summer was the very low rainfall over most of the continent, particularly in the northern and western parts. Rainfall generally was less than 80 per cent of the normal, while many areas in the north received less than 50 per cent of the normal. Temperatures were about normal, or slightly above normal, for the season, but were mostly below normal in the southern parts during December. There was no great incidence of bush fires, but the fire hazard remained high. The frequency of tropical cyclone developments was slightly below normal and the tracks of these systems did not favour the incidence of widespread general rains over the north. The outstanding feature of the pastoral and agricultural situation was that the wheat crop for 1964-65 was harvested under excellent weather conditions. The outlook for stock in the tropical pastoral areas was becoming serious and drought conditions became widespread. In the southern areas the pastoral and agricultural season was mostly good, although rain was needed in some areas to replenish pastures.

In autumn, rainfall in Western Australia was above normal in the extreme north and parts of the north-west and south-west, but elsewhere falls were normal to below normal. In most of South Australia rainfall in autumn was generally below normal grading from about 60 per cent deficit in the southern divisions to almost 100 per cent deficit in the extreme north of the State.

In the northern half of the Northern Territory rainfall was well above normal during the season. However, in the southern half rainfall was below normal, deficits becoming progressively larger towards the interior, exceeding 90 per cent deficit near the Northern Territory-South Australian border. In Queensland autumn rainfall was well below normal in the south and west, near normal in central districts and generally above normal in the north. In New South Wales rainfall for the season was well below normal. Severe drought conditions persisted in most

districts. In the southern divisions of Victoria seasonal rainfall was mostly normal to above normal, but in the northern divisions departures below normal generally ranged from 40-60 per cent. In Tasmania the rainfall was above normal for the season, nearly all divisions receiving 20 per cent or more above normal. The rainfall situation over the inland pastoral areas of the continent was generally serious, drought conditions being widespread particularly in western New South Wales, south-west Queensland and the interiors of South Australia and the Northern Territory. Temperatures generally were about normal over the continent during the season.

In winter abundant rains fell over much of Western Australia. In Queensland rainfall was above normal in the south-east corner of the State and a few northern districts, but elsewhere falls were well below average. Falls in New South Wales were mainly below average, except in the south-west of the State and in the North Coast and Metropolitan Districts. In Victoria rainfall was below average in some districts while in Tasmania below average conditions were experienced generally. Rainfall in South Australia was average to above average. Temperatures in Western Australia, Queensland and New South Wales during winter were mostly about normal. In Victoria temperatures were in the main below average while in Tasmania conditions were above normal in most areas. A storm in Queensland in July caused damage to crops and structures in south-eastern districts.

In Western Australia the outlook for crops and pastures was generally good to excellent. Useful rains in the eastern Darling Downs area and light rains in other southern and south-west districts brought some relief from the drought in Queensland, but generally pastures were slow in response and stock conditions continued to deteriorate in many areas of the State. Wheat and sugar prospects for Queensland were below average. In New South Wales the outlook for stock and crops in some areas was poor. The outlook for pastures and crops in Victoria and Tasmania was generally fair to good. Similarly in South Australia good general rains enhanced the prospects for crops and pastures, but follow-up rains were needed to consolidate the situation.

In spring, rainfall in the southern half of Western Australia was mainly above normal. Little rain was received in the northern half. In the Northern Territory and South Australia rainfall was below normal except over the north-west interior of South Australia extending across the border into the Northern Territory. Queensland rainfall was considerably below normal, particularly in northern and south-western areas. Spring rainfall in New South Wales was chiefly below normal, particularly in the north-west and parts of the north-east. In Victoria seasonal rainfall was below average in most of the State. Tasmania's rainfall was mostly below normal except in the south-west. Temperatures in Western Australia were variable but chiefly above normal. Queensland experienced temperatures above normal throughout with several hot spells. In New South Wales temperatures were above normal with an exceptionally hot spell over the State during the last week in September. Similarly in Victoria temperatures were above normal throughout and in Tasmania temperatures were normal to slightly above. Serious bushfires occurred in New South Wales during the season and there were outbreaks in parts of Victoria also.

CHAPTER 3

GENERAL GOVERNMENT

Parliamentary government

Scheme of parliamentary government

Under section 1 of the Commonwealth of Australia Constitution the legislative power of the Commonwealth is vested in the Parliament of the Commonwealth, which consists of the Sovereign, the Senate, and the House of Representatives. The Sovereign is represented throughout the Commonwealth by the Governor-General who, subject to the Constitution of the Commonwealth, has such powers and functions as the Sovereign is pleased to assign to him. In each State there is a State Governor who is the representative of the Sovereign for the State and who exercises such powers within the State as are conferred upon him by the Letters Patent which constitute his office and by the instructions which detail the manner in which his duties are to be fulfilled. The Legislature in each State was bicameral until 1922, when the Queensland Upper House was abolished and the Parliament became unicameral. In the bicameral Parliaments, the Upper House is known in the Commonwealth Parliament as the Senate, and in the State Parliaments as the Legislative Council, while the Lower House is known in the Commonwealth Parliament as the House of Representatives, in the State Parliaments of New South Wales, Victoria and Western Australia as the Legislative Assembly, and in the State Parliaments of South Australia and Tasmania as the House of Assembly. In Queensland the sole legislative chamber is known as the Legislative Assembly. The extent of the legislative powers of the Parliaments is defined by the Commonwealth and State Constitutions. The Assembly, which is the larger House, is in all cases elective, the franchise extending to adult British subjects with certain residential qualifications. The Council in each of the States other than New South Wales is elected by the people of the State concerned, the constituencies being differently arranged and, formerly, some property or special qualification for the electorate being required. In Victoria, however, under the *Legislative Council Reform Act 1950*, and in Western Australia under the *Constitution Acts Amendment Act (No. 2), 1963*, adult suffrage was adopted also for Legislative Council elections. In the case of New South Wales the Council is elected by the members of both Houses of Parliament at a simultaneous sitting. In the Federal Parliament the qualifications for the franchise are identical for both Houses, extending to adult British subjects who have lived in Australia for six months continuously.

The Sovereign

On 7 February 1952 the Governor-General and members of the Federal Executive Council proclaimed Princess Elizabeth Queen Elizabeth the Second, Queen of this Realm and of all Her other Realms and Territories, Head of the Commonwealth, Defender of the Faith, Supreme Liege Lady in and over the Commonwealth of Australia. The coronation of Her Majesty in Westminster Abbey took place on 2 June 1953.

The Governor-General

Powers and functions. As the Queen's representative in Australia, the Governor-General exercises certain prerogative powers and functions assigned to him by the Queen. Other powers and functions are conferred on him by the Constitution. Powers which have been so assigned or conferred include, among others, the power to grant pardons and to remit fines for offences against the laws of the Commonwealth; to appoint certain officers in the Diplomatic or Consular Service of the Commonwealth; to appoint times for holding the sessions of the Parliament, prorogue Parliament and dissolve the House of Representatives; to cause writs to be issued for general elections of members of the House of Representatives; to assent in the Queen's name to a proposed law passed by both Houses of the Parliament or withhold assent, or to reserve the law for the Queen's pleasure, or to return the proposed law to the House in which it originated and transmit therewith any amendments which he may recommend; to exercise the executive power of the Commonwealth; to choose and summon Executive Councillors, who hold office during his pleasure; and to appoint Ministers of State for the Commonwealth. In addition, the command in chief of the defence forces of the Commonwealth is vested in the Governor-General as the Queen's representative.

Most Acts of the Commonwealth Parliament provide that the Governor-General may make regulations to give effect to the Act. The Governor-General may also be authorized by statute to issue proclamations—for example, to declare an Act in force or a state of things to exist, e.g. the existence of an epidemic. He has been given power by statute to legislate for certain Territories of

the Commonwealth. Under the conventions of responsible government obtaining in British Commonwealth countries, the Governor-General's functions are exercised generally on the advice of Ministers of State.

Holders of office. The following list shows the names of the Governors-General since the inception of the Commonwealth.

GOVERNORS-GENERAL

- Rt. Hon. JOHN ADRIAN LOUIS, EARL OF HOPETOUN (afterwards MARQUIS OF LINLITHGOW), P.C., K.T., G.C.M.G., G.C.V.O. From 1 January 1901 to 9 January 1903.
- Rt. Hon. HALLAM, BARON TENNYSON, P.C., G.C.M.G. From 17 July 1902 to 9 January 1903, (Acting).
- Rt. Hon. HALLAM, BARON TENNYSON, P.C., G.C.M.G. From 9 January 1903 to 21 January 1904.
- Rt. Hon. HENRY STAFFORD, BARON NORTHCOTE, P.C., G.C.M.G., G.C.I.E., C.B. From 21 January 1904 to 9 September 1908.
- Rt. Hon. WILLIAM HUMBLE, EARL OF DUDLEY, P.C., G.C.B., G.C.M.G., G.C.V.O. From 9 September 1908 to 31 July 1911.
- Rt. Hon. THOMAS, BARON DENMAN, P.C., G.C.M.G., K.C.V.O. From 31 July 1911 to 18 May 1914.
- Rt. Hon. SIR RONALD CRAUFURD MUNRO FERGUSON (afterwards VISCOUNT NOVAR OF RAITH), G.C.M.G. From 18 May 1914 to 6 October 1920.
- Rt. Hon. HENRY WILLIAM, BARON FORSTER OF LEPE, P.C., G.C.M.G. From 6 October 1920 to 8 October 1925.
- Rt. Hon. JOHN LAWRENCE, BARON STONEHAVEN, P.C., G.C.M.G., D.S.O. From 8 October 1925 to 22 January 1931.
- Rt. Hon. SIR ISAAC ALFRED ISAACS, P.C., G.C.B., G.C.M.G., K.C. From 22 January 1931 to 23 January 1936.
- General the Rt. Hon. ALEXANDER GORE ARKWRIGHT, BARON GOWRIE, V.C., P.C., G.C.M.G., C.B., D.S.O., K.G.St.J. From 23 January 1936 to 30 January 1945.
- His Royal Highness PRINCE HENRY WILLIAM FREDERICK ALBERT, DUKE OF GLOUCESTER, EARL OF ULSTER AND BARON CULLODEN, K.G., K.T., K.P., P.C., G.C.B., G.C.M.G., G.C.V.O., General in the Army, Air Chief Marshal in the Royal Air Force, One of His Majesty's Personal Aides-de-Camp. From 30 January 1945 to 11 March 1947.
- Rt. Hon. SIR WILLIAM JOHN MCKELL, G.C.M.G., Q.C. From 11 March 1947 to 8 May 1953.
- Field Marshal SIR WILLIAM JOSEPH SLIM (afterwards VISCOUNT SLIM OF YARRALUMLA), K.G., G.C.B., G.C.M.G., G.C.V.O., G.B.E., D.S.O., M.C., K.St.J. From 8 May 1953 to 2 February 1960.
- Rt. Hon. WILLIAM SHEPHERD, VISCOUNT DUNROSSIL, P.C., G.C.M.G., M.C., K.St.J., Q.C. From 2 February 1960 to 3 February 1961.
- Rt. Hon. WILLIAM PHILIP, VISCOUNT DE L'ISLE, V.C., P.C., G.C.M.G., G.C.V.O., K.St.J. From 3 August 1961, to 6 May 1965.
- Rt. Hon. RICHARD GARDINER, BARON CASEY, P.C. G.C.M.G., C.H., D.S.O., M.C., K.St.J. From 22 September 1965.

Administrators. In addition to the holders of the office of Governor-General listed above, certain persons have, from time to time, been appointed as Administrator of the Government of the Commonwealth. Administrators are appointed in the event of the death, illness or absence from Australia of the Governor-General, or for the period between the departure of a Governor-General and the arrival of his successor. The following is a list of such appointments.

ADMINISTRATORS

- Rt. Hon. FREDERIC JOHN NAPIER, BARON CHELMSFORD, K.C.M.G. From 21 December 1909 to 27 January 1910.
- Lieut.-Colonel the Rt. Hon. ARTHUR HERBERT TENNYSON, BARON SOMERS, K.C.M.G., D.S.O., M.C. From 3 October 1930 to 22 January 1931.
- Captain the Rt. Hon WILLIAM CHARLES ARCEDECKNE VANNECK, BARON HUNTINGFIELD, K.C.M.G., K.St.J. From 29 March 1938 to 24 September 1938.
- Major-General SIR WINSTON JOSEPH DUGAN, G.C.M.G., C.B., D.S.O. From 5 September 1944 to 30 January 1945; 18 January 1947 to 11 March 1947.
- General* SIR JOHN NORTHCOTT, K.C.M.G., C.B., M.V.O.† From 19 July 1951 to 14 December 1951; 30 July 1956 to 22 October 1956
- General SIR REGINALD ALEXANDER DALLAS BROOKS, K.C.B., G.C.M.G., K.C.V.O., D.S.O., K.St.J. From 8 January 1959 to 16 January 1959; 3 February 1961 to 3 August 1961; 5 June 1962 to 4 October 1962; 21 November 1962 to 19 December 1962.
- General SIR ERIC WINSLOW WOODWARD, K.C.M.G., K.C.V.O., C.B., C.B.E., D.S.O. From 16 June 1964 to 30 August 1964.
- Colonel SIR HENRY ABEL SMITH, K.C.M.G., K.C.V.O., D.S.O. From 7 May 1965 to 21 September 1965.

* Lieutenant-General Sir John Northcott was granted honorary rank of General while administering the Government of the Commonwealth. † K.C.V.O., 1954.

Governors of the States

Powers and functions. The Queen is represented in each of the States by a Governor, the office having been constituted by Letters Patent under the Great Seal of the United Kingdom of various dates. The Governors of the States exercise prerogative powers conferred on them by these Letters Patent, their Commissions of appointment, and the Governor's Instructions given them under the Royal Sign Manual and Signet or other instrument as specified in the Letters Patent. In addition, they have been invested with various statutory functions, either under the State Constitutions, conferred by Imperial Act, or by Act of the Parliament of the State.

A Governor of a State assents in the Queen's name to Bills passed by the Parliament of the State, except those reserved for the Royal assent. The latter include certain classes of Bills which are regulated by the Constitution Acts and by the Governor's Instructions. He administers the prerogative of mercy by the reprieve or pardon of criminal offenders within his jurisdiction, and may remit fines and penalties due to the Crown. In the performance of his functions generally, particularly those conferred by Statute, the Governor of a State acts on the advice of Ministers of State for the State.

Holders of office. The names of the present (December 1965) State Governors are as follows.

STATE GOVERNORS, DECEMBER 1965

New South Wales—SIR KENNETH WHISTLER STREET, K.C.M.G., K.St.J.*

Victoria—MAJOR-GENERAL SIR ROHAN DELACOMBE, K.C.M.G., K.B.E., C.B., D.S.O., K.St.J.

Queensland—COLONEL SIR HENRY ABEL SMITH, K.C.M.G., K.C.V.O., D.S.O.

South Australia—LIEUT.-GENERAL SIR EDRIC MONTAGUE BASTYAN, K.C.M.G., K.C.V.O., K.B.E., C.B.

Western Australia—MAJOR-GENERAL SIR DOUGLAS ANTHONY KENDREW, K.C.M.G., C.B., C.B.E., D.S.O.

Tasmania—LIEUT.-GENERAL SIR CHARLES HENRY GAIRDNER, K.C.M.G., K.C.V.O., K.B.E., C.B.

The Cabinet and executive government

Both in the Commonwealth and in the States, executive government is based on the system which was evolved in Britain in the 18th century, and which is generally known as 'Cabinet' or 'responsible' government. Its essence is that the head of the State (Her Majesty the Queen, and her representative, the Governor-General or Governor) should perform governmental acts on the advice of her Ministers; that she should choose her principal Ministers of State from members of Parliament belonging to the party, or coalition of parties, commanding a majority in the popular House; that the Ministry so chosen should be collectively responsible to that House for the government of the country; and that the Ministry should resign if it ceases to command a majority there.

The Cabinet system operates chiefly by means of constitutional conventions, customs, or understandings, and through institutions that do not form part of the legal structure of the government at all. The Constitutions of the Commonwealth and the States make fuller legal provision for the Cabinet system than the British Constitution does—for example, by requiring that Ministers shall either be, or within a prescribed period become, members of the Legislature. In general, however, the legal structure of the executive government remains the same as it was before the establishment of the Cabinet system.

The executive power of the Commonwealth is exercisable by the Governor-General, and that of the States by the Governor. In each case he is advised by an Executive Council, which, however, meets only for certain formal purposes, as explained on p. 55. The whole policy of a Ministry is, in practice, determined by some or all of the Ministers of State, meeting without the Governor-General or Governor under the chairmanship of the Prime Minister or Premier. This group of Ministers is known as the Cabinet.

The Cabinet. This body does not form part of the legal mechanism of government. Its meetings are private and deliberative. The actual Ministers of the day alone are present, no records of the meetings are made public, and the decisions taken have, in themselves, no legal effect. In Australia, until January 1956, all Ministers were members of the Cabinet. Since then, however, although in the States all Ministers are members of the Cabinet, the Commonwealth ministry is made up of twelve senior Ministers, who constitute the Cabinet, and other Ministers† of non-Cabinet rank who attend meetings of the Cabinet only when required, as, for example, when the business of the Cabinet concerns their departments. As Ministers are the leaders of the party or parties commanding a majority in the popular House, the Cabinet substantially controls, in ordinary circumstances, not only the general legislative programme of Parliament, but the whole course of Parliamentary proceedings. In effect, though not in form, the Cabinet, by reason of the fact

* Lieutenant-Governor, Sir Roden Cutler, V.C., K.C.M.G., C.B.E., K.St.J., was sworn in as Governor on 20 January 1966.

† Thirteen, as from 4 March 1964.

that all Ministers are members of the Executive Council, is also the dominant element in the executive government of the country. Even in summoning, proroguing or dissolving Parliament, the Governor-General or Governor is usually guided by the advice tendered him by the Cabinet, through the Prime Minister or Premier, though legally the discretion is vested in the Governor-General or Governor himself.

The Executive Council. This body is usually presided over by the Governor-General or Governor, the members thereof holding office during his pleasure. All Ministers of State must be members of the Executive Council. In the Commonwealth, and also in the States of Victoria and Tasmania, Ministers remain members of the Executive Council on leaving office, but are not summoned to attend its meetings, for it is an essential feature of the Cabinet system that attendance should be limited to the Ministers of the day. The meetings of the Executive Council are formal and official in character, and a record of proceedings is kept by the Secretary or Clerk. At Executive Council meetings the decisions of the Cabinet are, where necessary, given legal form, appointments made, resignations accepted, proclamations issued, and regulations and the like approved.

The appointment of Ministers. Legally, Ministers hold office during the pleasure of the Governor-General or Governor. In practice, however, the discretion of the Queen's representative in the choice of Ministers is limited by the conventions on which the Cabinet system rests. When a Ministry resigns the Crown's custom is to send for the leader of the party which commands, or is likely to be able to command, a majority in the popular House, and to commission him, as Prime Minister or Premier, to 'form a Ministry'—that is, to nominate other persons to be appointed as Ministers of State and to serve as his colleagues in the Cabinet.

Ministers in Upper and Lower Houses. The following table shows the distribution of Ministers in the Houses of each Parliament in December 1965.

AUSTRALIAN PARLIAMENTS: MINISTERS IN UPPER OR LOWER HOUSES, DECEMBER 1965

Ministers with seats in—	Cwth.	N.S.W.	Vic. (a)	Qld	S.A. (b)	W.A. (c)	Tas.	Total
The Upper House	5	2	4	(d)	3	3	1	18
The Lower House	20	14	11	13	6	9	8	81
Total	25	16	15	13	9	12	9	99

(a) By the *Constitution Act Amendment (Responsible Ministers) Act 1964* the number of Ministers was increased to fifteen from 8 July 1964. (b) By the *Constitution Act, 1965* the number of Ministers was increased to nine from 10 November 1965. (c) Under the *Constitution Acts Amendment Act, 1965* the number of Ministers was increased to twelve from 17 August 1965. (d) Abolished in 1922.

Commonwealth Ministries

Names and tenure of office, 1901 to 1965. The following list shows the name of each Commonwealth Ministry to hold office since 1 January 1901, and the limits of its term of office.

COMMONWEALTH MINISTRIES, 1901 TO 1965

- (i) BARTON MINISTRY, 1 January 1901 to 24 September 1903.
- (ii) DEAKIN MINISTRY, 24 September 1903 to 27 April 1904.
- (iii) WATSON MINISTRY, 27 April 1904 to 17 August 1904.
- (iv) REID-MCLEAN MINISTRY, 18 August 1904 to 5 July 1905.
- (v) DEAKIN MINISTRY, 5 July 1905 to 13 November 1908.
- (vi) FISHER MINISTRY, 13 November 1908 to 1 June 1909.
- (vii) DEAKIN MINISTRY, 2 June 1909 to 29 April 1910.
- (viii) FISHER MINISTRY, 29 April 1910 to 24 June 1913.
- (ix) COOK MINISTRY, 24 June 1913 to 17 September 1914.
- (x) FISHER MINISTRY, 17 September 1914 to 27 October 1915.
- (xi) HUGHES MINISTRY, 27 October 1915 to 14 November 1916.
- (xii) HUGHES MINISTRY, 14 November 1916 to 17 February 1917.
- (xiii) HUGHES MINISTRY, 17 February 1917 to 10 January 1918.
- (xiv) HUGHES MINISTRY, 10 January 1918 to 9 February 1923.
- (xv) BRUCE-PAGE MINISTRY, 9 February 1923 to 22 October 1929.
- (xvi) SCULLIN MINISTRY, 22 October 1929 to 6 January 1932.
- (xvii) LYONS MINISTRY, 6 January 1932 to 7 November 1938.
- (xviii) LYONS MINISTRY, 7 November 1938 to 7 April 1939.
- (xix) PAGE MINISTRY, 7 April 1939 to 26 April 1939.
- (xx) MENZIES MINISTRY, 26 April 1939 to 14 March 1940.

COMMONWEALTH MINISTRIES, 1901 TO 1965—*continued*

- (xxi) MENZIES MINISTRY, 14 March 1940 to 28 October 1940.
- (xxii) MENZIES MINISTRY, 28 October 1940 to 29 August 1941.
- (xxiii) FADDEN MINISTRY, 29 August 1941 to 7 October 1941.
- (xxiv) CURTIN MINISTRY, 7 October 1941 to 21 September 1943.
- (xxv) CURTIN MINISTRY, 21 September 1943 to 6 July 1945.
- (xxvi) FORDE MINISTRY, 6 July 1945 to 13 July 1945.
- (xxvii) CHIFLEY MINISTRY, 13 July 1945 to 1 November 1946.
- (xxviii) CHIFLEY MINISTRY, 1 November 1946 to 19 December 1949.
- (xxix) MENZIES MINISTRY, 19 December 1949 to 11 May 1951.
- (xxx) MENZIES MINISTRY, 11 May 1951 to 11 January 1956.
- (xxxi) MENZIES MINISTRY, 11 January 1956 to 10 December 1958.
- (xxxii) MENZIES MINISTRY, 10 December 1958 to 18 December 1963.
- (xxxiii) MENZIES MINISTRY, 18 December 1963.

Names of holders of Commonwealth Ministerial office, to 31 December 1965. In Year Book No. 17, 1924, the names are given of each Ministry up to the Bruce-Page Ministry (9 February 1923 to 22 October 1929), together with the names of the successive holders of portfolios therein, and issue No. 39 contains a list, commencing with the Bruce-Page Ministry, which covers the period between the date on which it assumed power, 9 February 1923, and 31 July 1951, showing the names of all persons who held office in each Ministry during that period.

This issue shows only particulars of the latest Menzies Ministry, as constituted on 13 August 1965. For subsequent changes, see Appendix.

MENZIES MINISTRY—FROM 18 DECEMBER 1963

(Portfolios from 13 August 1965)

<i>Attorney-General, Minister of Aboriginal Affairs and Minister of Social Welfare—</i> THE HON. D. A. DUNSTAN, Q.C., M.P.	<i>Minister of Lands, Minister of Repatriation and Minister of Irrigation—</i> THE HON. J. D. CORCORAN, M.P.
<i>Minister of Education—</i> THE HON. R. R. LOVEDAY, M.P.	

WESTERN AUSTRALIA

Ministry (from 17 August 1965)

<i>Premier, Treasurer, and Minister for Tourists—</i> THE HON. D. BRAND, M.L.A.	<i>Minister for Works and Water Supplies—</i> THE HON. R. HUTCHINSON, D.F.C., M.L.A.
<i>Deputy Premier, and Minister for Agriculture and Electricity—</i> THE HON. C. D. NALDER, M.L.A.	<i>Minister for Local Government, Town Planning and Child Welfare—</i> THE HON. L. A. LOGAN, M.L.C.
<i>Minister for Industrial Development, Railways, and the North-West—</i> THE HON. C. W. M. COURT, O.B.E., M.L.A.	<i>Chief Secretary, and Minister for Police and Traffic—</i> THE HON. J. F. CRAIG, M.L.A.
<i>Minister for Education and Native Welfare—</i> THE HON. E. H. M. LEWIS, M.L.A.	<i>Minister for Housing and Labour—</i> THE HON. D. H. O'NEIL, M.L.A.
<i>Minister for Mines and Justice—</i> THE HON. A. F. GRIFFITH, M.L.C.	<i>Minister for Transport—</i> THE HON. R. J. O'CONNOR, M.L.A.
<i>Minister for Lands, Forests, and Immigration—</i> THE HON. W. S. BOVELL, M.L.A.	<i>Minister for Health, and Fisheries and Fauna—</i> THE HON. G. C. MACKINNON, M.L.C.

STATE MINISTRIES, 1965—*continued*

TASMANIA

Ministry (from 13 May 1964)

<i>Premier, Treasurer and Minister for Mines—</i> THE HON. E. E. REECE, M.H.A.	<i>Chief Secretary—</i> THE HON. B. K. MILLER, M.L.C.
<i>Deputy Premier and Attorney-General—</i> THE HON. R. F. FAGAN, M.H.A.	<i>Minister for Housing and Forests—</i> THE HON. S. V. WARD, M.H.A.
<i>Minister for Education—</i> THE HON. W. A. NELSON, M.H.A.	<i>Minister for Health—</i> THE HON. M. G. EVERETT, Q.C., M.H.A.
<i>Minister for Lands and Works—</i> THE HON. D. A. CASHION, M.H.A.	<i>Minister for Transport and Police—</i> THE HON. H. J. MCLOUGHLIN, M.H.A.

Leaders of the Opposition, Commonwealth and State Parliaments, December 1965

The Leader of the Opposition plays an important part in the Party system of government which operates in the Australian Parliaments. The following list gives the names of the holders of this position in each of the Parliaments in December 1965.

LEADERS OF THE OPPOSITION, DECEMBER 1965

<i>Commonwealth—</i> The Hon. A. A. Calwell, M.P.
<i>New South Wales—</i> J. B. Renshaw, M.L.A.
<i>Victoria—</i> The Hon. C. P. Stoneham, M.P.
<i>Queensland—</i> J. E. Duggan, M.L.A.
<i>South Australia—</i> Sir Thomas Playford, G.C.M.G., M.P.
<i>Western Australia—</i> The Hon. A. R. G. Hawke, M.L.A.
<i>Tasmania—</i> The Hon. W. A. Bethune, M.H.A.

Numbers and salaries of Commonwealth Ministers

Under sections 65 and 66, respectively, of the Constitution of the Commonwealth the number of Ministers of State was not to exceed seven, and the annual sum payable for their salaries was not to exceed £12,000, each provision to operate, however, 'until the Parliament otherwise provides'.

Subsequently the number and salaries have been increased from time to time, and from 1964 the annual sum payable for salaries has been fixed at \$191,300 and the number of Ministers at twenty-five. An additional ministerial allowance of \$8,000 a year has been payable to the Prime Minister since 1964, and an additional ministerial allowance of \$3,600 a year for senior Ministers and \$3,000 a year for junior Ministers.

All amounts payable in the foregoing paragraphs are in addition to amounts payable as Parliamentary allowances (see p. 69).

Parliaments and elections

The Commonwealth Parliaments

The first Parliament of the Commonwealth was convened by proclamation dated 29 April 1901 by His Excellency the Marquis of Linlithgow, then Earl of Hopetoun, Governor-General. It was opened on 9 May 1901 by H.R.H. the Duke of Cornwall and York. The Rt. Hon. Sir Edmund Barton, G.C.M.G., K.C., was Prime Minister.

The following table shows the number and duration of Parliaments since federation.

COMMONWEALTH PARLIAMENTS

Number of Parliament	Date of opening	Date of dissolution
First	9 May 1901	23 November 1903
Second	2 March 1904	5 November 1906
Third	20 February 1907	19 February 1910
Fourth	1 July 1910	23 April 1913
Fifth	9 July 1913	30 July 1914(a)
Sixth	8 October 1914	26 March 1917
Seventh	14 June 1917	3 November 1919
Eighth	26 February 1920	6 November 1922
Ninth	28 February 1923	3 October 1925
Tenth	13 January 1926	9 October 1928
Eleventh	9 February 1929	16 September 1929
Twelfth	20 November 1929	27 November 1931
Thirteenth	17 February 1932	7 August 1934
Fourteenth	23 October 1934	21 September 1937
Fifteenth	30 November 1937	27 August 1940
Sixteenth	20 November 1940	7 July 1943
Seventeenth	23 September 1943	16 August 1946
Eighteenth	6 November 1946	31 October 1949
Nineteenth	22 February 1950	19 March 1951(a)
Twentieth	12 June 1951	21 April 1954
Twenty-first	4 August 1954	4 November 1955
Twenty-second	15 February 1956	14 October 1958
Twenty-third	17 February 1959	2 November 1961
Twenty-fourth	20 February 1962	1 November 1963
Twenty-fifth	25 February 1964	

(a) A dissolution of both the Senate and the House of Representatives was granted by the Governor-General, acting on the advice of the Cabinet and under section 57 of the Constitution.

There have been twenty-four complete Parliaments since Federation. Until 1927 the Parliament met in Melbourne; it now meets in Canberra, the first meeting at Parliament House, Canberra, being opened by the Duke of York on 9 May 1927.

The twenty-fourth Parliament opened on 20 February 1962 and was dissolved on 1 November 1963. Elections for the House of Representatives were held on 30 November 1963. An election was also held on the same date to fill a single casual vacancy in the Senate for the State of Queensland. Particulars of electors and voting are given on page 68 of Year Book No. 49. For particulars of electors enrolled and of electors who voted in the several States and Territories at previous Commonwealth elections, see Year Book No. 48 and earlier issues. Particulars of electors and voting at the Senate Election which was held on 5 December 1964 are given on p. 62.

A special article describing the Commonwealth Parliament, its functions and procedure, prepared by the Clerk of the Senate and the Clerk of the House of Representatives, appears in Year Book No. 49, pages 65-71.

Qualifications for membership and for franchise—Commonwealth Parliament

Qualifications necessary for membership of either House of the Commonwealth Parliament are possessed by any British subject, twenty-one years of age or over, who has resided in the Commonwealth for at least three years and who is, or is qualified to become, an elector of the Commonwealth. Qualifications for Commonwealth franchise are possessed by any British subject, not under twenty-one years of age and not disentitled on other grounds, who has lived in Australia for six months continuously. Residence in a subdivision for a period of one month prior to enrolment is necessary to enable a qualified person to enrol. Enrolment and voting are compulsory except that the compulsory enrolment provisions do not relate to an Aboriginal native of Australia. A member of the Defence Forces on service outside Australia who is a British subject not less than 21 years of age and has lived in Australia for six months continuously is entitled to vote at Commonwealth elections, whether enrolled or not.

The principal reasons for disqualification of persons otherwise eligible as members of either Commonwealth House are: membership of the other House, allegiance to a foreign power, being attainted of treason, being convicted and under sentence for any offence punishable by imprisonment for one year or longer, being an undischarged bankrupt or insolvent, holding office of profit under the Crown (with certain exceptions), or having pecuniary interest in any agreement with the public service of the Commonwealth except as a member of an incorporated company of more than twenty-five persons. Persons of unsound mind, attainted of treason, convicted and under sentence for any offence punishable by imprisonment for one year or longer, or persons who are holders of temporary entry permits under the *Migration Act* 1958-1964 or are prohibited immigrants under that Act, are excluded from the franchise. In the main, these or similar grounds for disqualification apply also to State Parliament membership and franchise.

Commonwealth Parliaments and elections

From the establishment of the Commonwealth until 1949 the Senate consisted of thirty-six members, six being returned by each of the original federating States. The Constitution empowers Parliament to increase or decrease the size of the Parliament, and, as the population of the Commonwealth had more than doubled since its inception, the Parliament passed the *Representation Act* 1948 which provided that there should be ten Senators from each State instead of six, increasing the total to sixty Senators, thus enlarging both Houses of Parliament and providing a representation ratio nearer to the proportion which existed at Federation.

In accordance with the Constitution, the total number of members of the House of Representatives must be as nearly as practicable double that of the Senate. Consequently, in terms of the Constitution and the Representation Act, from the date of the 1949 elections the number of members in the House of Representatives was increased from 74 to 121 (excluding the members for the internal Territories). As the States are represented in the House of Representatives on a population basis, the numbers were increased as follows: New South Wales—from 28 to 47; Victoria—from 20 to 33; Queensland—from 10 to 18; South Australia—from 6 to 10; and Western Australia—from 5 to 8. Tasmania's representation remained at 5 and the total was increased from 74 to 121. The increase in the number of members of Parliament necessitated a redistribution of seats and a redetermination of electoral boundaries. This was carried out by Distribution Commissioners in each State on a quota basis, but taking into account community or diversity of interest, means of communication, physical features, existing boundaries of divisions and subdivisions, and State electoral boundaries.

The population as disclosed by the Census taken on 30 June 1954 necessitated a further alteration in representation in the House of Representatives in respect of New South Wales, South Australia, and Western Australia. Representation as from the general election for the House of Representatives on 10 December 1955 is New South Wales 46, Victoria 33, Queensland 18, South Australia 11, Western Australia 9, Tasmania 5, the total number of members (excluding the members for the internal Territories) being increased from 121 to 122. A redistribution of the States into electoral divisions was effected by Distribution Commissioners appointed for each State.

The population as disclosed by the Census taken on 30 June 1961 revealed that, under the provisions of the Representation Act, New South Wales, Queensland, and Western Australia would each lose one member in the House of Representatives, while Victoria would gain a member. The Distribution Commissioners' reports were duly laid before both Houses of Parliament, but the Government decided not to proceed with the proposals and announced that it would amend the Representation Act. In November 1964 the formula provided by Section 10 of the Representation Act for determining the number of members of the House of Representatives was amended so as to give a State an additional member for 'any portion of a quota'. The effect of this amendment will be that at the next redistribution (based on the population as at the 1961 Census), Victoria and South Australia will each gain one member, i.e. to 34 and 12 members respectively, while all other States will retain their existing representation, namely, New South Wales 46, Queensland 18, Western Australia 9, and Tasmania 5.

Since the general election of 1922 the Northern Territory has been represented by one member in the House of Representatives. The Australian Capital Territory has had similar representation since the elections of 1949. The members for the Territories may join in the debates but are not entitled to vote, except on any proposed law which relates solely to the respective Territories, on a motion for the disallowance of any ordinance of the Territory or on any amendment to such motion, or on a motion for the disallowance of a regulation under an ordinance. The Commonwealth Parliament, however, when providing for a Legislative Council for the Northern Territory in 1947, relinquished the power to disallow ordinances for that Territory. As from the date of establishment of the Legislative Council, power to disallow ordinances has been vested in the Governor-General in Council. In certain cases, ordinances passed must be reserved for the pleasure of the Governor-General.

The Constitution provides for a minimum of five members for each original State. Members of the House of Representatives are elected for the duration of the Parliament, which is limited to three years. At elections for Senators the whole State constitutes the electorate. For the purpose of elections for the House of Representative the State is divided into single electorates corresponding in number with the number of members to which the State is entitled. Further information regarding the Senate and the House of Representatives is given in earlier issues of the Year Book.

The *Commonwealth Electoral Act* 1948, introduced with the *Representation Act* 1948 to enlarge the Commonwealth Parliament (see p. 61), changed the system of scrutiny and counting of votes in Senate elections from the alternative vote to that of proportional representation. For a description of the system, see Year Book No. 38, pages 82-3. The system of voting for both the Senate and the House of Representatives is preferential.

COMMONWEALTH SENATE ELECTIONS, 1964

State	Electors enrolled	Electors who voted	Formal votes cast for—				
			Liberal and Country Parties	Australian Labor Party	Australian Democratic Labour Party	Others	Total
New South Wales	2,225,466	2,085,984	937,282	899,087	93,615	26,325	1,956,309
Victoria	1,650,479	1,564,438	612,104	606,134	199,707	14,944	1,432,889
Queensland	852,741	809,290	324,310	324,578	89,936	12,563	751,387
South Australia	551,341	528,464	221,289	248,956	11,680	7,118	489,043
Western Australia	408,549	383,882	202,374	141,038	14,527	3,033	360,972
Tasmania	192,376	184,922	64,722	88,877	24,046	805	178,450
Total	5,880,952	5,556,980	2,362,081	2,308,670	433,511	64,788	5,169,050

Particulars of voting at previous Senate elections and elections for the House of Representatives appear in earlier issues of the Year Book, and additional information is available in the *Statistical Returns* issued by the Chief Electoral Officer following each election.

The state of the parties in each House at the end of 1965 was: *Senate*—Liberal Party, 23; Country Party, 7; Australian Labor Party, 27; Australian Democratic Labour Party, 2; Independent, 1. *House of Representatives*—Liberal Party, 52; Country Party, 20; Australian Labor Party, 52 (including Northern Territory and Australian Capital Territory members with restricted voting rights).

Members of the Commonwealth Parliament

The following is a list of Senators and Members of the House of Representatives of the Commonwealth Parliament as at 1 January 1966. Changes since that date are set out in the Appendix to this volume. Party affiliation is indicated by the use of the following abbreviations:

A.D.L.P.—Australian Democratic Labour Party.

A.L.P.—Australian Labor Party.

C.P.—Australian Country Party.

Ind.—Independent.

Lib.—Liberal Party of Australia.

MEMBERS OF THE COMMONWEALTH PARLIAMENT, 1 JANUARY 1966(a)

THE SENATE

President:

SENATOR THE HON. SIR ALISTER McMULLIN,
K.C.M.G.

Chairman of Committees:

SENATOR T. C. DRAKE-BROCKMAN, D.F.C.

Commonwealth referendums

In accordance with section 128 of the Constitution any proposed law for the alteration of the Constitution, in addition to being passed by an absolute majority of each House of Parliament, must be submitted to a referendum of the electors in each State, and must be approved also by a majority of the electors in a majority of the States and by a majority of all the electors who voted, before it can be presented for Royal Assent. Twenty-four such proposals have so far been submitted to referendums and the consent of the electors has been received in four cases, the first in relation to the election of Senators in 1906, the second and third in respect of State Debts—one in 1910 and the other in 1928—and the fourth in respect of Social Services in 1946. Details of the various referendums and the voting thereon are given in the following pages.

In addition to referendums for alteration of the Constitution, other Commonwealth referendums have been held, the first occasion being in 1898, when a proposed Constitution, embodied in the Federal Constitution Bill, was submitted to the popular vote but failed to receive the statutory vote of 80,000 in New South Wales. On modification of the Bill in the following year the necessary consent was obtained. In 1916 a question was submitted in terms of section 5 of the *Military Service Referendum Act 1916* as to whether the people of Australia were in favour of compulsory overseas military service for the term of the war. The proposal was favoured by a majority of voters in Victoria, Western Australia and Tasmania, and in the Federal Territories, which also participated in this Referendum, but the necessary majority of all votes was not

obtained. Affirmative votes cast amounted to 48.39 per cent of all formal votes. Of the electors on the roll, 82.75 per cent voted. In 1917 another question was submitted. This was prescribed by Regulation 6 of the War Precautions (Military Service Referendum) Regulations 1917 and asked whether the Commonwealth should have power to call up by ballot compulsory reinforcements for the Australian Imperial Force overseas, up to 7,000 per month. Only Western Australia, Tasmania and the Federal Territories voted for the proposal, and affirmative votes, inclusive of those of members of the Forces and crews of transports who voted on this occasion, amounted to only 46.21 per cent of all formal votes. The percentage of electors who voted was 81.34.

Two Bills for alteration of the Constitution were passed during 1965, one to amend the provisions that the number of members of the House of Representatives shall be as nearly as practicable twice the number of Senators (section 24), and the other to repeal section 127—'In reckoning the numbers of the people of the Commonwealth, or of a State or other part of the Commonwealth, aboriginal natives shall not be counted.' In accordance with the provisions of section 128 of the Constitution the proposals were to have been submitted to the electors within six months after the passage of the Bills. The Government, however, decided in February 1966 to defer the holding of the referendums until after the next House of Representatives election.

**COMMONWEALTH REFERENDUMS FOR ALTERATION OF THE CONSTITUTION:
PROPOSED LAWS AND RESULTS OF VOTING (TO 31 DECEMBER 1965)**

On the occasions on which the requisite majority, both of States and of all electors was obtained, the results of voting are shown in italics.

Short title of Bill	Date submitted to electors	Powers or other alterations sought	In favour of proposed law	
			Number of States	Percentage of formal voters
<i>Constitution Alteration (Senate Elections) 1906</i>	12 December 1906	To alter from January to July the date on which the term of a senator begins, and to provide for other matters connected with the election of senators	<i>Six</i>	<i>82.65</i>
<i>Constitution Alteration (Finance) 1909</i>	13 April 1910	To vary the financial arrangements between the Commonwealth and the States under the Constitution by providing, <i>inter alia</i> , for specified <i>per capita</i> payments to each State and special payments to Western Australia	<i>Three (Q., W.A., T.)</i>	<i>49.04</i>
<i>Constitution Alteration (State Debts) 1909</i>	13 April 1910	To take over the public debts of the States whenever incurred	<i>Five (all but N.S.W.)</i>	<i>54.95</i>
<i>Constitution Alteration (Legislative Powers) 1910</i>	26 April 1911	To deal with (a) trade and commerce, without any limitations, instead of 'Trade and commerce with other countries, and among the States' only; (b) the control and regulation of corporations of all kinds (except those formed solely for religious, charitable, scientific or artistic purposes and not for the acquisition of gain); (c) labour and employment, including wages and conditions of labour and the settlement of industrial disputes generally, including disputes in relation to employment on State railways; and (d) combinations and monopolies in relation to the production, manufacture, or supply of goods or services	<i>One (W.A.)</i>	<i>39.42</i>
<i>Constitution Alteration (Monopolies) 1910</i>	26 April 1911	To make laws for the Commonwealth to carry on or control an industry or business declared to be the subject of a monopoly and for acquiring for that purpose on just terms any property used in connection with the industry or business	<i>One (W.A.)</i>	<i>39.89</i>
<i>Constitution Alteration (Trade and Commerce) 1912</i>	31 May 1913	As in (a) under (Legislative Powers) Referendum 1910, but excluding intra-State trade and commerce on State Railways	<i>Three (Q., S.A., W.A.)</i>	<i>49.38</i>
<i>Constitution Alteration (Corporations) 1912</i>	31 May 1913	As in (b) under (Legislative Powers) Referendum 1910	<i>Three (Q., S.A., W.A.)</i>	<i>49.33</i>
<i>Constitution Alteration (Industrial Matters) 1912</i>	31 May 1913	To make laws with respect to labour, employment, and unemployment, including the terms and conditions of labour, the rights and obligations of employers and employees, strikes and lockouts, the maintenance of industrial peace and the settlement of industrial disputes	<i>Three (Q., S.A., W.A.)</i>	<i>49.33</i>

COMMONWEALTH REFERENDUMS FOR ALTERATION OF THE CONSTITUTION:
PROPOSED LAWS AND RESULTS OF VOTING (TO 31 DECEMBER 1965)

—continued

Short title of Bill	Date submitted to electors	Powers or other alterations sought	In favour of proposed law	
			Number of States	Percentage of formal voters
<i>Constitution Alteration (Railway Disputes) 1912</i>	31 May 1913	To make laws with respect to conciliation and arbitration for the prevention and settlement of industrial disputes in relation to employment in the railway service of a State	Three (Q., S.A., W.A.)	49.13
<i>Constitution Alteration (Trusts) 1912</i>	31 May 1913	As in (d) under (Legislative Powers) Referendum 1910, but expressly including 'trusts'	Three (Q., S.A., W.A.)	49.78
<i>Constitution Alteration (Nationalization of Monopolies) 1912</i>	31 May 1913	As in (Monopolies) Referendum 1910, but excluding any industry or business carried on by the Government or a public authority of a State	Three (Q., S.A., W.A.)	49.33
<i>Constitution Alteration (Legislative Powers) 1919</i>	13 December 1919	To extend temporarily the legislative powers of the Commonwealth in regard to trade and commerce, corporations, industrial matters and trusts	Three (V., Q., W.A.)	49.65
<i>Constitution Alteration (Nationalization of Monopolies) 1919</i>	13 December 1919	To extend temporarily the legislative powers of the Commonwealth in regard to the nationalization of monopolies	Three (V., Q., W.A.)	48.64
<i>Constitution Alteration (Industry and Commerce) 1926</i>	4 September 1926	To make laws with respect to (a) corporations generally (with certain exceptions); (b) the prevention and settlement of all industrial disputes; (c) the establishment of authorities to regulate industrial matters; (d) investing State authorities with industrial powers; and (e) trusts and combines and industrial associations of employers and employees	Two (N.S.W., Q.)	43.50
<i>Constitution Alteration (Essential Services) 1926</i>	4 September 1926	To make laws for protecting the interests of the public in case of actual or probable interruption of any essential service	Two (N.S.W., Q.)	42.80
<i>Constitution Alteration (State Debts) 1928</i>	17 November 1928	To validate the proposals included in the Financial Agreement between the Commonwealth and States relating to State debts and the borrowing of money by the Commonwealth and the States	Six	74.30
<i>Constitution Alteration (Aviation) 1936</i>	6 March 1937	To make laws with respect to air navigation and aircraft	Two (V., Q.)	53.56
<i>Constitution Alteration (Marketing) 1936</i>	6 March 1937	To make laws under existing powers with respect to marketing without being subject to section ninety-two (freedom of interstate trade) of the Constitution	None	36.26
<i>Constitution Alteration (Post-war Reconstruction and Democratic Rights) 1944</i>	19 August 1944	To empower the Commonwealth for a period of five years after the cessation of hostilities, to make laws with respect to (i) the reinstatement and advancement of members of the fighting forces, and the advancement of dependants of deceased members; (ii) employment and unemployment; (iii) organized marketing of commodities; (iv) uniform company legislation; (v) trusts, combines and monopolies; (vi) profiteering and prices; (vii) production and distribution of goods (no law in respect of primary production to have effect in a State unless approved by that State and no law to discriminate between States or parts of States); (viii) control of overseas exchange and investment, and regulation of the raising of money according to plans approved by the Australian Loan Council; (ix) air transport; (x) uniformity of railway gauges; (xi) national works (with the consent and co-operation of the State concerned); (xii) national health in co-operation with the States; (xiii) family allowances; and (xiv) the people of the aboriginal race. (The proposed law contained provisions to safeguard freedoms of speech, expression and religion, and a provision requiring notice of regulations of a legislative character made under the proposed powers to be given to each senator and each member of the House of Representatives)	Two (S.A., W.A.)	45.99

COMMONWEALTH REFERENDUMS FOR ALTERATION OF THE CONSTITUTION:
PROPOSED LAWS AND RESULTS OF VOTING (TO 31 DECEMBER 1965)

—continued

Short title of Bill	Date submitted to electors	Powers or other alterations sought	In favour of proposed law	
			Number of States	Percentage of formal voters
<i>Constitution Alteration (Social Services) 1946</i>	28 September 1946	To make laws for the provision of maternity allowances, widows' pensions, child endowment, unemployment, pharmaceutical, sickness and hospital benefits, medical and dental services (but not so as to authorize any form of civil conscription), benefits to students and family allowances	Six	54.39
<i>Constitution Alteration (Organized Marketing of Primary Products) 1946</i>	28 September 1946	To make laws for the organized marketing of primary products, unrestricted by section ninety-two (freedom of interstate trade) of the Constitution	Three (N.S.W., V., W.A.)	50.57
<i>Constitution Alteration (Industrial Employment) 1946</i>	28 September 1946	To make laws with respect to terms and conditions of employment in industry, but not so as to authorize any form of industrial conscription	Three (N.S.W., V., W.A.)	50.30
<i>Constitution Alteration (Rents and Prices) 1947</i>	29 May 1948	To make laws with respect to rents and prices (including charges)	None	40.66
<i>Constitution Alteration (Powers to deal with Communists and Communism) 1951</i>	22 September 1951	To make such laws with respect to communists and communism as the Parliament considers necessary or expedient for the defence or security of the Commonwealth or for the execution or maintenance of the Constitution or laws of the Commonwealth; and to make a law in terms of the <i>Communist Party Dissolution Act 1950</i> , with certain powers of amendment	Three (Q., W.A., T.)	49.44

The Parliaments of the States and State elections

Pages 52, 61 and 69 of this chapter contain summarized information on the Parliaments of each State, the qualifications for members, the numbers of Houses and members, and salaries payable. For greater detail, including some historical material, reference should be made to Year Books No. 50, pages 69-72, No. 51, page 73, and earlier issues.

With the passage of 'The Elections Act of 1965' by the Queensland House of Assembly Aboriginal inhabitants of Australia and Torres Strait Islanders are, from 1 February 1966, qualified to vote as are other British subjects in Queensland, but for them enrolment is not compulsory. This means that Aboriginals are now entitled to vote at both Commonwealth and State elections in all States.

State Upper House elections. The following table shows particulars of the voting at the most recent elections for the Upper Houses or Legislative Councils in the States of Victoria, South Australia, Western Australia and Tasmania. In New South Wales members of the Legislative Council are elected at simultaneous sittings of the members of both Houses, in Queensland there has been no Legislative Council since 1922, and in Tasmania three members of the Council are elected annually (but four in each sixth year) and the Council cannot be dissolved as a whole.

STATE UPPER HOUSE ELECTIONS

State	Year of latest election	Electors enrolled— whole State			Contested electorates					
					Electors who voted			Percentage of electors who voted		
		Males	Females	Total	Males	Females	Total	Males	Females	Total
Victoria . . .	1964	800,620	834,691	1,635,311	758,124	785,654	1,543,778	94.7	94.1	94.4
South Australia .	1965	n.a.	n.a.	213,377	n.a.	n.a.	149,910	n.a.	n.a.	80.2
Western Australia	1965	202,106	206,356	408,462	n.a.	n.a.	361,752	n.a.	n.a.	92.1
Tasmania . . .	1965	(a)18,967	(a)19,862	(a)38,829	16,312	16,516	32,828	86.0	83.1	84.6

(a) Total electors enrolled in contested divisions.

State Lower House elections. The following table shows particulars of the voting at the most recent election for the Lower House in each State.

STATE LOWER HOUSE ELECTIONS

State	Year of latest election	Electors enrolled— whole State			Contested electorates					
					Electors who voted			Percentage of electors who voted		
		Males	Females	Total	Males	Females	Total	Males	Females	Total
New South Wales	1965	1,098,471	1,158,097	2,256,568	1,018,902	1,064,459	2,083,361	94.4	93.5	93.9
Victoria	1964	800,620	834,691	1,635,311	758,124	785,654	1,543,778	94.7	94.1	94.4
Queensland	1963	416,507	422,816	839,323	388,773	394,261	783,034	94.5	94.1	94.3
South Australia	1965	n.a.	n.a.	562,824	n.a.	n.a.	513,064	n.a.	n.a.	94.6
Western Australia	1965	202,106	206,356	408,462	n.a.	n.a.	309,893	n.a.	n.a.	92.3
Tasmania	1964	96,111	97,307	193,418	91,747	92,824	184,571	95.5	95.4	95.4

Year Book No. 51 and earlier issues contain particulars of the voting at elections for both Upper and Lower State Houses in years prior to those shown above.

Number and salary of members of the legislatures, Australian Parliaments, December 1965

**AUSTRALIAN PARLIAMENTS: MEMBERS AND ANNUAL SALARIES
31 DECEMBER 1965**

(a) Abolished in 1922. (b) Plus expense allowances—Senators, \$2,100; Members of the House of Representatives, city electorates, \$2,200, country electorates, \$2,600. Certain additional allowances are also provided for holders of parliamentary offices, etc. (c) Plus allowances from \$1,700 for metropolitan to \$2,100 for urban, \$2,300 for inner country, and \$2,400 for outer country electorates. (d) Plus allowance of \$1,200 where electorate is less than 50 miles from Adelaide or if a Minister, \$1,600 if more than 50 miles, \$1,900 if more than 200 miles. (e) Plus expense reimbursement ranging from \$1,200 for a metropolitan member to \$1,900 for a north province member. (f) Plus allowance according to area of electorate and distance from the capital varying from \$600 to \$1,100 in the case of the Legislative Council, and from \$1,000 to \$1,850 in the case of the House of Assembly. (g) Plus allowance varying from \$1,500 to \$2,100 according to location of electorate. (h) Plus individual electoral allowances ranging from \$1,100 to \$2,630.

Enactments of the Parliaments

In the Commonwealth all laws are enacted in the name of the Sovereign, the Senate, and the House of Representatives. The subjects with respect to which the Commonwealth Parliament is empowered to make laws are enumerated in the Constitution. In the States other than South Australia and Tasmania laws are enacted in the name of the Sovereign by and with the consent of the Legislative Council (except in Queensland) and Legislative Assembly. In South Australia and Tasmania laws are enacted in the name of the Governor of the State, with the advice and consent of the Parliament in the case of South Australia, and of the Legislative Council and House of Assembly in the case of Tasmania. Generally, assent to Bills passed by the legislatures is given by the Governor-General or State Governor acting on behalf of, and in the name of, the Sovereign. In certain special cases Bills are reserved for the Royal assent. The Parliaments of the States are empowered generally, subject to the Commonwealth Constitution, to make laws in and for their respective States, in all cases whatsoever. Subject to certain limitations they may alter, repeal, or vary their Constitutions. Where a law of a State is inconsistent with a law of the Commonwealth the latter prevails, and the former is to the extent of the inconsistency invalid.

The course of Commonwealth legislation

The actual legislation by the Commonwealth Parliament during 1965 is indicated in alphabetical order in *The Acts of the Parliament of the Commonwealth of Australia passed during the year 1965 in the First Session of the Twenty-fifth Parliament of the Commonwealth, with Appendix, Tables and Index*. A chronological table of Acts passed from 1901 to 1965 showing how they are affected by subsequent legislation or lapse of time is also given, and, further, a table of Commonwealth legislation passed from 1901 to 1965 in relation to the several provisions of the Constitution is furnished in the same volume. Reference should be made to these for complete information.

The Acts passed by the Commonwealth Parliament during the year 1965 are listed hereunder. In many cases the title of the Act indicates the general scope of the Act, but brief explanatory notes have been added where necessary. Appropriate chapters of this Year Book should be referred to for further information which may be available there.

The total enactments of the Commonwealth Parliament for a number of years at fairly even intervals since 1901 show a general increase. Seventeen Acts were passed in 1901, 36 in 1914, 38 in 1927, 87 in 1939, 109 in 1952, and 156 in 1965.

Commonwealth legislation passed during 1965

*Air Force Act 1965 (No. 50).**

Air Navigation (Charges) Act (No. 1) 1965 (No. 107) provided for an increase of ten per cent in the charges for the use of aerodromes and other facilities for air navigation.

Air Navigation (Charges) Act (No. 2) 1965 (No. 125).†

Aliens Act 1965 (No. 12) amended the *Aliens Act 1947-1959* to require aliens registered under the Act to notify the Department of Immigration annually of their address, occupation and marital status (see the chapter Population).

Appropriation Act (No. 3) 1964-65 (No. 15); Appropriation Act (No. 1) 1965-66 (No. 67); Appropriation Act (No. 2) 1965-66 (No. 68).

Appropriation (Special Expenditure) Act (No. 2) 1964-65 (No. 16) appropriated funds, mainly for bush-fire relief, for which no provision was made in the *Appropriation (Special Expenditure) Act 1964-65*.

Audit Act 1965 (No. 126).†

Australian National University Act 1965 (No. 108) abolished the position of Principal of the School of General Studies and provided, instead, for a part-time Deputy Chairman of the Board of the School, widened the field of candidates eligible for election to the Council as students' representative, made some minor administrative changes, and repealed transitional provisions relating to the merging of the Canberra University College with the original Australian National University.

Australian Universities Commission Act 1965 (No. 63) increased to eight the maximum number of members of the Commission.

Banking Act 1965 (No. 128); Bankruptcy, Decimal Currency Act 1965 (No. 128).†

Brigalow Lands Agreement Act 1965 (No. 122) approved a number of variations to the Brigalow Lands Agreement which extended the boundaries of the scheme and gave additional scope to the work. It also provided for an extension of three years to 30 June 1970 of the period in which financial assistance is available to Queensland but left the total amount of such assistance unaltered.

Commonwealth legislation passed during 1965—continued

- Broadcasting and Television Act 1965* (No. 38) amended the *Broadcasting and Television Act 1942–1964* to provide that no person shall obtain more than a five per cent interest in more than two companies licensed to operate commercial television stations.
- Broadcasting and Television Act (No. 2) 1965* (No. 120) excepted from the provisions relating to holding interests in licenses interests that were lawfully held prior to 17 December 1964.
- Butter Fat Levy Act 1965* (No. 42) imposed a levy on butter fat produced in Australia and used therein for the manufacture of dairy produce.
- Butter Fat Levy Act (No. 2) 1965* (No. 129); *Canned Fruits Export Charges Act 1965* (No. 130).†
- Cellulose Acetate Flake Bounty Act 1965* (No. 26) provided for continuation of bounty payments on rayon grade acetate flake for three years from March 1965, and raised the limit payable to £112,000 (\$224,000) but reduced the rate per lb from 7d. (6c) to 6d. (5c).
- Christmas Island Act 1965* (No. 131).†
- Coal Industry Act 1965* (No. 11) amended the *Coal Industry Act 1946–1958* to empower the Joint Coal Board to open accounts with other approved banks as well as with the Reserve Bank of Australia.
- Commonwealth Banks Act 1965* (No. 132).†
- Commonwealth Electoral Act 1965* (No. 48); *Commonwealth Electoral Act (No. 2) 1965* (No. 70) amended the provisions of the *Commonwealth Electoral Act 1918–1962* relating to the distribution of States into electoral divisions to provide for greater community of interests in the electors in any division, increased the amount of the deposit to be lodged by candidates, amended the grouping provisions for Senate elections, raised the maximum penalties for failure to enrol or failure to vote, extended the period for return of postal votes to the divisional returning officer, and made other minor amendments to voting procedure.
- Conciliation and Arbitration Act 1965* (No. 22) amended the *Conciliation and Arbitration Act 1904–1964* to provide that the Commonwealth Industrial Court cannot hear an application for an injunction against somebody from committing a breach or non-observance of an award unless it is satisfied that the Conciliation and Arbitration Commission was notified without delay that such breach or non-observance was liable to occur, and that fourteen days or more have passed since the notification was given.
- Copper Bounty Act 1965* (No. 80) extended the period of operation of the *Copper Bounty Act 1958–1963* to 31 December 1966 unless an earlier date of cessation is specified by proclamation.
- Currency Act 1965* (No. 95) proclaimed the date for the changeover to decimal currency, continued those provisions of the *Currency Act 1963* relating to coinage, and set out detailed provisions for the transitional period and for machine conversion. (See the chapter Private Finance; see also *Decimal Currency Board Act 1965* below).
- Customs Act 1965* (No. 29); *Customs Act (No. 2) 1965* (No. 82); *Customs Tariff 1965* (No. 28); *Customs Tariff (No. 1) 1965* (No. 7); *Customs Tariff (No. 2) 1965* (No. 81); *Customs Tariff (No. 3) 1965* (No. 84); *Customs Tariff (Canada Preference) 1965* (No. 8); *Customs Tariff (Dumping and Subsidies) Act 1965* (No. 117); *Customs Tariff (New Zealand Preference) 1965* (No. 9); *Customs Tariff Validation Act 1965* (No. 31); *Customs Tariff Validation Act (No. 2) 1965* (No. 113).
- Customs Act (No. 3) 1965* (No. 133); *Customs Tariff 1966* (No. 134).†
- Dairy Produce Export Charge Repeal Act 1965* (No. 45); *Dairy Produce Export Control Act 1965* (No. 43); *Dairy Produce Levy Repeal Act 1965* (No. 46); *Dairy Produce Research and Sales Promotion Act 1965* (No. 44).‡
- Decimal Currency Board Act 1965* (No. 94) replaced that part of the *Currency Act 1963* which set up the Decimal Currency Board and gave continuing effect to its provisions.
- Defence Act 1965* (No. 51) provided that all members of the defence forces, whether volunteers or those called up for compulsory service, will be liable for service either within or beyond the territorial limits of Australia.
- Defence Forces Retirement Benefits Act 1965* (No. 25) provided that pre-1959 Act contributors whose pension entitlements are increased may elect not to pay additional contributions.
- Defence Forces Retirement Benefits Act (No. 2) 1965* (No. 98) extended to members of the Defence Forces a number of the changes in retirement provisions included in the *Superannuation Act (1965)* (see p.75).

Commonwealth legislation passed during 1965—continued

- Defence Forces Retirement Benefits Act (No. 3) 1965 (No. 135).*†
- Defence (Re-establishment) Act 1965 (No. 54)* provided for the protection of the interests of national servicemen in relation to their reinstatement in civil employment and in relation to mortgages, debts, and other obligations they had entered into before becoming liable for national service, and for the facilitation of the re-establishment of national servicemen in civil life on completion of their period of continuous national service.
- Diesel Fuel Tax Act (No. 1) 1965 (No. 60); Diesel Fuel Tax Act (No. 2) 1965 (No. 61); Diesel Fuel Taxation (Administration) Act 1965 (No. 62);* provided for an increase in the rate of tax on diesel fuel from 1s. (10c) to 1s. 3d. (12c). per gallon.
- Dried Fruits Export Charges Act 1965 (No. 136); Egg Export Charges Act 1965 (No. 137).*†
- Estate Duty Assessment Act 1965 (No. 32)* amended the *Estate Duty Assessment Act 1914–1963* to exempt gifts to the Winston Churchill Memorial Trust from estate duty.
- Estate Duty Assessment Act (No. 2) 1965 (No. 138); Excise Act 1965 (No. 139); Excise Tariff (No. 2) 1965 (No. 140).*†
- Excise Tariff 1965 (No. 83).*
- Export Payments Insurance Corporation Act 1965 (No. 74)* amended the *Export Payments Insurance Corporation Act 1956–1964* to authorize the Corporation to insure certain types of Australian investments in overseas countries against non-commercial risks and provided for an increase of £1 million (\$2 million) in the capital of the Corporation, an increase of £25 million (\$50 million) in the maximum contingent liability which the corporation can accept under contracts of insurance and guarantee, and a reduction of the minimum value of export transactions in respect of which the Corporation may provide guarantees (see the chapters Oversea Transactions and Private Finance).
- Foot and Mouth Disease Act 1965 (No. 90)* extended the provisions of the *Foot and Mouth Disease Act 1961* to include two exotic animal diseases which are clinically indistinguishable from foot and mouth disease.
- Gold Mining Industry Assistance Act 1965 (No. 34)* extended the period of operation of the *Gold Mining Industry Assistance Act 1954–1965* for five years and liberalized subsidy payments (see the chapter Mineral Industry).
- Homes Savings Grant Act 1965 (No. 6)* widened the scope of the *Homes Savings Grant Act 1964* to make certain types of young persons, previously excluded, eligible to receive a grant and to allow money saved and used in a number of ways to be treated as acceptable savings (see the chapter Housing and Building).
- Honey Industry Act 1965 (No. 71)* gave the Australian Honey Board power to acquire stocks of honey for orderly marketing purposes and allowed the Board to borrow from the Reserve Bank of Australia under a Commonwealth guarantee, and *Honey Levy Act (No. 1) 1965 (No. 72);* and *Honey Levy Act (No. 2) 1965 (No. 73)* exempted small producers from payment of the levy.
- Honey Levy Act (No. 1A) 1965 (No. 141); Honey Levy Act (No. 2A) 1965 (No. 142).*†
- Housing Loans Insurance Act 1965 (No. 10)* established a Housing Loans Insurance Corporation to insure lenders against losses arising out of the making of loans for housing (see the chapter Housing and Building).
- Income Tax Act 1965 (No. 104); Income Tax Act (No. 2) 1965 (No. 116); Income Tax and Social Services Contribution Assessment Act 1965 (No. 33); Income Tax Assessment Act 1965 (No. 103).*
- Income Tax Assessment Act (No. 2) 1965 (No. 143).*†
- Income Tax (International Agreements) Act 1965 (No. 105); Income Tax (Non-resident Dividends) Act 1965 (No. 106).*
- Indus Basin Development Fund Supplemental Agreement Act 1965 (No. 2)* provided for payment of an additional contribution of \$US10,460,000 (\$A9,339,286) to the Indus Basin development fund.
- Insurance Act 1965 (No. 144).*†
- International Monetary Agreements Act 1965 (No. 24)* gave approval to Australia consenting to an increase of \$US100 million in Australia's quota in the International Monetary Fund.
- International Wheat Agreement (Extension) Act 1965 (No. 14)* approved Australia's acceptance of the protocol extending the period of operation of the International Wheat Agreement 1962, for one year.

† See footnote, page 75.

Commonwealth legislation passed during 1965—continued

Judges Remuneration Act 1965 (No. 92) increased by £1,500 (\$3,000) per annum the salaries of Judges of the Supreme Courts of the Northern Territory and the Australian Capital Territory, of the Bankruptcy Court, and of the Arbitration Commission.

Judiciary Act 1965 (No. 91) increased the salaries of justices of the High Court of Australia by £2,000 (\$4,000) a year.

Jury Exemption Act 1965 (No. 13) exempted certain classes of persons from jury service in States and Commonwealth Territories and specified the cases in which Commonwealth public servants may perform such service.

Life Insurance Act 1965 (No. 145).†

Live-stock Slaughter Levy Act 1965 (No. 76) provided that the existing levy on sheep and lambs may be used for the purposes of research as well as for meat market development.

Loan (Housing) Act 1965 (No. 55) authorized the raising and expending of up to £51 million (\$102 million) for the purposes of housing.

Loan (War Service Land Settlement) Act 1965 (No. 59) authorized the raising and expending of £8.1 million (\$16.2 million) for assistance to the States of Western Australia, South Australia and Tasmania in connection with War Service Land Settlement.

Matrimonial Causes Act 1965 (No. 99) amended the *Matrimonial Causes Act* 1959 so as to remove some minor anomalies in the principal Act.

Meat Industry Act 1965 (No. 77); *Meat Research Act* 1965 (No. 75) provided for the extension of the current beef research scheme to cover beef, mutton, and lamb research.

National Health Act 1965 (No. 100) relaxed some of the restrictions on the eligibility of pensioners for pensioner medical benefits.

National Health Act (No. 2) 1965 (No. 146).†

Native Members of the Forces Benefits Act 1965 (No. 109) was a machinery measure passed to place Aboriginal natives who had enlisted in special Torres Strait Island units during the 1939–45 War on the same footing as Torres Strait Islanders who enlisted for service in these units.

Nauru Act 1965 (No. 115) provided a detailed scheme of government for Nauru. It established a Legislative Council consisting of the Administrator, nine elected Nauruan members, and five official members, and an Executive Council consisting of the Administrator and two elected and two official members of the Legislative Council.

National Service Act 1965 (No. 52); *Naval Defence Act* 1965 (No. 53).*

Navigation Act 1965 (No. 1) amended the *Navigation Act* 1912–1961 in respect of certain minor matters concerning the employment of seamen and to permit of greater flexibility in the survey requirements for ships on inland waters.

Northern Territory (Administration) Act 1965 (No. 69) amended the *Northern Territory (Administration) Act* 1910–1962 to provide that the Administrator be withdrawn from the Legislative Council for the Territory both as a member and as President of the Council and that the Legislative Council elect the President from among the elected and non-official members of the Council, and changed the name of the Wards Benefits Trust Fund to the Aborigines Benefits Trust Fund.

Parliamentary Presiding Officers Act 1965 (No. 5) provided that if the Presiding Officer of either House of the Parliament resigns his office or his seat he shall be deemed to continue to be the Presiding Officer until a new Presiding Officer is chosen, and that if a Presiding Officer dies the Chairman of Committees shall act until a new Presiding Officer is chosen. Where either House of the Parliament is dissolved the Presiding Officer shall continue to act until a Presiding Officer is chosen by the new House.

Parliamentary Retiring Allowances Act 1965 (No. 35) amended the *Parliamentary Allowances Act* 1948–1964 to remove some technical difficulties from the administration of the Act, to vest the management of the Fund in the Parliamentary Retiring Allowances Trust, and to make some minor amendments to facilitate the administration of the legislation.

Parliamentary Retiring Allowances (Decimal Currency) Act 1965 (No. 147).†

Payroll Tax Assessment Act 1965 (No. 114).

Payroll Tax Assessment Act (No. 2) 1965 (No. 148).†

Pollution of the Sea by Oil Act 1965 (No. 4) amended the *Pollution of the Sea by Oil Act* 1960 so as to extend the types and sizes of vessels to which the Act applies and to extend prohibited zones.

Commonwealth legislation passed during 1965—continued

- Post and Telegraph Act 1965* (No. 149); *Post and Telegraph Rates Act 1965* (No. 150).†
- Poultry Industry Assistance Act 1965* (No. 21); *Poultry Industry Levy Act* (No. 19); *Poultry Industry Levy Collection Act 1965* (No. 20) provided for a stabilization scheme for the egg industry to be financed by a levy in respect of hens kept for commercial purposes which have reached six months of age.
- Processed Milk Products Bounty Act 1965* (No. 47) extended the bounty on exports of processed milk products for two years and provided a maximum amount of £400,000 (\$800,000) for this purpose for each of the years 1965–66 and 1966–67.
- Public Accounts Committee Act 1965* (No. 79); *Public Works Committee Act 1965* (No. 78) raised the limit of expenditure on allowances of the Joint Committee of Public Accounts and of the Parliamentary Standing Committee on Public Works from £5,000 (\$10,000) to £10,000 (\$20,000).
- Pyrites Bounty Act 1965* (No. 37) extended the operation of the *Pyrites Bounty Act 1960* for a period of at most six months to 31 December 1965 unless an earlier date of cessation is specified by proclamation; *Pyrites Bounty Act* (No. 2) 1965 (No. 119) further extended the operation of the *Pyrites Bounty Act 1960–1965* until 30 June 1969.
- Pyrites Bounty Act* (No. 3) 1965 (No. 151).†
- Raw Cotton Bounty Act 1965* (No. 3) amended the *Raw Cotton Bounty Act 1963* to provide for the bounty to be paid on a seasonal instead of a calendar year basis.
- Referendum (Constitution Alteration) Act 1965* (No. 49) was a machinery measure consequent on the amendments made to the Commonwealth Electoral Act (*see p. 71*).
- Referendum (Constitution Alteration) Act* (No. 2) 1965 (No. 121) simplified voting procedure at future referendums.
- Repatriation Act 1965* (No. 64) introduced a new category of war pension, the intermediate rate, extended the provisions relating to eligibility for payment of sustenance allowance, extended the eligibility of student children for medical treatment up to the age of twenty-one years and extended service pension benefits in a number of ways (*see the chapter Repatriation*).
- Repatriation (Special Overseas Service) Act 1965* (No. 110) extended the operation of the *Repatriation (Special Overseas Service) Act 1962–1964* to members of the forces serving outside Australia whose service involves them in hazards additional to those of normal peace time service, whether allotted for duty in a special area or not.
- Reserve Bank Act 1965* (No. 96) amended the provisions of the *Reserve Bank Act 1959* relating to the note issue to authorize the issue of decimal currency notes on and after 14 February 1966.
- Royal Australian Air Force Veterans' Residences Act 1965* (No. 124) extended the classes of persons eligible for accommodation in residences provided by the trustees to include widows, mothers of deceased former unmarried members, and former female members provided they are also eligible for benefits under the War Service Homes Act.
- Sales Tax (Exemptions and Classifications) Act 1965* (No. 30) revised the schedule of sales tax exemptions to accord with the revised *Customs Tariff 1965*.
- Science Laboratories Act 1965* (No. 39) provided for the granting of assistance of up to £14,858,700 (\$29,717,400) to the States for purposes in connection with laboratories and equipment for use in teaching science in secondary schools.
- Seamen's War Pensions and Allowances Act 1965* (No. 65) provided for payment of a new intermediate rate of pension between the special rate and the general (100 per cent) rate.
- Social Services Act 1965* (No. 57) extended benefits payable under the Act (*see the chapter Welfare Services*).
- Social Services Act* (No. 2) 1965 (No. 152).†
- States Grants Act 1965* (No. 88); *States Grants (Advanced Education) Act 1965* (No. 102); *States Grants (Petroleum Products) Act 1965* (No. 27); *States Grants (Research) Act 1965* (No. 93); *States Grants (Special Assistance) Act 1965* (No. 89); *States Grants (Technical Training) Act 1965* (No. 41); *States Grants (Petroleum Products) Act* (No. 2) 1965 (No. 153).†
- Stevedoring Industry Act 1965* (No. 66) transferred the power to recruit waterside workers from the Waterside Workers' Federation and authorized the Minister for Labour and National Service, where he is satisfied that circumstances warrant it, to ask the Conciliation and Arbitration Commission to make an investigation to determine whether the conduct of the Federation has been such as to justify deregistration action.

† *See footnote, page 75.*

Commonwealth legislation passed during 1965—continued

Sulphuric Acid Bounty Act 1965 (No. 36) extended the operation of the *Sulphuric Acid Bounty Act* 1954–1960 for a further maximum period of six months to 31 December 1965 unless an earlier date of cessation is specified by proclamation.

Sulphuric Acid Bounty Act (No. 2) 1965 (No. 118) further extended the operation of the *Sulphuric Acid Bounty Act* 1954–1965 until 30 June 1969.

Superannuation Act 1965 (No. 97) provided for the surplus reported in the eighth quinquennial investigation of the Commonwealth Superannuation Fund to be distributed to eligible contributors and pensioners.

Superannuation Act (No. 2) 1965 (No. 154).†

Supply Act (No. 1) 1965–66 (No. 17); *Supply Act* (No. 2) 1965–66 (No. 18).

Taxation Administration Act 1965 (No. 155).†

Temple Society Trust Fund Act 1965 (No. 112) clarified the administration of the Temple Society Trust Fund.

Tobacco Charge Act (No. 1) 1965 (No. 86); *Tobacco Industry Act* 1965 (No. 87); *Tobacco Marketing Act* 1965 (No. 85) established an Australian Tobacco Board and implemented a stabilization plan for the Australian tobacco growing industry (see the chapter Rural Industry).

Trade Practices Act 1965 (No. 111) was designed to preserve competition in Australian trade and commerce to the extent required by the public interest. It provides that restrictive agreements and practices shall be examined on a case to case approach by an independent Trade Practices Tribunal. Collusive tendering and collusive bidding are prohibited, and examinable agreements cover agreements not to compete in prices, other terms and conditions of dealing, concessions allowable, market zones of operation, and the persons dealt with. Examinable practices are the obtaining of a discriminatory price advantage by a buyer, the forcing by a seller of another person's product on a buyer, inducing in pursuance of an agreement a refusal to deal with someone, and monopolization. Certain agreements (e.g. the working conditions of employees, compliance with standards approved by the Standards Association of Australia, and restrictions to protect the goodwill of a business upon its sale) are exempted from the provisions of the Act. A Commissioner of Trade Practices shall be appointed to maintain a Register of Trade Agreements and to bring agreements and practices before the Tribunal for examination. There is also provision for a Review Division of the Tribunal to handle appeals. The Act also repealed the Australian Industries Preservation Act, which it supersedes.

Universities (Financial Assistance) Act 1965 (No. 40) amended the *Universities (Financial Assistance) Act* 1963–1964 to increase the capital grants to universities, to provide increases in recurrent costs resulting from acceptance of the increase in academic salaries recommended in the Eggleston report, and to support higher fees for part-time academic staff (see the chapter Education, Cultural Activities and Research).

Universities (Financial Assistance) Act (No. 2) 1965 (No. 101) provided grants for capital works and recurrent costs of medical teaching hospitals.

Weipa Development Agreement Act 1965 (No. 123) approved an agreement between the Commonwealth and the State of Queensland for the provision of financial assistance to the State for harbour works at Weipa in North Queensland.

Western Australia (South-west Region Water Supplies) Agreement Act 1965 (No. 23) approved an agreement between the Commonwealth and the State of Western Australia for financial assistance by the Commonwealth equivalent to half the total expenditure on the provision of water supplies to the south-west region of Western Australia, the aggregate assistance not to exceed £5.25 million (\$10.5 million).

Wheat Industry Stabilization Act 1965 (No. 156).†

Wheat Tax Act 1965 (No. 58).

Wool Reserve Prices Plan Referendum Act 1965 (No. 56) provided for a referendum to ascertain whether the wool-growers of Australia approved the proposed Reserve Price Plan for Australian wool sold at auction.

* These Acts make provisions for Navy, Air Force, and National Service Personnel similar to those embodied in the Defence Act relative to service outside Australia. † These Acts were machinery measures consequential to the changeover to decimal currency. ‡ These Acts were machinery measures consequential to the *Butter Fat Levy Act* 1965.

Cost of parliamentary government

The table below shows, in broad groups, the expenditure incurred in the operation of the parliamentary system in Australia, comprising the Governor-General and Governors, the Ministries, the Upper and Lower Houses of Parliament, and electoral activities; *they do not attempt to cover the expenditure on Commonwealth and State administration generally.* Only broad groups are shown, but even these are not entirely comparable because of differences in accounting procedures and in the presentation of accounts. A very large part of the expenditure under the head of Governor-General or Governor represents official services entirely outside the Governor's personal interest, carried out at the request of the Government. The item includes salaries of Government House staffs and maintenance of residences, official establishments, grounds, etc., and expenditure on capital works and services.

Commonwealth Government Departments

In Year Book No. 49 (pp. 87-98) a list appears of the Commonwealth Government Departments, giving particulars for each Department of the principal matters dealt with and the Acts administered by the Minister concerned as at the end of 1962, and changes made during 1963 are shown on page 83 of Year Book No. 50. For a list of current Acts administered *see* the *Commonwealth Directory* and pages 4833-40 of *Commonwealth of Australia Gazette* No. 87 of 1965.

CHAPTER 4

LAND TENURE AND SETTLEMENT

Disposal of Crown lands

Land legislation and tenures

The following sections contain figures showing the extent of the different land tenures in the several States and Territories, classified under broad headings indicating the nature of the tenure, together with some general descriptive matter. Information in greater detail, descriptions of the land tenure systems of the several States and the internal Territories, and conspectuses of land legislation in force and of the systems of land tenure were provided in Year Book No. 48 and previous issues (*see also* Year Book No. 50, page 85 and List of Special Articles, etc., preceding General Index to this Volume).

Free grants and reservations

Provision exists in all States except Tasmania for the disposal of Crown lands for public purposes by free grants, and in all States for the temporary and/or permanent reservation of Crown lands for public purposes. In the Northern Territory any Crown lands not subject to any right of, or contract for, purchase may be resumed for public purposes, and the whole or any portion of the lands resumed may be reserved for that purpose. In the Australian Capital Territory, under the *Seat of Government (Administration) Act* 1910, Crown lands may not be sold or disposed of for any estate in freehold except in pursuance of some contract entered into before the commencement of the Act.

AREAS OF CROWN LANDS RESERVED: STATES AND TERRITORIES, 1960 TO 1964 (^{'000} acres)

Year	N.S.W. (a)	Vic. (b)	Qld (b)	S.A. (a)	W.A. (a)	N.T. (a)	Total (c)
1960 . . .	15,956	8,642	25,002	22,747	59,860	59,591	191,798
1961 . . .	15,877	8,646	25,006	22,750	59,885	59,590	191,754
1962 . . .	15,883	8,783	25,126	22,743	68,672	59,595	200,802
1963 . . .	15,958	8,810	25,053	22,754	74,353	59,663	206,591
1964 . . .	15,931	8,847	25,234	22,764	76,450	60,903	210,129

(a) At 30 June. (b) At 31 December. (c) Excludes Tasmania, for which details are not available, and the Australian Capital Territory.

The purposes for which areas were reserved are given hereunder for 1964.

New South Wales. For travelling stock, 4,979,058 acres; forest reserves, 1,544,603 acres; water and camping reserves, 765,407 acres; mining reserves, 1,039,403 acres; for recreation and parks, 713,163 acres; other reserves, 6,889,490 acres; total, 15,931,124 acres.

Victoria. For roads, 1,707,444 acres; water reserves, 315,416 acres; agricultural colleges, 8,434 acres; forest and timber reserves, 5,754,803 acres; mallee reserves, 410,000 acres; other reserves, 650,460 acres; total, 8,846,557 acres.

Queensland. Timber reserves, 2,318,615 acres; for State forests and national parks, 6,894,174 acres; Aboriginal reserves, 6,637,482 acres; for streets, surveyed roads and stock routes, 3,958,202 acres; general reserves, 5,425,289 acres; total, 25,233,762 acres.

South Australia. Total area of surveyed roads, railways and other reserves, 22,764,075 acres, including 18,833,822 acres set apart as Aboriginal reserves.

Western Australia. For State forests, 4,459,038 acres; timber reserves, 1,844,865 acres; other reserves 70,146,097 acres; total, 76,450,000 acres.

Northern Territory. For Aboriginal, defence and public requirements, 60,903,285 acres.

Conditional and unconditional purchases of freehold

Crown lands in the States may be disposed of by unconditional purchase at public auction or by certain other forms of purchase (for details see Year Book No. 48, pages 91-2), and conditional purchases of various types may also be made. In the Northern Territory only 0.1 per cent of the total area is alienated, the remainder being held under lease or licence, or reserved for various purposes or unoccupied. In the Australian Capital Territory, about 18 per cent of the area is alienated or in process of alienation in consequence of contracts existing prior to the establishment of the Territory.

Leases and licences

Well over half the area of the States of New South Wales and South Australia and of the two Territories and more than four-fifths of that of Queensland are occupied under some form of lease or licence. In Victoria, only about one-tenth of the area is leased or licensed, more than half being alienated; in Western Australia, more than one-third is leased or licensed, most of the remainder being unoccupied; and in Tasmania only one-twelfth is leased or licensed, while about half the area of the State is occupied by the Crown or unoccupied, and the remainder alienated. Areas leased or licensed in the States are held under Crown lands Acts, closer settlement Acts, mining Acts, etc., and in the Territories under various Ordinances.

Land Acts and Ordinances. The types of lease and licence which obtain under land legislation cover a wide range, and vary with each State or Territory. The following are examples: grazing or pastoral, settlement and closer settlement, settlement purchase, conditional and conditional purchase, perpetual and Crown; however, the variations of these forms and the special forms of lease and licence which exist would extend this list considerably. Details of the various types in existence are given in Year Book No. 48, pages 93-4, and some detail is included in the tables on pages 82-5 of this chapter.

AREAS OCCUPIED UNDER LEASE OR LICENCE OTHER THAN MINING AND FORESTRY: STATES AND TERRITORIES, 1960 TO 1964

('000 acres)

Year	N.S.W. (a)	Vic.	Qld	S.A. (a)	W.A. (a)	Tas. (a)	N.T. (a) (b)	A.C.T. (a) (b)	Total

(a) Year ended 30 June. (b) Leases and licences for all purposes.

Mining Acts and Ordinances. In addition to the lands held under lease or licence under land legislation, there are also areas occupied under mining Acts for the purpose of prospecting or mining for gold and other minerals. Details of the various types of mining lease and licence are given in Year Book No. 48, pages 94-5.

AREAS OCCUPIED UNDER MINING ACTS AND ORDINANCES: STATES AND TERRITORIES, 1960 TO 1964

('000 acres)

Year	N.S.W. (a)	Vic.	Qld (b)	S.A. (a) (b)	W.A. (c)	Tas. (b)	N.T.	Total (d)

1964 . . .	956	50	2,187	7,894	221	42	61	11,411

(a) Year ended 30 June. (b) Excludes lands held under miners' rights and dredging claims. (c) Excludes holdings under miners' rights. (d) Excludes Australian Capital Territory, included in previous table.

Oil prospecting or exploring

The legislation relating to the search for petroleum differs from State to State, and the terminology of, and the conditions applying to, the forms of authorization differ accordingly. The figures below relate to the exploratory stage of operations.

**AREAS OCCUPIED UNDER AUTHORITIES TO PROSPECT OR EXPLORE FOR
PETROLEUM: STATES AND NORTHERN TERRITORY, 1960 TO 1964**

('000 acres)

(a) Year ended 30 June.

Closer settlement and war service settlement**Closer settlement**

Particulars of the methods of acquisition and disposal of land for the closer settlement of civilians and returned service personnel (1914-18 War) in the several States are given in issues of the Year Book up to No. 22 (see No. 22, pages 163-9), and the results of the operations of the several schemes have appeared in subsequent issues in considerable detail. However, the amalgamation in some States of closer settlement records with those of other authorities has since made it impossible to obtain up-to-date figures for those States and for Australia as a whole. Page 96 of Year Book No. 48 contains particulars as at 30 June 1960 of the areas and costs for those States for which separate information is available.

War Service Land Settlement Scheme

The War Service Land Settlement Scheme provides for the settlement on the land of eligible ex-servicemen from the 1939-45 War and the Korea-Malaya operations. Finance for capital expenditure under the scheme in South Australia, Western Australia and Tasmania and for special loans to New South Wales and Victoria is provided through Loan (War Service Land Settlement) Acts. Finance for other aspects of the scheme in all States is provided by annual parliamentary appropriation. The *States Grants (War Service Land Settlement) Act 1952* provides that the responsible Commonwealth Minister may make grants of financial assistance to the States under such terms as he may from time to time determine.

New South Wales, Victoria and Queensland agreed, at the inception of the scheme, to find their own finance for the acquisition and development of properties. In 1954 Queensland abandoned the scheme and made available for general settlement all unallotted lands held under it. Detailed information about the agreements and the methods of operation and administration of the scheme are contained in earlier Year Books (see List of Special Articles, etc., preceding General Index to this volume).

WAR SERVICE LAND SETTLEMENT: SUMMARY, STATES, TO 30 JUNE 1965

State	Land acquired	Farms allotted		Farms in course of development		Other
		no.	acres	no.	acres	
New South Wales	9,094,021	3,047	9,094,021
Victoria	1,181,599	3,048	1,181,599
Queensland	398,524	470	218,640	(a) 179,884
South Australia	755,873	1,022	687,772	(b) 68,101

Loans and Allowances (Agricultural Occupations) Scheme

Full details of the measures taken for the re-establishment of ex-servicemen in rural occupations were given in earlier Year Books (*see* List of Special Articles, etc., preceding General Index to this volume). These measures provide for a scheme of loans and allowances to assist ex-servicemen in establishing themselves in agricultural occupations. The loans are made to eligible ex-servicemen for the purchase of land, effecting improvements on land, the acquisition of tools of trade, livestock, plant or equipment, the establishment of a co-operative business with other persons, reduction or discharge of a mortgage, bill of sale, etc. At 30 June 1965, 14,307 loans had been approved, and advances amounting to \$20,355,298 had been made. The allowances are payable only in respect of the period during which the income derived from the occupation by the ex-serviceman concerned is considered inadequate. At 30 June 1965, 16,114 applications for allowances had been made, and the total amount paid in allowances was \$4,553,194.

Year Book No. 48 (page 98) contains details of the applications received and approved and the amounts involved for the individual States and Territories to 30 June 1961. There has been little subsequent change.

War Service Land Settlement Branch—Total expenditure

The following table shows the total expenditure on various projects by the War Service Land Settlement Branch to 30 June 1965.

**COMMONWEALTH WAR SERVICE LAND SETTLEMENT BRANCH: EXPENDITURE
STATES AND TERRITORIES TO 30 JUNE 1965**
(\$'000)

Project	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	Total expenditure	Receipts and re-payments	Net expenditure

Total	30,108	35,388	4,340	75,922	106,906	52,688	f 305,388	g 105,470	199,918

(a) Excludes interest, rent, and rates, \$21,312,000. (b) Includes expenditure on new loans of moneys repaid by borrowers. (c) Includes Northern Territory, \$20,000, and New Guinea, \$14,000. (d) Excludes interest, \$2,984,000. (e) Includes New Guinea, \$2,000. (f) Includes Northern Territory, \$20,000, and New Guinea, \$16,000. (g) Excludes interest, rent, and rates, \$24,296,000.

Alienation and occupation of Crown lands

The figures in the previous parts of this chapter show separate particulars of various forms of land settlement. The following tables set out the position with regard to the tenure of land in each State, in the Northern Territory, and in the Australian Capital Territory, during 1964. A summary for each State and Territory and for Australia as a whole is also included. Particulars for each year from 1954 to 1964 appear in the bulletin *Rural Industries* No. 2, 1963-64, page 1. The area occupied includes roads, permanent reserves, forests, etc. In some cases lands which are permanently reserved from alienation are occupied under leases or licences, and have been included therein. Lands occupied under leases or licences for pastoral purposes are frequently held on short tenures only, and could thus be made available for settlement practically whenever required.

New South Wales

The total area of New South Wales is 198,037,120 acres, of which 29.7 per cent had been alienated at 30 June 1964; 3.6 per cent was in process of alienation; 57.2 per cent was held under leases and licences; and the remaining 9.5 per cent was unoccupied or held by the Crown.

ALIENATION AND OCCUPATION OF CROWN LAND: NEW SOUTH WALES
30 JUNE 1964
(Acres)

Tenure	Area	Tenure	Area
Alienated	58,850,268	Held under leases and licences— Homestead selections and grants	1,711,243
		Alienable leases, long-term and perpetual	24,313,105
		Long-term leases with limited right of alienation	1,230,568
		Other long-term leases	81,419,540
		Short-term leases and temporary tenures	2,711,078
		Forest leases	1,662,825
		Mining and auriferous leases	213,665
		<i>Total leased or licensed</i>	<i>113,262,024</i>
In process of alienation— Conditional purchases	5,701,323	Unoccupied— Particulars of Lord Howe Island not being available, the area, 3,220 acres, is included under unoccupied (approximate)	18,794,190
Closer settlement purchases	925,652		
Soldiers' group purchases	125,168		
Other forms of sale	378,495		
<i>Total in process of alienation</i>	<i>7,130,638</i>	Total area of State	198,037,120

Victoria

The total area of Victoria is 56,245,760 acres, of which 56.5 per cent had been alienated up to the end of 1964; 4.2 per cent was in process of alienation under deferred payments and closer settlement schemes; 10.9 per cent was occupied under leases and licences; and 28.4 per cent was unoccupied or held by the Crown.

ALIENATION AND OCCUPATION OF CROWN LANDS: VICTORIA
31 DECEMBER 1964
(Acres)

Tenure	Area	Tenure	Area
Alienated	31,789,514	Leases and licences held— Under Lands Department—	
		Perpetual leases	165,576
		Agricultural college leases	28,235
		Other leases and licences	1,645
		Temporary (yearly) grazing licences(a)	5,951,056
In process of alienation—			
Exclusive of mallee and closer settlement lands	159,760	<i>Total leased or licensed</i>	<i>6,146,512</i>
Mallee lands (exclusive of closer settlement lands)	942,616		
Closer settlement lands	1,256,989	Occupied by the Crown or un- occupied	15,950,369
<i>Total in process of alienation</i>	<i>2,359,365</i>	<i>Total area of State</i>	<i>56,245,760</i>

(a) Includes 77,730 acres of reserved Crown lands.

Queensland

The total area of this State is 426,880,000 acres, of which, on 31 December 1964, 6.2 per cent was alienated; 0.9 per cent was in process of alienation; and 86.5 per cent was occupied under leases and licences. The remainder, 6.4 per cent, was either unoccupied or held as reserves or for roads.

ALIENATION AND OCCUPATION OF CROWN LANDS: QUEENSLAND
31 DECEMBER 1964
(Acres)

Tenure	Area	Tenure	Area
Alienated	26,367,845	Occupied under leases and licences—	
		Pastoral leases	246,929,920
		Occupation licences	13,939,581
		Grazing selection and settle- ment farm leases	95,459,925
		Leases—special purposes(a)	4,169,911
		Mining leases	2,195,216
		Perpetual lease selections	6,397,168
		Auction perpetual leases, etc.	46,399
		Forest grazing leases (of reserves)	258,560
		Development leases	7,231
		<i>Total leased or licensed</i>	<i>369,403,911</i>
		Reserves (net, not leased)	17,539,020
		Surveyed roads and surveyed stock routes	3,958,202
		Unoccupied	5,794,052
In process of alienation	3,816,970	<i>Total area of State</i>	<i>426,880,000</i>

(a) Special leases of Crown land, 691,931 acres; special leases of reserves, 3,477,980 acres.

South Australia

The area of South Australia is 243,244,800 acres and at 30 June 1964, 6.5 per cent was alienated; 0.2 per cent in process of alienation; 60.2 per cent occupied under leases and licences; and 33.1 per cent occupied by the Crown or unoccupied.

**ALIENATION AND OCCUPATION OF CROWN LANDS: SOUTH AUSTRALIA
30 JUNE 1964**

(Acres)

Tenure	Area	Tenure	Area
Alienated	15,960,762	Held under lease and licence(a)—	
		Perpetual leases, including irrigation leases	20,652,053
		Pastoral leases	122,718,007
		Other leases and licences	3,011,525
		<i>Total leased or licensed</i>	<i>146,381,585</i>
		Area unoccupied(b)	80,468,063
In process of alienation	434,390	Total area of State	243,244,800

(a) Mining leases and licences have also been issued over an area comprising 236,128,335 acres.
(b) Includes surveyed roads, railways and other reserves, salt water lakes, lagoons, and fresh water lakes.

Western Australia

The total area of Western Australia is 624,588,800 acres, of which, at 30 June 1964, 4.7 per cent was alienated; 2.3 per cent was in process of alienation; and 39.5 per cent was occupied under leases and licences issued by the Lands, Mines or Forests Departments. The balance of 53.5 per cent was unoccupied.

**ALIENATION AND OCCUPATION OF CROWN LANDS: WESTERN AUSTRALIA
30 JUNE 1964**

(Acres)

		Total area of State	16,885,000

Northern Territory

The area of the Northern Territory is 332,979,200 acres, of which, at 30 June 1964 only 0.1 per cent was alienated; 57.5 per cent was held under leases and licences; 18.3 per cent was reserved for Aboriginal, defence and public requirements; and the remaining 24.1 per cent was unoccupied and unreserved.

The following shows the mode of occupancy of areas at 30 June 1964: alienated, 323,804 acres; leased—pastoral leases, 177,716,044 acres; other leases, licences and mission stations, 13,720,282 acres; total leased, 191,436,326 acres; reserved for Aboriginal, defence and public requirements, 60,902,400 acres; unoccupied and unreserved, 80,316,670 acres; total 332,979,200 acres.

Australian Capital Territory

Alienated land of the Territory at the end of 1964 comprised 10.6 per cent of the total area; land in process of alienation 6.9 per cent; land held under lease and licence 47.5 per cent; land otherwise occupied, including city tenures, 9.4 per cent; and unoccupied 25.6 per cent.

The following are the particulars of land areas in the Australian Capital Territory at the end of 1964: alienated 63,754 acres; in process of alienation 41,224 acres; leased—grazing, agricultural, etc., leases, 266,654 acres; grazing licences, 12,482 acres; total leased, 279,136 acres; otherwise occupied, including city area leases, 56,629 acres; unoccupied, 142,186 acres; total, 582,929 acres. Including the Jervis Bay area of 18,000 acres—6,266 acres leased and 11,734 acres otherwise occupied—the grand total for the whole Territory is 600,929 acres.

Summary

The following table provides a summary for each State and Territory, and for Australia as a whole, of the alienation and occupation of Crown lands in 1964.

**ALIENATION AND OCCUPATION OF CROWN LANDS: STATES AND TERRITORIES
1964**

State or Territory	Private lands				Crown lands				Total area
	Alienated		In process of alienation		Leased or licensed		Other (a)		
	'000 acres	Per cent	'000 acres	Per cent	'000 acres	Per cent	'000 acres	Per cent	'000 acres
N.S.W.(b)	58,850	29.7	7,131	3.6	113,262	57.2	18,794	9.5	198,037
Vic.(c)	31,790	56.5	2,359	4.2	6,147	10.9	15,950	28.4	56,246

A.C.T.(c)(d)	64	10.6	41	6.9	285	47.5	211	35.0	601
Australia	169,056	8.9	28,544	1.5	1,074,835	56.6	627,027	33.0	1,899,462

(a) Occupied by Crown; reserved; unoccupied; unreserved. (b) At 30 June. (c) At 31 December.
(d) Includes Jervis Bay area.

Advances to settlers

A detailed statement regarding the terms and conditions governing advances to settlers in the several States and the Northern Territory may be found in earlier issues of the Year Book (see List of Special Articles, etc., preceding General Index to this issue). The summaries of loans and advances under State authorities in the following paragraphs are compiled from returns supplied by the State Government lending agencies concerned. A summary for Western Australia is not included, as practically the only governmental funds being made available are Commonwealth (see pages 80-1). The figures include transactions in lands acquired under closer and soldier settlement schemes, but exclude balances owing on former Crown lands sold on the conditional purchase, etc., system. Advances made by general banking institutions in the course of their ordinary business are not included. For information on such advances see the chapter Private Finance.

The amounts outstanding do not represent the actual differences between the total advances and settlers' repayments, for considerable remissions of indebtedness have been made in all States as a result of re-appraisements of land values and the writing down of debts. In general they include both principal and interest outstanding.

In New South Wales and Victoria expenditure on the acquisition, development and improvement of land for war service land settlement is provided for by the States, and particulars thereof are included in the respective summaries. In Queensland no money is paid for the value of the land acquired, most land being occupied on lease from the Government, but advance in respect of improvements are included. In the other States this expenditure is provided for by the Commonwealth, and particulars are included on page 81.

Loans (Agricultural Occupations) under the *Commonwealth Re-establishment and Employment Act 1945* and certain advances for the purchase of wire-netting and for other purposes made from finance provided by the Commonwealth are included in the summaries following.

ADVANCES TO SETTLERS, ETC.: NEW SOUTH WALES, TO 30 JUNE 1964

Advances, etc.	Advances, etc., made during 1963-64	Total advances, etc. to 30 June 1964	Balances outstanding at 30 June 1964

Western Australia

The operations prior to 1945 covered in this section related to moneys made available through, or by, the old Agricultural Bank and other Government Departments for the purpose of agricultural development. On 1 October 1945, however, the Agricultural Bank was reconstituted as the Rural and Industries Bank of Western Australia, and was given authority to operate in similar manner to the associated banks. Certain securities in the books of the old bank were taken over by the general banking division of the new bank, and the clients concerned then operated with privileges and obligations similar to those provided by other banking institutions. The majority of the remaining securities, also, were eventually transferred.

At present, very limited funds are being made available by the State Government for advances for agricultural development, the bulk of the moneys for this purpose being provided by the Commonwealth Government under the War Service Land Settlement and Commonwealth Re-establishment and Employment Acts. Particulars of this expenditure are shown on page 81.

Tasmania

Particulars of advances made for the purchase of land for closer and soldier land settlement included in this table for earlier years are now omitted, as they are not regarded as outstanding advances by the Department of Agriculture; the areas so purchased have been leased on 99-year terms with an option of purchase which the leaseholder may exercise at any time.

Northern Territory

During the year 1963-64 forty advances totalling \$117,470 were approved and advances made totalled \$92,767. At 30 June 1964 the balance outstanding from ninety-six settlers, including interest, was \$386,950.

CHAPTER 5

MANUFACTURING INDUSTRY

Further detail on the subjects dealt with in this chapter is contained in the annual printed bulletins *Manufacturing Industry* and *Manufacturing Commodities*, formerly *Secondary Industries*, Parts I and II. Information is also published, as soon as the data can be prepared, in a series of thirty-five annual mimeographed bulletins, *Manufacturing Industries*, each relating to a particular industry or group of industries. Details of the industries covered are contained in Statistical Publications of Australia of the Miscellaneous chapter. Advance annual information is published in mimeographed form in *A Summary of Principal Statistics of Factories* and in *Principal Factory Products*. Current information on factory products is available in the *Quarterly Summary of Australian Statistics*, the *Monthly Review of Business Statistics*, the *Digest of Current Economic Statistics*, and the *Monthly Bulletin of Production Statistics*. Preliminary annual statements (*Factory Statistics*) and *Principal Statistics of Factories, by Class of Industry* and a monthly statement (*Production Statistics*) are also issued.

In addition to the above-mentioned publications, there is also a series of forty-eight *Monthly Production Summaries*, each relating to the production of a particular commodity or group of commodities (see reference above to Statistical Publications).

Introduction

A complete statistical account of the growth of the manufacturing industry in Australia cannot be given, as the necessary statistics were not collected by the several States on a definite and uniform basis prior to 1906. A standard classification of manufacturing industries was formulated at a conference of Australian statisticians in 1902 and adopted by all States in 1906, and figures on this basis were prepared for 1907 and subsequent years.

An historical summary of the development of the manufacturing industry in Australia since 1901 is contained in earlier issues of the Year Book (see No. 51, pages 143-4).

The decentralization of secondary industries, and the steps taken by Commonwealth and State Governments towards its development, are referred to in previous issues of the Year Book (see No. 51, page 144).

The Commonwealth Scientific and Industrial Research Organization, the Standards Association of Australia and the National Association of Testing Authorities are organizations which have functions concerned with the improvement of efficiency in industrial operations. For further particulars see the chapter Education, Cultural Activities and Research of this Year Book.

The Industrial Design Council of Australia was established in June 1958 for the purpose of encouraging better design in Australian-made goods and fostering an appreciation of good design throughout the community. It has a membership fully representative of industry, commerce and government, together with designers and educationists and is financed by donations from industry and by Commonwealth grants. The Council is responsible for the Australian Design Index which provides a detailed, illustrated record of well-designed Australian products. A Record of Designers has been set up to register information about industrial designers and their work. The Council is also concerned, in co-operation with education authorities, with raising the standard of training in industrial design. For further particulars see Year Book No. 51, page 145.

Bounties are paid by the Commonwealth Government to encourage local manufacture of certain products. The statutory provisions usually fix a term of operation of the bounty, provide for payment at a rate varying according to changes in the corresponding customs duty, specify the annual maximum amount of bounty payable and require the bounty to be withheld or reduced if a manufacturer's net profit in production of the commodity exceeds a certain rate, or if rates of wages and conditions of employment in production of the commodity do not conform to prescribed standards. (See the chapter Public Finance for products on which bounties are paid.)

Definitions in factory statistics

The statistics relating to factories have been compiled from tabulations made by the Deputy Commonwealth Statisticians in the several States from returns supplied to them annually by manufacturers in accordance with the statistical Acts of the States and the Commonwealth. A return must be supplied in respect of every *factory*, which is defined for this purpose as an establishment where four or more persons are employed or where power (other than manual) is used in any manufacturing process. This definition includes factories in educational and charitable institutions, reformatories, and other public institutions (except penitentiaries), but does not cover smallgoods makers, laundries, photography studios, florists and seedsmen, or most abattoirs. Details relating to small establishments not classified for statistical purposes as factories are not included in the figures contained in this chapter.

If a manufacturing business is conducted in conjunction with any other activity, particulars relating to the manufacturing section only are included in the statistics. Where two or more industries are conducted in the same establishment, a separate return is obtained for each industry if practicable.

Manufacturers are requested to state in their returns particulars as to the number, age etc., of their employees, salaries and wages paid, the value of premises and equipment, the horsepower of machinery, the value of raw materials (including containers), tools replaced, etc., the values and in most cases the quantities of fuel used, and quantities and values of principal materials used and articles produced. The returns obtained from manufacturers are not intended to show a complete record of the income and expenditure of factories nor to show the profits or losses of factories collectively or individually.

All *persons employed* in the manufacturing activities of a factory are counted as factory employees including working proprietors and 'out-workers'.

The *average number of persons employed* is quoted on two different bases, the average during the period of operation and the average over the whole year. Of these, the former is simply the aggregate of the average number of persons employed in each factory during its period of operation (whether the whole or only part of the year). This average is used only in respect of details relating to classification according to the number of persons employed. The latter, which is used in all other instances, is calculated by reducing the average number working in the factories (irrespective of period of operation) to the equivalent number working for a full year.

Working proprietors are included in all employment figures other than those relating to monthly employment and age dissections, but salaries and wages paid in all cases exclude drawings by working proprietors.

Value of materials used includes the value, in the usual sense, of the materials used, stores used, containers, tools replaced, and materials used in repairs to plant.

Value of fuel, etc., used includes also the cost of power and light used, of lubricants and of water.

The *value of factory output* is the value of the goods manufactured or their value after passing through the particular process of manufacture concerned, and includes the amount received for repair work, work done on commission and receipts for other factory work. The basis of valuation of the output is the selling value of the goods at the factory, exclusive of all delivery costs and charges and excise duties, but inclusive of bounty and subsidy payments to the manufacturer of the finished article. In the special case of government factories and workshops, the value of output is, in most cases, estimated by adding ten per cent to the value of materials and fuel used and other factory costs, including salaries and wages paid.

The *value of production* is the value added to raw materials by the process of manufacture. It is calculated by deducting from the value of factory output the value (at the factory) of the materials used, containers and packing, power, fuel and light used, tools replaced, and materials used in repairs to plant (but not depreciation charges). In the process of manufacture, many goods are treated in several industries, the output of one becoming the raw material of another, so that such commodities are counted more than once in the aggregate value of output and of raw materials. Examples are raw sugar passing from the mills to the refinery, metals from the smelters which become raw materials in establishments concerned in the production of metal goods, timber from the sawmills used in furniture factories and in joinery, and synthetic resins from chemical works used to make plastic products. On the other hand, the aggregate value of production is assessed without duplication, the value added by each industry being taken into account once only. For this reason, the value of production, and not the value of the output, is used as a measure of activity in the manufacturing industries as a whole.

The *rated horse-power of engines used* for factories other than central electric stations relates to the rated horse-power of engines ordinarily in use.

Statistics relating to factory activity in the Australian Capital Territory and Northern Territory are not included in the figures contained in this chapter.

A standard classification of manufacturing industries is used in compiling statistical data relating to factories in Australia. It is designed in accordance with decisions of the 1945 Conference of Statisticians, and represents a revision and extension of a new classification which was introduced in 1930-31, replacing the revised versions of the original classification formulated in 1902.

Owing to limitations of space, details published in general tables in this chapter are confined either to the sixteen classes of industry or to total factory activity. Some particulars of certain of the sub-classes shown below are published in the latter portion of this chapter, and full details for all sub-classes may be found in the bulletin *Manufacturing Industry* (previously entitled *Secondary Industries, Part I—Factory and Building Operations*).

The classes and sub-classes in the current classification of factories are as follows.

CLASSIFICATION OF FACTORIES

CLASS 1. TREATMENT OF NON-METALLIFEROUS MINE AND QUARRY PRODUCTS

1. Coke works
2. Briquetting and pulverized coal
3. Carbide
4. Lime, plaster of paris, asphalt
5. Fibrous plaster and products
6. Marble, slate, etc.
7. Cement, portland
8. Asbestos cement sheets and mouldings
9. Other cement goods
10. Other

CLASS 2. BRICKS, POTTERY, GLASS, ETC.

1. Bricks and tiles
2. Earthenware, china, porcelain and terracotta
3. Glass (other than bottles)
4. Glass bottles
5. Other

CLASS 3. CHEMICALS, DYES, EXPLOSIVES, PAINTS, OILS, GREASE

1. Industrial and heavy chemicals and acids
2. Pharmaceutical and toilet preparations
3. Explosives (including fireworks)
4. White lead, paints and varnish
5. Oils, vegetable
6. Oils, mineral
7. Oils, animal
8. Boiling-down, tallow-refining
9. Soap and candles
10. Chemical fertilizers
11. Inks, polishes, etc.
12. Matches
13. Other

CLASS 4. INDUSTRIAL METALS, MACHINES, CONVEYANCES

1. Smelting, converting, refining, rolling of iron and steel
2. Foundries (ferrous)
3. Plant, equipment and machinery, including machine tools
4. Other engineering
5. Extracting and refining of other metals; alloys
6. Electrical machinery, cables and apparatus
- 7-16. Construction and repair of vehicles (10 groups)
- 17, 18. Ship and boat building and repairing, marine engineering (government and other)
19. Cutlery and small hand tools
20. Agricultural machines and implements
- Non-ferrous metals—
21. Rolling and extrusion
22. Founding, casting, etc.
24. Sheet metal working, pressing, and stamping
25. Pipes, tubes and fittings—ferrous
26. Wire and wire working (including nails)
27. Stoves, ovens and ranges
28. Gas fittings and meters
29. Lead mills
30. Sewing machines
31. Arms, ammunition (excluding explosives)
32. Wireless and amplifying apparatus
33. Other metal works

CLASS 5. PRECIOUS METALS, JEWELLERY, PLATE

1. Jewellery
2. Watches and clocks (including repairs)
3. Electroplating (gold, silver, chromium, etc.)

CLASS 6. TEXTILES AND TEXTILE GOODS (NOT DRESS)

1. Cotton ginning
2. Cotton spinning and weaving
3. Wool—carding, spinning, weaving
4. Hosiery and other knitted goods
5. Silk, natural
6. Rayon, nylon and other synthetic fibres
7. Flax mills
8. Rope and cordage
9. Canvas goods, tents, tarpaulins, etc.
10. Bags and sacks
11. Textile dyeing, printing and finishing
12. Other

CLASS 7. SKINS AND LEATHER (NOT CLOTHING OR FOOTWEAR)

1. Furriers and fur-dressing
2. Woolscouring and fellmongery
3. Tanning, currying and leather-dressing
4. Saddlery, harness and whips
5. Machine belting (leather or other)
6. Bags, trunks and other goods of leather and leather substitutes

CLASS 8. CLOTHING (EXCEPT KNITTED)

1. Tailoring and ready-made clothing
2. Waterproof and oilskin clothing
3. Dressmaking, hemstitching
4. Millinery
5. Shirts, collars, underclothing
6. Foundation garments
7. Handkerchiefs, ties and scarves
8. Hats and caps
9. Gloves
10. Boots and shoes (not rubber)
11. Boot and shoe repairing
12. Boot and shoe accessories
13. Umbrellas and walking sticks
14. Dyeworks and cleaning, etc.
15. Other

CLASS 9. FOOD, DRINK AND TOBACCO

1. Flour-milling
2. Cereal foods and starch
3. Animal and bird foods
4. Chaffcutting and corncrushing
5. Bakeries (including cakes and pastry)
6. Biscuits
7. Sugar-mills
8. Sugar-refining
9. Confectionery (including chocolate and icing sugar)
10. Jam, fruit and vegetable canning
11. Pickles, sauces, vinegar
12. Bacon curing
13. Butter factories
14. Cheese factories

CLASS 9. FOOD, DRINK AND TOBACCO—*continued*

15. Condensed and dried milk factories
16. Margarine
17. Meat and fish preserving
18. Condiments, coffee, spices
19. Ice and refrigerating
20. Salt
21. Aerated waters, cordials, etc.
22. Breweries
23. Distilleries
24. Wine-making
25. Cider and perry
26. Malting
27. Bottling
28. Tobacco, cigars, cigarettes, snuff
29. Dehydrated fruit and vegetables
30. Ice cream
31. Sausage casings
32. Arrowroot
33. Other

CLASS 10. SAWMILLS, JOINERY, BOXES, ETC., WOOD TURNING AND CARVING

1. Sawmills
2. Plywood mills (including veneers)
3. Bark mills
4. Joinery
5. Cooperage
6. Boxes and cases
7. Woodturning, woodcarving, etc.
8. Basketware and wickerware (including sea-grass and bamboo furniture)
9. Perambulators (including pushers and strollers)
10. Wall and ceiling boards (not plaster or cement)
11. Other

CLASS 11. FURNITURE OF WOOD, BEDDING, ETC.

1. Cabinet and furniture making (including billiard tables and upholstery)
2. Bedding and mattresses (not wire)
3. Furnishing drapery
4. Picture frames
5. Blinds

CLASS 12. PAPER, STATIONERY, PRINTING, BOOKBINDING, ETC.

1. Newspapers and periodicals
- Printing—
2. Government
3. General, including bookbinding
4. Manufactured stationery
5. Stereotyping, electrotyping
6. Process and photo engraving
7. Cardboard boxes, cartons and containers
8. Paper bags
9. Paper-making
10. Pencils, penholders, chalks, crayons
11. Other

CLASS 13. RUBBER

1. Rubber goods (including tyres made)
2. Tyre retreading and repairing

CLASS 14. MUSICAL INSTRUMENTS

1. Gramophones and gramophone records
2. Pianos, piano-players, organs
3. Other

CLASS 15. MISCELLANEOUS PRODUCTS

1. Linoleum, leather-cloth, oil-cloth, etc.
2. Bone, horn, ivory and shell
3. Plastic moulding and products
4. Brooms and brushes
5. Optical instruments and appliances
6. Surgical and other scientific instruments and appliances
7. Photographic material (including developing and printing)
8. Toys, games and sports requisites
9. Artificial flowers
10. Other

CLASS 16. HEAT, LIGHT, AND POWER

- 1-3. Electric light and power
- 4-6. Gas works

Factory development since 1901, Australia

The development of the manufacturing industries in Australia at intervals since 1901 is summarized in the following table.

FACTORIES: AUSTRALIA, 1901 TO 1964-65

Year	Factories	Employment(a)	Salaries and wages paid(b)	Value of				
				Materials and fuel used	Output	Production (c)	Land and buildings	Plant and machinery
	No.	'000	\$'000	\$'000	\$'000	\$'000	\$'000	\$'000
1901	11,143	198	n.a.	n.a.	n.a.	n.a.	n.a.	n.a.
1911	14,455	312	55,056	163,526	266,044	102,518	65,402	63,032
1920-21	17,113	367	125,864	427,118	647,986	220,868	121,662	137,310
1930-31	21,751	339	124,910	344,978	581,598	236,620	224,422	248,996
1940-41	27,300	650	275,838	773,762	1,289,590	515,828	288,188	322,712
1950-51	43,147	969	983,436	2,613,926	4,301,670	1,687,744	605,570	673,230
1959-60	56,657	1,132	2,173,390	5,918,432	10,079,530	4,161,098	2,129,156	2,443,208
1960-61	57,782	1,145	2,289,230	6,115,930	10,465,766	4,349,836	2,389,140	2,785,566
1961-62	58,450	1,121	2,286,550	6,113,466	10,508,102	4,394,636	2,809,640	3,052,080
1962-63	59,146	1,168	2,446,632	6,687,886	11,483,076	4,795,190	3,006,492	3,286,462
1963-64	59,375	1,210	2,651,620	7,370,622	12,641,328	5,270,706	3,204,035	3,480,673
1964-65p	60,650	1,264	2,979,976	8,118,147	13,990,211	5,872,063	3,476,759	3,748,510

(a) 1901 and 1911—average employment during period of operation. Later years relate to average employment over whole year. Working proprietors are included in all years. (b) Excludes drawings by working proprietors. (c) Value added in process of manufacture (i.e., value of output less value of materials and fuel, etc., used).

Number of factories

Number in each State

FACTORIES: NUMBER, STATES, 1959-60 TO 1963-64

Year	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	Aust.

Classification of factories by number of persons employed

The classification of factories in the tables on pages 96-8 is based on the average weekly number of persons employed during the period of operation (including working proprietors).

States

The following table shows, for each State, the number of factories and the average number of persons employed therein, classified by the average number of persons employed.

FACTORIES: NUMBER OF FACTORIES AND PERSONS EMPLOYED, BY AVERAGE NUMBER EMPLOYED, STATES, 1963-64

Persons employed	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	Aust.
NUMBER OF FACTORIES							
Under 4	10,169	6,256	2,147	2,678	2,298	751	24,299
4	1,865	1,361	523	465	391	155	4,760

Employment in factories

Number employed

All persons employed in the manufacturing activities of a factory, including proprietors who work in their own business and 'out-workers' (see page 101), are counted as factory employees, while those employed in selling and distributing, such as salesmen, travellers, collectors, carters employed solely on outward delivery of manufactured goods, and retailing storemen, are excluded. From 1960-61 the occupational groupings collected have been—(i) working proprietors; (ii) managerial and clerical staff including salaried managers and working directors; (iii) chemists, craftsmen and other laboratory and research staff; and (iv) foremen and overseers, workers in factory and others, in which were amalgamated the three former groups—(iv) foremen and overseers; (v) skilled and unskilled workers; (vi) carters (excluding delivery only), messengers, and persons working regularly at home.

Statistics of factory employment represent the equivalent average number employed over a full year of fifty-two weeks except for the classification of factories according to the number of persons employed (see page 96), which is based on the average number employed over the period worked.

Particulars of the numbers employed in Australia, the increase in employment, and the rate per cent. of such increase are given in the following table.

FACTORIES: EMPLOYMENT, AUSTRALIA, 1959-60 TO 1963-64

Year	Males			Females			Persons		
	Number employed	Increase on preceding year		Number employed	Increase on preceding year		Number employed	Increase on preceding year	
		Number	Per cent		Number	Per cent		Number	Per cent

Grand total	487,753	413,120	110,696	110,813	55,705	31,833	1,209,920

Persons employed, by occupational grouping

In the following table, the average number of persons employed in each State is classified according to occupational grouping.

FACTORIES: AVERAGE NUMBER OF PERSONS EMPLOYED, BY OCCUPATIONAL GROUPING, STATES, 1963-1964

State	Average number of persons employed				
	Working proprietors	Managerial and clerical staff, etc. (a)	Chemists, draftsmen, etc.	Foremen and overseers, workers in factory and others (b)	Total
New South Wales	13,730	65,075	9,483	399,465	487,753
Victoria	12,641	53,637	8,291	338,551	413,120
Queensland	4,684	12,610	1,419	91,983	110,696
South Australia	4,050	14,079	2,087	90,597	110,813
Western Australia	2,940	5,581	705	46,479	55,705
Tasmania	1,001	3,580	622	26,630	31,833
<i>Total males</i>	<i>33,224</i>	<i>94,936</i>	<i>20,319</i>	<i>769,651</i>	<i>918,130</i>
<i>Total females</i>	<i>5,822</i>	<i>59,626</i>	<i>2,288</i>	<i>224,054</i>	<i>291,790</i>
Total persons	39,046	154,562	22,607	993,705	1,209,920

(a) Includes salaried managers and working directors (b) Includes persons working regularly at home.

The term 'outworker' or 'homeworker' has acquired a special meaning in connection with manufacturing industries, and includes only persons to whom work is given out by factories to be done at home. Persons working regularly at home for factories are included in the group foremen, overseers, workers in factory and others, and separate details are not available.

Monthly employment

The following table shows the number of persons (excluding working proprietors) employed in factories in Australia on the last pay-day of each month.

**FACTORIES: MONTHLY EMPLOYMENT, BY SEX, AUSTRALIA, 1959-60 TO 1963-64
(EXCLUDING WORKING PROPRIETORS)**

Rate of annual variation for each sex

The percentages of increase or decrease on the average numbers of males and females employed in the preceding year are shown in the following table.

FACTORIES: ANNUAL PERCENTAGE INCREASES OF MALES AND FEMALES EMPLOYED, STATES, 1959-60 TO 1963-64

State	1959-60	1960-61	1961-62	1962-63	1963-64
MALES					
New South Wales	3.07	1.19	-1.76	2.57	2.27
Victoria	4.47	1.66	-2.23	4.28	3.41
Queensland	-0.54	-0.57	-2.73	2.86	5.30
South Australia	5.02	0.72	-0.12	5.93	4.94
Western Australia . . .	2.40	2.05	0.81	4.66	4.13
Tasmania	3.85	1.65	-0.28	2.87	3.02
Australia	3.30	1.17	-1.68	3.58	3.31
FEMALES					
New South Wales	6.59	0.64	-4.06	4.65	3.73
Victoria	7.13	1.55	-3.19	7.42	4.94
Queensland	2.36	1.50	-2.66	5.45	6.02
South Australia	5.78	1.98	-4.24	7.63	6.82
Western Australia . . .	3.53	2.03	0.15	5.01	5.00
Tasmania	6.79	1.74	-0.36	-0.49	5.85
Australia	6.39	1.20	-3.45	5.90	4.65

Minus sign (-) indicates decrease.

Masculinity of persons employed

The following table shows the proportion of males to females employed in factories in each State.

**FACTORIES: MASCULINITY^(a) OF PERSONS EMPLOYED
STATES, 1959-60 TO 1963-64**

Year	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	Aust.
1959-60.	303	259	491	459	642	465	320
1960-61.	305	260	481	454	642	464	320
1961-62.	312	262	481	473	646	464	326
1962-63.	306	254	469	466	644	480	319
1963-64.	301	251	466	457	639	467	315

(a) Number of males per 100 females.

Employment of females in particular industries

The majority of females in manufacturing industries are employed in four classes, namely: 4., Industrial metals, machines, etc.; 6., Textiles; 8., Clothing; and 9., Food, drink and tobacco. In 1963-64 these industries accounted for 78.02 per cent of all females in factories. In two classes only did the number of females exceed the number of males—in Class 6. Textiles, where there were 142 females to every 100 males, and in Class 8., Clothing, with 260 females to every 100 males. The following table shows the average number of male and females employed in each of the four classes.

**MALES AND FEMALES EMPLOYED IN
PARTICULAR INDUSTRIES, STATES, 1963-64**

Class of industry	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	Aust.
Males—							
4. Industrial metals, etc.	207,684	148,493	38,430	57,032	23,637	10,125	485,401
6. Textiles and textile goods (not dress)	8,703	17,374	869	1,237	471	1,565	30,219
8. Clothing (except knitted)	11,501	13,723	2,007	1,812	881	305	30,229
9. Food, drink and tobacco	27,978	27,541	22,890	7,936	5,933	3,473	95,751
All other classes	110,384	88,309	26,927	22,916	17,241	10,753	276,530
<i>Total males</i>	<i>366,250</i>	<i>295,440</i>	<i>91,123</i>	<i>90,933</i>	<i>48,163</i>	<i>26,221</i>	<i>918,130</i>
Females—							
4. Industrial metals, etc.	31,849	23,255	2,962	7,447	1,287	594	67,394

8. Clothing (except knitted)	33,351	33,445	5,876	3,500	2,103	405	78,680
9. Food, drink and tobacco	13,359	13,291	4,968	3,678	1,860	1,580	38,736
All other classes	30,372	22,389	4,339	3,970	1,881	1,172	64,123
<i>Total females</i>	<i>121,503</i>	<i>117,680</i>	<i>19,573</i>	<i>19,880</i>	<i>7,542</i>	<i>5,612</i>	<i>291,790</i>

Children employed in factories**Number of children employed**

In the returns for the various States the term 'child' denotes any person under sixteen years of age. The following table shows the number of children of each sex employed in manufacturing industries in June of each year.

FACTORIES: CHILDREN^(a) EMPLOYED, STATES, JUNE 1962 TO JUNE 1964

State	June 1962			June 1963			June 1964		
	Males	Females	Persons	Males	Females	Persons	Males	Females	Persons
New South Wales	2,955	2,646	5,601	2,623	2,196	4,819	2,854	2,215	5,069
Victoria	2,625	3,049	5,674	2,444	2,653	5,097	2,072	2,207	4,279
Queensland	1,521	1,564	3,085	1,665	1,630	3,295	1,987	1,494	3,481
South Australia	953	993	1,946	893	872	1,765	677	721	1,398
Western Australia	1,031	411	1,442	1,016	432	1,448	919	397	1,316
Tasmania	91	101	192	95	69	164	123	96	219
Australia	9,176	8,764	17,940	8,736	7,852	16,588	8,632	7,130	15,762

(a) Under sixteen years of age.

Industries employing children

The distribution of children employed in factories and the proportion of children employed to total employees, by the main classes of industry employing persons under sixteen years of age, are shown in the following table.

**FACTORIES: CHILDREN^(a) EMPLOYED, BY SEX, AND CLASS OF INDUSTRY
AUSTRALIA, JUNE 1964**

Class of industry	Children employed (a)		Total employees (b)		Proportion (per cent) of children employed to total employees (b)	
	Males	Females	Males	Females	Males	Females
Industrial metals, machines, conveyances	4,144	628	483,129	70,106	0.86	0.90
Textiles and textile goods (not dress)	368	1,203	29,964	42,846	1.23	2.81
Clothing (except knitted)	478	3,225	25,317	76,705	1.89	4.20
Food, drink and tobacco	1,112	819	92,312	36,638	1.20	2.24
Sawmills, joinery, boxes, etc.	840	74	51,051	3,528	1.65	2.10
Furniture of wood, bedding, etc.	412	102	16,210	4,828	2.54	2.11
Paper, stationery, printing, bookbinding etc.	507	594	57,431	21,004	0.88	2.83
All other industries	771	485	146,093	35,178	0.53	1.38
Total	8,632	7,130	901,507	290,833	0.96	2.45

(a) Under sixteen years of age.

(b) Excludes working proprietors.

Apprenticeship

Acts are in force in all States for the regulation of the age at which children may be employed in gainful occupations. Legislative provision is also made for the regulation of apprenticeship under the various State Factories Acts or Arbitration Acts. These Acts, while laying down general principles, leave to the wages tribunals the actual determination of the conditions under which apprentices may be employed.

Power equipment in factories

Since 1936-37 statistics of power equipment in factories relate to the 'rated horse-power' of engines ordinarily in use and engines in reserve or idle, omitting obsolete engines. In addition, particulars of the power equipment of central electric stations are collected in greater detail. To avoid duplication it is essential that some distinction should be made between central electric stations and other classes of industries. In the following tables central electric stations have been treated separately from other factories.

Rated horse-power of engines in factories other than central electric stations

The following table shows the total number of factories and the total rated horse-power of engines and electric motors ordinarily in use and in reserve or idle during 1963-64.

**FACTORIES^(a): TOTAL RATED HORSE-POWER OF ENGINES
AND ELECTRIC MOTORS, STATES, 1963-64**

State	Factories ^(a)	Rated horse-power of engines and motors	
		Ordinarily in use ^(b)	In reserve or idle (omitting obsolete)
New South Wales	23,592	2,900,288	391,525
Victoria	17,568	1,781,362	240,169
Queensland	5,903	637,514	93,429
South Australia	5,797	560,601	63,452
Western Australia	4,515	327,425	49,386
Tasmania	1,731	314,636	46,830
Australia	59,106	6,521,826	884,791

(a) Includes gas works but excludes central electric stations, details of which are shown on pp. 108-9. (b) Excludes motors driven by electricity generated in factories not classified as central electric stations.

Rated horse-power of engines and electric motors ordinarily in use, by type

Particulars of the types and the total rated horse-power of engines, etc., ordinarily in use in each State are given below.

FACTORIES(a): TOTAL RATED HORSE-POWER OF ENGINES AND ELECTRIC MOTORS ORDINARILY IN USE, BY TYPE, STATES, 1963-64

State	Steam		Internal combustion			Water	Motors driven by electricity		Total (b)(c)
	Reciprocating	Turbine	Gas	Petrol or other light oils	Heavy oils		Purchased	Own generation (d)

Value of production, materials used, salaries and wages

In all tables relating to salaries and wages paid in factories the amounts drawn by working proprietors are excluded.

The gross value of factory output for 1963-64 was \$12,641 million, of which \$6,933 million was the value of the materials used, including containers, etc., tools replaced, and repairs to plant and buildings, and \$437 million the value of the power, fuel, light, water and lubricating oil used. The difference between the sum of the last two amounts and the gross value of output, namely, \$5,271 million, represents the net value of factory production, defined as 'the value of consumable commodities produced during the year deducting, so far as possible, the value of goods consumed in process of production'. Depreciation, however, is not deducted (*see* p. 114). The gross value of factory output and the value of materials used each contain inherent elements of duplication, as the output of some factories becomes the materials used in other factories.

Salaries and wages paid

By class of industry. The amounts of salaries and wages paid in the various classes of industry in each State are shown in the following table.

**FACTORIES: SALARIES AND WAGES PAID, BY CLASS OF INDUSTRY
STATES, 1963-64
(\$'000)**

Class of industry	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	Aust.

Grand total . . .	1,101,021	912,424	218,762	240,316	108,515	70,582	2,651,620

Totals and averages. The following table shows the total amount of salaries and wages paid, and the average amount paid per employee in each State. The figures exclude working proprietors and the amounts drawn by them.

In comparing the figures in the following table regard should be paid to the nature of certain industries which are carried on to a greater extent in some States than in others. In Victoria, for instance, a large number of hands are employed in Class 8., Clothing, comprising a relatively high percentage of women and children.

**FACTORIES: TOTAL AND AVERAGE SALARIES AND WAGES PAID, STATES

(a) Includes value of lubricants and water.

Value of materials used

By class of industry. The value of materials used (which includes the value of containers, packing, etc., the cost of tools replaced, and repairs to plant) in factories in Australia in 1963-64 reached \$6,933 million, or 54.8 per cent of the value of the final output (see page 114). The following table shows the value of the materials used in various classes of industry in each State.

FACTORIES: VALUE OF MATERIALS USED, BY CLASS OF INDUSTRY
STATES, 1963-64
 (\$'000)

Class of industry	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	Aust.

Value of output

By classes of industry. The value of the output of factories in the various classes in each State in 1963-64 is shown in the following table. It represents the selling value at the factory (excluding delivery costs and charges) of goods made or processed during the year, including by-products. In addition, it includes the amount received for other work done, such as repair work, assembling and making up for customers. The difference between the sum of the values of the materials and of the power, fuel and light used, and the value of output is the net value of factory production (see p. 114).

FACTORIES: VALUE OF OUTPUT, BY CLASS OF INDUSTRY, STATES, 1963-64

Value of production

By class of industry. The value of production for any industry was defined at the Conference of Statisticians at Sydney in 1925 as 'the value of consumable commodities produced during the year, deducting, so far as possible, the value of goods consumed in process of production'.

In accordance with this definition, it was agreed that a deduction consisting of the costs of raw material, containers, power, fuel, light, lubricants, water, tools replaced, repairs to plant and depreciation should be made from the 'value of output'. Because of the difficulty experienced in securing accurate figures for depreciation, however, it was subsequently decided that no deduction should be made on this account. All the deductions mentioned above, with the exception of depreciation, are included in the items 'value of materials used' and 'value of fuel used' as defined above. The net value of production as given in the following tables is obtained, therefore, by deducting only 'value of materials used' and 'value of fuel used' from the 'value of output'. The value of factory production, therefore, approximates 'net value added' in the manufacturing process.

Only certain selected items of costs are recorded in the annual census of production. It must not, therefore, be inferred that when wages and salaries are deducted from the value of production the whole of the 'surplus' is available for interest and profit, as many miscellaneous expenses such as taxation, insurance, advertising and other overhead charges, as well as depreciation, also have to be taken into account.

The following table shows the value of production in each State for the various classes of industry.

Value of land, buildings, plant and machinery

The following table shows the value of land and buildings and of plant and machinery used in each State in connection with manufacturing industries.

FACTORIES: VALUE OF LAND, BUILDINGS, PLANT AND MACHINERY(a), 1963-64 (\$'000)

Value of—	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	Aust.
Land and buildings	1,453,877	1,020,794	211,520	230,628	118,813	168,403	3,204,035
Plant and machinery	1,504,196	1,040,724	308,307	330,281	155,514	141,651	3,480,673
Total	2,958,073	2,061,518	519,827	560,909	274,327	310,054	6,684,708

(a) At end of year. Includes estimated value of rented premises and plant.

The values recorded in this section are generally the values apportioned in the books of the individual firms after allowance has been made for depreciation, but they include estimates of the capital value of premises and plant rented. Consequently, the totals shown in the table do not represent the actual amount of capital invested in the items specified.

Value of land and buildings, by class of industry

The following table shows, by class of industry for Australia, the approximate value of land and buildings occupied in connection with manufacturing industries.

FACTORIES: VALUE OF LAND AND BUILDINGS(a) BY CLASS OF INDUSTRY, AUSTRALIA, 1959-60 TO 1963-64 (\$'000)

Class of industry	1959-60	1960-61	1961-62	1962-63	1963-64
1. Treatment of non-metalliferous mine and quarry products	44,650	54,660	62,264	65,682	72,615
2. Bricks, pottery, glass, etc.	39,232	44,498	52,200	63,060	68,470
3. Chemicals, dyes, explosives, paints, oils, grease	160,954	174,104	191,750	201,028	219,212
4. Industrial metals, machines, conveyances	777,320	912,844	1,013,520	1,102,872	1,188,289
5. Precious metals, jewellery, plate	7,910	9,032	9,968	10,788	11,657
6. Textiles and textile goods (not dress)	96,758	106,626	115,582	122,954	130,425
7. Skins and leather (not clothing or footwear)	18,332	18,666	20,000	21,590	23,322
8. Clothing (except knitted)	95,524	107,552	115,928	126,808	135,960
9. Food, drink and tobacco	298,682	321,432	344,714	370,014	392,089
10. Sawmills, joinery, boxes, etc., wood turning and carving	69,806	80,566	82,176	85,632	90,956
11. Furniture of wood, bedding, etc.	32,502	35,768	37,762	41,082	44,142
12. Paper, stationery, printing, bookbinding, etc.	137,994	154,996	170,438	182,792	198,860
13. Rubber	26,878	31,064	33,750	37,408	50,595
14. Musical instruments	1,860	1,844	1,592	1,594	1,550
15. Miscellaneous products	36,690	41,440	52,184	58,214	63,440
<i>Total, classes 1 to 15</i>	<i>1,845,092</i>	<i>2,095,092</i>	<i>2,303,828</i>	<i>2,491,518</i>	<i>2,691,582</i>
16. Heat, light and power	284,064	294,048	505,812	514,974	512,453
Grand total	2,129,156	2,389,140	2,809,640	3,006,492	3,204,035

(a) At end of year. Includes estimated value of rented premises.

The following table gives particulars for each State by class of industry.

FACTORIES: VALUE OF LAND AND BUILDINGS(a) BY CLASS OF INDUSTRY, STATES, 1963-64 (\$'000)

Class of industry	N.S.W.	Vic.	Qld.	S.A.	W.A.	Tas.	Aust.
1. Treatment of non-metalliferous mine and quarry products	26,049	28,123	4,628	7,117	5,057	1,641	72,615
2. Bricks, pottery, glass, etc.	34,222	21,952	3,942	4,437	2,887	1,030	68,470
3. Chemicals, dyes, explosives, paints, oils, grease	112,200	75,812	4,704	9,909	13,575	3,012	219,212
4. Industrial metals, machines, conveyances	543,486	393,476	66,074	112,390	43,918	28,945	1,188,289
5. Precious metals, jewellery, plate	4,750	4,349	458	1,443	517	140	11,657
6. Textiles and textile goods (not dress)	41,693	77,675	2,085	4,165	1,292	3,515	130,425

Grand total	164,241	117,563	29,048	33,963	18,018	13,807	376,640

(a) Less than \$500.

Land and buildings, plant and machinery—values, additions and replacements, depreciation

The following table summarizes the recorded totals for Australia and also includes particulars of additions and replacements.

FACTORIES: VALUE OF LAND AND BUILDINGS, PLANT AND MACHINERY AUSTRALIA, 1959-60 TO 1963-64
(S'000)

Year	Book values at 30 June(a)		Additions and replacements during year(a)		Depreciation allowed during year	
	Land and buildings	Plant and machinery	Land and buildings	Plant and machinery	Land and buildings	Plant and machinery
1959-60	2,129,156	2,443,208	203,942	462,324	26,606	216,972
1960-61	2,389,140	2,785,566	180,036	488,096	33,804	250,538
1961-62	2,809,640	3,052,080	359,728	561,186	36,892	279,860
1962-63	3,006,492	3,286,462	191,470	565,994	38,797	304,152
1963-64	3,204,035	3,480,673	192,419	564,958	39,711	336,929

(a) Includes estimated value of rented premises, plant and machinery.

Principal factory products

The factory production of certain commodities is shown in the monthly and quarterly publications of this Bureau, in the series *Manufacturing Industries*, and in the bulletin *Manufacturing Commodities*, formerly *Secondary Industries, Part II.—Materials Used and Articles Produced in Factories* (see page 91).

The following table shows the total recorded production of some of the principal articles (i.e. of those for which production can be represented in quantitative terms) manufactured in Australia. A more complete list, together with values, where available, is published in the aforementioned bulletin and in the mimeographed statement *Principal Factory Products*.

QUANTITY OF PRINCIPAL ARTICLES PRODUCED IN FACTORIES
AUSTRALIA, 1961-62 TO 1964-65

Article	1961-62	1962-63	1963-64	1964-65 (a) (b)

(a) Subject to revision. (b) Blank spaces indicate figures not yet available. (c) Excludes bicycle and "other". (d) Source: Department of Supply. (e) Excludes wheatmeal for baking, included with flour; includes wheatmeal for porridge and stock food. (f) Includes mixtures predominantly the fibre mentioned. (g) Primary origin only—includes small quantities of zinc dust.

Individual industries

Particulars on pages 95-119 afford a general view of the magnitude of industries in the sixteen groups adopted by the Conference of Statisticians in 1930. While it is not possible, within the limits of this publication, to give a detailed account of each industry, particular industries dealt with hereunder are of special importance because of the employment which they provide for labour or capital, or for other features of special interest. Details for individual States are available from publications issued by the Deputy Commonwealth Statistician in each State and, for selected industries, in the Central Office series *Manufacturing Industries*.

Horse-power of engines ordinarily in use . . h.p.	86,776	90,216	94,081	93,482	132,003

The above table shows particulars of establishments engaged in metal extraction and ore reduction including secondary recovery of metals, but excluding blast furnaces engaged in production of pig iron from iron ore. Ore dressing and elementary smelting of metallic minerals (e.g. in the case of gold), when these are carried out in an associated plant at or near the mine, are included in the mineral industry (see the chapter Mineral Industry).

**ELECTRICAL MACHINERY, CABLES AND APPARATUS
AUSTRALIA, 1959-60 TO 1963-64**

—	1959-60	1960-61	1961-62	1962-63	1963-64
Number of factories	1,360	1,339	1,349	1,404	1,438
Number of persons employed	53,089	54,072	52,918	55,692	59,416
Salaries and wages paid \$'000	108,022	114,358	114,039	123,113	135,806
Value of power, fuel, etc., used \$'000	5,700	5,642	5,671	6,153	6,841
Value of materials used \$'000	217,424	221,361	225,474	232,141	263,668
Value of production \$'000	180,398	187,792	186,033	201,809	229,536
Total value of output \$'000	403,192	414,795	417,178	440,103	500,045
Value of land and buildings \$'000	77,358	85,550	92,016	103,325	110,908
Value of plant and machinery \$'000	55,205	53,659	55,455	57,486	62,232
Horse-power of engines ordinarily in use . . h.p.	118,299	122,609	128,326	134,043	142,213

New South Wales factories account for almost two-thirds of the output of this industry.

TRAMCARS AND RAILWAY ROLLING STOCK(a)
AUSTRALIA, 1959-60 TO 1963-64

—	1959-60	1960-61	1961-62	1962-63	1963-64
Number of factories	129	126	122	122	119
Number of persons employed	36,746	35,323	35,466	34,653	33,689
Salaries and wages paid \$'000	68,416	69,589	71,990	70,663	73,267
Value of power, fuel, etc., used \$'000	2,224	2,194	2,170	2,144	2,162
Value of materials used \$'000	38,827	38,780	39,249	39,370	39,622
Value of production \$'000	82,947	85,779	87,369	85,495	92,435
Total value of output \$'000	123,998	126,753	128,788	127,009	134,219
Value of land and buildings \$'000	25,522	27,363	29,307	29,357	29,372
Value of plant and machinery \$'000	34,349	35,315	35,398	37,166	38,456
Horse-power of engines ordinarily in use . . h.p.	116,443	116,063	115,416	116,027	114,456

(a) Government and local authority only.

The railway and tramway workshops, which form an important part of Class 4, are owned chiefly by State governments and local authorities. *Workshops (fifteen in 1963-64) controlled by non-public bodies are not included in the figures above.*

MOTOR VEHICLES—CONSTRUCTION, ASSEMBLY, REPAIRS, ETC.
AUSTRALIA, 1963-64

—	Construction and assembly	Repairs	Motor bodies (a)	Motor accessories	Total
Number of factories	43	11,224	2,291	308	13,866
Number of persons employed	24,311	68,141	33,812	17,393	143,657
Salaries and wages paid \$'000	64,647	124,175	79,546	40,836	309,204
Value of power, fuel, etc., used \$'000	5,040	4,016	3,467	2,664	15,187
Value of materials used \$'000	151,160	137,695	211,032	68,811	568,697
Value of production \$'000	109,608	199,628	116,498	68,678	494,412
Total value of output \$'000	265,808	341,339	330,997	140,153	1,078,296
Value of land and buildings \$'000	65,969	184,508	71,126	31,007	352,610
Value of plant and machinery \$'000	47,981	30,981	60,717	32,577	172,256
Horse-power of engines ordinarily in use . . h.p.	90,106	80,322	91,412	64,085	325,925

(a) Includes motor body repairing, panel beating, duco spraying, etc.

The industries catering for the motor trade are included in Class 4, Industrial metals, machines and conveyances. In the table above a summary is given of the principal statistics for 1963-64 for each branch of industry associated with the motor trade of Australia.

In the next table similar details are shown for Australia for these industries combined, for the years 1959-60 to 1963-64. Victoria, New South Wales, and South Australia account for the bulk of the output of these industries. Most of the output of the other States is from repair work.

MOTOR VEHICLES—CONSTRUCTION, ASSEMBLY, REPAIRS, ETC.
AUSTRALIA, 1959-60 TO 1963-64

—	1959-60	1960-61	1961-62	1962-63	1963-64
Number of factories	12,089	12,757	13,135	13,623	13,866
Number of persons employed	120,561	127,274	121,409	135,579	143,657
Salaries and wages paid \$'000	228,372	248,771	240,583	281,091	309,204
Value of power, fuel, etc., used \$'000	10,246	11,787	11,756	13,783	15,187
Value of materials used \$'000	372,659	403,554	375,093	491,384	568,697
Value of production \$'000	366,732	396,000	391,220	448,106	494,412

Value of land and buildings \$'000	228,974	257,969	290,792	321,872	352,610
Value of plant and machinery \$'000	103,694	132,055	139,287	158,471	172,256
Horse-power of engines ordinarily in use . . h.p.	234,930	266,266	276,293	310,518	325,925

**SHIP AND BOAT BUILDING AND REPAIRING, MARINE ENGINEERING
AUSTRALIA, 1959-60 TO 1963-64**

—	1959-60	1960-61	1961-62	1962-63	1963-64
Number of factories	297	318	318	335	346
Number of persons employed	13,786	14,155	14,293	14,218	14,253
Salaries and wages paid \$'000	29,344	32,227	32,928	33,366	35,043
Value of power, fuel, etc., used \$'000	754	802	862	873	901
Value of materials used \$'000	19,193	21,960	23,333	28,106	31,645
Value of production \$'000	36,283	39,419	39,930	40,396	40,272
Total value of output \$'000	56,230	62,181	64,125	69,375	72,817
Value of land and buildings \$'000	11,867	12,939	12,496	13,308	13,865
Value of plant and machinery \$'000	10,174	10,594	10,681	11,258	11,745
Horse-power of engines ordinarily in use . . h.p.	75,827	75,300	75,568	77,691	81,291

The above table includes government factories as well as those owned privately and by municipal authorities. About half the output of this industry comes from New South Wales shipyards, with Victoria and South Australia accounting for the greater part of the balance.

**AGRICULTURAL MACHINES AND IMPLEMENTS
AUSTRALIA, 1959-60 TO 1963-64**

—	1959-60(a)	1960-61(a)	1961-62(a)	1962-63(a)	1963-64
Number of factories	404	450	497	531	556
Number of persons employed	11,359	11,307	11,317	11,785	13,818
Salaries and wages paid \$'000	22,632	22,872	22,901	25,610	33,117

Horse-power of engines ordinarily in use . . h.p.	50,038	52,300	47,547	56,219	60,447

New South Wales, South Australia, and Victoria produce most of the output of the above industry.

**WIRE AND WIRE WORKING (INCLUDING NAILS)
AUSTRALIA, 1959-60 TO 1963-64**

	1959-60	1960-61	1961-62	1962-63	1963-64
Number of factories	286	282	283	289	298
Number of persons employed	9,974	10,195	9,804	10,377	10,433
Salaries and wages paid \$'000	20,836	22,596	21,229	23,820	24,959
Value of power, fuel, etc., used \$'000	1,810	1,845	1,762	1,889	2,033
Value of materials used \$'000	71,750	74,602	69,936	80,581	92,097
Value of production \$'000	41,972	42,100	38,722	43,909	46,710
Total value of output \$'000	115,532	118,547	110,420	126,379	140,840
Value of land and buildings \$'000	16,244	17,916	19,570	21,200	21,743
Value of plant and machinery \$'000	12,255	13,176	13,988	16,168	15,770
Horse-power of engines ordinarily in use . . h.p.	37,162	37,233	39,010	43,818	42,624

New South Wales and Victoria predominate in this industry.

WIRELESS AND AMPLIFYING APPARATUS: AUSTRALIA, 1959-60 TO 1963-64

	1959-60	1960-61	1961-62	1962-63	1963-64
Number of factories	289	301	327	330	355
Number of persons employed	19,559	17,273	14,707	16,586	16,907
Salaries and wages paid \$'000	35,288	34,184	29,204	33,240	35,772
Value of power, fuel, etc., used \$'000	1,241	1,296	1,171	1,315	1,321
Value of materials used \$'000	100,259	80,517	71,990	78,940	78,847
Value of production \$'000	60,607	51,009	47,173	54,437	56,834
Total value of output \$'000	162,107	132,822	120,334	134,692	137,002
Value of land and buildings \$'000	17,882	20,958	23,129	24,104	23,883
Value of plant and machinery \$'000	11,488	12,936	12,893	13,266	12,888
Horse-power of engines ordinarily in use . . h.p.	14,302	14,850	15,353	15,216	14,720

The above industry is confined mainly to New South Wales, Victoria and South Australia.

COTTON SPINNING AND WEAVING: AUSTRALIA, 1959-60 TO 1963-64

—	1959-60	1960-61	1961-62	1962-63	1963-64
Number of factories	92	88	88	88	85
Number of persons employed	9,780	9,121	8,980	9,313	9,869
Salaries and wages paid \$'000	17,706	16,244	16,490	17,262	19,187
Value of power, fuel, etc., used \$'000	1,995	1,915	2,066	2,267	2,549
Value of materials used \$'000	41,262	36,672	38,323	41,635	46,619
Value of production \$'000	32,447	30,338	29,654	33,521	38,194
Total value of output \$'000	75,704	68,925	70,043	77,423	87,362
Value of land and buildings \$'000	19,413	20,783	25,818	28,860	32,264
Value of plant and machinery \$'000	18,829	20,211	21,617	24,382	24,402
Horse-power of engines ordinarily in use . . . h.p.	37,240	36,193	40,592	41,581	43,752

The growing of cotton is treated in some detail in the chapter Rural Industry. The production of raw cotton is supplemented by imports from overseas, chiefly (in 1964-65) from the United States of America, Mexico, Brazil, Pakistan, Uganda, Peru, and Colombia.

WOOL CARDING, SPINNING AND WEAVING:
AUSTRALIA, 1959-60 TO 1963-64

—	1959-60	1960-61	1961-62	1962-63	1963-64
Number of factories	134	135	134	134	129
Number of persons employed	22,433	21,400	20,102	21,131	20,061
Salaries and wages paid \$'000	36,105	34,743	34,162	36,461	35,476
Value of power, fuel, etc., used \$'000	3,126	2,968	2,913	3,014	2,874
Value of materials used \$'000	94,880	81,258	86,245	97,027	107,378
Value of production \$'000	58,262	56,237	53,186	58,652	55,799
Total value of output \$'000	156,268	140,463	142,344	158,693	166,051
Value of land and buildings \$'000	21,251	21,807	21,823	23,150	23,326
Value of plant and machinery \$'000	25,199	25,103	26,470	27,440	26,550
Horse-power of engines ordinarily in use . . . h.p.	70,811	69,488	70,610	71,354	71,318

Victoria produces more than half the output of this industry.

HOSIERY AND OTHER KNITTED GOODS: AUSTRALIA, 1959-60 TO 1963-64

—	1959-60	1960-61	1961-62	1962-63	1963-64
Number of factories	701	687	658	625	607
Number of persons employed	24,414	24,741	23,403	24,627	25,471
Salaries and wages paid \$'000	37,582	38,202	36,990	40,646	42,834
Value of power, fuel, etc., used \$'000	1,596	1,621	1,589	1,614	1,691
Value of materials used \$'000	82,957	84,456	83,545	92,517	98,423
Value of production \$'000	69,259	72,170	71,896	76,180	83,674
Total value of output \$'000	153,812	158,247	157,030	170,311	183,788
Value of land and buildings \$'000	25,924	29,213	30,458	31,499	32,685
Value of plant and machinery \$'000	18,342	19,933	21,222	22,753	24,370
Horse-power of engines ordinarily in use . . . h.p.	22,019	22,738	23,250	23,106	24,344

Victorian mills produce about three-quarters of the Australian output of knitted goods, most of the balance being produced in New South Wales.

RAYON, NYLON AND OTHER SYNTHETIC FIBRES
AUSTRALIA, 1959-60 TO 1963-64

—	1959-60	1960-61	1961-62	1962-63	1963-64
Number of factories	33	40	44	45	43
Number of persons employed	3,072	3,878	3,947	4,329	4,527
Salaries and wages paid \$'000	5,836	7,752	7,866	9,079	9,825
Value of power, fuel, etc., used \$'000	802	939	1,033	1,143	1,236
Value of materials used \$'000	13,637	17,316	19,767	25,733	27,483
Value of production \$'000	10,010	12,343	13,646	16,089	18,191
Total value of output \$'000	24,449	30,598	34,446	42,965	46,910
Value of land and buildings \$'000	4,494	6,433	7,350	8,596	8,711
Value of plant and machinery \$'000	5,710	7,643	7,956	9,141	8,688
Horse-power of engines ordinarily in use . . . h.p.	10,669	12,161	13,632	14,202	14,279

Victoria produces nearly two-thirds of the total Australian output of synthetic fibre textiles, most of the balance being produced in New South Wales.

ROPE AND CORDAGE: AUSTRALIA, 1959-60 TO 1963-64

—	1959-60	1960-61	1961-62	1962-63	1963-64
Number of factories	28	27	26	26	25
Number of persons employed	2,387	2,335	2,146	2,307	2,404
Salaries and wages paid \$'000	4,570	4,545	4,379	4,861	5,118
Value of power, fuel, etc., used \$'000	316	342	346	369	396
Value of materials used \$'000	8,333	10,242	8,480	9,590	11,022
Value of production \$'000	8,815	8,514	8,244	9,504	8,465
Total value of output \$'000	17,464	19,098	17,070	19,463	19,883
Value of land and buildings \$'000	5,251	5,259	5,403	5,508	5,492
Value of plant and machinery \$'000	3,317	3,389	3,437	3,568	3,600
Horse-power of engines ordinarily in use . . . h.p.	14,057	15,015	15,153	15,240	15,407

Most of the production takes place in New South Wales and Victoria.

WOOLSCOURING AND FELLMONGERY: AUSTRALIA, 1959-60 TO 1963-64

—	1959-60	1960-61	1961-62	1962-63	1963-64
Number of factories	59	58	58	56	54
Number of persons employed	3,014	2,740	2,803	2,842	2,570
Salaries and wages paid \$'000	6,701	6,176	6,307	6,594	6,152
Value of power, fuel, etc., used \$'000	1,282	1,110	1,170	1,238	1,212
Value of materials used \$'000	31,087	24,919	28,062	31,928	35,621
Value of production \$'000	9,919	8,842	8,866	9,271	8,546
Total value of output \$'000	42,288	34,871	38,098	42,437	45,379
Value of land and buildings \$'000	4,392	4,136	4,801	5,687	6,082
Value of plant and machinery \$'000	2,695	2,723	2,722	3,069	2,993
Horse-power of engines ordinarily in use . . . h.p.	17,479	17,926	16,779	17,544	18,089

Most of the production from the above industry comes from New South Wales and Victoria

TANNING, CURRYING AND LEATHER DRESSING
AUSTRALIA, 1959-60 TO 1963-64

—	1959-60	1960-61	1961-62	1962-63	1963-64
Number of factories	118	112	108	102	102
Number of persons employed	4,435	4,245	4,159	4,215	4,298
Salaries and wages paid \$'000	9,223	9,150	9,224	9,473	9,910
Value of power, fuel, etc., used \$'000	968	969	976	1,001	1,020
Value of materials used \$'000	31,531	28,842	28,560	25,156	23,881
Value of production \$'000	13,935	13,496	14,785	16,229	17,165
Total value of output \$'000	46,434	43,307	44,321	42,386	42,066
Value of land and buildings \$'000	6,798	6,836	7,074	7,329	8,205
Value of plant and machinery \$'000	4,303	4,460	4,483	4,531	4,761
Horse-power of engines ordinarily in use . . . h.p.	33,516	31,516	31,278	27,598	29,598

New South Wales, Victorian and Queensland factories produce most of the output of the above industry.

LEATHER GOODS (INCLUDING SADDLERY AND BELTING)
AUSTRALIA, 1959-60 TO 1963-64

—	1959-60	1960-61	1961-62	1962-63	1963-64
Number of factories	433	418	392	386	383
Number of persons employed	4,873	4,658	4,315	4,519	4,646
Salaries and wages paid \$'000	6,942	6,839	6,553	6,950	7,260
Value of power, fuel, etc., used \$'000	132	131	133	148	161
Value of materials used \$'000	13,214	13,010	12,064	13,151	14,083
Value of production \$'000	12,126	11,756	11,357	12,336	12,854
Total value of output \$'000	25,472	24,897	23,554	25,635	27,097
Value of land and buildings \$'000	5,643	6,171	6,383	6,884	7,238
Value of plant and machinery \$'000	1,292	1,669	1,690	1,484	1,572
Horse-power of engines ordinarily in use . . . h.p.	3,769	3,678	3,155	3,387	3,716

As with other industries of this class, New South Wales and Victorian factories dominate this industry.

TAILORING AND READY-MADE CLOTHING: AUSTRALIA, 1959-60 TO 1963-64

—	1959-60	1960-61	1961-62	1962-63	1963-64
Number of factories	1,860	1,871	1,839	1,847	1,892
Number of persons employed	33,170	33,890	32,496	33,234	34,188
Salaries and wages paid \$'000	44,265	47,083	46,099	48,543	51,126
Value of power, fuel, etc., used \$'000	934	989	1,000	1,027	1,060
Value of materials used \$'000	81,582	85,348	82,170	88,153	92,342
Value of production \$'000	70,332	73,941	75,170	80,043	86,803
Total value of output \$'000	152,848	160,278	158,340	169,223	180,205
Value of land and buildings \$'000	26,574	30,765	32,378	35,586	38,214
Value of plant and machinery \$'000	6,294	6,892	6,902	7,032	7,406
Horse-power of engines ordinarily in use . . h.p.	10,899	11,820	12,618	12,939	13,348

New South Wales and Victorian factories account for more than 90 per cent of the output of this industry.

DRESSMAKING AND MILLINERY: AUSTRALIA, 1959-60 TO 1963-64

—	1959-60	1960-61	1961-62	1962-63	1963-64
Number of factories	1,228	1,194	1,183	1,189	1,124
Number of persons employed	15,021	14,403	14,466	15,093	14,930
Salaries and wages paid \$'000	18,412	18,382	18,943	20,373	21,188
Value of power, fuel, etc., used \$'000	381	379	390	420	439
Value of materials used \$'000	23,517	23,332	24,076	26,055	28,285
Value of production \$'000	29,527	30,127	30,345	33,394	34,240
Total value of output \$'000	53,425	53,838	54,811	59,869	62,964
Value of land and buildings \$'000	15,246	16,554	17,322	18,231	19,232
Value of plant and machinery \$'000	2,229	2,169	2,166	2,365	2,742
Horse-power of engines ordinarily in use . . h.p.	4,880	4,398	4,543	4,831	4,955

About two-thirds of the total Australian output comes from Victorian establishments.

SHIRTS, COLLARS AND UNDERCLOTHING: AUSTRALIA, 1959-60 TO 1963-64

—	1959-60	1960-61	1961-62	1962-63	1963-64
Number of factories	376	368	353	351	329
Number of persons employed	12,891	12,864	12,270	13,304	13,271
Salaries and wages paid \$'000	16,652	16,848	16,484	17,967	18,312
Value of power, fuel, etc., used \$'000	274	295	313	333	335
Value of materials used \$'000	31,646	31,591	31,276	32,604	34,453
Value of production \$'000	27,144	26,720	26,552	29,113	29,719
Total value of output \$'000	59,064	58,606	58,141	62,050	64,507
Value of land and buildings \$'000	8,101	8,890	9,135	10,328	11,086
Value of plant and machinery \$'000	2,413	2,668	2,689	2,705	2,942
Horse-power of engines ordinarily in use . . h.p.	5,090	5,454	5,529	5,649	5,928

Victorian and New South Wales factories produce most of the output of the above industry.

FOUNDATION GARMENTS: AUSTRALIA, 1959-60 TO 1963-64

—	1959-60	1960-61	1961-62	1962-63	1963-64
Number of factories	70	71	66	64	62
Number of persons employed	3,589	3,663	3,981	4,012	3,948
Salaries and wages paid \$'000	4,958	4,939	5,345	5,569	5,616
Value of power, fuel, etc., used \$'000	86	93	99	102	104

Horse-power of engines ordinarily in use h.p.	17,674	14,599	14,805	15,351	15,594

(a) Includes details of Boot and Shoe Repairing in Tasmania.

The table above refers to boot and shoe factories as distinct from those devoted to repairing, except in Tasmania, where it has been necessary to include details of boot and shoe repairing, in order to avoid disclosure of confidential information for that State. Factories engaged in the manufacture of sand-shoes, goloshes and gum, etc., boots of rubber are not included here, but are classified under Rubber Goods, see page 141. About two-thirds of the output of boots and shoes is produced in Victoria.

FLOUR-MILLING: AUSTRALIA, 1959-60 TO 1963-64

	1959-60	1960-61	1961-62	1962-63	1963-64
Number of factories	135	132	125	118	114
Number of persons employed	4,410	4,463	4,405	4,219	4,512

(a) Includes confectionery in Tasmania.

The table above contains information regarding establishments in which the manufacture of bread, cakes, etc., was carried on. Since the details refer only to establishments coming within the definition of a factory as explained at the beginning of this chapter, the table does not give complete details of the industry, as a large number of bakeries, etc. not coming within the definition are excluded.

BISCUITS: AUSTRALIA, 1959-60 TO 1963-64

—	1959-60	1960-61	1961-62	1962-63	1963-64

Number of factories	31	31	31	31	31
Number of persons employed	6,197	6,014	6,053	6,387	6,981

Sugar-cane is grown in New South Wales and Queensland, and particulars of area, yield, etc. are given in detail in the chapter Rural Industry. The products of the sugar-mills are raw sugar and molasses, the former being sent to the refineries in different parts of Australia for further treatment. In 1963-64 there were two sugar refineries in Queensland and one each in New South Wales, Victoria, South Australia and Western Australia.

CONFECTIONERY: AUSTRALIA, 1959-60 TO 1963-64

Value of plant and machinery \$'000	11,158	13,512	14,163	15,447	15,162
Horse-power of engines ordinarily in use . . h.p.	39,390	44,731	49,253	53,652	56,424

The industries included in this group are engaged chiefly in the freezing and preserving of meat. Most abattoirs are excluded, except in Queensland and Western Australia. Works have been established at the seaports for the purpose of handling beef, lamb and mutton for export, and insulated space for the carriage of chilled and frozen produce is provided by shipping companies trading between Australia and other parts of the world. In recent years there has been considerable expansion in the canning of meat and fish. Particulars of the quantities and values of beef, mutton and lamb preserved by cold process exported from Australia over a series of years will be found in the chapter Rural Industry.

CONDIMENTS, COFFEE, SPICES: AUSTRALIA, 1959-60 TO 1963-64

Horse-power of engines ordinarily in use . . h.p.	407,440	425,280	417,084	428,421	437,807

Sawmilling is the most important industry in Class 10. Because of difficulties associated with the classifying of sawmills into forest and town mills, they have been combined in the above table, together with plywood and veneer mills. The figures exclude particulars of a small number of itinerant and travelling sawmills.

JOINERY: AUSTRALIA, 1959-60 TO 1963-64

	1959-60	1960-61	1961-62	1962-63	1963-64

Although the paper manufacturing industry has been established in Australia for many years, it was not until the manufacture of paper pulp from indigenous timber commenced in 1938-39 that any marked development occurred. The number of factories operating in 1963-64 comprised four in New South Wales, thirteen in Victoria, two in Queensland, two in South Australia, one in Western Australia, and four in Tasmania. In Tasmania, newsprint, writing and printing papers are produced, and in the other States, wrappings, other papers and boards. Mills producing pulp from eucalypt timber are operating in Victoria and Tasmania, while in South Australia pulp is being produced from locally-grown softwoods.

CHAPTER 6

ELECTRIC POWER GENERATION AND DISTRIBUTION

This chapter is divided into three major parts: the Introduction, which deals briefly with the resources, generation and distribution, and future development of electric power in Australia; the Snowy Mountains Hydro-electric Scheme; and the origins, development, present situation and new projects of electrical systems in each Australian State and Territory.

The information contained in the chapter relates to situations existing and projects contemplated in December 1965, and may be considerably affected by changes in policy or plans, or by developments in the projects themselves.

INTRODUCTION

Distribution of population and location of power resources in Australia

The two principal centres of population and industry in Australia, the metropolitan areas of Sydney and Melbourne, make the greatest demands for electric power, and their growth has been associated with the development of large deposits of coal located relatively close to the source of demand. This, together with the fact that the major water resources are also located in the south-eastern portion of Australia, materially influences the distribution of industrial population and the location of major electric power stations. By far the most important source of energy used in the production of electric power in Australia is coal. At 30 June 1964 thermal power equipment represented 71 per cent, hydro plant 26 per cent, and internal combustion equipment 3 per cent of the total installed generating capacity.

Most of Australia is poorly supplied with water, only about 13 per cent receiving an annual rainfall of 30 inches or over, and these areas are confined largely to Tasmania and to the narrow coastal strip along the east coast of the mainland. The only region on the mainland of Australia high enough to receive reliable winter snowfall, and from which, therefore, reasonably constant water supplies throughout the year can be expected, is the mountain chain which stretches from the high plateaux of south-eastern New South Wales to the north-eastern highlands of Victoria. The hydro-electric potential of this area is considerable, and plans have been formulated to develop more than 4,000,000 kW by 1975. The two major construction projects in this area are the Snowy Mountains and Kiewa schemes. Other hydro-electric potential does exist on the mainland on the rivers of the coastal areas of New South Wales and Queensland, but the amount available is smaller than the potential of the Alpine region. In Tasmania, hydro-electric resources have been estimated at about 50 per cent of the total Australian hydro-electric potential. On the mainland the chief source of energy is coal; in Tasmania it is water.

Electric power generation and distribution

At the beginning of this century Australia's electrical undertakings were carried on mainly by private enterprise, but with some measure of governmental control designed to provide standards of safety and to define the scope and obligations of the private organizations. A trend towards public ownership commenced during the 1914-18 War and became more pronounced after the 1939-45 War. By 1961 all major generating stations supplying the public were, in varying degrees, under the control of statutory organizations constituted with the object of unifying and co-ordinating the generation and distribution of electricity supplies. There are still a large number of small private and municipal enterprises generating power for supply to country towns, although central authorities are extending supply to these places wherever practicable. In many areas it has been, and remains, the practice for central authorities to sell power in bulk to local distributing organizations which undertake reticulation.

In addition to the private, local government and statutory organizations which generate and/or distribute electricity for sale, numerous firms generate power for use in their own establishments, particularly those engaged in mining pursuits remote from the main centres of population. This chapter, however, is concerned mainly with the activities of central electric stations, as the power regularly produced for such internal consumption is, in any case, a relatively small proportion of the total power produced. The measures taken by authorities to satisfy the demand created by the post-war growth in population and building and by developments in industry and commerce are described in the following pages.

SNOWY MOUNTAINS HYDRO-ELECTRIC SCHEME*

Snowy Mountains Hydro-electric Power Act 1949

In July 1949 the Commonwealth Government established the Snowy Mountains Hydro-electric Authority, and empowered it to generate electricity by means of hydro-electric works in the Snowy Mountains Area; supply electricity to the Commonwealth (i) for defence purposes, (ii) for consumption in the Australian Capital Territory; and supply to a State, or to a State Authority, electricity not required for defence purposes or for consumption in the Australian Capital Territory.

The Authority is constituted by a Commissioner and two Associate Commissioners, the three appointments being made by the Governor-General. It is empowered to construct, maintain, operate, protect, manage and control works:

- (a) for the collection, diversion and storage of water in the Snowy Mountains Area;
- (b) for the generation of electricity in that area;
- (c) for the transmission of the electricity generated;
- (d) incidental or related to the construction, maintenance, operation, protection, management or control of any works otherwise specified in the Act.

The Snowy Mountains Act is supported by a detailed agreement between the States of New South Wales and Victoria and the Commonwealth with regard to the construction and operation of the Scheme, the distribution of power and water, charges to be made for electricity, and other such matters. The Snowy Mountains Council, established under the terms of the Agreement and consisting of representatives of the Commonwealth, the Authority and the two States, directs and controls the operation and maintenance of the permanent works of the Authority and the allocation of loads to generating stations.

Snowy Mountains Hydro-electric Scheme

The Snowy Mountains area in south-eastern New South Wales is the only part of the continent in which altitudes exceed 7,000 feet and in which there is a substantial area over the altitude of 6,000 feet. The precipitation which results from the presence of this barrier on the line of the prevailing winter depressions of Antarctic origin amounts to as much as 150 inches a year in the vicinity of Mt. Kosciusko, the highest point in Australia. The drainage from the snowfields is practically all to three systems—those of the Murray and Murrumbidgee Rivers, which flow inland, and that of the Snowy River, which flows southward to Bass Strait.

The broad basis of the Snowy scheme is to transfer waters, which would otherwise flow to the sea unharnessed, from the Snowy River and its tributaries to the inland system, so that the water may be used for irrigation and to provide power. It involves two main diversions, the diversion of the Eucumbene, a tributary of the Snowy, to the Upper Tumut River, and the diversion of the main stream of the Snowy River at Island Bend and Jindabyne to the Swampy Plain River. These two diversions divide the scheme geographically into two sections, the Snowy-Tumut Development and the Snowy-Murray Development (*see* plate 18). For purposes of both power production and irrigation it is necessary to regulate run-off, and this will be achieved by the use of Lake Eucumbene (formed by the construction of Eucumbene Dam) and other smaller storages to control the waters of the Eucumbene, Murrumbidgee, Tooma and Tumut Rivers of the Snowy-Tumut Development and of the Snowy and Geehi Rivers for the Snowy-Murray Development. A sectional diagram of the scheme appears on plate 19.

Snowy-Tumut Development. This development comprises works for the diversion and regulation of the waters of the Eucumbene, Upper Tooma, Upper Murrumbidgee and Upper Tumut Rivers and their combined development through a series of power stations down the Tumut River. A major dam has been constructed on the Eucumbene River to create Lake Eucumbene, which has an ultimate usable storage of 3.5 million acre feet. The waters of the Upper Murrumbidgee River are diverted into Lake Eucumbene by a dam at Tantangara and a 10½-mile tunnel from Tantangara Reservoir. From Lake Eucumbene, the water flows through a 14-mile tunnel to Tumut Pond Reservoir on the upper reaches of the Tumut River, where it joins the waters of the Tumut River itself and the waters of the Tooma River diverted to Tumut Pond Reservoir by a diversion dam and a 9-mile tunnel. The 14-mile Eucumbene-Tumut Tunnel is used during periods of high flow to divert waters of the Tumut River from Happy Jacks Shaft or the combined waters of the Tumut and Tooma Rivers from Tumut Pond Reservoir back to Lake Eucumbene for storage.

From Tumut Pond Reservoir water is conveyed by pressure tunnel to Tumut 1 underground Power Station (capacity 320,000 kW), returned to the Tumut River and then by another pressure tunnel to Tumut 2 underground Power Station (capacity 280,000 kW), thence discharging into Talbingo Reservoir, also on the Tumut River.

* *See also* the chapter Water Conservation and Irrigation of this issue and special detailed article in Year Book No. 42, pp. 1103-1130.

Tumut 3 Power Station, the largest station of the scheme (capacity 1,500,000 kW of which 500,000 kW will be provided by pump turbines) will be constructed below Talbingo Reservoir and will discharge into Jounama Pondage on the Tumut River. This pondage will provide a downstream pumping pool and also re-regulate discharges from Tumut 3 Power Station as required. Releases from Jounama Pondage will then enter Blowering Reservoir formed by Blowering Dam. This dam is under construction by the Snowy Mountains Authority as an agent for the State of New South Wales and will provide for the regulation of power station discharges for irrigation use in the Murrumbidgee Valley. The Authority will construct a power station at the foot of the dam to generate power from releases of water for irrigation purposes.

Snowy-Murray Development. The principal features of the Snowy-Murray Development are the diversion of the main stream of the Snowy River by tunnels, shafts, and pipelines westwards through the Great Dividing Range into the Swampy Plain River in the catchment of the Upper Murray, and the development of power on the western slopes of the Alps. The main works of the development will be as follows.

- (a) A tunnel from the Snowy River near Island Bend through the Great Dividing Range to Geehi Reservoir on the Geehi River, and two power projects between Geehi Reservoir and the Swampy Plain River near Khancoban. The power stations associated with these two power projects, Murray 1 and Murray 2, will have a combined capacity of 1,500,000 kW.
- (b) A tunnel from a small dam on the Snowy River near Island Bend to Eucumbene Dam to carry Snowy water to Lake Eucumbene for storage at times of high river flows. When river flows are lower than average, this stored water will be returned towards Island Bend and thence through the Snowy-Geehi Tunnel to Geehi Reservoir and Murray 1 and Murray 2 Power Stations.
- (c) A dam on the Snowy River near Jindabyne to store the residual flow of the Snowy and Eucumbene Rivers downstream from Island Bend and Eucumbene Dams, including the flows of major tributaries, the Crackenback and Mowamba Rivers; and the construction of a pumping plant, pipeline and tunnel to lift this water from Jindabyne Reservoir to the Snowy-Geehi Tunnel near Island Bend, where it will join the flow to the Geehi Reservoir for use through Murray 1 and Murray 2 Power Stations.

The power output of this section of the Scheme will be increased by the construction of subsidiary hydro-electric projects on the Upper Snowy River above Island Bend and on Windy Creek, a tributary of the Upper Geehi.

Utilization of power from scheme

The future electric power plants on the mainland of Australia will be predominantly thermal or thermo-nuclear installations, and in an electrical system in which the greater part of the energy is generated in thermal plants it is usually found that the hydro installations operate to the best advantage on peak load. However, the existing New South Wales and Victorian systems include a proportion of relatively old and less efficient installations which, for reasons of fuel economy, are also best used for the production of peak load power. Therefore, in order to utilize the potential of the Snowy Mountains Scheme most effectively, the order of development is being arranged so that the early stations operate, initially, somewhat below the peak of the system load, with a progressive change to predominantly peak load operation as construction proceeds and as the load increases in magnitude.

The Snowy Mountains Scheme is situated about midway between the principal load centres of Sydney and Melbourne and is connected to those cities by 330 kV transmission lines. It is, consequently, in a position to take advantage of the diversity in the power requirements of these two load systems, a most important factor in so far as it affects the economy of operation of the supply systems of the two States. Although most of the output from the scheme will go to the States of New South Wales and Victoria, the Commonwealth Government has the right to draw from the scheme its requirements of power and energy for the Australian Capital Territory and for defence purposes. For convenience, the Commonwealth's requirements are drawn from the New South Wales transmission network by an exchange arrangement between the Commonwealth and the Electricity Commission of New South Wales. Electricity over and above that required by the Commonwealth Government is divided between the States of New South Wales and Victoria in the ratio 2 : 1.

Progress of scheme and future programme

The scheme's first power station, Guthega, of 60,000 kW initial capacity, came into operation in February 1955. It was followed by Tumut 1, an underground power station with a capacity of 320,000 kW, in 1959, and by the 280,000 kW Tumut 2 underground Power Station in 1962. The total installed capacity of the scheme at present is 660,000 kW. Eucumbene Dam, which provides the major regulating storage for the scheme, was completed in May 1958. Tumut Pond

Dam, completed in September 1958, provides the balancing storage for the power stations of the Upper Tumut Works. The first trans-mountain diversion of water from Lake Eucumbene to the Tumut River at Tumut Pond was made possible when the 14-mile Eucumbene-Tumut Tunnel was completed in June 1959. The 10½-mile Murrumbidgee-Eucumbene Tunnel and the 9-mile Tooma-Tumut Tunnel came into operation early in 1961. Following the completion of the Upper Tumut Works, construction activity has been concentrated on the Snowy-Murray development. The first unit of this development, the Eucumbene-Snowy project which comprises Island Bend Dam and the 15-mile Eucumbene-Snowy Tunnel, commenced diverting Snowy River water to storage in Lake Eucumbene in August 1965. Construction is well advanced on the 9-mile trans-mountain Snowy-Geehi Tunnel, the 7½-mile Murray 1 Pressure Tunnel, the 1-mile Pressure Pipeline and the 950,000 kW Murray 1 Power Station. These works, together with the Khancoban Dam, which will regulate power station releases before discharge into the Murray River, are to be substantially completed in 1966. At this time, the first trans-mountain diversion of water from the Snowy River to the Murray River and the first generation of electricity from the Murray 1 Power Station will occur.

STATES AND TERRITORIES

New South Wales

In Year Book No. 39, an account was given in some detail of the origin and development of electricity generation and distribution in New South Wales. At present, the following three main Acts govern electricity supply in New South Wales.

The Local Government Act, 1919, which lays down the various rights and responsibilities of local government bodies in the establishment and operation of electricity trading undertakings.

The Electricity Development Act, 1945-1964, which established the Electricity Authority of New South Wales as the body responsible for the co-ordination of electricity supply throughout the State.

The Electricity Commission Act, 1950-1961, which constituted the Electricity Commission of New South Wales as the major generating authority and not subject to the provisions of the Electricity Development Act.

Electricity Commission of New South Wales and other electricity supply authorities

The Commission, which is directly responsible to the Minister for Local Government, consists of five members, of whom one is full-time Chairman and one is full-time Vice-Chairman. The main function of the Commission is the generation and transmission of electricity, which it sells in bulk to distributing authorities (mainly local government bodies) throughout a large part of the State, to the Government railways, and to certain large industrial consumers. As the major generating authority, it is also responsible for the development of new power sources except in the Snowy Mountains region.

The retail sale of electricity to the public is, in general, carried out by separate electricity supply authorities—municipal and shire councils, electricity county councils (consisting of groups of shire and/or municipal councils), or private franchise holders. At 30 June 1965 there were fifty supply authorities throughout the State, of which thirteen also generated part or all of their power requirements. Most of the small power stations which had operated in many country centres have closed down as the main transmission network has been extended.

Over recent years there has been a distinct trend towards the consolidation of supply areas on a district basis for electricity distribution purposes. Generally, these consolidations have taken the form of a county district consisting of a number of neighbouring shire and municipal and city areas grouped only for electricity supply purposes, and administered by a county council of representatives elected by the constituent councils. Of the 224 cities, municipalities and shires in New South Wales, 214 are included in one or other of the thirty-four electricity county districts. The majority of these county districts have been constituted since 1945. The largest of the county councils is the Sydney County Council, which at 30 June 1965 was supplying 530,219 consumers in the Sydney metropolitan area.

Electricity Authority of New South Wales

The Electricity Authority was constituted for the purpose of promoting and regulating the co-ordination, development, expansion, extension and improvement of electricity supply throughout the State. A regulatory body, it consists of seven members of whom one is a full-time Chairman. Like the Electricity Commission, it is responsible to the Minister for Local Government. The following are the main functions of the Authority.

Distribution. The approval of the Authority is required for the establishment or acquisition of an electricity trading undertaking by a local government council, for the granting or renewing by such a council of electricity franchise agreements or corresponding agreements with other councils, and for the giving or taking of bulk supplies of electricity. It also has power to formulate proposals for the establishment of county councils. In exercising these powers, the Authority is concerned mainly with seeing that distributing authorities are sufficiently strong to provide an economical, efficient and satisfactory service. Its most important activities in this regard are in investigating supply areas and in making recommendations to the Minister for the consolidation of such areas into county districts.

Rural electrification. The Authority administers the rural electricity subsidy scheme under which rural electrification throughout the State is progressing very rapidly (see pp. 148-9).

Safety. The Electricity Development Act, 1945-1964 contains provisions for the making of regulations relating to most aspects of safety, and these powers are being used more and more extensively. Safety regulations now in force cover such matters as inspection of consumers' installations, licensing of electricians and electrical contractors, approval of electrical appliances, safety of linesmen and overhead line construction.

Generation and transmission. The approval of the Authority is required for the establishment or extension of power stations and main transmission lines (with the exception of those of the Electricity Commission).

Generation and transmission

Except in the Snowy Mountains district and in one or two other areas New South Wales is lacking in major water power potential, and for the generation of electricity the State is dependent mainly on steam power stations. During the year ended 30 June 1965, coal-fired power stations generated 82.8 per cent of the State's energy requirements, hydro-electric stations 16.7 per cent and internal combustion plants 0.5 per cent. Of the 16.7 per cent generated from hydro-electric stations, approximately 70 per cent was from the Snowy Mountains Scheme. This proportion will increase with the expansion of that scheme, but it is not expected that more than 15 per cent to 20 per cent of the State's power needs will be supplied from this source. The coal-fired steam power stations (and possibly atomic power stations in the future) will therefore continue to supply the greater part of requirements.

Major generating stations. In New South Wales the generation of electricity has followed the general world trend towards large centralized power stations supplying large areas through interconnected transmission networks. Whereas until a few years ago the greater part of the coal-fired generating plant was located in the industrial areas of Sydney, Newcastle and Wollongong, where most of the population is also located, major power stations are now being located on the coalfields to the north, south and west of Sydney, and power is transmitted to the load centres through high voltage transmission lines.

At 30 June 1965 the major power stations of the State system of the Electricity Commission of New South Wales and their installed capacities were as follows: *Steam*—Vales Point (Lake Macquarie), 600,000 kW; Bunnerong (Sydney), 375,000 kW; Wangi (Lake Macquarie), 330,000 kW; Tallawarra (Lake Illawarra), 320,000 kW; Wallerawang (near Lithgow), 240,000 kW; Pyrmont (Sydney), 200,000 kW; White Bay (Sydney), 172,000 kW; Balmain (Sydney), 107,000 kW; Port Kembla, 60,500 kW; Zarra Street (Newcastle), 42,500 kW; Muswellbrook, 30,000 kW; Lithgow, 27,000 kW; Tamworth, 27,000 kW; Maitland, 20,000 kW; Penrith, 20,000 kW; Liverpool, 20,000 kW; *Hydro*—Hume—(near Albury), 50,000 kW; Warragamba (near Penrith), 50,000 kW; Burrinjuck (near Yass), 20,000 kW. There were also various other steam, hydro and internal combustion stations aggregating 33,150 kW. The total installed capacity of the Electricity Commission's system was 2,744,150 kW. The greater part of the Commission's generating plant is concentrated within a hundred mile radius of Sydney—the largest stations outside this area being located at Hume, Muswellbrook and Tamworth.

Major transmission network. The retailing of electricity to 97 per cent of the population of New South Wales is in the hands of local distributing authorities, which obtain electricity in bulk from the Commission's major State network. This network of 330 kV, 132 kV, 66 kV and some 33 kV and 22 kV transmission lines links the Commission's power stations with the load centres throughout the eastern portions of the State, extending geographically up to 400 miles inland.

At 30 June 1965 there were in service 859 route miles of 330 kV (including 143 miles operating for the time being at 132 kV) and 2,073 miles of 132 kV transmission lines (including 153 miles operating for the time being at 66 kV or lower). There were also in service 2,445 miles of transmission line of 66 kV and lower voltages. The installed transformer capacity at the Commission's 112 sub-stations was 9,350,300 kVA.

Separate systems and total State installed capacity. A number of small plants which supply isolated towns and villages have not yet been interconnected with the main network. Some local government bodies have undertaken the development of independent power stations. Of these, the more important are:—the Northern Rivers County Council, which has constructed a steam power station at Koolkhan (near Grafton) with an installed capacity of 28,750 kW, and the North-West County Council, which has established a 15,000 kW steam power station on the Ashford coalfield. The aggregate installed capacity for the whole of the New South Wales systems and isolated plants was 2,858,480 kW at 30 June 1965 and the number of ultimate consumers at this date was 1,339,499.

Future development

The major new thermal stations already built and those now being developed on the coal-fields will become the main base load centres for the northern, southern and western regions. Wangi, on Lake Macquarie, Wallerawang, near Lithgow, and Tallawarra, on Lake Illawarra, have been completed.

At Vales Point, on Lake Macquarie, work is in progress on a large thermal station with a designed capacity of 875,000 kW. The plant will consist of three 200,000 kW units and one 275,000 kW unit. The three 200,000 kW units have been commissioned. The 275,000 kW unit is programmed for completion in 1966. Construction of the Munmorah Power Station, located between Lakes Munmorah and Budgewoi (on the central coast), has commenced. The plant at Munmorah will comprise four 350,000 kW generating units, the first of which is programmed for commissioning in 1967, and the second, third and fourth units will follow at yearly intervals thereafter.

During the first half of 1965 work commenced on the Liddell Power Station project in the Hunter Valley, between Singleton and Muswellbrook. The designed capacity of Liddell is 2,000,000 kW, consisting of four 500,000 kW generating units and is the biggest thermal power station yet planned in Australia. The first unit is scheduled for commissioning in 1971, and the second, third and fourth units in 1972, 1973 and 1974 respectively. The development of the 330 kV main system is continuing. With duplicate transmission completed over the whole distance from the Snowy Mountains to the northern coalfields, the main work now is the construction of a third circuit between the Vales Point-Munmorah area and Sydney and between the Snowy area and Yass. The latter transmission line is being constructed between Talbingo and Yass (74 miles) and will connect at Talbingo to a new 330 kV line being constructed by the Snowy Mountain Authority between Talbingo and the Authority's Murray switching station transmitting power to the New South Wales net work from the Murray power stations.

The development of the 330 kV network around the Sydney metropolitan area is proceeding. Further progress in the work of bringing additional power into the Sydney metropolitan area from southern and northern power stations was achieved when the new 330 kV transmission centre was commissioned at Sydney West, near Wallgrove, with a transformer capacity of 870 MVA. This major 330 kV substation, the third to be established in the metropolitan area, is linked at 330 kV with Sydney North and Sydney South and also with Dapto in the south. Plans to augment the transmission system during the next five years provide for the construction of 379 route miles of 330 kV lines and three associated substations, over 930 route miles of 132kV line and eighteen substations, as well as additions to existing substations and a number of lower voltage works.

Hydro-electricity

The greater part of the hydro-electric potential of New South Wales is concentrated in the Snowy Mountains area (*see* Snowy Mountains Hydro-electric Scheme, p. 144). Apart from this area, major hydro-electric stations are in operation at the Warragamba Dam (50,000 kW), Hume Dam (50,000 kW), Burrinjuck Dam (20,000 kW), and Keepit Dam (6,000 kW). The output of Warragamba Power Station depends upon the availability of water surplus to the requirements of the Sydney metropolitan area, and the output of the other stations on the release of water for irrigation. Of the remaining hydro installations, the largest is that of the New England County Council on the Oakey River, a tributary of the Macleay River, which has a capacity of 5,250 kW. The Northern Rivers County Council operates a hydro-electric power station on the Nymboida River, a tributary of the Clarence River. This station has a capacity of 4,500 kW. The Bega Valley County Council has constructed a hydro-electric scheme at Brown Mountain utilizing the headwaters of the Bemboka River. This installation has a capacity of 3,950 kW. The Mullumbimby Municipal Council has in operation two hydro units with an effective rating of 140 kW each, on Wilson's Creek, a tributary of the Richmond River.

Rural electrification

When the Electricity Authority of New South Wales was constituted in 1946 less than one-quarter of New South Wales farms within reasonable reach of public electricity supply systems were being served with electricity. Under a subsidy scheme approved in August 1946, local

electricity suppliers receive subsidies from the Electricity Authority towards the cost of new rural lines. The amount of subsidy is based on the estimated cost of the proposed extension and the number of consumers able to be served by the new lines. The scheme was designed to encourage local electricity supply authorities to construct the more economic extensions first by fixing a limit to the cost for which suppliers could be subsidized. Originally this limit was £250 (\$500) per consumer when averaged over the cost of the whole extension, but the limit was raised to £400 (\$800) in December 1953. Some subsidy was paid on higher cost extensions, but the excess over an average of £400 (\$800) was not subsidized.

To assist supply authorities in extending supply to less populated, and thus high-cost, areas of the State the subsidy scheme was extended from May 1959 to provide for payment of increased subsidy in respect of extensions where the average capital cost per consumer lies within the range of £600-£800 (\$1,200-\$1,600).

Between August 1946 and June 1965, applications for subsidy had been made by electricity suppliers to the Authority covering rural extensions costing \$75 million to give supply to some 57,250 farming properties and 34,700 other rural consumers and involving 54,300 miles of line. The greater part of this work had been completed at 30 June 1965. At this date the Authority was committed to the payment of \$30,924,486 in subsidies, of which \$16,455,470 had been paid.

Victoria

In Year Book No. 39 a detailed description is given of the development of electricity generation in the cities of Melbourne, Geelong, Bendigo and Ballarat up to the time of transfer of control of electricity undertakings in those cities to the State Electricity Commission of Victoria. An account is also given of the events culminating in the establishment of the Commission in 1919, and of the early developments in the Commission's undertakings.

Constituted by the *Electricity Commissioners Act 1918*, the State Electricity Commission is a semi-governmental authority administered since 1921 by a full-time Chairman and three part-time Commissioners. The principal duty of the Commission is to co-ordinate and extend on an economic basis the supply of electricity throughout Victoria. For this purpose it is vested with power to erect, own, and operate power stations and other electrical plant and installations, supply electricity retail to individual consumers or in bulk to any corporation or public institution, acquire and operate electricity undertakings, develop, own, and operate brown coal open cuts and briquetting works, and develop the State's hydro-electric resources. From its own revenues, which it controls, the Commission must meet all expenditure in the operation of its power, fuel and subsidiary undertakings, and all interest and other charges incurred in the service of its loans and other capital commitments.

The Commission is the controlling authority for all electrical undertakings in Victoria. It is responsible for the registration of electrical contractors, the licensing of electrical mechanics, the control of installation methods and material, and the testing and approval of electrical equipment and appliances. Incidental to its main operations, the Commission owns and operates the tramway systems in Ballarat and Bendigo. For the accommodation of its employees at Yallourn, the Commission owns and administers the town of Yallourn. It also owns large housing estates in the surrounding area, but is progressively selling houses in these estates to Commission employees. In the Kiewa hydro-electric works area it has built the two townships of Mount Beauty and Bogong, municipal administration of the former now being vested in the Shire of Bright. With construction at Kiewa now complete, many houses at Mount Beauty have been sold for holiday homes.

State Electricity Commission of Victoria

Since it began operating in 1919 the State Electricity Commission has expanded and co-ordinated the production and supply of electricity on a State-wide basis to the point where its system now generates almost all the electricity produced in Victoria and serves nearly 98 per cent of the population. Development of Victoria's electricity system is based on the utilization for both power and fuel of Victoria's extensive brown coal resources in the Latrobe Valley in eastern Gippsland, with supplementary development of the hydro-electric potential of north-eastern Victoria. Victoria is entitled to one-third of the electricity from the Snowy Mountains Hydro-electric Scheme, after the Commonwealth has taken the power it needs for its purposes. Victoria also shares with New South Wales in the electricity generated at Hume Hydro Station on the River Murray. About 75 per cent of the State's electricity is generated from brown coal, either used in its raw state or manufactured into higher quality fuel in the form of brown coal briquettes. All the brown coal and briquette fuel is supplied by undertakings which the Commission itself owns and operates. Output of brown coal in 1964-65 from the three open cuts at Yallourn, Yallourn North and Morwell totalled 19,001,796 tons, of which 13,322,670 tons were used in the Commission's own power stations, and 5,250,518 tons were manufactured into 1,892,759 tons of brown coal briquettes, 33 per cent of the briquette output then being used for electricity production

in metropolitan and provincial steam power stations. The two functions, generation of electricity and production of fuel, are closely integrated. Apart from the large proportion of brown coal and briquette fuel consumed in the power stations, the process of briquette manufacture results also in the generation of electricity, since the steam needed for processing the raw coal for briquetting is first used to operate turbo-generators.

Electricity supply

At 30 June 1965 the number of ultimate consumers in Victoria was 1,057,314. Of these, 1,048,554 were served by the State system and 8,760 by local country undertakings. The State system supplies all the Melbourne metropolitan area and over 2,000 other centres of population.

Complete electrification of the State is now within sight. By 30 June 1965 about 890,000 of the 917,000 homes in the State and 61,200 of Victoria's 72,000 farms were supplied with electricity. By 1970-71, allowing for extensions then in progress, only about 6,000 homes and fewer than 1,250 farms in remote areas will be out of reach of public electricity supply, but efforts will be continued to supply as many of these as possible.

The Commission sells electricity retail in all areas except part of the metropolitan area, where it sells in bulk to eleven municipal undertakings which operate as local retail supply authorities under franchises granted before the Commission was established. Bulk supply is also being provided at present to several New South Wales municipalities and irrigation settlements bordering the River Murray. The number of consumers served by the State system outside the Melbourne metropolitan area is 481,616. Of the new consumers connected to supply each year, more than two-thirds are outside the metropolitan area. New farm connections average over 3,000 a year.

The Commission's retail consumers numbered 842,168 at 30 June 1965. Retail supply is administered through the metropolitan branch and ten extra-metropolitan branches (Ballarat, Eastern Metropolitan, Geelong, Gippsland, Midland, Mildura, Northern, North-Eastern, South-Western and Wimmera). At 30 June 1965 there were branch and district supply offices in Melbourne and 90 other cities and towns in Victoria.

Electricity production, transmission and distribution

Electricity generated in the State system or purchased by it totalled 9,636 million kWh in 1964-65, or more than 99 per cent of all Victoria's electricity for public supply. The system comprises a series of thermal and hydro-electric power stations. Inclusive of generator capacity both within the State and available to the Victorian system from outside the State, the total installed generator capacity at 30 June 1965 was 2,288,000 kW. Power stations are interconnected and feed electricity into a common pool for general supply. The major power station in this interconnected system is the brown coal burning power station at Yallourn, which alone generates nearly half of Victoria's electricity. Other power stations in the interconnected system comprise two further base load brown coal burning power stations, Morwell and Hazelwood (which has two of its planned eight 200,000 kW generating sets in service); steam stations in Melbourne (Newport, Richmond and Spencer Street), Geelong and Ballarat, and also at Red Cliffs, which has, in addition, some internal combustion plant; hydro-electric stations at Kiewa, at Eildon, on the Rubicon and Royston rivers near Eildon, and at Cairn Curran; and an internal combustion station at Warrnambool. All within Victoria are Commission-owned, except Spencer Street Power Station, which remains the property of the Melbourne City Council, although operated as a unit in the interconnected system. A 330 kV transmission line links the Victorian system with the Snowy Mountains undertaking, and also provides facilities for interconnection between the Victorian and New South Wales State generating systems. Also linked with the Victorian interconnected system is the hydro station at Hume Dam on the River Murray. This power station is operated by the Electricity Commission of New South Wales. Output and operating costs are shared by Victoria and New South Wales. In meeting the total demand on the system, which fluctuates throughout the day and from month to month, each group of stations in the interconnected system is assigned a predetermined function dependent upon the availability of power from each group and the economics of generation. The various stations are utilized in the combination that will meet the system load most economically at a given time.

The electrical transmission and distribution system in the State supply network at 30 June 1965 comprised 46,011 miles of power-lines, 19 terminal receiving stations, 94 main transmission sub-stations, and over 42,000 distribution sub-stations. Main transmission is by 330 kV, 220 kV, 132 kV and 66 kV power lines which supply the principal distribution centres and also provide interconnection between the power stations. The 330 kV and 220 kV systems total 1,154 miles.

Future development

Major new construction is concentrated on the erection on the brown coal fields of the Latrobe Valley, of a large new brown coal burning power station (Hazelwood), which is designed to operate on raw brown coal fuel supplied by belt conveyor direct from the Morwell open cut. Hazelwood Power Station is the largest project yet undertaken by the Commission and is designed

to have a capacity of 1,600,000 kW in 1971. By that year the State's power resources, including Victoria's share of the output of the Snowy scheme, will have increased by 81 per cent to 3,616,000 kW. The first of Hazelwood's eight 200,000 kW turbo-generators was commissioned in October 1964. A second generating set of the same capacity went into service in 1965, and six other 200,000 kW sets will follow at yearly intervals. Power generated at Hazelwood Power Station is transmitted at high voltage to Melbourne metropolitan terminal stations for distribution through the State supply network.

Local country electricity undertakings

At 30 June 1965 there were eleven independent electricity undertakings in country centres in Victoria generating and distributing their own local supply. All except three of these undertakings were in the west and north-west of the State. Under the State Electricity Commission's rural electrification programme almost all the independent local country undertakings will ultimately be acquired and absorbed into the State system. For the year 1964-65 the total production of the independent undertakings was 32 million kWh. The number of consumers at 30 June 1965 was 8,760. With the exception of the Wonthaggi undertaking (which is operated by the State Coal Mine), the operation of the independent undertakings is governed by the *Electric Light and Power Act 1958*, which is administered by the State Electricity Commission.

Queensland

In Year Book No. 39 an account is given of the growth of electricity generation in Queensland, with particular reference to south-eastern Queensland, and of the events leading up to the establishment in 1937 of the State Electricity Commission of Queensland.

Electricity supply in Queensland is governed by the following Acts which are administered by the Commission:

- '*The State Electricity Commission Acts, 1937 to 1965.*' These Acts constituted the Commission and define its powers, duties and responsibilities.
- '*The Electric Light and Power Acts, 1896 to 1965.*' These Acts relate to the constitution of electric authorities, and define their powers, duties and responsibilities, and the conditions under which electricity is to be supplied and used, and also provide for the making of regulations governing safety and other matters.
- '*The Regional Electric Authorities Acts, 1945 to 1964.*' These Acts provide for the constitution of Regional Electricity Boards representative of the Commission and the Local Authorities within each region, and define their powers and responsibilities.
- '*The Southern Electric Authority of Queensland Acts, 1952 to 1964.*' These Acts established the Southern Electric Authority as a public authority and successor to the City Electric Light Co. Ltd., and define the powers and responsibilities of the Authority.
- '*The Northern Electric Authority Acts, 1963 to 1964.*' These Acts established the Northern Electric Authority with responsibility for the generation and main transmission of electricity in north Queensland and for its sale in bulk to regional distributing authorities. They also define its powers and responsibilities.
- '*The Electrical Workers and Contractors Acts, 1962 to 1964.*' These Acts deal with the execution of electrical works, the competency of electrical workers, and the licensing of electrical contractors.

State Electricity Commission of Queensland

The Commission commenced to function in January 1938. Generally, the Commission is the statutory authority concerned, *inter alia*, with the administration of electricity supply legislation, the general control, organization and efficient development of the electricity supply industry in Queensland, the forward planning of such development, the control of electricity charges, the administration of regulations and rules relating to safety, the raising of capital, the provision of engineering and consulting services, the promotion of the use of electricity, particularly in manufacturing and rural industries, and the fixing of standards. In addition, it is an authority to which consumers may appeal on matters in dispute between them and their electric authorities. The Commission is also empowered to own directly and operate generating stations and transmission lines and to sell electricity in bulk, but up to the present it has not been found necessary or desirable to implement this power.

Development and organization

Following the 1939-1945 War, regional systems of electricity supply were established in and adjacent to the eastern coastal area, which is over 1,300 miles long. Five Regional Electricity Boards were established to replace the numerous individual electricity undertakings which had supplied only the larger centres of population. Under this system supply was delivered from

central generating stations at or near the principal load centres. Each region comprised a homogeneous area, possessing relatively common interests, within which integrated transmission and distribution systems were established. Transmitted supply was taken to load centres previously served by relatively costly local generating stations and a vigorous policy of rural electrification was pursued. In south-eastern Queensland regional electrification was undertaken by the Southern Electric Authority and the Dalby Town Council. The Brisbane City Council supplies the metropolitan area.

In the pastoral areas west of the Great Dividing Range supply had been provided by means of small diesel-operated generating stations run by local authorities. These independent units are fairly uniformly scattered throughout western Queensland and no town or village with more than fifty potential consumers is without electricity. With increasing consumption there has been a trend in this area for local generating stations to be superseded by transmitted supply from larger centres. From such transmission lines it has been possible to provide electricity to many otherwise isolated rural properties.

Continued load growth led naturally to the interconnection of regional systems and by this means the production of electricity was concentrated on the cheapest sources of power. The three northern Regional Electricity Boards (Cairns, Townsville and Mackay) were consolidated into one interconnected grid. In the south, the supply systems of the Southern Electric Authority, the Brisbane City Council, the Wide Bay-Burnett Regional Electricity Board and the Dalby Town Council also form an interconnected grid. The central Queensland network, which is operated by the Capricornia Regional Electricity Board, is not yet connected with either the northern or southern grids.

The natural sequel to the interconnection of regional supply systems has been the severance of the production and distribution functions. For the northern grid, the Northern Electric Authority is responsible for the operation of generation and main transmission facilities, with the Cairns, Townsville and Mackay Regional Electricity Boards buying in bulk and acting as distributing authorities. In the south, the Southern Electric Authority is responsible for generation and transmission, with the other authorities purchasing in bulk and performing the distribution function. However, the Southern Electric Authority also distributes over a large rural area surrounding Brisbane, and the Wide Bay-Burnett Board generates on a small scale. The Capricornia, Townsville and Cairns Boards operate a number of small isolated diesel generating stations.

All electricity undertakings in Queensland are now publicly owned, and with the exception of the Southern Electric Authority are controlled by representatives of local authorities within the areas concerned. Further interconnections and amalgamations within the electricity supply industry will be effected as soon as they will produce greater efficiency and lower costs to consumers. A major co-ordinating factor has been the inclusion of the Commissioner for Electricity Supply on the Boards of the Southern Electric Authority, the Northern Electric Authority and the five Regional Electricity Boards since their inception.

Electricity generation, transmission and distribution

Electricity generated in the State is based primarily on black coal, 83.3 per cent of the total production during 1964-65 being derived from this fuel. Hydro-electric stations, located mainly in north Queensland, provided 15.1 per cent, and the balance of the production, 1.6 per cent, was from internal combustion plants located mainly in western Queensland, utilizing oil, wood, coal or natural gas as fuel. Natural gas is the principal fuel used at the Roma power station. Electricity generated in Queensland in power stations in 1964-65 totalled 3,518 million kWh. At 30 June 1965, the major power stations within the State were as follows:—*Steam*—Bulimba A (Brisbane), 92,500 kW; Bulimba B (Brisbane), 180,000 kW; New Farm (Brisbane), 75,000 kW; Tennyson A (Brisbane), 120,000 kW; Tennyson B (Brisbane), 120,000 kW; Howard (near Maryborough), 37,500 kW; Rockhampton, 52,500 kW; Callide, 30,000 kW; Mackay, 12,250 kW; Townsville, 37,500 kW; *Hydro*—Kareeya (Tully Falls), 72,000 kW; Barron Gorge (near Cairns), 60,000 kW. The Mackay station also contains 3,000 kW of internal combustion plant. The Southern Electric Authority also operates two packaged plants each of 10,000 kW capacity. The total installed capacity of all Queensland generating stations was 995,975 kW, which comprised 833,750 kW of steam plant, 135,205 kW of hydro-electric plant and 27,020 kW of internal combustion plant.

The electrical transmission and distribution systems within the State comprised 34,180 circuit miles of electric lines at 30 June 1965. The main transmission voltages are 132 kV, 110 kV, 66 kV and in certain areas 33 kV. Extensive rural electrification has been undertaken by means of the single wire earth return system. At 30 June 1965 the total number of electricity consumers was 476,000, of whom 191,691 were in metropolitan Brisbane. The total number of farming properties supplied with electricity was 25,876.

Future development

Major new construction is concentrated on the development of three new power stations sited on coalfields. These are at Swanbank (396,000 kW) on the West Moreton coalfield near Ipswich, Callide (120,000 kW) on the Callide open-cut coalfield near Biloela, and at Collinsville

(180,000 kW) on the Collinsville coalfield. These stations will supply the southern, central and northern network, respectively. Cooling water for the Callide station will be provided from a multipurpose dam on Callide Creek which will also satisfy irrigation needs. A similar multipurpose dam on the Broken River will serve the Collinsville station. The water requirements of the Swanbank power station will be supplied from the Moogerah Dam. The Swanbank station will consist of six 66,000 kW generating sets, the first of which will be commissioned in 1966, two more in 1967 and one in 1968 and 1969. The first stage of the Callide station consists of two 30,000 kW sets, the first of which was commissioned in June 1965. The second and third sets are scheduled for commissioning in 1966 and 1967 respectively. At Collinsville the first stage of two 30,000 kW sets is planned for commissioning in 1968. In November 1965 Government approval was secured for the construction of a second thermal power station at Swanbank. This station has a planned capacity of 480,000 kW, and one 100,000 kW generating set will be commissioned annually from 1970 to 1973. In North Queensland, developments being considered include the further expansion of thermal generation at Collinsville and the further utilization of the area's hydro-electric potential.

The electrical development in the west of Queensland is being assisted by the progressive extension westwards of the boundaries of the major regional electricity undertakings to include smaller western undertakings, bringing with it the advantages of incorporation within larger authorities, lower tariffs and greater financial and technical resources. Organizational changes involving amalgamation of isolated undertakings and their interconnection by transmission lines are being implemented as and when economic benefits to the consumers will result. In the extreme far west the isolated undertakings must inevitably continue to remain as such for the foreseeable future. New measures now proposed include the further westward extension of the areas of supply of the Townsville and Capricornia Regional Electricity Boards, and the establishment of a small electricity supply region to cater for the development of the central Western area of the State based upon Longreach and Barcaldine.

South Australia

An account of the companies generating electric power in South Australia prior to the establishment of the Adelaide Electric Supply Co. Ltd., and describing the development of that company's activities, was given in Year Book No. 39. Also included in the account was some reference to the early measures of public control over electricity supply in South Australia and the extent to which they were applied, and also to the inquiries into the activities of the Adelaide Electric Supply Co. Ltd., in 1932 and 1935. Following an inquiry instituted by the Government in 1943, relative to measures for increasing electricity supply to the metropolitan area and country districts, the Electricity Act, 1943 was passed, which, *inter alia*, established the South Australian Electricity Commission.

Electricity Trust of South Australia

In 1946 the assets of the Adelaide Electric Supply Co. Ltd. were transferred to a newly formed public authority, the Electricity Trust of South Australia, which became responsible for unification and co-ordination of the major portion of the State's electricity supply and which took over the powers previously vested in the South Australian Electricity Commission. In addition to the powers specified in the Adelaide Electric Supply Company's Acts, 1897-1931, the Trust may supply electricity direct to consumers within a district or municipality with the approval of the local authority, and by agreement with other organizations which generate or supply electricity, arrange to inter-connect the mains of the Trust with those of other organizations, and give or receive supplies of electricity in bulk.

Capacity and production

Three main categories of organizations generate electric power in South Australia, namely: (a) governmental, which include the Electricity Trust; (b) local authorities, e.g. municipal and district councils, and the Renmark Irrigation Trust; and (c) other, including individuals and firms engaged primarily in generating power for sale, firms generating power primarily for their own use but supplying outside consumers, and firms generating power solely for their own use.

Of the total installed capacity in South Australia at 30 June 1965, the Electricity Trust operated plant with a capacity of 666,000 kW, and is the most important authority supplying electricity in the State. There were approximately 368,000 ultimate consumers of electricity in the State, of whom 349,600 were supplied directly and approximately 11,000 indirectly (i.e. through bulk supply) by the Trust. Its major steam stations are Osborne 'A' (60,000 kW), Osborne 'B' (240,000 kW), and Port Augusta Playford 'A' (90,000 kW) and Playford 'B' (240,000 kW), the balance of the capacity controlled consisting of house sets and regional stations at Port Lincoln and Mount Gambier, where the Trust operates steam power stations of 5,000 kW and 21,800 kW capacity respectively, the former burning fuel oil and the latter either wood waste or fuel oil. Mt. Gambier is connected with the Metropolitan system by a 132 kV line. No hydro-electric potential exists in South Australia. Steam generating units comprise 98 per cent of installed capacity and the balance is internal combustion equipment.

Leigh Creek and other new capacity

Fairly extensive deposits of low grade sub-bituminous coal are obtainable at Leigh Creek, about 360 miles north of Adelaide. Under the Electricity Trust of South Australia Act, 1946, the Trust was given authority to develop Leigh Creek coal for use in its own undertakings and also for sale to other consumers. Production from the Leigh Creek field commenced in 1944, and in the year ended 30 June 1965, 1,919,483 tons of coal were produced, practically all of which was used by the electricity undertaking at the Port Augusta Playford Power Stations which use Leigh Creek coal exclusively.

A large power station is to be constructed on Torrens Island near Adelaide and four 120,000kW turbo-alternators and associated oil fired boilers have been ordered, the first to be commissioned early in 1967.

Western Australia

Since 1952 the State Electricity Commission of Western Australia has generated and distributed all electric current in the Perth metropolitan area, including Fremantle. Previously the Fremantle Municipal Tramways and Electric Lighting Board and other metropolitan municipal and road board supply authorities had purchased current in bulk from the Commission for distribution through their own system. For information on the early history of electricity supply in the metropolitan area, see Year Book No. 39, page 1189.

State Electricity Commission of Western Australia

The State Electricity Commission of Western Australia was established by the *State Electricity Commission Act, 1945*, and, as at present constituted, consists of nine members, including the Chairman, appointed by the Governor. Four of the Commissioners are representatives of consumers, one for the metropolitan area, two for the rest of the State and one representing commercial consumers. Of the remaining five, one is the Under Treasurer of the State or his deputy, one represents employees of the Commission and three are required to be qualified engineers.

The Commission is empowered to co-ordinate all State and other power undertakings in the State; to encourage and promote the use of electricity and other power, especially for industrial, manufacturing and rural purposes; and to carry out investigations to determine the safest, most economical and effective means for promoting, establishing, extending and improving works for the generation, transmission, distribution, supply and use of electricity or other power throughout the State. No person or organization is permitted to construct or extend an electricity supply undertaking without consent from the Commission. Local authorities are empowered to operate and construct power stations and other works associated with the supply of electricity, provided that authority is first obtained from the Commission and that their proposals are not inconsistent with the Commission's plans.

General pattern of electricity supply

The State Electricity Commission gives central power station supply to the metropolitan area and an area of approximately 25,000 square miles defined in the report which formed a basis for the *South West State Power Scheme Act, 1945*, and an area extending eastward from Perth to Merredin. These areas include the more highly developed rural districts with a greater population density, which can more readily be connected to a central power station system. The policy of extending power supplies to rural consumers is continuing and at 30 September 1965 some 5,673 rural consumers were connected. A similar scheme known as the Northern Areas State Power Scheme will be developed and a depot has been established in the Geraldton area. The Commission purchases power in bulk from the Geraldton Town Council to supply surrounding districts as far north as Northampton.

In the other areas of the State, towns are supplied by the local authority or by a concessionaire operating under an agreement with the local authority and the Commission. Power stations operated under these conditions are exclusively diesel of varying sizes. The number of consumers at 30 June 1965 was 189,844.

At the request of the Government, the Electricity Advisory Committee, in 1945, submitted a report which recommended, among other things, a national power scheme for the south-west. The plan provided for acquisition of the existing Collie Power Station and installation of additional generating capacity, construction of a power station at Bunbury and inter-connection of the south-west scheme with the metropolitan system. In 1946 the State Electricity Commission acquired the Collie Power Station, and since then it has acquired a number of electrical undertakings from municipal bodies and private organizations in the south-west area and is proceeding with arrangements for the purchase of others. In August 1951 the first portion of the South-West Power

Scheme was officially opened at Collie, and most of the south-west towns as well as towns in the eastern wheat belt area as far east as Merredin have now been connected by transmission line to the interconnected system. Statistics relating to activities of the interconnected system for the years 1963-64 and 1964-65 are shown in the following table.

	1963-64	1964-65
Plant capacity kW	289 500	349,500
Maximum load kW	263,000	320,000
Units generated million kWh	1,094	1,215
Fuel used per unit (kWh) generated . . . lb.	1.49	1.47
Coal used tons	617,150	686,928

In Kalgoorlie the large gold mines generate their own power requirements. The Power Corporation has ceased operations, and the Kalgoorlie Town Council operates a new 50 cycle diesel station to supply A.C. consumers in Kalgoorlie and Boulder. The D.C. stations of the Kalgoorlie and Boulder Town Council will continue to operate for some time at least.

New projects

Since its inception in 1946 the State Electricity Commission has made the provision of an adequate reserve of generating plant its primary object. With the commissioning of the first unit at South Fremantle Power Station in May 1951, the lag caused by shortages during the war and early post-war years was overcome. The system then developed rapidly to keep pace with the expansion of industry and housing. Generating plant has increased five-fold in the past eighteen years. The three major power stations have been interconnected with the South West Power Station at Collie enabling the most economical units to be used as a base load station. Continuous development of the transmission and distribution system is being undertaken to keep pace with the growth in consumer demand which is being maintained at a high level.

The first of the four turbo alternators to be installed at Muja Power Station (near Collie) was commissioned on 10 July 1965, and work on the other units is proceeding to schedule. One of these will be ready for service in September 1966, another in 1967 and the fourth in 1968. Tenders have also been called for two 120,000 kW oil fired units for a new station to be built at Kwinana. It is expected that these units will be commissioned in 1970 and 1971.

Tasmania

A considerable part of the water catchment in Tasmania is at high level, with a substantial natural storage available, and this has made it possible to produce energy at lower cost than elsewhere in Australia, or in most other countries. Another factor contributing to the low cost is that rainfall is distributed fairly evenly throughout the year with comparatively small yearly variations. The abundant and comparatively cheap supplies of electricity and other natural resources have attracted to Tasmania a number of important secondary industries, including large electro-chemical and metallurgical works with high load factor (in consequence of which the system load factor is also very high—72 per cent), for which energy costs constitute a large proportion of the total cost of production. The continuous power demands of these organizations when plant is in full operation aggregates 278,000 kW. For information on hydro-electric development in Tasmania prior to the establishment of the Hydro-Electric Commission in 1930, see Year Book No. 39, pages 1192-3.

Hydro-Electric Commission

In 1929 the Government passed the *Hydro-Electric Commission Act 1929*, which established the Hydro-Electric Commission and vests in the Commission, with some minor exceptions, the right to use the waters of the State of Tasmania, and authorizes it to develop and reticulate electric power for all purposes. In 1930 this corporate body took over the State hydro-electric undertaking and the business of the Hydro-Electric Department. For details of projects undertaken by the Commission prior to 1957 see Year Book No. 48, pp. 243-4, and earlier issues. Particulars of the Catagunya Power Development Scheme, begun in 1957 and completed in 1962, are contained in subsequent issues up to No. 51.

In the Great Lake Power Development the water of the Great Lake, by its diversion to the north-east in the direction of the most precipitous fall, is used to much greater advantage than previously through Shannon and Waddamana. Eventually reaching the South Esk River, it is used again through the machines of the Trevallyn Power Station. The works consist of an intake at the Great Lake, a four-mile headrace tunnel through the Western Tiers, one mile of high pressure pipeline on the face of the Tiers, a vertical shaft leading to the Poatina Power Station some 500 feet underground, a two-mile trailrace tunnel discharging into a canal, and then a

channel to the Lake River, a tributary of the South Esk. In this development the power is generated by the fall of water through a vertical distance of 2,730 feet to the underground Poatina Power Station. Three 50,000 kW generators were in operation by mid-1964, a fourth in September, 1964, and a fifth in February 1965. A sixth generator, to be installed at a later date, will bring the station's installed capacity to 300,000 kW. A further section of the scheme, now nearing completion, includes a dam at Arthur Lakes from which water will be pumped via conduit into the Great Lake, thus increasing the storage for use through the Poatina Power Station. With the commissioning of Poatina Power Station, Shannon Power Station was taken out of service in June 1964, and the original Waddamana 'A' Power Station was taken out of service in June 1965. Waddamana 'B' Station is being retained to provide peak load capacity and spare plant.

The total installed capacity of alternators in the various power stations throughout Tasmania in June 1965 was as follows:

	kW
Waddamana 'B'	48,000
Tarraleah	90,000
Butler's Gorge	12,200
Trevallyn	80,000
Tungatinah	125,000
Lake Echo	32,400
Liapootah	83,700
Wayatinah	38,250
Catagunya	48,000
Poatina	250,000
Total	807,550
King Island (diesel plant)	390

Approved construction will bring this total to approximately 1,240,000 kW by 1974. The number of ultimate consumers at 30 June 1965 was 131,593.

New capacity

The Hydro-Electric Commission is engaged on a construction programme which comprises the Lower Derwent Power Development and the Mersey-Forth Power Development. In the first-named a three-stage development is under construction below Catagunya on the River Derwent. With dams and associated power stations Repulse, Cluny and Meadowbank, completion of this project by 1967 will add a further 85,000 kW to the system, and it will also bring to an end the exploitation of the power potential of the River Derwent and its tributaries.

The Mersey-Forth Power Development is also under construction and is scheduled to be completed by 1974. In this development the Mersey River will be diverted westward to the Forth River by the construction of the Parangana Dam about half a mile below the junction of the Mersey and Fisher Rivers. Thence the flow will be conducted by a tunnel and penstock to Lemonthyme Power Station on the Forth River. The combined flow will be used for power generation at three power stations on the Forth River, situated at the foot of dams at Cethana, Devil's Gate, and Paloona. The Wilmot River will be diverted to the east by a dam through a tunnel to a power station on the Forth River upstream from Cethana Dam. The diverted flow of the Wilmot River will also be used to produce power at Cethana, Devil's Gate, and Paloona. A sixth power station will result from the development of the Fisher River, where a rapid fall from Lake Mackenzie on the plateau to the Mersey River enables a head of some 2,100 feet to be exploited. The principal storage in the development, Lake Rowallan, will be situated on the upper Mersey River at Walters Marsh, and Rowallan Power Station will exploit the water released from this storage. Smaller storages will be provided by Lake Mackenzie and by Parangana, Wilmot, Cethana and Devil's Gate Dams. The six stages of the development are to be completed progressively between 1969 and 1974 and will add a total of 298,500 kW to the system.

The Commission is conducting extensive surveys and investigation of other schemes with a view to further construction after the completion of the present programme. Investigations are continuing into the very considerable resources as yet untouched, principally in the west and north-west of the State, and it is estimated that the potential which can be developed economically should ultimately harness 2,400,000 kW to the system.

Statistical Summary

The following table shows statistics for each State separately and for the six States combined for the year 1963-64. Statistics of the electricity supply industry for the years 1959-60 to 1963-64 are given in the chapter Manufacturing Industry. Particulars of the Snowy Mountains scheme are included under New South Wales in the following table.

CENTRAL ELECTRIC STATIONS, STATES, 1963-64

Particulars	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	Total
Generating stations—							
Government . . . no.	26	11		10	13	12	72
Local authority . . . "	10	8	51	8	38		115
Companies . . . "	14	10	1	11	43	3	82
<i>Total stations</i> . . .	50	29	52	29	94	15	269
Installed capacity of generators—							
Steam . . . '000 kW	2,615	1,303	834	657	300		5,709
Hydro . . . "	809	333	139		2	767	2,050
Internal combustion . . . "	71	26	34	12	80	1	224
<i>Total capacity</i> . . .	3,495	1,661	1,008	669	382	768	7,983
Persons employed(b) . . . no.	4,230	3,356	1,682	1,542	(a)	(a)	12,162
Value of output(c) . . . \$'000	128,051	71,095	37,851	21,697	(a)	(a)	291,220
Value of production(d) . . . "	54,774	44,905	18,888	12,452	(a)	(a)	194,020
Electricity generated(e) million kWh	13,859	7,888	3,493	2,547	1,318	3,414	32,519
Ultimate consumers(f) . . . no.	1,295,353	1,017,355	457,600	352,000	182,094	128,642	3,433,044

(a) Not available for publication; included in the total for Australia. (b) Average employment in generating station, over whole year, including working proprietors. (c) Value, at generating station, of electricity produced plus certain earnings. (d) Value added in the process of generation. (e) Total generated including that generated by factories for their own use. (f) Approximate figures supplied by the electricity authority in each State. An 'ultimate consumer' is a person, business, undertaking, etc., that has contracted to receive electric power from a public or private organization supplying this service. The number of ultimate consumers is not identical with the number of persons served with electricity because one ultimate consumer may represent three or four persons, e.g. in a household.

Commonwealth Territories

The electricity supply undertakings at Canberra in the Australian Capital Territory and at Darwin, Katherine, Tennant Creek and Alice Springs in the Northern Territory are operated by the Commonwealth Government.

Australian Capital Territory

The supply authority is the A.C.T. Electricity Authority, which took over the functions of the Canberra Electric Supply Branch, Department of the Interior, on 1 July 1963. Supply was first made available in Canberra during 1915 and was met from local steam plant. Connection to the New South Wales interconnected system was effected in 1929, and all requirements are now taken from this system. Locally owned plant consists of 4,000 kW of diesel alternators which are retained as a standby for essential supplies. The total number of ultimate consumers at 30 June 1965 was 25,090. During the year 1964-65 the bulk electricity purchased was 287,347,316 kWh and the system maximum demand was 77,900 kW.

Northern Territory

At Darwin, supply was established by the Town Council in October 1934, but during April 1937 responsibility for generation and supply was transferred to the Northern Territory Administration. The power station is now equipped with turbo alternators with a total capacity of 15,000 kW. Tenders were let during 1964 and 1965 for two additional 1,500 kW turbo alternators and boilers for installation at Stokes Hill, Darwin, power station. In addition, diesel generating plant of approximately 6,500 kW is available. A 66 kV transmission system is used. At Alice Springs the power station is equipped with a diesel generating plant of 3,600 kW capacity. Additional plant of 2,000 kW capacity is installed and a contract for another 2,000 kW set will be let early in 1966. At Katherine the power station is equipped with a diesel generating plant of 960 kW capacity with an additional 1,100 kW planned. The total number of ultimate consumers served in the Territory at 30 June 1965 was 6,641.

Papua and New Guinea

Papua and New Guinea Electricity Commission. Responsibility for the operation and establishment of the electrical undertakings in Papua and New Guinea is vested in the Papua and New Guinea Electricity Commission, whose headquarters are located at Port Moresby. The Commission came into operation on 1 July 1963, and assumed the functions and responsibilities previously vested in the Electrical Undertakings Branch of the Department of Public Works. The Commission, on its own behalf, operates the public supplies in the main centres of population and, on behalf of the Administration, operates the supply in the minor centres and patrol posts,

hospitals, agricultural establishments, etc., where the supply cannot be considered to be a fully commercial supply. It has also regulatory functions associated with the licensing of electricians and contractors, the control of franchise holders and the approval of appliances and electrical materials for use in the Territory. The Appliance Approval By-laws will be based upon complete reciprocity with the Australian approval authorities.

The generating capacity in the centres under the control of the Commission is as follows: Port Moresby—*diesel*, 3,720 kW, with an additional 480 kW under construction, *hydro*, 5,500 kW; Rabaul—*diesel*, 3,000 kW; Lae—*diesel*, 2,640 kW; Madang—*diesel*, 1,620 kW; Wewak—*diesel*, 870 kW, with an additional 520 kW under construction; Goroka—*diesel*, 500 kW under construction, *hydro*, 400 kW; Samarai—*diesel*, 300 kW, with an additional 150 kW under construction; Kavieng—*diesel*, 200 kW, with an additional 150 kW under construction; Kokopo—*diesel*, 80 kW. On behalf of the Administration, the Commission operates generating sets totalling some 4,200 kW distributed over 130 centres, with capacities between 5 and 150 kW. The townships of Wau and Bulolo are supplied by power generated by Bulolo Gold Dredging Limited, which operates hydro-electric plant of 5,500 kW capacity. Power produced by this plant is used mainly in the plywood mill and gold dredges at Bulolo. The number of consumers served by the Commission at 30 June 1965 was 9,000. The consumers in minor centres approximated 4,000.

Future development. The Commission has a policy to take increasing advantage of the hydro potential existing in the Territory. Stage 1 of the Sirinomu Dam on the Laloki River near Port Moresby is in operation ensuring a minimum river flow of 200 cusecs. Tenders have been let for the supply of three 6,000 kW generating sets, to be installed in an underground power station, which will take advantage of the fall in the Laloki River over the Rouna Falls. This station will have an ultimate capacity of 30,000 kW. It is planned to commission the station in January 1967.

Preliminary investigations have indicated the economics of developing the potential of the Upper Ramu River adjacent to Kainantu in New Guinea, to provide a regional supply to Lae, Madang, Kainantu, Goroka and Mount Hagen. The present planning is to provide a station designed for ultimate capacity of 48,000 kW, and for the installation of two 8,000 kW generators in the first stage. Some 400 miles of 66kV and 132 kV transmission line will be constructed to bring power to the centres of consumption.

To meet the growing needs of the Territory, pending the commissioning of the hydro-electric power stations on the Laloki and Upper Ramu Rivers, the Commission is adopting the policy of installing skid-mounted diesel generating sets of a capacity which will permit their transfer at a later date to other growing centres. Trends indicate that a total of five 500 kW sets will be needed at Port Moresby. These will later be transferred to Lae and Madang.

Extensive investigations have been made to locate a suitable source of hydro-electric power to supply the township of Rabaul and the quickly developing area along the Gazelle Peninsula. However, the geological reports on those sites so far investigated have not been encouraging, and at present no firm proposal has been put forward. Several small hydro-electric installations are in service or are in process of construction to serve isolated centres. These are—Aiyura Agricultural Station—30kW; Mount Hagen—120 kW; Mendi (at tender stage)—200 kW; Tapini (under construction)—30 kW. The Commonwealth Department of Works has a Stream Gauging Section and maintains records of many of the main rivers in order to provide material for future investigations into some of the major hydro-electric potential which exists in the Territory.

In 1950 the Commonwealth Government joined with the British Aluminium Co. Ltd. of London to form a company, New Guinea Resources Prospecting Co. Ltd., to locate and develop large capacity hydro-electric schemes in New Guinea (the Commonwealth Government later sold its interest). The company carried out very extensive investigations into the rivers of the Gulf of Papua and, in particular, into the Purari River.

CHAPTER 7

WATER CONSERVATION AND IRRIGATION

RESOURCES, UTILIZATION AND NATIONAL AND INTERSTATE ASPECTS

Official Year Book No. 51, pages 228-31, contains a description of recent developments in the measurement of Australia's water resources. For information concerning general, descriptive and historical matter *see also* Year Book No. 37, pages 1096-1141.

For further details on geographical and climatic features determining the Australian water pattern, *see* the chapter Physiography; on water supply and sewerage in metropolitan areas, cities and towns, the chapter Local Government; and on the generation of hydro-electric power, the chapter Electric Power Generation and Distribution, of this issue.

A series of maps showing the location of major dams and reservoirs and the various irrigation schemes operating in each of the States may be found on pages 259-65 of Year Book No. 46, and a map showing the extent of known artesian basins throughout Australia is shown on page 273 of Year Book No. 48.

Water resources and their utilization

Surface supplies

An assessment of Australia's surface water resources has been made, based on measured and estimated stream flows within 197 river basins, as follows. The total average annual discharge of Australian rivers has been assessed at 280 million acre feet. This can be divided into 108 million acre feet measured discharge and 172 million acre feet estimated for areas where there are generally no gauging records. For the whole area of Australia (approximately 3 million square miles) only 1.9 million square miles are regarded as contributing to stream flow (i.e. there is practically no flow from: Western Plateau drainage division and from arid parts of other divisions).

The flow of Australian rivers is small in comparison with the flow of rivers in other continents, some examples of which, expressed as mean annual discharges in millions of acre feet, are: Amazon, 2,950; Mississippi, 465; Mekong, 405; Niger, 308; Volga, 205; and the ten major rivers of the United States of America in the aggregate, 900.

Major dams and reservoirs

The table below lists existing major dams and reservoirs, together with those under construction and those projected, at June, 1965. The list is confined to dams and reservoirs with a capacity of 100,000 acre feet or more. There are many others of smaller capacity in Australia.

MAJOR DAMS AND RESERVOIRS IN AUSTRALIA

Name	Location	Capacity (acre feet)	Height of wall (feet)	Remarks
EXISTING DAMS AND RESERVOIRS				
Eucumbene . . .	Eucumbene River, New South Wales	3,540,000	381	Part of Snowy Mountains Hydro-electric Scheme
Eildon	Upper Goulburn River, Victoria	2,750,000	260	Storage for irrigation and for the generation of electricity
Hume	Murray River, near Albury, New South Wales	2,500,000	142	Part of Murray River Scheme—storage for domestic, stock and irrigation purposes. Hydro-electric power also developed
Warragamba . . .	Warragamba River, New South Wales	1,670,000	379	For Sydney water supply. Also provides for generation of hydro-electricity and flood mitigation

(a) Useful storage only.

MAJOR DAMS AND RESERVOIRS IN AUSTRALIA—*continued*

Name	Location	Capacity (acre feet)	Height of wall (feet)	Remarks
EXISTING DAMS AND RESERVOIRS—<i>continued</i>				
Menindee Lakes Storage	Darling River, near Menindee, New South Wales	1,470,000	..	Part of Darling River Water Conservation Scheme for irrigation
Miena	Great Lake, Tasmania	a1,300,000	40	Storage for Poatina hydro-electric power station. (See also under Dams and Reservoirs under Construction)
Burrinjuck	Murrumbidgee River, New South Wales	837,000	264	Storage for irrigation and production of hydro-electric power
Somerset	Stanley River, Queensland	735,000	173	Brisbane-Ipswich water supply, flood mitigation and small hydro-electric power station
Lake Victoria	Murray River, near South Australian border, in New South Wales	551,700	..	Natural off-river storage for irrigation in South Australia. Storage improved by construction of embankments and control regulators
Lake Echo	Lake Echo, Tasmania	(a)412,200	60	Storage for Lake Echo, Tungatinah, Liapootah, Wayatinah and Catagunya hydro-electric power stations
Keepit	Namoi River, near Gunnedah, New South Wales	345,000	177	For rural water supplies and hydro-electricity, generation
Arthur Lakes	Source of Lake River, near Great Lake, Tasmania	(a)343,000	50	Part of Great Lake hydro-electric power development
Waranga	Goulburn River, Victoria	333,400	..	Irrigation storage
Tinaroo Falls	Barron River, North Queensland	330,000	136	For irrigation purposes in the Mareeba-Dimbulah area
Glenbawn	Hunter River, near Scone, New South Wales	293,000	251	Part of Hunter Valley conservation work, for irrigation and flood mitigation
Rocklands	Glenelg River, Victoria	272,000	..	Part of Wimmera-Mallee domestic and stock water supply system
Clark	Derwent River, Tasmania	(a)253,400	200	Storage for Tarraleah, Liapootah, Wayatinah, and Catagunya hydro-electric power stations. (See also under Dams and Reservoirs under Construction)
Eppalock	Campaspe River, near Heathcote, Victoria	252,860	150	To supplement supply to Bendigo and for irrigation
Wyangala	Lachlan River, New South Wales	(b)245,000	200	Storage for domestic, stock and irrigation purposes and for generation of hydro-electric power. (See also under Dams and Reservoirs under Construction)
Tantangara	Murrumbidgee River, New South Wales	(a)193,000	148	Part of Snowy Mountains Hydro-electric Scheme
Avon	Avon River, New South Wales	173,800	232	Part of Sydney water supply
Glenmaggie	Gippsland, Victoria	154,300	100	Storage for irrigation
Lake St. Clair	Central Highlands, Tasmania	(a)154,200	..	Improved natural storage for Tarraleah hydro-electric power station
Wellington	Collie River, Western Australia	150,100	112	For supply of water to irrigation districts and to agricultural areas and country towns
Koombooloomba	Tully River, North Queensland	146,000	123	For hydro-electric and irrigation purposes
Serpentine	Serpentine River, Western Australia	144,000	171	For Perth water supply
Lake Brewster	Lachlan River, near Hillston, New South Wales	123,900	..	Storage of rural water supplies for the lower Lachlan
Cairn Curran	Loddon River, Victoria	120,600	..	Storage for irrigation
Upper Yarra	Yarra River, Victoria	110,000	270	For Melbourne water supply

(a) Useful storage only.

(b) Temporary reduced level.

PLATE 18

REVISED PER. 1968

PLATE 19

MAJOR DAMS AND RESERVOIRS IN AUSTRALIA—*continued*

Name	Location	Capacity (acre feet)	Height of wall (feet)	Remarks
------	----------	----------------------------	-----------------------------	---------

DAMS AND RESERVOIRS UNDER CONSTRUCTION

Miena	Great Lake, Tasmania	1,710,000	40	Miena Dam (<i>see also</i> under Existing Dams and Reservoirs) is at present being replaced by a new dam to increase storage for Poatina hydro-electric power station
Burrendong	Macquarie River, near Wellington, New South Wales	1,361,000	250	For rural water supplies, flood mitigation and possible hydro-electric power generation
Blowering	Tumut River, New South Wales	a1,300,000	370	For regulation of discharges from stations of Snowy Mountains Hydro-electric Scheme, primarily for irrigation but also for hydro-electric power generation
Wyangala	Lachlan River, New South Wales	1,000,000	270	Strengthening and enlarging of existing dam for increased water supply and hydro-electric power generation. (<i>See also</i> under Existing Dams and Reservoirs)
Clark	Derwent River, Tasmania	432,000	220	Enlarging of existing dam for increased storage capacity for Tarraleah, Liapootah, Wavatimah and Catagunya hydro-electric power stations. (<i>See also</i> under Existing Dams and Reservoirs)
Jindabyne	Snowy River, New South Wales	(a)314,000	225	Part of Snowy Mountains Hydro-electric Scheme
Wuruma	Nogo River, Central Queensland	157,000	120	For irrigation storage
Rowallan	Mersey River, North Tasmania	110,000	140	Storage for Mersey Forth power development
Eungella	Broken River, North Queensland	104,000	150	Provision of cooling water for Collinsville power station and for irrigation purposes

DAMS AND RESERVOIRS PROJECTED

Chowilla	Murray River, in South Australia, near Victorian border	65,000,000	41	Regulation of the lower Murray River
Ord River	Near Wyndham, Western Australia	3,500,900	200	For irrigation, generation of hydro-electric power and flood mitigation. (Additional 6,000,000 acre feet flood control proposed)
Maraboon	Nogoa River, Central Queensland	1,170,000	148	For irrigation and probable thermal power station
Buffalo (second stage)	Buffalo River, near Myrtleford, Victoria	800,000	260	For irrigation
Warkworth	Wollombi Brook, Hunter Valley, New South Wales	406,000	130	Flood mitigation and irrigation dam for the Hunter Valley
Mokoan	Winton Swamp, near Benalla, Victoria	300,000	35	To store flood flows in Broken River for irrigation
Talbingo	Tumut River, New South Wales	(a)130,000	530	Part of Snowy Mountains Hydro-electric Scheme

(a) Useful storage only.

(b) Subject to final survey.

Irrigation

For some brief remarks on the history of irrigation in Australia *see* issues of the Year Book prior to No. 39. Trends in irrigation practice in more recent years were described in Year Book No. 37, pag. 1099.

AREA OF LAND IRRIGATED, STATES AND TERRITORIES, 1960-61 to 1964-65
(Acres)

(a) Source: Water Conservation and Irrigation Commission. (b) Includes total area irrigated by licensed diversions, but details for individual crops, etc., (in 1964-65 271,104 acres), are not available. (c) Source: State Rivers and Water Supply Commission. (d) Incomplete, excludes area of rice irrigated. (e) See footnote (b) to New South Wales. (f) Not available separately; included in Other crops. (g) Not available for publication; included in Other crops. (h) Incomplete, see footnotes to individual States. (i) Includes vineyards. (j) Not available for publication; excluded from totals. (k) Included with Orchards.

Irrigation research

Comprehensive programmes of research and investigation are being pursued by State water and agricultural authorities and the Commonwealth Scientific and Industrial Research Organization, often in collaboration. Special attention is being given to the following: high water tables due to the application of water; surface accumulation of salt and other soil changes associated with irrigation; methods of applying water efficiently; soil treatments to improve the physical condition of irrigated heavy clay soils; the utilization of irrigated pastures by stock; growth problems affecting plants and trees; the prevention of evaporation from water storages; the potability of saline waters for stock; the de-salting of brackish waters; and cloud-seeding over catchments.

Irrigation is studied by the Commonwealth Scientific and Industrial Research Organization at a number of its research stations and laboratories, the principal one being the Irrigation Research Laboratory at Griffith (New South Wales), where investigations are concerned with limiting the degradation of land by irrigation, improving the quality and range of irrigated crops, and assessing the amount of water required by irrigated crops and the most economical means of applying it. The crops being studied include citrus, cotton, wine grapes and lucerne. The Organization's Division of Plant Industry studies irrigated pastures at Deniliquin (New South Wales) and Canberra (Australian Capital Territory), and tobacco at Mareeba (Queensland). At Adelaide (South Australia) and Merbein (Victoria) the Horticultural Research Section is working on problems of the dried-fruit industry. The Division of Land Research conducts research on rice at the Coastal Plains Research Station, Darwin (Northern Territory), and on a number of irrigated crops, including rice, safflower, linseed and cotton, at the Kimberley Research Station (Western Australia). The Division has also carried out a number of hydrological investigations in connection with the utilization of underground water for irrigation. The Division of Soils and the Soil Mechanics Section are studying methods of reducing seepage from earthen dams, and take part in the examination of the physical properties of sediments beneath proposed dam sites. The Division of Soils is also looking at underground water movement and the water balance in the south-east of South Australia, and at the drainage and soil moisture regime of the irrigated swamps of the lower Murray River. The Division of Physical Chemistry is investigating methods of minimizing evaporation losses from water storages by the use of monomolecular layers.

The Irrigation Research and Extension Committee plays an important part in the agricultural activity of the Murrumbidgee Irrigation Areas. It is representative of the New South Wales Department of Agriculture, the Commonwealth Scientific and Industrial Research Organization, the Rural Bank of New South Wales, the Soil Conservation Service of New South Wales, the

Water Conservation and Irrigation Commission and the Rice Marketing Board of New South Wales, and certain farmers' organizations (including the M.I.A. Council of Horticultural Associations). Finance is provided by these authorities on an agreed basis. The objectives are: to enable the agricultural extension services to the farmers in the defined sub-region to be continued and developed; to provide a system for advising on local agricultural policy and organization; to provide means for farmer opinion to have due weight in the consideration of regional agricultural administration and policy; to achieve a unified approach to sub-regional extension in all branches of agriculture; to advise on the research needs of the sub-region and to co-ordinate the agricultural research of the various rural institutions working therein; to achieve close liaison between research and extension; and to conduct research in extension methods.

Preservation of catchments

Since water conservation commences on the catchments it is becoming increasingly recognized that anything which interferes with catchment efficiency affects the quantity of water available for all purposes. Active steps are being taken to counteract soil erosion, to conserve soil generally, and to minimize the effects of floods, overstocking, bush fires, and the destruction of vegetative cover. All States and the Commonwealth have initiated forestry policies which provide for reforestation and the preservation of catchments. In recent years efforts to counteract soil erosion have been intensified, and there is some evidence of a more unified approach to catchment, water, forestry, and land use factors regarded as parts of a single problem.

Sub-surface supplies

Much of Australia's underground water is obtained from artesian and sub-artesian basins and is used for stock purposes. These supplies are indispensable in most inland areas. The quality of the water ranges from usable to very saline. In inland areas a considerable amount of water has been tapped that is unusable because of its high salt content. Because of this, development of an economic desalting process would provide the interior with additional large quantities of usable water.

Considerable use is also made of sub-surface water, other than pressure water, from local storages, particularly in the well-settled areas. The water is used mainly for domestic and stock purposes. Compared with other countries with similar rainfall and climate, underground water is not used extensively for town and individual industrial supplies, but its use for these purposes is increasing.

Artesian and sub-artesian supplies. Pressure water (either artesian or sub-artesian), variable in quantity and quality, is obtainable in many parts of Australia, the various artesian basins extending over about half the continent. A map of Australia showing the extent of the known artesian basins appears on page 273 of Year Book No. 48.

The Great Artesian Basin, the most extensive in the world, underlies an area of approximately 676,250 square miles, comprising about 421,000 in Queensland, 135,000 in South Australia, 81,250 in New South Wales and 39,000 in the Northern Territory. The table on page 164 shows the principal defined water-bearing basins in Australia.

More than 18,000 artesian bores have been drilled within the Great Artesian Basin, while the daily free discharge from all bores continuing to flow in Australia has been stated as exceeding 350 million gallons, of which the loss by evaporation and seepage has been estimated at more than 90 per cent. Sub-artesian bores and wells throughout Australia number more than 200,000.

Artesian water generally is good stock water, but most is unsuitable for plant life, while in certain areas sub-artesian waters are suitable for all uses including irrigation. In the Eucla Basin and parts of the Murray and Pirie-Torrens Basins the water is of poor quality, being barely suitable for stock.

In common with other countries possessing artesian supplies Australia has been faced with the problem of flow diminution. It was recognized early that flows were diminishing as more bores were drilled, but it is now considered that while many of the bores will ultimately cease to flow, others will assume a perpetually steady rate of flow, corresponding with the average intake of water from rainfall absorbed by permeable outcrops, mainly sandstone and limestone. Diminution in flows from artesian bores has emphasized the need to eliminate wastage as much as possible, and investigations have been made regarding wasteful methods of distribution of artesian water by open channels or bore drains and the careless use of water. (For greater detail on this subject see Year Book No. 37, pages 1103-4.)

PRINCIPAL WATER-BEARING BASINS IN AUSTRALIA

Name	State	Geological age of chief aquifers	Approximate area	Depth to pressure water
Great Artesian . . .	Queensland, New South Wales, South Australia and Northern Territory	Mesozoic	square miles 676,250	feet Up to 7,000
Canning	Western Australia	Mesozoic-Palaeozoic	150,000	100 to 1,800
Murray	Victoria, New South Wales and South Australia	Miocene-Eocene . . .	109,000	100 to 1,300
Georgina (including Barkly and Daly)	Northern Territory, Queensland	Cretaceous, Ordovician, Cambrian and Upper Proterozoic	108,000	150 to 1,000
Eucla	Western Australia, South Australia	Pliocene-Miocene . . .	74,000	300 to 2,000
Carnarvon	Western Australia	Cretaceous, Permian	45,000	200 to 4,000
Perth	Western Australia	Recent, Jurassic . . .	21,000	200 to 2,500
Western District (Otway)	Victoria	Pleistocene-Upper Cretaceous	13,000	100 to 4,500
Basins of Ord-Victoria region	Northern Territory, Western Australia	Mainly Cambrian and Permian	12,000	200 to 1,000
Pirie-Torrens . . .	South Australia . . .	Recent, Pleistocene . .	9,000	Up to 600
East Gippsland . . .	Victoria	Pleistocene-Eocene . .	3,500	200 to 3,500
Adelaide	South Australia . . .	Recent, Oligocene . . .	1,100	200 to 600

Shallow groundwater. Shallow groundwater supplies are used in various parts of Australia for industry, irrigation, stock and domestic purposes. Two examples of the use of these shallow supplies for industrial and domestic purposes occur in New South Wales. The Hunter District Water Board pumps 15 million gallons a day for general use from the Tomago coastal sands near Newcastle, and at Botany, Sydney, private industry pumps 8-10 million gallons a day for its own use from similar sands. Exploration of the coastal sands north of the Tomago Sands has revealed a further potential production of 25 million gallons a day. Examples of the use of shallow groundwater supplies for irrigation include the Burdekin Delta and the Bundaberg area in Queensland. In the Burdekin Delta, which covers an area of some 200 square miles, the present extraction for irrigation from underground sources is in the region of 200,000 acre feet per annum (about 150 million gallons a day) and in the Bundaberg area it is approximately 50,000 acre feet per annum (about 37 million gallons a day).

In recent years there has been a marked increase, particularly in Queensland, New South Wales and Victoria, in investigation into the groundwater resources of river and coastal alluvium for irrigation and town water supplies.

National and interstate aspects

As the Commonwealth Constitution makes special reference to water rights, both the Commonwealth and the State Governments have an interest in the control and conservation of water. The main responsibility for control of water resources rests with the individual State Governments, but as political boundaries sometimes intersect river valleys and catchments, co-operation between Governments has been necessary to develop resources in certain cases. Specific examples of Commonwealth-State and interstate co-operation and approach are given in the following paragraphs.

Australian Water Resources Council

The Australian Water Resources Council was established by joint action of the Commonwealth and State Governments in 1962. The council comprises the Minister for National Development as Chairman, the Minister for Territories, and the Ministers for Water Supply in each State. It has as its principal objective the provision on a continuing basis of a comprehensive assessment of Australian water resources and the extension of measurement and research so that future planning can be carried out on a sound and scientific basis.

An important factor is that the Council is not concerned with particular works projects, normally the responsibility of the States or the Commonwealth, for which there are established channels, such as the Premiers' Conference and Loan Council, for the exchange of views and allocation of funds.

Assisting the Council is a Standing Committee of senior officers from Commonwealth and State water authorities, and there are a number of committees advising the Standing Committee,

namely: Water Research and Education Steering Committee, Technical Committee on Surface Water, Technical Committee on Underground Water, Advisory Committee on Hydraulics Laboratory Facilities and several *ad hoc* panels.

The Water Resources Council published, early in 1965, a *Review of Australia's Water Resources (Stream Flow and Underground Resources)* 1963. Among important matters receiving attention the more urgent include the recommendation of accelerated programmes of stream-gauging and underground water investigations.

In 1964 Australian Governments adopted an accelerated programme of stream-gauging (surface water measurement) to extend over the next ten years. They have also recognized the need for a continuous programme of underground water investigations. Under the *States Grants (Water Resources) Act* 1964 the Commonwealth Government grants financial assistance to the States in connection with the measurement and investigation of their water resources. This means that \$3,692,000 of additional funds (a sixty per cent increase on current rates of expenditure) relative to these programmes could be made available over the three years to 1966-67.

All authorities represented on the Council and its committees have agreed to work towards a common, nation-wide system of recording hydrologic data in a digital form suitable for rapid analysis by computer. The Council is also giving attention to the extent to which particular kinds of water research, and specialized training of research workers, can assist in bringing about the comprehensive water resources assessment envisaged as the Council's objective.

Murray River scheme

The Murray River and its tributaries form the largest river system in Australia. The catchment is approximately 408,000 square miles, or one-seventh of the area of the Australian continent, comprising five-sixths of New South Wales, over one-half of Victoria, one-sixth of Queensland and one-fortieth of South Australia. The Murray proper is 1,600 miles long. Its main tributaries are the Darling (1,700 miles), the Murrumbidgee (980 miles), and the Goulburn (350 miles). The average annual flow of each of the chief contributory streams is as follows: Upper Murray, including the Mitta Mitta and Kiewa Rivers, 3,820,000 acre feet; Darling River, 2,820,000 acre feet; Goulburn River (including Broken River), 2,580,000 acre feet; Murrumbidgee River, 2,050,000 acre feet; and Ovens River, 1,266,000 acre feet. Irrigated production in the Murray River Basin is mainly grapes for wine, dried fruits, fresh fruits, rice, vegetables, dairy produce, wool, and fat lambs.

River Murray Waters Agreement. For a brief summary of the historical events leading up to the River Murray Agreement (1915) by the Governments of the Commonwealth, New South Wales, Victoria, and South Australia, see issues of the Year Book prior to No. 39. Under the Agreement construction works are carried out by the States (which are also responsible for maintenance) subject to the approval and direction of the River Murray Commission. The Agreement provides that the minimum quantity of water to be allowed to pass for supply to South Australia in each year shall be sufficient to maintain certain specified flows in the lower river varying from 47,000 acre feet a month in the winter months to 134,000 acre feet a month in the four summer months of maximum demand—the total amounting to 1,254,000 acre feet over twelve months. The flow at Albury is shared equally by New South Wales and Victoria, and each of these States has full control of its tributaries below Albury, subject in each case to the fulfilment of the South Australian allocation. For a brief outline of the operation of the Agreement prior to 1949, see Year Book No. 40, page 1065, and earlier issues.

At a conference of Ministers held in 1949 to consider the diversion of the Snowy River it was decided that, by diversion of streams in the Snowy Mountains area, an average of approximately 440,000 acre feet per annum would be added to the Murray River (see Snowy Mountains Hydro-electric Scheme, page 144) and that increased storage should be provided in order to give additional regulation of the Murray River itself as well as to provide for regulation of the diverted waters. Hydro-electric potentialities would also affect the size of the storage.

The River Murray Commission investigated the position and subsequently recommended to the contracting Governments that the River Murray Waters Agreement be amended to provide for enlargement of the Hume Reservoir by 500,000 acre feet to 2,500,000 acre feet. A conference of Ministers in 1954 agreed to the enlargement, and it was also agreed that the Commission should be given power to construct regulators and to carry out such other work on the Murray River between Tocumwal and Echuca as it considered necessary to reduce the losses from the regulated flow in that stretch of the river. The amended Agreement was ratified in the Parliaments of the Commonwealth and the three States and was proclaimed on 7 April 1955. In view of the proposed diversions by the Snowy Mountains Authority to and from the Murray River, and for other reasons, amendments to those sections of the River Murray Waters Agreement dealing with

the distribution of the waters of the Murray were considered desirable. Following ministerial conferences, amendments were ratified by the four Parliaments concerned, and came into force on 6 November 1958.

Further amendment of the Agreement to provide for the construction of a storage of approximately 5,000,000 acre feet capacity at Chowilla in South Australia was ratified by legislation in the Commonwealth and State Parliaments and came into force on 30 April 1964. The dam will be located some six miles downstream from the border between Victoria and South Australia, and will consist of concrete outlet structures and a bank forty-one feet high across the flood plain. The overall length of the dam will be three and one-third miles, and the lake formed behind it will extend to Wentworth Weir, a distance of about 120 miles by river.

As a temporary measure, to assist in drought mitigation pending completion of the Chowilla reservoir, it has been agreed that portion of the waters in the Menindee Lakes storage will be made available to the Commission for allocation between the States of New South Wales, Victoria and South Australia. The arrangement, to operate for a period of seven years from 1 January 1963, was approved by the *Menindee Lakes Storage Agreement Act 1963*.

The quantity (in acre feet) of water diverted during 1964-65 from the Murray and its tributaries for irrigation and other purposes was as follows: New South Wales, 2,115,000; Victoria, 2,555,000; South Australia, 291,000; a total of 4,961,000 acre feet.

River Murray works. One of the major works of the Murray River scheme is the Hume Reservoir, situated just below the junction of the Murray and Mitta Mitta Rivers, ten miles above Albury, forming a lake of 56,000 acres. The design comprises a mass concrete spillway and outlet works extending for 1,000 feet, and an earthen embankment 142 feet high extending for 4,000 feet across the river flats, the length of the total structure being approximately one mile. Work on the enlargement of the reservoir to its approved capacity of 2,500,000 acre feet was completed in 1961.

The Yarrawonga Diversion Weir, which was completed in 1939, raised the river level so that water could be diverted by gravitation into main channels constructed on either side of the river. Between the Yarrawonga Weir and the Murray mouth, thirteen weirs and locks have been built. Two flood diversion weirs have been constructed on the Murrumbidgee—one between Hay and the Lachlan junction and the other below the Lachlan junction.

The Mulwala Canal, supplied from the Yarrawonga Weir, has an off-take capacity of 2,500 cubic feet a second, servicing 1,800,000 acres of land in New South Wales. The Yarrawonga Channel, on the Victorian side, has an off-take capacity of 1,250 cubic feet a second, serving 300,000 acres. Not all of this area is irrigated.

Adjoining the river in New South Wales, and 35 miles from the Murray-Darling junction, Lake Victoria storage, with a surface area of 27,670 acres, was completed in 1928. The water released from Lake Victoria is used by the South Australian settlements. The inlet channel to Lake Victoria was enlarged in 1957 to permit greater diversion of periodical flood flows of short duration.

Five barrages across channels near the Murray River mouth connecting Lake Alexandrina with the sea were completed in 1940 to prevent ingress of salt water to Lakes Alexandrina and Albert and to the lower river, thereby increasing the productivity of adjacent lands. The structures maintain a sufficiently high level for 50 miles up river to permit watering by gravitation of a considerable area of reclaimed river flats. The total distance across the barrages and intervening islands is 15 miles.

In addition to the works carried out under the auspices of the Commission, the separate States have constructed thousands of miles of distribution channels and have provided a number of storages on the tributaries, thereby contributing very materially to the large amount of irrigation development in the Murray Basin. The main storages are: New South Wales—Menindee Lakes Storage (Darling), Burrinjuck (Murrumbidgee), Keepit (Namoi), Burrundong (Macquarie), and Wyangala (Lachlan); Victoria—Eildon (Goulburn), Waranga (Goulburn), Eppalock (Campaspe), and Cairn Curran (Loddon). Details of these and other State works on Murray tributaries will be found in the sections dealing with State systems. No storages exist on the Murray in South Australia at present, but the construction of a large storage at Chowilla is proposed (*see above*).

New South Wales-Queensland Border Rivers Agreement

The catchments for the border streams of New South Wales and Queensland (2,000 square miles) extend to the granite areas in the vicinity of Tenterfield (New South Wales) and Stanthorpe (Queensland), and elevation rises to 3,000 feet. Average rainfall is 30 inches. The catchments and the areas suitable for irrigation are approximately equal in each State. Climatic conditions are such that from April to October it is necessary to supplement rainfall by irrigation to stabilize

and increase production. The capacity of the area to grow lucerne and tobacco under irrigation has already been demonstrated. Other possible development of the area includes irrigation of cotton, root crops, cereals, and citrus fruit, and expansion of the fat stock industry.

The New South Wales-Queensland Border Rivers Agreement came into effect on 1 July 1947. The Agreement provides for the construction of certain works on those sections of the Severn, Dumaresq, Macintyre and Barwon Rivers which constitute part of the boundary between New South Wales and Queensland for the furtherance of water conservation, water supply and irrigation in those States.

The works to be constructed comprise a dam on the Dumaresq River at a site to be selected by the Water Conservation and Irrigation Commission of New South Wales (the constructing authority) to give a storage basin with a capacity as large as is reasonably practicable and not less than six nor more than twelve weirs as may be found necessary to meet the requirements of irrigation along the rivers. Provision is also made for the construction of not more than four regulators in the effluents from the barrier rivers and for the taking over of the existing weir on the Macintyre River at Goondiwindi and the existing weir on the Barwon River at Mungindi (the Irrigation and Water Supply Commission of Queensland is the constructing authority for new weirs and regulators). The cost of these works and of administration are to be borne by the States in equal shares. The Agreement further provides that the water discharge from the Dumaresq storage, whether by regulated or unregulated flow, shall be available to the two States in equal shares.

After unfavourable foundation conditions were disclosed at several dam sites on the Dumaresq River, investigations were extended to tributary streams, and superficially suitable sites located on Pike Creek and the Mole River. A geophysical survey was made at each of these sites and preliminary comparative estimates were prepared to determine the relative economy of providing one large storage at Mingoola or two smaller storages on the tributaries. Following exploratory drilling of the tributary sites, a report dealing with alternative storage proposals and possible amendments to the existing Agreement was submitted to the participating States. It was subsequently agreed by the State Governments that, at the appropriate time, the existing Agreement would be amended to include, *inter alia*, provision for the construction of storages on Pike Creek (Queensland) and the Mole River (New South Wales).

Completed works include Bonshaw and Cunningham Weirs on the Dumaresq River, a weir and regulator on the Barwon River at the offtake of the Boomi River, and a low level weir to establish a pumping pool at Glenarbon on the Dumaresq River. The existing Goondiwindi and Mungindi Weirs are being maintained, operated and controlled by the Queensland Irrigation and Water Supply Commission. Until a dam has been constructed it is unlikely that any other weirs will be required.

Snowy Mountains Hydro-electric Scheme*

Following a comprehensive investigation into both the water and power potential of the Snowy River waters by a Technical Committee representative of the Commonwealth and the States of New South Wales and Victoria in 1947 and 1948, and the submission by the Committee of reports in 1948 and 1949, the Commonwealth Parliament passed the *Snowy Mountains Hydro-electric Power Act 1949* setting up an Authority to implement the proposals agreed upon.

The basis of the proposals is to impound the Snowy River waters at high elevations and, by diverting them into tunnels passing under the Alps, to use their potential power for the generation of electricity and then to discharge them into the Murray and Murrumbidgee River systems for use in the irrigation areas.

The scheme involves two main diversions, that of the Eucumbene, a tributary of the Snowy, to the Upper Tumut River, and that of the main stream of the Snowy River at Island Bend and Jindabyne to the Swampy Plain River. In addition, works required to make use of the waters of the Upper Murrumbidgee, the Upper Tumut, the Upper Tooma and the Geehi Rivers for power generation also provide additional regulation of these streams, and this makes more water available for irrigation. Details of the two trans-mountain diversions and the associated power works together with details of progress and construction are given in the chapter Electric Power Generation and Distribution (see pages 144-6).

An additional 500,000 acre feet of water per annum is now available for irrigation in the Murrumbidgee Valley. When all works are completed, it is estimated that the total gain to the Murrumbidgee by diversion and regulation will amount to 1,120,000 acre feet per annum and the total gain to the Murray will be 800,000 acre feet per annum. This additional water should be sufficient to provide irrigation for approximately 1,000 square miles of land, which is expected to result in a substantial increase in annual primary production.

* See also the chapter Electric Power Generation and Distribution, page 144. For more detailed information see special article by the Commissioner, Snowy Mountains Hydro-electric Authority (Sir William Hudson) which appeared in Chapter XXIX. Miscellaneous of Year Book No. 42.

International aspects

Australia maintains contact with international developments in water conservation and irrigation through its membership, since 1952, of the International Commission on Irrigation and Drainage. This Commission was set up in India in 1950 in order that the technical experience of all countries might be pooled for the benefit of all, and to promote the development and application of the science and technique of irrigation and drainage in the engineering, economic and social aspects. The Commission is constituted of National Committees of participating countries, and fifty-four countries, including Australia, have already been admitted to membership.

The Central Office of the International Commission is situated in New Delhi, India. Congresses, which are held every three years, have taken place in India, Algeria, the United States of America, Spain and Japan, in that order. The sixth Congress was held in India in January 1966.

An Australian National Committee was established following a meeting of representatives of Australian authorities held in Melbourne in 1953. At that meeting it was decided, *inter alia*, 'that a National Committee should be formed and that the National Committee would consist of representatives of Government Departments, Statutory Authorities, firms and individuals actively interested in irrigation and drainage'. The Committee meets annually.

STATES AND TERRITORIES

The foregoing text deals with water conservation and irrigation in Australia generally and with international, national and interstate aspects. The following survey covers the local pattern of water resources and the steps taken by the State Governments to bring about their development. In the various States water policies tend to assume a distinctive and characteristic pattern closely allied with climatic conditions and specific local needs.

In Victoria almost every form of water scheme is in operation. In New South Wales major emphasis at present is on irrigation and stock development in the dry areas along the Murray and Murrumbidgee Rivers, though a substantial scheme of intensive irrigation is being conducted in the Murrumbidgee Irrigation Areas. In Queensland, up to the present, the predominant emphasis has fallen on water (mainly underground sources) for stock, and the development of small irrigation schemes in sub-humid and humid areas, especially to stabilize sugar production. Apart from regular irrigation practices along the Murray River, South Australian authorities are vitally concerned with reticulated supplies for rural areas and towns. Western Australia has developed unique rock catchments and piped supplies for agricultural areas and towns in dry districts. Tasmanian interest relates almost exclusively to hydro-electric generation. The Northern Territory is concerned primarily with stock supplies and the safeguarding of long stock routes.

New South Wales

On page 1110 of Year Book No. 37 information is given on the pattern of rainfall and the history of irrigation in New South Wales. (See also the chapter Physical Geography and Meteorology of this issue.)

Administration

The Water Conservation and Irrigation Commission of New South Wales consists of three members appointed by the Governor. The operations of the Commission cover water conservation, control of irrigation areas, the establishment, operation and maintenance of works for domestic and stock water supply, irrigation districts, flood control districts, sub-soil drainage districts, constitution of water trusts, the issue of licences for private irrigation, artesian and shallow boring, assistance under the provisions of the farm water supplies scheme, and river improvement works.

Under the Water Act, 1912-1955 the right to the use and flow and the control of water in all rivers and lakes which flow through, or past, or are situated within, the land of two or more occupiers, is vested in the Commission for the benefit of the Crown. A system of licences operates for the protection of private works of water conservation, irrigation, water supply, drainage, and prevention of inundation.

For particulars of the New South Wales-Queensland Border Rivers Agreement ratified by Acts of both States in 1947, see pages 166-7 of this chapter.

Schemes summarized

The bulk of irrigated land is along the Murray and its tributary the Murrumbidgee. Smaller areas are served by the Wyangala Dam, Lake Cargelligo and Lake Brewster on the Lachlan (a tributary of the Murrumbidgee), by Glenbawn Dam on the Hunter River, by Keepit Dam on the Namoi River, and by the Menindee Lakes Storage on the Darling River. None of the other rivers is regulated by large head storages, though weirs and dams have been provided for town supplies, etc. in many places. A head storage on the Macquarie River is nearing completion and construction of a dam has commenced on the Tumut River near Tumut. In addition, substantial use is made of artesian and sub-artesian water in pastoral areas.

New South Wales legislation provides for the constitution and control of various schemes having different characteristics and including irrigation areas, irrigation districts, water trust districts, flood control and irrigation districts, and river improvement districts. There are nine irrigation areas, although two of these, Yanco and Mirrool, are generally described under the one heading, namely, the Murrumbidgee Irrigation Areas. The Areas are: The Murrumbidgee Irrigation Areas, consisting of 451,263 acres served with water through a channel system stemming from the river at Berembded Weir; the Coomealla Irrigation Area of 34,672 acres, served by pumping from the Murray; the Curlwaa Irrigation Area of 10,393 acres, supplied from the Murray by pumping; the Hay Irrigation Area of 6,850 acres, supplied with water pumped from the Murrumbidgee; the Tullakool Irrigation Area of 18,006 acres, supplied from the Edward River by diversion at Stevens Weir; the Buronga (8,693 acres) and Mallee Cliffs (1,900 acres) Irrigation Areas, served by pumping from the Murray; and the Coleambally Irrigation Area (127,235 acres), served by diversion from the Murrumbidgee River. All these Areas are administered by the Commission, and details of the various schemes are given in the table on page 170.

The capacities of the main storages (in acre feet) are:

Darling—Menindee Lakes Storages (1,470,000);

Murray—Half share of Hume Reservoir, weirs and locks to Wentworth (1,361,420); Stevens Weir, Edward River (7,165);

Murrumbidgee—Burrinjuck Dam (837,000); Berembded Weir (10,000); Redbank Weir (7,360); Maude Weir (6,740);

Namoi—Keepit Dam (345,000);

Lachlan—Wyangala Dam (temporary reduced level 245,000); Lake Brewster (123,900); Lake Cargelligo (29,435); Jemalong Weir (2,200); and

Hunter—Glenbawn Dam (185,000 acre feet irrigation storage; 108,000 acre feet flood mitigation storage).

The total length of supply channels, drains, escape channels and pipe lines constructed by the Water Conservation and Irrigation Commission in New South Wales is 4,922 miles. This comprises 3,420 miles of supply channels (including main canals), 1,433 miles of drains and escape channels, and 69 miles of pipe lines.

Extent of systems and nature of irrigated culture

The table on page 170 shows the areas of the various irrigation systems and the areas irrigated in 1964–65 and corresponding particulars for the State as a whole during the seasons 1960–61 to 1964–65.

**AREAS OF SYSTEMS AND OF LAND IRRIGATED: NEW SOUTH WALES
1960-61 TO 1964-65**

(a) Excludes Flood Control Districts and some Irrigation Trusts, particulars for which are not available. (b) Citrus and deciduous; in 1964-65 deciduous amounted to 11,818 acres, of which 11,556 acres were in the Murrumbidgee Irrigation Areas. (c) Includes total area irrigated by Licensed Diversions, but details for individual crops, etc., are not available. (d) Includes lands outside irrigation areas supplied under special agreement. (e) Incomplete. (f) Details for individual crops, etc., are not available.

Irrigation Areas

Murrumbidgee. These areas, together with adjacent lands supplied under agreement, received 429,100 acre feet, or nearly a quarter of the total water (2,158,813 acre feet) allocated within the State for stock, domestic supply and irrigation. They are served by the Burrinjuck Dam on the Murrumbidgee, forty miles north-west of Canberra. The catchment above the dam is about 5,000 square miles. The river rises on the high plateau north of Mount Kosciusko where the average annual rainfall exceeds 60 inches. Flow for the irrigation areas and districts is supplemented by unregulated flow from the Tumut River below the dam. The dam also provides town supplies for Gundagai, Wagga, Narrandera, Hay, Balranald, and for towns served by the South-West Tablelands scheme.

Domestic and stock water and water for irrigation are supplied to the Irrigation Districts of Tabbita, Benerambah and Wah Wah, and the Flood Control and Irrigation District of Lowbidgee. Flood flows are relied on to serve the Lowbidgee district, and water is not released from the dam for that purpose. For the other undertakings, however, water is stored during the winter, fed by melting snows and spring freshets, and is released during the September-May irrigation season. It passes along the river channel to Berembed Weir, 240 miles westward, where it is diverted to the main canal with an off-take capacity of 1,600 cubic feet a second. The main canal has been completed to beyond Griffith, 106 miles from the off-take. Reticulation channels aggregate approximately 900 miles and drainage channels 880 miles. In addition, approximately 440 miles of supply channels run through irrigation districts adjacent to the Murrumbidgee Areas in which the water supply is operated and maintained by the Water Conservation and Irrigation Commission.

The Water Conservation and Irrigation Commission controls land transactions and water supplies for the Murrumbidgee Irrigation Areas only, and has no jurisdiction over land transactions in the adjacent irrigation districts, although it is responsible for the operation and maintenance of the water supply in these areas. Other local government services, including electricity and town water supply, are provided by Councils. Land is disposed of by the Commission by purchase or under perpetual lease tenure or leased for short terms for grazing or cultivation. The area under occupation at 30 June 1965 was 414,929 acres, including 38,083 acres held for short lease grazing, agriculture, etc.

The land on which the Murrumbidgee Irrigation Areas and associated districts are situated originally comprised large sheep stations and was sparsely populated, but at 30 June 1965 its population was approximately 29,425, that of Leeton Shire being 10,725 and that of Wate Shire, 18,700. The principal products of the Murrumbidgee Irrigation Areas are wool, livestock for slaughtering, rice, citrus fruits, peaches and nectarines, grapes, tomatoes, peas, beans and root vegetables. Rice growing was initiated on the Areas in 1924 and has since become the most important crop. In a normal season the water supplied for rice represents about half the total delivered to the Areas.

Other Irrigation Areas. The Coomealla, Tullakool, Buronga, Mallee Cliffs, Hay, Curlwaa and Coleambally Irrigation Areas follow the same administrative pattern as the Murrumbidgee Areas—that is, land transactions are administered by the Water Conservation and Irrigation Commission which is responsible also for the operation and maintenance of works to supply water.

Irrigation Districts

These districts are set up under the Water Act, 1912–1955 for (a) domestic and stock water supply and (b) irrigation. They differ from water trusts in that the cost of the works is not required to be repaid over a period, but annual charges are made by the State for water supplied to land-holders.

Since the completion of the Hume Reservoir, several such districts have been established along the Murray to utilize the New South Wales share of the storage. Water is not available for the whole of the 5,000,000 acres adjacent to the Murray in New South Wales, and therefore the schemes are based on 'extensive' irrigation, that is, water rights are allotted to holdings on the basis that only a portion of each holding (one acre in three, five or ten, according to the district, etc.) will be irrigated, but additional water, when available, may be obtained by land-holders. 'Water right' means right to such a quantity annually of water, 12 inches deep, as will cover an area of one acre.

Water to serve Berriquin, Deniboota and Denimein Districts is diverted through a main canal which is approximately 100 miles long. Water for the Wakool Irrigation District and the Tullakool Irrigation Area is diverted from the Edward River at Stevens Weir, and a supplementary supply is also obtainable from Mulwala canal. At 30 June 1965 the total length of completed canals and channels in Berriquin District was 997 miles, comprising Mulwala canal 75 miles, Berrigan channel 22 miles, subsidiary channels 785 miles, escape channels 105 miles, and cross drainage channels 10 miles. Off-take capacity of the Mulwala canal is 5,000 acre feet a day. Wakool, with 418 miles of channel, contains 315 holdings, and the area developed by irrigation

includes about one acre in six of the total area. Sheep raising is the main industry. Considerable subdivision has occurred within the Berriquin District, and the proportion of the total area developed for irrigation is higher than in the case of Wakool. Sheep (including fat lambs), dairying and wheat growing are the main industries.

Water Trust Districts, Irrigation Trusts and Flood Control and Irrigation Districts

The Water Act, 1912-1955 provides for the constitution of Trust Districts for domestic and stock water and irrigation, and empowers the Commission to construct, acquire or utilize necessary works. When the works are completed, they are handed over to trustees to administer. The trustees are elected by the occupiers of the land and act with a representative of the Commission. They are empowered to levy and collect rates covering the cost of the works repayable to the Crown by instalments and also the cost of operation and maintenance of the works. The rates are struck according to the area of land which benefits. The following are the water trusts, other than irrigation, as at present constituted (the area in acres of each district being shown in parenthesis): *Murray River*—Little Merran Creek (157,440), Bullatale Creek (68,320), Poon Boon (34,300), Minnie Bend Flood Prevention (2,190); *Murrumbidgee River*—Yanco, Colombo and Billabong Creeks (1,007,780); *Lachlan River*—Marrowie Creek (292,640), Torrigan, Muggabah and Merrimajeel Creeks (170,240), Ulonga (64,960), Micabil Weir (11,500), Condo-bolin West Weir (4,480); *Miscellaneous*—Great Anabranche of Darling River (959,184), Nidgerly Weir (46,880), Algdudgerie Creek (9,760), Collarenebri town water supply (117)—making in all a total area of 2,829,791 acres. Twelve of these trusts have been formed for the provision of water for domestic and stock purposes, one for a town supply and one for flood prevention.

Irrigation Trusts are established under the same Act and are administered by trustees in a similar way.

The Lowbidgee Provisional Flood Control and Irrigation District, the first of its kind, was constituted in 1945. Its purpose is to provide flood irrigation for pasture lands on the lower Murrumbidgee by water diverted from the Maude and Redbank Weirs. Another district, Medgun, near Moree in the north-west, is also in operation.

River, lake and farm water supplies

During recent years the numbers of licences and permits issued to individuals to draw water from rivers and lakes for irrigation have increased substantially, especially along the coastal streams in sub-humid districts where the value of supplementary irrigation is becoming more recognized as a means of stabilizing production in dry months. There has also been a considerable increase along the Murrumbidgee and Lachlan.

Under the Farm Water Supplies Act, 1946, technical advice and assistance, and also financial assistance, are made available to help individual farmers and groups of farmers to provide and improve water supplies for domestic, stock and irrigation purposes by means of wells, bores, excavated tanks, weirs or dams, flood and spray irrigation systems.

Underground water

Extensive use is made of artesian, sub-artesian, and shallow underground water. The Great Artesian Basin underlies an area of some 81,250 square miles in north-western New South Wales. Eighty-seven Bore Water Trusts and twelve Artesian Wells Districts have been constituted. Bore Trusts are administered in the same way as Water Trusts, but in Artesian Wells Districts the settlers maintain the drains. Bore Trusts and Artesian Districts cover 5,597,202 acres and distribute water through 3,673 miles of open earth drains. At 30 June 1965, 1,137 artesian bores had been constructed in the New South Wales section of the Basin. At that date 664 bores were flowing and were capable of producing about 62,500,000 gallons per day. Conservation measures control this to about 50,000,000 gallons per day. The total length of bore drains, including those for Trusts and Districts, is approximately 8,000 miles.

Of other structural basins of sedimentary rocks, e.g. Murray, Sydney, Oxley and Clarence Basins, the Murray is the largest and also the most important in that it affords stock water supplies over an extensive area of the south-western section of the State. Only a few of these bores flow, the remainder being sub-artesian. Good supplies for stock and, in some instances, small scale irrigation, are obtained from porous sandstone in the Moss Vale-Picton area, but the remainder has limited potential. Stock supplies are obtained from bores in the fringe zones of the Oxley Basin, but the centre of this basin lies under the Liverpool range. The Clarence Basin is relatively unimportant from a groundwater viewpoint, but stock supplies are obtained from some sections.

In other parts of the State the largest and best quality groundwater supplies are obtained from sands and gravels in the alluvium of the major rivers and their tributaries, particularly the western-flowing rivers, e.g. Lachlan, Macquarie and Namoi. Supplies of up to 80,000 gallons an hour are obtained from wells and screened bores in these areas and are used for irrigation

and town water supply. The Government is carrying out investigations to determine the groundwater potential of the alluvium of such valleys, particularly with regard to irrigation use, and a test-boring programme is in progress in the Lachlan Valley. Coastal river systems have a much more limited potential in this regard, the main exception being the Hunter. Old sand dune areas along the coast provide large supplies of good quality water. However, since the soils of these areas are not suited to agricultural pursuits, exploitation has been largely confined to the Sydney and Newcastle areas. Initially a source of Sydney's water supply, the Botany sands are now utilized mainly by industry. The Tomago sands provide a considerable proportion of the Newcastle water supply.

The older rocks, which are mostly folded and jointed, are very variable in their groundwater potential and only rarely do they yield supplies sufficient and suitable for limited irrigation. Where suitable conditions obtain, they yield useful stock supplies, mostly at depths between 50 and 250 feet.

A license under the Water Act, 1912-1955 is required for all bores sunk in any part of New South Wales and details of over 20,500 bores and wells in the State are recorded. When assessed in relation to the geologic and topographic conditions of any particular area, such records provide valuable evidence of the groundwater potential and are thus of considerable benefit to landholders.

Future programme

The programme of development in hand includes the provision of additional dams and storages, diversion weirs, and flood mitigation and river protection works in various parts of the State. Construction of Burrendong Dam on the Macquarie River is nearing completion, and work has commenced on a dam at Blowering on the Tumut River. Legislation has been passed authorizing the construction of a flood control and irrigation dam at Warkworth in the Hunter Valley. The Hunter River development, of which Glenbawn Dam is an integral part, concerns an exceptionally fertile coastal valley, forming the hinterland to Newcastle, where the annual rainfall is not heavy and variations from month to month are considerable. This is the first coastal scheme initiated in New South Wales. At Wyangala Dam, on the Lachlan River, the fixed crest of the dam spillway has been lowered temporarily to enlarge the spillway for passage of greater floods. Construction has commenced on a new earth and rock-fill dam which will be built behind the present dam to give a storage of 1,000,000 acre feet. Within the new Coleambally Irrigation Area further development of farms has been carried out and water is being supplied by the new diversion weir at Gogeldrie. At 30 June 1965, 194 large area farms and 12 horticultural farms had been allotted

Victoria

Particulars of the rainfall pattern of Victoria were given on page 1117 of Year Book No. 37. (See also the chapter Physical Geography and Meteorology of this issue.)

Administration

Victorian Governments have been active in the development of country water supplies since the 1860's when major works to supply the Bendigo goldfields were undertaken. Local trusts to construct and operate waterworks under Government supervision were provided for in the *Water Conservation Act* 1881. Development under the trust system was greatly stimulated by the *Irrigation Act* 1886 which provided for the construction of national headworks by the State, and vested in the Crown the right to the use and control of all surface waters. By 1900 there were 33 irrigation trusts and 18 other rural water supply trusts, but the system of local control was then breaking down under financial difficulties.

The *Water Act* 1905 established the State Rivers and Water Supply Commission to take over the Irrigation Trust districts (except the still-existing First Mildura Irrigation Trust) and to exercise the State's functions in the further control and development of surface waters outside the metropolis. The Commission now supervises all private diversions from streams and directly administers irrigation districts covering 2,250,000 acres, rural waterworks districts covering 7,000,000 acres, drainage and flood protection districts covering 170,000 acres, and urban water supplies serving 200,000 people. It also supervises the activities of local urban water supply authorities supplying 600,000 people in more than 200 towns, as well as 80 local sewerage authorities and 25 drainage and river improvement authorities.

Works summarized

Since the State Rivers and Water Supply Commission began its operations in 1906 the capacity of storages under its control has been increased from 172,000 acre feet to 4,542,420 acre feet. In addition, Victoria has in effect a half share in River Murray Commission storages totalling 2,722,840 acre feet, bringing total capacity available to Victoria at 30 June 1965, to 5,903,840 acre feet. Most of the water used from these storages is for irrigation. The area irrigated has

increased from 105,000 acres in 1906 to 1,189,055 acres in 1964-65. Irrigation deliveries in 1964-65 totalled 1,859,173 acre feet. The value of irrigation production in 1963-64 was estimated at \$153,000,000, about one-fifth of Victoria's total rural production. Of the total irrigation production about one-fifth was from lands irrigated by 'private diverters' i.e., irrigators who are authorized to take water from streams, lakes, etc., but who do not come within the boundaries of an irrigation district.

Storages

Capacities of storages (in acre feet) at 30 June 1965 were as follows:

Goulburn System—Eildon, 2,750,000; Waranga, 333,400; total 3,104,100;

Murray System—half share of Murray storages, 1,361,420; Lake Buffalo, 19,500; total, 1,423,780;

Loddon System—Cairn Curran, 120,600; Tullaroop, 60,000; total, 266,450;

Campaspe River—Coliban storages, 62,730; Eppalock, 252,860; total, 315,590;

Wimmera-Mallee Systems—Rocklands, 272,000; total, 563,800;

Gippsland-Glenmaggie—154,300; total, 154,340;

Werribee-Bacchus Marsh—total, 34,900;

Mornington Peninsula—total, 17,640.

Nature of irrigated culture

The following table shows the areas irrigated in the various irrigation systems in 1964-65, and corresponding particulars for the State as a whole during the seasons 1960-61 to 1964-65.

AREA OF LAND IRRIGATED: VICTORIA, 1960-61 TO 1964-65

(a) Includes First Mildura Irrigation Trust. (b) Excludes private diverters in the Torrumbarry System, but includes all other private diverters along the Murray River.

Irrigation systems

Goulburn-Campaspe-Loddon. The principal storage for Goulburn waters is Lake Eildon, which was completed in 1956, submerging the original 306,000 acre feet Eildon storage completed in 1927. For the distribution of additional supplies available from Eildon and from other new storages on the Loddon and Campaspe rivers it has been necessary to undertake major enlargements in the distribution system by a long term programme of channel works which is still in progress. Deliveries have already increased from 395,000 acre feet in 1954-55 to 758,000 in 1964-65. Goulburn river water is diverted to the irrigation areas by gravitation from the pool

formed by the Goulburn Weir, near Nagambie, completed in 1890 as a State work. The East Goulburn main channel of 1,000 cusecs capacity supplies the areas around Shepparton. Two 1,500 cusec channels to the west convey water to the off-river Waranga Reservoir and supply part of the Rodney area through offtakes on the way. From Waranga Reservoir there are two main outlets, one supplying the western part of the Rodney area and the other, of 1,200 cusecs capacity, supplying the Waranga Western Main Channel, which runs more than 100 miles west across the Campaspe and Loddon valleys to Boort.

Flows in the Waranga western main channel are augmented by the injection of Campaspe water through a pumping station of 200 cusecs capacity near Rochester. Supply to the Tragowel and Boort areas is augmented by gravitational diversion of Loddon water.

The gross area of holdings in the Goulburn-Campaspe-Loddon systems is 1,351,460 acres. The main products are dairy produce, fruit, wool and fat lambs. Annual production of deciduous canning fruits in the eastern part of the system is about two-thirds of Australia's total.

Murray River system. Water is diverted from the Murray by gravity at the Yarrawonga Weir for the Murray Valley Irrigation Area and at the Torrumbarry Weir for the Torrumbarry irrigation system which extends to Swan Hill. Holdings in the Murray Valley area total 301,818 acres, devoted mainly to dairying, fat lambs and canning fruit. Holdings in the Torrumbarry system total 365,199 acres, devoted mainly to dairying and the production of fat lambs, with a concentration of vineyards, orchards and market gardens around Swan Hill.

Downstream from Swan Hill there are five districts supplied by pumping: the district of the First Mildura Irrigation Trust, and the four Commission districts of Nyah, Robinvale, Red Cliffs and Merbein. These districts together serve 80,763 acres, producing mainly dried vine fruits, with some citrus fruit and table and wine grapes.

Southern systems. The Macalister district, covering 130,582 acres around Maffra and Sale, is supplied from the Macalister River, regulated by Lake Glenmaggie, and from the unregulated flow of the Thomson River. Dairy farming is the principal activity. The Bacchus Marsh and Werribee Districts, supplied from storages in the Werribee River only twenty miles west of Melbourne, cover 16,342 acres intensively developed for dairying and vegetables.

Wimmera-Mallee domestic and stock supply system

Storages in the Grampians in south-west Victoria ensure farm water supplies over an area of 11,000 square miles extending northward through riverless pastoral and cereal lands to the Murray. Farm dams throughout this region, which covers one eighth of the total area of the State, are filled once each year, in the winter-spring season, through the medium of 6,500 miles of Commission channels and 3,000 miles of private channels. Without this supply, occupation of the region would be extremely hazardous. Headworks storage capacity is now being increased from 563,800 acre feet to 627,400 acre feet by construction of Lake Bellfield. Forty-seven towns, with a population of 40,000, receive their supply from the same system. Near Horsham, which is close to headworks in the south, a supply is maintained for the irrigation of an area of 7,000 acres, mainly for dairying.

Drainage, flood protection and river improvement

The largest work in this category undertaken by the State Rivers and Water Supply Commission is the Koo-wee-rup-Cardinia flood protection district embracing 80,000 acres of a continuous depression along the seaboard of Westernport. Once useless, indeed a hindrance to communication, this area now yields primary products worth several million pounds each year.

By the *River Improvement Act* 1948, the formation of local river improvement and drainage trusts under the supervision of the Commission has been greatly facilitated and, since 1950, 24 such trusts have been formed. The importance of river improvement work is expected to continue to grow.

In 1963 the Dandenong Valley Authority was created, by special legislation, with jurisdiction over the whole catchment of the Dandenong Creek (300 square miles) for purposes of arterial drainage, river improvement and flood protection. The Authority will in due course take over the Commission's Carrum Drainage District.

Finance

The net capital liability of the Commission at 30 June 1965 for works under its direct control was \$252 million. Of this amount, \$168 million was expended for irrigation and \$24 million for rural, domestic and stock supplies, the costs being borne entirely by the State. The total liability for urban supply was \$40 million, shared about equally between the State and the districts concerned. The remaining \$20 million was for expenditure on flood protection and drainage districts (\$4 million), and items such as loan flotation expenses, miscellaneous surveys and investigations, and buildings, plant and stores (\$16 million).

Underground resources

Underground water. The investigation, exploration and survey of underground water resources in Victoria is carried out jointly by the State Rivers and Water Supply Commission and the Department of Mines. The Commission is concerned mainly with investigation of shallow waters in irrigation districts, while the Department covers all other work, including exploratory drilling to 5,500 feet. Underground water is the only available source of supply other than rain in some areas of the State. It is of particular importance in the western portions of the Wimmera-Mallee districts where annual rainfall ranges between 10 and 20 inches and there are no surface streams. Elsewhere underground water is used to supplement surface supplies and in places it may be the only developed source for town, industry, rural, domestic, stock or irrigation use.

The Wimmera and Mallee districts are situated over part of the Murray Basin where, to the west of the Wimmera River, Miocene marine limestones form an aquifer with water suitable for town supply and irrigation. It is used for this purpose at Kaniva, Murrayville and Nhill where yields between 10,000 and 60,000 gallons per hour may be obtained. North of Murrayville and Underbool the water in the limestones is more saline and in the extreme north it is too saline even for stock use. East of the Wimmera River to Lake Tyrrell and north of Swan Hill the marine rocks consist of marls and silts with calcareous beds capable of yielding saline water at less than 1,000 gallons per hour. These aquifers are not developed. Lower Tertiary swamp, deltaic and estuarine carbonaceous and ligneous sediments underlie and extend eastward of the marine rocks. Sands in these sediments contain water of greater or lesser salinity than that of the marine deposits. Yields from the estuarine aquifers are not known, but exploration and testing by the Victorian Mines Department are in progress. Overlying the marine and estuarine sediments there are aquifers consisting of Pliocene to Pleistocene terrestrial, fluvial and lacustrine sands and sandstones. Yields from these rocks are limited to windmill supplies. The quality is variable and in the north-west highly saline. East of the Avoca River the deposits of the Murray Basin are entirely non-marine and consist of terrestrial, fluvial and lacustrine gravels, sands, silts and clays to a maximum depth of about 600 feet. Water from the sands and gravels is of variable quality. In places it is too saline for stock use, but the quality improves towards the east and it is used for town supply at Katunga and Wangaratta, and at Barnawartha, Bright and Chiltern where the deposits partly fill valleys in the bedrock of the highlands.

In the Otway Basin in the south-west of Victoria the Upper Cretaceous-Lower Tertiary sands have been developed for underground water supplies to Portland, Heywood, Port Fairy, Peterborough, Port Campbell and Timboon. In the central (Warrnambool and Koroit) and northern parts of the basin the waters are suitable only for stock. In the areas of better quality water the depth of the aquifers (2,000-4,500 feet) renders their development uneconomic except for town supply and industry. Oligocene to Miocene marine limestones occur in the south-central and western portions of the basin. The salinity of the water in the limestones is often less than that of the water in the sands beneath, but the limestone waters are generally hard. They are used in part to supply Portland and also for irrigation. Small underground water supplies are obtained from the Pliocene-Pleistocene deposits of ferruginous sands, marine sandy limestones and dune limestones in the west and from the dune limestones along the coast between Warrnambool and Portland.

In and around the structural depressions of the Port Phillip and Western Port Bay districts there are several small areas where underground water of good quality occurs. Among these are the Lower Tertiary sand aquifers at Anglesea which have not been developed as yet (1965); the Middle Miocene sands, shelly silts and limestones which have been developed for market garden watering south-east of Melbourne; and the Pleistocene sands and shelly silts on the Nepean Peninsula where the water is used for market gardens and pasture.

Irrigation. Brackish waters in the Eocene to Oligocene sands under the Werribee Plains have some potential for industrial use. The Western Port area has yielded large supplies of water from Tertiary marine and non-marine sands, and from fractured fresh basalt in some areas. Extensive use is made of water from the sands for irrigation of pastures and cash crops in the Koo-wee-rup Swamp area. Yields of up to 30,000 gallons per hour are common. In the Lang Lang area the water is used for town and industrial supply, but not as yet for irrigation. Stock supplies with one or two minor exceptions are available at shallow depth over the whole of the area.

The Gippsland Basin contains two main groups of water-bearing rocks, viz. the Lower Tertiary coal measures and marine sands, and the Upper Tertiary sands and gravels. Water from the Lower Tertiary rocks is frequently high in bicarbonate and therefore soft. It is used for irrigation at Bairnsdale and Yarram, and some abnormally hot water is used for industrial purposes at Maryvale. The Upper Tertiary rocks yield large quantities of very good quality water, mainly in the east-central part of the basin, where it is used extensively for irrigation. Stock supplies are generally available at shallow depth in rocks of various types and ages.

The pre-Upper Cretaceous sedimentary and igneous rocks of the highland areas generally yield small supplies of water suitable for stock. Exceptions to this are the Devonian sandstones of the Grampians where large supplies of good quality water may be obtained, and the better quality waters suitable for domestic use from the higher rainfall area of the Eastern Highlands of the State.

The Lower Tertiary volcanic rocks, mainly basalts, yield large supplies, up to 15,000 gallons per hour where the basalt is well jointed and little weathered, but only small quantities where the rocks are weathered. Where yields are large as in the west and south-west of Gippsland and on French Island the water quality generally is suitable for irrigation, but on the Bellarine and Mornington Peninsulas, Phillip Island and at Cranbourne the small yields of water are suitable for limited stock use only. Pliocene to Pleistocene volcanic rocks, basalts with tuffs and agglomerate occur extensively over the Werribee Plains and Western District and in valleys in the western half of the Central Highlands. Yields from these rocks are variable, the maximum recorded being 16,000 gallons per hour. From the weathered basalt yields are usually less than 1,000 gallons per hour. The quality is generally suitable only for stock but may be suitable for irrigation. Under-ground water derived from the later basalts of the stony rises west of Colac usually has high nitrate content.

Future programme

In July 1963 the Government announced plans for a long-term storage programme to cost a total of \$75 million between 1963-64 and 1973-74. Three storages, namely Chowilla Reservoir (a River Murray Commission Storage), Lake Buffalo, and Lake Mokoan, appear in the list of dams and reservoirs projected in the table on page 161.

Other works are:

- (a) Lake Bellfield on Fyans Creek (Grampian Mountains) to supplement the supply to the Wimmera-Mallee system (*see* page 175);
- (b) An extensive channel enlargement and remodelling project in the Goulburn system (*see* page 174);
- (c) Tarago Reservoir on the Tarago River to supplement supply to the Mornington Peninsula area;
- (d) Nillahcootie Reservoir on the Broken River below Mansfield, to be used for irrigation;
- (e) Lake Merrimu on Coimadaí Creek, to be filled mainly from the Lerderderg River and Goodmans Creek, and used to supplement irrigation water supplies at Werribee and Bacchus Marsh; and
- (f) Corop Lakes, two natural lakes near Rochester to be used as an adjunct to Waranga Basin for off-river storages for irrigation.

Queensland

Particulars of the rainfall pattern of Queensland are given in Year Book No. 37, page 1122. (*See also* the chapter Physical Geography and Meteorology of this issue.)

Administration

In Queensland, the right to the use and flow of non-tidal surface water contained in, or flowing through or past, the land of two or more occupiers, and all artesian and sub-artesian water vests in the Crown. Subject to certain reservations for local authority and other purposes, such water is controlled by a Commissioner of Irrigation and Water Supply. Private diversions from watercourses, artesian wells and, in certain declared areas, sub-artesian wells, are subject to licence by the Commissioner. Dams and weirs are constructed by the Commissioner to safeguard supplies in streams from which private pumping for irrigation takes place, and also to provide water for irrigation areas established by the Commissioner. For a description of the development of the present administration *see* Year Book No. 42 and earlier issues.

Irrigation—extent, systems and methods

In Queensland sugar cane represents in value nearly half the total agricultural production of the State. In 1964-65, 20 per cent of the sugar cane acreage was irrigated, representing 43 per cent of the total area irrigated in the State. Tobacco is another major crop, and the area irrigated during 1964-65 represented 96 per cent of the total plantings.

Most irrigation in Queensland is undertaken by farmers operating under licence to obtain water by pumping from streams or from natural underground storages. Over half the total area irrigated in Queensland is supplied from underground water. The main areas where these supplies have been developed extensively are the Burdekin Delta (Ayr-Home Hill area), the Pioneer Valley, Callide Valley, Lower Burnett (Bundaberg area), Lockyer Valley and Redland Bay.

Furrow irrigation is used for cotton, sugar cane, some tobacco, and miscellaneous row crops. Spray irrigation is used widely on fruit, vegetables, fodder crops, and the major part of the tobacco crop. Irrigation is required round-the-year for most of Queensland, as the timing and duration of the summer 'wet' season are too variable to enable a definite non-irrigation season to be fixed, as can be done in southern States.

AREA OF LAND IRRIGATED: QUEENSLAND, 1960-61 TO 1964-65

Season and division	No. of irrigators	Area irrigated (acres)							
		Vegetables	Fruit and vineyards	Sugar cane	To-bacco	Cotton	Other crops	Pastures	Total
1960-61	7,932	29,698	5,758	68,987	13,789	2,675	50,139	15,651	186,697
1961-62	8,433	32,139	6,537	74,541	13,671	2,040	59,947	20,544	209,419
1962-63	8,562	34,258	7,020	81,506	15,801	2,206	58,029	22,341	221,161
1963-64	8,930	36,329	7,315	98,204	15,079	2,717	65,078	27,360	252,082
1964-65									
Southern Queensland	6,510	29,071	6,910	38,944	2,450	2,073	55,709	22,289	157,446
Central Queensland	668	1,119	277	210	22	2,033	12,336	2,747	18,744
Northern Queensland	2,132	4,830	905	81,402	10,698	42	3,589	3,188	104,654
Total, 1964-65	9,310	35,020	8,092	120,556	13,170	4,148	71,634	28,224	280,844

Areas under private irrigation

In two important areas irrigation has been developed by private pumping. In the Lockyer Valley, 30 miles west of Brisbane, about a third of an estimated total irrigable area of 60,000 acres is under irrigation. The valley comprises an extensive flood plain where heavy black alluvial soil thickly overlies gravels and sands carrying water suitable for irrigation, which is necessary for continuous agricultural production. A number of small weirs with a total storage of 1,340 acre feet have been constructed on Lockyer Creek by the Irrigation and Water Supply Commission; these also tend to augment and conserve underground supplies. The Lockyer Valley produces a substantial proportion of Queensland's onions, potatoes, pumpkins, lucerne, hay, green fodder, maize and dairy products.

The other important area is the fertile delta region of the Burdekin River, where the irrigated area is over 56,000 acres. The delta has ground water supplies at shallow depth, and these have been tapped to obtain supplies in the dry periods of the year. Sugar is the main crop irrigated, together with citrus fruits, pineapples, vegetables and tobacco. In 1940 the Burdekin River Trust was formed to safeguard the sugar areas of the delta from erosion and floods, and an irrigation research station studies the development of pastures and crops. In May 1965 the North Burdekin Water Area and Water Board were constituted for the purpose of utilizing part of the flow of the Burdekin River to replenish the subterranean water supplies of the northern part of the Burdekin Delta. A similar proposal for the South Burdekin Delta is at present under consideration.

Government irrigation areas and projects

The Irrigation and Water Supply Commission has constructed and operates four dams and forty-two weirs with a storage capacity of 529,626 acre feet. Water from these storages supplies the following four irrigation areas operated by the Commission and supplements numerous streams from which pumping for private irrigation takes place.

Mareeba-Dimbulah Irrigation Area. In 1952 an irrigation undertaking was established to assist tobacco production in the valleys of the Walsh and Barron Rivers. Tinaroo Falls Dam on the Barron River (330,000 acre feet) has been completed, and construction is proceeding on irrigation works to serve 78,000 acres (comprising 910 tobacco farms and 180 mixed farms) of which 49,000 acres will be irrigated. One hundred and sixty-five miles of channels have been constructed, and irrigation water from the dam is available to 549 farms. Tinaroo Falls Dam is also providing a regulated flow of water in Barron River at Kuranda for the generation of hydro-electric power at Barron Falls.

Burdekin River Irrigation Area. The Clare, Millaroo and Dalbeg sections of the Burdekin River Irrigation, Hydro-electric and Flood Mitigation Project have been completed. Located from twenty-five to sixty-five miles from the mouth of the Burdekin, these areas comprise 18,862 acres and obtain water from central pumping stations drawing from the river. Two storages of 7,670 acre feet and 2,550 acre feet capacity have been constructed about seventy-nine miles and seventy-two miles respectively from the mouth of the river. Originally developed for tobacco production, the growing of sugar cane is expected to predominate in future years.

Dawson Valley Irrigation Area. A scheme for the development of the Dawson Valley providing for the irrigation of 70,000 acres was inaugurated in 1923, but work was discontinued after three weirs had been built in this area. Their total storage is 10,280 acre feet, covering about sixty-one farms (4,894 acres) in production. Dairy products and cotton account for the major part of the production from irrigated areas. Further development of the scheme is dependent on the provision of additional storage works.

St. George Irrigation Area. This area comprises nineteen farms, of which a maximum of 3,275 acres can be irrigated from a weir on the Balonne River (8,200 acre feet). Fat lambs, wool, and fodder and cotton crops are the main products.

Several additional projects have recently been completed and work is in progress on others. Moogerah Dam (Warrill Valley Project) on Reynolds Creek (73,000 acre feet) is capable of serving some 11,000 acres of the Warrill Valley, and will provide water for the thermal power station now under construction at Swanbank, near Ipswich. Borumba Dam (Mary Valley Project) on Yabba Creek (34,500 acre feet) makes water available to maintain the town water supply for Gympie and allows extension of the area irrigated from the Mary River to about 18,000 acres. Callide Dam (37,800 acre feet) on Callide Creek, 9 miles upstream from Biloela, will provide cooling water for the Calcap power station and compensation water for maintenance of underground supplies along Callide Creek; provision has been made to increase the storage capacity to 87,000 acre feet. Leslie Dam (Upper Condamine Project), nearing completion on Sandy Creek, will have an initial capacity of 38,500 acre feet, with provision for later increase to 87,000 acre feet. Water from the dam will be available for irrigation of sections of the Darling Downs downstream the Condamine River as far as Cecil Plains and for a supply to the city of Warwick. A 61,000 acre foot dam under construction at Coolmunda (Macintyre Brook Project) will allow irrigation of up to 8,000 acres. Wuruma Dam (Upper Burnett Project), under construction on the Nogo River, will have a storage capacity of 157,000 acre feet for irrigation of 11,000 acres along 100 miles of the Burnett River. The Eungella Dam (Bowen-Broken Project), under construction on the Broken River, will have a storage capacity of 104,000 acre feet. It will provide cooling water for the Collinsville power station and irrigation water along the Bowen and Lower Burdekin rivers. The development of rivers constituting portion of the Queensland-New South Wales border, under the authority of the Dumaresq-Barwon Border Rivers Commission, is described on pages 166-7.

Underground water—Great Artesian Basin and other sources

The use of underground water supplies has been a very important factor in agricultural and pastoral development in Queensland. The Great Artesian Basin is the major source of stock water supplies over more than half the State. Elsewhere, supplies obtained at shallower depths, in porous, fractured or fissured rocks, are extensively used for domestic and stock purposes. Underground water also supports more than half the irrigated area in the State, supplies being obtained chiefly from alluvial formations along river valleys, and from river deltas, the most conspicuous example of which is the Burdekin River (*see* page 178).

Great Artesian Basin

Western Queensland, beyond the 20 inch rainfall belt, is predominantly pastoral and is mainly dependent for water supplies on artesian and sub-artesian bores and, where surface storage is not readily available, on excavated tanks. The Great Artesian Basin in Queensland corresponds approximately with the area lying west and south of the Great Dividing Range, excluding the Cloncurry mineral field and the Barkly Tableland. It comprises 421,000 square miles or nearly two-thirds of the total State area of 667,000 square miles.

Artesian water. Although the number of bores has gradually increased over the years, the total flow of all bores has declined from the peak flow of 351 million gallons a day. A report on the nature and structure of the Great Artesian Basin, presented in 1954, indicated that the output would continue its decline during the next sixty years, at which stage the flow from the remaining flowing bores would be of the order of 110 million gallons a day. The discharge from windmills, springs and other leakages, together with the underflow past the Queensland borders, would then be about 20 million gallons a day. It was further expected that the total discharge, of the order of 130 million gallons a day, would be in equilibrium with the recharge of the basin. It was anticipated that numbers of bores on higher ground would cease to flow during the next sixty years and the area served by the flowing bores would contract by perhaps twenty per cent.

Up to 30 June 1965, 2,899 artesian bores had been drilled, of which 1,893 were still flowing. The total depth drilled amounted to 4,049,041 feet and the estimated daily flow was 199 million gallons. Although very few bores exceed 2,000 feet in depth (the average depth is 1,397 feet) and a new bore greater than 4,000 feet deep is exceptional, the deepest bore recorded was sunk to 7,009 feet. Some bores which had been classified as 'ceased' have been inspected and found to be still flowing, while other ceased bores have responded to deepening and have recommenced flowing. Both the pressure and flow of artesian bores are steadily diminishing, the rate of decrease varying widely throughout the basin. Present average rates of diminution are: pressure, 1-2 feet of head; total flow, 2-3 per cent. per annum. The greater part of the artesian discharge is distributed by some 15,500 miles of open earth channels, from which a large proportion of water is lost by soakage and evaporation, less than 10 per cent being actually used by stock.

Although artesian beds underlie a large area of the State, only 79,000 square miles are primarily watered by bore drains. The remaining area is watered by artesian bores (with small or no flow and limited drains), sub-artesian bores, excavated tanks, dams and natural waterholes. In many districts artesian bores do not provide economical watering facilities because of depth, limited area to be watered, and difficult terrain for distribution of water by drains. The quality of artesian water from the greater part of the basin is not suited for prolonged use for irrigation on most soils, nor are the supplies sufficient for both large scale irrigation and stock-watering. Practically the whole of the final steady-rate discharge from flowing bores will be needed for the watering of stock.

Shallower supplies, which come from beds unconnected with artesian beds, are of variable quality and volume. These supplies are available at depths of less than 1,000 feet over a large area of the basin. Some 11,651 sub-artesian bores within the Great Artesian Basin have been registered in Queensland. An important practical consideration is that the main artesian beds are continuous and the sub-artesian beds are not continuous.

Bore Water Areas. The constitution of Bore Water Areas was inaugurated in 1913 to aid pastoral settlement in districts where large flows were available at a cost beyond individual capacity, and to conserve artesian supplies by fully utilizing flows from the existing bores on the land resumed for closer settlement. Bores and drains are constructed from loan funds repayable over a period of years. The areas are administered by local boards or by the Commissioner of Irrigation and Water Supply, acting as a board. Rates are levied to meet interest, redemption, maintenance and administration costs. Statistics for the year 1964-65 are: areas constituted, 74; administered by the Commissioner, 55; administered by local boards, 6; number abolished, 13; area benefited, 4,086,056 acres; average rate per acre, 1 64d. (1.37c); number of flowing bores, 56; total flow, 24,821,000 gallons a day; drains served, 2,510 miles.

Other underground sources

Outside the Great Artesian Basin, ground water supplies can conveniently be divided into two broad groupings, (a) those obtained in porous, weathered, fissured or fractured rocks, and (b) those obtained in unconsolidated sediments of Cainozoic age. In the first group, supplies, often within short distances, are widely variable both in quantity and quality, but are normally sufficient only for stock-watering purposes. Because storage is generally small, seasonal fluctuation of water level tends to be high, and this can have a significant effect on the supply available during dry seasons. Small to moderate irrigation supplies (up to a few thousand gallons an hour) are sometimes obtained and, in exceptional cases, particularly with basalts and limestones, supplies may be as much as 10,000 gallons an hour. The second group comprises the main irrigation supplies and, although a wide range may be found in the supply normally available from individual bores in any area, pumping rates as high as 10,000 gallons an hour are common. The availability of underground water has been investigated in a considerable number of alluvial valleys in south eastern Queensland and in a number of coastal areas, particularly in the vicinity of the estuaries of the Burnett, Pioneer and Burdekin Rivers, where underground water is the main source for irrigation of sugar cane.

Reference has already been made to the importance of underground water for irrigation in the Lockyer Valley (see page 178), and other areas in which irrigation supplies from alluvial formations have been extensively utilized include the Callide Valley, the Monto area, parts of Barker and Barambah Creeks, Warrill Creek, Cressbrook Creek, the Upper Logan River, and parts of the Condamine River and its tributaries. Government authorities do not normally undertake private drilling for landholders, but assistance is given in the location and development of ground water supplies through the provisions of *'The Farm Water Supplies Assistance Acts, 1958 to 1965 (see page 181)*. This assistance has considerably accelerated the use of underground water for irrigation, and there is no doubt that there are many areas with a large potential for future expansion.

Stock watering

A predominant interest in the field of water conservation has been the provision of stock and domestic water supplies in Queensland's great pastoral areas, which contain more than a third of the Commonwealth's cattle and about a seventh of the sheep. In addition to the stabilization of water supplies in the pastoral areas, the provision of water along stock routes for travelling stock has received much attention in recent years.

Main stock routes. The Queensland Irrigation and Water Supply Commission acts as consultant and constructing authority to the Stock Routes Co-ordinating Board for watering facilities on stock routes. On completion, facilities are vested in local authorities for control and maintenance. From 1935, when the scheme was inaugurated, to 30 June 1965, 635 facilities had been completed, and at 30 June 1965, 33 facilities were under construction or investigation. A State-wide investigation is being carried out by the two authorities mentioned above to ascertain the general movement of stock, determine primary and secondary routes, register existing water facilities, and formulate a co-ordinated plan in regard to the provision of new watering facilities.

Channel Country stock routes. Under the *State Grants (Encouragement of Meat Production) Act 1949-1954* the Commonwealth Government agreed to meet half the cost of providing additional watering facilities in stock routes leading into, along, and out of, the Channel country and on the route from Camooweal to Mount Isa. These routes connect with the main far-western route included in the State scheme inaugurated in 1935. This scheme was completed during 1962-63. The total number of watering facilities constructed since the commencement of the scheme was 37, at a total cost of \$599,184.

Technical and financial assistance to farmers

'*The Farm Water Supply Assistance Acts, 1958 to 1965*' are designed to improve the standard of water supply installations on individual holdings, encourage greater development of individual irrigation schemes, provide greater stability of production, and avoid losses in time of drought as well as generally increase production. To achieve this purpose, the Acts authorize the provision of technical and financial assistance to landowners for the investigation, design and installation of approved works of farm water supply. All projects for which finance is provided under the Acts are carried out under Commission supervision, and for the payment of a small charge the Commission will supervise the construction of works designed by its staff, but for which the landowners do not require financial assistance under the Acts.

During 1964-65, 1,013 requests (665 for technical assistance only, and 348 for technical and financial assistance) were dealt with in addition to advice on a further 475 requests on ground-water supplies. An amount of \$1,041,390 was approved for advances under the Acts in 1964-65, and the amount advanced was \$783,612.

South Australia

Brief particulars of the climatic conditions in South Australia are given on page 1129 of Year Book No. 37. (See also the chapter Physical Geography and Meteorology of this issue.)

Administration

Water supplies, other than irrigation works, are under the control of the Engineering and Water Supply Department, which administers the Waterworks Act, 1886 governing the supply of water through mains in water districts for townships and farm lands. The Water Conservation Act, 1886 provides for the construction of storages in non-reticulated areas, and authorizes the Minister concerned to 'divert and impound the water from any streams or springs or alter their courses, and take water therefrom, or any other waters as may be found in, under, or on, any land entered upon for the purpose of supplying water to the inhabitants of any water district'.

Early in the history of the State, the rights to all running streams, springs and soaks were vested in the Crown. The Water Conservation Act was passed in 1886 and, up to 30 June 1965, more than 550 dams, tanks and rainsheds, together with 460 wells and 340 bores, had been built or acquired by the State at a total cost of \$3,721,800. The rainsheds are timber frameworks roofed with galvanized iron to collect rainfall, which is delivered to storage tanks and is available for surrounding settlers and travellers. Rainshed catchments vary from a few hundred square feet to four acres in extent. Over most of the State extraordinary precautions are taken to counteract evaporation, and pipelines in preference to open channels and covered storages are used for this purpose. Meters are attached to practically all services to check usage by individual consumers.

Irrigation

Australian irrigation originated in the upper Murray of South Australia and the Mildura area of Victoria. South Australian irrigation commenced with an agreement between the Government and the Chaffey brothers in 1887 whereby an area of land at Renmark was made available for the establishment of certain irrigation works. In South Australia, irrigation is almost exclusively confined to the Murray Valley. Except for that held in various lock pools, no water from the Murray is stored in South Australia. Water is either pumped onto the land or gravitated from the river.

The two major authorities administering irrigation areas are the Department of Lands and the Renmark Irrigation Trust. The Trust is controlled by a local board of management consisting of seven members. This area differs from other South Australian irrigation areas in that the land is freehold instead of leasehold and is self-contained and self-controlled. Every settler is entitled to vote for the election of Trust members. The Trust maintains 100 miles of reticulation channels.

The following table shows particulars of the areas of crops and pastures irrigated in the various areas during 1964-65 and in South Australia as a whole during the seasons 1960-61 to 1964-65.

AREA OF LAND IRRIGATED: SOUTH AUSTRALIA, 1960-61 TO 1964-65

^(a) Includes fodder and fallow land.

Water supply schemes

Adelaide Metropolitan Water Supply. Adelaide derives its water from six reservoirs in the nearby Mount Lofty Ranges, and by means of pumping stations and a pipeline from the Murray River at Mannum. The reservoirs have a storage capacity of 87,400 acre feet and the pipeline has a capacity of 74,000 acre feet a year.

To the north, the city of Elizabeth receives water from South Para Reservoir in the Barossa system and from the metropolitan storages. The consumption for the whole area for the year 1964-65 was 95,000 acre feet, equivalent to a consumption of 101 imperial gallons per head per day. The capital cost to 30 June 1965 was \$97,705,528.

Country reticulated supplies. Areas extending to a distance of 90 miles north of Adelaide are supplied from the Warren, Barossa, and South Para Reservoirs (50,350 acre feet) in the Barossa Ranges. Agricultural towns and areas further north are supplied from Beetaloo,

Bundaleer and Baroota Reservoirs, and the Morgan-Whyalla Pipeline. There is a supplementary supply from the Mannum-Adelaide pipeline through the Warren Reservoir. The 223-mile pipeline from Morgan to Whyalla can carry up to 14,500 acre feet of water a year from the Murray River. Work is well advanced on a second main of more than double that capacity. A large part of Eyre Peninsula is supplied, through the 240-mile, Tod River Main and the 104-mile East Coast Main, with water from the Tod River Reservoir (9,160 acre feet), the sand beds of the Uley-Wanilla Basin, the Lincoln Basin, and the newly developed Polda Basin. Along the Murray River all towns are supplied from the river. Water from the river is also reticulated through adjacent farmlands for up to 30 miles. Surface and underground resources have been developed to supply most rural centres not covered by the larger schemes. Water conservation and distribution works in country districts to 30 June 1965 have cost \$109,905,574 (exclusive of river control and irrigation works on the Murray River) and contain 7,770 miles of water mains.

Underground water

Surveys of groundwater resources are undertaken continually by geologists of the Department of Mines, the results being published in various bulletins and reports. The *Groundwater Handbook* published in 1959 by the Department provides a comprehensive and detailed review of the State's groundwater resources.

The occupied portion of South Australia is, on the whole, well endowed with underground water, and the extent of the several artesian basins is reasonably well known. There are also considerable areas in which groundwater occurs, notably in the south-east of the State where, in the Keppoch district, supplies exceeding 100,000 gallons an hour are not uncommon. Quality varies widely, but a great deal is at least useful for watering stock, and this is its major use.

The deepest portion of the Great Artesian Basin (in the north-east) is not extensively developed because development costs are high in proportion to the carrying capacity of the arid land. Deep boreholes have been drilled by the Government to provide watering places along stock routes, and pressure waters have been developed around the basin margin. These waters occur at comparatively shallow depth, as at Marree township, where the deepest flowing bore is 575 feet. In addition to the pressure waters, the non-pressure aquifers of the subsidiary basins provide pastoralists with stock water supplies which can be readily and economically developed. The use of the waters of the Murray Basin is essential to settlement in the Murray-Mallee country and in the south-east of the State, especially for farms and township supplies. Mount Gambier draws its water from Blue Lake, which is fed from the Basin. Bores supply a number of towns in this Basin, the deepest bore being 1,805 feet. The Lincoln Basin is now fully developed and is yielding up to 20 million gallons a week, which provide a water supply for the town of Port Lincoln on Eyre Peninsula. The Polda Basin near the township of Lock was brought into operation late in 1962. Investigations in the Basin are almost complete, and yields of 20,000 to 40,000 gallons per hour have been obtained from single large diameter boreholes. The present pumping plant has a capacity of seven million gallons a week. The water is reticulated to townships and farming properties on the upper Eyre Peninsula. Investigations are currently proceeding for the further development of this basin.

Pastoralists, farmers, market gardeners and others have been assisted with expert advice on drilling, and the Government maintains and operates twenty-five drilling plants, which to date have developed an underground water supply potential in excess of 150 million gallons of water a day throughout the State. The whole of the Murray River Basin has been examined critically to ascertain the extent of land which could be used for lucerne, and considerable tracts of previously undeveloped country in the upper south-east and Yorke Peninsula have been found to have usable water and are now being opened up. On Eyre Peninsula the Uley Basin has been in use as a source of groundwater since 1948. The water level has dropped below the critical point, however, and no groundwater has been taken from the Uley Basin since 1963. Lincoln and Polda Basins have been supplementing the water supplies on the Peninsula since 1960 and 1962 respectively. Investigations are being made in the South Uley Basin, and yields of up to 80,000 gallons per hour have been proved from single boreholes.

Farm water schemes

The Department of Mines gives assistance to individual farmers in the provision of supplies from underground sources, and the Department of Agriculture provides an advisory service on water conservation and irrigation designs, on farms, and on the use and suitability of underground water for irrigation and stock purposes. In addition, a great part of the farming areas is supplied with water under pressure from the extensive distribution systems connected to various reservoirs on the Murray River.

South-eastern drainage

In the south-east of South Australia it has been necessary to construct drainage schemes to dispose of surplus water from areas where a series of valleys or flats is separated by low ranges,

parallel to the coastline, which prevent natural drainage. The Millicent Drainage System, completed in 1885, reclaimed 100,000 acres. The South-Eastern Drainage Area System, which is controlled by the South-Eastern Drainage Board, comprises drains constructed by the Government at national cost, plus those undertaken by the Government in co-operation with the landholders. The area is bounded on the east by the State boundary, and on the west by the sea coast. It extends from about 55 miles north of Kingston southerly to near Millicent and Kalangadoo. Up to 1948 about 430 miles of drains had been provided at a cost of \$1,441,752. These were of a developmental nature intended more to promote the rapid removal of floodwaters than to provide a complete system of drainage. Since 1948 the complete drainage of the Biscuit, Reedy Creek, and Avenue Flats in the Western Division has been in progress. The southern section of 260,000 acres, which involved the excavation of 8,160,000 cubic yards and the provision of 343 miles of new or enlarged drains, has been completed. Work is in progress on the northern section of 140,000 acres, where 68 miles of drains, involving the excavation of 2,944,070 cubic yards of material, have been completed. In addition, work is in hand for the drainage of 727,000 acres of land in the Eastern Division of the south-east, situated east of Bakers Range, and extending from near Kalangadoo to north of Naracoorte. As part of the first stage of the work (which involves the construction of a main diversion drain from Beachport to Struan), an existing drain from Beachport to Legges Lane (a distance of over 24 miles) has been enlarged, and work is proceeding between Legges Lane and Struan (a distance of 33 miles). A total of 5,839,940 cubic yards of material has been excavated. The capital cost of drainage in the South-Eastern Drainage Area System to 30 June 1965 was \$15,877,400, and the length of drains constructed was 791 miles. An extensive system of private drains (many of which are connected to the drains constructed under Government authority) also exists in the south-east of the State.

Murray River Irrigation District

Excess waters from the irrigation of orchards in the Murray River Irrigation Districts are building up a perched water table, which is rising to the levels of the tree root system. Investigations have proved that adequate drainage can be obtained in the underlying limestone aquifer. The building up of groundwater pressures due to drainage in these aquifers is being studied, as the outflow of saline waters into the Murray River surface waters must be prevented.

Western Australia

Brief particulars of the climatic conditions in Western Australia are given on page 1133 of Year Book No. 37. (See also the chapter Physical Geography and Meteorology of this issue.)

Administration

The Minister for Water Supply, Sewerage and Drainage administers the departmental irrigation schemes under the *Rights in Water and Irrigation Act, 1914-1964*. He is advised by an Irrigation Commission representing the local irrigationists and governmental, technical and financial branches. The Minister for Works administers, under the *Country Areas Water Supply Act, 1947-1964*, the water supplies to about 200 towns and 4,200,000 acres of reticulated farmland, and also controls minor non-revenue producing supplies to stock routes and a few mines and agricultural areas with their associated communities. Five town supplies are administered by local boards under the *Water Boards Act, 1904-1964*, which provides a large degree of autonomy with ultimate Ministerial control.

Irrigation

Irrigation schemes have been established by the Government on the coastal plain south of Perth in the Waroona, Harvey and Collie River Irrigation Districts between Waroona and Daranup, the water being channelled from dams in the adjacent Darling Range.

Harvey Weir with a capacity of 8,372 acre feet and Stirling Dam (46,191 acre feet) supply the Harvey Irrigation District, the rated area of which is 13,290 acres. Additional supplies are provided by Logue Brook Dam with a capacity of 19,717 acre feet. The Harvey District is linked to the Waroona Irrigation District, served by the damming of Drakes Brook and Samson Brook (9,292 acre feet). Waroona Dam, under construction with a planned capacity of 11,900 acre feet, will also serve this district, the rated area of which is 3,060 acres. Wellington Dam on the Collie River with a capacity of 150,107 acre feet serves an area of 10,870 rated acres in the Collie River Irrigation District.

During the past thirty years a centre of tropical agriculture has been developed at Carnarvon, near the mouth of the Gascoyne River. Private pumping from sands of the Gascoyne River is the principal source of irrigation water. The Government is developing up-river sources and

delivers water by pipeline to twenty plantations in the district. Vegetables and fruit for the metropolitan market are grown. A tropical research station is maintained at Carnarvon by the Department of Agriculture.

A project has been embarked upon to provide water supplies for irrigation in the area traversed by the Ord River in the Kimberley Division. The project provides for the eventual development of an area of 175,000 acres of land agriculturally and topographically suitable for irrigation, and comprises four stages, the first being the construction of a diversion dam to supply water for an area of 30,000 acres. The other stages are the building of a main storage dam with a capacity of 3.5 million acre feet (equivalent to more than 950,000 million gallons), the progressive development of the remaining 145,000 acres, and the construction of a hydro-electric power station. The diversion dam, at Bandicoot Bar, sixty-five miles south-east of Wyndham, capacity 79,000 acre feet, was completed in 1963. Some forty farms are included in the first stage of the project, and are being released progressively. On the twenty-six farms allotted so far, cotton and rice are the principal crops grown. The Western Australian Government has presented a case to the Commonwealth Government for financial assistance towards meeting the cost of the remaining stages of the Ord Irrigation project, and this is under consideration.

On the Ljveringa flood plain, water is diverted from the Fitzroy River through Uralla Creek to a natural storage of about 1,200 acre feet, which, together with a dam on Uralla Creek (4,600 acre feet), provides for irrigation at Camballin sixty-five miles south-east of Derby. During 1964-65, 8,674 acre feet of water were used in the irrigation of sorghum and rice. Further development in this area is envisaged.

AREA OF LAND IRRIGATED: WESTERN AUSTRALIA, 1960-61 TO 1964-65

(Acres)

Season	Vegetables	Fruit	Vineyards	Cotton	Other crops (a)	Pastures	Total
1960-61 . .	9,076	8,335	897	(b)	5,591	24,652	48,551
1961-62 . .	9,596	8,840	972	(b)	4,235	25,036	48,679

1964-65 . .	9,379	11,710	1,081	5,496	5,259	30,110	63,035

(a) Includes fodder and fallow land. (b) Not available for publication, included with Other crops.

Country water supplies controlled by Department of Public Works and Water Supply

Since 1947 enlargement and extensions of the Goldfields and Agriculture Water Supply and the development of the Great Southern Towns Water Supply have been carried out, mainly in accordance with a project known as the Modified Comprehensive Scheme. Under this scheme water has been supplied to towns and farms in an area of 4.1 million acres in mixed farming (cereal and sheep) districts of Western Australia. The modified scheme was completed in 1961 at a cost of \$20.6 million, of which the Commonwealth contributed \$10 million under the *Western Australia Grant (Water Supply) Act 1948*. A further request was made by the State Government in 1963 for a grant of £5.25 million (\$10.5 million) representing half the estimated cost of proposed extensions which would increase by 3.7 million acres the area served by the scheme. The Commonwealth agreed to provide assistance in the form of an interest-bearing loan up to a maximum of the amount requested, advances to be made during a period of eight years commencing 1965-66. Legislative authority for the loan is given by the *Western Australia (South-west Region Water Supplies) Agreement Act 1965*.

Mundaring Reservoir on the Helena River, twenty-six miles from Perth, is the source of water supplied to the Eastern Goldfields. It has a capacity of 62,435 acre feet and is connected to Kalgoorlie by a pipeline with extensions to towns and agricultural areas. At 30 June 1965 the Goldfields and Agricultural Water Supply was serving eighty-nine towns, and water was being reticulated to farms in an area of 4.2 million acres. The total length of pipelines was 3,940 miles and the number of services was 24,208. Consumption during 1964-65, including supplies drawn from local schemes and from the Metropolitan Water Supply, was 2,798 million gallons.

The Great Southern Towns Water Supply pipes water from Wellington Dam to towns on the Great Southern Railway from Brookton to Katanning as well as a number of other towns. At 30 June 1965 the Supply was serving twenty-two towns, the total length of pipelines was 419 miles, and the number of services was 7,752. Consumption during 1964-65, including supplies drawn from local sources, was 518 million gallons.

Ninety-two local schemes supply water from stream flow, dams, tanks, wells and bores, mainly to country towns. At 30 June 1965 the total length of water mains was 679 miles and the number of services was 21,322. During 1964-65 consumption was 1,570 million gallons.

Other country water supplies

As well as the schemes controlled by the Department of Public Works and Water Supply, there are five local Water Boards which also draw supplies from stream flow, dams, tanks, wells and bores. In addition, some local authorities supply water within their boundaries. The Forests Department and sawmilling companies operate schemes to supply water to their mill towns. Railways of the Commonwealth and State Governments make independent provision for supplies of water for their own purposes, although considerable additional quantities are consumed by the railways from other sources, such as those controlled by the Department of Public Works and Water Supply and the Metropolitan Water Supply, Sewerage and Drainage Board.

Underground water

Considerable use is made of underground water by individual farmers, pastoralists, market gardeners, etc., and it is estimated that over 50,000 bores are in use in the State. The quality of the water varies from place to place and much of it is suitable only for stock. However, artesian aquifers are tapped to supply or augment the town supplies of Perth, Bunbury, Busselton, Eaton and Denham, and non-pressure water is used in the public supplies of thirty-seven other towns.

Considerable advances in the knowledge of aquifers and quality of water in the main sedimentary basins has been made as a result of extensive geological surveys by oil exploration companies in recent years.

The Public Works Department and the Metropolitan Water Supply, Sewerage and Drainage Department are responsible for all developmental works, and for the geological survey for all exploratory works, as well as for investigating and assessing the State's groundwater resources, advising local Government authorities, private industry and individuals on groundwater problems, and supervising departmental drilling.

Groundwater projects have recently been completed for Halls Creek, Boyanup, Carnarvon, Exmouth, Lancelin and Bremer Bay, and work is in progress on others for Geraldton, Mandurah, Morawa, Yerecoin, Esperance, Albany, Jurien Bay, Guilderton, Meekatharra, Port Hedland, and additional supplies for the Perth metropolitan area. In addition, a long-term systematic exploratory drilling programme on the Coastal Plain Basin is continuing.

Tasmania

Brief particulars of the rainfall pattern in Tasmania are given on page 1136 of Year Book No. 37. (See also the chapter Physical Geography and Meteorology of this issue.)

Main purposes of water conservation and utilization

Because of the generally more adequate rainfall in Tasmania, scarcity of water is not such a problem as it is in most mainland areas, though not all streams are permanently flowing. The only large scale conservation by reservoirs is for hydro-electric power generation, but there are some moderately sized dams built by mining and industrial interests and by municipal authorities for town water supplies.

Until a few years ago irrigated areas were negligible except for long established hop fields, but there is a rapidly extending use of spray irrigation on orchards and pastures, and to some extent on potatoes and beans. Up to the present there has been almost complete dependence on natural stream flows, but the need for some regulating storages is now apparent. A few farmers are constructing storages of their own, and the extension of this practice is foreseen as the logical solution in most areas, as valleys are narrow and steep sided. Single large reservoirs cannot economically serve large areas of suitable land, as nearly every valley is separated from others by pronounced hills, prohibiting the construction of cross-country channels.

Underground water suitable for stock, minor irrigation works, and limited domestic use is exploited in the south-east, the midlands and north-western Tasmania. Supplies are mainly derived from fractured rocks by means of shallow bores which yield between 200 and 400 gallons an hour. On King and Flinders Islands water of variable quality suitable for stock and limited domestic use is obtained from aeolian sands. The township of Currie on King Island obtains up to 200,000 gallons a day for domestic use from this source. Underground water investigations, and almost all of the water boring in Tasmania, are carried out by the Mines Department.

Administration

In 1962 a new authority, the Metropolitan Water Board, assumed overall control of water supplies to the cities of Hobart and Glenorchy and the municipalities of Kingborough and Clarence, all of which, however, retain primary responsibility for reticulation. Water supplies to other areas are primarily the responsibility of local councils, subject to approval of plans and finance by the Rivers and Water Supply Commission.

While the Commission does not own the waters of streams and lakes, it is empowered to take them, or issue licences, subject to pre-existing statute and common law rights. These include water reserved for specific industries, municipal requirements, and ordinary riparian rights. The Commission is also concerned with drainage trusts' operations, river improvement, including repairs after flood damage, and stream gauging.

Regional water schemes

Three regional water schemes are in operation. The first draws water from the east bank of the River Derwent at Lawitta to provide domestic and industrial supplies in five southern municipalities, and the second, which increases existing supplies to Hobart, pumps water from the west bank of the River Derwent at Lawitta. These two schemes are controlled by the Metropolitan Water Board. In addition, the State Government has constructed a regional water scheme to serve the aluminium refinery at Bell Bay on the River Tamar and to supply several municipalities with bulk water for domestic and industrial purposes.

Potential sources capable of greater development without storage exist on the Derwent, South Esk, Huon, Lake, Mersey and Forth Rivers. There is also a great reserve of untapped permanent streams in the western half of the State, which is largely unsettled. Diversion to the eastern half of the watersheds is not regarded as practicable.

Industrial water schemes

Three principal industrial water schemes have been installed privately—for a paper mill near Lawitta on the Derwent River, for a paper mill at Burnie using water from the Emu River, and for a factory at Heybridge reticulating water from Chasm Creek. The State Government has constructed some water schemes for use primarily for industrial purposes. These include the scheme serving the aluminium refinery at Bell Bay referred to above, a storage supplementing the summer flows of the Kermandie River for use by a wood-pulping plant at Geeveston, and the recently completed Prosser River Scheme which supplies water to a sodium alginate industry at Louisville near Orford and supplements the water supply of the township of Orford.

Irrigation

There are no State irrigation projects at present, but the Rivers and Water Supply Commission is investigating the possibility of establishing a scheme near Cressy. The *Water Act 1957* provides for irrigation works to be undertaken by municipalities and by trusts constituted for the purpose, but no such works have been undertaken to date. With the exception of the Lawrenny estate at Ouse, which is the largest single area under irrigation in the State, and also the only formally constituted irrigation district, there are no extensive schemes utilizing one common source of water supply in Tasmania. The larger proportion of the area under irrigation is watered by pumping systems.

Details of the areas of crops and pastures irrigated in Tasmania in the seasons 1960–61 to 1964–65 are shown in the following table.

AREA OF LAND IRRIGATED: TASMANIA, 1960–61 TO 1964–65

(Acres)

Season	Vegetables	Fruit	Hops	Other crops ^(a)	Pastures	Total
1960–61 . . .	2,103	3,311	1,364	1,787	10,369	18,934
1961–62 . . .	3,388	3,930	1,447	2,711	11,713	23,189
1962–63 . . .	4,100	4,446	1,465	2,839	11,435	24,285
1963–64 . . .	6,319	5,933	1,463	4,162	15,693	33,570
1964–65 . . .	8,302	5,955	1,553	4,318	14,194	34,322

(a) Includes fodder and fallow land.

Northern Territory

Some particulars of the climate and main topographical features of the Northern Territory are given on page 1138 of Year Book No. 37, and in this issue information on climatic conditions will be found in the chapter Physical Geography and Meteorology, and a brief outline of contour and physical characteristics in the chapter The Territories of Australia.

Administration

Under the *Control of Waters Ordinance 1938-1962* of the Northern Territory natural waters are vested in the Crown. Where a watercourse or lake forms a boundary of any land alienated by the Crown, the beds and banks are deemed to remain the property of the Crown (except in special cases) and the diversion of water is prohibited except under prescribed conditions. There is a Water Resources Branch of the Northern Territory Administration under the control of a Director. The functions of the branch include systematic stream gauging, collection of data on surface and underground water supplies, planning of water use for irrigation and town water supplies, and flood prevention and control.

Under the *Water Supplies Development Ordinance 1960-1963* the Water Resources Branch gives financial assistance to landholders for the development and improvement of water supplies on agricultural and pastoral leases. Another function of the branch, which is increasing in importance as it builds up a body of technical data and information about the Territory's water resources, is the dissemination of this knowledge by the provision of advice and technical assistance to professional drillers and to landholders.

Underground water

The marked seasonal rainfall over the whole of the Northern Territory is one of the basic factors affecting the pastoral industry, which provides a large proportion of the Territory's income. Underground water supplies are of great importance in the Territory, where most of the cattle numbers are dependent on underground supplies for three to five months each year, because of the inadequacy of surface water during the dry season.

Rainfall is one of the factors controlling cattle numbers, but geological features, controlling both soils and the storage of underground water, are equally important. In the northern-most portion of the Territory, which receives from 25 to 60 inches of seasonal rainfall a year, surface water supplies are, in general, adequate for the pastoral industry. Despite this, however, the area has a comparatively low carrying capacity for cattle, and the pastoral industry is concentrated more in inland areas where feed retains more nutritive value in winter, despite dry conditions. *South from this well-watered northern-most portion, the Territory becomes progressively drier, with an average annual rainfall of only five inches at the margins of the Simpson Desert in the south-east corner. In the lower rainfall areas the search for potable underground water becomes exacting, but in the Ord-Victoria region and the Barkly Tablelands the best pastures are generally in areas where sub-surface conditions are suitable for the storage of underground water.*

In the Ord-Victoria region the best grass lands overlie volcanic rocks and extend over some 10,000 square miles. Outcrops of sandstone, limestone and shale also occur in this area and underlie the volcanic rocks in most places. In general, these sedimentary rocks dip gently to the east, and sub-artesian conditions prevail. Underground water in this region is obtained from sandstone aquifers which yield supplies ranging up to 4,000 gallons an hour. Most of the bores are required in areas where the sediments are overlain by basalts; selection of bore sites is usually difficult. Supplies of shallow groundwater from joints, cracks and faults in the basalt are insignificant, and virtually all the bores obtain water from the sub-basalt sandstone aquifers. Successful bores in this area have ranged in depth from 200 feet to more than 900 feet. There are also small basins of younger sedimentary rocks in the region, some of which yield sub-artesian, and in places artesian, water and provide areas of good pastures.

The Barkly Tablelands, which extend into Western Queensland, overlie flat-lying limestone, sandstone and shale of the Barkly Basin. In most places underground water is under pressure (sub-artesian), but no flowing bores are known. Sandstones and beds of limestone with fractures and solution cavities provide a number of aquifers within the Basin. The hydraulic surface (to which pressure water will rise in bores) ranges between 500 and 600 feet above sea level, and adequate supplies for the watering of stock are available at depths ranging from 150 to 400 feet from the surface. The water from over 90 per cent of the bores is suitable for stock and over 50 per cent of it is suitable for human consumption. Investigations by the Commonwealth Bureau of Mineral Resources indicate that underground water supplies will be more than sufficient for the future development of the pastoral industry on the Tablelands.

In the Alice Springs district valuable pastures occur on a great variety of rock types, and from some of these very little underground water is available. Many shallow bores obtain water from alluvium near stream channels. There are also many successful bores in porous sands and limestone in Mesozoic and Cainozoic sedimentary basins and in some Upper Proterozoic and

Palaeozoic limestones and sandstones. Small supplies of underground water are obtained from bores intersecting joint zones in metamorphic rocks and granite of Archaean age. However, except in areas close to recharge, the water quality varies from moderate to poor.

The Water Resources Branch of the Northern Territory Administration has intensified research aimed at increasing the water supplies for Alice Springs and Darwin. Bores into the Palaeozoic Mereenie sandstone, twelve miles south of Alice Springs, have intersected sub-artesian aquifers at depths between 500 and 1,000 feet, and water from these bores is now used to supplement the existing town supply from alluvial basins. High-yielding dolomite aquifers of Lower Proterozoic age in the area sixteen miles south of Darwin are being developed to augment the Darwin water supply. Tennant Creek now has a water supply pumped from Cabbage Gum Basin, a small basin of alluvium and deeply weathered Precambrian rocks nine miles south of the town. A continuous check on the hydrological results of such pumping is maintained in order to adjust future yields from the basin.

At 30 June 1965, 4,946 bores and wells were registered in the Territory. Of these, 3,385 were for pastoral use, 291 were for agricultural use, 310 served town and domestic water supplies, 32 were in use on mining fields, 405 were investigation bores, 392 were Government established stock route bores, and 131 were classified under other uses. Registered bores which have been abandoned total 1,244. These include successful bores which have collapsed, and bores which were unsuccessful owing to drilling difficulties, or to insufficient quantity or poor quality of underground water.

Irrigation

There are no large water conservation projects in the Territory with the exception of the Manton Dam (12,700 acre feet), which serves Darwin with a reticulated supply. Some water is drawn from the rising main between the Manton Dam and Darwin for irrigation purposes, but the trend is for properties in this area to develop their own water supplies, either by boring or by pumping from watercourses or lakes. Investigations for additional water to augment Darwin's water supply are proceeding on the Darwin River, at Berry Springs, and in the McMinns Lagoon area. In the McMinns area a production bore has been drilled and is expected to yield one million gallons per day. This bore will be connected to the rising main from Manton Dam.

Hydrological investigations are being carried out by the Water Resources Branch to determine the available water and the best method of control and use in the potential irrigation areas of the Northern Territory. Since the start of stream gauging activity in the Northern Territory the Water Resources Branch has established 221 gauging stations. At 30 June 1965, 164 stations were in operation. Of these, 136 measure the volume of discharge of flowing streams, twenty measure the level of free standing water, and eight record tide fluctuations. One of the latter records tides in the Darwin harbour and another the tides in Melville Bay near Gove Peninsula.

Agricultural activity in the Territory is not extensive, being confined to the Darwin, Adelaide River, Coomalie Creek, Daly River, Katherine River and Alice Springs areas, with only small acreages being utilized. In the Territory thirty-three licences to divert water from streams have been issued. The total licensed area is 2,003 acres, but the actual area irrigated is less than this. There are also a number of farms irrigated from bore supplies, particularly in the Alice Springs area. Purposes for which irrigation water is used include the growing of fruit, vegetables, crops and pastures, and also dairying and mixed farming. Some 300 acres of irrigated rice were grown commercially on the Adelaide River in the 1964-65 season in a pilot farm project.

The Northern Territory Administration and the Commonwealth Scientific and Industrial Research Organization are investigating the potentialities of the Katherine area for agricultural production. In this area there are twelve licensed stream diversions covering an area of 220 acres, and investigations are continuing into the possibility of using the Adelaide and Daly Rivers for irrigation. A dam site is under investigation at Adelaide River Township. The Daly River appears promising for irrigation purposes as it has a minimum dry season flow of 275 cusecs and a reliable annual flow, without regulation, of 300,000 acre feet.

Papua and New Guinea

Rainfall in Papua and New Guinea varies considerably from approximately 250 inches near Lindenhafen (New Britain) and 230 inches at Kikori (Papua) to about seventy inches near Marienburg (New Guinea) and forty inches at Port Moresby (Papua). For a general description of these territories *see* the chapter The Territories of Australia, of this Year Book. Irrigation has not been developed on any organized basis owing to the availability of high rainfall and the nature of agricultural development.

The Territory of Papua and New Guinea is well served with large rivers deriving their water from heavy tropical rains and high mountains which rise to over 14,000 feet, but complete data regarding water resources are not available. At 31 July 1965 there were thirty-eight stream gauging stations in existence, and it is planned to increase this number as part of the overall establishment

of a basic stream gauging network. However, the difficulty of the terrain and the inaccessibility of some regions gives rise to considerable difficulties in the installation and operation of such stations. The available stream gauging records up to the end of 1964 are being prepared for publication.

The largest rivers in the Territory include the Fly (700 miles long, situated in the western division of Papua), the Sepik (700 miles), the Ramu (450 miles), the Purari (300 miles), and the Markham (110 miles). The main water conservation interest in New Guinea at present is the hydro-electric potential, which is extensive. An outline of schemes at present in operation is given in the previous chapter.

CHAPTER 8

POPULATION

Statistics in this chapter cover, in the main, the year 1964. More detailed figures will be found in the annual bulletin *Demography*, and current statistics are published in the *Monthly Review of Business Statistics*, the *Quarterly Summary of Australian Statistics*, and the mimeographed series *Australian Demographic Review* and *Oversea Arrivals and Departures*. All statistics in this chapter, except those on page 225, The Aboriginal Population of Australia, are exclusive of particulars of full-blood Aboriginals.

Population statistics

Types of population statistics

Population statistics for Australia or the component States and Territories at specific dates are of two types.

(i) *Those ascertained by census enumeration.* These results attain a very high degree of accuracy and may generally be accepted without reservation.

(ii) *Estimates derived by the application of vital and migration statistics to census data.* In general, three estimates are made for any specific date.

(a) Original estimates for dates subsequent to a census made before another census is taken. These estimates represent the population ascertained at the census, plus natural increase and recorded net migration since the census. As complete records of interstate migration are not available, the estimated State or Territory populations so derived are approximate, and are subject to revision when the actual population of each State or Territory is ascertained at the next census. For some States such revisions are substantial.

(b) Two-stage revision of the original estimates for each newly completed intercensal period to adjust for the difference between the new census result and the comparable estimate. This is to bring intercensal estimates into line with the two census populations and thus effect adjustment for unrecorded movement of population in the intercensal period. The first revision is reconciled with preliminary census results and the second revision with final census results.

Final revised figures become the permanent population estimates. For purposes requiring a mean population for any twelve-month period is calculated as described on page 198. As populations at specific dates are used in these calculations, consequential revisions are made to mean populations when the estimates for specific dates are revised as described above.

In accordance with this policy all Australian population statistics shown in this issue of the Year Book for dates up to June 1961, and all mean populations for calendar years up to 1960 and financial years up to 1960-61, are final. Population statistics for dates or years subsequent to these will be revised in accordance with the results of the June 1966 census.

Since the establishment of the Commonwealth Bureau of Census and Statistics, the populations of the States and Territories have been estimated in a comparable manner, and attention has been given to the improvement of the basic data from which the estimates are compiled. The principal source of error in early estimates lay in the migration records, both overseas and interstate, and post-censal revisions were made to these figures. With the improvement of records of overseas migration, however, such post-censal revision of the records of overseas migration was not found necessary after the 1933 census. The same level of improvement has not been achieved in respect of records of interstate movement, which cover travel by sea, air, rail and some movements by road.

The census

Census-taking

Although 'musters' of the population were carried out at least annually from 1788 to 1825, the first regular census in Australia was not taken until 1828, when a count of the population of the Colony of New South Wales was made. Subsequent censuses were taken sporadically in the various colonies until 1881, when a census was taken on the same date throughout Australia.

In 1891 and 1901 census-taking was still in the hands of the Government Statisticians of the States, but, in 1911, under the provisions of the *Census and Statistics Act 1905*, which provided for the enumeration to be made from one centre instead of by each State as formerly, the Commonwealth Statistician undertook the first census of the Commonwealth of Australia. The second was taken in 1921, the third in 1933, the fourth in 1947, the fifth in 1954, and the sixth in 1961. The seventh is to be taken in June 1966.

The Australian census is on a *de facto* basis, i.e. it records the population actually resident at a specific date, and not according to place of usual residence (*de jure* basis).

Population recorded at censuses

State and Territorial populations recorded at the Australia-wide censuses taken over the period 1881 to 1961 are shown in the following table. The figures relate to the political boundaries of the several States (or Colonies) and Territories as they existed at the date of each census, except that the Northern Territory has been shown separately from South Australia for the censuses prior to its transfer from that State. The years of formation of the separate Colonies and transfer of the Territories are shown in the chapter Discovery, Colonization and Federation of Australia (page 5). The total populations recorded at the censuses taken in the Colonies from 1828 to 1881 were shown in Year Book No. 40, page 326.

POPULATION, BY SEX: AUSTRALIAN CENSUSES, STATES AND TERRITORIES 1881 TO 1961

Increase since 1891 census

The increases in the populations of the several States and Territories and of Australia as a whole during the last seven intercensal periods are shown in the following table, which distinguishes the numerical increases, the proportional increases (which do not allow for the differences in the length of the intercensal periods) and the average annual rates of increase.

POPULATION OF AUSTRALIA, 1788 TO 1965

RATIO GRAPH

PLATE 20

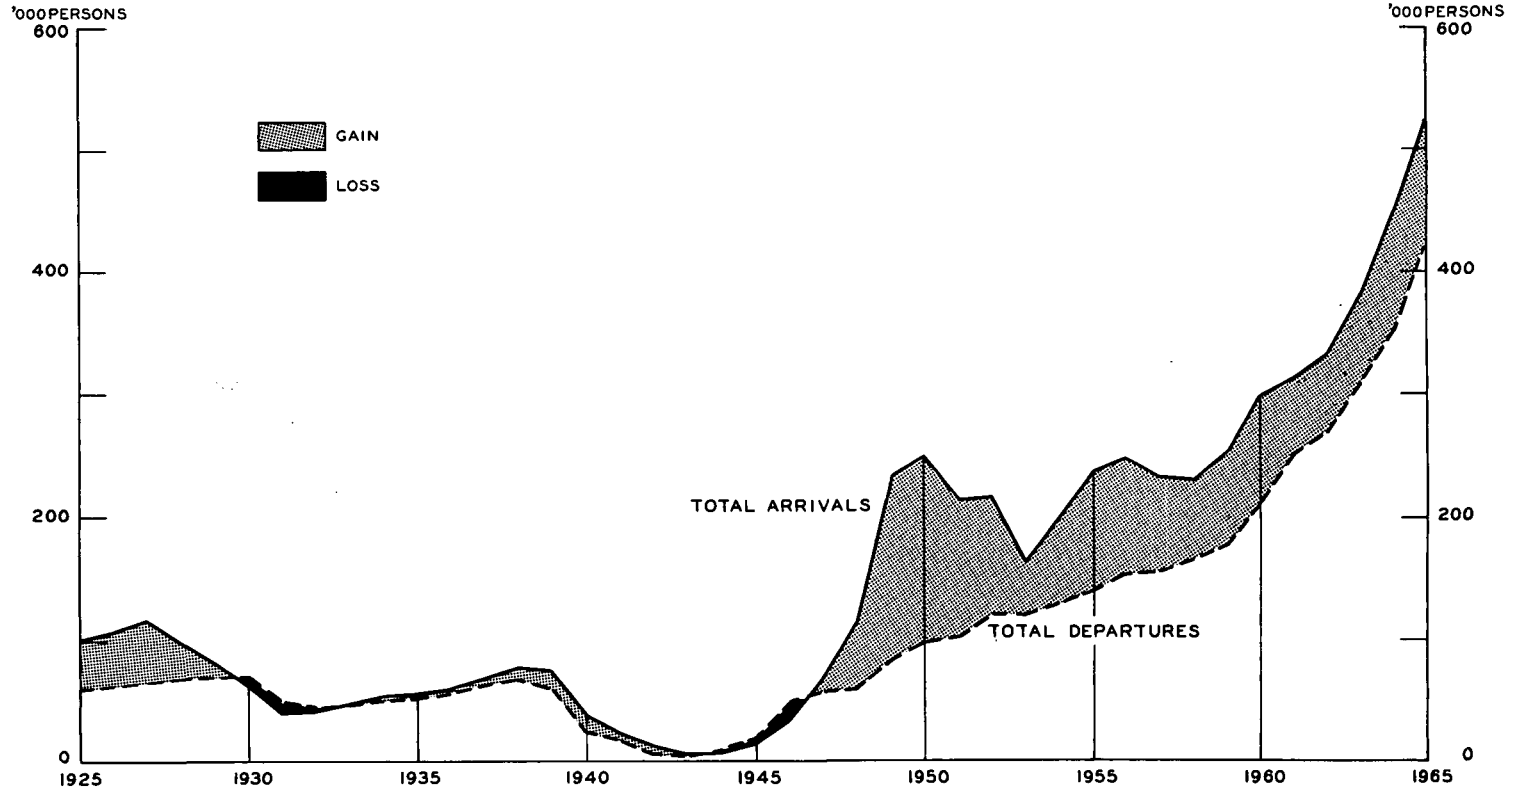

NOTE: THE VERTICAL SCALE IS LOGARITHMIC, AND THE CURVES RISE AND FALL ACCORDING TO THE RATE OF INCREASE OR DECREASE; ACTUAL NUMBERS ARE INDICATED BY THE SCALE.

(a) Includes Australian Capital Territory prior to 1911. (b) Part of New South Wales prior to 1911.
Minus sign (-) denotes decrease.

Growth and distribution of population

Growth of population

The table which follows shows the growth in the population of each sex in the various States and Territories as measured by the estimated population at 31 December in 1900 and thereafter at decennial intervals to 1960, and for each year from 1960 to 1965.

(a) Part of New South Wales prior to 1911. (b) Includes all defence personnel enlisted in Australia irrespective of movements subsequent to enlistment.

Estimates of population for intercensal years are obtained in the manner outlined on page 191.

The estimated population at 31 December each year from 1788 to 1946 was shown in *Demography*, Bulletin No. 67, 1949, and for the period 1886 to 1964 in *Demography*, Bulletin No. 82, 1964. A graph illustrating the growth of the population of Australia and of each State and Territory appears on plate 20.

Proportions of area and of population, density and masculinity

In the following table the proportions of the total area and of the total population represented by each State and Territory are given, together with the density and the masculinity of the population. Additional information regarding density and masculinity of population appears later in this chapter (see pages 201–2).

PROPORTIONS OF AREA AND OF POPULATION; DENSITY AND MASCULINITY OF POPULATION: STATES AND TERRITORIES, 31 DECEMBER 1965

State or Territory	Proportion of total area (per cent)	Proportion of estimated population, 31 December 1965 (per cent)			Density (a)	Masculinity(b)
		Males	Females	Persons		
New South Wales	10.43	36.79	37.05	36.92	13.69	100.87
Victoria	2.96	28.08	28.27	28.17	36.80	100.87
Queensland	22.47	14.16	13.98	14.07	2.42	102.91
South Australia	12.81	9.28	9.27	9.28	2.80	101.74
Western Australia	32.88	7.19	7.10	7.14	0.84	102.82
Tasmania	0.89	3.32	3.29	3.30	14.37	102.41
Northern Territory	17.53	0.34	0.25	0.30	0.07	135.33
Australian Capital Territory	0.03	0.84	0.79	0.82	99.91	108.49
Australia	100.00	100.00	100.00	100.00	3.87	101.57

(a) Number of persons per square mile.

(b) Number of males per 100 females.

Urban and rural distribution

The table below shows the distribution of the population among metropolitan, other urban and rural areas in each State and Territory at the 1961 census. Corresponding details for previous censuses were shown in earlier issues of the Year Book. Before comparisons are made between the populations of the metropolitan urban, other urban, and rural divisions at various censuses, consideration must be given to the changes which have taken place in the composition of these divisions from census to census.

Metropolitan urban divisions comprise the capital cities of the States and the City of Canberra, the national capital, and include, together with the cities proper, a number of adjacent municipalities and shires. The boundaries of the metropolitan urban divisions are determined for census purposes by the Statisticians of the States in collaboration with the Commonwealth Statistician, and in order to conform to the growth of the metropolitan urban population the boundaries are reviewed at each census and adjustments made, wherever necessary, to embrace contiguous urban areas that have developed since the previous census. Amendments were made, prior to the census of 1961, to the boundaries of the metropolitan urban divisions of Victoria, Queensland and Tasmania. *Other urban* divisions comprise (i) all separately incorporated municipalities (or cities, towns or boroughs) outside the metropolitan urban division (including Darwin, the capital city of the Northern Territory) except for any municipality or part of a municipality which was specifically regarded as rural for census purposes; and (ii) towns, not separately incorporated, with a population of 1,000 persons or more (750 persons or more in Tasmania). *Rural* divisions comprise the remaining portions of each State and Territory. The term *migratory* used in the following tables refers to persons not elsewhere enumerated who at midnight between 29 and 30 June 1961 were on ships in Australian waters or were travelling on long-distance trains, motor coaches or aircraft.

Principal urban areas

The following table shows the population of the principal cities and towns (population 6,000 or more) in each State and Territory of Australia at 30 June 1965, or at 30 June 1961, where later figures are not available.

ESTIMATED POPULATION OF PRINCIPAL CITIES AND TOWNS: AUSTRALIA
30 JUNE 1965

City or town	Popu- lation	City or town	Popu- lation	City or town	Popu- lation
NEW SOUTH WALES		VICTORIA		QUEENSLAND—cont.	
Sydney and suburbs(a)	2,349,590	Melbourne and suburbs(a)	2,121,900	Innisfail(c)	(d)6,917
Newcastle and suburbs(b)	222,390	Geelong and suburbs (b)	101,580	Roma	6,000

(a) Metropolitan area. (b) Entire urban area. (c) Non-municipal town, i.e., a town not separately incorporated for purposes of local government. (d) 30 June 1961. (e) Population count, 30 June 1965.

A table showing the aggregate urban population at the 1961 census of all cities and towns outside the metropolitan area of each State with 2,000 or more, and 3,000 or more, urban inhabitants was given in Year Book No. 51, page 267. A table showing similar data for the 1954 census was given in Year Book No. 47, page 295 and one for the 1947 census in Year Book No. 40, page 334. Comparisons between these various tables can be made only if allowance is made for changes in the status and structure of local government areas and for changes in the manner of determining urban population at each census.

Principal cities of the world

The following table shows the population of the world's largest cities at the latest available date. Since the way in which cities are delimited differs from country to country, the table shows data for the urban agglomeration, if such exists, as well as data for the so-called city proper. The urban agglomeration is defined in the United Nations *Demographic Yearbook* 1964 (page 26), from which most of the figures in the table have been taken, as the suburban fringe or thickly settled territory lying outside of, but adjacent to, city boundaries. (See also the Technical Notes on Statistical Tables and footnotes to the table in the *Demographic Yearbook*.)

POPULATION OF THE WORLD'S LARGEST CITIES

(Details for Commonwealth countries are printed in italics)

City	Country	Year	Population ('000)

(a) New York-Northeastern New Jersey urbanized area, which includes Elizabeth, Jersey City, Newark, Paterson and Yonkers. (b) May include some scattered or rural population as well as the urban centre. (c) Formerly Mukden. (d) East Berlin, year 1964, population of city proper, 1,071,462. (e) 1957. (f) 1961.

Mean population

Mean populations are calculated for twelve-month periods to provide a satisfactory average basis for calculations requiring allowance for the continuous change in population figures during such periods. From 1901 onwards the mean population for any year has been calculated by the formula:

$$\text{Mean population} = \frac{a + 4b + 2c + 4d + e}{12}$$

where *a*, *b*, *c*, *d* and *e*, respectively, are the populations at the end of the quarter immediately preceding the year and at the end of each of the four succeeding quarters; e.g., in the case of a calendar year, 31 December of the preceding year, and 31 March, 30 June, 30 September and 31 December of the year under consideration. This formula gives a close approximation to the mean of a theoretical population progressing smoothly through the five values *a*, *b*, *c*, *d*, and *e*.

The following tables show the mean populations for the calendar and financial years 1956 to 1965.

**MEAN POPULATION: CALENDAR YEARS, STATES AND TERRITORIES

Elements of increase

The two factors which contribute to the growth of a population are 'natural increase', i.e., the excess of births over deaths, and 'net migration', i.e., the excess of arrivals over departures. The 'total increase' of the population is obtained by combining natural increase with the increase by net migration. However, comparison of the total increase so obtained with that derived by subtracting the population recorded at one census from that recorded at the next census reveals differences which can be attributed partly to differences in the coverage of the census enumerations, and partly to deficiencies in the records of the elements of increase.

Elements of increase, 1941 to 1965

In the following table particulars are given of the elements of increase for each five-year period from 1941 to 1965 and for each of the years 1961 to 1965.

**POPULATION: ELEMENTS OF INCREASE, BY SEX
AUSTRALIA, 1941 TO 1965**

Period	Natural increase (a)	Net migration (b)	Intercensal adjustment (c)	Total increase

1965 . . .	123,139	104,856	(d)	227,995

(a) Excess of births over deaths. For the period September 1939 to June 1947, deaths of defence personnel, whether overseas or in Australia, have been included. (b) Excess of arrivals over departures. Excludes troop movements for the period September 1939 to June 1947. (c) Adjustment of population on the basis of the final results of the 1947, 1954 and 1961 censuses. (d) For periods subsequent to the census of 30 June 1961 the intercensal adjustment will not be known until after the next census has been taken.

Analysis of intercensal increase, 30 June 1954 to 30 June 1961

As stated on page 191 of this chapter, complete records of interstate migration are not available. For this reason the differences between the estimated populations and those recorded at the census of 30 June 1961, i.e. the intercensal adjustments, were substantial for some States.

POPULATION: ANALYSIS OF INTERCENSAL INCREASE, BY SEX, STATES AND TERRITORIES, 30 JUNE 1954 TO 30 JUNE 1961

State or Territory	Population at 30 June 1954(a)	Natural increase(b)	Net migration (c)	Total recorded increase	Intercensal adjustment (d)	Population at 30 June 1961(a)

(a) Census. (b) Excess of births over deaths. (c) Excess of arrivals over departures for recorded interstate and overseas migration. (d) Adjustment of population on the basis of the census of 30 June 1961.

Rate of population growth

In the following two tables natural increase refers to the excess of births over deaths (including deaths of Australian defence personnel), net migration refers to excess of overseas arrivals over departures excluding overseas movement of defence personnel for the period September 1939 to June 1947, and total increase is the sum of natural increase and net migration together with differences disclosed by results of population censuses up to 30 June 1961.

Annual rates of natural increase, net migration and total increase, for single years, represent the increase during the year expressed as a proportion (per cent) of the population at the beginning of the year. These rates are slightly higher than those calculated as a proportion (per cent) of the mean population for the year.

Average annual rates of increase for periods greater than one year have been calculated in the following manner.

The average annual rate of total increase is computed by the formula:

$$P_t = P_0 (1+r)^t$$

where P_0 and P_t are the populations at the beginning and end of a t -year period, respectively and r is the average annual rate of growth.

The average annual rate of natural increase and net migration is computed by dividing the average annual rate of total increase between its components in proportion to the fraction of total increase due to each component during the period. Differences between the sum of the rates of natural increase and of net migration and the rate of total increase are due to the intercensal adjustment.

**POPULATION: ANNUAL RATE OF GROWTH, AUSTRALIA
1941 TO 1965
(Per cent)**

Period	Natural increase	Net migration	Total increase
Average annual rate—			
1941-45	0.94	0.02	0.98
1946-50	1.36	0.91	2.26
1951-55	1.38	0.95	2.31
1956-60	1.40	0.83	2.22
1961-65	1.27	0.74	2.01
Annual rate—			
1961	1.45	0.59	2.04
1962	1.36	0.59	1.95
1963	1.30	0.67	1.97
1964	1.17	0.90	2.07
1965	1.10	0.93	2.03

The average annual rate of population growth during the present century has been 1.72 per cent, but the results from year to year have deviated widely from this figure. In the following table the period 1 January 1901 to 31 December 1965 has been arranged into certain defined groups of years according to the occurrence of influences markedly affecting the growth of population.

**POPULATION: PERIODICAL RATES OF GROWTH, AUSTRALIA
1901 TO 1965**

Period	Interval (years)	Total increase ('000)	Average annual numerical increase ('000)	Average annual rate of population growth (per cent)		
				Natural increase	Net migration	Total
1901 to 1913	13	1,128	87	1.55	0.49	2.04
1914 to 1923	10	862	86	1.49	0.15	1.64
1924 to 1929	6	680	113	1.26	0.62	1.88
1930 to 1939	10	569	57	0.82	0.02	0.85
1940 to 1946	7	513	73	0.98	0.01	1.01
1947 to 1952	6	1,222	204	1.37	1.19	2.54
1953 to 1960	8	1,652	207	1.39	0.81	2.19
1961 to 1965	5	1,087	217	1.27	0.74	2.01

Rates of population growth from 1886 are shown for each State and Territory of Australia in the annual bulletin, *Demography*. Estimated rates of growth of the population of Australia in comparison with those for other countries of the world for the years 1958-1963 are shown in the table on pages 227-8.

Density

From certain aspects, population may be less significant in respect of its absolute amount than in its relation to the area of the country. Australia, with an area of 2,967,909 square miles and an estimated population at 31 December 1965 of 11,478,703, excluding full-blood Aborigines, has a density of only 3.87 persons to the square mile, and is, therefore, one of the most sparsely populated countries of the world. For other continents and sub-continents, the densities in 1963 were approximately as follows: Europe (excluding U.S.S.R.), 231; Asia (excluding U.S.S.R.), 163; U.S.S.R., 26; Africa, 26; Northern America, 26; and Latin America, 28. The population density of Australia in 1963 was 3.68, about one-seventh of that of Northern America, of Africa

and of the U.S.S.R.; about one-eighth of that of Latin America; about one-fourty-fourth of that of Asia (excluding U.S.S.R.); and about one sixty-third of that of Europe (excluding U.S.S.R.).

Because of the large area of Australia and the unsuitability for settlement of much of the country, the density of population must necessarily increase slowly. In Australia as a whole the figure has increased from 1.29 per square mile in 1901 to 3.87 in 1965. The rise in density from 1901 to 1965 in each State and Territory was: New South Wales 4.45 to 13.69, Victoria 13.77 to 36.80, Queensland 0.76 to 2.42, South Australia 0.95 to 2.80, Western Australia 0.20 to 0.84, Tasmania 6.68 to 14.37, Northern Territory 0.01 to 0.07, and Australian Capital Territory 2.05 (in 1911) to 99.91. When comparing the density of population of the several States, consideration should be given to the average annual rainfall distribution in each State as an indication of the climatic influence upon probable population numbers. The proportion of the area of Australia receiving less than 10 inches of rainfall is 39 per cent.; that of the various States is: New South Wales, 20 per cent.; Victoria, nil; Queensland, 13 per cent.; South Australia, 83 per cent.; Western Australia, 58 per cent.; and Tasmania, nil.

The number and density of population of the principal countries and continental groups of the world are shown in the table on pages 227-8.

General characteristics of the population

Particulars of the characteristics of the population of Australia at the 1961 census compared with the 1954 census are shown in this section, and for the individual States and Territories at the 1961 census in Year Book No. 49 (see pp. 317-35). Information concerning the industry, occupational status and occupations of the population as recorded at the 1961 census is given in the chapter Employment and Unemployment, and on dwellings and householders in the chapter Housing and Building.

Sex distribution

The number of males to each hundred females has been adopted as a measure of the 'masculinity' of the population. The masculinity of the population of each of the States may be obtained for each year from 1796 to 1907 from the table on pages 163-5 of Year Book No. 2 and for the years 1900 to 1910 from the table on page 123 of Year Book No. 5.

With the exception of some dislocation arising from the two World Wars, there was a continuous diminution of the masculinity of the population until 1945. This resulted from the increasing proportion of the population in the higher age groups, in which females preponderate owing to their greater longevity, and the general long-term fall in the birth rate. At the 1947 census the numbers of the sexes were practically equal, but during the following decade there was an increase in masculinity owing to the greater number of males as compared with females in net oversea migration, and the recovery of the birth rate in the post-war period from the low levels of the 1930s. In more recent years, however, the trend has declined again.

POPULATION: MASCULINITY, STATES AND TERRITORIES

DECEMBER 1900 TO 1965

(Number of males per 100 females)

(a) Includes Pacific Islander, Polynesian and South Sea Islander, so described. (b) This category covers persons with European blood of the extent of one-half and blood of a non-European race to the extent of one-half.

The characteristic 'race' refers broadly to the ethnic origin of the person irrespective of where born or of what nationality. For this characteristic the basic data do not permit of scientific classification of ethnic origin, and the races are named with a geographical rather than a truly ethnological description.

Minus sign (-) denotes decrease.

Oversea arrivals and departures

More detailed statistics of oversea arrivals and departures, covering country of residence, country of embarkation/intended disembarkation, mode of travel, month of arrival or departure, etc., are shown in the tables of Section II., Oversea Arrivals and Departures, of the annual bulletin *Demography*. Monthly and quarterly mimeographed bulletins, containing the latest available statistics of oversea arrivals and departures, are also issued.

Oversea arrivals and departures since 1936

Earlier issues of the Year Book contain, in summary form, tables showing the increase of population by net migration from 1861 to the latest date, while information for individual years from 1881 is published in the annual bulletin *Demography*. The following table shows, for Australia, arrivals and departures since 1936, and refers to total movement irrespective of length of stay. Air crews and ships' crews, persons passing through Australia on board the same ship or aircraft, and also persons on a short pleasure cruise commencing and finishing in Australia on a ship not engaged in a regular voyage, are excluded from Australian statistics of oversea arrivals and departures. A graph showing arrivals and departures from 1925 to 1965 appears on plate 21.

OVERSEA ARRIVALS AND DEPARTURES, BY SEX: AUSTRALIA, 1936 TO 1965

Period	Total arrivals			Total departures			Excess of arrivals over departures

(a) Excludes movements of defence personnel from September 1939 to June 1947.

Excess of arrivals over departures

The excess of total overseas arrivals over total departures is one of the elements of population increase taken into account in preparing the estimated population for other than census dates (see page 191 of this chapter). It is necessary to use statistics of total overseas arrivals and departures for this purpose, because Australian population statistics relate to the total population present in Australia at the date of the census or estimate, and not the population normally resident in Australia (which would include those temporarily overseas and exclude those temporarily visiting Australia). In the two following tables are set out particulars of the net gain or loss of population due to overseas migration, according to age and marital status and according to country of birth.

EXCESS OF ARRIVALS OVER DEPARTURES, BY SEX: AGE DISTRIBUTION AND MARITAL STATUS, AUSTRALIA, 1963 AND 1964

	1963			1964		
	Males	Females	Persons	Males	Females	Persons

AGE DISTRIBUTION

Minus sign (-) indicates excess of departures over arrivals.

Stated purpose of travel

Since 1 July 1924 overseas travellers have been classified according to declared intention in regard to residence into two principal categories, distinguishing movements for short terms from movements for longer periods (including permanently). Prior to 1957 these categories were *temporary* and *permanent*. Thereafter the categories were entitled *short-term* and *permanent and long-term*, but the basis of classification was not changed and the figures are directly comparable for the whole period. For short-term movements overseas visitors and Australian residents have been identified separately.

Revised questions for travellers were introduced in mid-1958, and these enabled the separation, from 1 January 1959, of permanent from other long-term movements and also the identification among the permanent departures of former settlers departing.

The principal categories of travellers according to stated purpose of travel are as follows:

Permanent movement—consisting of persons arriving with stated intent to settle permanently in Australia, and Australian residents departing with stated intent to reside permanently abroad;

Long-term movement—consisting of the arrival of visitors and the departure of residents with stated intent to stay (in Australia or in a country abroad respectively) for twelve months or more; and the departure of visitors and the return of residents who have stayed (in Australia or in a country abroad respectively) for twelve months or more;

Short-term movement—consisting of all other movements, including the movement of Australian troops irrespective of period of stay;

Settlers—persons who, on arrival in Australia, indicated that they came intending to settle;*

Former settlers—persons who, on departure from Australia, stated that they had come to Australia intending to settle, had stayed for a period of twelve months or more and were now departing permanently.*

This classification is based on the purpose of travel stated by travellers on arrival in, or departure from, Australia. These statements represent the traveller's intention at that time. Many travellers subsequently change their intentions, and this must be borne in mind in interpreting the statistics.

The numbers so classified since 1 January 1941, on the basis of declared intention as to residence, and since 1 January 1961, on this basis supplemented by additional particulars as to stated purpose of travel, are as follows.

OVERSEA ARRIVALS AND DEPARTURES, BY STATED PURPOSE OF TRAVEL AUSTRALIA, 1941 TO 1965

Permanent movement

In the following paragraphs particulars are given of the persons who on arrival in Australia stated that they came intending to settle, and of Australian residents who on departure from Australia stated their intent to reside permanently abroad.

* Included in *Permanent movement*.

Country of birth. The principal countries of birth of permanent arrivals (assisted arrivals and others) and departures during the years 1964 and 1965 were as follows.

**OVERSEA ARRIVALS AND DEPARTURES—PERMANENT MOVEMENT

Settlers—State or Territory of intended residence. The following table shows the number of settlers arriving in Australia, according to the State or Territory of intended residence. Persons are asked, on or before arrival, the State or Territory of Australia in which they next intend to stay for twelve months or more. The statements represent the settlers' intentions at the time and may not be realized. The allocation to States and Territories in the table is based on these statements, except that settlers proceeding to the migrant reception centre, Bonegilla, Victoria, are allocated, as far as is practicable, to the State or Territory of their placement from the centre.

**OVERSEA ARRIVALS—SETTLERS ARRIVING: STATE OR

Assisted migration into Australia

Since 1945 successive Australian Governments have pursued an immigration policy which has included the granting of financial assistance to selected migrants from overseas countries. This assistance has in some cases been matched or partly matched by contributions from the government of the emigration country and from international funds. The basis of operation has varied from country to country—in some cases bilateral migration agreements have been negotiated; in some migration arrangements have been made through the Intergovernmental Committee for European Migration (ICEM); and in others unilateral assistance has been given by the Australian Government. In the following table particulars are shown of the total numbers of persons who were assisted to come to Australia by the Australian Government under all assisted passage schemes during the period 1946 to 1965.

ASSISTED MIGRATION: AUSTRALIA, 1946 TO 1965

Period	Nominated and selected (assisted) arrivals
1946-50	273,195
1951-55	275,241
1956-60	305,517
1960	68,254
1961	55,685
1962	45,276
1963	62,914
1964	79,604
1965	93,653

Joint Commonwealth and States scheme

Details of the joint scheme of assisted immigration arrived at by agreement between the Commonwealth and State Governments, which operated from 1920 to 1939, were published in earlier issues of the Year Book (*see* No. 38, page 576). After the outbreak of hostilities in 1939 it was decided to discontinue the grant of assisted passages for the duration of the war.

Migration from Britain

At the conclusion of the 1939-45 War two migration agreements were negotiated between the Australian and British Governments and signed on 5 March 1946. These agreements came into operation on 31 March 1947, and provided respectively for granting free passages to British ex-servicemen and their dependants and assisted passages to other residents of Britain wishing to settle permanently in Australia. The free passage agreement was terminated on 28 February 1955, but the assisted passage agreement has continued in operation by renewal from time to time. The current assisted passage agreement came into force on 1 June 1962, and continues until 31 March 1967.

Assisted passages. Under the present agreement the British Government contributes £Stg.150,000 per annum towards the cost of the movement of migrants to Australia. Each migrant 19 years of age or over contributes £Stg.10 towards his passage costs. Migrants under 19 years of age make no contribution. The Australian Government meets the balance of the overall transport costs.

Eligibility for consideration for assisted passages under current arrangements is confined generally to citizens of the United Kingdom and colonies, normally resident in Britain. Subject to those broad conditions of eligibility, there are six categories of applicants who may be granted assisted passages under current arrangements.

Personal nominees—persons sponsored by relatives or friends already established in Australia who provide accommodation for their nominees.

Group nominees—workers and their dependants sponsored or selected to fulfil nominations lodged by public and private employers.

Commonwealth nominees—workers and their dependants selected to meet labour requirements within industry generally in Australia.

'Bring out a Briton' nominees—migrants sponsored by special voluntary committees formed throughout Australia to stimulate the flow of British migrants through community effort.

Single men and women and married couples without children—migrants with a minimum capital of £Stg.25 each, selected without specific nomination who are prepared to make their own accommodation arrangements upon arrival.

'Nest-egg families'—unnominated families having a minimum capital of £Stg.1,000 and prepared to make their own accommodation arrangements on arrival.

Hostels are provided by the Australian Government for the initial accommodation of nominees. State Governments provide transit accommodation for certain groups of migrants.

Number of arrivals. The numbers of British migrants who came to Australia under the Free and Assisted Passage Agreement during the period January 1947 to June 1965 are given in the following table according to the State of proposed destination.

UNITED KINGDOM FREE AND ASSISTED PASSAGE AGREEMENT: NUMBER OF MIGRANTS(a), STATES AND TERRITORIES, JANUARY 1947 TO JUNE 1965

(a) Includes child migrants as shown below. (b) See text page 215 for explanation.

Child migration from Britain

The pre-war arrangements under which child migrants were brought to Australia under the sponsorship of various religious denominations and voluntary organizations were resumed in 1947. Under current arrangements these young migrants receive assisted passages and special maintenance provisions involving the British Government and the Australian and State Governments. From the beginning of 1947 to 30 June 1965 a total of 7,507 British child and youth migrants arrived under sponsorship, 5,101 to New South Wales, 1,373 to Western Australia, 578 to Victoria, and 455 to the other States. These arrivals are included in the table above.

Maltese migration

The Australian Government and the Government of Malta entered into an agreement on 28 April 1965, under which financial assistance is granted jointly towards the movement to Australia of approved migrants from Malta. The agreement supersedes earlier ones signed in 1948 and 1956. ICEM (Intergovernmental Committee for European Migration—see page 218) is associated with the assisted migration arrangements under this agreement. Up to 30 June 1965 a total of 35,264 Maltese had arrived under the assisted passage scheme.

Netherlands migration

On 1 April 1951 a migration agreement between the Netherlands and Australia came into operation under which selected Dutch workers and their dependants could receive assisted passages to Australia. This superseded an earlier arrangement made in 1946 between the Netherlands Emigration Foundation and Australia (see Year Book No. 39, page 56). The 1951 agreement continued in operation under extensions until the signing of the Australia-Netherlands Migration and Settlement Agreement on 1 June 1965. In accordance with Article II of that Agreement an 'Australian-Netherlands Assisted Passage Migration Arrangement' was negotiated to come into force concurrently with the Agreement. The Agreement is for a basic period of five years but will then continue indefinitely subject to termination at one year's notice by either Party. The 'Arrangement' will normally run for the same period as the 'Agreement' but may be terminated at 180 days' notice by either Party.

Contributions to passage costs under the arrangement are made by the migrant and the Netherlands and Australian Governments. The Australian Government is responsible for the reception of assisted migrants and for general assistance towards their settlement in Australia. ICEM (*see page 218*) is associated with the assisted migration arrangements under this agreement. Up to 30 June 1965, 68,201 Dutch assisted migrants had arrived in Australia.

Italian migration

On 1 August 1951 a migration agreement between Italy and Australia came into operation under which selected Italian workers and their dependants could receive assisted passages to Australia. The agreement was temporarily suspended at the end of 1952 but was resumed at the end of 1954. It continued in operation under extensions until 31 January 1964. Negotiations are in course for a revised agreement and, in the meantime, provision has been made for assisted migration on a limited scale to continue under the previous arrangements. Contributions to passage costs under the agreement are made by the migrant and the Italian and Australian Governments. The Australian Government is responsible for the reception of assisted migrants and for general assistance towards their settlement in Australia. ICEM (*see page 218*) is associated with the assisted migration arrangements under this agreement. Up to 30 June 1965, 41,028 Italian assisted migrants had settled in Australia.

German migration

On 29 August 1952 a migration agreement was signed between the Federal Republic of Germany and Australia under which selected German workers and their dependants could receive assisted passages to Australia. The agreement was renewed for five years from 29 August 1957, but assisted migration under the terms of the 1957 agreement continued until a new agreement was signed on 21 June 1965, to run indefinitely subject to one year's notice of termination by either party. Contributions to passage costs under the agreement are made by the migrant and the Governments of the Federal Republic of Germany and Australia. The Australian Government is responsible for the reception of assisted migrants and for general assistance towards their settlement in Australia. ICEM (*see page 218*) is associated with the assisted migration arrangements under this agreement. Up to 30 June 1965, 75,671 German assisted migrants had settled in Australia.

Austrian migration

Late in 1952 arrangements were made between the Austrian Government, the Australian Government and ICEM (*see page 218*) under which selected Austrian workers and their dependants could receive assisted passages to Australia. These arrangements still apply. The contribution formula towards passage costs has varied from time to time, but at present contributions are made by the migrant and the Australian Government. The Australian Government is responsible for the reception of assisted migrants and for general assistance towards their settlement in Australia. Up to 30 June 1965, 18,485 Austrian assisted migrants had settled in Australia.

Greek migration

Late in 1952 arrangements were made between the Greek Government, the Australian Government and ICEM (*see page 218*) under which selected Greek workers and their dependants could receive assisted passages to Australia. These arrangements still apply. Contributions to passage costs are made by the migrant, the Greek and Australian Governments and ICEM. The Australian Government is responsible for the reception of assisted migrants and for general assistance towards their settlement in Australia. Up to 30 June 1965, 39,748 Greek assisted migrants had settled in Australia.

Spanish migration

In 1958 arrangements were made between the Spanish Government, the Australian Government and ICEM (*see page 218*) under which selected Spanish workers and their dependants could receive assisted passages to Australia. At the request of the Spanish authorities these arrangements, so far as workers are concerned, were temporarily suspended in March 1963. Since then certain female dependants nominated by Spanish assisted migrants already in Australia have continued to arrive in Australia as assisted migrants, and negotiations are in course with a view to restoring the previous assisted passage arrangements for workers and their dependants. Contributions to passage costs are made by the migrant, the Spanish and Australian Governments and ICEM. The Australian Government is responsible for the reception of assisted migrants and for general assistance towards their settlement in Australia. Up to 30 June 1965, 8,007 Spanish assisted migrants had settled in Australia.

Belgian migration

On 1 February 1961 arrangements were made between the Belgian Government, the Australian Government and ICEM (*see below*) under which selected Belgian workers and their dependants could receive assisted passages to Australia. These arrangements still apply. Contributions to passage costs are made by the migrant and the Belgian and Australian Governments. The Australian Government is responsible for the reception of assisted migrants and for general assistance towards their settlement in Australia. Up to 30 June 1965, 1,625 Belgian assisted migrants had settled in Australia.

Refugee migration

By agreement with the International Refugee Organization, Geneva, on 21 July 1947, Australia undertook to provide resettlement opportunities for Displaced Persons. A total of 170,700 Displaced Persons arrived in Australia under this agreement in the following years. The International Refugee Organization was terminated in 1951 and refugee problems became the responsibility of the United Nations High Commissioner for Refugees, whose office was created by the United Nations specifically for this purpose. At about the same time ICEM was established (*see below*) partly to provide arrangements for the actual resettlement overseas of refugees, particularly in regard to transport.

Australia has continued to provide resettlement opportunities for refugees from Europe and elsewhere. In the period from 1945 to 30 June 1965, 120,279 refugees had been resettled in Australia additional to the 170,700 Displaced Persons mentioned above. Of the total number of refugees received by Australia since the end of World War II up to 30 June 1965, 211,265 have received financial assistance from the Australian Government towards their passage costs.

General Assisted Passage Scheme

This scheme has operated since 10 September 1954, and provides for a contribution by Australia towards passage costs to be granted to selected workers and their dependants from a number of countries including the United States of America, Switzerland, the Scandinavian countries, Eire, France, and the Latin American countries. It also covers certain British subjects resident outside the United Kingdom and certain European nationals outside their countries of origin. Australia provides for the reception of migrants accepted under this scheme and for general assistance towards their settlement in Australia. Up to 30 June 1965, 27,120 assisted migrants had settled in Australia under the General Assisted Passage Scheme.

The Intergovernmental Committee for European Migration (ICEM)

This Committee, like the office of the United Nations High Commissioner for Refugees, was established to perform functions that had formerly been carried out by the International Refugee Organization. In addition to assuming responsibility for the resettlement of refugees, ICEM has been concerned also with the movements of national migrants from Europe. Australia was one of the sixteen foundation members of the Committee; there are now thirty member countries including the British Commonwealth countries of Australia, New Zealand, the United Kingdom and Malta.

The three main functions of ICEM are:

- (a) the movement of national migrants and the provision of related services;
- (b) the resettlement of refugees and the provision of related services; and
- (c) developmental activities and technical co-operation (this includes activities such as language teaching, vocational and orientation training, and in particular measures to facilitate the acceptance of European migrants by Latin American countries).

Each member government is required to contribute an agreed percentage of the Committee's administrative expenditure. Contributions to its operational expenditure are voluntary and governments may stipulate the terms and conditions under which they are to be used.

Up to 30 June 1965 ICEM had moved 1,383,000 persons, of whom 429,300—313,600 nationals and 115,700 refugees—had departed for Australia. For its purposes ICEM records as refugees migrants who are so classified by the country of asylum from which they are moved. This classification does not in all cases accord with the classification adopted by Australia in recording their arrival.

Summary of arrivals of assisted migrants

The following table shows the number of assisted migrants who arrived in Australia in each of the last six financial years and since January 1947.

ARRIVALS UNDER ASSISTED MIGRATION SCHEMES: AUSTRALIA, JANUARY 1947
TO JUNE 1965

Assisted migration scheme	January 1947 to June 1960	1960-61	1961-62	1962-63	1963-64	1964-65	January 1947 to June 1965

Other schemes	28,359	323	28,682
Total	824,167	66,996	42,062	57,159	71,052	88,616	1,150,052

(a) Mostly Scandinavians, U.S. Americans, and British nationals from countries other than the United Kingdom.

NOTE. (i) All arrivals indicated in this table have obtained some financial assistance from the Australian Government towards payment of their passage money. Transport to Australia for the migrants concerned has been arranged on (a) ships under charter to the Department of Immigration, (b) ships and aircraft under charter to the Intergovernmental Committee for European Migration, and (c) normal commercial shipping and airlines.

(ii) The arrivals under these schemes include a small number of nationals of countries other than those referred to, and stateless persons.

The regulation of immigration into Australia

Powers and legislation of the Commonwealth

Under section 51 (xix), (xxvii) and (xxviii) of the Commonwealth Constitution, the Parliament of the Commonwealth is empowered to make laws with respect to immigration, migration, aliens and the influx of criminals. Immigration into Australia is regulated by the *Migration Act 1958-1964* which came into force on 1 June 1959 and repealed the *Immigration Act 1901-1949* and the *Aliens Deportation Act 1948*.

Any immigrant entering Australia after the commencement of the Act without having been granted an 'entry permit' or who is not within an exempted class is a prohibited immigrant. Exempted persons include diplomatic, consular and trade representatives of other countries, and seamen who enter on leave while their ships are in Australian ports. For the purposes of the Migration Act an immigrant includes a person entering for temporary stay.

An entry permit is normally granted at the port of entry by means of a stamp in the traveller's passport or equivalent travel document. There is no form of application involved. Temporary entry permits are granted to persons who have been authorized to enter for a limited period only. Persons eligible to enter for indefinite residence are granted permits of unrestricted validity. A person who is refused an entry permit must be kept on board the ship on which he arrives, otherwise the shipping company is liable to a fine of \$1,000.

The Act abolished the 'Dictation Test' as a means of excluding or deporting ineligible persons. Other deportation powers which were contained in the repealed legislation were largely re-enacted, although with some revision. It revised the law relating to the emigration of Aboriginals and children, repealing the *Emigration Act 1910*.

The Act does not affect passport or visa requirements for entry to Australia. All persons who, prior to the 1958 Act, had been required before embarkation to obtain visas or other kinds of authority to proceed to Australia, are still required to obtain them. Likewise, persons who have not had to obtain prior authority to proceed to Australia are not now required to obtain such authority solely as a result of the Act. Persons previously allowed to enter without production of passports—notably British people arriving from New Zealand—are still able to do so.

The *Aliens Act 1947-1965* provides that a register of aliens shall be maintained for every State and mainland Territory of Australia. Unless exempted, aliens 16 years of age and over are required to register with the Department of Immigration and to notify the Department of their address, occupation, or employment during the month of September each year. They are required to notify marriage within thirty days of marriage taking place. The Act provides also that the consent of the Department must be obtained before an alien may change his surname.

The *Immigration (Guardianship of Children) Act 1946-1952* provides that the Minister for Immigration becomes the legal guardian of every person under the age of 21 years who enters Australia (except for certain groups exempted) other than in charge of, or for the purpose of living in the care of, a parent or adult relative. It is primarily administered through the Child Welfare authorities in each State and mainland Territory who, as the Minister's delegates under the Act, supervise the welfare of each 'immigrant child'.

Conditions of immigration into Australia

Admission of non-Europeans. Australia's immigration policy is based on the need to maintain a predominantly homogeneous population. It is fundamental to the policy that those people coming to Australia for residence should be capable, both economically and socially, of ready integration into the community.

Australia does not exclude from residence persons of other than European origin. Immigration laws and policy permit the Minister to exercise discretion, taking into account the qualifications of persons wishing to settle here, their ability to integrate readily into the community, and other aspects including considerations of a humanitarian nature and broad national interest.

There are in Australia some 38,400 non-Europeans. Of these, 16,200 are Australian citizens (10,800 by birth and 5,400 by naturalization or registration), while 4,200 have resident status but have not sought or qualified for citizenship. The remaining 18,000 comprise 4,300 non-Europeans who have been admitted, in some instances with their families, in a variety of categories with temporary residence status, 1,100 visitors, and an Asian and other non-European student population of 12,600 (including 1,600 government-sponsored students and 11,000 private students).

The present policy provides, *inter alia*, that:

non-Europeans, who are the spouses, unmarried minor children, aged parents or fiancées of Australian citizens, or of British subjects who have or will have resident status in Australia, may be admitted with the same status;

non-Europeans who have already been admitted under temporary permit but with the expectation of indefinite stay may, after completing five years' residence, qualify to apply for resident status and subsequently for citizenship.

The following are examples of persons who may be considered for entry with a view to settlement, accompanied by their wives and children, on the basis of their general suitability, ability to integrate and qualifications positively useful to Australia. Those admitted are able, after five years' stay on temporary permit, to apply for resident status and citizenship:

persons with specialized technical skills for appointments for which local residents are not available;

persons of high attainment in the arts and sciences, or of prominent achievement in other ways;

persons nominated by responsible authorities or institutions for specific important professional appointments, which otherwise would remain unfilled;

executives, technicians, and other specialists who have spent substantial periods in Australia—for example, with the branches here of large Asian companies—and who have qualifications or experience in positive demand here;

businessmen who in their own countries have been engaged in substantial international trading and would be able to carry on such trade from Australia;

persons who have been of particular and lasting help to Australia's interest abroad in trade, or in other ways;

persons who by former residence in Australia or by association with us have demonstrated an interest in or identification with Australia that should make their future residence here feasible.

In addition to visitors and students, provision exists also for the entry on a limited temporary residence basis of staffs of companies, professional, technical and specialist personnel, and of persons coming for medical treatment, religious training, or as sportsmen and entertainers, and in other miscellaneous categories.

Private students. Young people may enter Australia for the purpose of study, irrespective of their countries of origin. The greater proportion of such private students in Australia are, however, from Asia, the Pacific area and, to a lesser extent, from the continent of Africa (there are at present some 11,000 Asian and other non-European private students in Australia). The objective is to provide the opportunity for young people in these areas to come to Australia for advanced secondary, tertiary and other post-secondary study and training which will result in qualifications in demand and of use in their countries. The student, as well as meeting other requirements of entry, must have the capacity to undertake the course of study proposed, and produce evidence of enrolment and assurances as to maintenance and accommodation. The student is admitted with temporary residence status on the understanding that he will return to his own country when the course of approved study is completed. Extensions of stay are dependent normally upon satisfactory progress being made with his studies.

Persons of European race. Maltese, Cypriots, and aliens of European race desiring to settle permanently in Australia are required to obtain authority for admission from the Department of Immigration or an Australian overseas post. Their admission under the present policy is subject to their compliance with Australia's requirements with regard to health, character, freedom from security risk, and general suitability as settlers.

General information. General information about conditions of entry into Australia may be obtained from the following officers:

- (a) in Australia—the Secretary, Department of Immigration, Canberra, Australian Capital Territory, and Commonwealth Directors of Migration in the capital cities of the various States;
- (b) in overseas countries—from migration officers or from Australian diplomatic posts (a complete list of these is given in the chapter International Relations).

Passports

Australian passports are issued, under the *Passports Act 1938–1948* and Passport Regulations, to Australian citizens. Diplomatic passports are issued to persons travelling on official missions of a diplomatic character. Official passports are granted to persons travelling on the official business of the Commonwealth or a State Government. Australian passports are obtainable on application at offices of the Commonwealth Department of Immigration in each State and internal Territory of Australia or from overseas offices of that Department, from any Australian diplomatic or consular mission abroad, or from the office of any Australian Government Trade Commissioner overseas. Applicants for passports must furnish evidence of their identity and nationality and pay a fee of two dollars. Approximately 85,000 Australian passports are issued each year in Australia and abroad.

Citizenship and naturalization

Commonwealth legislation

The *Nationality and Citizenship Act 1948* commenced on Australia Day (26 January) 1949, and repealed all previous Commonwealth legislation on this subject. The most significant effect of the Act was the creation for the first time of the status of 'Australian Citizen'. In this respect the Act was complementary to citizenship legislation passed or about to be passed by other countries of the British Commonwealth. All Australian citizens, and the citizens of other countries of the British Commonwealth, are declared to be British subjects. Australian citizenship was automatically acquired as from 26 January 1949 by persons who were British subjects at that date and who either (a) were born in Australia or New Guinea; or (b) were naturalized in Australia; or (c) had been residing in Australia during the five years immediately preceding 26 January 1949; or (d) were born outside Australia of fathers to whom (a) or (b) above applied (provided the persons concerned had entered Australia without being placed under any immigration restriction); or (e) were women who had been married to men who became Australian citizens under the above headings (provided that the women concerned had entered Australia without being placed under immigration restriction). For the purposes of the Act, 'Australia' includes Norfolk Island and the Territory of Papua, and by an amendment of the Act in 1950 it was further provided that Nauru shall be treated in the same manner as New Guinea.

Citizenship may be acquired in the following ways: (a) by birth in Australia; (b) by birth outside Australia, of a father who is an Australian citizen, provided that the birth is registered at an Australian Consulate; (c) by registration—Certificates of Registration as Australian citizens may be granted by the Minister to British subjects or Irish citizens who make application and satisfy the Minister that they can comply with specified requirements as to residence in Australia, good character and intention to reside permanently in Australia; (d) by naturalization—

Certificates of Naturalization as Australian citizens may be granted by the Minister to aliens who make application and can comply with requirements somewhat similar to those previously required under the *Nationality Act 1920-1946*. Requirements for naturalization are: (i) as a rule five years residence in Australia is required, but residence in other British countries or service under a British government may be accepted (special concessions in the matter of residence qualifications in respect of persons who have voluntarily enlisted in the armed forces were made by an amending Act of 1952); (ii) the applicants must have an adequate knowledge of the responsibilities and privileges of citizenship; (iii) Certificates do not take effect until the applicant takes the oath of allegiance. The oath is now taken, and citizenship is conferred, at public ceremonies held in the locality of the applicant's place of residence, and presided over by the mayor or equivalent head of the local government authority.

The declaration of intention to apply for naturalization, which was introduced by the original Act of 1948, is no longer compulsory, although it can still be made if an intending applicant so desires. This change was made by the amending Acts of 1955 and 1959 under the provisions of which aliens may lodge applications on completing 4½ years residence, but may not be granted naturalization until five years residence has been completed.

Under the Act the independence of married women in nationality matters is recognized, and British nationality is restored to those women who had lost it through marriage to aliens. Marriage does not affect a woman's nationality. Alien women who marry Australian citizens may, however, be naturalized under somewhat easier conditions than those which apply to other aliens.

Persons granted Australian citizenship by naturalization and registration during 1964-65

The following tables show:

- the number of persons who became Australian citizens by reason of the grant of certificates of naturalization and the countries in which such persons were ordinarily resident immediately before entering Australia or New Guinea; and
- the number of persons who became Australian citizens by reason of the grant of certificates of registration and the countries in which such persons were ordinarily resident immediately prior to entering Australia or New Guinea.

Population of External Territories

Ordinances of the individual external territories under the control of Australia provide for a census of the population to be taken on the day prescribed for the taking of a census in the Commonwealth of Australia. The following table shows the population of the Territories of Christmas Island, Cocos (Keeling) Islands, Norfolk Island, Papua, the Trust Territory of New Guinea and the Trust Territory of Nauru at the census of 30 June 1961, and as estimated at 30 June 1965.

POPULATION: EXTERNAL TERRITORIES, 30 JUNE 1961 AND 1965

Territory	Census 30 June 1961			Estimate 30 June 1965
	Males	Females	Persons	Persons
Christmas Island	1,963	1,136	3,099	3,333
Cocos (Keeling) Islands	333	273	606	674
Norfolk Island	421	423	844	980
Papua	(a) 5,490	(a) 4,304	(a) 9,794	(b) 573,411
Trust Territory of New Guinea	(a) 9,158	(a) 6,378	(a) 15,536	(b) 1,575,966
Trust Territory of Nauru	3,019	1,594	4,613	5,561

(a) Non-indigenous population only. The indigenous population was estimated to be—Papua, 513,648, Trust Territory of New Guinea, 1,433,383. (b) Total population. The non-indigenous population was estimated to be—Papua, 14,014; Trust Territory of New Guinea, 17,446.

Further particulars concerning the indigenous populations of the territories are given in the chapter The Territories of Australia.

The Aboriginal population of Australia

In Year Book No. 17, pages 951–61, a brief account was given of the Australian Aboriginal population, its origin, its numbers as estimated from time to time and the steps taken for its protection. On pages 914–16 of Year Book No. 22, particulars were shown for each of the States and Territories of Australia at successive periods, while a special article dealing with the estimated number and distribution of the native population at the date of first settlement of the white race in the continent appeared on pages 687–96 of Year Book No. 23.

The Aboriginals are scattered over the whole of the mainland, but are mostly in the Northern Territory, Queensland, and Western Australia. Particulars of the number in each State and Territory at the census of 30 June 1961 are shown in the following table. Persons with Aboriginal blood to the extent of one-half and with European blood to the extent of one-half are included in the numbers of the population and are of course enumerated at the census.

ABORIGINAL POPULATION, STATES AND TERRITORIES, 30 JUNE 1961

State or Territory	Full-blood					Other ^(a) (enumerated at the census)			Total full- blood and other (a)
	Number enumerated at census, 30 June 1961			Estimated number out of contact at census	Total number as recorded or estimated at 30 June 1961	Males	Females	Persons	
	Males	Females	Persons						
New South Wales	791	697	1,488	..	1,488	6,703	6,525	13,228	14,716
Victoria	141	112	253	..	253	758	785	1,543	1,796
Queensland	4,686	4,000	8,686	..	8,686	5,460	5,550	11,010	19,696
South Australia	1,181	966	2,147	..	2,147	1,426	1,311	2,737	4,884
Western Australia	4,243	3,878	8,121	2,000	10,121	4,108	4,047	8,155	18,276
Tasmania	24	14	38	38
Northern Territory	7,857	7,585	15,442	1,944	17,386	1,156	1,162	2,318	19,704
Aust. Cap. Territory	78	65	143	143
Australia	18,899	17,238	36,137	3,944	40,081	19,713	19,459	39,172	79,253

(a) This category covers persons with European blood to the extent of one-half and blood of the Aboriginal race to the extent of one-half.

Torres Strait Islanders, both full-blood and half European blood, are not included as Aboriginals, but are included in the populations shown on pages 192–207. At the 1961 census there were 4,972 full-blood and 245 half European blood Torres Strait Islanders of whom 4,970 and 237 respectively were recorded in Queensland.

International statistics of population

In the following tables the population, density, rate of growth, natural increase and masculinity are shown in respect of all countries which had an estimated population of at least one million persons in 1963, plus Papua. The source of these figures is the 1964 *Demographic Year-book* which is prepared and published by the Statistical Office of the United Nations. The tables include figures varying in reliability and accuracy, there being considerable variation in the quality of demographic statistics as between countries, but this information has been shown to provide some form of guide as to the magnitude and trend of population movements in overseas countries.

Where the information available to the Statistical Office of the United Nations relates to only part of the population of a country, the population characteristic (e.g., rate of growth), or vital statistics rate (e.g. marriages), has been omitted from the tables, and this is indicated by a footnote. For fuller particulars of the differences in the quality of the statistics and their reliability and for other qualifications, reference should be made to the detailed explanations contained in the *Demographic Yearbook* of the Statistical Office of the United Nations (see particularly Technical Notes on Statistical Tables and footnotes to the tables).

Population, rate of growth and density: world, continents and regions

The following table shows for the world, continents, and regions, estimated population in 1930, 1940, 1950, 1958, 1960 and 1963. The annual rate of increase (per cent), together with the average annual increase, during the period 1958-63, is also shown. Population figures have been adjusted for under-enumeration and errors in estimation. In preparing these figures, the Population Branch of the United Nations revises, from time to time, the estimates for previous years as new data become available, for example, from a census. The figures are estimates only, and as such are subject to a substantial margin of error.

POPULATION, DENSITY, AND RATE OF INCREASE FOR THE WORLD AND CONTINENTS—SELECTED YEARS

Population, density, rate of growth, natural increase and masculinity of selected countries

Certain details of the population of the more populous countries within continental groups are shown in the following table. As explained above, reference should be made to the detailed comments contained in the United Nations *Demographic Yearbook*, 1964, regarding geographical units used, boundaries of areas, reliability of estimates, etc.

CHAPTER 9

VITAL STATISTICS

The tables in this chapter are confined to the principal characteristics of vital statistics for Australia, and relate, in the main, to the year 1964, except for the totals of marriages, births, deaths and infant deaths, for which it has been possible to include figures for 1965. Comparisons have been restricted, in general, to the individual years 1961 to 1965 and the five-year periods 1941-45 to 1961-65, while age data have been shown in five-year groups. Comparisons over longer periods, together with more detailed figures such as single age particulars and cross-classifications of various characteristics, will be found in the annual bulletin, *Demography*. Commencing with the year 1963 a separate annual bulletin *Causes of Death* has been published. This contains the detailed tables based on the International Statistical Classification of Diseases, Injuries and Causes of Death which were formerly published in *Demography*. Current information is published in the *Monthly Review of Business Statistics*, the *Quarterly Summary of Australian Statistics* and the *Australian Demographic Review* (a mimeographed series issued at intervals throughout the year on population and vital statistics).

Figures of births and deaths for Australia are exclusive throughout of full-blood Aborigines.

Vital statistics for the principal countries of the world are set out in International Vital Statistics at the end of this chapter.

Provisions for registration and compilation of statistics

In Australia vital statistics are compiled from information supplied for the registration of births, deaths and marriages. Each State and Territory has an independent system of registration. Provisions for the civil registration of births, deaths, and marriages have been in force in Tasmania from 1839, in Western Australia from 1841, in South Australia from 1842, in Victoria from 1853, and in New South Wales and Queensland (then part of New South Wales) from 1856. Registration in the Territories is administered by the Commonwealth Government, registration having been taken over in respect of the Northern Territory from South Australia in 1911 and in respect of the Australian Capital Territory from New South Wales in 1930. The authority responsible for the registration of births, deaths and marriages occurring within his particular State or Territory is the Registrar-General (the Government Statist in Victoria) or the Principal Registrar.

Information concerning a birth is required to be supplied within 28 days in the Australian Capital Territory and the Northern Territory, 42 days in South Australia, and 60 days in other States. For the registration of a death the period allowed is 8 days in Tasmania, 10 days in South Australia, 14 days in Western Australia, Australian Capital Territory and Northern Territory, 21 days in Victoria, and 30 days in New South Wales and Queensland.

The *Marriage Act* 1961 came into operation on 1 September 1963, placing the marriage laws of all States, the mainland Territories and Norfolk Island on a uniform basis. Provision is made for the celebration of marriage by ministers of religion registered with the Registrar of Ministers of Religion appointed in each State and Territory by the Attorney-General, and by certain civil officers. In all cases the authorized celebrant is required to register particulars of the parties married with the appropriate registering authority in each State or Territory. The celebrant is requested to register a marriage as soon as practicable and in any case not later than fourteen days after the marriage.

The registration of stillbirths is compulsory in all the States and Territories except Tasmania. Western Australia in 1908 was the first State to introduce compulsory registration, followed by the Australian Capital Territory in 1930, New South Wales in 1935, South Australia in 1937, the Northern Territory in 1949, Victoria in 1953, and Queensland in 1959. Stillbirths are entered in both the birth and death registers in New South Wales and Western Australia, in the birth register in the Australian Capital Territory and the Northern Territory, and in separate stillbirth registers in Victoria, South Australia and Tasmania. Stillbirths are not entered in a register in Queensland but the papers are kept for a period of at least ten years. In this chapter stillbirths have been excluded from all tables of births and deaths and are shown only in those specially relating to stillbirths.

The data for the compilation of vital statistics are obtained from registry records and dispatched, through the Statistical Office in each State and Territory, to the Commonwealth Statistician. The compilation and publication of vital statistics for Australia is one of the functions of the Commonwealth Statistician. The Deputy Commonwealth Statisticians compile and publish statistics relating to their respective States.

Marriages

Numbers of marriages and crude marriage rates

The numbers of marriages registered in each State and Territory in five-year periods from 1941-45 to 1961-65, and for each of the years 1961 to 1965, and crude marriage rates for the same periods are shown in the following tables. Annual averages for each five-year period from 1861 to 1950 were published in Year Book No. 39, page 575. A graph showing the number of marriages in each year from 1870 to 1965 appears on plate 22 of this issue.

1965	8.38	8.24	8.07	8.24	8.00	7.82	8.7*	7.5*	8.23

(a) Number of marriages per 1,000 of mean population.

* Based on too few events to warrant calculation of rates to two decimal places.

The crude marriage rates for Australia and the more populous countries of the world are shown for the latest available year in International Vital Statistics at the end of this chapter.

Marriage rates based on marriageable population

As the marriage rates in some international tabulations are based on the unmarried population aged 15 years and over, the corresponding rates have been calculated for Australia for the nine census periods to 1960-62. The period in each case comprises the census year with the year immediately preceding and the year immediately following, and the figures are as follows.

PERSONS MARRYING PER 1,000 OF UNMARRIED POPULATION: AUSTRALIA 1880-82 TO 1960-62

Period	Rate(a)	Period	Rate(a)
1880-82	48.63	1932-34	42.88
1890-92	44.04	1946-48	71.24
1900-02	42.14	1953-55	65.32
1910-12	50.12	1960-62	62.27
1920-22	55.97		

(a) Average annual number of persons who married per 1,000 unmarried persons, including widowed and divorced, aged 15 years and over.

Age and marital status at marriage

Particulars of age at marriage in age groups, and previous marital status, of bridegrooms and brides in 1964 are given hereunder. There were 10,775 males under 21 years of age married during 1964, while the corresponding number of females was 35,496. At the other extreme there were 1,054 bridegrooms and 505 brides in the age group 65 years and over.

AGE AND MARITAL STATUS OF BRIDEGROOMS AND BRIDES AUSTRALIA, 1964

Age at marriage (years)	Bridegrooms				Brides			
	Bachelors	Widowers	Divorced	Total	Spinsters	Widows	Divorced	Total

Total brides	86,013	4	24,373	41,256	8,906	3,379	2,296	1,811	3,988

The average age at marriage of brides and bridegrooms has declined during recent years. The average ages, in years, of brides for each of the five years to 1964 were: 1960, 24.84; 1961, 24.73; 1962, 24.68; 1963, 24.42; and 1964, 24.31. The average ages, in years, of bridegrooms were: 1960, 28.15; 1961, 28.07; 1962, 28.03; 1963, 27.76; and 1964, 27.58. The difference in the average age at marriage between brides and bridegrooms is generally just over three years, the difference in 1964 being 3.27 years.

Previous marital status

The following table shows the relative marital status of bridegrooms and brides in 1964.

**MARITAL STATUS OF BRIDEGROOMS AND BRIDES
AUSTRALIA, 1964**

Marital status of bridegrooms	Total bridegrooms	Marital status of brides		
		Spinsters	Widows	Divorced
Bachelors	78,085	74,231	1,142	2,712
Widowers	3,038	941	1,399	698
Divorced	4,890	2,498	673	1,719
Total brides ..	86,013	77,670	3,214	5,129

Countries of birth of persons marrying

The following table shows the relative countries of birth of bridegrooms and brides married in 1964.

**RELATIVE COUNTRIES OF BIRTH OF BRIDEGROOMS AND BRIDES
AUSTRALIA, 1964**

Country of birth of bridegroom	Country of birth of bride										Total bridegrooms

Occupation of bridegrooms

The distribution of the 86,013 bridegrooms for 1964 amongst classes of occupations was as follows: craftsmen, 28,919; administrative and clerical workers, 11,111; labourers, 10,480; rural and mining workers, 8,250; professional and technical workers, 8,542; workers in transport and communication, 6,268; service, sport, and other workers, 5,667; sales workers, 5,360; persons not in the work force, 1,416.

Celebration of marriages

Under the provisions of the *Marriage Act* 1961 marriages may be celebrated either by ministers of religion who are registered for that purpose with the Registrar of Ministers of Religion in each State or Territory, or by certain civil officers, in most cases district registrars. Most of the marriages are celebrated by ministers of religion. The registered ministers in 1964 belonged to more than fifty different denominations, some of which, however, have only very few adherents. The categories 'Ministers of Other Recognized Denominations' and 'Other Ministers' combine ministers of some of these denominations. The figures for 1964 are shown in the following table.

MARRIAGES IN EACH DENOMINATION: STATES AND TERRITORIES, 1964

Divorce

The number of dissolutions of marriage, nullities of marriage and judicial separations was 7,967 in 1964 and 8,534 in 1965. Further information may be found in the chapter Public Justice.

Fertility and reproduction

Natural increase has been a significant element of increase in the population of Australia for many years. The level of natural increase depends on the excess of births over deaths, and the relation between fertility and mortality determines the rate of reproduction or replacement of the population.

Number of live births and confinements

There are various methods of measuring the fertility of the population by relating the number of births to the numbers of the population. In each the basic data are, of course, the numbers of live births. The number of live births registered in Australia during 1964 is shown in the following table. The table shows also the number of confinements resulting in one or more live births. The figures exclude cases where the births were of still-born children only.

LIVE BIRTHS AND CONFINEMENTS: STATES AND TERRITORIES, 1964

Particulars	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	A.C.T.	Aust.
LIVE BIRTHS									
Single births	78,882	63,556	34,206	20,483	16,372	8,074	895	1,910	224,378
Twins	1,606	1,422	754	377	313	177	16	42	4,707
Triplets	30	12	12	6	..	1	..	3	64
Quadruplets
Males	41,414	33,511	17,990	10,849	8,570	4,218	476	1,034	118,062
Females	39,104	31,479	16,982	10,017	8,115	4,034	435	921	111,087
Total	80,518	64,990	34,972	20,866	16,685	8,252	911	1,955	229,149

STILLBIRTHS ASSOCIATED WITH MULTIPLE BIRTHS INCLUDED ABOVE

Twins	42	16	12	1	5	3	79
Triplets	2	2

CONFINEMENTS RESULTING IN BIRTHS SHOWN ABOVE

Nuptial	74,349	60,908	31,732	19,446	15,232	7,665	802	1,889	212,023
Ex-nuptial	5,367	3,371	2,861	1,228	1,299	500	101	43	14,770
Total	79,716	64,279	34,593	20,674	16,531	8,165	903	1,932	226,793

NOTE. Owing to the registration procedure adopted in some States, it is possible that in some cases where one child only of a multiple pregnancy was live-born, the confinement has been treated as a single birth. However, the numbers of multiple births are not significantly affected. See also page 241.

The average annual number of live births in each State and Territory for each five-year period from 1941 to 1965 and the total number of live births for each year from 1961 to 1965 are given in the following table. Corresponding figures for each five-year period from 1861 to 1950 were published in Year Book No. 39, page 583.

LIVE BIRTHS: STATES AND TERRITORIES, 1941 TO 1965

Period	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	A.C.T.	Aust.
Annual average—

A graph showing the number of births in each year from 1870 to 1965 will be found on plate 22.

Crude birth rates

The oldest and most popular method of measuring fertility is to relate the number of births to the total population, thus obtaining the crude birth rate. The crude birth rate measures the rate per thousand persons (irrespective of age or sex) at which the population has added to its numbers by way of births during a given period. Other methods of measuring fertility are shown on pages 237-9. Crude birth rates for each five-year period from 1941 to 1965 and for each year from 1961 to 1965 for each State and Territory are set out below.

CRUDE BIRTH RATES(a): STATES AND TERRITORIES, 1941 TO 1965

Period	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	A.C.T.	Aust.
Average annual rates—									
1941-45 .	19.79	19.27	22.28	20.43	21.72	22.23	11.4*	26.8*	20.28

1965 .	18.61	19.81	20.88	19.83	20.08	20.40	26.9*	24.3*	19.61

(a) Number of births per 1,000 of mean population.

* Based on too few events to warrant calculation of rates to two decimal places.

The birth rates in the table above are based on *live births registered in the respective States and Territories*. Some confinements, however, take place in States other than the State in which the mother usually resides, particularly in areas near State borders. The variations thus caused in the birth rates for the States and Territories by referring the birth registrations to the mother's usual residence are shown by the following corrected rates for 1964—New South Wales 19.59; Victoria, 20.76; Queensland, 21.96; South Australia, 20.12; Western Australia, 21.14; Tasmania, 22.51; Northern Territory, 30.20 and Australian Capital Territory, 24.18. See Year Book No. 47 (p. 339) for the effect of the variations in the availability of hospital facilities on the birth rate in the Australian Capital Territory and in the neighbouring town of Queanbeyan in New South Wales.

A graph showing the birth rate for each year from 1870 to 1965 will be found on plate 23. The crude birth rates of Australia and the more populous countries of the world for the latest available year are shown in International Vital Statistics at the end of this chapter.

Fertility rates

The principal demographic factors affecting the level of crude birth rates are the proportion of women of child-bearing age in the population and the proportion of such women who are married. These factors may vary considerably at different periods and for different countries, and a population with a higher proportion of married women of child-bearing age will have a much higher crude birth rate than one with a low proportion, although the fertilities of the two populations may be identical. In order to compare fertilities births are sometimes related to the number of women of child-bearing age or, alternatively, nuptial births are related to the number of married women of child-bearing age. Thus births are related to potential mothers, giving the fertility rate.

The following table sets out for certain periods, commencing with 1880-82, the number of births per thousand of mean population, the number of births per thousand women of child-bearing age and the number of nuptial births per thousand married women of child-bearing age. For purposes of this table the child-bearing age has been taken to be fifteen to forty-four years inclusive, but births to mothers who were stated to be under fifteen or over forty-four years have been included in the compilations.

CRUDE BIRTH RATES AND FERTILITY RATES: AUSTRALIA, 1880-82 TO 1960-62

Period	Average annual rates			Index nos. (Base: 1880-82 = 100)		
	Crude birth rate ^(a)	Fertility rates		Crude birth rate ^(a)	Fertility rates	
		Births per 1,000 women aged 15-44 years	Nuptial births per 1,000 married women aged 15-44 years		Births per 1,000 women aged 15-44 years	Nuptial births per 1,000 married women aged 15-44 years
1880-82	35.3	170	321	100	100	100
1890-92	34.5	159	332	98	94	103
1900-02	27.2	117	235	77	69	73
1910-12	27.2	117	236	77	69	74
1920-22	25.0	107	197	71	63	61
1932-34	16.7	71	131	47	42	41
1946-48	23.6	104	160	67	61	50
1953-55	22.7	109	149	64	64	46
1960-62	22.5	112	154	64	66	48

(a) Number of births per 1,000 of mean population.

The table above shows how increasing proportions both of women of child-bearing age and of married women of child-bearing age inflate the crude birth rate. Thus, while the nuptial birth rate for married women increased by only 22 per cent over the period 1932-34 to 1946-48, the crude birth rate rose by 41 per cent owing principally to the greatly increased number of marriages during that period.

Age-specific birth rates

So long as customary ages at marriage do not change drastically the main demographic factor affecting the number of births is the age composition of the potential mothers in the population. Within the child-bearing group the fertility of women of different ages varies considerably and a clearer view of the fertility of the population can be obtained from an examination of what are known as its age-specific birth rates, that is the number of births to women of specified ages per thousand women of those particular ages.

Age-specific birth rates are more commonly expressed in age groups than in single ages. In the following table such rates are shown in five-year age groups for Australia for the period 1941 to 1964. A graph showing the age-specific birth rates for each year during the period 1941 to 1964 appears on plate 24 of this issue.

AGE-SPECIFIC BIRTH RATES:(a) AUSTRALIA, 1941 TO 1964

Age group (years)	1941	1946	1951	1956	1961	1962	1963	1964
15-19	24.30	26.30	38.33	43.09	47.37	44.77	46.04	46.74
20-24	121.26	151.86	177.86	210.10	225.21	215.33	207.03	189.92
25-29	145.07	184.59	185.23	203.15	220.16	215.83	210.86	197.88
30-34	103.24	133.62	122.31	123.58	131.31	127.58	123.21	118.44
35-39	58.11	76.66	65.92	64.22	63.22	61.27	59.81	58.39
40-44	19.30	24.47	20.51	19.72	19.16	18.32	18.41	16.50
45-49	1.67	2.06	1.61	1.57	1.42	1.18	1.11	1.16

(a) Number of births per 1,000 women in each age group.

Gross and net reproduction rates for females

A single measure of reproduction, known as the gross reproduction rate, is obtained by adding together the specific fertility rates for each age in the child-bearing group. This measure indicates the number of female children who would be born on an average to women living right through

the child-bearing period, if the conditions on which the rate is based continue. The rate is unaffected by the age composition of the potential mothers, and consequently it shows more clearly than the crude birth rate the reproductive propensity of the population. It is, however, an imperfect measure of reproduction because it does not take into account the females who fail to live from birth to the end of the reproductive period. A more accurate measure of this nature is obtained by multiplying the specific fertility rates by the number of females in the corresponding age group of the stationary or life table population and summing the products. Allowance is thus made for the effect of mortality, and the result is known as the net reproduction rate. The net reproduction rate indicates the average number of female children who would be born to women during their lifetime if they were subject at each age to the fertility and mortality rates on which the calculation is based. A constant net reproduction rate of unity indicates that the population will ultimately become stationary. If it continues greater than unity, the population will ultimately increase; if less than unity, it will ultimately decrease. The following table should be read in the light of the comment which follows it and of the index of marriage fertility, page 239.

GROSS AND NET REPRODUCTION RATES: AUSTRALIA, 1881 TO 1964

Year	Gross reproduction rate	Net reproduction rate	Year	Gross reproduction rate	Net reproduction rate
1881(a)	2.65	(b) 1.88	1947	1.493	(g) 1.416
1891(a)	2.30	(b) 1.73	1954	1.558	(h) 1.497
1901(a)	1.74	(c) 1.39	1960	1.677	(i) 1.623
1911	1.705	(d) 1.421	1961	1.724	(i) 1.668
1921	1.511	(e) 1.313	1962	1.659	(i) 1.605
1931	1.141	(f) 1.039	1963	1.620	(i) 1.567
1941	1.154	(f) 1.053	1964	1.525	(i) 1.475

(a) Approximate only. (b) 1881-1890 mortality experience used. (c) 1891-1900 mortality experience used. (d) 1901-1910 mortality experience used. (e) 1920-1922 mortality experience used. (f) 1932-1934 mortality experience used. (g) 1946-1948 mortality experience used. (h) 1953-1955 mortality experience used. (i) 1960-62 mortality experience used.

It is not strictly correct to assume, as in the calculations of the rates above, that a particular age-specific fertility rate can be applied to a hypothetical group of women reaching that age, without taking into account of previous fertility and marriage experience. Reproduction rates are therefore unreliable when birth and marriage rates have been changing. The indexes of marriage fertility shown on the next page are also of doubtful reliability in similar circumstances.

In the following table a comparison is given of the gross and net reproduction rates recorded for various countries in the period 1954 to 1964. These represent the latest available international comparisons.

GROSS AND NET REPRODUCTION RATES: VARIOUS COUNTRIES

Country	Period	Reproduction rate		Country	Period	Reproduction rate	
		Gross	Net			Gross	Net
Thailand	1954	(d) 2.06	1.70	France	1962	1.36	1.31
New Zealand(a)	1962	1.97	1.91	Yugoslavia	1961	1.33	1.18
Ireland, Republic of	1962	1.90	(h) 1.45	Finland	1962	1.29	(f) 1.30
Canada	1963	1.80	(e) 1.77	Belgium	1961	1.29	1.24
United States of America(b)	1962	1.63	1.58	Denmark	1962	1.24	(g) 1.20
Netherlands	1963	1.56	(e) 1.50	Czechoslovakia	1962	1.14	1.09
Australia(c)	1964	1.53	1.48	Germany—			
Scotland	1963	1.47	1.42	Federal Rep.	1962	1.20	(g) 1.11
Portugal	1955-58	1.43	1.23	Democratic Rep.	1955	1.13	1.06
Norway	1962	1.40	(f) 1.34	Switzerland	1955-59	1.13	1.09
England and Wales	1962	1.38	1.34	Sweden	1961	1.07	1.05
Austria	1963	1.38	(e) 1.28	Japan	1962	0.95	0.90
				Hungary	1963	0.88	(e) 0.81

(a) Excludes Maoris. (b) White population only. (c) Excludes full-blood Aborigines. (d) 1950-54. (e) 1962. (f) 1961. (g) 1960. (h) 1955.

In comparing the reproduction rates of the countries shown allowance should be made for any differences in years, as the rates for any one country from year to year are affected by variations in the incidence of marriage, as well as the stationary or life table population used.

Fertility of marriages

More satisfactory estimates of the fertility of marriages may be made by relating nuptial confinements in each year to the marriages from which they could have resulted. Confinements of women of a certain number of years duration of marriage are related to the number of marriages taking place that number of years previously. The table below sets out this index of current fertility per marriage in respect of confinements in the individual years shown.

FERTILITY OF MARRIAGES: AUSTRALIA, 1950 TO 1964

Year	Nuptial confinements per marriage	Year	Nuptial confinements per marriage	Year	Nuptial confinements per marriage
1950	2.56	1955	2.71	1960	2.96
1951	2.55	1956	2.76	1961	3.05
1952	2.63	1957	2.87	1962	2.98
1953	2.66	1958	2.88	1963	2.92
1954	2.66	1959	2.93	1964	2.78

See text following first table on page 238.

The figure for a particular year gives the estimated number of children which a marriage would produce according to the fertility conditions of that year. The figures for 1949 and subsequent years present a somewhat inflated index, as many of the births which have been used to calculate the index relate to marriages of immigrants which took place overseas and consequently are not included in Australian marriage records. Partial investigation suggests that this factor probably overstated the index by very little in 1949, but that the overstatement at present is about 8 per cent.

Masculinity of live births

The masculinity of live births, i.e., the number of males born for every 100 female births, has remained fairly stable for Australia at about 105. But when the number of births for which masculinity is being calculated is small (for example, totals for smaller States) considerable variation is shown. The averages for the ten years 1951-60 were as follows: New South Wales, 105.38; Victoria, 105.50; Queensland, 105.80; South Australia, 104.89; Western Australia, 105.25; Tasmania, 104.96; Northern Territory, 107.16; Australian Capital Territory, 108.77; Australia, 105.43. The following table shows the figures for Australia for each ten-year period from 1901 to 1960 and for each of the years 1963 to 1965.

MASCULINITY(a) OF LIVE BIRTHS REGISTERED: AUSTRALIA, 1901 TO 1965

Particulars	1901-10	1911-20	1921-30	1931-40	1941-50	1951-60	1963	1964	1965
Total births	105.22	105.27	105.55	105.12	105.38	105.43	105.75	106.28	105.61
Ex-nuptial births	104.08	105.25	105.16	105.36	105.34	103.99	106.76	106.00	

(a) Number of males born for every 100 female births.

Ex-nuptial live births

The variations in the proportions of ex-nuptial live births as between the individual States and Territories for 1964 and for Australia at intervals from 1901 to 1964 are shown in the following table.

EX-NUPTIAL LIVE BIRTHS
NUMBER AND PROPORTION, STATES AND TERRITORIES, 1964

Particulars	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	A.C.T.	Aust.
Number . . .	5,427	3,402	2,898	1,239	1,311	502	103	43	14,925
Proportion of total births %	6.74	5.23	8.29	5.94	7.86	6.08	11.31	2.20	6.51

EX-NUPTIAL LIVE BIRTHS: NUMBER AND PROPORTION
AUSTRALIA, 1901¹ TO 1964

Particulars	Annual average						1960	1961	1962	1963	1964
	1901-10	1911-20	1921-30	1931-40	1941-50	1951-60					
Number . . .	6,498	6,836	6,238	5,133	6,780	9,013	10,987	12,269	12,813	13,454	14,925
Proportion of total births % . . .	6.05	5.22	4.66	4.40	4.13	4.25	4.77	5.11	5.40	5.71	6.51

A further measure of ex-nuptiality is obtained by calculating the number of ex-nuptial births per thousand of the single, widowed and divorced female population aged from 15 to 44 years. On this basis, the number of ex-nuptial births per 1,000 unmarried women of ages 15 to 44 is as follows: 1880-82, 14.49; 1890-92, 15.93; 1900-02, 13.30; 1910-12, 12.53; 1920-22, 10.50; 1932-34, 6.91; 1946-48, 11.45; 1953-55, 14.45; and 1960-62, 18.49. Ex-nuptial births to married women, which are not recorded separately, are included in these figures and it is not possible to determine to what extent they influence the trend shown. The following table shows the relative ratios of ex-nuptial and nuptial births to the total population for periods from 1901.

CRUDE EX-NUPTIAL, NUPTIAL, AND TOTAL BIRTH RATES(a)
AUSTRALIA, 1901 TO 1964

Birth rate	Annual average						1962	1963	1964
	1901-10	1911-20	1921-30	1931-40	1941-50	1951-60			
Ex-nuptial . . .	1.60	1.39	1.04	0.76	0.90	0.97	1.19	1.23	1.34
Nuptial . . .	24.91	25.18	21.40	16.47	20.99	21.75	20.95	20.36	19.24
Total . . .	26.51	26.57	22.44	17.23	21.89	22.72	22.14	21.59	20.58

(a) Number of births per 1,000 of mean population.

Legitimations

Under the provisions of the Commonwealth *Marriage Act* 1961, which came into operation on 1 September 1963, a child whose parents were not married to each other at the time of its birth becomes legitimized on the subsequent marriage of its parents. The legitimation takes place whether or not there was a legal impediment to the marriage of the parents at the time of the child's birth and whether or not the child was still living at the time of the marriage, or in the case of a child born before 1 September 1963, at that date. Prior to the introduction of this

Act, legitimations took place under Acts passed in the several States to legitimize children born before the marriage of their parents, provided that no legal impediment to the marriage existed at the time of birth. On registration in accordance with the provisions of the Legitimation Acts, any child who came within the scope of their purposes, born before or after the passing thereof, was deemed to be legitimate from birth by the post-natal union of its parents, and entitled to the status of offspring born in wedlock. The number of children legitimized in Australia during 1964 was 3,765.

Multiple births

Because the current Australian birth statistics are based only on those confinements which resulted in a live-born child, the number of confinements for multiple births for Australia is understated—firstly, because in cases where all children of a multiple birth are still-born the confinement is excluded, and secondly, because some cases of multiple births in which only one child was live-born are registered as single births.

Multiple births recorded on this basis during 1964 comprised 2,393 cases of twins and 22 cases of triplets, the resultant numbers of live-born and still-born children being respectively 4,707 and 79 for twins, 64 and 2 for triplets. This represents an average of 10.55 recorded cases of twins and 0.10 recorded cases of triplets per 1,000 confinements or, alternatively, mothers of twins represented 1 in every 95 mothers and mothers of triplets 1 in every 10,309. Total cases of multiple births represented 10.65 per 1,000 confinements or 1 in every 94 mothers. The proportion of mothers of multiple births to total mothers does not vary greatly from year to year.

Births—ages of parents

The relative ages of the parents of children whose births were registered in 1964 have been tabulated separately for male and female births, multiple births being distinguished from single births. For total births and for multiple births, the relative ages of parents are shown in *Demography*, Bulletin No. 82. In the following table the relative ages of parents are shown in five-year groups.

CONFINEMENTS, BY RELATIVE AGES OF PARENTS: AUSTRALIA, 1964

Age of father (years) and type of birth	Total	Age of mother (years)								Not stated

Other European	1,812	27	250	285	98	66	88	74	98	3,208	129	6,135
Other and unspecified	1,609	29	278	44	154	44	103	17	11	95	1,946	4,330
Total mothers	166,862	877	12,828	2,500	5,275	9,638	3,320	774	1,679	4,552	3,718	212,023

Births—occupation of fathers

In the 212,023 cases where nuptial confinements resulted in one or more live births, the classes of occupations of the fathers were distributed as follows: craftsmen, 67,930; rural and mining workers, 27,225; administrative and clerical workers, 28,194; labourers, 22,491; workers in transport and communication, 18,949; professional and technical workers, 19,523; sales workers, 13,730; service, sport and other workers, 13,335; persons not in the work force, 646.

Births—age, duration of marriage and issue of mothers

The total number of nuptial confinements resulting in live births in 1964 was 212,023, comprising 209,764 single births, 2,237 cases of twins and 22 cases of triplets. The following tables relating to previous issue exclude the issue of former marriages and still-born children. On the other hand, they include in some States children by the same father who were born to the mother prior to the marriage. Children born at the present confinement are included in the total issue shown.

The following table shows that in 1964 the duration of marriage of mothers of nuptial children ranged from less than one year to over 25 years and that the average family increased fairly regularly with the duration of marriage. The average issue of married mothers who bore children in 1964 was 2.56, compared with 2.60 in 1963, 2.61 in 1962, 2.60 in 1961 and 2.59 in 1960.

**NUPTIAL CONFINEMENTS, BY DURATION OF MARRIAGE
AND ISSUE OF MOTHERS: AUSTRALIA, 1964**

Total married mothers .	16,836	66,906	64,444	37,735	20,117	5,645	340	212,023

Multiple births—previous issue of mothers

Of married mothers of twins in 1964, 573 had no previous issue either living or deceased, 553 had one child previously, 467 had two previous issue, 280 three, 153 four, 92 five, 49 six, 33 seven, 22 eight, 7 nine, 2 ten, 3 eleven, 1 twelve, 1 thirteen, and 1 fifteen. Of the 22 cases of nuptial triplets registered during 1964, 6 mothers had no previous issue, 4 had one, 4 had two, 2 had three, 2 had four, 1 had five, 2 had six, and 1 had nine previous issue.

Nuptial first births

The following table shows the interval between marriage and first birth for periods since 1911. In cases of multiple births, the first live-born child only is enumerated.

NUPTIAL FIRST BIRTHS, BY DURATION OF MARRIAGE: AUSTRALIA, 1911 TO 1964

Duration of marriage	Annual average					1963	1964
	1911-20	1921-30	1931-40	1941-50	1951-60		

NUMBER OF NUPTIAL FIRST BIRTHS

Under 8 months . . .	9,312	10,351	10,677	8,822	11,796	17,621	18,343

In 1964 the masculinity of nuptial first births was 106.22 and of total births 106.28.

A summary showing grouped ages and grouped durations of marriage of mothers of nuptial first-born children is given in the following table.

**NUPTIAL FIRST BIRTHS, BY AGE OF MOTHER AND DURATION OF MARRIAGE
AUSTRALIA, 1964**

1963	69,130	150,713	219,843	31.45
1964	68,586	143,437	212,023	32.35

Stillbirths

Interstate comparisons of the figures and rates in the following tables are affected by the differences in the definitions of stillbirths adopted by the various States, and only the trends in the rates for the States should be compared. For various reasons, the registration of stillbirths is not as complete as for live births and deaths; particulars for the Territories and the smaller States are more affected by this than are those for the larger States. Stillbirth registration is not compulsory in Tasmania. The figures shown represent those stillbirths voluntarily registered during the year.

STILLBIRTHS: STATES AND TERRITORIES, 1936 TO 1964

Period	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	A.C.T.	Aust.
Annual average—									
1936-40	1,409	854	(a)	(b) 274	234	144	(a)	5	(a)
1941-45	1,478	966	(c) 657	324	248	143	(a)	9	de 3,825
1946-50	1,405	949	626	368	274	161	(a)	12	(e) 3,795
1951-55	1,239	849	581	290	271	139	8	16	3,393
1956-60	1,253	839	558	274	235	109	6	19	3,293
Annual total—									
1960	1,261	850	551	280	226	106	13	22	3,309
1961	1,306	885	553	272	240	111	17	19	3,403
1962	1,099	775	520	278	203	102	9	20	3,006
1963	1,163	792	476	262	178	63	30	14	2,978
1964	1,003	771	402	252	170	69	13	15	2,695

(a) Not available. (b) Three years 1938-40. (c) Four years 1942-45. (d) Excludes Queensland for 1941. (e) Excludes Northern Territory.

The incidence of stillbirths in each State and Territory as measured by the rate per 1,000 of all births, both live and still, is as follows.

PROPORTION OF STILLBIRTHS(a): STATES AND TERRITORIES, 1936 TO 1964

Period	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	A.C.T.	Aust.
Average annual rate—									
1936-40	28.7	27.4	(b)	(c) 27.5	25.7	28.7	(b)	22.2	(b)
1941-45	25.5	24.8	d 26.8	25.2	23.3	25.7	(b)	22.9	ef 25.25
1946-50	20.0	19.6	21.9	22.1	20.5	22.3	(b)	16.3	f 20.46
1951-55	16.5	15.5	18.4	15.8	17.0	17.5	17.2	17.1	16.57
1956-60	15.5	13.5	16.1	13.5	13.7	12.6	8.6	14.3	14.59
Annual rate—									
1960	15.1	13.1	15.4	13.2	13.2	11.8	(g)	13.7	14.16
1961	14.9	13.3	14.9	12.0	13.9	12.2	(g)	(g)	13.98
1962	12.7	11.6	14.4	12.8	11.8	11.3	(g)	10.9	12.52
1963	13.6	11.9	13.1	12.1	10.2	7.3	33.7	(g)	12.48
1964	12.3	11.7	11.4	11.9	10.1	8.3	(g)	(g)	11.62

(a) Numbers of stillbirths per 1,000 of all births (live and still). (b) Not available. (c) Three years 1938-40. (d) Four years 1942-45. (e) Excludes Queensland for 1941. (f) Excludes Northern Territory. (g) Less than twenty events: rates not calculated.

NOTE. Because of the smallness of the numbers of stillbirths occurring in the Australian Capital Territory and the Northern Territory, the rates for these Territories (i.e. the number per thousand live births and stillbirths) are subject to considerable fluctuation.

Mortality

Number of deaths

The following tables show the number of deaths, male and female, registered in each State and Territory during 1965. Stillbirths, although registered as both births and deaths in some States, are excluded from the death statistics published herein.

DEATHS, SEXES: STATES AND TERRITORIES, 1965

Sex	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	A.C.T.	Aust.
Males	21,553	15,453	8,172	4,836	3,715	1,716	125	200	55,770
Females	17,396	12,578	5,942	3,952	2,559	1,327	36	155	43,945
Persons	38,949	28,031	14,114	8,788	6,274	3,043	161	355	99,715

A summary of the number of deaths in each State and Territory from 1941 to 1965 is given in the following table. Annual averages for each five-year period from 1861 to 1950 were published in Year Book No. 39, page 597.

DEATHS: STATES AND TERRITORIES, 1941 TO 1965

Period	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	A.C.T.	Aust.
Annual average—									
1941-45(a)	27,807	20,964	9,715	6,303	4,724	2,488	64	71	72,136
1946-50(a)	29,552	21,827	10,357	6,507	4,802	2,459	76	103	75,683
1951-55	32,135	22,900	11,187	7,182	5,263	2,576	109	131	81,483
1956-60	34,002	24,254	12,008	7,732	5,523	2,668	117	184	86,488
1961-65	37,514	26,569	13,570	8,388	6,043	2,939	152	290	95,465
Annual total—									
1961	35,048	24,500	12,756	7,815	5,729	2,789	128	196	88,961
1962	36,861	25,847	13,182	8,232	5,810	2,870	144	217	93,163
1963	37,226	26,920	13,275	8,201	5,976	2,818	161	317	94,894
1964	39,487	27,548	14,523	8,906	6,429	3,174	164	363	100,594
1965	38,949	28,031	14,114	8,788	6,274	3,043	161	355	99,715

(a) Excludes deaths of defence personnel and of internees and prisoners of war from overseas for the period September 1939 to June 1947.

A graph showing the number of deaths in each year from 1870 to 1965 will be found on plate 22.

Crude death rates

The commonest method of measuring the mortality rate is to relate the number of deaths for a given period to the mean population for that period, thus obtaining the crude death rate. This rate for a given period measures the number per thousand of population by which the population is depleted through deaths during that period.

CRUDE DEATH RATES(a): STATES AND TERRITORIES, 1941 TO 1965

Period	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	A.C.T.	Aust.
Average annual rate—									
1941-45(b)	9.73	10.63	9.24	10.26	9.86	10.21	6.4*	5.0*	9.96
1946-50(b)	9.70	10.37	9.13	9.76	9.23	9.30	6.3*	5.3*	9.74
1951-55	9.49	9.55	8.71	9.25	8.49	8.48	6.9*	4.58	9.25
1956-60	9.20	8.91	8.36	8.62	7.90	7.97	5.32	4.31	8.78
1961-65	9.26	8.68	8.69	8.30	7.82	8.10	5.15	3.94	8.74
Annual rate—									
1961	8.95	8.37	8.42	8.06	7.77	7.89	4.9*	3.3*	8.47
1962	9.26	8.64	8.56	8.32	7.69	7.99	5.3*	3.3*	8.70
1963	9.19	8.81	8.50	8.13	7.73	7.74	5.6*	4.3*	8.69
1964	9.58	8.80	9.16	8.63	8.14	8.64	5.2*	4.5*	9.03
1965—									
Males	10.23	9.59	10.02	9.10	9.08	9.17	6.4*	4.3*	9.74
Females	8.33	7.88	7.51	7.57	6.44	7.28	2.5*	3.6*	7.80
Persons	9.28	8.74	8.78	8.34	7.78	8.24	4.7*	4.0*	8.78

(a) Number of deaths per 1,000 of mean population. (b) Excludes deaths of defence personnel, etc., from September 1939 to June 1947.

* Based on too few events to warrant calculation of rates to two decimal places.

NOTE. Crude death rates (i.e., the number of deaths per thousand of mean population) are affected by the particular age and sex composition of the population. In the Australian Capital Territory and the Northern Territory the population at risk in the higher ages is lower proportionately than in other States, largely as a result of the rapid increases of the population in the lower ages.

A graph showing the crude death rate for each year from 1870 to 1965 will be found on plate 23.

Standardized death rates

The death rates quoted on p. 247 are crude rates, i.e., they simply show the number of deaths per thousand of mean population without taking into consideration differences in the sex and age composition of the population. Other conditions being equal, however, the crude death rate of a community will be low if it contains a large proportion of young people (not infants), and conversely it will be relatively high if the population includes a large proportion of elderly people. The foregoing table of crude death rates, therefore, does not indicate comparative incidence of mortality either as between States in the same year or in any one State over a period of years. In order to obtain a comparison of mortality rates on a uniform basis as far as sex and age constitution are concerned, 'standardized' death rates may be computed. These are computed by selecting a particular distribution of age and sex as a standard, and then calculating what would have been the general death rate if the death rates for each sex and in each age group had been as recorded, but the age and sex distribution had been the same as in the standard population. For the standardized rates which follow, the standard population compiled by the International Institute of Statistics has been used. This standard is based upon the age distribution according to sex of nineteen European countries at their censuses nearest to the year 1900. An examination of the age distribution of deaths and the resultant age-specific death rates is made on pages 252-4.

Comparison of crude and standardized death rates

The relative incidence of mortality as between individual States and as between the years 1921, 1933, 1947, 1954 and 1961 is illustrated in the following statement of crude and 'standardized' death rates. These years have been chosen for comparison because the census data give essential information as to sexes and ages of the State populations. Crude death rates are shown to indicate the degree to which they disguise the true position.

CRUDE AND STANDARDIZED DEATH RATES: STATES, 1921 TO 1961

Particulars	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	Aust.
Crude death rate(a)—							
1921	9.50	10.52	9.37	10.02	10.42	10.30	9.91
1933	8.58	9.59	8.84	8.44	8.64	9.60	8.92
1947	9.53	10.44	9.15	9.61	9.39	9.17	9.69
1954	9.46	9.20	8.63	9.01	8.38	8.67	9.10
1961	8.95	8.37	8.42	8.06	7.77	7.89	8.47
Standardized death rate(b)—							
1921	10.35	10.79	10.24	10.38	11.88	10.83	10.58
1933	8.52	8.74	9.10	7.66	8.74	8.86	8.62
1947	7.44	7.31	7.47	6.77	7.28	7.21	7.34
1954	7.24	6.63	6.80	6.52	6.71	7.02	6.90
1961	6.56	6.12	6.26	5.90	6.02	6.19	6.27

(a) Total deaths per 1,000 of mean population. (b) See explanation of standardized death rates above.

The comparisons above relate to individual years in which a census of population was taken and should not be used as the basis for general conclusions as to changes in incidence of mortality for other than those years.

True death rates

The main objections to standardized death rates are that the choice of a standard population is arbitrary and that the standardized rates have little value except for comparative purposes, and even then variation of the standard population may make appreciable differences. However, a correct measurement of the mortality of the population can be obtained from life tables. A life table represents the number of survivors at each age from a group of newly-born children

who are subject to given mortality conditions, and from such a table the complete expectation of life at birth can be calculated. The reciprocal of this figure is known as the true death rate, since, if the complete expectation of life of a person at birth is fifty years, say, then each person will on the average die fifty years after birth, so that in a stationary population one person in fifty, or twenty per thousand, will die each year. The true death rate for a given period is unaffected by the particular age distribution of that period and is determined solely by the mortality experience of the period as manifested in the rate of survival from each year of age to the next. The table below sets out complete expectation of life at birth and true death rates for the periods covered by Australian life tables.

COMPLETE EXPECTATION OF LIFE AT BIRTH
AND TRUE DEATH RATES: AUSTRALIA, 1881-90 TO 1960-62

Period	Complete expectation of life at birth (years)		True death rate	
	Males	Females	Males(a)	Females(b)
1881-90 . . .	47.20	50.84	21.19	19.67
1891-1900 . . .	51.06	54.76	19.58	18.26
1901-10 . . .	55.20	58.84	18.12	17.00
1920-22 . . .	59.15	63.31	16.91	15.80
1932-34 . . .	63.48	67.14	15.75	14.89
1946-48 . . .	66.07	70.63	15.14	14.16
1953-55 . . .	67.14	72.75	14.89	13.75
1960-62 . . .	67.92	74.18	14.72	13.48

(a) Number of deaths per 1,000 males in stationary population.

(b) Number of deaths per 1,000 females in stationary population.

The crude death rates and the true death rates of Australia and the more populous countries of the world for the latest available year are shown in the table in International Vital Statistics at the end of this chapter.

Australian Life Tables

Life Tables prior to 1961. It has been the practice at each census from 1911 onwards to prepare Life Tables representative of the mortality experience of Australia. The mortality of the Australian population for the thirty years from 1881 to 1910 inclusive was investigated in 1911 by the Commonwealth Statistician. Tables were compiled for each State and for Australia as a whole in respect of each sex for each of the decennial periods 1881-90, 1891-1900 and 1901-10. These compilations furnished a comprehensive view of Australian mortality in respect of sex, time, and geographical distribution, and practically superseded all Life Tables prepared in Australia prior to 1911. In addition, monetary tables based on the experience for the whole of Australia for the ten years 1901-10 were prepared and published. At the census of 1921 Life Tables were prepared by the Commonwealth Statistician from the recorded census population and the deaths in the three years 1920 to 1922. In 1933, 1947 and 1954, Life Tables based on the census population and the deaths in the years 1932 to 1934, 1946 to 1948 and 1953 to 1955 respectively were compiled by the Commonwealth Actuary.

Life Tables of census of 1961. On the occasion of the 1961 Census, the eighth Life Tables in the series were compiled by the Commonwealth Actuary. These were based on the population recorded at the census, adjusted to allow for variation in the net movement into Australia over the years 1960 to 1962, and deaths during these years. Full particulars of the data used, the method of construction and the tabulation of these Life Tables will be found in the report of the Commonwealth Actuary, which was published by the Commonwealth Statistician in 1966. This report will also appear in Volume VIII of the detailed tables of the 1961 census. The main features of the tables, including comparisons with earlier Australian tables, are set out in the following summary tables.

AUSTRALIAN COMPARATIVE LIFE TABLES

RATES OF MORTALITY (q_x) AT REPRESENTATIVE AGES

Age (x)	1901-10	1920-22	1932-34	1946-48	1953-55	1960-62

80	4.96	5.36	5.47	5.57	5.73	6.02	6.30	6.68

l_x = number surviving at specified ages out of 100,000 births. ${}^e e_x$ = complete expectation of life at specified ages.

As indicated in the foregoing tables, the progress towards lower mortality rates for both males and females has continued over the past sixty years or more. For example, the probability of a child born in 1961 dying in one year is less than one-quarter of the probability of death in one year attached to the child who was born sixty years ago. Even at advanced ages, the reductions

which have occurred in mortality rates as compared with sixty years ago are very substantial. With the exception of males of ages forty to forty-seven and ages sixty-two to sixty-six lower mortality rates were experienced by males and females during 1960 to 1962 than for the period 1953 to 1955.

There is evidence that female longevity continues to improve at a faster rate than male longevity. It would seem that the risks associated with child-bearing for females are far outweighed by the greater accident propensity of younger males and the more rapid deterioration of health, presumably due to business and other pressures, of older males.

An improvement has occurred in male mortality from accidents of all types. Even though there is some indication that for females the accident rates have deteriorated slightly, the rates are, however, still substantially below the corresponding rates for males.

Age distribution at death

Age at death is recorded for statistical purposes in days for the first week of life, in weeks for the first four weeks, in months for the first year and in completed years of life thereafter. These ages are usually combined in groups for publication, the most common being weeks for the first four weeks, months or groups of months for the first year, single years of age for the first five years, and thereafter the five-year groups 5-9 years, 10-14 years, etc. A summary in this form for the year 1964 is given for Australia in the following table.

DEATHS, BY AGE AT DEATH AND SEX: AUSTRALIA, 1964

Age at death	Males	Fe- males	Per- sons	Age at death	Males	Fe- males	Per- sons

There are different mortality rates at various stages of life, and the actual number of deaths in any period is related to the numbers living at the respective stages. Changes in the number of deaths from one period to another are associated with changes in the rate of mortality in the various age groups and by the changed proportions of persons living in the different groups. The combined effect of various influences, i.e., the steady decline in the rate of mortality, the long-term decline in the birth-rate, and the effects of past and present migration on the age distribution of the population, is shown in the following table, which shows the proportion of deaths in various age groups in ten-year periods from 1901 to 1960 and for the year 1964.

PROPORTION OF DEATHS IN EACH AGE GROUP: AUSTRALIA, 1901 TO 1964
(Per cent)

Period	Age at death (years)								Total
	Under 1	1-4	5-19	20-39	40-59	60-64	65 and over	Unspeci- fied	
1901-10 .	20.51	6.45	6.37	14.99	17.99	5.31	28.26	0.12	100.00
1911-20 .	16.66	6.09	5.49	14.44	20.32	6.19	30.68	0.13	100.00
1921-30 .	13.10	4.51	4.85	12.12	20.55	8.26	36.53	0.08	100.00
1931-40 .	7.40	2.56	3.83	9.36	20.54	8.36	47.92	0.03	100.00
1941-50 .	6.79	1.71	2.26	6.01	19.04	9.33	54.84	0.02	100.00
1951-60 .	5.59	1.33	1.80	4.90	17.27	9.18	59.90	0.03	100.00
1964—									
Males .	4.46	0.91	2.09	4.90	20.23	10.49	56.89	0.03	100.00
Females .	4.19	0.93	1.44	3.13	13.61	6.80	69.88	0.02	100.00
Persons .	4.34	0.92	1.80	4.12	17.31	8.86	62.62	0.03	100.00

A table showing these proportions for males and females separately for the period 1901 to 1950 was published in Year Book No. 39, page 614.

Age-specific death rates

In previous issues of the Year Book, average annual age-specific death rates were given for each State and Australia for the periods 1932-1934, 1946-1948 and 1953-1955 (see Year Books, No. 37, pp. 778-9, No. 39, pp. 615-6 and No. 44, pp. 640-1). These rates were based on the age distribution of the population at the relevant censuses. Rates for the period 1960-1962 are shown in the following table.

AGE-SPECIFIC DEATH RATES(a): STATES, 1960-62

85 and over	208.1	203.7	191.5	199.5	191.5	187.1	202.0

(a) Average annual number of deaths per 1,000 of population in each age group at 30 June 1961.
 (b) Infant deaths per 1,000 live births registered.

Intercensal estimates of the age distribution of the population are available for Australia and for the larger States. The following table shows age-specific death rates i.e. the average number of deaths per 1,000 of population in each age group, for Australia for the year 1964, for males and females.

AGE-SPECIFIC DEATH RATES(a), BY SEX: AUSTRALIA, 1964

Age group (years)	Males	Females	Age group (years)	Males	Females
Under 1(b)	21.2	16.7	45-49	6.2	3.9
1-4	1.1	0.9	50-54	10.3	5.7
5-9	0.5	0.4	55-59	17.4	8.6

35-39	2.3	1.6	85 and over	260.6	212.8
40-44	4.0	2.4			

(a) Average number of deaths per 1,000 of mid-year population in each age group estimated in respect of 30 June 1964. (b) Infant deaths per 1,000 live births registered.

Infant deaths and death rates—States and Territories

Compared with other countries, Australia occupies a favourable position in respect of infant mortality. In 1964, only a few countries recorded a lower rate than Australia. Rates for Australia and the more populous countries of the world for the latest available year are shown in the table in International Vital Statistics, pp. 269-70. The next tables show, for each State and Territory for the period 1941 to 1965, the number of deaths under one year of age and the rates of infant mortality under one year, and for the period 1936 to 1964 the rates under four weeks, and four weeks and under one year.

INFANT MORTALITY UNDER ONE YEAR: STATES AND TERRITORIES, 1941 TO 1965

Period	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	A.C.T.	Aust.

1964	6.0	4.0	5.7	5.8	6.7	6.3	(b)	(b)	5.42

(a) Number of deaths of children aged four weeks and under one year per 1,000 live births registered. (b) Less than twenty events; rates not calculated.

Because of the smallness of the numbers of these deaths occurring in the Australian Capital Territory and the Northern Territory, the rates for these Territories (i.e., number of such deaths per thousand live births) are subject to considerable fluctuation.

Infant deaths and death rates—Australia

The fact that out of 602,835 male infants born from 1960 to 1964, 13,275 (22.02 per 1,000) died during the first year of life, while of 569,396 female infants only 9,871 (17.34 per 1,000) died during the first year, accords with the universal experience that during the first few years of life the higher death rate of male infants tends to counteract the excess of male births. Stillbirths, for which masculinity is also higher, are not included in any of the tables relating to deaths.

As shown by the following table, the disparity is greater during the first four weeks of life, termed the neonatal period, than during the remainder of the first year of life, or the post-neonatal period.

INFANT DEATHS AND MORTALITY RATES, BY SEX: AUSTRALIA, 1936 TO 1964

Period	Number of deaths						Rates(a)

(a) Number of deaths per 1,000 male or female live births registered.

From the following table, showing particulars of infant deaths in the first four weeks of life, or the neonatal period, it will be seen that for both males and females the risk of death is very much greater during the first day of life than subsequently.

INFANT DEATHS AND MORTALITY RATES—UNDER FOUR WEEKS, BY SEX AUSTRALIA, 1936 TO 1964

Period	Number of deaths						Rates(a)

A graph showing infant mortality rates for each year from 1910 to 1965 will be found on plate 25.

BIRTHS, DEATHS, AND MARRIAGES: AUSTRALIA, 1870 TO 1965

RATES OF BIRTHS, DEATHS, AND NATURAL INCREASE

AUSTRALIA, 1870 TO 1965

BIRTH RATES, BY AGE OF MOTHER
 AUSTRALIA, 1941 TO 1964
 (NUMBER OF BIRTHS PER 1,000 OF FEMALE POPULATION
 IN EACH AGE GROUP)

NOTE: THE VERTICAL SCALE IS LOGARITHMIC, AND THE CURVES RISE AND FALL ACCORDING TO THE RATE OF INCREASE OR DECREASE; ACTUAL NUMBERS ARE INDICATED BY THE SCALE.

INFANT MORTALITY RATES: AUSTRALIA, 1910 TO 1965

(INFANT DEATHS PER 1,000 LIVE BIRTHS)

PLATE 25

Causes of death—children under one year

Causes of death of children under one year of age should be considered in relation to age at death, because the emphasis on various causes changes rapidly as age at death varies. A summary for 1964 of deaths of children under one year of age, classified according to principal causes of death and age at death, is given in the following table.

DEATHS OF CHILDREN UNDER ONE YEAR OF AGE, BY CAUSE OF DEATH
AUSTRALIA, 1964

International Classification of Diseases number	Cause of death	Age at death										Total under one year		
		Days		Total under one week	Weeks			Months						
		Under 1	1-6		1	2	3	1-2 (a)	3-5	6-8	9-11

Causes of death

The classification of causes of death adopted for Australia by the Commonwealth Bureau of Census and Statistics at the inception of its mortality statistics in 1907 was that introduced by the International Institute of Statistics in 1893, reviewed by that Institute in 1899, and revised by an International Commission in 1900. This classification became known as the International List of Causes of Death, and further international revisions in 1909 (Second), 1920 (Third), 1929 (Fourth), 1938 (Fifth), 1948 (Sixth), and 1955 (Seventh), were successively adapted for use in Australian statistics.

The Sixth Revision of the International Statistical Classification of Diseases, Injuries and Causes of Death was used in Australia for deaths registered in 1950 to 1957. The Seventh Revision has been used for deaths registered in 1958 and subsequent years. The Sixth Revision, for the first time in connection with the International Classification, laid down rules for a uniform method of selecting the main cause to be tabulated if more than one cause is stated on the death certificate. These rules were maintained in the Seventh Revision, which was concerned mainly with certain essential changes and amendment of errors and inconsistencies in the previous classification. Prior to 1950 the rules adopted in Australia for the selection of the cause of death to be tabulated were those laid down in the United States Manual of Joint Causes of Death, first published in 1914 and revised to conform to successive revisions of the International List.

The adoption of the new method introduced with the Sixth Revision and maintained in the Seventh marked a fundamental change in Australian cause of death statistics, emphasis now being placed on the underlying cause of death as indicated by the certifying practitioner. This change in principle affects the comparability of the statistics for 1950 and subsequent years with those for earlier years. A complete detailed classification of causes of death for Australia for 1950 according to both the Fifth and Sixth Revisions was shown in *Demography*, Bulletin No. 68, 1950.

In order to facilitate the concise presentation of cause of death statistics, the present International Classification provides two special lists of causes for tabulation—the Intermediate List of 150 causes and the Abbreviated List of 50 causes. The latter has been used as the base of the cause of death tabulations for 1964 which follow. Some categories have been sub-divided to show additional particulars of interest in Australian statistics. Tables A and B show deaths of males and females, respectively, in age groups, and Table C shows the total numbers of males and females who died, the death rates per million of mean population, and the percentage of total deaths.

Deaths from principal causes

In the preceding tables, particulars have been given for each of the causes of death comprising the Abbreviated Classification according to the Seventh Revision of the International List. Certain important causes are treated in detail hereunder. The Abbreviated Classification numbers used in tables A to C (pages 259-62) are indicated in parentheses for each cause or group of causes.

All forms of tuberculosis (B1, B2). In comparing any of the figures for 1950 and subsequent years with those for 1949 and earlier years, consideration should be given to the effect of the change in basis from the Fifth to the Sixth Revision of the International List. This was discussed in Year Book No. 39, page 626. The following table shows the age groups of males and females who were classified as dying from tuberculosis in 1964, together with figures for 1931, 1941, 1951 and 1961.

**DEATHS FROM TUBERCULOSIS (ALL FORMS), BY AGE GROUP AND SEX
AUSTRALIA, 1931 TO 1964**

Age group (years)	Males					Females				
	1931	1941	1951	1961	1964	1931	1941	1951	1961	1964
0-14	90	63	23	5	1	81	54	35	1	1
15-29	294	162	46	2	2	487	275	68	..	3.
30-44	585	428	135	25	17	422	319	142	20	16
45-64	674	793	570	128	113	252	251	126	41	37
65 and over	193	279	306	175	186	89	110	86	50	36
Not stated	1	1
Total	1,836	1,725	1,080	335	320	1,331	1,009	458	112	93

The reduction in mortality from tuberculosis is shown by the decline in the crude death rate from tubercular diseases, which fell from 49 per 100,000 of mean population in 1931 to 18 in 1951, and to 4 in 1964. The reductions in the younger age groups are much greater, as can be seen from the table above. In making these comparisons, consideration of the effect of the change in basis from the Fifth to the Sixth Revision of the International List (*see above*) is particularly important.

Of the more populous countries, those with lowest death rates from tuberculosis per 100,000 of population are: Netherlands, 2.1; New Zealand, 3.7; Denmark, 3.9; Australia, 4.0; Canada, 4.0; Israel (Jewish population), 4.1; and United States of America, 4.9. Rates for selected countries in each continent are:

Africa—South Africa (white population), 7.1; United Arab Republic, 21.6.

North America—Dominican Republic, 15.6; Mexico, 26.1; Guatemala, 31.4.

South America—Argentina, 19.9; Peru, 50.2; Brazil, 82.3.

Asia—Japan, 24.3; India, 82.6; Philippines, 79.7.

Europe—England and Wales, 6.3; Scotland, 9.4; Italy, 15.7; France, 18.3; Poland, 41.1.

Malignant neoplasms, including neoplasms of lymphatic and haematopoietic tissues (B18.) Deaths classified under this heading according to the Sixth and Seventh Revisions of the International List (used in Australia for deaths registered since 1950) are not directly comparable in total with those on the Fifth Revision basis (*see Year Book No. 39, p. 628*).

Tables showing the seat of disease in conjunction with age and conjugal condition of the persons dying from malignant neoplasms in 1964 are included in *Causes of Death*, Bulletin No. 2. A summary regarding seat of disease for 1964 is given below.

DEATHS FROM MALIGNANT NEOPLASMS AND NEOPLASMS OF LYMPHATIC AND HAEMATOPOIETIC TISSUES, BY SEAT OF DISEASE AND SEX: AUSTRALIA, 1964

Seat of disease	Males	Females	Persons
Malignant neoplasms—			
Buccal cavity and pharynx	180	99	279
Digestive organs and peritoneum—			
Oesophagus	206	110	316
Stomach	949	630	1,579
Small intestine	20	25	45
Large intestine	697	937	1,634
Other	970	784	1,754
Respiratory system	2,174	334	2,508
Breast	11	1,353	1,364
Uterus	560	560
Other female genital organs	474	474
Male genital organs	934	..	934
Urinary organs	491	254	745
Skin	246	147	393
Other and unspecified organs	618	550	1,168
<i>Total, malignant neoplasms</i>	<i>7,496</i>	<i>6,257</i>	<i>13,753</i>
Neoplasms of lymphatic and haematopoietic tissues—			
Lymphosarcoma and reticulosarcoma	216	170	386
Hodgkin's disease	96	42	138
Other forms of lymphoma (reticulosis)	30	31	61
Multiple myeloma (plasmocytoma)	81	67	148
Leukaemia and aleukaemia	382	292	674
Mycosis fungoides	6	..	6
<i>Total, neoplasms of lymphatic and haematopoietic tissues</i>	<i>811</i>	<i>602</i>	<i>1,413</i>
Grand total	8,307	6,859	15,166

The ages of males and females who died from malignant neoplasms in 1964 are given below, together with figures for 1931, 1941, 1951 and 1961. The increase in the number of deaths from malignant neoplasms in the years since 1931 is due principally to the increase in the number of people in the higher age groups, at which ages the risks of cancer are much greater. While the total population increased by about 72 per cent between 1931 and 1964, the number of people aged 55 years and over increased by about 113 per cent. The increase in the number of deaths in the lower age groups from 1951 is due partly to the inclusion of neoplasms of lymphatic and haematopoietic tissues, and it is probable also that part of the increased number of deaths from cancer recorded in recent years has been due to improved diagnosis and certification on the part of the medical profession.

DEATHS FROM MALIGNANT NEOPLASMS^(a), BY AGE GROUP AND SEX
AUSTRALIA, 1931 TO 1964

Age group (years)	Males					Females				
	1931	1941	1951 (a)	1961 (a)	1964 (a)	1931	1941	1951 (a)	1961 (a)	1964 (a)

(a) Includes neoplasms of lymphatic and haematopoietic tissues.

The death rates from malignant neoplasms have continued to rise over recent years. The rates are crude death rates representing the number of deaths from malignant neoplasms per 100,000 of mean population and do not take account of changes in the age constitution of the population, and to a substantial extent they reflect the increasing age of the population rather than the true change in mortality from malignant neoplasms (see previous paragraph). In 1931 the rate for Australia was 101 (males, 105; females, 97); in 1941 it was 119 (males, 119; females, 120); and in 1951 it had risen to 126 (males, 130; females, 122). Figures for 1961 gave a rate of 130 (males, 139; females, 121), and for 1964 a rate of 136 (males, 148; females, 124).

Death rates from malignant neoplasms per 100,000 of mean population for Australia and for various other countries are as follows: Brazil, 94; Poland, 104; Japan, 106; Israel (Jewish population), 108; South Africa (white population), 111; Canada, 132; Australia, 136; United States of America, 151; Italy, 155; Netherlands, 178; France, 203; England and Wales, 217; Scotland, 224. The rates are for the latest available year in each case.

Diseases of the heart (B25 to B28). The number of deaths classified to diseases of the heart in 1964 was 37,453 (21,821 males and 15,632 females). This class is the largest among causes of death, the rate having increased from 112 per 100,000 of mean population in 1911-15 to 336 in 1964. The increase in the number of deaths recorded from heart diseases has been particularly pronounced during the past twenty years. The rapid increase in mortality is partly a reflection of the ageing of the population, but the figures have been influenced mainly by improved diagnosis and certification by medical practitioners.

The death rates from heart diseases for various years from 1931 were as follows:—1931, 159 (males, 178; females, 142); 1941, 269 (males, 306; females, 231); 1951, 314 (males, 367; females, 259); 1961, 304 (males, 356; females, 250); and 1964, 336 (males, 389; females, 283). Deaths from heart diseases in 1964 represented 37 per cent of the total deaths.

Puerperal causes (B40). It was shown in Year Book No. 39, page 634, that the changes introduced with the Sixth Revision of the International List did not significantly affect the comparability of the total number of deaths from puerperal causes. The Seventh Revision, introduced in 1958, did not affect comparability. The death rate from these causes has fallen rapidly during recent years and in 1964 the rate was 0.3 per 1,000 live births, compared with a rate of 6 per 1,000 in 1936. The 75 deaths in 1964 correspond to a death rate of 1.36 per 100,000 females. The death rate may be expressed in other terms by stating that for every 3,055 babies born alive in 1964 one woman died from puerperal causes. The death rate per 1,000 live births from puerperal causes in various countries for the latest available year is as follows: Sweden, 0.1; Denmark and Norway, 0.2; Netherlands, United Kingdom, and Australia, 0.3; New Zealand, United States, Canada and France, 0.4; Finland, 0.5; Switzerland, 0.6; Italy and Japan, 1.0; and Venezuela, 1.1.

Causes of infant mortality. See paragraphs devoted to causes of infant deaths on pages 257-8.

Accidents, poisonings and violence (BE47 to BE50). Deaths in this class are classified according to external cause and not according to nature of injury. The classification provides sub-groups for accidents, including adverse reactions to prophylactic inoculations, therapeutic misadventures and late effects of accidental injury; suicide; homicide and injuries purposely inflicted by other persons; and injury resulting from operations of war, including delayed effects.

The following table, showing the death rates in the main sub-groups per 100,000 of mean population, indicates that the death rate from violence is between two and three times as great for males as for females. The low level of the rates and proportions for the years 1941-45 is due largely to the exclusion of deaths of defence personnel from accidents, suicide and homicide though the rates have been based on total mean population (including defence personnel). A further contributing factor is the decrease during this period in the number of automobile accidents. From July 1947 deaths of defence personnel from accidents, etc. have again been included.

**ACCIDENTS, POISONINGS AND VIOLENCE: DEATH RATES(a), BY SEX

(a) Number of deaths per 100,000 of mean population. (b) Includes 'open verdict'. (c) Includes late effects of injuries due to operations of war.

In 1964 the total number of deaths from *accidental causes* (BE47, BE48) was 5,971 (4,098 males and 1,873 females). Over half of the accidental deaths were the result of transport accidents. Of these, the numbers attributable to the major causes, and the percentages of the total accidental deaths in each case, were as follows: Motor vehicle traffic accidents, 2,894 (48.47 per cent); motor vehicle non-traffic accidents, 67 (1.12 per cent); other road vehicle accidents, 48 (0.80 per cent); railway accidents, 87 (1.46 per cent); water transport accidents, 113 (1.89 per cent); aircraft accidents, 28 (0.47 per cent); a total of 3,237 (54.21 per cent). Other important causes were accidental falls, 1,023 (17.13 per cent); accidental drowning, 409 (6.85 per cent); and accidents caused by fire and explosion of combustible material, 193 (3.23 per cent).

Deaths from *suicide* (BE49) in 1964 numbered 1,620 (males, 1,071; females, 549). Poisoning, other than by gases, was used in 683 cases (42.16 per cent of total deaths by suicide). Other important modes adopted, together with the numbers and relevant percentages, were as follows: firearms and explosives, 345 (21.30 per cent); poisoning by gases, 249 (15.37 per cent); hanging or strangulation, 172 (10.62 per cent); submersion (drowning), 70 (4.32 per cent); other and unspecified modes, 101 (6.23 per cent). Of the 1,071 males who committed suicide, 321 (29.97 per cent) used firearms or explosives. For females the most common mode was poisoning (other than by gases). This was used in 371 cases (67.58 per cent). The following table shows the age of persons who committed suicide in 1964.

**PERSONS WHO COMMITTED SUICIDE, BY AGE GROUP AND SEX
AUSTRALIA, 1964**

Age group (years)	Males	Females	Persons	Age group (years)	Males	Females	Persons
10-14 . . .	2	4	6	60-64 . . .	83	37	120

55-59 . . .	90	47	137	Total deaths . . .	1,071	549	1,620

Of the 178 deaths recorded in 1964 from *homicide and operations of war (BE50)* there were 168 deaths from homicide and injury purposely inflicted by other persons (not in war), of which assault by firearms and explosives caused 64, assault by cutting and piercing instruments 17, and assault by other means 87. Deaths from injury resulting from the operations of war numbered 10 but all were deaths from late effects of such injuries.

Age at death and average issue of deceased married males and females

Demography, Bulletin No. 82, contains a number of tables showing, in combination with the issue, the age at marriage, age at death and occupation of married (including widowed or divorced) persons who died in Australia in 1964. Deaths of married males in 1964 numbered 43,828, and those of married females, 35,980. The tables which follow deal, however, with only 43,163 males and 35,733 females, the information regarding issue in the remaining 912 cases being incomplete. The total number of children in the families of the 43,163 males was 125,754 and of the 35,733 females, 111,221. The average number of children is shown for various age groups in the following table.

DECEASED MARRIED^(a) MALES AND FEMALES, BY AGE AT DEATH AND AVERAGE ISSUE: AUSTRALIA, 1931 TO 1964

All ages	4.44	3.91	3.39	2.98	2.91	4.72	4.22	3.68	3.22	3.11

(a) In cases where the deceased was married more than once this represents age at first marriage.

Vital statistics of external territories

The following table shows, for the year 1964, the number of marriages, births and deaths registered in the external territories under the control of Australia. More detailed information will be found in a series of tables in *Demography*, Bulletin No. 82.

EXTERNAL TERRITORIES: VITAL STATISTICS, 1964

Territory	Marriages	Births	Deaths
Christmas Islands(a)	6	69	7
Cocos (Keeling) Islands(a)	..	18	4
Norfolk Island(a)	9	11	6
Papua(b)	94	402	28
Trust Territory of New Guinea(b)	94	617	56
Trust Territory of Nauru(b)	3	12	1

(a) Total population. (b) Non-indigenous population only.

International vital statistics

In the following table vital statistics rates for selected countries are shown. Crude marriage, birth, and death rates represent the number of 'events' reported for the year stated per 1,000 of the population. Infant mortality rates are the number of deaths which occurred under one year of age per 1,000 live births. The true death rates (reciprocals of the expectation of life at birth) have been computed from the life tables for the respective countries as published in the United Nations *Demographic Yearbook*, 1964 (see explanation of true death rates, pages 248-9).

In many instances the rates shown in the following table are estimates and the results of sample surveys only. Reference should be made to the detailed comments contained in the United Nations *Demographic Yearbook*, 1964 (see particularly Technical Notes on Statistical Tables and footnotes to the tables). The countries are arranged in the same order as in the table on pages 227-8 of the Population chapter.

CHAPTER 10

HOUSING AND BUILDING

On pages 271-8 of this chapter details are given of the *characteristics of dwellings as obtained from censuses*, pages 278-88 contain a *summary of building activities*, pages 288-300 outline *government activities in the field of housing*, and pages 300-7 relate to *financial arrangements associated with the erection or purchase of homes*.

Further information on dwellings obtained from censuses is available in the detailed tables of the 1961 census and earlier censuses and in the mimeographed statements of the 1961 census (see the chapter Miscellaneous of this Year Book.) More detailed information on building activity is contained in the annual bulletin *Building and Construction*, and the *Quarterly Bulletin of Building Statistics*, and current information is obtainable also in the *Quarterly Summary of Australian Statistics*, the *Monthly Review of Business Statistics*, the *Digest of Current Economic Statistics*, and the mimeographed statements *Building Statistics: Number of New Houses and Flats* (quarterly), and *Building Approvals* (monthly). Details for particular States are available from publications issued regularly by the Deputy Commonwealth Statisticians.

Commonwealth Government activities relate in the main to the provision of moneys to State Governments under Commonwealth-State Housing Agreements, to the assistance of ex-service personnel in the erection and purchase of homes, to assistance to young married couples under the Home Savings Grant Act, to the operation of the Housing Loans Insurance Corporation, and to the provision of homes in the Territories. Further details of activities of the Commonwealth and State Housing Authorities are shown in the reports issued by these authorities.

Census dwellings

At each census of the population, in addition to the questions relating to personal particulars, there have been a number of questions relating to dwellings. A 'dwelling' is defined as any habitation occupied by a household group living together as a domestic unit, whether comprising the whole or only part of a building, and includes, *in addition to houses and flats*, a great variety of dwellings ranging from a single-roomed shack to a multi-roomed hotel or institution. All statistics in this section are exclusive of particulars of dwellings occupied solely by full-blood Aborigines.

Number of dwellings

The following table shows the number of occupied and unoccupied dwellings in Australia at each census from 1911 to 1961. Occupied dwellings are classified into 'private' and 'other than private' dwellings (see page 273 for definitions of 'private' and 'other than private' dwellings). Unoccupied dwellings include dwellings whose occupants are temporarily absent, holiday homes, and other temporarily vacant dwellings (see page 278 for full explanation of the term 'unoccupied').

DWELLINGS: AUSTRALIA, CENSUSES, 1911 TO 1961

Census	Occupied			Unoccupied
	Private	Other than private	Total	
1911 . . .	894,389	29,070	923,459	33,473
1921 . . .	1,107,010	46,275	1,153,285	51,163
1933 . . .	1,509,671	37,705	1,547,376	68,772
1947 . . .	1,873,623	34,272	1,907,895	47,041
1954 . . .	2,343,421	36,932	2,380,353	112,594
1961 . . .	2,781,945	35,325	2,817,270	194,114

The following table shows the number of occupied and unoccupied dwellings in the urban and rural areas of Australia at the census of 30 June 1961. (For definitions of 'urban' and 'rural' see page 195).

DWELLINGS, BY DIVISION OF STATE: AUSTRALIA, CENSUS, 30 JUNE 1961

Division	Occupied				Unoccupied	
	Private	Other than private	Total		Number	Proportion of total
			Number	Proportion of total		
				Per cent		Per cent
Urban—						
Metropolitan	1,607,392	18,304	1,625,696	57.70	59,096	30.44

Western Australia	162,823	6,614	194,317	13,705
Tasmania	78,789	5,288	91,258	8,582
Northern Territory	3,427	47	5,479	179
Australian Capital Territory	7,118	326	13,937	797
Australia	2,380,353	112,594	2,817,270	194,114

Class of dwelling

The following table shows the numbers of the various classes of occupied dwellings in the metropolitan urban, other urban, and rural areas of Australia at the censuses of 1954 and 1961. The boundaries of the metropolitan urban and other divisions of State differ from census to census, and consequently accurate comparison cannot be made between figures for corresponding divisions (see page 195).

Private dwellings are classified into the following four categories:

Private house—includes houses, sheds, huts, garages, etc., used for dwelling purposes, and shared private houses for which only one householder's schedule was received;

Share of private house—portion of a shared private house which is occupied separately and for which portion a separate householder's schedule was received;

Flat—part of a house or other building which can be completely closed off and which has its own cooking and bathing facilities;

Other private dwelling—includes private dwellings such as rooms, apartments, etc., which are parts of buildings but are not self-contained units.

Other than private dwellings include hotels; motels; boarding houses, lodging houses and hostels; educational, religious and charitable institutions; hospitals; defence and penal establishments; police and fire stations; clubs; staff barracks and quarters, etc.

OCUPIED DWELLINGS, BY CLASS OF DWELLING AND DIVISION OF STATE: AUSTRALIA, CENSUSES, 1954 AND 1961

Class of occupied dwelling	Census, 30 June 1954				Census, 30 June 1961				Increase 1954-61

Total occupied dwellings per square mile	592.77	123.32	0.16	0.80	661.12	173.77	0.16	0.95	0.15

(a) See text on page 195 regarding comparability as between censuses. (b) Includes shared private houses for which only one householder's schedule was received. (c) Portion of a shared private house which is occupied separately and for which portion a separate householder's schedule was received. (d) Prior to 1961 single self-contained dwellings attached to, or situated above, offices, shops, etc., were classified as private houses irrespective of the description stated in the householder's schedule. In 1961 such dwellings, if described as self-contained flats, were classified as flats. (e) Included with private dwellings. (f) Certain institutions previously classified as 'Educational' were in 1961 classified as 'Religious'.

Minus sign (-) denotes decrease.

Population according to class of dwelling, etc.

The following table shows the number of the various classes of occupied dwellings at the censuses of 1954 and 1961, together with the number of inmates therein.

OCCUPIED DWELLINGS AND INMATES, BY CLASS OF DWELLING: AUSTRALIA
CENSUSES, 1954 AND 1961

	Census, 30 June 1954			Census, 30 June 1961		
	Number of dwellings	Inmates		Number of dwellings	Inmates	
		Number	Proportion of total		Number	Proportion of total
Private house(a)—			per cent			per cent

(a) Includes houses, sheds, huts, etc., and shared private houses for which only one householder's schedule was received. (b) Portion of a shared private house which is occupied separately and for which portion a separate householder's schedule was received. (c) See footnote (d) to table on page 273.

The following table gives particulars of the nature of occupancy of occupied private dwellings. For a dissection of these figures into metropolitan urban, other urban and rural areas see page 363 of Year Book No. 50.

**OCCUPIED PRIVATE DWELLINGS, BY NATURE OF OCCUPANCY
AND CLASS OF DWELLING: AUSTRALIA, CENSUS, 1954 AND 1961**

Nature of occupancy	Census, 30 June 1954					Census, 30 June 1961				
	Private house (a)	Share of private house (b)	Flat (c)	Other	Total private dwellings	Private house (a)	Share of private house (b)	Flat (c)	Other	Total private dwellings
Owner	1,074,696	28,772	15,974	2,372	1,121,814	1,260,221	22,572	35,998	2,817	1,321,608
Purchaser by instalments	343,625	7,099	1,816	553	353,093	607,444	8,175	7,529	866	624,014
Tenant (Governmental housing)(d)	91,968	560	4,935	1,913	99,376	102,087	488	13,925	579	117,079
Tenant	481,813	67,964	103,142	46,935	699,854	400,489	45,943	155,110	44,195	645,737
Caretaker	25,307	772	888	460	27,427	25,982	659	2,813	468	29,922
Other methods of occupancy	27,285	869	435	241	28,830	27,327	675	1,523	244	29,769
Not stated	11,325	1,180	230	292	13,027	11,616	1,038	688	474	13,816
Total private dwellings	2,056,019	107,216	127,420	52,766	2,343,421	2,435,166	79,550	217,586	49,643	2,781,945

(a) Includes houses, sheds, huts, etc., and shared private houses for which only one householder's schedule was received. (b) Portion of a shared private house which is occupied separately and for which portion a separate householder's schedule was received. (c) See footnote (d) to table on page 273. (d) At the 1954 Census, figures were compiled from the answers furnished in response to the instruction on the householder's schedule 'Tenant paying rent to a Government Authority to write 'Tenant (G)'. At the 1961 Census, householders were instructed on the schedule to write 'Tenant (G)' if they paid rent to the Governmental Housing Authority in their State or Territory.

The numbers of occupied private dwellings in Australia at the census of 30 June 1961, classified according to date of building, are shown below. This information was derived from replies of occupants of dwellings at 30 June 1961. For a number of reasons, the figures shown on the first line of the table do not agree with the number of dwellings by class recorded at the census of 30 June 1954, e.g., demolitions, conversion from one class of dwelling to another and errors of memory regarding date of building. Also, the figures are not precisely comparable with 1954 data because of changes in classification of dwellings adopted at the 1961 census, as indicated in footnotes (d) and (e) to the table on page 273.

OCCUPIED PRIVATE DWELLINGS, BY DATE OF BUILDING AND CLASS OF DWELLING AND DIVISION OF STATE: AUSTRALIA, CENSUS, 30 JUNE 1961

With television set(b)	1,139,578	30,126	97,226	11,732	1,038,837	168,875	70,950	1,278,662

(a) Includes houses, sheds, huts, etc., and shared private houses for which only one householder's schedule was received. (b) So stated in census schedules.

Tenanted private dwellings—weekly rent

Information tabulated from census results concerning rents was restricted to the actual rent paid per week by tenants for unfurnished private dwellings. Particulars of rents shown in the following tables are therefore on an *unfurnished* basis. Dwellings shown as 'Not stated' include those whose rents were shown on householders' schedules on a *furnished* basis, and those whose rents were not applicable (e.g., for shop and dwelling combined). In this section information on 'tenanted private dwellings' *excludes particulars of dwellings occupied by 'Tenants (Governmental Housing)' in each State*, i.e. those householders who at the 1954 Census furnished answers in response to the instruction on the census householder's schedule 'Tenant paying rent to a Government Authority to write 'Tenant (G)'' and those householders who at the 1961 Census furnished answers in response to the instruction on the census householder's schedule 'Tenant paying rent to the Governmental Housing Authority in their State to write 'Tenant (G)'''. For the Australian Capital Territory and the Northern Territory particulars of all tenanted private dwellings are included.

TENANTED PRIVATE DWELLINGS, BY WEEKLY RENT (UNFURNISHED) AND CLASS OF DWELLING: AUSTRALIA, CENSUSES, 1954 AND 1961

(a) These figures exclude dwellings occupied by 'Tenants (Governmental housing)' except those in the Northern Territory and the Australian Capital Territory. (b) Includes houses, sheds, huts, etc., and shared private houses for which only one householder's schedule was received. (c) Portion of a shared private house which is occupied separately and for which portion a separate householder's schedule was received. (d) See footnote (d) to table on page 273. (e) Includes tenanted dwellings which were rent-free, those rented on a furnished basis, and those for which the rents were not applicable (e.g., for shop and dwelling combined).

For similar particulars to the above for metropolitan urban, other urban, and rural areas and for further detail *see* Year Book No. 50, pages 365-7.

Unoccupied dwellings

The following table classifies unoccupied dwellings according to the reasons given by census collectors as to why the dwellings were unoccupied at the census date. Unoccupied dwellings include vacant dwellings available for sale or renting; dwellings such as 'week-ender', 'holiday home', 'second home', 'seasonal workers' quarters', which were not occupied on the night of the census; dwellings normally occupied, but whose usual occupants were temporarily absent on the night of the census; newly completed dwellings whose owners or tenants had not entered into occupation on the night of the census; dwellings described as 'to be demolished', 'condemned', 'deceased estate', 'exhibition home', etc.; and buildings constructed as dwellings, but used for non-dwelling purposes on the night of the census. The total number of unoccupied dwellings shown for any area must not, therefore, be read as representing the number of vacant houses and flats available for sale or renting.

UNOCCUPIED DWELLINGS, BY REASON FOR BEING UNOCCUPIED AUSTRALIA, CENSUS, 30 JUNE 1961

Reason for being unoccupied	Urban		Rural	Total, Australia	
	Metro- politan	Other		Number	Per cent
For sale or for renting	16,159	10,920	7,189	34,268	17.65

Total	59,096	58,577	76,441	194,114	100.00

Building

Statistics of building approved

Statistics of building approvals have been compiled from (a) permits issued by local government authorities in the areas subject to building control by these authorities, and (b) contracts let or work commenced and day labour projects authorized by governmental authorities. They relate only to approvals for buildings as distinct from the construction of roads, railways, bridges, earthworks, water storage, etc. Values shown represent the estimated cost when completed (excluding cost of land) of new buildings and alterations and additions to existing buildings. Additions of \$10,000 and over are included with new buildings in all States except New South Wales, where they are included in 'alterations and additions'. These statistics are available from the year 1953-54.

Statistics of building commenced, completed and under construction

These relate to building by private contractors, government authorities and owner-builders. The following outlines the scope of the statistics: (a) *only the erection of new buildings as distinct from the construction of roads, railways, bridges, earthworks, water storages, etc., is covered*; (b) major new additions to existing buildings are included as new buildings (for New South Wales, major alterations also are included as new building); (c) minor additions, alterations, renovations and repairs are excluded because of the difficulty of obtaining details of this work; (d) temporary dwellings, sheds, huts, etc., are excluded; (e) figures for houses exclude flats and dwellings attached to other new buildings (the value of dwellings attached to other new buildings is included with the value of buildings to which they are attached); figures for flats include 'home units'; (f) imported prefabricated houses are included; (g) details obtained from government authorities and building contractors refer to all areas, whereas details for owner-builders cover only areas subject to building control by local government authorities.

The following definitions of terms used in this section are necessary for interpretation of the data presented.

Private or Government ownership. A building is classified as 'private' or 'government' according to ownership at date of commencement. Thus 'government' includes buildings erected for Commonwealth and State Governments, semi-governmental and local government authorities, either by contractor or by day-labour, whether these buildings are for their own use or for rental or sale after completion. Houses erected for particular persons under government sponsored home building schemes or with government financial assistance are classified as 'private'.

Owner-built. An 'owner-built' house is one actually erected or being erected by the owner or under the owner's direction without the services of a contractor who is responsible for the whole job.

Contract-built. Includes the operations of all building contractors and government authorities which undertake the erection of new buildings.

Commenced. A building is regarded as having been commenced when work on foundations has begun. Owing to the difficulty of defining the exact point that this represents in building operations, classifications made by informants may not be entirely uniform.

Completed. A building is regarded as having been completed when the contractor has fulfilled the terms of the contract. As with commencements, the classifications made may not be entirely uniform.

Under construction. A building is regarded as being under construction if it has been commenced but not completed, whether or not work on the building is actively proceeding.

Values. All values shown exclude the value of land and represent the estimated value of buildings on completion.

Values of work done. The values of work done during the period represent the estimated value of work actually carried out on buildings during the period. For any building the sum of these values obtained during its construction equals the value of the building on completion. Data relating to the value of work done on owner-built houses are not collected. However, the figures shown for the value of work done include a component relating to owner-built houses, calculated on the basis of the figures collected for the value of owner-built houses commenced, completed and under construction.

Type of building. Classification is according to the function a building is intended to serve. A building which is ancillary to other buildings or forms part of a group of related buildings is classified according to the function of the group as a whole.

Persons working. Figures relate to persons working on the jobs of contractors who undertake the erection of new buildings and of government authorities which erect new buildings on their own account. They include persons actually working on alterations, additions, repairs and maintenance when these jobs are undertaken by such contractors and authorities. Contractors are asked to give details of all persons working on their jobs on a specified day, including working principals, men working as or for sub-contractors and men temporarily laid off on account of weather. Because of the intermittent employment of various types of sub-contractors on any particular job, it is sometimes difficult for contractors and authorities to provide precise particulars of the number of sub-contractors and the number of employees of sub-contractors working on their jobs on the specified day. This factor may cause some estimation by persons completing returns and some degree of understatement in figures shown in tables. On the other hand, because of frequent movement between jobs of some types of tradesmen (such as electricians) who may work on several jobs on the one day, a small element of duplication may occur. The figures exclude persons working on owner-built houses, and employees of builders who undertake only alterations, additions, repairs and maintenance.

New houses approved, commenced, completed and under construction

The next table provides a summary for 1964-65 of the number of new houses approved, commenced, completed and under construction in each State and Territory. For a graph showing the number of new houses commenced, completed and under construction for the period 1955-56 to 1964-65, see plate 26.

NEW HOUSES: NUMBER, STATES AND TERRITORIES, 1964-65

1963-64	12,991	12,912	2,916	5,639	2,923	1,633	359	951	40,324
1964-65	12,851	11,858	3,027	5,809	2,945	1,600	491	1,055	39,636

(a) Includes flats for 1960-61.

New flats

The figures in the foregoing tables, except those for the Northern Territory for periods prior to 1961-62, do not include particulars of new flats. It should be noted: (a) that the figures hereunder are additional to the numbers of houses shown in other tables, (b) that each flat is counted as a separate unit, and the numbers shown therefore relate to individual flats, (c) that new flats only are included, i.e., conversions of old buildings into flats are omitted, and (d) 'home units' are included as flats. For a graph showing the number of new flats commenced, completed and under construction for the period 1955-56 to 1964-65 see plate 27.

Approved, commenced, completed and under construction

The summary following shows the number of new flats approved, commenced, completed and under construction for the year 1964-65.

NEW FLATS: NUMBER, STATES AND TERRITORIES, 1964-65

—	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	A.C.T.	Aust.

(a) Prior to 29 June 1962, excludes the number of persons working on certain private buildings, other than houses, which were erected without the services of a contractor responsible for the whole job.

Government activities in the housing field

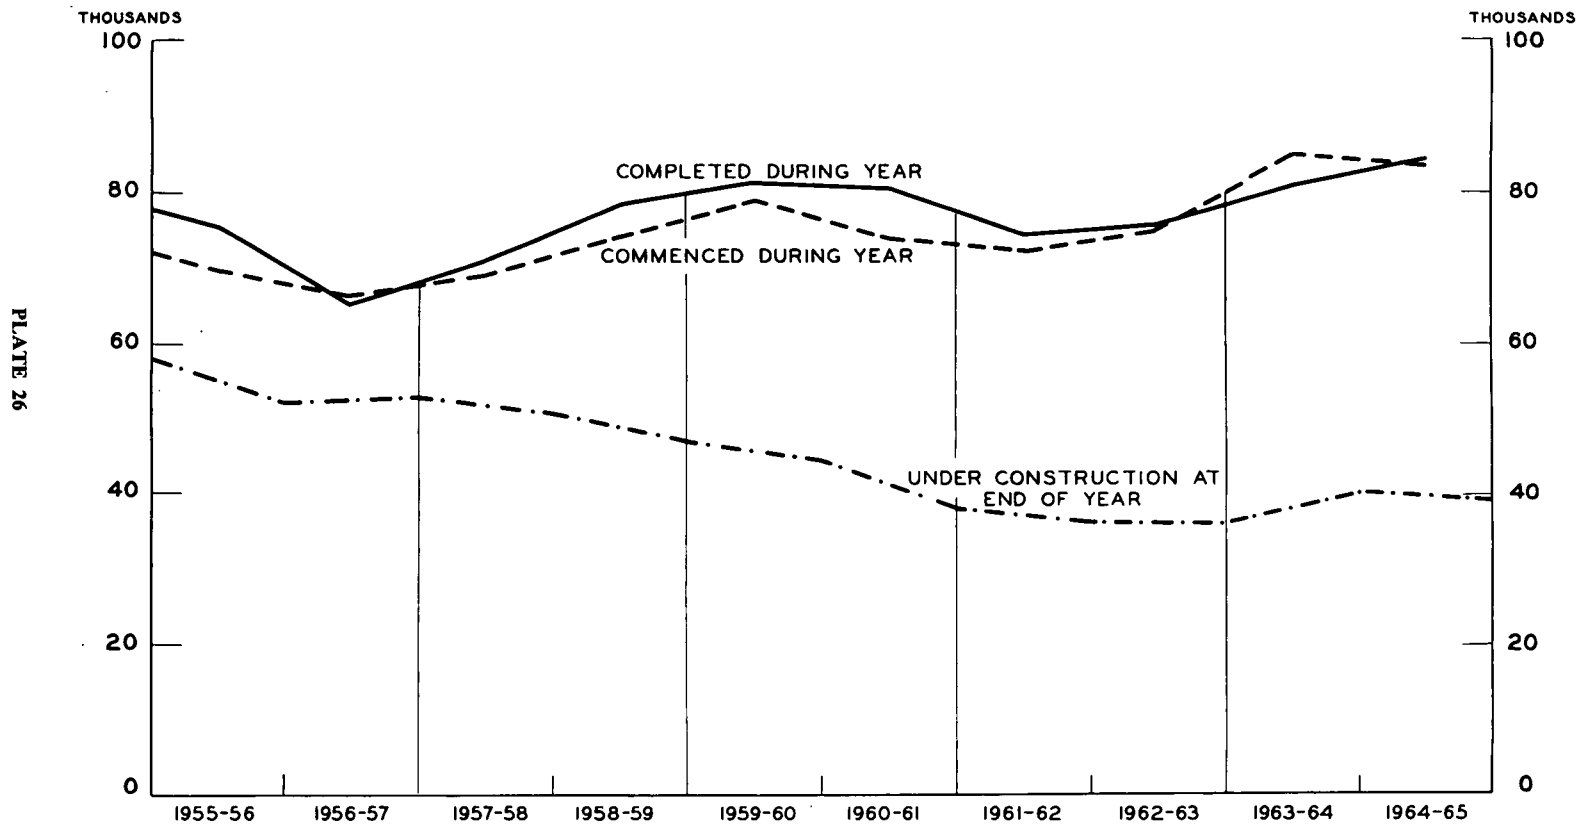

Housing Agreements between Commonwealth and State Governments

Under the Commonwealth-State Housing Agreements the Commonwealth Government makes substantial long-term loans to the States for the provision of housing.

The 1945 Agreement. In November 1945 the Commonwealth Government entered into an Agreement with the Governments of the States whereby the Commonwealth Government would provide finance for, and the State Governments would undertake the building of, housing projects. Tasmania withdrew from the Agreement in August 1950, and South Australia did not begin to operate under it until July 1953. Between 1945-46 and 1955-56, under this Agreement, the Commonwealth Government advanced \$177,698,000 to New South Wales; \$171,562,000 to Victoria; \$48,688,000 to Queensland; \$23,400,000 to South Australia; \$54,100,000 to Western Australia; and \$5,670,000 to Tasmania. When Tasmania withdrew from the Agreement, it repaid all advances made to it.

NEW HOUSES: AUSTRALIA

1955-56 TO 1964-65

NEW FLATS: AUSTRALIA

1955-56 TO 1964-65

Initially, dwellings constructed under the 1945 Agreement were sold only to tenants provided the tenant was able to arrange payment of the full purchase price to the State immediately on sale. Under this arrangement sales to tenants were relatively few. Subsequent amendments to the 1945 Agreement in 1955 and 1961 progressively eased the conditions of sale to tenants of dwellings constructed under the Agreement and permitted sales to tenants on terms and prices decided by the States. For information on the conditions of sale, etc., under the 1945 Agreement see Year Book No. 48, page 367.

The 1956 Agreement. In 1956 the Commonwealth and the States entered into a new Agreement under which added emphasis was placed on the construction of dwellings for private ownership. The Commonwealth Government provided finance to the States over a period of five years ending 30 June 1961 for the erection of dwellings. The Agreement provided that for the first two years of the five-year period a minimum of twenty per cent of the money advanced to each State was to be allocated to a Home Builders' Account and for the remaining three years a minimum of thirty per cent. Funds in these accounts were then advanced to building societies and other approved institutions for lending to private home builders and purchasers. The balance of the amounts advanced to each State was used by the States for the erection of dwellings for either rental or sale. The States determined the type of dwellings to be erected, their location and the selection of tenants, and also fixed the terms of sale. The Commonwealth was entitled to specify that up to five per cent of the moneys allocated for the erection of dwellings by the State be set aside for the erection of dwellings for serving members of the defence forces nominated by the Commonwealth. The Commonwealth provided supplementary advances to the States equal to the amounts set aside by them for this purpose. For other features of the 1956 Commonwealth and State Housing Agreement see Year Book No. 48, page 368.

The 1961 Agreement. The period during which Commonwealth advances to the States could be made under the 1956 Agreement terminated on 30 June 1961. A new Agreement was entered into which extended for a further five years the period during which advances could be made and also amended the 1956 Agreement in certain respects. The main effects of the amendments were:

- (a) to allow the Commonwealth and a State to agree that the State would set aside funds for the erection of dwellings for rental to servicemen in excess of the previous maximum of five per cent of the allocation to the State housing authority, provided the Commonwealth made supplementary advances for the same purpose of the same amount or of such greater amount as was agreed between the Commonwealth and the State; and
- (b) to provide for a rate of interest on Commonwealth advances equal to the long-term Commonwealth bond rate at the time each advance was made, less one per cent per annum.

The interest rates under the Agreement have been: from 1 July 1961 to 6 February 1962, $4\frac{3}{8}$ per cent per annum; 7 February 1962 to 22 July 1963, 4 per cent per annum; 23 July 1963 to 13 May 1964, $3\frac{1}{2}$ per cent per annum; 14 May 1964 to 12 August 1964, $3\frac{3}{8}$ per cent per annum; 13 August 1964 to 12 April 1965, 4 per cent per annum; and since 13 April 1965, $4\frac{1}{2}$ per cent per annum.

Operations under the various Housing Agreements

The following tables show the operations under the various Housing Agreements during 1964-65 and to 30 June 1965. The earliest single year for which details are given in the tables is 1955-56; for earlier years see Year Book No. 50, pages 382-383.

(a) Includes supplementary advances for Service Housing. (b) The maximum amount is 70 per cent of the Commonwealth advances, other than supplementary advances for Service Housing. (c) The minimum amount must be 30 per cent of the Commonwealth advances, other than supplementary advances for Service Housing. (d) These figures include estimates supplied by the Queensland Housing Commission. During 1958-59 and subsequent years the Queensland State Housing programme was financed from a Trust Fund which included Housing Agreement moneys, together with moneys from other sources. (e) Also included in State Housing Programme above. (f) Tasmania did not operate under the 1945 Agreement after August 1950.

(a) Estimates supplied by the Queensland Housing Commission (see footnote (d) to table on page 290).

War service homes

The provision of war service homes is a function of the Department of Housing, and the administration of the War Service Homes Act is under the control of the Director of War Service Homes. The *War Service Homes Act* 1918-1962 is a measure for the provision of homes for Australian ex-servicemen who served during the 1914-1918 War or the 1939-1945 War and to persons with service in Korea or Malaya. Provision is made also for assistance to the female dependants of Australian ex-servicemen and other classes of eligible persons as defined in the Act. Assistance may be granted to an eligible person and the wife or husband of that person as joint tenants, but homes are not provided for occupation purely on a tenancy basis.

Operations under the War Service Homes Act

The following tables give details of the operations under the War Service Homes Act in the year 1964-65 and from the inception of the scheme on 6 March 1919 to 30 June 1965. The earliest single year for which details are given in the tables is 1955-56; for earlier years see consecutive issues of the Year Book. The figures shown include operations in the Territories of Papua, New Guinea and Norfolk Island.

(a) Includes Norfolk Island. (b) Includes Territories of Papua and New Guinea.

In addition to the homes provided under the War Service Homes Act and shown in the table above, 2,246 homes, which had been provided originally under the Housing Agreements with the States, have been taken over in accordance with those Agreements, 84 being taken over during 1964-65.

Home Savings Grant Scheme

The operation of the Home Savings Grant Scheme is a function of the Commonwealth Department of Housing. The purpose of the scheme is to assist young married persons to purchase or build their own homes. A further objective is to increase the proportion of total private savings available for housing purposes by encouraging young people to save with those institutions which provide the bulk of long-term housing finance. The scheme was introduced by the *Homes Savings Grant Act* 1964. It was assented to on 28 May 1964, and applications for grants commenced to be received on 20 July 1964 on the opening of offices of the Department in each State and in the Australian Capital Territory. The Act was amended on 21 April 1965 to remove a number of anomalies revealed by experience in operating the scheme.

The scheme provides for the payment of grants from the National Welfare Fund of \$2 for every \$6 saved by young persons for the first home they own after marriage. The savings must be made over a period, and held in an approved form. The maximum grant to a married couple, or to husband or wife if only one is eligible, is \$500 on savings of \$1,500 or more. Smaller grants are, however, payable on lesser amounts saved. To be eligible for the grant, a person must be married, and must have—or must be married to a person who has—entered into a contract to buy a home or have one built, or begun to build a home as an owner-builder. The person must be under 36 years of age at the time of marriage and at the date of the contract to buy or build or the date building began, must have either been an Australian citizen or lived in Australia during the three years immediately preceding that date, and must also have saved in Australia in an approved form throughout that period. Those three years together with any earlier corresponding years during which savings are made in an approved form are known as the applicants' savings years'. The grant is payable in respect of existing homes and homes being built. Flats and home-units may also be eligible provided separate title can be obtained. The home, including the land, the house itself and any other improvements, must not cost more than \$14,000. Most homes are eligible, the main exception being homes purchased from State housing authorities, which have been built with money advanced by the Commonwealth under the *Commonwealth-State Housing Agreement at concessional rates of interest*.

The main forms of saving acceptable under the Scheme are Home Savings Accounts with savings banks, fixed deposits with trading banks designated Home Savings Accounts and deposits with or shares in registered building or co-operative housing societies. Savings spent in connection with the purchase or construction of the home prior to the date of the contract to buy or build the home, or the date building began, are also acceptable. In addition, savings in certain other forms up to 31 December 1964 are acceptable up to 31 December 1967 if they remain in those forms. These forms are accounts with savings and trading banks other than Home Savings Accounts, and deposits with registered friendly societies and credit unions. However, all new and additional savings after 1 January 1965 must be in one or more of the forms mentioned earlier to be acceptable. The amount of savings that qualify for a grant is the sum of the amounts saved, in acceptable forms, in each savings year. However, in any savings year commencing on or after 1 January 1965 there is a limit of \$500 on the amount of savings that can qualify for a grant. In a savings year commencing before 1 January 1965 the maximum amount that can qualify may be more than \$500 but may not exceed \$1,120.

Full details of the scheme are set out in the official pamphlet *A Grant for Your Home* available from banks, post offices and offices of the Department throughout Australia. Additional statistical information is contained in the First Report by the Secretary, Department of Housing, on the *Homes Savings Grant Act 1964-1965*, which is available from the Government Printer, Canberra.

Operations under Home Savings Grant Scheme

Particulars of applications received and approved during the period from 20 July 1964 to 30 June 1965 are set out in the following table.

HOME SAVINGS GRANT SCHEME: OPERATIONS, STATES AND TERRITORIES 1964-65

		N.S.W.	Vic.	Qld	S.A.(a)	W.A.	Tas.	A.C.T.(b)	Aust.
Applications received	No.	13,053	10,723	4,370	3,531	2,203	1,109	294	35,283
Applications approved		8,855	7,621	3,355	2,556	1,622	836	234	25,079
Grants approved	\$'000	4,110	3,582	1,478	1,146	710	374	110	11,510

Expenditure from National Welfare Fund	\$'000	4,054	3,536	1,458	1,132	698	364	108	11,350

(a) Includes Northern Territory.

(b) Includes Municipality of Queanbeyan, N.S.W.

Homes qualifying for grants

The two following tables contain particulars of homes in respect of which grants were approved. As grants are payable only to persons under 36 years of age and in respect of homes costing no more than \$14,000, these statistics should not be regarded as being applicable to home owners in general.

HOME SAVINGS GRANT APPLICATIONS APPROVED: MANNER OF ACQUISITION TOTAL COST AND AVERAGE COST OF HOME (INCLUDING LAND) STATES AND TERRITORIES, 1964-65

(a) Homes financed without mortgage loan. Includes homes financed from the applicant's own resources only, with personal or unsecured loans, purchased under a terms contract of sale, etc. (b) Includes homes financed with and without second mortgage loans. (c) Includes Northern Territory. (d) Includes Municipality of Queanbeyan, N.S.W.

Housing Loans Insurance Scheme

The Housing Loans Insurance Corporation was established by the *Housing Loans Insurance Act* 1965, assented to on 4 May 1965 to insure approved lenders against losses arising from the making of housing loans. The Corporation consists of a chairman (who is also managing director) and a deputy chairman, who are full-time members, and three part-time members, all of whom are appointed by the Governor-General. The main purpose of the activities of the Housing Loans Insurance Corporation is to assist people to obtain, as a single loan and at a reasonable rate of interest, the money they need and can afford to borrow to obtain a home suited to their requirements.

To encourage the making of high-ratio loans the Corporation will insure loans up to 95 per cent of valuation for houses valued at \$12,000 or less. Where the valuation of a home exceeds \$12,000 the maximum insurable amount is 95 per cent of the first \$12,000 of valuation plus 70 per cent of the balance or \$17,000, whichever is the lesser. A once-and-for-all premium of 2 per cent of the amount of the loan is charged by the Corporation. The premium is payable by the borrower, but lenders may agree to add it to the amount of the loan for repayment by the borrower over the duration of the loan. The maximum rate of interest that may be charged on insured loans is 7½ per cent (December 1965) per annum and the maximum period for repayment is thirty-five years. The maximum rate of interest is kept under continuing review and may be varied by the Corporation, with the concurrence of the Minister for Housing, whenever charges appear to be warranted by movements in interest rates generally or by other developments.

The Housing Loans Insurance Corporation insures loans that are made for a wide range of purposes in addition to the purchase or construction of a dwelling. The other purposes include alterations, extensions or improvements to a dwelling, and the provision or improvement of roads, kerbing and footpaths. An insured loan may be made only by an approved lender. Approved lenders are appointed by the Corporation from within approved classes of lenders specified by the Minister for Housing. The approved classes include banks, building societies, co-operative housing societies, friendly societies, life insurance companies and trustee companies. The Housing Loans Insurance Corporation commenced its insurance operations in November 1965.

State housing authorities

The following paragraphs describe briefly the organization of the various State housing authorities and their activities in the fields of home construction and provision of homes on a rental basis (see pages 300-3 for their financial advances to persons wishing to purchase or build a home). For summarized figures of total government construction of houses and flats, see pages 280-1 and 283-4.

New South Wales—The Housing Commission of New South Wales. The Housing Commission of New South Wales was constituted in 1942, with a full-time salaried chairman and four other members remunerated by fees. The principal function of the Commission is the provision of low-cost housing for rental or sale to persons in the lower or moderate income groups. The Commission is also empowered to make surveys of housing conditions, recommend local government building ordinances, provide assistance to private home builders, and undertake the manufacture, purchase, and supply of building materials.

Advances from the Commonwealth have provided most of the Housing Commission's capital funds. Of the \$431,473,552 total capital funds available to the Commission from its inception to 30 June 1965, \$370,207,700 (or 85.8 per cent) came from Commonwealth advances, \$10,444,048 (2.4 per cent) from Consolidated Revenue, \$14,265,354 (3.3 per cent) from General Loans Account and \$13,771,320 (3.2 per cent) from other State funds, and \$22,785,130 (5.3 per cent) from the Commission's own funds. During the year 1964-65 the Housing Commission's income and expenditure (other than capital transactions) was—total income, \$26,376,586 (consisting of rent \$17,414,116, interest \$5,817,444, other \$3,145,026); and total expenditure \$22,240,812.

Most of the permanent dwellings provided by the Commission have been erected under the Commonwealth-State Housing Agreements. In 1964, 5,123 houses and flats, valued at \$24,428,332, were completed for the Housing Commission by private builders on contract to the Commission.

Upon request by other State Departments the Housing Commission will erect houses for employees of those Departments, e.g., Education, Agriculture, Water Conservation, etc. These Departments provide the necessary land and funds needed to finance the erection of the houses. Rentals charged are fixed by the Departments in accordance with the salaries of the officers occupying the houses. In addition, the Commission erects (with State funds) dwellings for employees of industries connected with decentralization and development. The number of rental houses erected (other than under the Housing Agreements) is 1,493. Specially designed units are erected by the Housing Commission to provide dwellings for elderly persons at rentals within their means. The rents of these units are \$2 per week for elderly single persons and \$3 per week for elderly couples, and 2,225 units had been completed at 30 June 1965.

Applicants for Commission housing may, when their priority has been reached, elect either to purchase or to rent the dwelling allocated to them. Should they decide to purchase, terms of sale provide for a minimum deposit of \$100 with repayments spread over a maximum period of forty-five years, with interest currently at the rate of 5 per cent. There is no limit on the amount of outstanding indebtedness. Further, those tenants who originally elect to rent may subsequently purchase the dwellings occupied by them on similar terms. Applicants who have established eligibility for Housing Commission accommodation may apply to have a standard type of dwelling erected on their own block of land. At 30 June 1965, 351 dwellings had been completed under this scheme. During the years 1954 and 1955 the Housing Commission completed 100 houses for sale which were sold through the Rural Bank on the basis of 10 per cent deposit with repayment of the balance over a maximum period of forty years. This scheme was limited to 100 houses.

Victoria—Housing Commission, Victoria. A preliminary investigation into housing conditions in Victoria was begun in July 1936, when a board for the purpose was appointed by the Government. As a result of their report, the *Housing Act 1937* was passed by Parliament and provided for the appointment of a Housing Commission of four members (reduced to three in 1954) to be the central housing authority of the State. The Housing Commission of Victoria was appointed on 1 March 1938.

The objects of the Commission as now laid down are the improvement of existing housing conditions; the provision of suitable rental housing for persons displaced by slum reclamation or living under unsatisfactory conditions, and for other eligible persons; the sale of houses to eligible persons and making of advances to such persons to enable them to own their homes; the development of land for housing and related purposes; and the responsibility of maintaining housing standards. Since the signing of the 1945 Commonwealth-State Housing Agreement the construction of dwellings has been financed by the Commonwealth Government and Commission Funds.

At 30 June 1965 the Housing Commission had completed 1,328 dwelling units under the State Housing Scheme, and 52,676 dwelling units under Commonwealth-State Agreements. An additional 2,598 units were either under construction or let to contract at this date. Specially designed dwelling units are erected by the Commission to provide dwellings for elderly persons at rentals within their means. To 30 June 1965, 2,339 units had been completed. Under the *Aborigines Act 1958*, as amended by the *Aborigines (Houses) Act 1959*, the Aborigines Welfare Board is empowered to buy houses, or land on which to erect houses for occupation as dwellings by Aborigines. To 30 June 1965, 70 units had been completed.

State Government Authorities, such as the Public Works Department, State Electricity Commission, Victorian Railways, State Rivers and Water Supply Commission, etc., provide, from time to time, the necessary land and finance for the erection of dwellings for employees of

those departments. Rentals charged are fixed by the Government Authorities in accordance with the salaries of officers occupying the dwellings. The dwellings erected by these State Government Authorities do not come under the control of the Victorian Housing Commission.

Prior to the end of the Second World War the Commonwealth Government and various State Governments made arrangements for the settlement of discharged soldiers on the land as part of a general scheme of rehabilitation of ex-members of the Services. In 1945 the Victorian Government completed an Agreement with the Commonwealth Government, and legislation was passed constituting the Soldier Settlement Commission. On 17 March 1962 the Rural Finance and Settlement Commission came into being, constituted by an Act passed in December 1961. Activities under the *Soldiers Settlement Act* 1958 and the *Land Settlement Act* 1959, previously administered by the Soldiers Settlement Commission, are now carried out by the Settlement Branch of the new Commission. At 30 June 1965 a total of 3,177 houses had been erected and 61 were still under construction or approved but not yet started.

Queensland—The Queensland Housing Commission. The Queensland Housing Commission was established in 1945 to assist in meeting the housing shortage. It took over the operations of the State Advances Corporation which was established in 1916 to make advances to home builders under 'The State Advances Act of 1916' (State housing in Queensland originally began in 1910 under the Workers' Dwelling Board). In addition, the Commission was empowered to build houses itself, either for sale or for rental.

The Housing Commission finances its operations through two Treasury Trust Funds—the Queensland Housing Commission Fund and the Commonwealth-State Housing Fund. In addition, a Home Builders' Deposit Trust Fund is available to assist eligible persons to accumulate money to acquire land and erect a Commission dwelling thereon, or to purchase a dwelling under contract of sale conditions. Total disbursements by the Commission for the year 1964–65 amounted to \$24,361,548, representing \$8,752,180 from the Queensland Housing Commission Fund and \$15,609,368 from the Commonwealth-State Housing Fund, while the Home Builders' Deposit Fund had a balance of \$1,930 at 30 June 1965.

During 1964–65 the Commission completed 1,744 house units, bringing the total completions under all schemes since the revival of housing construction in 1944–45 to 31,544. Of this number, 18,939 houses, or 60.0 per cent, were for home ownership, and 12,605, or 40.0 per cent, were for rental.

In the field of rental housing the Commission administers and acts as the constructing authority for the Commonwealth-State Housing Agreements of 1945, 1956 and 1961. These agreements have made possible large-scale home building programmes during the post-war years, the houses so built being mainly for rental, although subsequently they may be sold.

Operating under the provisions of 'The State Housing Acts, 1945 to 1962' the Commission, through its scheme of workers' dwellings, makes advances for the construction of dwellings to eligible persons who own a suitable building site. To be eligible to qualify for any of its home-ownership schemes, a person must not own, nor must his wife or her husband own, a house in Queensland or elsewhere. The number of workers' dwellings completed during 1964–65 amounted to 465, making a total of 29,456 completions since the inception of the scheme. The Commission also has power to make advances, secured by mortgage, to firms for housing of employees. Home ownership is further assisted through the Commission's power to sell houses under contract of sale conditions. It may sell houses already erected to eligible applicants, or it will erect a dwelling to the intending purchaser's own design, on Commission land, for subsequent sale to him. Tenants of rental houses may also purchase under contract of sale conditions the houses they are occupying. Contract of sale agreements were made to purchase 571 of the Commission's houses during 1964–65. The Commission is also authorized, under 'The State Housing Acts Amendment Act of 1961', to sell freehold land, or lease vacant Crown land which has been set apart for the purposes of the State Housing Acts, to an eligible person for the erection of a dwelling, subject to the condition that within eighteen months from the date of contract he will execute a building agreement for the erection of a dwelling thereon for his occupation.

South Australia—The South Australian Housing Trust. The South Australian Housing Trust was constituted in 1937 under the South Australian Housing Trust Act, 1936–1937, for the purpose of providing comfortable homes for workers in regular employment on the lower ranges of income and for tenants in serious financial straits. The Housing Trust builds houses for both rental and sale, and from July 1946 to 30 June 1965, 53,109 houses were erected by the Trust in both city and country areas.

Rents charged for Trust accommodation are generally based on the overall cost of construction, and vary not only according to the size of the dwelling but also according to date of erection. As at 1 January 1966 the rents of five-roomed houses (i.e. three bedrooms) ranged from \$4.25 a week for houses of an older type to \$7.50 a week for houses then being completed. Factors taken into consideration when allotting rental houses include date of application, housing need and suitability of tenant. Persons with high incomes are asked to consider purchasing their own homes. Two- and three-storey groups of flats with weekly rental ranging from \$8.25 to \$15.50

per flat have been built in the Metropolitan Area and at Elizabeth. At 30 June 1965, 1,199 of these flats had been completed in the Metropolitan Area and 220 at Elizabeth. In 1953 the Trust began building cottage or pensioner flats for elderly people. At 30 June 1965 it had built 732 cottage flats for its own scheme and an additional 439 for, and at the expense of, charitable organizations. In 1958 the State Government instituted the rental-grant scheme for the purpose of providing houses in the country towns for people who cannot afford to pay an economic rent, and to 30 June 1965, 181 houses had been built.

Houses built under the sales scheme, which was inaugurated in 1946, are of solid or timber-frame construction. More than 26,500 have been completed in both metropolitan and country areas since the scheme began. The Trust may receive cash payment for the house and land. More usually the purchaser pays a deposit (which varies according to the type of house and locality and the purchaser's ability to pay) and raises the balance by way of mortgage. In 1956 the Trust began the erection of houses, which may be of solid or timber-frame construction or a mixture of both, for individuals on their own land. Houses are built by contract under the Trust's supervision. Prices for building and supervision of the standard five-roomed houses covered by the scheme in late 1965 ranged from \$8,800 to \$13,700. During 1962-63 the Trust commenced construction of rental-purchase houses. The aim of this scheme is to provide less expensive houses for the lower-middle income group, and it is expected that such houses will, as far as possible, replace the demand for the double-unit type rental houses. By 1 October 1965, approximately 1,550 rental-purchase houses had been built.

Upon request by State Government Departments the Trust will erect houses for purchase by those Departments for the accommodation of their employees. Rents for the houses are determined by the Public Service Board. The Trust has built 165 houses in country towns for the Department of Aboriginal Affairs. The houses are owned and managed by the Department and let by it to specially selected Aboriginal families. The aim of the scheme is to provide an opportunity for those of Aboriginal blood, who are both able and disposed to do so, to take their place in the general community.

In order to assist primary producers the Trust will erect houses on the applicant's own land for his own use or that of his employees, either using local materials or transporting prefabricated houses to the site. At 30 June 1965 prices for three bedroom asbestos-cement sheeted timber houses erected on a level site within 100 miles of Adelaide ranged from \$6,600 upwards.

Western Australia—State Housing Commission of Western Australia. The State Housing Commission was established in January 1947, under the *State Housing Act, 1946* to replace the Workers' Homes Board. The *State Housing Act, 1946-1961* has as its objects 'the improvement of existing housing conditions' and 'the provision of adequate and suitable housing accommodation for persons of limited means and certain other persons not adequately housed'. It provides for the erection of homes for workers, the making of advances to workers for the purchase of homes, the erection of homes for letting on a weekly rental basis, the acquisition and development of land, the clearing of slums, the erection of hostels, and the planning of community facilities. The Commission, consisting of seven members, builds houses for letting or sale and lends money for home building. The houses are built by private contract on land provided by the applicant or the Commission. The administration of the Commonwealth and State Housing Agreements and the War Service Homes Act is included in the functions of the Commission. The number of houses completed under the State Housing Act up to 30 June 1965 were: freehold, 3,881; leasehold, 3,086; assistance by second mortgage, 1,342.

Various forms of assistance have been granted by the Commission to encourage home ownership, including schemes for arranging purchase by means of loans secured by mortgage, advances made under contract of sale, advances for securing homes under leasehold conditions, second mortgage loans, and loans for the completion of partly built dwellings. Under the leasehold scheme a purchaser can convert from perpetual Crown lease or lease for a term of years to freehold conditions upon having a 10 per cent equity in the improvements and by agreeing to purchase the land at the valuation determined at the date of commencement of the lease.

Purchasers of Commission houses also gain relief from a Death Benefit Scheme at no extra cost to themselves. Under this scheme the surviving spouse and children are assisted upon the death of the family wage-earner. Maximum benefit is a reduction of liability by \$1,000 plus \$200 for each dependent child under sixteen years of age. The maximum benefit is payable when the wage-earner is under thirty-six years of age, decreasing until the wage-earner reaches sixty-five years when no benefit is payable unless there are dependent children under sixteen years of age.

The Commission also conducts certain other housing schemes and has completed or is currently engaged in other specific projects, details of which are given in previous Year Books. Included among current activities are the Government Employees' Housing Scheme, which commenced in 1958-59 and up to 30 June 1965 had provided 138 houses in country areas for certain government employees; the construction of 100 houses to be built under the provisions of the *Laporte Industrial Factory Agreement Act, 1961*; and the building of up to thirty homes a year until 1969-70 as part of the Broken Hill Proprietary Company's Agreement with the State to

establish an integrated steel industry. A contract for a three-storey block of flats to accommodate seventy-six elderly lady pensioners has been signed—the third block of this nature in recent years. The Commission also undertakes the construction of houses for other State Government Departments and semi-governmental authorities. To further assist religious and charitable organizations eligible under the Commonwealth Aged Persons Homes Act, full architectural services of the Commission, which include plans, specifications, arranging of contracts and the carrying out of supervision during construction, have been provided free of cost. Up to 30 June 1965, 424 units had been completed.

The Commission administers building society legislation and the *Housing Loan Guarantee Act, 1957–1962*, under which the Government guarantees lenders of funds to building societies and other approved financial organizations making advances to families interested in owning their own home on low deposits, and at an interest rate not exceeding 6½ per cent per annum reducible.

Tasmania—The Housing Department. The Housing Department was established in July 1953 as a separate identity, and is responsible for administering that portion of the *Homes Act 1935* which relates to the acquisition and development of land for housing purposes and the erection of homes for rental and ultimate sale, and the *Homes (Old Age Pensioners') Act 1940*. Housing Department construction utilizes both day labour and private contractors to build houses on land developed by the Department. On-site construction is supported by the Department's factory, which incorporates joinery works, timber mill, plumbing and electrical workshops, material stores, and garage. Most of the dwellings constructed by the Department are three-bedroom timber dwellings. Roofing is usually corrugated iron, but some coloured asbestos cement sheeting is used. During 1964–65, 586 dwellings were completed. Construction since 1944 has comprised 9,022 dwelling units, of which 8,514 were single units (7,406 of timber), 190 were elderly persons' flatettes, 22 were maisonettes and 296 were multi-unit flats. Of the total dwellings completed, 7,976 were three-bedroom, 849 two-bedroom and 197 one-bedroom.

Flats, maisonettes and elderly persons' homes are for rental only. Allottees of single unit dwellings are encouraged to acquire properties on purchase contract where this procedure is deemed to be for their benefit, and a majority take advantage of this opportunity. Some of these dwellings, however, are occupied on a rental basis. The rental of a newly erected three-bedroom timber house in the Hobart metropolitan area approximated \$11.75 in the June quarter of 1965. In certain necessitous cases rental rebates are allowed and the Department is reimbursed by the State Treasury. Rebates on rentals of elderly persons' flatettes are graduated according to the incomes of the occupiers. Under the current rental rebate formula a married couple whose only income is the age pension pay \$3.80, while a single person solely dependent on the pension pays \$2 a week.

Allotments are made on a no-deposit purchase contract basis with repayments over a maximum term of fifty-three years, but allottees are encouraged to pay a deposit if they are in a position to do so. Purchase contracts are sometimes surrendered to the Department. Net of surrenders, 5,784 purchase contracts had been entered into by June 1965. The sale price, excluding land, of a new three-bedroom house in the Hobart metropolitan area was approximately \$6,900 in the June quarter of 1965. Prices in the north and north-western areas were slightly lower. The weekly repayment instalment on a purchase contract is less than the weekly rent of a similar dwelling, as the latter includes a charge for maintenance, whereas a person on purchase contract is responsible for maintenance of the property.

Housing schemes in Commonwealth Territories

Northern Territory. In 1946 control of all government-owned residences in the Territory (excluding those belonging to the Defence Services or Commonwealth Railways, or attached to post offices) was vested in the Administration. The Administration provides houses for rental to officers and employees of the Commonwealth. The Northern Territory Housing Commission provides rental housing for persons of limited means who are not adequately housed and who are not officers of either the Commonwealth or the Northern Territory Public Service. The Commission was established in 1959 and operates under authority of the *Housing Ordinance 1959–1965*; to 30 June 1965 a total of 676 houses and flats had been completed and a further 269 houses and 62 flats were under construction.

Australian Capital Territory. The Commonwealth Government provides houses and flats for rental to persons employed in the Australian Capital Territory. At 30 June 1965 the Department of the Interior controlled 7,114 houses and 1,942 flats for rental purposes. Government rental houses may be purchased by tenants. From 1 July 1950 to 30 June 1965, 4,930 houses had been sold to tenants.

Papua and New Guinea. In 1960 the Administration, through the Commissioner for Housing, commenced a scheme for providing low-cost houses for rental and eventual sale where possible to indigenes, mixed race peoples and Asians. To 30 June 1965, 223 houses had been completed.

Summary of rental activities of government authorities

The following table shows the revenue from rental for dwellings under control of government housing authorities each year from 1960-61 to 1964-65.

GOVERNMENT HOUSING AUTHORITIES: REVENUE FROM RENTALS, STATES AND TERRITORIES, 1960-61 TO 1964-65
(\$'000)

Year	N.S.W.	Vic.	Qld (a)	S.A. (b)	W.A.	Tas.	N.T.	A.C.T.	Aust.

(a) Excludes tenants of 'aged units'. (b) Excludes tenanted temporary dwellings. (c) Excludes temporary and emergency dwellings. At 30 June 1963 these numbered 2,549. (d) Number of occupied dwellings at 30 June.

Advances to home purchasers

Many prospective home purchasers wish to borrow for the purpose of constructing or purchasing their own homes. Usually the loan is covered by way of mortgage of the home to be constructed or bought. Such loans are provided from a number of private sources and from agencies owned or guaranteed by the State or Commonwealth Governments. The information in this section concerns the direct loans made to home purchasers by the more important institutional lenders. Loans to institutions which in turn lend moneys to home purchasers and loans to contract builders, etc., are excluded as far as possible. The loans may be for the construction of new dwellings, the purchase of existing dwellings, for additions, renovations, etc., as first or subsequent mortgages, overdrafts and so on. While figures of all loans to home purchasers are not available, the institutions mentioned account for a significant proportion of total loans. Details of the terms and conditions of lending are given, together with available information on the number and value of loans made.

State authorities and agencies*New South Wales*

Rural Bank of New South Wales—Sale of Homes Agency. A Sale of Homes Agency was established in 1954 within the Rural Bank's Government Agency Department to arrange for the sale on terms of houses erected by the Housing Commission of New South Wales. The Agency's operations began with the sale to selected purchasers of 100 houses made available by the Commission during 1954-55 and 1955-56. The sales were made on the basis of 10 per cent deposit and repayment of the balance over a maximum period of forty years, with interest at 4½ per cent per annum. Total advances under that scheme amounted to \$646,648; at 30 June 1965 the advances outstanding amounted to \$432,042 in respect of 85 houses.

Since 1956 the Sale of Homes Agency has acted as the agent of the Housing Commission in arranging the sale on terms of houses erected under the 1956 and 1961 Commonwealth-State Housing Agreements. These houses are sold, in general at the Bank's valuation, to persons who have satisfied the Commission as to their housing needs and have registered as prospective purchasers. The terms of sale provide for a minimum deposit of \$100 and repayment of the balance over a maximum period of forty-five years, with interest rates, since the inception of the scheme, ranging from $4\frac{1}{2}$ to $5\frac{1}{2}$ per cent per annum. The cash deposits and periodical instalments payable by purchasers are collected by the Agency as agent for the Commission. Particulars of the advances made by the Agency in connection with the sale of houses erected under the 1956 and 1961 Agreements are given in the following table.

RURAL BANK OF NEW SOUTH WALES—SALE OF HOMES AGENCY: ADVANCES FOR HOMES SOLD UNDER THE 1956 COMMONWEALTH—STATE HOUSING AGREEMENT, TO 1964-65

Year	Advances during year		Advances outstanding at end of year ^(a)	
	Number of houses	Amount	Number of houses	Amount
		\$'000		\$'000
1956-57 . . .	1,604	10,158	1,604	9,952
1957-58 . . .	3,012	19,966	4,612	29,430

1963-64 . . .	957	7,362	14,568	94,178
1964-65 . . .	1,777	14,356	16,042	105,648

(a) Comprises principal outstanding and loan charges due but not paid.

Rural Bank^a of New South Wales—other loans. The Rural Bank of New South Wales provides assistance to individuals for the erection or purchase of homes and for other approved purposes associated with homes. Advances are based on the bank's official valuation of the dwelling. The rate of interest on long-term loans for housing purposes was $5\frac{1}{2}$ per cent per annum in November 1965.

RURAL BANK OF NEW SOUTH WALES: ADVANCES FOR HOMES, 1955-56 TO 1964-65

Year	Advances during year ^(a)		Advances outstanding at end of year ^(b)	
	Number of dwellings	Amount	Number of dwellings	Amount

1963-64 . . .	2,434	15,148	18,972	68,790
1964-65 . . .	2,613	18,250	19,936	76,450

(a) The number of advances during a year represents the number of dwellings in respect of which an advance was first made in the year, but the amount of advances includes subsequent advances made in respect of the dwellings. (b) The number of advances outstanding at the end of a year represents the number of dwellings on which a debt was still outstanding. The amounts shown comprise principal outstanding and loan charges due but not paid.

Victoria

Housing Commission, Victoria. Very few houses were sold by the Commission until 1954. The amendments to the Commonwealth-State Housing Agreement in 1955-56 have had the effect of substantially increasing the number of houses sold. Whereas between 1949 and 1954 only about 100 houses were sold, a total of 19,895 houses were sold on terms to 30 June 1965, the total value of terms sales exceeding \$152 million. Until 1964-65 houses were sold on a minimum deposit of \$200, but during that year provision was made to sell without deposit in very special circumstances. The maximum repayment term is forty-five years with interest at $4\frac{1}{2}$ and $4\frac{3}{4}$ per cent.

An inducement to tenants of the Commission to purchase their homes was the introduction of a Death Benefit Scheme, to provide for the property under purchase to pass to the estate of the purchaser free of debt in the event of his death prior to completion of purchase. If application is made for admittance to the Death Benefit Scheme, the maximum period for repayment is reduced to thirty years, the rate of interest is fixed at $5\frac{1}{2}$ and $5\frac{3}{8}$ per cent and the contract must terminate before the purchaser's seventieth birthday.

Home Finance Trust. In 1956 a Home Finance Trust was established with the object of receiving money from institutions and others in order to make loans for the erection or purchase of houses. Applicants for loans must declare that they intend to use the houses as homes for themselves, their families and dependants. Except in special circumstances, no loan will be granted if the borrower or spouse already owns a house in Victoria at the date of the proposed mortgage.

Loans granted are on the basis of a first mortgage over the house. Loans are not to exceed ninety-five per cent of the value of the security (house and land) and are not made if the value of the security exceeds \$10,000. The house must not have been erected more than two years before the date of the mortgage. Repayment of loans may be made over a maximum period of thirty years, with interest charges determined by the Trust. At 30 June 1965, 2,977 loans totalling \$17,995,396 were outstanding.

In 1963 the Trust was empowered to make housing loans on the security of second mortgages subject to conditions similar to those applying to the first mortgage loans, except that the maximum term for repayment of a loan is ten years and no restriction is placed on the percentage of loan to valuation. At 30 June 1965, 1,068 second mortgage loans were outstanding, the amount involved being \$956,776. The Trust was also empowered to make a loan to the trustees of a fund established to provide a home for a doctor or a dentist at a place located more than thirty miles from the City of Melbourne. There is no valuation limit or age limit of the dwelling in cases of this nature.

(See Savings Banks, page 305, for activities of the State Savings Bank of Victoria.)

Queensland

Queensland Housing Commission. The present maximum advance allowable under the Acts is \$7,000 for a timber, brick veneer, brick, or concrete building. The rate of interest charged on new advances in 1964-65 was $4\frac{7}{8}$ per cent per annum to 9 September 1964, $5\frac{1}{4}$ per cent per annum from 10 September 1964 to 16 June 1965, and $5\frac{1}{2}$ per cent per annum from 17 June 1965. Repayment may be made at the option of the borrower over either a thirty year or a forty-five year period. A borrower or purchaser who elects to repay over a thirty year period, who is under forty years of age, and who has passed a prescribed medical examination, is entitled to free life insurance cover to an amount sufficient to liquidate his indebtedness to the Commission in the event of his death before his loan has been fully repaid, provided that the maximum benefit payable under such insurance cover does not exceed \$4,500.

Workers' dwellings. From 4 October 1962 the maximum advance under this scheme was increased to \$7,000 for all types of workers' dwellings. Total advances made for dwellings since operations commenced in 1910 to 30 June 1965 amounted to \$60,569,762.

South Australia

South Australian Housing Trust Sales Scheme. A minimum deposit of \$100 is required for houses under the Rental-Purchase Scheme for a loan, repayable at an interest rate of $4\frac{1}{2}$ per cent per annum over a period not exceeding forty years. Prospective purchasers of Housing Trust houses (other than rental-purchase houses) can arrange or have arrangements made for a first mortgage to be granted by a lending institution of their choice. In cases where the deposit and the first mortgage so raised are insufficient, the Trust may advance the balance of the house price by way of a second mortgage, the repayment term of which is a maximum of thirty years, interest being at the rate of 6 per cent per annum. During 1964-65 the Trust commenced 1,007 second mortgages valued at \$900,000. At 30 June 1965, second mortgages totalled 7,890, and the balance outstanding at that date was \$8,360,000.

State Bank of South Australia. The State Bank, together with the Housing Trust, is the principal agent of the State Government for the distribution through the Home Builders' Fund of moneys received under the Commonwealth-State Housing Agreement. During 1964-65 the Bank opened 1,774 new accounts worth \$11,522,788 in the Home Builders' Fund. The balance of loans in this Fund outstanding at 30 June 1965 totalled \$45,616,008. In addition, during 1964-65, \$746,270 was advanced to the public under the Advances for Homes Act, 1928-1958 which is administered by the Bank on behalf of the State Government. Under this Act 120 new accounts were opened during 1964-65, leaving a balance outstanding at 30 June 1965 of \$27,639,256. The present maximum housing loan under either of these schemes is \$7,000, repayable over a period not exceeding fifty years at a rate of interest of $5\frac{1}{4}$ to $5\frac{3}{4}$ per cent per annum calculated on monthly balances. Persons who have received benefit under either of these schemes are ineligible for another mortgage.

Western Australia

State Housing Commission of Western Australia. Under the State Housing Act and the Commonwealth-State Housing Agreement the maximum loan is \$6,000 by way of mortgage, while under contract of sale the maximum is \$5,800 on the building plus the value of the land in the Metropolitan Area, and greater amounts in rural areas, depending on the circumstances. For houses built north of the twenty-sixth parallel the Minister may approve of a larger advance.

To proceed under the mortgage conditions, a deposit of not less than 10 per cent is required, but under contract of sale the deposit may be as low as \$200, or less when circumstances warrant. The interest rate on all advances is $5\frac{3}{4}$ per cent per annum and the repayment period is forty-five years. The income eligibility figure varies according to the movement of the basic wage, and as at the basic wage adjustment on 26 April 1965 an applicant in the Metropolitan Area cannot have an income exceeding \$2,540 a year, plus \$50 for each dependent child under sixteen years of age. For the country the corresponding amount is \$3,054 per annum plus \$50 for each dependent child under sixteen years, and north of the twenty-sixth parallel the Minister may allow families with an income of up to \$4,000 to be given financial assistance. A second-mortgage scheme exists under the State Housing Act which provides that assistance be limited to those applicants who are building or purchasing new homes, the cost of which, excluding land, does not exceed \$7,000. The Commission limits the second mortgage to a maximum of \$2,000.

(See Savings Banks, page 306, for activities of the Savings Bank Division of the Rural and Industries Bank of Western Australia.)

Tasmania

Housing Department. The interest rate on purchase contract loans from the Housing Department signed after 1 May 1965 was $4\frac{1}{2}$ per cent, immediately prior to which the rate was 4 per cent. To be eligible for a house on purchase contract terms, an applicant must be married or about to be married, or have dependants for whom it is necessary to provide a home. Number of dependants, income, and existing accommodation are considered in determining applicants' priority. The number of loans outstanding at 30 June 1965 was 5,354, and the amount outstanding \$34,112,000.

Agricultural Bank of Tasmania. The Agricultural Bank, as an approved institution under the Commonwealth-State Housing Agreement, receives part of those funds allocated for advances to home builders. Prior to the commencement of the agreement, the Bank borrowed from the State Loan Fund and from private institutions. To be eligible for a loan, an applicant must be married or about to be married and be over the age of twenty-one, and when, as is usual, the advance is required to build a house, the applicant must own a block of land. The maximum amount of an advance to an applicant is \$7,000 for all types of houses in certain areas, provided that the total advance does not exceed ninety per cent of the Bank's valuation of land and dwelling. Advances to borrowers are repayable by equated instalments over thirty-one years. Advances made as from 1 July 1965 were at an interest rate of $5\frac{3}{4}$ per cent, immediately prior to which the rate was $5\frac{1}{2}$ per cent.

During 1964-65, 304 advances were approved, valued at \$2,108,000. Since November 1945 a total of 2,963 loans amounting to \$16,914,000 have been approved, of which 2,630 have been for erection of dwellings and 333 for the purchase of existing homes. Total advances outstanding at 30 June 1965 amounted to \$12,746,000. These figures exclude advances to building societies.

Commonwealth authorities and Territories

Department of Housing

In December 1963 the Department of Housing was created and to it were transferred the functions and staff of the War Service Homes Division and the Housing and Building Industry Branch of the Department of National Development. Further details relating to the Department of Housing may be found on page 83 of Year Book No. 50.

War service homes

The maximum amount of loan or advance which may be granted under the *War Service Homes Act 1918-1962* is \$7,000. The period of repayment may be up to forty-five years. In the case of a widow or widowed mother of an Australian ex-serviceman, the period may be extended to a maximum of fifty years.

The following table gives details of advances under the *War Service Homes Act* in each State and Territory of Australia, and the Territories of Papua, New Guinea and Norfolk Island, for the years 1955-56 to 1964-65. (See tables on pages 292-3 for the number of homes provided.)

Northern Territory

Loans Scheme. This scheme was commenced in 1953 and is administered by the Commissioner for Housing under the *Housing Loans Ordinance 1949-1959*. Advances may be made for the erection of a house, the purchase or enlargement of an existing house, the completion of a partially erected dwelling, or the discharge of a mortgage already existing. Loans are provided on a deposit of 5 per cent of the first \$4,000 and 10 per cent of the balance of the Commissioner's valuation up to a maximum of \$7,000. The rate of interest charged is 6 per cent per annum reducible to 5 per cent per annum if instalment payments are made by the due date. The maximum period of repayment is forty-five years. Up to 30 June 1965, 1,083 loans totalling \$6,005,690 had been approved. These were for: erection, 714; purchase, 285; enlargement or completion, 34; discharge of mortgage, 50.

Sales Scheme. Tenants of government-owned houses under the control of the Administration may purchase the dwellings they occupy, either for cash or on terms requiring a minimum deposit of 5 per cent of the first \$4,000 and 10 per cent of the balance of the purchase price with repayments over a maximum period of forty-five years including interest at 4½ per cent per annum.

Housing Commission Sales Scheme. Since the amendment of the *Housing Ordinance* 1959–1963 in November 1963 the Housing Commission is permitted to sell its houses to tenants in occupation. The terms require a minimum cash deposit of \$200 and repayment of the remainder of the loan over a period not exceeding forty-five years; there is no prescribed limit to the amount of the loan and the rate of interest is to be fixed by the Commission from time to time.

Australian Capital Territory

Loans may be granted by the Commissioner for Housing to enable persons to purchase or build a new house in the Australian Capital Territory. Where the Commissioner's valuation does not exceed \$4,000, the maximum loan may not exceed ninety-five per cent of the valuation. If the Commissioner's valuation exceeds \$4,000, the maximum loan is ninety-five per cent of the first \$4,000 and ninety per cent of the balance (but in no case can the amount lent exceed \$7,000). Repayment may be made over a maximum period of forty-five years. The current rate of interest is 4½ per cent per annum. From 1 July 1950 to 30 June 1965, 3,002 loans were granted. At 30 June 1965, 2,827 houses were under mortgage to the Commissioner.

Government rental houses may be purchased by tenants. The basis of the sale is a minimum deposit of 5 per cent of the purchase price fixed by the Department of the Interior with no limit to the amount which may be held on mortgage from the Department. Repayment of the amount covered by mortgage may be made over a maximum period of forty-five years. The interest rate is 4½ per cent per annum. From 1 July 1950 to 30 June 1965, 4,930 houses had been sold to tenants.

Papua and New Guinea

Under authority of the *Housing Loans Ordinance* 1953–1963 the Commissioner for Housing may make advances to any member of the community for the erection of a house, the purchase or enlargement of an existing house, the completion of a partially erected dwelling, or the discharge of a mortgage already existing. The maximum loan is \$7,000. The maximum period of repayment is thirty-five years for brick, stone or concrete and twenty-five years for all other materials. Minimum cash deposit is 5 per cent of the first \$4,000 plus 10 per cent of the remainder of the Commissioner's valuation. The effective rate of interest is 5 per cent per annum. Up to 30 June 1965, 293 loans totalling \$1,476,760 had been approved.

Savings banks

All savings banks lend funds for housing to both individuals and building societies. Separate figures of loans to individuals are not available for all savings banks. The amounts outstanding on housing loans of all savings banks (including loans to building societies) were \$794 million, \$998 million and \$1,186 million at the end of June 1963, 1964 and 1965 respectively. Some details in respect of three savings banks are shown below.

State Savings Bank of Victoria. The Bank grants long-term loans to depositors to enable them to build, purchase or improve homes. These loans are granted by both the *Crédit Foncier* and *Savings Bank* Departments.

The maximum proportion of valuation to be granted as *Crédit Foncier* loan is 80 per cent and the maximum loan is \$7,000. Interest is 5 per cent and the term of the loan is ten years, subject to renewal. The maximum proportion of valuation granted as *Savings Bank* Department loan is seventy-five per cent and the maximum loan is \$10,000. The interest rate is 5½ per cent if the property is occupied by the borrower and 6½ per cent in other cases. The term of the loan is three years, subject to renewal. During the year 1964–65 the Bank advanced \$51,869,576 to 9,118 borrowers in addition to \$815,352 to Co-operative Housing Societies and \$900,000 to the Home Finance Trust. At 30 June 1965 the total debt of 52,799 individual borrowers was \$232,890,810 while indebtedness of Co-operative Housing Societies and the Home Finance Trust amounted to \$18,689,866 and \$8,564,256 respectively.

Savings Bank of South Australia. The Bank grants mortgage loans for the building or purchase of houses for personal occupation, the maximum loan available being \$8,000 for all types of homes. Normally advances are made up to 85 per cent of the Bank's valuation but, if the loan is granted under the *Homes Act, 1941–1962*, 95 per cent of such valuation may be advanced (maximum loan, \$6,000). The maximum loan period is thirty years at a rate of interest of 5½ per cent per annum; this rate is subject to review after five years. During 1964–65 the Bank advanced \$15,914,452 by way of housing loans, the number of new loans totalling 2,374. At 30 June 1965 there were 21,798 loans current with a balance outstanding of \$92,100,000.

Rural and Industries Bank of Western Australia (Savings Bank Division). The Rural and Industries Bank of Western Australia is authorized by the *Rural and Industries Bank Act, 1944-1958* to make loans from moneys on deposit with its Savings Bank Division to a person or body for the purchase or erection of a dwelling. It is the policy of the Bank to provide funds for housing primarily for occupancy by the borrower. There is no fixed limit on the amount of a loan. The average loan in the case of a brick or timber house is between \$6,000 and \$7,000. The rate of interest varies with the current bank rate and is usually $\frac{1}{2}$ per cent lower. The rate at 30 June 1965 was $5\frac{1}{2}$ per cent. The average term of housing loans is twenty-two years.

Trading banks

Apart from loans by certain State banks as Government agencies (see pp. 300-1 and 303) advances for housing to individuals are also provided by the trading banks. Amounts outstanding in respect of advances to individuals for housing purposes made by the major trading banks were \$220 million on the second Wednesday of July 1965 (see the chapter Private Finance for further details).

Life insurance companies

The life insurance companies are another source of funds for housing. Details of new loans made during 1963, 1964 and 1965 (statistics for years prior to 1963 are not available) are given in the following table.

LIFE INSURANCE COMPANIES: HOUSING LOANS PAID OVER, STATES AND TERRITORIES, 1963 TO 1965

State or Territory	Amount (\$'000)		
	1963	1964	1965
New South Wales	20,572	21,082	24,176
Victoria	13,152	16,176	18,642
Queensland(a)	3,430	4,480	5,753
South Australia(b)	3,368	3,744	5,108
Western Australia	2,262	2,964	3,778
Tasmania	1,418	1,546	1,547
Australian Capital Territory	340	594	869
Total	44,542	50,586	59,873

(a) Includes loans made in Papua and New Guinea.

(b) Includes loans made in Northern Territory.

Amounts outstanding at the end of June 1964 and 1965 in respect of housing loans made by insurance companies were \$323 million and \$339 million respectively.

Registered building societies

Including the Victorian Co-operative Housing Societies there are 3,162 registered building societies in Australia, of which 116 are permanent societies and the remainder terminating societies. The permanent societies are in the main investment societies which make loans for housing purposes, usually on credit foncier terms, and obtain their funds from share capital deposits and borrowings from banks and other lending institutions. The terminating societies are co-operative societies which make loans to members from funds obtained from lending institutions (usually government guaranteed), members' subscriptions, and, since 1956, from moneys provided under the Commonwealth-State Housing Agreements. Details of new loans granted and net advances outstanding for each of the years ended June 1960 to 1964 are given in the following table (see also the chapter Private Finance).

REGISTERED BUILDING SOCIETIES, STATES, 1959-60 TO 1963-64

Year	N.S.W.	Victoria		Qld	S.A.	W.A.	Tas.	Total
		Co-operative housing societies (a)	Other building societies (b)					

LOANS GRANTED DURING YEAR (\$'000)

(a) Year ended 30 April. (b) Year ended 31 December. (c) Excludes Victorian co-operative housing societies. (d) Net of borrowing members' funds.

Other lenders

Little information is available on advances made by other lenders such as superannuation and other trust funds, private finance and investment companies, etc. In South Australia advances on first mortgage made by the South Australian Superannuation Fund are granted under the Homes Act, 1941-1962, by which the State Government guarantees up to 25 per cent of the value of the mortgage, thus raising the limit of the advance. Loans so made are limited to 95 per cent of the Superannuation Board's valuation to a maximum of \$6,000, or 85 per cent of the Board's valuation to a maximum of \$7,000. The rate of interest is 6 per cent per annum, calculated on quarterly balances, reducing to 5½ per cent when payments are made within a prescribed period of twenty-one days from the end of the quarter. The term of the mortgage may run for thirty years on a stone or brick home or twenty years on a timber-framed construction. Trustee mortgages may be granted as an alternative to the foregoing. A maximum of 70 per cent of the Board's valuation may be granted for a trustee mortgage, other conditions being those applicable to mortgages granted under the Homes Act. At 30 June 1965 there were 5,219 loans current, the principal outstanding totalling \$19,726,568. During 1964-65 the value of advances made was \$3,679,906.

CHAPTER 11

EMPLOYMENT AND UNEMPLOYMENT

Further detail on subjects dealt with in this chapter is contained in the *Labour Report* and other publications of this Bureau. For subjects relating to population censuses reference should be made to the series of mimeographed and printed publications listed in the chapter Miscellaneous of this Year Book. Detailed information on employment and unemployment and the Work Force Survey is contained in the monthly mimeographed bulletin *Employment and Unemployment*. Current information is also available in the *Monthly Review of Business Statistics*, the *Digest of Current Economic Statistics*, and the *Quarterly Summary of Australian Statistics*, and preliminary estimates of civilian employment are issued in a monthly statement *Wage and Salary Earners in Civilian Employment*.

THE WORK FORCE

The work force comprises two categories of persons: those who are employed and those who are unemployed. In the first category are included employers, self-employed persons, wage and salary earners, and unpaid helpers. Comprehensive details for each State and Territory and for Australia as a whole in respect of persons in the work force, classified according to characteristics such as age, sex, conjugal condition, industry, occupational status and occupation, are obtained only at a general census of population. Quarterly estimates of the civilian work force are derived from the results of surveys of a sample of households selected by area sampling methods. Estimates are at present available only for the six State capital cities combined. A summary of the information about the work force that was obtained at the population census of June 1961 and earlier censuses is given on pages 308-16. Estimates derived from the quarterly work force surveys appear on pages 318 *et seq.*

Population censuses*

Occupational status

Occupational status of persons classified as in the work force at population census dates covers two broad groups: those at work and those not at work. The first group comprises employers, self-employed persons, employees (on wage or salary) and unpaid helpers. The category 'not at work' includes those who stated that they were usually engaged in work, but were not actively seeking a job at the time of the census by reason of sickness, accident, etc., or because they were on strike, changing jobs, or temporarily laid off, etc. It also includes persons able and willing to work but unable to secure employment, as well as casual and seasonal workers not actually in a job at the time of the census. The numbers shown as 'not at work' in the following tables, therefore, do not represent the number of unemployed available for work and unable to obtain it.

The tables following show the occupational status of the population of Australia at the 1954 and 1961 censuses and of the States and Territories at the 1961 census.

OCCUPATIONAL STATUS OF THE POPULATION: AUSTRALIA, CENSUSES, 1954 AND 1961

Occupational status	Census, 30 June 1954			Census, 30 June 1961			Increase 1954-61
	Males	Females	Persons	Males	Females	Persons	
In work force—							
At work—							
Employer	220,878	30,104	250,982	224,369	42,712	267,081	16,099

Helper(b)	6,452	5,923	4,833	1,952	1,624	699	55	22	21,550
Total at work	1,538,817	1,158,151	555,055	365,831	269,621	126,828	13,819	24,368	4,052,490
Not at work(c)	63,699	51,912	29,941	11,730	10,163	4,090	424	647	172,606
Total in work force	1,602,516	1,210,063	584,996	377,561	279,784	130,918	14,243	25,015	4,225,096
Not in work force	2,314,497	1,720,050	933,832	591,779	456,845	219,422	12,852	33,813	6,283,090
Grand total	3,917,013	2,930,113	1,518,828	969,340	736,629	350,340	27,095	58,828	10,508,186

(a) On wage or salary. (b) Not on wage or salary. (c) See explanation on page 308.

Particulars of males and females in the Australian work force classified by occupational status and industry are given on page 312, and pages 407-10 of Year Book No. 50 contain tables showing males and females at the census of 30 June 1961, classified according to occupational status in conjunction with age and conjugal condition. This information may also be found in Labour Report No. 50, 1962 and 1963, pages 150-3.

Persons not at work

The total number of persons 'not at work' has been recorded only at the dates of the various censuses. Since the 1947 census this category has included all persons (usually engaged in industry, business, trade, profession or service) who were out of a job and not at work at the time of the census for whatever reason, including any not normally associated with unemployment. The following table shows the numbers recorded as 'not at work' at the censuses of 30 June 1947, 1954 and 1961, classified according to cause. As explained on page 308, the totals shown as 'not at work' do not represent the number of unemployed available for work and unable to obtain it.

**PERSONS NOT AT WORK(a), BY CAUSE: AUSTRALIA
CENSUSES, 1947, 1954 AND 1961**

Census	Unable to secure employment	Temporarily laid off	Illness	Accident	Industrial dispute	Other (b)	Total
Males—							
1947 . . .	17,314	12,458	14,639	2,985	475	18,743	66,614
1954 . . .	9,912	4,423	11,879	2,804	344	11,652	41,014
1961 . . .	83,945	11,930	13,684	6,152	540	12,375	128,626
Females—							
1947 . . .	2,254	2,449	4,396	280	24	7,512	16,915
1954 . . .	3,685	1,386	4,310	318	17	4,284	14,000
1961 . . .	27,562	3,939	5,821	773	199	5,686	43,980
Persons—							
1947 . . .	19,568	14,907	19,035	3,265	499	26,255	83,529
1954 . . .	13,597	5,809	16,189	3,122	361	15,936	55,014
1961 . . .	111,507	15,869	19,505	6,925	739	18,061	172,606

(a) Persons in the work force who were 'not at work' (see explanation on page 308) at the time of the census. (b) The majority of these persons were resting between jobs or changing jobs.

Industry

For census purposes, industry may be defined as any single branch of productive activity, trade or service. All persons engaged in any such branch of economic activity are classified industrially as belonging to that particular branch, irrespective of their personal occupations within the industry. Thus a single firm may employ persons performing completely different occupations in order to make a particular product, or to render a particular service, but the industrial classification of each of these persons is determined by the nature of the product made or of the service rendered by the firm that employs him.

The following table shows the number of persons in the work force in each industry group and sub-group at the censuses of 1954 and 1961. The figures include those at work and those not at work.

INDUSTRY OF THE POPULATION: AUSTRALIA, CENSUSES, 1954 AND 1961

Industry group and sub-group	Census, 30 June 1954			Census, 30 June 1961			Increase or decrease 1954-61
	Males	Females	Persons	Males	Females	Persons	
Primary production—							
Fishing	8,451	115	8,566	8,124	128	8,252	-314
Hunting and trapping	1,552	11	1,563	1,361	14	1,375	-188

Details of individual industries within the foregoing sub-groups, by sex, are published for each State and Territory and for Australia as a whole in the mimeographed 1961 *Census Bulletin* No. 29 and in the respective parts of the census volumes.

Industry and occupational status

Males and females in the work force at the 1961 census are classified in the following table according to industry and occupational status. Only the major industry groups are shown in this table; particulars for each sub-group are available in the mimeographed 1961 *Census Bulletin* No. 34 and in the respective parts of the printed census volumes.

(a) On wage or salary. (b) Not on wage or salary. (c) See explanation on page 308.

Married women in the work force

At the 1961 census 444,680 married women (including 39,148 women who were married but permanently separated, legally or otherwise) were recorded as being in the work force. This represented 42 per cent of the total number of females in the work force. At the 1954 census the corresponding percentage was 34.3. Between 1954 and 1961 there was an increase of 154,748 or 53.4 per cent in the number of married women in the work force compared with an increase of 213,767 or 25.3 per cent in total females in the work force. The largest increase (both numerical and proportional) in any age group was for married women aged 35-39 years, where the increase in the seven years 1954 to 1961 was almost 82 per cent.

**MARRIED WOMEN IN THE WORK FORCE
ACCORDING TO AGE: AUSTRALIA
CENSUSES, 1954 AND 1961**

Age last birthday (years)	Married women in the work force(a)		Increase, 1954-61	
	Census, 30 June 1954(b)	Census, 30 June 1961(c)	Number	Per cent
15-19 . . .	3,549	5,570	2,021	56.95
20-24 . . .	35,452	51,003	15,551	43.86
25-29 . . .	43,899	49,536	5,637	12.84
30-34 . . .	43,320	59,025	15,705	36.25
35-39 . . .	41,046	74,660	33,614	81.89
40-44 . . .	42,265	67,695	25,430	60.17
45-49 . . .	33,492	59,745	26,253	78.39
50-54 . . .	23,346	41,142	17,796	76.23
55-59 . . .	13,539	22,415	8,876	65.56
60-64 . . .	6,609	9,342	2,733	41.35
65 and over . . .	3,415	4,547	1,132	33.15
Total . . .	289,932	444,680	154,748	53.37

(a) Includes women married but permanently separated, legally or otherwise. (b) The figures shown for 1954 include an allowance for the number of women whose conjugal condition was not stated. (c) A conjugal condition was allocated prior to tabulation in all instances where this information was not stated.

Occupation

The working population may be classified according to distinct concepts—(i) the *occupation*, which is personal to the individual, and (ii) the *industry*, in which the individual carries on his occupation. Thus the *occupation* of a person is the kind of work that he or she personally performs, while *industry* is defined as any single branch of productive activity, trade or service. Particulars of the work force classified according to industry are given on pages 310-12 of this section; pages 314-16 contain particulars of the principal occupation groups (major and minor) of the work force at the census of 30 June 1961. Details of individual categories of occupations are published in the mimeographed 1961 *Census Bulletin* No. 32 and in the respective parts of the census volumes.

The following table shows, for Australia, the numbers of males, females and persons in the work force in each of the principal occupation groups at the 1961 census. Data of this type were last obtained at the 1947 census, but a comparison of the figures derived therefrom with those shown below is not possible because of differences in classification. Only those persons regarded as being in the work force are classified according to occupation. Corresponding details for persons in each State and Territory are given in Year Book No. 50, pages 415-16 and in *Labour Report* No. 50, 1962 and 1963, pages 158-9.

OCCUPATIONS OF THE POPULATION: AUSTRALIA, CENSUS, 30 JUNE 1961

Occupation group	Males	Females	Persons
Professional, technical and related workers—			
Architects, engineers and surveyors	29,526	155	29,681

Service, sport and recreation workers	4.1	15.8	7.0
Members of armed services, enlisted personnel	1.3	0.2	1.0
Occupation inadequately described or not stated	1.0	2.0	1.3
Total in work force	100.0	100.0	100.0

The work force survey

Estimates of the civilian work force are obtained in February, May, August and November of each year for the six State capital cities from surveys based on a sample of dwellings selected by area sampling methods. These surveys are currently in process of extension to non-metropolitan areas.

The survey information, which is obtained at sample dwellings by personal interview, enables the total civilian population fourteen years of age and over to be classified according to work force and demographic characteristics. The work force classification used conforms closely to that recommended by the Eighth International Conference of Labour Statisticians, Geneva, 1954. Under this classification the category to which an individual is assigned depends on his actual activity or status (i.e. whether working, looking for work, etc.) during a specified week covered by the survey.

The principal categories in the following tables are the employed and the unemployed, which together constitute the total work force, and the remainder, comprising persons who are not in the work force. Details of these categories are as follows.

- (a) *Employed persons* comprise all those who, during the specified week, worked for pay, profit, or payment in kind, in a job or business, or on a farm, and those who had a job, business, or farm, but were temporarily absent for the whole of the specified week for reasons other than lack of work. Persons who worked as unpaid helpers in a family business or on a farm are included in the employed if they worked fifteen hours or more during the specified week. The category includes employees, employers and self-employed persons.
- (b) *Unemployed persons* comprise all those who, during the specified week, did no work at all, did not have a job or business, and were actively looking for work. The category also includes persons absent from work for the whole of the specified week without pay because of lack of demand for their services (i.e. those laid off without pay for the whole of the specified week).
- (c) *The work force* consists of all persons who, during the specified week, were employed or unemployed in terms of the classifications given in (a) and (b) above.
- (d) *Persons not in the work force* are those who, during the specified week, were not classified as employed or unemployed in terms of the classifications given in (a) and (b) above.

Figures in the tables which follow are estimates based on a sample and are therefore subject to sampling variability, that is, variations that may occur by chance because only a sample of the population is enumerated in the surveys. For this reason, figures are rounded but not adjusted to add to totals, because such adjustments would, in some cases, exceed the sampling variability of the estimates and tend to destroy their value as indicators of movement.

Occupational status, and work force participation and unemployment rates

The following table shows, for November in each of the years 1961 to 1965, the distribution, by major work force category, of the civilian population fourteen years of age and over in the six State capital cities. The table also shows changes in the work force participation rate and unemployment rate over the period. As indicated in the general notes above, the classification of the population by work force category conforms to the standard recommended by the International Conference of Labour Statisticians. This International Standard was not adopted for population censuses prior to the census of 1966, and consequently the figures in this table are not strictly comparable with those in the tables in the preceding section of this chapter.

**CIVILIAN POPULATION 14 YEARS OF AGE AND OVER: OCCUPATIONAL STATUS
AND WORK FORCE PARTICIPATION AND UNEMPLOYMENT RATES, SIX
AUSTRALIAN STATE CAPITAL CITIES, NOVEMBER 1961 TO 1965**

November—	Occupational status				Total civilian popu- lation 14 years of age and over	Work force parti- cipation rate (b)	Unem- ployment rate (c)
	Civilians in the work force			Civilians not in the work force			
	Employed (a)	Un- employed	Total				
Males—	'000	'000	'000	'000	'000	per cent	per cent
1961 . . .	1,689.0	38.2	1,727.1	385.4	2,112.5	81.8	2.2
1962 . . .	1,731.5	24.2	1,755.6	396.0	2,151.7	81.6	1.4
1963 . . .	1,764.2	18.6	1,782.8	414.5	2,197.3	81.1	1.0
1964 . . .	1,807.8	12.9	1,820.8	429.4	2,250.2	80.9	0.7
1965 . . .	1,853.0	18.5	1,871.5	437.5	2,309.0	81.1	1.0
Females—							
1961 . . .	749.4	21.6	771.0	1,465.7	2,236.7	34.5	2.8
1962 . . .	790.1	17.8	808.0	1,477.8	2,285.8	35.3	2.2
1963 . . .	808.9	11.5	820.4	1,515.4	2,335.8	35.1	1.4
1964 . . .	837.1	13.6	850.7	1,543.7	2,394.4	35.5	1.6
1965 . . .	888.2	17.7	905.9	1,548.1	2,454.0	36.9	2.0
Persons—							
1961 . . .	2,438.4	59.7	2,498.1	1,851.1	4,349.3	57.4	2.4
1962 . . .	2,521.6	42.0	2,563.6	1,873.8	4,437.4	57.8	1.6
1963 . . .	2,573.1	30.1	2,603.2	1,929.9	4,533.1	57.4	1.2
1964 . . .	2,644.9	26.5	2,671.5	1,973.1	4,644.5	57.5	1.0
1965 . . .	2,741.2	36.2	2,777.4	1,985.6	4,763.0	58.3	1.3

(a) Includes employees, employers, self-employed persons, and unpaid helpers who worked 15 hours or more a week in a family business. (b) The civilian work force as a percentage of the civilian population 14 years of age and over. (c) The number unemployed as a percentage of the civilian work force.

Occupational status and age distribution

The following table shows the civilian population fourteen years of age and over in the six State capital cities at November in each of the years 1961 to 1965, classified according to occupational status and age distribution.

**CIVILIAN POPULATION 14 YEARS OF AGE AND OVER: OCCUPATIONAL STATUS

Total	1,853.0	888.2	18.5	17.7	1,871.5	905.9	437.5	1,548.1	2,309.0	2,454.0

(a) Includes employees, employers, self-employed persons, and unpaid helpers who worked 15 hours or more a week in a family business.

* Estimates of less than 5,000 are not published in the table because they would be subject to sampling variability too high for most practical purposes. Although figures for these small components can, in some cases, be derived from the tables by deduction, undue significance should not be attached to them.

Work force participation and unemployment rates

The table below shows work force participation rates and unemployment rates by marital status for the civilian population fourteen years of age and over in the six State capital cities at November in each of the years 1961 to 1965.

CIVILIAN POPULATION 14 YEARS OF AGE AND OVER: WORK FORCE PARTICIPATION AND UNEMPLOYMENT RATES, BY MARITAL STATUS AND SEX, SIX AUSTRALIAN STATE CAPITAL CITIES
NOVEMBER 1961 TO 1965

(Per cent)

November—	Work force participation rate(a)			Unemployment rate(b)		
	Married	Not married(c)	Total	Married	Not married(c)	Total
Males—						
1961	88.8	68.8	81.8	1.5	3.8	2.2
1962	88.8	68.1	81.6	0.8	2.8	1.4
1963	88.4	67.5	81.1	0.6	2.0	1.0
1964	88.7	66.9	80.9	0.4	1.4	0.7
1965	89.1	66.9	81.1	0.6	2.0	1.0

For footnotes see next page.

CIVILIAN POPULATION 14 YEARS OF AGE AND OVER: WORK FORCE PARTICIPATION AND UNEMPLOYMENT RATES, BY MARITAL STATUS AND SEX, SIX AUSTRALIAN STATE CAPITAL CITIES NOVEMBER 1961 TO 1965—continued
(Per cent)

November—	Work force participation rate(a)			Unemployment rate(b)		
	Married	Not married(c)	Total	Married	Not married(c)	Total
Females—						
1961	26.9	46.8	34.5	2.8	2.8	2.8
1962	27.7	47.8	35.3	1.9	2.5	2.2
1963	27.3	47.9	35.1	1.1	1.7	1.4
1964	28.5	46.8	35.5	1.6	1.6	1.6

1965	59.5	56.3	58.3	0.9	2.0	1.3

(a) The civilian work force as a percentage of the civilian population 14 years of age and over. (b) The number unemployed as a percentage of the civilian work force. (c) Includes never married, widowed and divorced.

Unemployment in industry groups

The following table shows the unemployment rate in each industry group for the six State capital cities at November in each of the years 1961 to 1965. The total work force for a particular industry group comprises persons currently employed in the industry group and those unemployed persons whose last employment was in the group. The unemployment rates given in the table are the numbers unemployed in the industry groups expressed as percentages of the total work force in those groups. Because unemployed persons with no previous employment experience are excluded from the calculations used for this table, the unemployment rate shown for 'All industries combined' differs from the unemployment rate for the civilian work force as a whole. This latter rate, which is given in the preceding tables, takes into account all unemployed persons, including those seeking work for the first time.

CIVILIAN POPULATION 14 YEARS OF AGE AND OVER: UNEMPLOYMENT RATES(a), BY INDUSTRY GROUP, SIX AUSTRALIAN STATE CAPITAL CITIES, NOVEMBER 1961 TO 1965
(Per cent)

Industry group in which last employed	November—				
	1961	1962	1963	1964	1965
Manufacturing	2.1	1.3	0.9	0.8	0.9
Building and construction	3.9	1.1	1.2	0.5	1.2
Transport, storage and communication	1.4	0.9	0.8	0.5	0.7
Commerce	2.1	1.4	0.9	0.9	1.3
Public authority (n.e.i.); community and business services (including professional)	0.9	0.7	0.7	0.7	0.7
Amusement, hotels and other accommodation, cafés, etc., personal service, etc.	3.0	2.3	1.4	1.7	1.2
Other industries	2.1	1.8	1.3	1.0	1.0
All industries combined(b)	2.1	1.3	1.0	0.8	1.0

(a) The numbers unemployed in the industry groups as percentages of the total work force in those groups. (b) Excludes unemployed persons who had not previously been employed.

WAGE AND SALARY EARNERS IN CIVILIAN EMPLOYMENT
 PRINCIPAL INDUSTRY GROUPS: AUSTRALIA
 1955 TO 1965

REGISTERED UNEMPLOYED AND NUMBER ON UNEMPLOYMENT BENEFIT AUSTRALIA, 1955 TO 1965

PLATE 29

The table below shows, for the six State capital cities at November in each of the years 1961 to 1965, the unemployed in each industry group as a percentage of the total unemployed civilians fourteen years of age and over.

CIVILIAN POPULATION 14 YEARS OF AGE AND OVER: DISTRIBUTION OF UNEMPLOYED BY INDUSTRY GROUP, SIX AUSTRALIAN STATE CAPITAL CITIES NOVEMBER 1961 TO 1965

(Per cent)

Industry group in which last employed	November—				
	1961	1962	1963	1964	1965
Manufacturing	30.4	27.8	27.7	28.6	24.0
Building and construction	11.9	4.7	7.7	4.0	6.9
Transport, storage and communication.	5.0	4.3	5.2	4.1	4.1
Commerce	17.5	16.4	15.3	17.1	18.7
Public authority (n.e.i.); community and business services (including professional)	5.9	7.1	9.6	11.2	8.7
Amusement, hotels and other accommodation, cafés, etc., personal service, etc.	8.6	9.5	8.6	11.0	5.9
Other industries	7.0	8.5	8.5	7.5	6.1
<i>All unemployed persons who had previous employment</i>	<i>86.3</i>	<i>78.3</i>	<i>82.6</i>	<i>83.5</i>	<i>74.4</i>
Unemployed persons who had not previously been employed(a)	13.7	21.7	17.4	16.5	25.6
Total unemployed persons	100.0	100.0	100.0	100.0	100.0

(a) Comprises mainly school-leavers seeking work for the first time.

Duration of unemployment

The following table shows, for the six State capital cities at November in each of the years 1961 to 1965, the unemployed, classified by duration of unemployment, as a percentage of the total unemployed civilians fourteen years of age and over.

CIVILIAN POPULATION 14 YEARS OF AGE AND OVER: DISTRIBUTION OF UNEMPLOYED BY SEX AND DURATION OF UNEMPLOYMENT, SIX AUSTRALIAN STATE CAPITAL CITIES, NOVEMBER 1961 TO 1965

(Per cent)

Period of unemployment	November—				
	1961	1962	1963	1964	1965
Males—					
Less than one month	35.2	44.5	60.6	62.0	69.3
One month and less than three months	28.4	26.0	17.9	21.2	19.1
Three months and over	36.4	29.5	21.5	16.8	11.6
<i>Total</i>	<i>100.0</i>	<i>100.0</i>	<i>100.0</i>	<i>100.0</i>	<i>100.0</i>
Females—					
Less than one month	44.5	42.7	55.0	56.6	68.1

<i>Total</i>	<i>100.0</i>	<i>100.0</i>	<i>100.0</i>	<i>100.0</i>	<i>100.0</i>

Persons working less than 35 hours a week

In the work force surveys, persons who report themselves as having worked less than thirty-five hours a week are further questioned to ascertain their reasons for not working longer hours. In the following table, employed civilians in the six State capital cities, fourteen years of age and over, who worked less than thirty-five hours a week are classified according to the reasons why they did not work longer hours.

EMPLOYED CIVILIANS 14 YEARS OF AGE AND OVER WHO WORKED LESS THAN 35 HOURS PER WEEK, BY REASON: SIX AUSTRALIAN STATE CAPITAL CITIES NOVEMBER 1961 TO 1965

November—	Reason for working less than 35 hours a week								
	Persons who usually work 35 hours or more a week			Persons who usually work less than 35 hours a week			All persons who worked less than 35 hours in the survey period		
	Lack of work (a)	Other reasons (b)	Total	Lack of work (c)	Other reasons (d)	Total	Lack of work (a)(c)	Other reasons (b)(d)	Total
Number ('000)—									
1961	25.4	215.5	240.9	19.8	181.9	201.6	45.1	397.3	442.5
1962	14.7	228.3	243.0	12.2	197.4	209.6	26.9	425.7	452.6
1963	12.4	229.9	242.2	7.6	213.1	220.7	20.0	443.0	463.0
1964	10.7	226.5	237.2	7.3	230.5	237.8	18.0	457.0	475.0
1965	17.2	238.8	256.0	7.8	258.1	265.8	25.0	496.8	521.8
Proportion of the civilian work force of the six capitals (per cent)—									
1961	1.0	8.6	9.6	0.8	7.3	8.1	1.8	15.9	17.7
1962	0.6	8.9	9.5	0.5	7.7	8.2	1.1	16.6	17.7
1963	0.5	8.8	9.3	0.3	8.2	8.5	0.8	17.0	17.8
1964	0.4	8.5	8.9	0.3	8.6	8.9	0.7	17.1	17.8
1965	0.6	8.6	9.2	0.3	9.3	9.6	0.9	17.9	18.8

(a) Excludes persons laid off for whole week without pay, who are included in the unemployed. The figures comprise persons working short time, those who lost their jobs or commenced in new jobs during the specified week, and those absent from work because of plant breakdowns or bad weather. (b) Own illness or injury, leave or holiday, and industrial disputes. (c) Persons who would prefer to work 35 hours a more a week if suitable work were available. (d) Persons who prefer to work less than 35 hours a week.

WAGE AND SALARY EARNERS IN EMPLOYMENT

The monthly estimates of the number of wage and salary earners in civilian employment (excluding employees in rural industry and private domestic service) are based on comprehensive data (referred to herein as 'benchmarks') derived for the purpose from the population censuses of June 1954 and June 1961. Figures for periods between, and subsequent to, the two benchmark points of time are estimates obtained from three main sources, namely (a) current pay-roll tax returns, (b) current returns from government bodies, and (c) some other direct current records of employment (e.g. for hospitals). Data from these sources have been supplemented by estimates of changes in the number of wage and salary earners not covered by the foregoing collections.

Figures for current months are subject to revision. As they become available, particulars of employment obtained from other collections, such as the annual factory census and the censuses and sample surveys of retail establishments, are used to check, and, where desirable, to revise estimates in relevant sections. The work force survey (see page 317) will supply an additional check for future estimates.

The benchmark figures are derived from particulars recorded for individuals on population census schedules. The estimated monthly figures are derived mainly from reports supplied by employers relating to enterprises or establishments. These two sources differ in some cases in scope and in reporting of industry; however, the benchmark industry dissections have been adjusted, as nearly as may be, to an enterprise/establishment reporting basis. The industry classification used throughout the series is that of the population census of June 1961.

Pay-roll tax returns are lodged at present by all employers paying more than \$400 a week in wages (other than certain Commonwealth Government bodies, religious and benevolent institutions, public hospitals, and other similar organizations specifically exempted under the *Pay-roll Tax Assessment Act 1941-1965*). At June 1954 this Act required employers paying

wages of more than £80 (\$160) a week to lodge returns. The exemption limit was raised to £120 (\$240) a week from 1 September 1954, and to the present level of £200 (\$400) a week as from 1 September 1957.

The figures relate to 'wage and salary earners' on payrolls or 'in employment' in the latter part of each month as distinct from numbers of employees actually working on a specific date. They include some persons working part-time. Employees in rural industry and in private domestic service are not included in the estimates, because of the inadequacy of current data.

The prime purpose of this series is to measure, as nearly as may be with available data, *current monthly trends* in employment in the defined field. The estimates may be less reliable for longer-term measurement. However, as a broad measure of long-term trends, figures for the period June 1947 to June 1954, estimated on a basis approximately comparable with that for later periods, are to be found on page 172 of *Labour Report* No. 50, 1962 and 1963.

Total civilian employees and defence forces

The following table shows, for Australia, the estimated numbers of private and government civilian employees (excluding employees in rural industry and private domestic service) and the numbers in the defence forces at June of each of the years 1954 and 1961 to 1965 and at December 1965.

(a) Includes employees, within Australia, of government authorities (Commonwealth, State, local and semi-government) on services such as railways, tramways, banks, post office, air transport, education (including universities), broadcasting, television, police, public works, factories and munitions establishments, departmental hospitals and institutions, migrant hostels, etc., as well as administrative employees. See pages 326-7.
(b) Permanent defence forces in Australia and overseas. Figures for December 1965 include national servicemen enlisted in the Regular Army Supplement.

Civilian employees

The following table shows, for Australia, the estimated number of wage and salary earners in civilian employment (excluding employees in rural industry and private domestic service) in the principal industry groups at June of each of the years 1954 and 1961 to 1965 and at December 1965. Revised figures for June and December 1965 will be found in the Appendix.

COMMONWEALTH EMPLOYMENT SERVICE

Statutory warrant for the Commonwealth Employment Service (C.E.S.) is to be found in the *Re-establishment and Employment Act 1945-1962* (sections 47 and 48). In brief, the main functions of the Service are to assist people seeking employment to obtain positions best suited to their training, experience, abilities and qualifications; and to assist employers seeking labour to obtain employees best suited to their needs. The organization and functions of the C.E.S. conform to the provisions of the Employment Service Convention, 1948, of the International Labour Organization, which was ratified by Australia in December 1949. In addition, C.E.S. practices accord substantially with the provisions of the I.L.O. Employment Service Recommendation, 1948.

The C.E.S. functions on a decentralized basis within the Employment and Industrial Services Division of the Department of Labour and National Service. The Central Office is in Melbourne and there is a Regional Office in the capital city of each State. There are 148 District Employment Offices and Branch Offices in suburban and the larger provincial centres and 321 agents in the smaller country centres. The District Employment Offices and Branch Offices are distributed as follows: New South Wales, 54; Victoria, 37; Queensland, 24; South Australia, 13; Western Australia, 13; Tasmania, 4; Northern Territory, 2; Australian Capital Territory, 1.

Specialized facilities are provided for young people, persons with physical and mental handicaps, ex-members of the defence forces, migrants, rural workers, and persons with professional and technical qualifications. Vocational guidance is provided free of charge by a staff of qualified psychologists. It is available to any person, but is provided particularly for young people, ex-servicemen and the physically handicapped. The N.S.W. Department of Labour and Industry provides a vocational guidance service within the school system and for young persons leaving school.

All applicants for unemployment benefits under the *Social Services Act 1947-1965* must register at a District Employment Office or agency of the C.E.S., which is responsible for certifying whether or not suitable employment can be offered to them. The C.E.S. is responsible for placing in employment migrant workers sponsored by the Commonwealth under the Commonwealth Nomination and similar schemes. This includes arranging for them to move to their initial employment and for their admission, if necessary, to Commonwealth migrant hostels. Assistance in obtaining employment is provided to other migrants as required. From the inception of the various free and assisted schemes, including the Displaced Persons Scheme, to the end of December 1965, about 236,000 British and European migrant workers had been placed in initial employment by the C.E.S. Since 1951 it has been responsible for recruiting Australian experts for overseas service under the Colombo Plan and the United Nations Expanded Programme of Technical Assistance (now replaced by the U.N. Development Programme). The principal spheres in which experts have been supplied are agriculture, education, engineering, geology, health, and economic and scientific research and development.

In association with placement activities, regular surveys of the labour market are carried out and detailed information is supplied to interested Commonwealth and State Government departments and instrumentalities and to the public. Employers, employees and other interested persons are advised on labour availability and employment opportunities in various occupations and areas and on other matters concerning employment.

The Service completed its twentieth year of operation in May 1966. During 1965 there were 934,904 applicants who registered for employment, of whom 723,717 were referred to employers and 424,270 placed in employment. New vacancies notified numbered 632,334 and vacancies unfilled at the end of December 1965, 60,351.

Persons registered for employment

The following table shows the number of persons who claimed, when registering for employment with the Commonwealth Employment Service, that they were not employed and who were recorded as unplaced. The figures include those persons who were referred to employers and those who may have obtained employment without notifying the C.E.S. They include persons in receipt of unemployment benefit (*see* the chapter Welfare Services).

CHAPTER 12

LABOUR, WAGES AND PRICES

For particulars of the Farm Production Price Index, see the chapter Miscellaneous. For current information on the subjects dealt with in this chapter, see the *Monthly Review of Business Statistics*, the *Digest of Current Economic Statistics* (monthly), and the *Quarterly Summary of Australian Statistics*, also the mimeographed statements *Wage Rates and Earnings*, *Consumer Price Index*, *Wholesale Price (Basic Materials and Foodstuffs) Index*, *Wholesale Prices—Price Index of Electrical Installation Materials*, and *Export Price Index*. For further information on these subjects, except the Export Price Index, see the *Labour Report* issued by this Bureau.

RETAIL PRICES AND PRICE INDEXES

Retail prices of food and groceries and average rentals of houses for years extending back to 1901 were collected by the Commonwealth Statistician, and in some cases have been recorded by the Statisticians of various States for earlier years.

Retail prices of a more extensive range of commodities (including clothing) and certain services in common demand have been ascertained at frequent and regular intervals since 1923 and comparable information was ascertained for the month of November in each year from 1914 to 1922. The range of items for which retail prices data are obtained was considerably expanded in 1948 and in later years. Average retail prices of certain food and grocery items in current periods are published in the annual *Labour Report*.

An explanation of the nature and purposes of retail price indexes is given in the various editions of the annual *Labour Report*, together with further particulars of indexes then current. Previous retail price indexes for Australia are briefly described below. The current retail price index, entitled the Consumer Price Index, was published for the first time in August 1960. It was compiled retrospectively to 1948–49. A description of the Consumer Price Index is given on pages 330–1.

Previous Retail Price Indexes

Five series of retail price indexes had been compiled at various times for Australia by the Commonwealth Statistician prior to 1960. Each of these was continued until changed conditions required the compilation of indexes more directly relevant to current conditions. The respective indexes were as follows.

- (i) *The 'A' Series Index* (covering food, groceries and house rents) was first compiled in 1912 with the year 1911 as base = 1,000. It was discontinued in June 1938.
- (ii) *The 'B' Series Index* (covering food, groceries and rent of 4 and 5 roomed houses) was first compiled in 1925 and continued until December quarter 1953. It was the food and rent constituent of the 'C' Series Index and was designed to replace the 'A' Series Index for general statistical purposes.
- (iii) *The 'C' Series Index* (covering food and groceries, rent of 4 and 5 roomed houses, clothing, household drapery, household utensils, fuel, lighting, fares, smoking and some other miscellaneous items) was first compiled in 1921. It was last issued on its original basis for December quarter 1960. For certain transitional purposes a 'C' Series Index was issued for some quarters after that. This was calculated by varying the index numbers of December quarter 1960 in proportion to movements shown by the Consumer Price Index.
- (iv) *The 'D' Series Index*, derived by combining the 'A' and 'C' Series Indexes, was used by the Commonwealth Court of Conciliation and Arbitration from May 1933 to May 1934 and then discontinued.

- (v) *The Interim Index* (covering food and groceries, rent of 4 and 5 roomed houses, clothing, household drapery, household utensils, fuel, lighting, fares, smoking, certain services and some miscellaneous items) was first compiled in 1954 with the year 1952-53 as base = 100. As its title indicated, it was constructed as a transitional index. Its compilation was discontinued following its replacement by the Consumer Price Index in June quarter 1960.

An index of retail price movements from 1901 to 1965 is shown on page 335 of this Year Book. It is derived by linking together successive indexes (the 'A' Series, the 'C' Series and the Consumer Price Index) available for that period.

In 1937 the Commonwealth Court of Conciliation and Arbitration introduced a 'Court' Index for the purpose of its system of making automatic quarterly adjustments to the basic wage within its jurisdiction. By decision of the Court the 'Court' Index ceased to be issued by the Industrial Registrar as at December quarter 1953. These 'Court' Index numbers were an arithmetical conversion of the 'C' Series Retail Price Index.

Consumer Price Index

This retail price index was first compiled in 1960, retrospectively to September quarter 1948. A full description of the index is given in *Labour Report* No. 51, 1964.

Origin

The list of component items and the weighting pattern of the 'C' Series Retail Price Index, first adopted in 1921, were slightly revised by Conference of Statisticians in 1936, but otherwise continued almost unchanged until the index was discontinued in 1960. The reasons for this, and the circumstances which led to the present Consumer Price Index, appear from ensuing paragraphs.

From the outbreak of war in 1939 to late in 1948, periodic policy changes in regard to various war-time controls (including rationing) caused recurrent changes in consumption and in the pattern of expenditure. This rendered changes desirable but made it impracticable either to produce a new index, or to revise the old one, on any basis that would render the index more representative than it already was of the changing pattern of household expenditure in those years.

When commodity rationing had virtually ceased in the latter part of 1948 action was taken by the Statistician to collect price data of about 100 additional items and to gather information as to current consumption and expenditure patterns. This was done to facilitate review of the component items and weighting system of the 'C' Series Retail Price Index in the light of the new pattern of wage-earner expenditure and consumption that appeared to be emerging. But there supervened, in the next few years, conditions which caused wide price dispersion coupled with a very rapid rise in prices and a new sequence of changes in consumption and in the pattern of wage-earner expenditure. Under these conditions it was not possible to devise any new weighting pattern likely to be more continuously representative of conditions then current than was the existing 'C' Series Retail Price Index on the 1936 revision.

A Conference of Statisticians considered the matter in June 1953, and resolved (in part) as follows:

- (a) that, in view of the persistence of recurrent changes in the pattern of consumer expenditure in the post-war period, it is undesirable to make a general revision of the list of items and weighting system of the 'C' Series Retail Price Index at present, unless industrial tribunals expressly desire some revision for special purposes;
- (b) that an Interim Retail Price Index be compiled with putative weights and components representative, as nearly as may be, of the post-war pattern of consumer usage and expenditure.'

The 'C' Series Index continued to be compiled on its pre-war basis without significant change in procedures. The Interim Retail Price Index was introduced in 1954 and continued until March quarter 1960.

The Interim Index was a transitional index designed to measure retail price variations on the 'C' Series model in terms of post-war consumption weights as emerging in the early 1950's. It embraced a wider range of commodities and services than did the 'C' Series Retail Price Index, but it did not take into account successive major changes in the pattern of expenditure and modes of living that began to occur early in 1950 and through to 1960. These changes could not, in fact,

be detected and measured promptly, and incorporated into an index concurrently with their happening. Nor was it envisaged as desirable to adopt fundamentally new procedures in price index construction until it was fully evident that far-reaching procedural changes were necessary to meet the situation that had developed between about 1950 and 1960.

In this period home-owning largely replaced house-renting, the use of the motor car greatly increased and partly replaced use of public transport, and various items of electrical household equipment and television came into widespread use. The impact of these (and other) changes in usage upon the pattern of household expenditure was heightened by disparate movements in prices. Together, they rendered nugatory the attempt to meet the situation by devising a single Interim Retail Price Index. As studies progressed and new data became available, it was clear that no single list of items and no single set of fixed weights would be adequately representative as a basis for measuring retail price changes at all times throughout the post-war period. In consequence, the situation was met by compiling the Consumer Price Index constructed as a chain of linked indexes with significant changes in composition and weighting effected at short intervals.

Purpose, scope and composition

The Consumer Price Index is a quarterly measure of variations in retail prices for goods and services representing a high proportion of the expenditure of wage-earner households. The weighting pattern relates to estimated aggregates of wage-earner household expenditures and not to estimated expenditures of an 'average' or individual household of specified size, type, or mode of living. In this way it is possible to give appropriate representation to owner-occupied houses as well as rented houses and to include motor cars, television sets, and other major expenditures which relate to some households and not to others.

Consumer (retail) price indexes are sometimes loosely called 'cost of living indexes' and are thought to measure changes in the 'cost of living'. Neither the Consumer Price Index, nor any other retail price index, measures those changes in the cost of living that result directly from changes in the mode or level of living. Changes of that kind are matters for consideration apart from price indexes, but the change in prices of goods and services is a very important part of the change in the cost of living and this part is measured by consumer (retail) price indexes.

The Consumer Price Index covers a wide range of commodities and services arranged in the following five major groups:

- Food;
- Clothing and Drapery;
- Housing;
- Household Supplies and Equipment;
- Miscellaneous.

These groups do not include every item of household spending. It is both impracticable and unnecessary for them to do so. Prices are collected regularly for specified quantities and qualities of a large and representative selection of commodities and services. Movements in the prices of these items, when combined in suitable proportions, provide a representative measure of price change as affecting a high proportion of the expenditure of wage-earner households.

Structure—a chain of linked indexes

Substantial changes have occurred in consumer usage and patterns of expenditure since the 1939-45 War. In order to keep the weighting pattern representative of current expenditures it has been necessary to construct indexes with additional items and changes in the weighting pattern at intervals, rather than on the basis of a list of items and set of weights that remained unchanged throughout the whole period covered. For the six State capital cities five series for short periods (namely, from the September quarter of 1948 to the June quarter of 1952, from the June quarter of 1952 to the June quarter of 1956, from the June quarter of 1956 to the March quarter of 1960, from the March quarter of 1960 to the December quarter of 1963, and from the December quarter of 1963 onwards) have therefore been constructed and linked to form a continuous retail price index series known as the Consumer Price Index. (For information regarding these links for Canberra see *Labour Report* No. 51, 1964.)

During each period between links the items and weighting remained unchanged. At times of linking the weighting pattern was altered and new items (mainly ones that had become significant in household expenditure) were introduced. Under this method, in effect, average percentage price movements are assessed on one pattern up to the time of the link and on another pattern thereafter. The process of linking ensures that the series reflects only price variations and not differences in cost of the old and new lists of items. The introduction of new items and weights by linking does not, of itself, raise or lower the level of the index.

Tabular statements of Retail Price Index Numbers

Consumer Price Index

The index has been compiled for each quarter from September quarter 1948, and for each year from 1948-49. 'All Groups' index numbers and 'Group' index numbers for each of the five major groups are compiled and published regularly for the six State capital cities separately and combined, and for Canberra. The reference base for each of these indexes is: year 1952-53 = 100.0. Figures appearing after the decimal point possess little significance for general statistical purposes. They are inserted to avoid distortions that would occur in rounding off the figures to the nearest whole number.

Index numbers for each quarter are first issued in mimeographed statistical bulletins available from the Commonwealth Statistician about three weeks after the end of the quarter. These bulletins contain comment on the index and on significant price movements in that quarter. Tables showing index numbers for preceding quarters and years are presented.

The following table shows Consumer Price Index Numbers (Total All Groups) for the six State capital cities separately and combined and for Canberra, for periods from the year 1948-49.

CONSUMER PRICE INDEX: ALL GROUPS INDEX NUMBERS SIX STATE CAPITAL CITIES AND CANBERRA, YEARS 1948-49 TO 1964-65 AND QUARTERS MARCH 1963 TO DECEMBER 1965

(Base of each index: year 1952-53 = 100.0) (a)

The separate city indexes measure price movements within each city individually. They do not compare price levels as between cities.

(a) Figures appearing after the decimal point possess little significance for general statistical purposes. They are inserted to avoid distortions that would occur in rounding off the figures to the nearest whole number.
 (b) Weighted average.

Retail Price Index Numbers, 1901 to 1965

The index numbers shown below are presented as a continuous series, but they give only a broad indication of long-term trends in retail price levels. They are derived by linking a number of indexes that differ greatly in scope. The successive indexes used are: from 1901 to 1914, the 'A' Series Retail Price Index; from 1914 to 1946-47, the 'C' Series Retail Price Index; from 1946-47 to 1948-49, a composite of Consumer Price Index Housing Group (partly estimated) and 'C' Series Index excluding Rent; and from 1948-49 onwards, the Consumer Price Index.

International comparisons

The following table shows index numbers of consumer (retail) prices for various countries. Except where otherwise noted, the year 1958 is taken as base (= 100). The index numbers show fluctuations in prices in each country, and do not measure relative price levels as between countries.

(a) Consumer Price Index converted to base 1958 = 100 by Commonwealth Statistician. (b) Beginning 1963, new index—base: 1962 = 100. Before 1963, index for Paris. (c) Base: Average of March–December, 1958 = 100. (d) Index for Europeans only.

Note. Symbol - on each side of an index number (e.g. -95-) indicates that two series have been linked during that period. Symbol — between two index numbers indicates that it is not possible to link two series (because of change in scope, etc.) and therefore the index numbers are not comparable with each other even though they are shown on the same base period.

WHOLESALE PRICES AND PRICE INDEXES

Two indexes of wholesale prices of basic materials have been compiled by the Commonwealth Bureau of Census and Statistics. These are:

- (i) The Melbourne Wholesale Price Index;
- (ii) The Wholesale Price (Basic Materials and Foodstuffs) Index.

A special purpose index 'Wholesale Price Index of Electrical Installation Materials' is also published by the Bureau (see page 338). Work is proceeding on the preparation of new series of wholesale price index numbers.

A brief note on the Melbourne Wholesale Price Index, which is now obsolete, is given on page 338. After reviewing the list of items and weighting of the Melbourne Wholesale Price Index, the 1930 Conference of Statisticians resolved that a new index of wholesale prices of basic materials and foodstuffs should be compiled. This index, the Wholesale Price (Basic Materials and Foodstuffs) Index, is compiled monthly and extends back to 1928.

Wholesale Price (Basic Materials and Foodstuffs) Index

Price quotations

The prices used in the index have, in the main, been obtained directly from manufacturers and merchants, and, with a few important exceptions, from Melbourne sources. Apart from locally-produced building materials and one or two minor commodities, however, the price movements may be taken as representative of variations in wholesale prices of the selected items in most Australian markets.

Commodities in the index are priced in their primary or basic form wherever possible and in respect of imported materials as nearly as may be at the point where they first make effective impact on the local price structure. Thus the prices of imported goods are not taken at the time of import, but rather on an ex-bond (or into factory) basis. Broadly, where home-consumption prices exist for local products, they have been used in this index. During the year 1950-51 wool for local manufacture was subsidized, and the home-consumption price for wool was used to calculate the index numbers shown in the table on page 338.

Commodities and grouping

For purposes of this index, 'basic' materials (as opposed to certain of the foodstuffs) are commodities in the primary or basic forms in which they first enter into productive processes carried out in Australia. The list of items is divided into seven main groups, each of which is sub-divided into goods which are mainly imported and goods which are mainly home-produced. The percentage of the total aggregate in 1964-65 contributed by each group was as follows: metals and coal, 16.82; oils, fats and waxes, 7.63; textiles, 3.13; chemicals, 3.28; rubber and hides, 1.37; building materials, 12.09; foodstuffs and tobacco, 55.68. Goods principally imported comprised 23.02 per cent. of the total aggregate in 1964-65, and goods principally home-produced, 76.98. A full list of the commodities and the quantity-multipliers (weights) is published in *Labour Report* No. 51, 1964, page 42.

Method of construction

The index is constructed on the simple aggregative fixed-weights formula. The weights (quantity-multipliers) are based on estimates of the average annual consumption of the commodities in Australia during the period 1928-29 to 1934-35 inclusive. Changes in usage, changes of category as between 'imported' and 'home-produced' for some commodities, and changes in the industrial structure have affected the validity of some of the weights in the index.

Index numbers

Index numbers for each group of commodities, and for all groups combined, for the index of wholesale prices of basic materials and foodstuffs are given in the following table. Current index numbers on the base: Average of three years ended June 1939 = 100 are published monthly in the mimeographed statement *Wholesale Price (Basic Materials and Foodstuffs) Index* and in the *Monthly Review of Business Statistics*. A table showing index numbers computed to the base 1928 = 100 is published in the *Labour Report*.

WHOLESALE PRICE (BASIC MATERIALS AND FOODSTUFFS) INDEX NUMBERS YEARS 1928-29 TO 1964-65 AND MONTHS, 1965-66

(a) Excludes potatoes and onions from 1936-37. (b) Represents only such imported commodities as are included in the Wholesale Price Index and does not measure changes in the prices of all imports.

Melbourne Wholesale Price Index

An index of Melbourne wholesale prices was first compiled in 1912. It related chiefly to basic materials and foods weighted in accordance with consumption in the years immediately preceding that year. Neither the list of items nor the weighting was varied, except for some changes in the building materials group in 1949. The series has some historical significance as a measure of changes, since the year 1861, in the prices of its component items combined in the proportions in which they were in common use about the year 1910. A description of the index and a list of the commodities included in it were published in *Labour Report* No. 38, 1949, pages 43-5. Index numbers up to the year 1961, the last period for which the index was compiled, were published in Year Book No. 48, 1962.

Wholesale Price Index of Electrical Installation Materials

This special purpose index was introduced in 1964 and index numbers have been published for quarterly periods from August 1959 onwards. In addition to its use in connection with the Bureau's constant price estimates in the national accounting field, the index has a direct value as a measure of changes in aggregate cost of materials used in an important part of the building industry (other than house-building). It is compiled and published quarterly.

Commodities and grouping

The items in this index have been selected as representative of materials used in electrical installation in structures such as hospitals, schools, factories and multi-storied commercial buildings and flats. These items are divided into three main groups for which separate indexes are compiled in addition to the All Groups index. The combination of materials selected is fixed as to quantity and quality. A list of the components of the index is set out below with the percentage contribution of each to the All Groups index in the reference base year 1959-60.

Price quotations

The items are priced as at the middle of the month for which index numbers are published. The basis of pricing is the price to electrical contractors, delivered on site or into store, metropolitan area Sydney or Melbourne. The price series used relate to specific standards for each item and in some cases are combinations of prices for different makes, types, etc. The units of quantity specified as the basis for collecting prices are representative lots normally purchased by electrical contractors, inclusive of quantity discounts and packing and quantity extras, etc.

Method of construction

The index is a fixed-weights index with the reference base: year 1959-60 = 100. In general, the weights were derived from information relating to the values of materials used in selected representative projects in Sydney and Melbourne during the three years 1960-61 to 1962-63. The projects selected for this purpose had a minimum electrical materials and labour content of \$10,000. Selected representative items carry the weights of similar items not directly priced. The index is compiled by the method known as the weighted average of price relatives. Base period percentage value weights are applied to quarterly indexes of price movement relative to 1959-60.

**WHOLESALE PRICE INDEX OF ELECTRICAL INSTALLATION MATERIALS
COMPOSITION AND WEIGHTING PATTERN AS AT REFERENCE BASE
YEAR 1959-60**

Component		Percentage contribution to All Groups Index
1. CONDUCTORS GROUP		40.00
	Mains—	
	Insulated cables	14.79
	Glands	0.70
	Bare copper strand	0.50

	Metal and plastic junction boxes	2.59
	Metal and plastic accessories—other	2.16
		4.75
3. SWITCH-BOARD AND SWITCH-GEAR MATERIAL GROUP		35.00
	Bakelite accessories—	
	Mounting blocks	0.65
	Switches	1.40
	Terminal boxes	0.10
		2.15
	Fluorescent components and lamps—	
	Fluorescent tubes and starters	1.37
	Incandescent lamps	0.58
		1.95
	Iron clad accessories—	
	Switch plug	1.67
	Plug top	0.64
	Other accessories	1.30
		3.61
	Switch-board accessories' components—	
	Mild steel	3.07
	Aluminium bar	0.86
	Contactors	4.90
	Circuit breakers	11.00
	Other accessories	7.46
		27.29
	Total.	100.00

Index numbers

Index numbers for each group of items and for all groups combined for the index of wholesale prices of electrical installation materials are given in the following table. Current index numbers are published quarterly in the mimeographed statement *Wholesale Prices—Price Index of Electrical Installation Materials*.

WHOLESALE PRICE INDEX OF ELECTRICAL INSTALLATION MATERIALS
GROUP INDEX NUMBERS, YEARS 1959-60 TO 1964-65 AND
AUGUST 1959 TO FEBRUARY 1965

February	121.3	104.4	106.0	111.7

(a) The figures appearing after the decimal points are inserted to avoid the distortions that would sometimes occur in rounding off the figures to the nearest whole number.

EXPORT PRICES AND PRICE INDEXES

Previous Export Price Indexes

1901 to 1917

An annual index of export prices has been published by the Bureau since its inception. The first index was compiled annually for the years 1901 to 1916-17. The method of computation was to select all articles of export which were recorded by units of quantity, and to apply to the quantities of these export commodities actually exported during any year the average price per unit ruling in the year 1901 (adopted as the base year). The 'total value' so obtained was divided into the total recorded value of these exports for the year concerned and the result (multiplied by 1,000) was the export price index number for that year.

1918 to 1930

The method was changed in 1918. Weights for all principal exports were calculated, based on the average quantities of exports for the nineteen and a half years from 1 January 1897 to 30 June 1916. To these weights were applied the 'average unit export values' of each export in successive years, and a weighted aggregative index of 'price' variations was derived. This index was published for the years 1897 to 1929-30. Particulars of this index were last published in Year Book No. 24, page 147.

1928 to 1962

After the 1914-18 War the relative importance of different exports changed considerably, and the pattern of exports varied considerably from year to year. For these reasons two new series of monthly export price indexes—one using fixed weights and the other using changing weights—were published in 1937, compiled back to 1928. The data on which both series were based differed from those used in the previous series of annual index numbers. The most important change was the use of actual (or calculated) export prices in place of the 'unit values' declared at the Customs. Brief notes on these two indexes are given below. A full description of both indexes was last published in Year Book No. 48, 1962, pages 500-4.

The Fixed Weights Index. This was a weighted aggregative index of price variations. It was compiled back to 1928, with that year taken as base. In later years it was published on the base: average of three years ended June 1939 = 100. The original weights (used for the period 1928 to 1936) were the average annual exports (production in the case of gold) during the five years 1928-29 to 1932-33. From July 1936 the weights were revised and were based on average annual exports (production in the case of gold) during the three years 1933-34 to 1935-36. This index was published from 1937 until July 1962, after which it was replaced by the current Export Price Index described below.

The Changing Weights Index. This index was designed for shorter period comparisons—from one or more months of the current year to the corresponding months of the previous year. In computing these index numbers the 'quantity multipliers' were the quantities actually exported (sold, in some cases) in the months (or periods) to which the index numbers related. This index was discontinued in 1962.

The current Export Price Index

The current Export Price Index was first published in October 1962, but index numbers were compiled back to July 1959. The reference base of this index is: year 1959-60 = 100. This index is a fixed-weights index, and its purpose (as was that of the previous fixed-weights index) is to provide comparisons monthly, over a limited number of years, of the level of export prices of the selected items, making no allowance for variations in quantities exported. The index numbers are thus measures of price change only. The price series used in the index relate to specified standards for each commodity and in most cases are combinations of prices for a number of representative grades, types, etc. For some commodities price movements in the predominant market, or markets, are used, while for other commodities average realizations in all export markets are used. As nearly as possible, prices used are on the basis f.o.b. at the main Australian ports of export. The index is compiled by the method known as 'weighted average of price relatives'.

Composition and weighting

There are twenty-nine items in the current index compared with twenty items in the previous index. These twenty-nine items have constituted approximately 83 per cent of the total value of Australian exports in recent years. The weights for the current index are based on average annual values of exports during the five years 1956-57 to 1960-61.

The following table sets out a list of the items, and groups of items, in the index, together with the percentage contribution of each item and group to the All Groups index in the reference base year 1959-60. The weights used for some of the items are adjusted to cover some related commodities which are not priced directly. The most important instances of this are wool, which includes wool exported on sheepskins, and copper, zinc, lead and silver, which include the estimated metallic content of ores and concentrates exported. In the previous index the weight for gold was derived from production instead of export figures. For the period 1956-57 to 1960-61 production and exports of gold were similar, and therefore in the current index the weight for gold (as for the other items) is based on average annual exports during the period.

EXPORT PRICE INDEX

LIST OF ITEMS AND PERCENTAGE CONTRIBUTION OF ITEMS AND GROUPS TO
ALL GROUPS INDEX IN 1959-60

Group and item	Percentage contribution to All Groups Index in 1959-60	Group and item	Percentage contribution to All Groups Index in 1959-60
<i>Wool</i>	50.73	Canned—Pineapples	0.20
Meats—		Apricots	0.11
Beef	6.71	Peaches	0.37
Lamb	0.76	Pears	0.68
Mutton	0.59	<i>Total, dried and canned fruits</i>	2.54
Canned—Beef	1.65	<i>Sugar</i>	3.99
Mutton	0.21	Hides and tallow—	
<i>Total, meats</i>	9.92	Cattle hides	0.72

Oats	0.66	<i>Total, metals and coal</i>	10.54
<i>Total, cereals</i>	12.54	<i>Gold</i>	1.99
Dried and canned fruits—		Total	100.00
Dried—Sultanas	1.06		
Currants	0.12		

Index numbers

Index numbers for each of the groups and 'All Groups' are shown in the table on page 343. The yearly index numbers are simple averages of the twelve monthly index numbers in each year.

Link between current and previous indexes

In order to show approximate movements in export prices over a long period, the 'All Groups' indexes of the previous and current series have been linked together at the year 1959-60, the earliest year for which the new index has been compiled. The table on page 344 shows this linked series and a long-term price index for wool, which is the most important single component in the movement of the 'All Groups' index.

WAGES, EARNINGS AND HOURS

Arbitration and Wages Boards Acts and associated legislation

Particulars regarding the operation of Commonwealth and State Laws for the regulation of wages, hours and other conditions of employment were first compiled for the year 1913, and revised particulars have appeared annually in the *Labour Report* and in issues of the Year Book prior to No. 38. A summary of the Commonwealth legislation and brief particulars of Commonwealth and State industrial tribunals are given in the following paragraphs.

Commonwealth industrial legislation and tribunals

Under placitum (xxxv) of section 51 of the Commonwealth of Australia Constitution, the Commonwealth Parliament is empowered to make laws with respect to 'conciliation and arbitration for the prevention and settlement of industrial disputes extending beyond the limits of any one State'. The Parliament has made such a law, namely the *Conciliation and Arbitration Act* 1904-1965.

This Act defines an 'industrial dispute' as:

'(a) A dispute (including a threatened, impending or probable dispute) as to industrial matters which extends beyond the limits of any State; and (b) a situation which is likely to give rise to a dispute as to industrial matters which so extends; and includes—(c) such a dispute in relation to employment in an industry carried on by, or under the control of, a State or an authority of a State; (d) a dispute in relation to employment in an industry carried on by, or under the control of, the Commonwealth or an authority of the Commonwealth, whether or not the dispute extends beyond the limits of any one State; and (e) a claim which an organization is entitled to submit to the Commission under section eleven A of the *Public Service Arbitration Act* 1920-1960 or an application or matter which the Public Service Arbitrator has refrained from hearing, or from further hearing, or from determining under section fourteen A of that Act, whether or not there exists in relation to the claim, application or matter a dispute as to industrial matters which extends beyond the limits of any one State.'

The Conciliation and Arbitration Act was extensively amended by an Act (No. 44 of 1956) assented to on 30 June 1956. This amendment altered the structure of the arbitration machinery by separating the judicial functions from the conciliation and arbitration functions. The Commonwealth Industrial Court was established to deal with judicial matters under the Act, and the Commonwealth Conciliation and Arbitration Commission to handle the functions of conciliation and arbitration. A summary of the provisions of the *Conciliation and Arbitration Act* 1904-1965 is given in the following paragraphs.

The Commonwealth Industrial Court is at present composed of a Chief Judge and four other Judges. The jurisdiction of the Court shall be exercised by not less than two Judges, except in the following circumstances. A single Judge may exercise the jurisdiction of the Court with respect to the dismissal or injury of an employee on account of industrial action, interpretation of awards, questions concerning eligibility of membership of an organization, disputes between an organization and its members and a prescribed matter of practice or procedure. A single Judge may refer a question of law for the opinion of the Court constituted by not less than two Judges. The Court is a Superior Court of Record with the same power to punish contempts of its power and authority as is possessed by the High Court. In general, decisions of the Industrial Court are final; however, an appeal lies to the High Court, but only when the latter grants leave to appeal. The Act provides for the registration of associations of employees and employer., and for inquiries to be held concerning disputed elections in organizations; and certain powers in connection therewith are, by the Act, given to the Industrial Court. Provision is also made for the Commission to exercise the powers of the Court with regard to an application for cancellation of registration of an organization. Any such change of jurisdiction must be notified by proclamation. This provision could be used if the powers of the Court in this regard were declared, in whole or in part, to be invalid.

Special provision is made concerning the right of audience before the Commonwealth Industrial Court. Briefly, except in proceedings which, in general, involve questions of law or offences against the Act, parties are able to elect whether to appear personally or to be represented by lawyers or officials. Even in proceedings involving questions of law, except appeals from decisions by other Courts to the Industrial Court, on matters arising under this Act or the *Public Service Arbitration Act 1920-1960*, the parties may, if they wish and the Court grants leave, be represented by officials.

The Commonwealth Conciliation and Arbitration Commission at the end of 1965 was composed of a President, five Deputy Presidents, a Senior Commissioner, ten Commissioners and three Conciliators. The Commission is empowered to prevent or settle industrial disputes by conciliation or arbitration, and to make suggestions and to do such things as appear right and proper for (a) effecting a reconciliation between parties to industrial disputes; (b) preventing and settling industrial disputes by amicable agreement; and (c) preventing and settling, by conciliation or arbitration, industrial disputes not prevented or settled by amicable agreement. The Commission may exercise its powers of its own motion or on the application of a party.

The President may assign a Commissioner to deal with industrial disputes relating to particular industries, or members of the Commission to deal with a particular industrial dispute. However, subject to the approval of the President, it is the duty of the Senior Commissioner to organize and allocate the work of the Commissioners and Conciliators. When an industrial dispute occurs or is likely to occur, a Commissioner shall take steps for the prompt prevention or settlement of that dispute by conciliation or, if in his opinion conciliation is unlikely to succeed or has failed, by arbitration. A Commissioner may arrange with the Senior Commissioner for a Conciliator to assist the parties to reach an amicable agreement and shall do so if the parties so request. If an agreement is reached a memorandum of its terms shall be made in writing, and may be certified by the Commission. A certified memorandum shall have the same effect as an award.

Only the Commission in Presidential Session, that is, the Commission constituted by at least three presidential members nominated by the President, has the power to make awards, or to certify agreements, concerning standard hours, basic wages and long-service leave. Upon application by a party to an industrial dispute, a Commissioner shall consult with the President as to whether in the public interest any matter in dispute should be dealt with by a Commission constituted by not less than three members nominated by the President, at least one of whom shall be a presidential member and one, where practicable, the Commissioner concerned. The President may direct the Commission to hear the matter in dispute; however, after consideration, the Commission may refer the matter in dispute back for determination to the Commissioner originally dealing with the dispute.

An appeal against the decision of a Commissioner shall be heard by not less than three members nominated by the President, of whom at least two shall be presidential members of the Commission. However, an appeal will not be heard unless the Commission considers it is necessary as a matter of public interest. The President, after taking account of the views of the parties to a dispute, may appoint a member of the Commission to take evidence on behalf of a presidential bench of the Commission, so that it may have this evidence before it when it commences its hearing.

Full benches of the Commission not constituted by the same persons may sit in joint session at the direction of the President when he considers it desirable and has the opinion that a question is common to the matters before those benches. A joint session may be held whether the benches concerned are constituted pursuant to the Conciliation and Arbitration Act or the Public Service Arbitration Act, and whether they are constituted to hear references or appeals. However, it is left to each appropriate full bench to determine any of the matters before it.

Provision is also made in the Act for a presidential member of the Commission to handle industrial matters in connection with the maritime industries, the Snowy Mountains Area and the stevedoring industry, except in those matters for which the Act requires that the Commission shall be constituted by more than one member. The Commonwealth Conciliation and Arbitration Commission also deals with disputes and industrial matters, interstate or intra-state, associated with undertakings or projects of the Commonwealth Government which have been declared by the Minister to be Commonwealth projects for the purposes of this Act. In effect, this places employees of Commonwealth projects, so declared, under the jurisdiction of the Commission. The Minister has the power to exempt certain persons or classes of persons working on these projects from the jurisdiction of the Commission.

The Commission may make an award in relation to an industrial dispute concerning employees of a Commonwealth project or when the Public Service Arbitrator refrains from dealing with claims made by a Public Service employee organization or consents to the claims being presented to the Commission, though such an award may be inconsistent with a law of the Commonwealth relating to salaries, wages, rates of pay or terms or conditions of service of employees in the Public Service as defined by section three of the *Public Service Arbitration Act 1920-1960*, not being the *Commonwealth Employees' Compensation Act 1930-1964*, the *Commonwealth Employees' Furlough Act 1943-1959*, the *Superannuation Act 1922-1965* or any other prescribed Act.

The Act provides that where a State law, or an order, award, decision or determination of a State industrial authority is inconsistent with or deals with a matter dealt with in an award of the Commission, the latter shall prevail, and the former, to the extent of the inconsistency or in relation to the matter dealt with, shall be invalid.

For further particulars regarding Commonwealth arbitration legislation, see the annual *Labour Report*. For information concerning the Australian Stevedoring Industry Authority and the Coal Industry Tribunal see the Transport and Communication chapter and the Mineral Industry chapter respectively of this Year Book, and for further information on the Commonwealth Public Service Arbitrator see the *Labour Report*.

State industrial tribunals—New South Wales

The controlling authority is the Industrial Commission of New South Wales, consisting of a President and seven other Judges. Subsidiary tribunals are the Conciliation Commissioners, the Apprenticeship Commissioner, Conciliation Committees and Apprenticeship Councils constituted for particular industries. Each Conciliation Committee consists of a Conciliation Commissioner as Chairman and equal numbers of representatives of employers and employees. The Apprenticeship Commissioner and the members of the Conciliation Committee for an industry constitute the Apprenticeship Council for the industry. These subsidiary tribunals may make awards binding on industries, but an appeal to the Industrial Commission may be made against any award. Special Commissioners with conciliatory powers and limited arbitration powers may be appointed. Compulsory control commenced in 1901, after the earlier Acts of 1892 and 1899 providing for voluntary submission of matters in dispute had proved abortive.

Victoria

The authorities are separate Wages Boards for the occupations and industries covered, each consisting of a chairman and equal numbers of representatives of employers and employees, and a Court of Industrial Appeals, the latter presided over by a Judge of the County Court. The system was instituted in the State in 1896, and represented the first example in Australia of legal regulation of wage rates.

Queensland

Legal control was first instituted in 1908 with the passing of the Wages Boards Act. 'The *Industrial Conciliation and Arbitration Act of 1961*' established the Industrial Conciliation and Arbitration Commission and preserved and continued in existence the Industrial Court. The Industrial Court is constituted by the President (a Judge of the Supreme Court of Queensland) sitting alone, and the Full Industrial Court by the President and two Commissioners. The Conciliation and Arbitration Commission is constituted by a Commissioner sitting alone; and the Full Bench of the Commission by at least three Commissioners. Not more than five Commissioners shall be appointed. A Commissioner shall not be capable of being a member of the Executive Council or of the Legislative Assembly, and shall not take part in the management of any business.

South Australia

The principal tribunal is the Industrial Court of South Australia, composed of the President (a person eligible for appointment as a Judge of the Supreme Court) who may be joined by two assessors employed in the industry concerned: Deputy Presidents may also be appointed. There are also Industrial Boards for the various industries, consisting of a chairman and equal numbers

of representatives of employers and employees. Another tribunal provided for under the Industrial Code is the Board of Industry, composed of a President, who shall be the President or a Deputy President of the Industrial Court, and four Commissioners. Broadly speaking, the functions of these three tribunals are: (i) the Industrial Court delivers awards concerning workers who do not come under the jurisdiction of the Industrial Boards, appoints Boards of Reference and hears appeals from decisions of Industrial Boards and Boards of Reference; (ii) the determinations of the Industrial Boards apply to most industries in the metropolitan area; however, for employees of the Public Service, Railways, and councils of a municipality or district, determinations of Industrial Boards apply to the whole of the State; (iii) the Board of Industry declares, for the whole of the State, the 'living wage' (see page 378).

Western Australia

Legal control dates back to 1900. The present system of control comprises a four-man Western Australian Industrial Commission and an Industrial Appeal Court consisting of three Supreme Court judges who are nominated by the Chief Justice of Western Australia. A Commissioner may, in relation to any dispute or other matter, refer such matters to the Commission in Court Session. Similarly, appeals from decisions of a single Commissioner are heard by the other three Commissioners acting as the Commission in Court Session, but such hearings are restricted to the evidence and matters raised in the proceedings before the single Commissioner. The Commission in Court Session fixes and adjusts the basic wage. Appeals from the Commission to the Industrial Appeal Court are limited to matters which are erroneous in law or in excess of jurisdiction. The Court has the power to impose penalties for disobedience of orders made by the Commission.

The Western Australian Coal Industry Tribunal, established under the *Mining Act 1904-1965*, has power to determine any industrial matter in the coal mining industry. It consists of a chairman and four other members (two representatives each of employers and employees). Boards of reference may be appointed by the Tribunal and decisions of the Tribunal may be reviewed by the Court of Arbitration on the application of a party subject to the decision.

Tasmania

The authority consists of Wages Boards for separate industries, comprising a Chairman (who is common to all Wages Boards) appointed by the Governor, and equal numbers of representatives of employers and employees appointed by the Minister administering the Act. The system was instituted in 1910.

Incidence of industrial awards, determinations and agreements

In May 1963 a survey was conducted to ascertain the approximate proportions of employees affected by awards, determinations and registered industrial agreements under the jurisdiction of Commonwealth and State industrial authorities. The proportions of employees not so affected by awards, etc. (including those affected by unregistered industrial agreements) were also obtained. The scope, results, etc., of this survey were published in *Labour Report* No. 51, 1964, and in a mimeographed statement (S.B. 383 of 11 February 1964).

Rates of wage and hours of work

This section contains indexes (with base: year 1954 = 100) of minimum weekly and hourly rates of wage and standard hours of work for adult males and adult females for Australia and each State. In the indexes there are fifteen industry groups for adult males and eight industry groups for adult females. For relevant periods these indexes replace cognate indexes (base: year 1911 = 1,000 for males and April 1914 = 1,000 for females) published in Year Books before No. 46, 1960. The current indexes are based on the occupation structure existing in 1954. Weights for each industry and each occupation were derived from two sample surveys made in that year. The first was the Survey of Awards in April 1954, which showed the number of employees covered by individual awards, determinations and agreements. This provided employee weights for each industry as well as a basis for the Survey of Award Occupations made in November 1954. This second survey showed the number of employees in each occupation within selected awards, etc., thereby providing occupation weights.

The industrial classification used in the current indexes, shown in the table on page 349, does not differ basically from the previous classification, the alterations being largely in the arrangement of classes. The former Pastoral, agricultural, etc., group and the Domestic part of the group Amusement, hotels, personal service, etc. are excluded from the current indexes because of coverage difficulties.

The minimum wage rates and standard hours of work used in the current indexes are for representative occupations within each industry. They have been derived entirely from representative awards, determinations and agreements in force at the end of each month or quarter, commencing with March 1939 for adult males and March 1951 for adult females. From January 1957 particulars for adult males have been available as at the end of each month. The index for adult males includes rates and hours for 3,415 award designations. However, as some of these designations are operative within more than one industry, or in more than one State, the total number of individual award occupations is 2,313. For adult females, the corresponding numbers are 1,100 and 515. Using the industry and occupation weights derived from the surveys described above, these rates and hours were combined to give weighted averages for each industry group for each State and Australia. Weighted averages of the components of the total minimum weekly wage rate, i.e. basic wage, margin and loading, were calculated separately for employees covered by Commonwealth awards, etc., and for those covered by State awards, etc. (*see* pages 350-1).

Because the indexes are designed to measure movements in prescribed minimum rates of 'wages' as distinct from 'salaries', those awards, etc. which relate solely or mainly to salary earners are excluded.

A more detailed description of the current indexes of minimum rates of wage and standard hours of work is given in the *Labour Report*, which also contains an extensive tabular presentation of the minimum rates of wage for adult males and females in the principal occupations in the capital city of each State. Further particulars of wage rates and index numbers will be found in a mimeographed statement, *Minimum Wage Rates, March 1939 to June 1965*. Current figures are published in the monthly bulletin *Wage Rates and Earnings*.

Weekly wage rates—adult males

The following table shows, for each State and Australia, the weighted average minimum weekly rates of wage payable to adult male workers for a full week's work, and index numbers at the dates specified.

WEEKLY WAGE RATES: ADULT MALES, ALL GROUPS(a), STATES DECEMBER 1945 TO 1965

WEIGHTED AVERAGE MINIMUM WEEKLY RATES(b) PAYABLE FOR A FULL WEEK'S WORK
(EXCLUDING OVERTIME) AND INDEX NUMBERS OF WAGE RATES

(a) As prescribed in awards, determinations and agreements. (b) The amounts shown should not be regarded as actual current averages, but as an index expressed in money terms, indicative of trends. (c) Includes the value of keep, where supplied. (d) Excludes rural.

Adult males—components of total wage rate. A dissection of weighted average minimum weekly wage rates for adult males into the three components of the total minimum wage, i.e. basic wage, margin and loading, is given in the following three tables, separate particulars being shown for employees covered by awards, etc., within Commonwealth and State jurisdictions. For the purposes of the index the Commonwealth jurisdiction embraces awards of, or agreements registered with, the Commonwealth Conciliation and Arbitration Commission and determinations of the Commonwealth Public Service Arbitrator. State jurisdictions embrace awards or determinations of, or agreements registered with, State industrial tribunals, together with certain unregistered agreements, where these are dominant in the particular industries to which they refer.

The *basic wage rates* shown herein are weighted averages of the rates prescribed in awards, etc., for the occupations included in the index for each State. For industries other than mining metropolitan basic wage rates have generally been used. However, there are a number of occupations for which basic wage rates other than the metropolitan rate are prescribed. Also, in some States at various times, State Government employees under Commonwealth awards have been paid State basic wage rates, and the basic wage rates of some employees have been subject to automatic quarterly adjustments while those of other employees within the same jurisdiction have remained unchanged. In all such cases the basic wage rate actually paid is used in the tables below. For these and other reasons the weighted average basic wage rates differ, in the majority of cases, from the metropolitan basic wage rates shown in other sections of this chapter.

Margins are minimum amounts, in addition to the basic wage, awarded to particular classifications of employees for features attaching to their work, such as skill, experience, arduousness and other like factors.

Loadings are minimum amounts, in addition to the basic wage and margin (if any), awarded for various kinds of disabilities associated with the performance of work, or to meet particular circumstances. They include payments such as industry loadings and other general loadings prescribed in awards, etc. for the occupations included in the index.

For a more detailed description of this dissection of weekly wage rates into components and for tables for each State and Australia, according to jurisdiction, extending back to 1939, see the mimeographed statement *Minimum Wage Rates, March, 1939 to June, 1964*.

A table showing components of total wage rates in industry groups for Australia at the end of December each year 1945 to 1964 was published in the Appendix to *Labour Report*, No. 51, 1964.

The table below shows similar details for 31 December 1964 and 1965.

WEEKLY WAGE RATES: ADULT MALES, COMPONENTS OF TOTAL WAGE RATE INDUSTRY GROUPS, AUSTRALIA, DECEMBER 1964 AND 1965(a)
WEIGHTED AVERAGE MINIMUM WEEKLY RATES(b) PAYABLE FOR A FULL WEEK'S WORK (EXCLUDING OVERTIME)

(a) Excludes rural. The amounts shown should not be regarded as actual current averages, but as an index expressed in money terms, indicative of trends. For definitions of basic wage, margin and loading see text, page 350.

(b) As prescribed in awards, determinations and agreements.

(c) For mining, the average rates of wage are those prevailing at the principal mining centres in each State. They include lead bonuses, etc.

(d) Average rates of wage are for occupations other than masters, officers and engineers in the Merchant Marine Service, and include the value of keep, where supplied.

Weekly wage rates—adult females

The following table shows, for each State and Australia, the weighted average minimum weekly rates of wage payable to adult female workers for a full week's work, and index numbers at the dates specified. This series has not been compiled for years prior to 1951.

Standard hours of work

In the fixation of weekly wage rates most industrial tribunals prescribe the number of hours constituting a full week's work for the wage rates specified. The hours of work so prescribed form the basis of the compilation of the weighted averages and index numbers on page 355. The main features of the reduction of hours to forty-four and later to forty per week are summarized on pages 353-4. In considering such changes, it must be remembered that even within individual States the authority to alter conditions of work is divided between Commonwealth and State industrial tribunals and the various legislatures, and that the State legislation usually does not apply to employees covered by awards of the Commonwealth Conciliation and Arbitration Commission. However, it may do so in respect of matters not treated in Commonwealth awards.

The 44-hour week

No permanent reduction to a 44-hour week was effected until 1925, although temporary reductions had been achieved earlier. In 1920 the New South Wales legislature granted a 44-hour week to most industries, but in the following year this provision was withdrawn. Also in 1920 the President of the Commonwealth Court of Conciliation and Arbitration (Higgins J.), after inquiry, granted a 44-hour week to the Timber Workers' Union, and in the following year he extended the same privilege to the Amalgamated Society of Engineers. In 1921, however, a reconstituted Commonwealth Court of Conciliation and Arbitration unanimously rejected applications by five trade unions for the shorter standard week and re-introduced the 48-hour week in the case of the above-mentioned two unions then working forty-four hours. During 1924 the Queensland Parliament passed legislation to operate from 1 July 1925 granting the 44-hour standard week to employees whose conditions of work were regulated by awards and agreements of the Queensland State industrial authority. Similar legislative action in New South Wales led to the re-introduction of the 44-hour week in that State as from 4 January 1926.

In 1927, after an exhaustive inquiry, the Commonwealth Court of Conciliation and Arbitration granted a 44-hour week to the Amalgamated Engineering Union and intimated that this reduction in standard hours of work would be extended to industries operating under conditions similar to those in the engineering industry. Applications for the shorter hours by other unions were, however, treated individually, the nature of the industry, the problem of production, the financial status and the amount of foreign competition being fully investigated. The economic depression delayed the extension of the standard 44-hour week until the subsequent improvement in economic conditions made possible its general extension to employees under Commonwealth awards.

In States other than New South Wales and Queensland no legislation was passed to reduce the standard hours of work, so that, for employees not covered by Commonwealth awards, the change had to be effected by decisions of the appropriate industrial tribunals. In these cases the date on which the reduction to forty-four hours was implemented depended on the decision of the tribunals in particular industries, employees in some industries receiving the benefit of the reduced hours years ahead of those in others. In these States the change to the shorter week extended over the years from 1926 to 1941.

The 40-hour week

Standard Hours Inquiry, 1947. Soon after the end of the 1939-45 War applications were made to the Commonwealth Court of Conciliation and Arbitration for the introduction of a 40-hour week, and the hearing by the Court commenced in October 1945. Before the Court gave its decision the New South Wales Parliament passed legislation granting a 40-hour week, operative from 1 July 1947, to industries and trades regulated by State awards and agreements, and in Queensland similar legislation was introduced in Parliament providing for the 40-hour week to operate from 1 January 1948.

The Commonwealth Court of Conciliation and Arbitration, in its judgment of 8 September 1947, granted the reduction to the 40-hour week from the beginning of the first pay-period commencing in January 1948. The Queensland Act was passed, and was proclaimed on 10 October 1947. On 27 October 1947, the South Australian Industrial Court, after hearing applications by unions, approved the incorporation of the 40-hour standard week in awards of that State. The Court of Arbitration of Western Australia, on 6 November 1947, approved that on application provision for a 40-hour week could be incorporated in awards of the Court, commencing from 1 January 1948.

In Victoria and Tasmania the Wages Boards met and also incorporated the shorter working week in their determinations, so that from the beginning of 1948 practically all employees in Australia whose conditions of labour were regulated by industrial authorities had the advantages of a standard working week of forty hours or, in certain cases, less.

Basic Wage and Standard Hours Inquiry, 1952-53. In the 1952-53 Basic Wage and Standard Hours Inquiry the employers sought an increase in the standard hours of work per week, claiming that one of the chief causes of the high costs and inflation had been the loss of production due to the introduction of the 40-hour week. This claim was rejected by the Court, as it considered that the employers had not proved that the existing economic situation called for a reduction of general standards in the matter of the ordinary working week. (See also page 365.)

Basic Wage and Standard Hours Inquiry, 1961. The Commonwealth Conciliation and Arbitration Commission rejected an employers' claim for an increase in the number of ordinary working hours from 40 to 42 per week, with a concomitant increase in weekly wages by an amount equal to two hours' pay at ordinary rates. This was to be a temporary measure to have effect for four years, after which time hours would revert to 40 and the increased wage would remain. (See also page 366.)

Hourly wage rates

The average rates of wage in the preceding tables are based on the minimum rates prescribed for selected occupations in awards, etc., for a full week's work, excluding overtime. However, the number of hours constituting a full week's work differs in some instances between various occupations in each State, and between the same occupations in the several States. For some purposes a better comparison may be obtained by reducing the results in the preceding paragraphs to a common basis, namely the rate of wage per hour. The particulars of weighted average minimum hourly rates of wage given in the following tables relate to all industry groups except Rural, and Shipping and stevedoring. The Rural industry is not included in the index and Shipping and stevedoring has been excluded because, for some of the occupations in this group, definite particulars for the computation of average working hours and hourly rates of wage are not available.

The following table shows the weighted average minimum hourly rates of wage payable to adult male workers, and index numbers of hourly rates in each State.

Weighted average standard weekly hours of work

The 40-hour week has operated in Australia generally from 1 January 1948, and in New South Wales from 1 July 1947 (*see* page 354.) However, as stated on page 354, the number of hours constituting a full week's work (excluding overtime) differs between occupations and/or between States. The weighted average standard hours of work (excluding overtime) prescribed in awards, determinations and agreements for a full working week, in respect of adult male workers in all industry groups, except Rural, and Shipping and stevedoring, at 31 December 1965, were: New South Wales, 39.95; Victoria, 39.97; Queensland, 39.98; South Australia, 39.96; Western Australia, 39.89; Tasmania, 39.97; Australia, 39.96. Corresponding figures for adult female workers at 31 December 1965 were: New South Wales, 39.53; Victoria, 39.81; Queensland, 39.70; South Australia, 39.77; Western Australia, 39.78; Tasmania, 39.56; Australia, 39.67.

Average weekly earnings

The figures in this section are derived from particulars of employment and of wages and salaries recorded on pay-roll tax returns, from other direct collections, and from estimates of the unrecorded balance. The figures relate to civilians only.

Particulars of wages and salaries paid are not available for males and females separately from these sources; average weekly earnings have therefore been calculated in terms of male units. Male units represent total male employment plus a proportion of female employment based on the approximate ratio of female to male earnings. As it was not possible to estimate the ratio of male to female earnings in the several States the same ratio has been used in each State. Because the actual ratio may vary between States, precise comparisons between average earnings in different States cannot be made on the basis of the figures shown in the following table. Quarterly figures corresponding to those shown in the table are published in the monthly bulletin *Wage Rates and Earnings* and in the *Monthly Review of Business Statistics*.

Particulars of average weekly earnings per employed male unit are shown in the following table for each of the years 1955-56 to 1964-65.

**AVERAGE WEEKLY EARNINGS PER EMPLOYED MALE UNIT(a): STATES
1955-56 TO 1964-65**

(a) Includes, in addition to wages at award rates, earnings of salaried employees, overtime earnings, over-award and bonus payments, payments made in advance or retrospectively during the periods specified, etc. *See* explanatory notes above. (b) Includes Australian Capital Territory. (c) Includes Northern Territory.

The following table shows, for 'All industries' and for 'Manufacturing', the movement in average weekly earnings from 1955-56 to the March quarter 1966. The 'All industries' index is based on pay-roll tax returns and other data. It relates to average weekly earnings per employed male unit. The index for manufacturing industries for the years to 1964-65 is based on the average earnings of male wage and salary earners employed in factories as disclosed by annual factory censuses (*see* the chapter Manufacturing Industry, page 110); figures for quarters subsequent to June quarter 1965 are preliminary estimates based on pay-roll tax returns.

The index numbers for 'All industries' and 'Manufacturing' show the movement in average earnings for each group over a period of time. However, they do not give, at any point of time, a comparison of actual earnings in the two groups. The base of each series is the year 1953-54 = 100, and both series have been seasonally adjusted.

(a) See footnote (a) to table on page 356.

(b) Average earnings per employed male unit.

Surveys of wage rates, earnings and hours

Since 1960 a number of statistical surveys of wages and hours of work in Australia have been undertaken by this Bureau. The object of these surveys has been to obtain information on wage rates, actual weekly earnings and hours of work on a more comprehensive scale than previously available in Australia. A summary of the scope and coverage of each of these surveys is shown below.

Survey of Wage Rates and Earnings, September 1960

This survey, relating to the last pay-period in September 1960, obtained information about marginal rates of wage and the dissection and distribution of actual weekly earnings of adult male employees (excluding part-time and casual employees). In addition to the exclusion of government and semi-government employees, and private employees in rural industry and in private domestic service, the survey did not cover the following—shipping and stevedoring industries; the motion picture industry; certain businesses such as those of accountants, consultant engineers, etc.; and trade associations, etc. The survey was based on a stratified random sample of private employers in other industries who were subject to pay-roll tax (that is, employers paying more than \$400 per week in wages and salaries). For information on the results of the survey see Year Book No. 51, pages 439 to 442.

Survey of Weekly Earnings, October 1961

This survey was conducted for the last pay-period in October 1961 and provided information about the distribution of actual weekly earnings for adult male employees (excluding part-time and casual employees). The survey did not cover government or semi-government employees, private employees in rural industry and in private domestic service, or employees not liable to pay-roll tax. The survey was based on a stratified random sample of private employers in other industries who were subject to pay-roll tax (that is, employers paying more than \$400 a week in wages and salaries). The results of the survey were published in Year Book No. 51, pages 442 to 444.

Surveys of Weekly Earnings and Hours, October 1962, October 1963, and October 1964

Sample surveys of earnings and hours in respect of most private employers subject to pay-roll tax (i.e. those paying more than \$400 a week in wages and salaries) have been conducted as at the last pay-period in October for the years 1962, 1963 and 1964. Results of the 1963 and 1964 surveys, with some comparisons with the 1962 survey, are shown in the following tables.

Figures for average weekly earnings, average weekly hours paid for, and average hourly earnings as at the selected pay-periods are shown for males and females (adult and junior) separately by industry groups and by States. They reflect the effects of differences (and of changes between the points of time) in amounts paid for the various occupations; in amounts paid for the same occupations; in occupational structures within industries; in industry structure; in degrees of business activity (incidence of overtime, etc.); and in incidence of incentive schemes, piece-work and profit-sharing scheme payments, etc.

Coverage of surveys

The results of the surveys were based on returns from stratified random samples of private employers subject to pay-roll tax. Employees in rural industry and in private domestic service were excluded because most employers in these two industries are not subject to pay-roll tax. Also excluded from the surveys were employees of government and semi-government authorities as well as those of religious, benevolent and other similar organizations exempt from pay-roll tax. The earnings and hours of waterside workers employed on a casual basis have been excluded because they are subject to wide fluctuations for short periods such as those covered by these surveys. Approximately 3,550 employers were included in the October 1964 survey and the sample represented 1,359,000 male and 568,200 female wage and salary earners.

The figures contained in the tables in this section are for 'Employees (other than part-time) whose hours of work were known' as defined below. Because of the heterogeneity of the data combined with high sampling variability, figures relating to other employees (part-time workers, executives, etc., and those whose hours of work were not known) are not available for publication.

Comparability of results of surveys

Since the survey estimates are based on a sample they are subject to sampling variability, that is, variations which might occur by chance because only samples of employers were surveyed. In addition to affecting the results of each sample such aspects also affect comparison between each year's results.

A detailed comparison of the results of the October 1962 survey with the other two surveys is not presented mainly because there was a change in industry classification after the 1962 survey. A broad comparison by States is shown on page 363.

Definitions of terms used in surveys

The following definitions refer to terms used in the surveys and in the tables in this section.

Employees refer to male and female employees on the pay-roll for the last pay-period in October.

Employees whose hours of work were known exclude (i) all managerial, executive, professional and higher supervisory staff, whether or not their hours of work were known, and (ii) any other employees whose hours of work were not known. They comprise all other employees who received pay for the last pay-period in October and whose hours of work were known (including foremen, transport supervisors, floor-walkers, other minor supervisory employees, clerical and office staff, etc.).

Part-time employees refer to employees who ordinarily worked less than thirty hours a week. Employees on short-time who normally worked thirty hours or more a week were classified as 'other than part-time.'

Adults include employees who, although under twenty-one years of age, were paid at the adult rate for their occupation.

Juniors are those employees under twenty-one years of age who were not paid at the adult rate for their occupation.

Earnings (i.e. gross earnings, before taxation and other deductions) include ordinary time and overtime earnings, payments for sick leave and holidays, commission, and all other payments such as incentive scheme, piecework and profit-sharing scheme payments, etc., and bonus payments of any kind. Annual or other periodical bonuses have been included only at the appropriate proportion for one week. For employees paid other than weekly, only the proportion of earnings equivalent to one week has been included.

Weekly hours paid for include ordinary time and overtime hours, paid stand-by or reporting time, paid sick leave and paid holidays. For employees paid other than weekly, hours have been converted to the equivalent for one week.

Average earnings and hours

In the following tables the average weekly earnings, average weekly hours paid for and average hourly earnings at the last pay-periods in October 1963 and October 1964 are shown for males and females (adult and junior), other than part-time, by industry group.

(a) Private employees only. Excludes managerial, executive, professional and higher supervisory staff, whether or not their hours of work were known, and all other employees whose hours of work were not known.

(b) Last pay-period in October. For definitions and particulars of the coverage of the surveys, etc., see page 358.

(c) Excludes Northern Territory and Australian Capital Territory.

Basic wages in Australia

The concept of a 'basic' or 'living' wage is common to rates of wage determined by industrial authorities in Australia. Initially the concept was interpreted as the 'minimum' or 'basic' wage necessary to maintain an average employee and his family in a reasonable state of comfort. However, it is now generally accepted 'that the wage should be fixed at the highest amount which the economy can sustain and that the "dominant factor" is the capacity of the community to carry the resultant wage levels'.

Under the *Commonwealth Conciliation and Arbitration Act 1904-1965* (see page 344) the Commonwealth Conciliation and Arbitration Commission (previously the Commonwealth Court of Conciliation and Arbitration) may, for the purpose of preventing or settling an industrial dispute extending beyond the limits of any State, make an order or award 'altering the basic wage (that is to say, that wage or that part of the wage, which is just and reasonable for an adult male [female], without regard to any circumstance pertaining to the work upon which, or the industry in which he [she] is employed) or the principles upon which it is computed'. In practice, the Commonwealth Conciliation and Arbitration Commission holds general basic wage inquiries from time to time, and its findings apply to industrial awards within its jurisdiction.

In New South Wales and South Australia the State industrial authorities adopt the relevant Commonwealth basic wage. In Victoria and Tasmania, where Wages Boards systems operate, no provision is included in the Industrial Acts for the declaration of a basic wage, although Wages Boards generally adopt Commonwealth basic wages. In Queensland and Western Australia the determination of a basic wage is a function of the respective State Industrial or Arbitration Courts. Details of basic wage determinations in each State are set out in pages 376-80.

In addition to the basic wage, 'secondary' wage payments, including margins for skill and various kinds of loadings peculiar to the occupation or industry, are determined by these authorities. The basic wage and the 'secondary' wage, where prescribed, make up the 'minimum' wage for a particular occupation. The term 'minimum wage' as distinct from the basic wage is used currently to express the lowest rate payable for a particular occupation or industry. (See also *Adult males—components of total wage rate*, pages 350-1).

The Commonwealth Basic Wage—early judgments

The principle of a living or basic wage was propounded as far back as 1890, but it was not until 1907 that a wage, as such, was declared by a Court in Australia. The declaration was made by an order in terms of section 2 (d) of the *Excise Tariff 1906* in the matter of an application by H. V. McKay that the remuneration of labour employed by him at the Sunshine Harvester Works, Victoria, was 'fair and reasonable'. Mr. Justice Higgins, President of the Commonwealth Court of Conciliation and Arbitration, defined the standard of a 'fair and reasonable' minimum wage for unskilled labourers as that standard appropriate to 'the normal needs of the average employee, regarded as a human being living in a civilized community'. The rate declared was 7s. (70c) a day or £2 2s. (\$4.20) a week for Melbourne, the amount considered reasonable for 'a family of about five'.

The 'Harvester' standard was adopted by the Commonwealth Court of Conciliation and Arbitration for incorporation in its awards, and practically the same rates continued until 1913, when the Court took cognizance of retail price index numbers, covering food and groceries and rent of all houses ('A' Series) for the thirty more important towns of Australia, which had been published by the Commonwealth Statistician for the first time in the preceding year. At intervals thereafter as awards came before it for review the Court usually revised the basic wage rate of the award in proportion to variations in the retail price index.

During the period of its operation the adequacy or otherwise of the 'Harvester' standard was the subject of much discussion, the author of the judgment himself urging on several occasions the need for its review. During the period of rapidly rising prices towards the end of the 1914-18 War strong criticism developed that this system did not adequately maintain the 'Harvester' equivalent. A Royal Commission was appointed in 1919 to inquire as to what it would actually cost a man, wife and three children under fourteen years of age to live in a reasonable standard of comfort, and as to how the basic wage might be automatically adjusted to maintain purchasing power. The Commission's Reports were presented in 1920 and 1921. An application by the unions to have the amounts arrived at by the inquiry declared as the basic wage was not accepted by the Court, because they were considerably in advance of existing rates, and grave doubts were expressed by members of the Court as to the ability of industry to pay such rates. Further details of the recommendations of the Commission were given in *Labour Report* No. 41, page 102.

The system of making automatic quarterly adjustments to the basic wage in direct ratio to variations in the retail price index ('A' Series) was first introduced in 1921. The practice then adopted was to calculate the adjustments to the basic wage quarterly on the index number for the preceding quarter. The new method would have resulted in a basic wage lower than that to

which employees would have been entitled had the previous practice been continued, and in 1922 the Court added to the basic wage a general loading of 3s. (30c) (known as the 'Powers 3s.'). This loading continued until 1934. The practice of making automatic quarterly adjustments continued until September 1953 (*see below*).

For a description of the several series of retail price indexes referred to in these paragraphs, *see pages 329-31* of this chapter.

Commonwealth Basic Wage Inquiries, 1930 to 1950

No change was made in the method of fixation and adjustment of the basic wage until the onset of the depression in 1930, when applications were made to the Court for a reduction of wages. From 1 February 1931 the Court reduced all wages under its jurisdiction by 10 per cent. Subsequent applications in 1932 and 1933 for cancellation of this reduction were refused. In May 1933 the Court transferred the basis of the quarterly adjustment of the basic wage from the 'A' Series to the 'D' Series Retail Price Index. Further particulars may be found in the *Labour Report*, Nos. 22 and 23.

The 'Harvester' standard, adjusted by variations in retail price index numbers, continued to be the theoretical basis of the wage of the Commonwealth Court until the judgment of 17 April 1934, when automatic adjustment was transferred to the 'C' Series Retail Price Index. The new rate for the six capital cities, £3 5s. (\$6.50), was in effect the same as that previously paid under the 'A' Series, without the 'Powers 3s.' (30c) and without the 10 per cent reduction, which then ceased to operate. (*See Labour Report No. 25, 1934.*)

The following were the main features of the judgment of the 1937 Inquiry. (a) Amounts were added to the basic wage not as an integral, and therefore adjustable, part of that wage, but as 'loadings' additional to the rates payable under the 1934 judgment (referred to as the 'needs' portion of the basic wage). These loadings, commonly referred to as 'Prosperity' loadings, ranged, for capital cities, from 4s. (40c) to 6s. (60c), that for the six capitals being 5s. (50c). (b) The minimum adjustment of the basic wage was fixed at 1s. (10c) a week instead of 2s. (20c). (c) The basis of the adjustment of the 'needs' portion of the wage in accordance with the variations shown by retail price index numbers was transferred from the 'C' Series to a special 'Court' Series based upon the 'C' Series. (d) Female and junior rates were left for adjustment by individual judges when dealing with specific awards. (*See Labour Report No. 28, pages 77-87.*)

In 1940, trade unions applied for increases in the basic wage. This application by unions was not finalized until 1950, and the various judgments of the Commonwealth Court of Conciliation and Arbitration are summarized below. In February 1941 the Court refused to increase the basic wage owing mainly to the uncertainty of the economic outlook under existing war conditions. The application was stood over for further consideration. The Chief Judge suggested that the basic wage be graded according to family responsibilities by means of a system of child endowment. (Subsequently the Commonwealth *Child Endowment Act* 1941 came into operation on 1 July 1941. *See the chapter Welfare Services for details.*) In 1946 the unions applied for an 'interim' basic wage declaration and in December 1946 the basic wage was increased by 7s. (70c) per week. The Basic Wage Inquiry, 1949-50 completed the case begun in 1940 and continued in 1946. In October 1950 the Court, by a majority decision, increased the adult male basic wage by £1 (\$2) per week; determined that the adult female basic wage be 75 per cent of the adult male rate; and standardized the 'Prosperity' loadings and declared them to be an adjustable part of the basic wage. These decisions operated from the beginning of the first pay-period in December 1950, and the whole of the new basic wage was subject to automatic adjustment as from the beginning of the first pay-period in February 1951. For further particulars of these judgments *see Labour Report No. 38, page 79 and Labour Report No. 39, page 81.*

Commonwealth Basic Wage Inquiries, 1952-53 to 1960

The Commonwealth Court of Conciliation and Arbitration in September 1953 announced its decision in the Basic Wage Inquiry, 1952-53. The decision of the Court was (a) the employers' applications for reduction in the basic wages and for an increase in the standard hours of work were refused; (b) the employers' applications for the deletion of provisions for the adjustment of basic wages in accordance with variations in retail price index numbers were granted; and (c) the unions' application for increases in basic wages was refused.

In May 1956 the Court delivered judgment in the Basic Wage Inquiry, 1956. The Court rejected the unions' application for the re-introduction of automatic quarterly adjustments and the abolition of the 3s. (30c) country differential. The Court increased the adult male basic wage by 10s. (\$1) a week and the adult female basic wage by 7s. 6d. (75c) a week payable from the beginning of the first pay-period in June 1956.

The Commonwealth Conciliation and Arbitration Commission on 29 April 1957 delivered judgment in the Basic Wage Inquiry, 1956-57. The basic wages for adult males were increased by 10s. (\$1) a week and the basic wages for adult females by 7s. 6d. (75c), to come into effect from the first pay-period to commence on or after 15 May 1957. The unions' claim for restoration of automatic quarterly adjustments was refused.

As a result of the Basic Wage Inquiry, 1958 the basic wage for adult males was increased by 5s. (50c) a week, to operate from the beginning of the first pay-period commencing on or after 21 May 1958. The restoration of automatic quarterly adjustments of the basic wage was refused. The claim of the South Australian Government for special treatment for the basic wage for Adelaide was refused.

In its judgment in the Basic Wage Inquiry, 1959 the Commission, by a majority decision, decided that the basic wage for adult males should be increased by 15s. (\$1.50) a week payable as from the beginning of the first pay-period commencing on or after 11 June 1959, and that the system of automatic quarterly adjustments should not be restored.

The Conciliation and Arbitration Commission, in its judgment in the Basic Wage Inquiry, 1960, decided that there would be no increase in the basic wage and no restoration of quarterly adjustments to the basic wage.

In the Differential Basic Wage Inquiries, 1960 the Commission decided that the 3s. (30c) country basic wage differentials should be eliminated from awards of the Commission, the new basic wages to be payable from the beginning of the first pay-period commencing on or after 1 January 1961. The claim by employers' associations in South Australia for special treatment for the Adelaide basic wage was refused.

For details of these inquiries *see* earlier issues of the Year Book and the *Labour Report*.

Commonwealth Basic Wage Inquiries, 1961, 1962 and 1963

In its judgment in the Basic Wage and Standard Hours Inquiry, 1961 the Commonwealth Conciliation and Arbitration Commission made the following decisions: (1) the employers' claim for an increase in the standard hours of work from forty to forty-two a week with a concomitant increase in the weekly wage equivalent to two hours' pay at ordinary rates was refused; (2) the unions' claim for restoration of automatic quarterly adjustments was refused; (3) the basic wages for adult male employees were increased by 12s. (\$1.20) per week to come into effect from the beginning of the first pay-period commencing on or after 7 July 1961; and (4) that in February 1962 the only issue to be considered in regard to the basic wage should be why the money wages fixed by this decision should not be adjusted in accordance with any change in the Consumer Price Index. To give effect to this the applications were adjourned till February 1962.

The adjourned hearing was held on 20 February 1962. The Commission, after hearing submissions, decided that there would be no alteration in the basic wage until further order; and further adjourned the application before it until February 1963.

The application again came before the Commission on 5 February 1963. In its judgment the Commission decided that there would be no alteration in the basic wage rates, and that the application was further adjourned until February 1964.

Commonwealth Basic Wage Inquiry, 1964, and Employers' Total Wage Case, 1964

On 25 February 1964 the Commonwealth Conciliation and Arbitration Commission began hearing an application by respondent unions for a variation in the Metal Trades Award and the Pastoral Industry Award, and an application by the employers for a variation in the Metal Trades Award. The unions sought an increase of 52s. (\$5.20) a week in the basic wage portion of the Metal Trades Award and the Pastoral Industry Award, the abolition of the disparity in respect of station hands under the Pastoral Industry Award, and the re-introduction of automatic quarterly adjustments based on the Consumer Price Index. The employers sought an alteration to the present wage structure, involving the abolition of the 'basic wage' and 'margins' components of the award and the substitution of a total wage, with increases ranging from 5s. (50c) to 8s. (80c) a week.

It was decided to hear the claim by the unions first, but to reserve the decision until the employers' Total Wage Case was heard immediately afterwards. Since the arguments used in the first case were likely to be similar to those used in the employers' hearing it was deemed expedient for Commissioner Winter, who was a member of the bench for the Total Wage Case, to attend the first hearing as an observer.

The Basic Wage Inquiry, 1964

For the hearing of this case the Conciliation and Arbitration Commission was constituted in Presidential Session by Kirby C.J. and Gallagher, Moore, and Nimmo JJ. Commissioner Winter was present as an observer only.

The application by the unions (*see* above) was opposed by private employers generally. The Commonwealth Government intervened in the public interest, but neither supported nor opposed the claim. Leave to intervene was granted to the Australian Council of Salaried and Professional Associations and thirty affiliated organizations of that Council, to nineteen organizations affiliated with the High Council of Commonwealth Public Service Organisations, and to the State of Tasmania; these parties supported the unions' claims.

At the conclusion of the Basic Wage Inquiry and the Total Wage Case the bench on 9 June 1964, handed down the following decisions.

'1. Unanimous decision that the unions' claim for the restoration of automatic quarterly adjustments be refused.

'2. Unanimous decision that the application of The Australian Workers Union for the deletion from the Pastoral Industry Award of the basic wage for station hands be granted. This means abolition of the disparity of 1s. [10c] per week in respect of station hands.

'3. Unanimous decision that the basic wages of adult male employees covered by Federal Awards be increased. The Commission is equally divided in opinion on the amount of increase, the President and Mr. Justice Moore being of the opinion that it should be 20s. [£2] and Mr. Justice Gallagher and Mr. Justice Nimmo that it should be 10s. [£1]. The Act (Section 68) provides that if the Commission is equally divided in opinion the question shall be decided according to the opinion of the President. The decision of the Commission is therefore that the basic wages of adult male employees covered by Federal Awards shall be increased by a uniform weekly amount of 20s. [£2].

'4. The new rates will come into operation from the beginning of the first pay period to commence on or after 19 June 1964, subject to special cases.

'5. The basic wages which shall be increased by 20s. [£2] per week shall be those prescribed for adult males in the Pastoral Industry Award, as varied by Decision No. 2 above, and those basic wages as at present prescribed for adult males in the Metal Trades Award and all the Awards respectively the subject of the applications and disputes which have been ordered by the Commission to be joined for hearing and decision with the applications concerning the Pastoral Industry Award and the Metal Trades Award. The awards concerned are set out in the schedule to the Judgment of the President and Mr. Justice Moore.'

Three separate judgments, one by Kirby *C.J.* and Moore *J.* and one each by Gallagher *J.* and Nimmo *J.*, were presented and a summary of these judgments is given below.

Kirby C.J. and Moore J. Discussing the unions' claims Kirby *C.J.* and Moore *J.* in their judgment said:

'The amount of 52s. [£5.20] is ascertained by applying to the basic wage of September 1953 movements in the "C" Series Index from the September quarter 1953 until the June quarter 1961, and thereafter movements in the Consumer Price Index until December 1963. A figure of 20s. [£2] is arrived at by this method of attempting to restore the value of the 1953 basic wage. The 20s. [£2] is then added to 288s. [£28.80], the present Six Capital Cities' basic wage which for the purposes of the claim would become 308s. [£30.80]. Then the assumption is made that national productivity has increased at a rate of one per cent per annum since 1952-53. This, when compounded, is 10.4 per cent and 10.4 per cent of 308s. [£30.80] is 32s. [£3.20] which with the 20s. [£2] for price movements gives the 52s. [£5.20] claimed.'

Kirby *C.J.* and Moore *J.* stated they would reject the use of the 'C' Series Index which had been becoming progressively less satisfactory and was no longer published by the Commonwealth Statistician. If the Consumer Price Index was used instead, the amount of the claim became 31s. (£3.10) and the unions conceded that the Consumer Price Index might be the more appropriate index to use. After discussing the two indexes and the use of different base years from which to measure the increase in productivity, they said that the unions, while not abandoning their 52s. (£5.20) claim, had pressed for an increase of 31s. (£3.10) with alternatives of 13s., 20s., 21s., 25s., 27s., and 32s. (£1.30, £2, £2.10, £2.50, £2.70 and £3.20 respectively).

Automatic quarterly adjustments. The unions also asked for the re-introduction of automatic quarterly adjustments to the basic wage; this was opposed both by the employers and the Commonwealth Government. Their Honours agreed with what was said in the 1961 Basic Wage judgment about automatic quarterly adjustments and therefore rejected this part of the claim.

Pastoral Award Differential. The Australian Workers Union had asked that the 1s. (10c) a week difference between the basic wage for station hands and shearing employees be removed, and explained the history of the difference as related to basic wage concepts, which in its submission no longer applied. The employers argued that questions of principle were involved and that they should be given an opportunity of presenting a more detailed case before the application was fully considered.

Kirby *C.J.* and Moore *J.* said they appreciated that the difference between these two basic wages was at different times in the past a matter of some significance, not only because statistics were available upon which to adjust these different basic wages, but also because the amounts between them at times were considerable. In theory the Commission should undertake a lengthy exercise to examine the history and perhaps other factors in detail, but since the amount involved was only 1s. (10c) and would remain at 1s. (10c) forever if the application were refused, they thought the unions' application should be granted and the difference between the two basic wages, which was now quite artificial, should be removed.

Base year. Their Honours discussed the unions' use of 1952-53 as the base year because of the elimination of automatic quarterly adjustments at that time. They indicated that in 1961 the Commission had rejected that year and preferred 1949-50 as a base year from which to consider productivity movements. They considered that the important thing was that the 1961 decision was correct and that the unions were now strongly relying upon it as a proper approach to wage fixation. They said:

'In our opinion the 1961 decision is the proper starting point for our consideration of the basic wage both because it was the latest fixation in point of time and because it applied correct principles.'

The judgment went on to say that the unions were able to show different and even opposite movements in productivity by applying different deflators to the Gross National Product, and the judges concluded that the conflict shown by these different groups of figures confirmed views which the Commission had expressed before about relying too heavily on figures of this kind to control its decisions.

Attitude of the parties. The unions' claim, both for an increase in the basic wage and the restoration of quarterly adjustments, was supported by the State of Tasmania, the Australian Council of Salaried and Professional Associations and the High Council of Public Service Organisations, all of whom had been granted leave to intervene.

The attitude of the employers was not of opposition to a wage increase itself, but one of desiring to see a total wage in the Commission's awards following the abolition of a basic wage. They submitted that movements in wages should be kept within movements in productivity. Their Honours said that although this was related to their total wage application, it would also apply to basic wage increases, which caused movements in total wages. In view of what was contained in the majority judgment in the Total Wage Case they did not propose to discuss the employers' proposal as to the fixation of wages. They agreed with what was said in that decision about that proposal.

The applications to increase the basic wage could be considered in an atmosphere in which employers were prepared to agree to wage increases, though on certain terms. The employers attacked the principles laid down in the 1961 Basic Wage decision, in particular the *prima facie* adjustment for prices. They also attacked the amount awarded. The Commonwealth Government, while intervening neither to support nor oppose an increase of the basic wage, did not attack the concept of a basic wage, though it criticized in some detail the 1961 Basic Wage decision. On the other hand the unions relied strongly on that decision. It was necessary to look closely as to what was said and done in that case.

1961 Basic Wage decision. The basic wage awarded in 1961 had taken into account the capacity of the economy, the standard set by the basic wage of 1960 and increases in productivity up to and including 1959-60, and it was not correct to assert that the 12s. (\$1.20) increase was granted merely because of the movement in prices. Their Honours rejected the employers' submission that the Commission had adopted a policy of granting increases which amounted to the sum of price movements and productivity increases since the last fixation.

In 1961 the Commission made a positive finding that it would assume that the capacity of the economy would continue to be such as to enable the real value of the increased basic wage to be maintained. It indicated that there would be consideration of price movements each year, and that a review of the economy could take place every three or four years. This did not preclude any party from exercising its right to come to the Commission more frequently, but in the absence of special circumstances the next review of the basic wage would only be a consideration of price movements. The only issue would be whether the money wage should be adjusted in accordance with any change in the Consumer Price Index, and the onus would be on the party opposing such an alteration to show that it should not be made.

Relying on this decision the unions had waited for three years before making an application for an increase in the basic wage, and to now reject the implications of that decision might properly be regarded by the unions as a breach of faith by the Commission.

Overall approach to basic wage fixation. Having confirmed the 1961 decision, Kirby C.J. and Moore J. stated their overall approach to general applications for alteration in the basic wage. It was necessary to look at the state of the economy, past, present and future. They explained that in considering the development of the economy two elements were given most prominence. They were the movements in prices and productivity, but these movements should not be applied automatically and inevitably, nor should they be the only things considered in a review of the real basic wage. They said they had endeavoured to look at the economy in the round, and base their decision on its capacity since 1961, its capacity now and its capacity for the predictable future.

It was thought that a general review of the economy should take place every three or four years, but while it was desirable to adhere to the 1961 approach in this case, it might be necessary in different circumstances for the Commission to vary this approach. If either of the parties sought a more frequent review of the real wage the Commission would have to deal with it.

The judgment said they would leave that to the future because they had decided that this application should be determined here and now. The only departure from the 1961 procedure was that they now considered it preferable for the future to leave it to the parties to apply, as they might be advised, either for money or real changes in the basic wage. They would not, therefore, stand this matter over from year to year as has been done since 1961.

General conclusion. Kirby C.J. and Moore J. considered economic capacity by reviewing the indicators normally considered by the Commission and concluded that:

'A consideration of all the indicators separately and collectively must lead to the conclusion that in all its aspects the Australian economy is at present buoyant. . . .

' . . . We are conscious that there is some fear in the community that unless care is exercised the present situation may develop into an inflationary boom with possible consequent dampening down measures. However, we think that the Commission would not be fixing a basic wage which was just and reasonable if it did not act on the present state of the economy which is expanding and buoyant with no positive sign of inflation although there is an upward tendency in some prices. As we have noted the Reserve Bank is watchful about inflation and we would assume that other authorities will be equally watchful.

'In these circumstances there is and can be no real dispute that the basic wage should be significantly increased. Bearing in mind all we have said we conclude that a just and reasonable increase to the male basic wage would be an amount of 20s. [\$2] a week. We would point out that the 20s. [\$2] by which we would increase the basic wage is not arrived at by the method suggested by the unions in regard to that amount. . . . It is our view that the present and predictable capacity can provide for such an increase and that a lesser sum would not be just and reasonable. This increase should in our view come into operation from the beginning of the first pay period to commence on or after 19th June, 1964.

'The increase of 20s. [\$2] a week granted this year compares with the increase of 12s. [\$1.20] three years ago. In the 1961 judgment it was calculated that the 12s. [\$1.20] added £60 million [\$120 million] to the wages bill or something less than two per cent of the £3,311 million [\$6,622 million] paid as wages and salaries during the preceding year. Using the same approach but conceding that it is only a rough rule of thumb method the 20s. [\$2] now granted would increase the wages bill by £100 million [\$200 million]. This would be approximately 2.5 per cent of the £3,965 million [\$7,930 million] of wages, salaries and supplements during 1962-63. This year's 20s. [\$2] represents an increase of something under four per cent on the figure of average weekly earnings.'

It was the view of the judges that their decision should be applied to all the applications and disputes which had been ordered by the Commission to be joined for hearing and decision with the original applications and any other applications which were subsequently presented.

Gallagher J. After reviewing the evidence presented by the unions, employers and the Commonwealth Government, Gallagher J. in his judgment said:

'I have decided to proceed on the basis that the capacity of the economy is the predominant issue in the assessment of the basic wage. In the application of this principle, I shall adhere to the rule that the wage should be the highest which the community can afford'.

However, he said he would not ignore the industrial, social and economic consequences of the Commission's actions.

'My adherence to the capacity principle does not, as I understand the position, bring me into conflict with the procedure . . . introduced by the Full Bench in the decision which resulted from the Basic Wage Inquiry 1961'.

His Honour said he agreed with the Full Bench that the purchasing power of the basic wage had always been a matter of importance, and did not consider that the *prima facie* adjustment for prices or the onus placed upon the employers created an undesirable procedure.

'Provided the relevant evidence is available (and I see no sound reason why it should not be), it is not unreasonable that the employers may be called upon to satisfy the Commission that price increases, although admittedly having occurred, should not be reflected in the basic wage. The matter of fundamental importance, as I see it, is that the employers in raising objection should have the right fully to raise capacity to pay, that is to say, it should be open to them to examine all material aspects including the accepted indicators and then to establish that in the light of the economic position viewed as a whole, an alteration based alone on increased prices should not be made.

'I have already indicated my belief that the 1961 basic wage decision did not constitute a departure from the principle that capacity to pay is the predominant issue but if there has been such a departure I would to that extent respectfully refuse to apply the decision.

'My concurrence with the "1961 procedure" is, as I have already indicated, restricted to the extent to which it provides for a prima facie adjustment for price movement. For the reason that the taking into account of productivity increases over an extended period could lead to a large increase of the basic wage, I would be inclined to the view that adjustments for productivity, if they are to be made, should be effected at fairly frequent intervals. In this way I hope to avoid the serious impact upon the economy flowing from a substantial increase.'

His Honour did not consider it necessary to discuss the accepted indicators in detail since it was conceded on behalf of the Commonwealth Government that the situation of the economy was favourable.

Gallagher *J.* said that expressions of opinions of economists extracted from documents tendered as evidence left the impressions that: (a) the Australian economy was developing and productivity would increase; (b) there was a lag in award wages as compared with average weekly earnings; (c) the position of the lower wage groups could not be alleviated more than temporarily by a wage rise which accrued indiscriminately to all wages earners; (d) smaller adjustments made with greater frequency were preferable to substantial adjustments made after lengthy intervals; (e) a low rate of increase of wages was unlikely to have much impact on the rate of technical progress; and (f) a rate of increase which was too high could cause economic dislocation.

Although the basic wage had remained static for almost three years, average weekly earnings had consistently increased. Those who were on the average or above it appeared to have received the benefits of price movements and productivity, but it might well be that, as a matter of equity and good conscience, an improvement in the standard of living was required for those appreciably below the average.

There was some statistical evidence which would give rise to the inference that the number of workers whose earnings were little above the basic wage were relatively few in number, but the figures did not take into account employees in government undertakings and therefore did not necessarily provide a conclusive guide.

After considering particulars relating to personal consumption expenditure, new motor vehicle registrations, number of new houses and flats commenced and completed, and savings banks deposits, His Honour said that some increase was warranted, but the important thing for the wage earner was that the amount be of real value. A substantial increase could seriously upset price stability. A moderate increase should be much less likely to do so, and he considered that a middle course would be best.

After referring to scope for private arrangements between employers and employees on wages, and for the use of incentive payments, with the object of demonstrating that the keeping of the basic wage within moderate limits need not result in depressed earnings, he announced his conclusion that the amount of the increase should be 10s. (\$1) a week.

He also concurred with the others on the Bench in rejecting the application for automatic quarterly adjustments, and agreed to the abolition of the difference in the basic wage between station hands and shearing employees.

Nimmo J. The separate judgment handed down by *Nimmo J.* said that if the basic wage current at the date of the review was not the highest that the capacity of the community as a whole could sustain it was the duty of the Commission to alter it accordingly. Since any alteration operated in the future the Commission was obliged to estimate the highest amount the community should sustain during the period of operation of the alteration. In estimating this amount the Commission considered a variety of factors, each of which it weighed and considered against the others. Any party was free to urge the consideration of factors other than those normally used by the Commission.

The Commission used various 'indicators' to assess the present and future state of the economy, considered national productivity, total wages and recent awards, movements in prices and the consequences of any alteration in the basic wage.

In considering the applicants' claims *Nimmo J.* said he did not accept the unions' contentions that the court had wrongly abolished the system of automatic quarterly adjustments in 1953 and that since that date wage earners had not received the full share in increases in national productivity to which they had been entitled.

He examined the economy of the country and concluded that the indicators disclosed that the Australian economy was in a healthy state and pointed towards it remaining in that state.

After examining past and future productivity he said:

'over the last three years, depending upon the methods adopted for assessing the Gross National Product and calculating the number of persons employed, national productivity may be estimated as having increased annually by between 1.2 per cent and 2.4 per cent.

The breadth of this range is a clear indication that it is not possible with existing statistical information to estimate growth in national productivity with precision. The trend, which emerges from the examination, is for a moderate but steady growth which may, on present indications, be reasonably expected to continue in the future.'

Over-award payments had increased at a faster rate than had award wages and an increase in the basic wage would spread throughout the ranks of wage earners and not be absorbed into over-award payments. In the past most of the productivity gains had been distributed in a variety of forms to consumers, employers and employees. In 1963 the Commission had increased annual leave generally in secondary industry by one week and had increased margins in the Metal Trades Industry, and in the following years awarded thirteen weeks long service leave after fifteen years service to employees under the Metal Trades and Graphic Arts Awards. He said:

'Consumer prices have been steady since June 1961. It must be remembered, however, that early in this period the economy was depressed and unemployment existed and that the recovery which has taken place since then has been until recently of a gradual nature.'

He drew attention to such factors as the state of liquidity, the high average income of adult male wage earners and the increasing shortage of labour in some industries, and said:

'With these potential inflationary elements present it is my view that a substantial increase in the basic wage would aggravate the position and could easily trigger off a wage-price spiral which would produce the undesirable consequences mentioned in the earlier references I have made on this subject.'

He concluded that the basic wage for adult males was not the highest the capacity of the community as a whole could sustain now and in the future.

'Having regard to the current state of affairs and to the conclusion I have reached that for the time being there should be annual reviews of the basic wage it is my opinion that the increase which is justified is one of 10s. [\$1] to apply until the next annual review.

'Since I find myself at variance with the learned President and my brother Moore, on the question whether the 1961 procedures should be continued, I think it incumbent on me to give my reasons in detail.'

These reasons are summarized below.

(a) It was incompatible with the principle of 'capacity to pay' to single out any particular factor for separate treatment. (b) An upward movement in the Consumer Price Index could lead to an application which might not be opposed by the employers who would simply increase domestic prices. (c) Under a system of annual reviews a complete consideration of an application for an increase in the basic wage proceeded on the basis that an increase in the capacity to pay should lead to a rise in the wage—such a rise would ensure that the real value of the basic wage was protected. (d) Annual reviews reduced the margin of error involved in the Commission's prognosis in the respect of the future capacity of the community to sustain increases. (e) Previous statements by the Court and the Commission pointed out that it was not the policy to determine basic wages without regard to the general level of secondary wages. He said:

'no explanation has been advanced to show how this principle can be applied in a prognosis of capacity extending over a period of three or four years, because the nature and extent of marginal applications over that period cannot be foreseen'.

(f) A full review after a period of time might lead to one big increase, as opposed to a series of moderate increases which the economy might have a better chance of absorbing. (g) Under the 'capacity to pay' principle a party seeking a change in the basic wage should show that it was justified having regard to the capacity of the community as a whole to sustain it. One party should not be freed from the responsibility of establishing that a change was justified by mere proof of a change in one factor among many and place upon its opponent the task of proving that it was not, whether the movement in prices be up or down. (h) During a long delay between hearings, pressure was likely to develop for increases in over-award payments and margins, and because of the general lack of bargaining strength of the low wage earners they might suffer. (i) There were no difficulties in the way of annual hearings as the parties now had more common ground than previously. A further improvement might be the presentation of written cases which could be studied by the parties and then spoken to in the sittings of the Commission.

While opposed to the 1961 procedures, Nimmo J. said that if they were adhered to he would prefer a scheme of staggered increases. He agreed with the other members of the bench that the application to restore automatic quarterly adjustments be refused, and that the differential between station hands and shearers be abolished.

Employers' Total Wage Case, 1964

The case was heard in Presidential Session by Kirby C.J., Gallagher, Moore, and Nimmo JJ. and Commissioner Winter.

A claim was made by the Metal Trades Employers Association, the Victorian Chamber of Manufactures and the Metal Industries Association of South Australia for the deletion from the Metal Trades Award of the basic wage provisions and for the insertion in the award of a wage unless the Commission also agreed to implement their submission that movements in wages but made it clear that they did not desire the Commission to grant their application for a total wage unless the Commission also agreed to implement their submission that movements in wages should be kept within movements in productivity. They also asked that, since the application was a vehicle by which the Commission would establish a new approach to the principle of wage fixation, the decision should not be confined to the Metal Trades industry but applied generally to the Commission's awards. The unions opposed the application, stressing the importance of the basic wage to the lower paid worker, its historical significance and the attitude of Parliament.

The Commonwealth Government, when intervening, emphasized the need for flexibility, the desirability of adherence to the capacity to pay principle, the danger of fixing wage rates solely in relation to price movements or productivity, the undesirability of assessing rates on purely economic grounds, the advantage of work value fixations, and that it was wrong to proceed on the basis that whenever a change took place in one margin all margins should change.

On 9 June 1964 the Commission announced the following decision:

'The members of the bench are unanimous in the opinion that the application of the employers for the deletion from the Commission's awards generally of the basic wage provision and for the insertion in those awards of a wage expressed as a total wage should be rejected.'

Three separate judgments, one by Kirby *C.J.* Moore *J.* and Commissioner Winter, and one each by Gallagher and Nimmo *J.J.*, were handed down, and a summary of these judgments is given below.

Kirby C.J., Moore J. and Commissioner Winter. After discussing the claim by the employers the judgment said:

'Allowing for the attractiveness of greater simplicity and predictability and appreciating the thoughtful arguments put by [the employers] we find ourselves unable to implement the employers' proposal, at any rate at the present time, particularly as it has not yet been successfully applied elsewhere.'

The judgment gave six reasons for rejecting the application and emphasized that they were interrelated and should not be treated separately.

Firstly, it had not been shown that the proposal could successfully be put into practice by the Commission. Nor was it established that any other country had successfully applied the principle that movements in wages and movements in productivity should move in consonance with each other at least generally or over any appreciable period of time. The role of the Commission was to prevent and settle industrial disputes, and the Act made the Commission neither an economic planning body nor a national commission dealing with all types of income or even all wages and salaries. The Commission was required to deal with such industrial disputes as were brought before it and was neither required nor allowed to do anything more, although it did not operate in a vacuum or ignore the economic consequences of its decisions.

Secondly, the proposal would be applied by the Commission in a community where there was no consideration of incomes overall and no overall authoritative control of prices as applied in the writings on which the employers relied. While not underestimating the importance of wages and salaries in the national economy, the application of the proposal to wages and salaries only was another reason for declining, at least at this stage, to attempt to apply the employers' proposal. It might be important, however, to note that different considerations might well apply if the Commission's work was performed in a setting in which there was an overall policy both as to incomes of all types and as to prices.

Thirdly, the Commission not only did not fix all incomes but did not even fix all wages and salaries. Accordingly even if it would, it could not cause the theory to work in Australia in the way suggested by the employers. Federal awards covered only some forty-two per cent of male employees and thirty-one per cent of female employees. In New South Wales, Queensland and Western Australia the basic wage under State awards was different from the Federal basic wage. Margins were not always the same in State as distinct from Federal awards, and moreover there was a considerable proportion of the work force not covered by awards at all. It was an important factor that the Commission did not and could not fix all wages and salaries, and this would be a very real obstacle to the implementation of the employers' proposal.

Fourthly, there were technical problems involved in deciding on the method of determining a measure of productivity and of choosing between award rates or average weekly earnings as the base from which to start to apply the proposed formula, each of which would for the purposes of this decision involve inaccuracies and each would produce a different result. Considering the statistical information presently available and the fact that there was no agreement or demonstrably sound argument as to which particular figures should be used, the Commission should not give effect to the employers' proposition.

Fifthly, the application of the proposed formula in the way suggested by the employers to a total wage would reduce the flexibility of wage fixation and in particular of wage fixation by the Commission. It was considered that the introduction of the employers' proposal would if anything diminish the likelihood of work value cases and would probably tend to detract from the valuable work at present being done by individual members of the Commission in individual industries.

Sixthly and finally, the Commission considered it should not allow a theoretical consideration to interfere with the rectification of what it considered to be an inequitable situation which required correction, however the original inequity might have arisen. The implementation of the employers' theory could prevent the Commission increasing wages even when in the view of the Commission the wages would not be just and reasonable unless increased.

Considering some of the non-economic arguments put forward by the employers, the judgment said that it was perhaps vital that the basic wage or something very like it should have come into being and have been retained in Australia. It might be that if a national wage were to be introduced afresh at this time it might not be similar to the basic wage. But the basic wage became a national phenomenon and the real problem was whether that phenomenon still remained of value in the field of national wage fixation. The Commission did not think that in the present circumstances or at the present time a case for the abolition of the basic wage had been made out.

Kirby *C.J.*, Moore *J.* and Commissioner Winter were of the view that the fact that the basic wage might not be an actual paid wage was of no great significance in these proceedings.

They were attracted to the suggestion that since the unions had used similar economic arguments for the fixation of both wage and margins, it would be more logical and tidier to require these arguments to be applied at the same time to a total wage. However, this overlooked the function and duty of the Commission to prevent and settle industrial disputes, in which tidiness might have to give way to more important considerations. The parties were in fundamental disagreement on the issue of a total wage and there would have to be more cogent reasons than tidiness before the Commission would approve the drastic change sought by the employers.

The employers submitted that as soon as the Commission increased the basic wage that fact by itself created a 'legacy claim' for marginal increases. The real truth of the matter was that unions based their claims for both basic wage and marginal increases on the same economic grounds and therefore inevitably there must be a similarity between such margins cases and basic wage cases. It was at least as likely as not that increases in the basic wage had an effect in delaying and moderating marginal claims and not in increasing and accentuating them.

The Commission could in each case coming before it create a wage which had no basic wage element, but it thought that at the very least the question of the abolition of the basic wage must be seen against a background of Parliamentary recognition and perhaps even approval of its continued existence.

The judgment rejected the application in the knowledge that the Commission did not consider cases of national importance in isolation. It had been the practice of the Commission when dealing with such cases to bear in mind other decisions of the Commission given in other cases of national importance, and this was a practice which would continue.

Gallagher J. In his judgment *Gallagher J.* stated that, in short, the employers' claim was that the basic wage was an anachronism and that it should give way to modern methods of fixation and the time had arrived for its abolition. The unions had stressed the importance of the basic wage particularly to lower paid workers and argued that its abolition had never been contemplated.

The basic wage for adult males was described as 'that wage or that part of a wage, which is just and reasonable for an adult male, without regard to any circumstances pertaining to the work upon which or the industry in which he is employed'. For highly remunerated employees the wage element as thus described might be of little significance, but while throughout the length and breadth of Australia there might not be one employee on the basic wage there were many thousands whose marginal element when compared with the basic wage was insignificant.

Irrespective of the nature of his work and the conditions under which it was performed an employee was entitled to have included in his wage a monetary sum aimed 'at the highest living standard for the wage earner which the community can afford'. It was right that there should exist a separate wage element which was just and reasonable without regard to any circumstances pertaining to the work upon which or the industry in which a person was employed.

Gallagher J. concluded:

'There may exist grounds for further consideration of present methods of marginal fixation particularly the system which can have the effect of creating widespread percentage increases almost simultaneously and without regard for the nature of the work or the conditions under which it is done but the case for the retention of the basic wage is beyond argument. The application should be refused'.

Nimmo J. In a separate judgment *Nimmo J.* stated that the basic wage remained a factor of great importance in the minds of wage earners. There were large numbers of wage earners who received relatively small payments in addition to the basic wage, and the closer their wages were to the basic wage the greater the significance it had for them. Although there appeared to be a measure of truth in most of the reasons the employers submitted to support the change, even if they were wholly true they would not justify that change, nor if the change occurred would it produce the results they claimed for it.

Nimmo J. then enumerated his reasons, which are summarized as follows. (a) The concept of the basic wage had existed for more than fifty years and was now a well accepted and fundamental feature of the nation's industrial, social and economic life, which it had served well. (b) In view of the effective way in which the present system had served the nation, it should not be changed upon the application of the employers against the strong opposition of the unions, and against the wish of the Commonwealth Government. (c) In view of (b) above the change sought would be more likely to increase than reduce the number of industrial disputes in the community. (d) The employers claimed that while the Commission stated that its decisions on margins in Metal Trades Awards should not be automatically applied to other awards, this in many cases did happen. This submission would be more in point in a case involving only the fixation of margins, and submissions of that nature did not justify so drastic a remedy as the abolition of the basic wage. (e) The Act showed that Parliament intended that a dispute as important as a basic wage dispute should be determined by the Commission in Presidential Session, but a total wage dispute which would be as at least as important would not, as the Act now stood, be heard in Presidential Session. The Commission should hesitate before introducing new procedures which would produce this result. (f) It was true that there were disadvantages in the present system but there were advantages as well, not the least of them being its flexibility. *Nimmo J.* was not convinced that the disadvantages of the present system outweighed its advantages or that the suggested new system would not have just as many disadvantages of the same magnitude.

National Wage Cases of 1965

Hearing in these cases commenced on 2 March 1965 before Kirby *C.J.*, Gallagher, Moore, Sweeney and *Nimmo J.J.*, of the Commonwealth Conciliation and Arbitration Commission. Claims by the employers and the trade unions were heard concurrently.

The employers' claim (Part A) was for the abolition of the concepts of the basic wage and margins, and the introduction into the Metal Trades Award of an obligation to pay a total wage made up of the sum of the amounts expressed in terms of the basic wage and a margin, plus an amount equivalent to one per cent of such sum. The employers also asked (Part B) that, in respect of the ensuing twelve months, the level of the basic wage and the level of margins, in so far as the latter is determined upon general economic grounds, should be decided simultaneously. It was open to the Commission under Part B of these claims to decide whether there should be an increase in (a) the basic wage element alone; (b) the marginal element alone; or (c) both the basic wage and marginal elements, to whatever extent in respect of each element the Commission deemed proper.

The trade unions sought new basic wage rates incorporating increases proportionate to the rises in the Consumer Price Index. For the Six Capital Cities basic wage the increase claimed was 12s. (\$1.20) a week for adult males.

The Commission announced its decision on 29 June 1965, when three separate judgments were handed down—a joint judgment by Gallagher, Sweeney and *Nimmo J.J.*, and separate judgments by Kirby *C.J.* and by Moore *J.* In accordance with the opinion of the majority (namely, that of Gallagher, Sweeney and *Nimmo J.J.*), the order of the Commission was to the effect:

- (a) Part A of the employers' application was refused;
- (b) With regard to Part B of the employers' application—
 - (i) there would be no alteration in the basic wage,
 - (ii) with effect from the first pay-period commencing on or after 1 July 1965 each margin in Clause 4 of the Metal Trades Award was increased by an amount equal to 1½ per cent of the sum of the Six Capital Cities basic wage and that margin;
- (c) the application of the unions for an increase in the basic wage was refused.

The majority judgment anticipated that, subject to the question of capacity of a particular industry and the question of those margins which had already been increased on general economic grounds (since 1963), the increases awarded would be speedily reflected throughout the awards of the Commission.

Further details will be included in the next issue of this Year Book.

Commonwealth basic wage rates operative

The following table shows the movements in the Commonwealth basic wage rates for each State capital city and for the six capitals during the period 1939 to 1964.

COMMONWEALTH BASIC WAGE: WEEKLY RATES, ADULT MALES(a)
STATE CAPITAL CITIES, SEPTEMBER 1939 TO JUNE 1964

(\$)

Date operative(b)	Sydney	Mel- bourne	Brisbane	Adelaide	Perth	Hobart	Six capitals
September 1939 . . .	8.10	8.10	7.60	7.80	7.70	7.70	7.90

(a) Rates prescribed by the Commonwealth Conciliation and Arbitration Commission (before 30 June 1956 the Commonwealth Court of Conciliation and Arbitration). Rates include prosperity loadings, where applicable.
(b) Rates operative from the beginning of the first pay-period commencing in the month shown or commencing on or after the date shown. (c) From December 1950 the basic wage rates for adult females have been 75 per cent of the rates for adult males. (d) Automatic adjustment discontinued (see page 365).

A table showing Commonwealth basic wage rates from 1923 to 1964 was published in the Appendix to *Labour Report* No. 51.

Basic wage rates, Australian Territories

In the Northern Territory there are two basic wages operating, one in respect of areas north of the 20th parallel of South Latitude, generally referred to as the 'Darwin' rate, and the other in respect of areas south of that parallel and extending down to the 26th parallel (the 'Port Augusta' rate). The basic wage rates payable as from the beginning of the first pay-period commencing on or after 19 June 1964 were: 'Darwin' rate, adult males £16 7s. (\$32.70), adult females £12 5s. (\$24.50); 'Port Augusta' rate, adult males £15 14s. (\$31.40), adult females £11 15s. 6d. (\$23.55). In addition to these rates, special loadings of 10s. (\$1) to the 'Darwin' and 7s. (70c) to the 'Port Augusta' adult male basic wages have been provided in a number of awards.

In the Australian Capital Territory the rates payable as from the beginning of the first pay-period commencing on or after 19 June 1964 were £15 10s. (\$31.00) for adult males and £11 12s. 6d. (\$23.25) for adult females.

Further details of basic wage rates in the Northern Territory and the Australian Capital Territory may be found in *Labour Report* No. 51, (pages 131-5 and in Section IX of the Appendix).

Basic wage rates for females

Labour Report No. 51, page 130, contains an account of the fixation of minimum rates and basic wages for adult females by the Commonwealth Court of Conciliation and Arbitration. At the end of the 1949-50 Basic Wage Inquiry the Commonwealth Court of Conciliation and Arbitration, by a majority decision, fixed the basic weekly wage for adult females at 75 per cent of the corresponding male rate from the beginning of the first pay-period commencing in December 1950. This percentage has continued to be prescribed in subsequent inquiries.

State basic wages—New South Wales

The first determination under the New South Wales Industrial Arbitration Act of a standard 'living' wage for adult male employees was made on 16 February 1914, when the Court of Industrial Arbitration fixed the living wage at £2 8s. (\$4.80) a week for adult males in the metropolitan area. A Board of Trade, established in 1918, with power to determine the 'living' wage for adult male and female employees in the State, made numerous declarations from 1918 to 1925, but ceased to function after the Industrial Arbitration (Amendment) Act, 1926 transferred its powers, as from 15 April 1926, to the Industrial Commission of New South Wales.

The adult male rate was determined on the family unit of a man, wife and two children from 1914 to 1925; a man and wife only in 1927, with family allowances for dependent children; and a man, wife and one child in 1929, with family allowances for other dependent children. However, with the adoption in 1937 of the Commonwealth basic wage, the identification of a specified family unit with the basic wage disappeared.

A State scheme of supplementing wages by child endowment became operative in New South Wales from July 1927, and continued until superseded by the Commonwealth Government scheme in July 1941. A brief account of the main features of the New South Wales system was given in Year Book No. 37, pages 485-6.

From 1937 to October 1955 the State basic wage for Sydney was the same as the Commonwealth basic wage for Sydney. Beginning from the first pay-period in November 1955, by amendment to the Industrial Arbitration Act, the basic wage was automatically adjusted each quarter in accordance with movements in retail price index numbers. (Automatic adjustments to Commonwealth basic wages were discontinued in September 1953—see page 365.) In October 1964 the Act was amended to delete provision for automatic adjustment to the State basic wage, and to provide that the Commonwealth basic wage for Sydney should in future apply in State awards and industrial agreements, to operate from the beginning of the first pay-period which commenced on or after 19 June 1964.

The Industrial Arbitration (Female Rates) Amendment Act, 1958 defined the basic wage for adult females as being 75 per cent of the adult male rate. It also provided that by January 1963 for male and female employees performing work of the same or like nature and of equal value the same basic wage and secondary wage might be prescribed by the Industrial Commission or a Conciliation Committee.

A table showing State basic wage rates for Sydney for adult males and adult females from 1914 to 1964 was published in the Appendix to *Labour Report* No. 51, 1964. Current rates are published in the monthly bulletin *Wage Rates and Earnings*. The rates payable from 19 June 1964 were £15 15s. (\$31.50) for adult males and £11 16s. (\$23.60) for adult females. For further particulars of the history of State basic wages see earlier issues of the Year Book or *Labour Report*.

Victoria

There is no provision in Victorian industrial legislation for the declaration of a State basic wage. Wages Boards constituted for each industry group or calling from representatives of employers and employees, with an independent chairman, determine the minimum rate of wage to be paid in that industry or calling. In general these Boards have adopted a basic wage in determining the rate of wage to be paid.

Wages Boards in the past have generally adopted Commonwealth basic wage rates. In 1934 Wages Boards were given discretionary power to include in their determinations appropriate provisions of relevant Commonwealth Awards; in 1937 Wages Boards were compelled to adopt such provisions of Commonwealth Awards. In 1937 Wages Boards were also given power to adjust wage rates, 'with the variation from time to time of the cost of living as indicated by such retail price index numbers published by the Commonwealth Statistician as the Wages Board considers appropriate'. The Wages Boards thus adopted the basic wages declared by the Commonwealth Court of Conciliation and Arbitration and followed that Court's system of adjusting the basic wage in accordance with variations in retail price index numbers.

After the Commonwealth Court of Conciliation and Arbitration discontinued the system of automatic adjustment of the Commonwealth basic wage in September 1953, a number of Wages Boards met in November 1953, and deleted references to these adjustments. However, an amendment to the Factories and Shops Act in November 1953 required Wages Boards to provide for the automatic adjustment of wage rates in accordance with variations in retail price index numbers.

In October 1956 an amendment to the Labour and Industry Act (which had superseded the Factories and Shops Act in 1954) deleted the automatic adjustment provision and directed Wages Boards in determining wage rates to take into consideration relevant awards of, or agreements certified by, the Commonwealth Conciliation and Arbitration Commission. The last automatic quarterly adjustment of the basic wage was payable as from the beginning of the first pay-period in August 1956. Following the judgment of the Commonwealth Conciliation

and Arbitration Commission in the 1959 Basic Wage Inquiry, Wages Boards met in June and July 1959, and varied their determinations by incorporating the new Commonwealth rates. Since then the increases in basic wage rates granted by the Commonwealth Conciliation and Arbitration Commission have been adopted by Wages Boards. The rates for Melbourne, payable from 19 June 1964, were £15 7s. (\$30.70) a week for adult males and £11 10s. (\$23.00) for adult females.

A table showing, for the period November 1953 to June 1964, the basic wage rates for adult males and females adopted by most Wages Boards was published in the Appendix to *Labour Report* No. 51, 1964. Current rates are published in the monthly bulletin *Wage Rates and Earnings*.

Queensland

The first formal declaration of a basic wage, £4 5s. (\$8.50) for adult males, by an industrial tribunal in Queensland operated from 1 March 1921. Prior to this declaration the rate of £3 17s. (\$7.70) a week for adult males had been generally recognized in awards as the 'basic' or 'living' wage.

'*The Industrial Conciliation and Arbitration Act of 1929*' established an Industrial Court and provided that the Court could make declarations as to the basic wage and standard hours. This Act as subsequently amended was repealed by '*The Industrial Conciliation and Arbitration Act of 1961*', which established, in addition to the Industrial Court, an Industrial Conciliation and Arbitration Commission. The Act provides that any basic wage declared must at least maintain an employee, his wife and family of three children in a fair and average standard of comfort.

The amendment to the Act in 1961 provided that the full bench of the Commission, consisting of not less than three Commissioners, might make declarations as to the basic wage and standard hours of work. The Act also provided that all persons interested must be given an opportunity to be heard before any general declaration as to the basic wage could be made.

Following an inquiry, the Commission, in a decision in May 1961, increased the adult male basic wage by 4s. (40c) a week, which was approximately the amount of the increase indicated by the Consumer Price Index for March quarter 1961. In November 1961 the Commission refused an application by employer organizations for a declaration of a general ruling that 'in future the basic wage for males and/or females shall not be reviewed merely by reason of any change in the Consumer Price Index at intervals of less than twelve months'.

The Commission in December 1962 rejected an application by unions for increases of £1 4s. (\$2.40) in the adult male basic wage and 18s. (\$1.80) in the adult female basic wage.

In 1963 the Commission, after an inquiry, increased the basic wage by 2s. (20c) a week for adult males and by 1s. 6d. (15c) a week for adult females from 6 May 1963. Following hearing of four applications by unions to alter the basic wage, the Commission in 1964 unanimously increased the basic wage by 14s. (\$1.40) to £15 (\$30) a week for adult males. The increase took effect on and from 13 July 1964.

In a declaration on 23 September 1964 the Commission after an inquiry refused to increase the basic wage, despite movement in the Consumer Price Index for the June quarter 1964 which would have justified an increase of 2s. (20c), on grounds that such an increase would constitute a very ineffective addition to the wages of employees.

The Commission in December 1964 granted basic wage increases of 6s. (60c) and 4s. 6d. (45c) a week for adult males and adult females respectively which had been claimed by unions. Commenting on employer associations' claims, the Commission stated that, although the Commonwealth basic wage determined the State basic wage in all States except Queensland and Western Australia, the Commission had never fixed the State basic wage only in relation to the basic wage in other States or the Commonwealth basic wage, and could therefore see no reason why a decision should be made at this time to withhold a hearing for review pending the review of the Commonwealth basic wage.

Trade unions applied in January 1965 for a further increase in the basic wage consequent upon the upward movement in the Consumer Price Index since the last declaration. Following the hearing of unions' claims, the Commission increased the adult male wage by 3s. (30c) a week and the adult female wage by 2s. 6d. (25c) a week, effective as from 29 March 1965. In its judgment the Commission stated that it had been decided as a matter of policy that in the future it did not propose to deal with an application to vary the basic wage solely because of a change in the Consumer Price Index unless such a change warranted an alteration of 4s. (40c) or more in the basic wage for adult males.

In July 1965 trade unions applied to the Commission to vary the basic wage on the grounds that recent rises in the Consumer Price Index warranted an increase of more than 4s. (40c) a week in the basic wage. In its judgment of 2 September 1965 a majority of the Commission rejected the unions claim for 6s. (60c) per week increase, but granted an increase of 5s. (50c) per week, effective from 20 September 1965. As a matter of policy the Commission further decided not to review the basic wage again before 1 July 1966.

The rates payable in the Southern Division (Eastern District) from 20 September 1965 were £15 14s. (\$31.40) for adult males and £11 15s. 6d. (\$23.55) for adult females. In addition to the basic wage for the Southern Division (Eastern District), which includes Brisbane, adult males in other areas receive district allowances. As from 2 February 1959 the allowances have been: Southern Division (Western District) 10s. 6d. (\$1.05), Mackay Division 9s. (90c), Northern Division (Eastern District) 10s. 6d. (\$1.05), Northern Division (Western District) £1 12s. 6d. (\$3.25). The allowances for adult females are not less than 75 per cent of those for adult males. In the Appendix to *Labour Report* No. 51 a table was published showing adult male and adult female basic wage rates payable in the Southern Division (Eastern District) from 1 March 1921 to 20 September 1965. Current rates are published in the monthly bulletin *Wage Rates and Earnings*.

South Australia

The Industrial Code, 1920–1965 provides that the Board of Industry shall after public inquiry declare the 'living wages' to be paid to adult male and adult female employees. The Board has power also to fix different rates to be paid in defined areas. The family unit was not specifically defined in the Code, but the South Australian Industrial Court in 1920 decided that the average employee in respect of whom the living wage was to be declared was a man with a wife and three children. However, the concept of a family unit disappeared with the adoption of basic wage rates declared by the Commonwealth Court of Conciliation and Arbitration (*see below*). The first declaration by the Board of Industry became operative from 4 August 1921 when the living wage for adult male employees in the metropolitan area was determined at £3 19s. 6d. (\$7.95) a week.

Following the 'interim' increase in the 'needs' basic wage of the Commonwealth Court of Conciliation and Arbitration, announced on 13 December 1946, the South Australian Government made a provision in the Economic Stability Act, 1946 for the declaration by the Governor of a living wage based on the Commonwealth basic wage for Adelaide. This action was taken because the Board of Industry had made a determination on 5 September 1946, and under the Industrial Code was unable to make a further determination for six months.

The Industrial Code Amendment Act, 1949 made provision for the quarterly adjustment of the living wage in accordance with the variations in the Commonwealth basic wage for Adelaide. In effect, this made the State living wage and the Commonwealth basic wage for adult males equal from the beginning of the first pay-period commencing in February 1950. The prescribed adjustment to the female living wage was seven-twelfths of that made to the Commonwealth male basic wage. The Board of Industry retained power to amend the living wage, but any new living wage was to be adjusted quarterly as above.

Following the decision of the Commonwealth Court of Conciliation and Arbitration in the 1949–50 Basic Wage Inquiry, the South Australian Industrial Code was amended to provide for declarations of the living wage by proclamations to prevent unjustifiable differences between the State and Commonwealth rates of wage. By proclamation dated 30 November 1950 the South Australian living wage in the metropolitan area was made identical with the December 1950 rates fixed by the Commonwealth Court of Conciliation and Arbitration for the metropolitan area of South Australia. The female basic wage, which had been approximately 55 per cent of the male basic wage, was increased to 75 per cent of the corresponding male rate.

When the Commonwealth Court of Conciliation and Arbitration discontinued quarterly adjustments to Commonwealth basic wages in September 1953, the South Australian living wage also ceased to be varied quarterly, and since that time it has remained the same as the Commonwealth basic wage for Adelaide. Following the Commonwealth basic wage inquiries in 1956 and subsequent years, increases were made to the South Australian living wages by proclamation. The rates operative from 22 June 1964 were \$15 3s. (\$30.30) for adult males and \$11 7s. (\$22.70) for adult females.

A table showing adult male and adult female basic wage rates for the whole State (with the exception of Whyalla and nearby area) from 1921 to June 1964 will be found in Section X of the Appendix to *Labour Report* No. 51. Current rates are published in the monthly bulletin *Wage Rates and Earnings*.

Western Australia

Prior to the amendment made in 1963, the *Industrial Arbitration Act*, 1912–1961 provided that the Court of Arbitration could determine and declare a basic wage at any time on its own motion and must do so when requested by a majority of industrial unions or by the Western Australian Employers' Federation, with the limitation that no new determinations should be made within twelve months of the previous inquiry.

The term 'basic wage' was defined in the Act as 'a wage which the Court considers to be just and reasonable for the average worker to whom it applies'. In determining what was just and reasonable, the Court had to take into account not only the 'needs of an average worker', but also

the 'economic capacity of industry' and any other matters it deemed relevant. The Act provided that the Court of Arbitration (or the Commission since 1964) could make adjustments to the basic wage each quarter, if the statement supplied by the State Government Statistician showing retail price index numbers and monetary equivalents in terms of the State basic wages indicated that there has been a variation of 1s. (10c) or more a week compared with the previous quarter. These adjustments generally apply from the dates of declaration.

The first declaration of the basic wage by the Court of Arbitration, after the authority to fix one was vested in the Court in 1925, operated from 1 July 1926. The family unit was not specifically defined in the Act, but it has been the practice of the Court to take as a basis for its calculations a man, his wife and two dependent children. The principal inquiries into the basic wage have been those of 1938, 1947, 1950, 1951 and 1964. For details of the inquiries 1937 to 1950 see earlier issues of the Year Book.

In December 1951 the basic wage for adult females became 65 per cent of the corresponding male rate. In January 1960 this proportion was increased to 75 per cent. In each case the margins for females were reduced or deleted to offset the increase in the female basic wage.

Amendments to the Industrial Arbitration Act passed in 1963 became effective on 1 February 1964. The Act provided that the fixation and adjustment of the basic wage would now be dealt with by the Commission in Court Session (three Commissioners) instead of the former Court of Arbitration. In April 1964 the Commission in exercising its discretionary powers, unanimously increased the basic wage for adult males by 2s. 8d. (27c) a week for the metropolitan area and the rest of the South-West land division and 2s. 7d. (26c) a week for the Goldfields area and all other parts of the State.

The Commission on 22 July 1964 began a General Inquiry following union submissions for an increase of £2 12s. (\$5.20) in the basic wage for adult males. On 22 September the Commission announced its decision that the basic wage for the whole of the State would be £15 8s. (\$30.80) for adult males, with appropriate rates for females, juniors and apprentices. This decision abolished the differential rates applying to different areas of the State which had operated since 1931. Subsequently the Commission reduced the industry allowance in the goldmining industry awards from 30s. (\$3) to 22s. 6d. (\$2.25) a week. Further increases in the State basic wage were made in October 1964, April 1965, July 1965, November 1965 and January 1966, following the Commission's examination of movements in the Consumer Price Index.

The rates payable in the metropolitan area as from 25 January 1966 were £16 3s. 9d. (\$32.38) for adult males and £12 2s. 10d. (\$24.28) for adult females. A table showing the Western Australian State basic wage for the Perth Metropolitan Area, from 1926 to 16 November 1965, will be found in Section X of the Appendix to *Labour Report* No. 51. Current rates are published in the monthly bulletin *Wage Rates and Earnings*.

Tasmania

A State basic wage is not declared in Tasmania. Under the *Wages Board Act* 1920 as amended (to 1964) Wages Boards are constituted for a number of industries from representatives of employers and employees, with an independent chairman (who is common to all Wages Boards), with power to determine the minimum rates of wage payable in each industry. Until February 1956 these Boards generally adopted the basic wages of the Commonwealth Court of Conciliation and Arbitration in determining the rates of wage to be paid.

Wages Boards have power to adjust their wage rates in accordance with variations in the cost of living as indicated by retail price index numbers published by the Commonwealth Statistician. When the Commonwealth Court discontinued the system of automatic adjustments of the basic wage in September 1953, Wages Boards met to consider this matter. By early December 1953 all Wages Boards had met and deleted the automatic adjustment clause from determinations and cancelled the adjustment increases payable from November 1953.

Automatic quarterly adjustments in accordance with movements in retail price index numbers were re-introduced by Wages Boards in February 1956, and continued in May and August 1956.

The majority of Wages Boards suspended automatic quarterly adjustments after the August 1956 adjustment, and basic wage rates remained unchanged until July 1959, when Commonwealth basic wages were adopted. In January 1961 Wages Boards adopted the basic wage for Hobart as the uniform rate applicable throughout the State. Following the decision of the Commonwealth Conciliation and Arbitration Commission in July 1961 to increase the basic wage, Wages Boards met during July and incorporated the new Commonwealth rates in their determinations. During 1962 a number of Wages Boards met and varied their determinations by making provision for the automatic adjustment of the basic wage to conform to any change in the basic wage determined from time to time in awards of the Commonwealth Conciliation and Arbitration Commission. In June 1964, following the increase of 20s. (\$2) in the Commonwealth basic wage for adult males, the rates became £15 14s. (\$31.40) and £11 15s. 6d. (\$23.55) for adult males and adult females respectively.

A table was published in the Appendix to *Labour Report* No. 51, 1964 showing Hobart basic wage rates for adult males and adult females generally adopted by Wages Boards in the period February 1956 to June 1964. Current rates are published in the monthly bulletin *Wage Rates and Earnings*.

State basic wage rates

The 'basic' wage rates of State industrial tribunals operative in January 1966 are summarized in the following table. State basic wage rates for adult males and adult females for a long period of years are shown in the Appendix to *Labour Report* No. 51, 1964. Current figures are published in the monthly bulletin *Wage Rates and Earnings*.

STATE BASIC WAGES: WEEKLY RATES OPERATIVE
JANUARY 1966
(\$)

State and locality	Date of operation	Males	Females
New South Wales	19.6.64	31.50	23.60

(a) Differential rates abolished as from 22 September 1964.

Wage margins

Wage margins have been defined as 'minimum amounts awarded above the basic wage to particular classifications of employees for the features attaching to their work which justify payments above the basic wage, whether those features are the skill or experience required for the performance of that work, its particularly laborious nature, or the disabilities attached to its performance'.

Marginal rates of wage are determined by Commonwealth and State industrial tribunals. In the Commonwealth jurisdiction prior to 1954 the Commonwealth Court of Conciliation and Arbitration had not made any general determination in respect of wage margins, but general principles of marginal rate fixation had been enunciated by the Court in the Engineers Case of 1924, the Merchant Service Guild Case in 1942 and the Printing Trades Case of 1947. Major determinations affecting margins were made in 1954, 1959, 1963 and 1965. The decisions of the Commonwealth Court and later the Commonwealth Conciliation and Arbitration Commission have generally been followed by State industrial tribunals in the determination of margins in State awards.

A summary of the judgments in the 1954, 1959 and 1963 Margins Cases is given in the following paragraphs. A summary of the judgment in the National Wage Cases of 1965 is given on page 374.

Metal Trades Case, 1954

In a judgment delivered on 5 November 1954 the Commonwealth Court of Conciliation and Arbitration made an order re-assessing the marginal structure in the Metal Trades Award by, in general, raising the current amount of the margin to two and a half times the amount of the margin that had been current in 1937. However, in cases in which the result of that calculation produced an amount less than the existing margin, the existing margin was to remain

unaltered. In effect, this decision increased the margins of a fitter from 52s. (\$5.20) a week to 75s. (\$7.50) a week, increased similarly margins of other skilled occupations, and made no increase in margins of what may generally be described as the unskilled or only slightly skilled occupations under the Metal Trades Award. The new rates operated from the beginning of the first pay-period commencing on or after 13 December 1954.

At the end of its judgment the Court stated that, while its decision in this case related immediately to one particular industry, it was expected to afford general guidance to all authorities operating under the Conciliation and Arbitration Act, or under other legislation which provided for tribunals having power to make references, or being subject to appeal, to the Court, where the wage or salary may properly be regarded as containing a margin. The Court added observations for the guidance of these and of other tribunals 'which may regard decisions of this Court as of persuasive authority'. Further details were published in *Labour Report* No. 46, 1958, pages 101-8.

Margins Cases, 1959

On 25 August 1959 the Commonwealth Conciliation and Arbitration Commission began considering a number of applications for changes in margins referred to it from the appropriate Commissioner. Applications had been made by various employee organizations for increased margins in Parts I. and II. of the Metal Trades Award, Part II. of the Aircraft Industry Award, the Bank Officials' Award, and the Gold and Metalliferous Mining Award. An application by employers sought to reduce marginal rates in the Metal Trades Award. The Commission decided to hear all these matters together, permitting the applicant unions in respect of Part II. of the Metal Trades and Aircraft Industry Awards, and the Bank Officials' Award to ask first for an interim increase. A summary of the principal decisions of the Commission is given in the following paragraphs. Further details, including extracts from the judgment, were published in Year Book No. 47, pages 455-9.

Metal Trades Award, Part I. The employee organizations claimed an increase in the margin for the fitter, as set out in the Metal Trades Award, 1952 (i.e. the award as it existed prior to the Metal Trades Case, 1954—see above), from 52s. (\$5.20) to 134s. (\$13.40) a week and an increase of 157 per cent in the margins for other classifications. The employers counter-claimed for a reduction in margins of 15s. (\$1.50) a week.

The Commonwealth Government intervened, and not only submitted statistical material and an analysis of the economic situation, but also assisted the Commission with an exposition of various factors proper to be taken into account in the fixation of margins. In particular, the Commonwealth emphasized the desirability of flexibility in the workings of the arbitration system.

In its judgment, delivered on 27 November 1959, the Commission rejected the employers' application to reduce margins, and made an order re-assessing the marginal structure in the Metal Trades Award by increasing the existing margins by 28 per cent, the amount of the increase being taken to the nearest 6d. (5c). The new margins applied from the beginning of the first full pay-period commencing in December 1959. The effect of this decision was to increase the margin of the fitter from 75s. (\$7.50) to 96s. (\$9.60) a week and that for the process worker from 22s. (\$2.20) to 28s. (\$2.80).

Other awards. The Commission also granted margin increases to workers covered by the Gold and Metalliferous Mining Award, the Metal Trades Award, Part II., the Aircraft Industry Award, Part II., and the Bank Officials' Award. Details of these increases were published in previous issues of the Year Book. Other awards of the Commission were subsequently amended in accordance with the decision in the Metal Trades Award, Part I.

Margins Case, 1963

Following the conclusion of the 1963 Basic Wage Case, two benches of the Commonwealth Conciliation and Arbitration Commission on 5 February 1963 commenced to hear applications by metal trades unions for increased margins and for three weeks annual leave (see page 383). The two benches sat jointly for the convenience of the parties involved and were constituted as follows: margins case—Kirby *C.J.* (President), Moore and Ashburner *JJ* and Commissioner Apsey; three weeks' annual leave case—Kirby *C.J.* (President), Moore *J.* (Deputy President) and Commissioner Apsey.

The unions' claim on margins was that the Commission restore, on an assessed basic wage, the relativities within the Metal Trades Award established in 1947 by what is known as the second Mooney formula. Taking £15 7s. (\$30.70) as the assessed basic wage (calculated as the 1947 basic wage adjusted to price changes since 1947) and applying the percentage 48.6, which the fitter's margin was of the 1947 basic wage, the union arrived at a new marginal rate of £7 9s.

(\$14.90) for a fitter, an increase of £2 13s. (\$5.30) on the current margin. This claim of £7 9s. (\$14.90) was 2.86 times the 1947 fitter's margin, and hence the unions sought to have all 1947 margins multiplied by 2.86. This claim was opposed by the employers, who asked that any consideration of marginal increases be deferred for an unspecified time.

The Commonwealth Government intervened in the public interest and made submissions as to the approach to be adopted to marginal fixation generally and to marginal fixation in the metal trades industry, as well as supplying information to the Commission about the economic situation and the Government's assessment of it. The Commonwealth Government neither opposed nor supported the claim. The South Australian Government neither opposed nor supported the claim for marginal increases, but did oppose any change in present relativities. The Queensland Government neither opposed nor supported the application for increases in margins, but submitted certain information regarding possible effects in Queensland. The Commission declined to allow submissions aimed at showing what might happen in State awards if State industrial tribunals followed their past practices with respect to the Commission's decisions.

The Commission concluded its consideration of the indicators with these words:

‘ . . . our own investigation of the economy [is] that both from a long term point of view and also from a short term point of view the prospects for the economy may be reasonably regarded with optimism. On a consideration of the whole of the indicators, we conclude that national capacity has increased and that it is likely to continue to increase in the foreseeable future. In these circumstances we are confident that the economy is able to sustain the increase of ten per cent in margins in this award which we consider is otherwise justified.’

At the request of the parties the Commission took the unusual course of making a pronouncement early in the proceedings as to the extent to which the decision in the metal trades case should be used in other industries. The Commission re-affirmed what was said in the 1959 metal trades judgment that the decision would relate to the Metal Trades Award only, although they realized that the margin of the fitter had been used as a standard for other awards. In the present case the Commission stated it was not intended that the decision should be applied automatically outside the metal trades.

The order of the Commission was that the margins for adult males in the Metal Trades Award be increased by ten per cent, the increase to be calculated to the nearest shilling (10c) and to operate from the beginning of the first pay-period to commence on and after 22 April 1963.

National Wage Cases of 1965

The effect on margins of the judgment of the Commission in these cases was as follows. With effect from the first pay-period commencing on or after 1 July 1965 each margin in the Metal Trades Award was increased by an amount equal to $1\frac{1}{2}$ per cent of the sum of the six Capital Cities basic wage and that margin. For further details see page 374.

Annual leave

The judgment delivered by the Commonwealth Court of Conciliation and Arbitration in the Commercial Printing Case of 1936, granting one week's annual leave with full pay to employees in the industry, has usually been regarded as the first statement in the Commonwealth jurisdiction of the principles involved in deciding whether or not annual leave should be awarded. Over a period of time annual leave was introduced industry by industry when and if the Judge responsible for the industry considered it proper.

In 1945 the question of annual leave was before the Court, and the Court in its judgment set out what it considered to be the principles to be applied in all applications for an extension of the annual leave period to fourteen days. Alteration of particular awards was left to the discretion of the single judge who heard the application.

Further inquiries into annual leave were conducted in 1960, 1962 and 1963, and the decisions in these inquiries are set out in the following paragraphs. Annual leave for employees under the jurisdiction of State awards, etc. is subject to separate determination, and a brief summary is given on pages 383-4. At present the majority of employees in Australia receive three weeks' annual leave at least.

Commonwealth

Since 1960, three inquiries have been held following union claims to increase paid annual leave from two to three weeks in Commonwealth Awards. A report on these cases is given on page 373.

Three Weeks' Annual Leave Inquiry, 1960. In its judgment in this inquiry the Commonwealth Conciliation and Arbitration Commission stated that it had decided to reject the unions' application for three weeks' annual leave. Part of the conclusion of the Commission stated:

'We accordingly dismiss this application because of the present economic situation. In doing so we would again repeat what we have said earlier in this judgment that we do not consider that employees under Federal awards have yet achieved all the leisure which they should achieve. We have done no more than decide that the present is not an appropriate time in which to award an extra week's paid leave.'

For further particulars see Year Book No. 49, pages 511-513.

Three Weeks' Annual Leave Inquiry, 1962. In its judgment in this inquiry the Commonwealth Conciliation and Arbitration Commission made the following announcement:

'We have given careful consideration to the submissions which have been made to us in this case. The applicant unions have asked that we consider the claim a general one, the result to be applied to Federal awards generally. This must result in greater caution on our part in deciding whether or not the application should succeed. Our present intention is that an increase to three weeks' annual leave generally in secondary industry, subject to special cases, should be granted as soon as we are satisfied that the economy is in a position to cope with the effects of such an increase. However, there are two aspects of the economic arguments about which we are troubled and about which we consider it too early to make any firm decision. These are, firstly, whether our internal economy has sufficiently recovered from the recession of late 1961 and, if so, what is the likely rate of its recovery in the future and, secondly, the effect on Australia of success or failure of the application of the United Kingdom to enter the European Common Market. There have been developments in relation to the latter question since the hearing which both emphasise its importance and the lack of accurate information as to what is going to happen and the short and long term effect on Australia's economy.

'So that we may be able better to assess these matters we have decided to adjourn these proceedings until a date in February or March next which will be announced later when the parties and interveners will be able to make such further submissions on these two matters as they may desire.'

Further details were published in Year Book No. 50, page 496.

Three Weeks' Annual Leave Inquiry, 1963. On 5 February 1963 the Commonwealth Conciliation and Arbitration Commission, constituted by Kirby C.J. (President), Moore J. (Deputy President) and Commissioner Apsley, commenced hearing the application, which had been adjourned from May 1962, to vary the Metal Trades Award to provide three weeks' paid annual leave, instead of two (see above).

The hearing was continued during March and April 1963 jointly with the Metal Trades Margins case hearing (see pages 381-2), and in its judgment on 18 April 1963 the Commission said it would implement its intention of granting three weeks' annual leave generally in secondary industry, subject to special cases. The Commission announced that the Metal Trades Award would be varied to produce the following result: 'A period of 21 consecutive days' leave shall be allowed to employees who have completed twelve months continuous service by or after 30th November 1963.' Provision for proportionate leave for periods of employment of one month and over was made in respect of employment after 1 June 1963. The application of the new standard of annual leave for secondary industry in other Federal awards would be a matter for individual Commissioners upon proper application being made for variations.

In a decision given on 22 October 1963 the Commission, comprising Wright J. (Acting President), Moore J. (Deputy President) and Commissioner Winter, unanimously rejected an application by employers' organizations firstly for permission, at the employers' discretion, to require employees to take their annual leave in two periods of seven and fourteen days respectively, and secondly that the time after accrual within which leave must be taken should be extended to nine months when leave is taken in one period and twelve months when leave is taken in more than one period.

New South Wales

Employees in New South Wales in private industry, other than those covered by Federal awards, were granted three weeks annual leave by an amendment to the Annual Holidays Act passed in 1958. In 1964 the State Government granted its employees four weeks annual leave effective from 1 January 1964. From 29 September 1964 annual holiday pay for employees covered by provisions of the Annual Holidays Act has been calculated on the basis of the employee's current weekly earnings instead of current award rates.

Victoria

Following the decision of the Commonwealth Conciliation and Arbitration Commission in April 1963 (see page 383) individual Wages Boards commenced to alter provisions of their determinations to grant employees an extra week leave. By September 1963 the majority of Boards had included three weeks annual leave in their determinations.

In December 1963 the Industrial Appeals Court upheld an appeal by employees against the determination of the Photographic Goods Board which stated that an employer may direct the workers or group of workers to take their annual leave in two periods of two consecutive weeks and one week respectively.

Queensland

In June 1963 the Full Bench of the Industrial Conciliation and Arbitration Commission granted an extra week's annual leave to employees with twelve months continuous service on or after 30 November 1963. This move implemented a previous decision of the Commission in which it was decided, as a matter of policy, to grant increased leave to persons already enjoying two weeks leave.

The decision applied to day workers and non-continuous shift workers receiving two weeks leave; continuous shift workers receiving three weeks leave; and day workers and shift workers receiving additional leave in lieu of extra payment for working on statutory holidays. The order became effective as from 1 June 1963.

The terms of the decision of the Commonwealth Conciliation and Arbitration Commission, as handed down in April 1963 (see page 383) were to apply to awards of the Industrial Conciliation and Arbitration Commission of Queensland with the exception that, in the State awards, *pro rata* payment for leave not taken at the termination of employment was to be expressed at hours per month. The decision did not apply to employees in primary industry—apart from the sugar industry—or those in western areas. Extra leave for these employees was granted as a result of separate applications.

South Australia

The Full Bench of the South Australian Industrial Court in May 1963 announced an increased standard of annual leave in the State, adopting three weeks as the standard as fixed by the Commonwealth Conciliation and Arbitration Commission (see page 383).

The Court, as a general indication as to its attitude, expressed the view that annual leave should be taken at a time fixed either by agreement or, if this is not possible, at a time fixed by the employer. The leave should be allowed in two parts and one part must be of at least two weeks duration. These, however, were factors which could vary from award to award and their determination would depend on the needs of the particular industry.

Western Australia

Following a general inquiry concerning Annual Leave and Public Holidays the Court of Arbitration in June 1963 adopted three weeks as the new standard for the normal period of annual leave in State awards, with four weeks for seven-day shift workers. The date of operation was the same as that decided by the Commonwealth Conciliation and Arbitration Commission (see page 383). Existing awards and agreements which already provided annual leave in excess of the Court's standard were to be examined separately to ascertain whether special circumstances existed to justify leave greater than the normal standard. The standard number of public holidays was retained at ten a year.

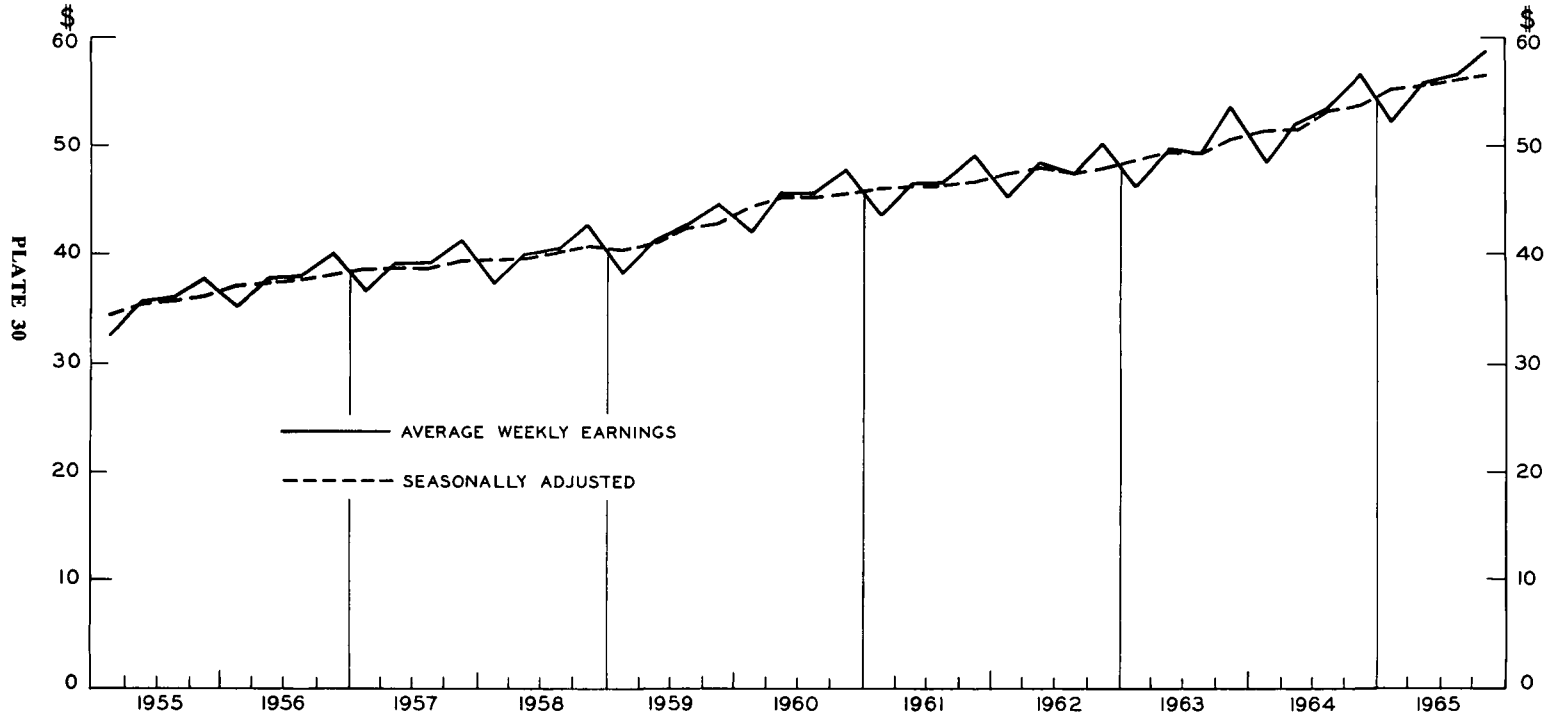

In November 1963 the Court refused an application by employers for the right to split the annual leave into two parts since it decided to follow the decision of most other State tribunals and allow the additional leave in conformity with conditions similar to those prescribed by the Commonwealth Conciliation and Arbitration Commission. The right to split the leave would be allowed by the Court only in exceptional circumstances, unless all the parties concerned agreed to the inclusion of such a provision.

Tasmania

Following an amendment to the Wages Board Act in 1961, Wages Boards were permitted to grant employees up to three weeks paid recreational leave. Between June 1962 and early 1963 determinations of Wages Boards were amended to provide for three weeks annual leave for employees, to operate from 1 January 1963.

Generally, most Wages Boards adopted provisions to enable leave to be taken in one consecutive period within six months from the end of the preceding year of employment or, if the employer and employee agree, in two separate periods, the lesser of which shall be of not less than seven consecutive days.

WORKING DAYS LOST - INDUSTRY GROUPS

PLATE 31

Long service leave

Paid long service leave, i.e. leave granted to workers who remain with the one employer over an extended period of time, has been included in the provisions of industrial legislation in the several States and a brief summary is given in the following paragraphs. The position in regard to Commonwealth award employees is also summarized. In all cases the transfer of ownership of a business does not constitute a break in continuity of service with the same employer.

Commonwealth

Until May 1964 the Commonwealth Conciliation and Arbitration Commission had not included provision for long service leave in its awards, and had refrained from determining disputes relating to this subject except in the case of the Northern Territory and the Australian Capital Territory (*see below*). Consequently until then the provisions of the various State Acts relating to long service leave applied to workers covered by awards of the Commonwealth. The applicability of long service leave provisions under State law to workers under Commonwealth awards had been tested before the High Court and the Privy Council, and such provisions had been held to be valid.

The Commission's position was set out in its decision, issued on 16 September 1959, regarding disputes on the inclusion, in the Graphic Arts (Interim) Award, 1957, of provisions for long service leave. It stated that it should refrain until further order from determining the disputes so far as they concerned long service leave and that if in future the Commission decided that long service leave on a national basis was desirable, it was open to proceed to the making of an award on the matter.

Following the hearing of claims for long service leave provisions by employers in the graphic arts and metal trades industries in August 1963, the Full Bench of the Commonwealth Conciliation and Arbitration Commission on 11 May 1964 announced its decision that long service leave entitlement would be calculated on the basis of thirteen weeks for twenty years of unbroken employment, in respect of employment before 11 May 1964 (or, in New South Wales, 1 April 1963), and at the rate of thirteen weeks for fifteen years in respect of service after 11 May 1964 (or, in New South Wales, 1 April 1963). After further periods of ten years, employees would be entitled to an additional *pro rata* period of leave calculated on the same basis. Those employees who completed an unbroken contract of employment of ten years but less than fifteen years, and whose employment was terminated by death or by the employer for any cause other than serious and wilful misconduct, or by the employee on account of illness, incapacity or domestic or other pressing necessity, would be entitled to *pro rata* payment. The rate of payment while on leave would be current award rates which would be subject to basic wage changes and marginal adjustments which occurred during the leave period.

Following applications by employers in the metal trades and printing industries, the Full Bench of the Commission in a judgment delivered on 23 December 1964 extended the provisions of the awards to cover non-unionist employees. The decision rejected the unions' argument that the Commission had no jurisdiction to make long service leave awards binding in respect of non-unionists. The Commission, in a separate decision, varied the provisions of the awards so that an employer would not be required to grant an employee long service leave until the entitlement equalled thirteen weeks for the first period of entitlement and eight and two-thirds weeks in respect of any subsequent period of entitlement. These variations would be effective on and from 1 December 1964.

Australian Territories. Long service leave codes for employees covered by Northern Territory and Australian Capital Territory awards were originally prescribed on 4 December 1961 by the Commonwealth Conciliation and Arbitration Commission in Presidential Session. The Commission decided that employees should be granted three months long service leave after twenty years service with one employer, even if part of this service was outside the Territory. In addition, the Australian Capital Territory code prescribed that employees presently employed might 'go back for a period of 25 years in regard to the calculation of their present or future entitlement of long service leave'. In December 1964 the Commission amended the majority of awards covering employees in the Northern Territory and the Australian Capital Territory by granting long service leave on the basis of thirteen weeks after fifteen years service.

Stevedoring Industry. The *Stevedoring Industry Act 1962*, which came into force on 19 November 1962, amended the *Stevedoring Industry Act 1956-1961* by extending the eligibility and qualifying periods of the long service leave provisions of the Act. No changes were made to the entitlement for long service leave, which remained at thirteen weeks after twenty years qualifying service and six and a half weeks for each subsequent ten years qualifying service.

New South Wales

Long service leave was first introduced for the majority of workers by the Industrial Arbitration Act, 1951, which provided such leave for workers under State awards. This Act was replaced by the Long Service Leave Act, 1955, which extended the benefits to any worker within

the State. An amendment to the Act in April 1963 provided for three months long service leave for fifteen years continuous service with the same employer and proportionate amounts on this basis after a minimum of five years service. The Long Service Leave (Metalliferous Mining Industry) Act, 1963 conferred on certain workers in the metalliferous mining industry the right to three months long service leave after ten years service. This Act operated from 1 January 1964.

Victoria

The *Factories and Shops (Long Service Leave) Act* 1953 first provided for long service leave for workers in Victoria, the provisions of this Act being subsequently incorporated in the Labour and Industry Act. Leave provided for was thirteen weeks for twenty years continuous service with the same employer. Contributions by employers to retirement schemes were to be taken into consideration in dealing with exemptions from the Act.

An amendment to the Labour and Industry Act in December 1964 granted employees, from 1 January 1965, thirteen weeks leave after fifteen years continuous service. Workers who terminated their employment after ten years but less than the qualifying fifteen years would be able to obtain a *pro rata* entitlement subject to the existing special conditions of the Act. Following amendment to the Public Service Act in 1964, public servants became entitled to four and a half months leave after fifteen years service instead of six months after twenty years.

Queensland

In 1952 The Industrial Conciliation and Arbitration Acts were amended to include long service leave provisions for employees within the jurisdiction of the Industrial Court, and the Acts were amended again in 1955 to extend these provisions to any employee in respect of whose employment there was not in force an award or industrial agreement under the Act and to seasonal workers in sugar mills and meat works. Leave provided for was thirteen weeks for twenty years continuous service with the same employer.

An amendment to The Industrial Conciliation and Arbitration Acts was passed and assented to in December 1964 granting employees long service leave of thirteen weeks after fifteen years continuous service. The amendment retained *pro rata* leave entitlement after ten years service and operated on and from 11 May 1964.

South Australia

The Long Service Leave Act, passed in 1957, exempts a large number of industrial agreements, with wide industrial coverage, from specifying long service leave for employees. For those covered by the Act leave provided for is seven days in the eighth and in each subsequent year of continuous service. Contributions by employers to retirement schemes can be taken into consideration in dealing with exemptions under the Act.

On 24 December 1964 long service leave of thirteen weeks after fifteen years continuous service in respect of employment on and from 11 May 1964 was granted to shop assistants by agreement between employers and employees.

Western Australia

The Long Service Leave Act was passed in 1958, but it did not apply to employees whose conditions of work were regulated under the Western Australian Industrial Arbitration Act. The Court of Arbitration of Western Australia in an order dated 1 April 1958 incorporated in most of the awards and agreements within its jurisdiction provisions similar to those in the Long Service Leave Act. Leave provided for was thirteen weeks for twenty years continuous service with the same employer. Contributions by employers to retirement schemes can be taken into consideration in dealing with exemptions from the Act.

In September 1964 the industrial Commission began to amend the long service leave provisions of its awards and industrial agreements to provide for thirteen weeks leave after fifteen years service on or from 1 October 1964. *Pro rata* entitlement would accrue after ten years service. The *Long Service Leave Amendment Act (No. 2), 1964*, introduced in October 1964, was in the same terms as the amendments made by the Commission to the various awards and agreements.

Tasmania

The Long Service Leave Act, which was passed in 1956, provided for thirteen weeks leave for twenty years continuous service with the same employer. Contributions by employers to retirement schemes could be taken into consideration in dealing with exemptions from the Act. An amendment to the Long Service Leave Act, assented to on 17 December 1964, granted thirteen weeks leave after fifteen years continuous service. The amendment operated on and from 11 May 1964.

INDUSTRIAL DISPUTES

Detailed information regarding industrial disputes involving stoppage of work is given in the *Labour Report*. A table showing statistics of industrial disputes for each year from 1913 is contained in the Appendix to *Labour Report* No. 51, 1964.

Particulars of all disputes in progress during the year are included in the annual figures, whether the dispute commenced in that year or was in progress at the beginning of the year. Consequently, details of 'the number of disputes' and 'workers involved' in disputes which commenced in any year, and were still in progress during the following year, are included in the figures for both years.

The following table gives, for Australia as a whole, particulars of industrial disputes which were in progress during 1965, classified according to industry groups.

INDUSTRIAL DISPUTES(a): INDUSTRY GROUPS, AUSTRALIA, 1965

Industry group	Number	Workers involved			Working days lost	Estimated loss in wages (\$'000)
		Directly	Indirectly (b)	Total		
Agriculture, grazing, etc.
Coal mining	208	35,198	..	35,198	50,993	493.9
Other mining and quarrying	7	2,275	1,543	3,818	122,230	1,571.9
Engineering, metals, vehicles, etc.	326	76,987	5,485	82,472	122,596	1,129.9
Textiles, clothing and footwear	5	1,453	715	2,168	7,330	60.4
Food, drink and tobacco	119	34,802	6,119	40,921	109,200	992.8
Sawmilling, furniture, etc.	1	143	..	143	70	0.7
Paper, printing, etc.	20	3,028	..	3,028	6,869	67.5
Other manufacturing	83	13,953	363	14,316	50,516	514.9

Other industries(c)	35	14,253	46	14,299	28,122	255.8
Total	1,346	460,234	14,810	475,044	815,869	8,198.5

(a) Refers only to disputes involving a stoppage of work of 10 man-days or more. (b) Persons thrown out of work at the establishments where the stoppages occurred but not themselves parties to the dispute. (c) Includes communication; Finance and property; Wholesale and retail trade; Public authority (n.e.i.); and Community and business services.

A graph showing, for the years 1953 to 1965, the working days lost as a result of industrial disputes in the main industry groups is shown on plate 31.

The following table gives particulars of the number of industrial disputes in each State and Territory, together with the number of workers involved and the losses in working days and wages caused by disputes which were current during each of the years 1961 to 1965.

INDUSTRIAL DISPUTES(a): STATES AND TERRITORIES, 1961 TO 1965

State or Territory	Year	Number	Workers involved			Working days lost	Estimated loss in wages (\$'000)
			Directly	Indirectly (b)	Total		
New South Wales	1961	529	131,661	5,295	136,956	318,629	2,632.2
	1962	752	195,344	13,623	208,967	303,400	2,571.7
	1963	817	214,643	4,333	218,976	307,440	2,629.5
	1964	828	221,510	7,566	229,076	320,568	2,996.2
	1965	832	244,900	6,156	251,056	367,942	3,479.1

	1965	1,346	460,234	14,810	475,044	815,869	8,198.5

(a) Refers only to disputes involving a stoppage of work of 10 man-days or more. (b) Persons thrown out of work at the establishments where the stoppages occurred but not themselves parties to the dispute.

Duration of disputes

The duration of each industrial dispute involving a loss of work, i.e. the time between the cessation and resumption of work, has been calculated in working days, exclusive of Saturdays, Sundays and holidays, except where the establishment involved carries on a continuous process (e.g. metal smelting and cement manufacture).

The following table shows, for the year 1965, industrial disputes in coal mining, stevedoring and other industries classified according to duration.

INDUSTRIAL DISPUTES(a): DURATION, BY INDUSTRY GROUP, AUSTRALIA, 1965

Duration (working days)	Number	Workers involved(b)		Working days lost		Estimated loss in wages (\$'000)
		Number	Proportion of total (per cent)	Number	Proportion of total (per cent)	
COAL MINING						
1 day and less	132	19,078	54.2	13,940	27.3	135.0
2 days and more than 1 day	45	11,172	31.7	20,408	40.0	202.4
3 days and more than 2 days	19	3,017	8.6	8,385	16.5	78.5
Over 3 days and less than 5 days	9	1,390	4.0	5,471	10.7	52.4
5 days and less than 10 days	3	541	1.5	2,789	5.5	25.6
10 days and less than 20 days
20 days and less than 40 days
40 days and over
<i>Total.</i>	208	35,198	100.0	50,993	100.0	493.9
STEVEDORING						
1 day and less	159	133,319	73.3	66,697	42.9	679.4
2 days and more than 1 day	69	40,723	22.4	56,333	36.2	578.0
3 days and more than 2 days	29	3,390	1.9	8,213	5.3	84.0
Over 3 days and less than 5 days	10	747	0.4	2,816	1.8	28.7

3 days and more than 2 days	107	27,307	10.6	64,215	10.5	578.2
Over 3 days and less than 5 days	83	16,349	6.3	61,603	10.1	576.7
5 days and less than 10 days	78	12,880	5.0	86,360	14.2	843.7
10 days and less than 20 days	24	6,249	2.4	68,532	11.3	674.2
20 days and less than 40 days	2	28	..	635	0.1	5.5
40 days and over	2	2,039	0.8	132,349	21.7	1,650.8
<i>Total.</i>	867	257,989	100.0	609,356	100.0	6,112.8
ALL INDUSTRIES						
1 day and less	686	286,550	60.3	177,752	21.8	1,712.9
2 days and more than 1 day	290	110,879	23.4	175,288	21.5	1,665.6
3 days and more than 2 days	155	33,714	7.1	80,813	9.9	740.8
Over 3 days and less than 5 days	102	18,486	3.9	69,890	8.6	657.8
5 days and less than 10 days	85	17,099	3.6	110,610	13.5	1,090.9
10 days and less than 20 days	24	6,249	1.3	68,532	8.4	674.2
20 days and less than 40 days	2	28	..	635	0.1	5.5
40 days and over	2	2,039	0.4	132,349	16.2	1,650.8
<i>Grand total</i>	1,346	475,044	100.0	815,869	100.0	8,198.5

(a) Refers only to disputes involving a stoppage of work of 10 man-days or more. (b) Includes workers indirectly involved. See footnote (b) to table on page 388.

Causes of disputes

Stoppages are analysed in three separate groups, 'Coal mining', 'Stevedoring', and 'Other industries'. Causes have been grouped under four main headings: (1) Wages, hours and leave; (2) Physical working conditions and managerial policy; (3) Trade unionism; (4) Other causes. The first group is restricted to disputes involving general principles relating to wages, hours and leave; minor questions regarding the claims to pay or leave by individual employees are included under managerial policy. The second group comprises disputes regarding physical working conditions and general questions of managerial policy, including disciplinary action, the promotion of employees, the employment of particular individuals, personal disagreements between employees and supervisory staff, and disputes arising from the computation of wages, leave, etc., in individual cases. The third group includes stoppages over employment of non-unionists, inter-union and intra-union disputes, disputes over recognition of union activities, and sympathy stoppages in support of employees in another industry. The last group comprises disputes by way of protest against situations not arising from the usual relationship of employer and employee, e.g. political matters, and cases (occurring mainly in the coal mining industry) where the cause of the stoppage is not officially made known to the management.

The following tables show particulars of industrial disputes classified according to cause, in three industry groups for 1965, and according to cause for the years 1961 to 1965.

INDUSTRIAL DISPUTES(a): CAUSES, BY INDUSTRY GROUP, AUSTRALIA, 1965

Cause of dispute	Coal mining	Stevedoring	Other industries	All industries
Number of disputes—				
Wages, hours and leave	5	46	375	426

By filling places of workers on strike or locked out
By closing down establishment permanently
By resumption without negotiation	39,786	65,272	387,535	492,593
By other methods
Total	50,993	155,520	607,680	814,193

(a) Refers only to disputes involving a stoppage of work of 10 man-days or more. (b) Includes workers indirectly involved. See note (b) to table on page 388. (c) Differences between these figures and corresponding figures in tables on pages 387-91 are due to disputes which were incomplete at the end of the year.

WORKERS' COMPENSATION LEGISLATION

A conspectus of the principal provisions of Workers' Compensation Acts in force in Australia at 31 December 1964 is included in *Labour Report* No. 51, pages 215-23.

LABOUR ORGANIZATIONS
Labour organizations in Australia

The figures shown in this section are prepared from a special collection of membership of labour organizations at 31 December each year. The affairs of single unions are not disclosed in the published results and this has assisted in securing complete information. The Bureau is indebted to the secretaries of trade unions for their co-operation in supplying information. More detailed statistics appear in the annual *Labour Report*.

Trade Unions

The trade unions in Australia are very diverse in character, and range from the small independent association to the large interstate organization, which, in its turn, may be a branch of an international body. Broadly speaking, there are four distinct classes of labour organizations: (a) the local independent; (b) the State; (c) the interstate; and (d) the Australasian or international; but a number of variations occur from each of these classes. The schemes of organization of interstate or federated unions vary greatly in character. In some unions the State organizations are bound together under a system of unification with centralized control,

while in others the State units are practically independent and self-governing, the federal bond being loose and existing only for one or two specified purposes. Statistics relating to interstate or federated trade unions are shown in the table on page 394.

Returns showing membership by States and Territories at 31 December each year are obtained for all trade unions and employee organizations. The following table shows the position at the end of each of the years 1963 to 1965.

TRADE UNIONS: NUMBER AND MEMBERSHIP, STATES AND TERRITORIES, 1963 TO 1965

State or Territory	Number of separate unions			Number of members ('000)			Percentage increase in membership(a)		
	1963	1964	1965	1963	1964	1965	1963	1964	1965
New South Wales	227	223	222	782.7	795.1	825.8	2.2	1.6	3.9
Victoria	154	157	156	514.9	525.8	537.8	3.4	2.1	2.3
Queensland	137	141	140	339.4	350.6	353.3	1.6	3.3	0.8
South Australia	134	137	137	161.1	166.9	174.0	0.4	3.6	4.2
Western Australia	154	154	155	129.0	135.1	139.2	6.5	4.7	3.1
Tasmania	103	111	109	57.4	59.9	63.4	0.4	4.2	6.0
Northern Territory(b)	30	30	33	3.3	3.4	3.5	(b)	(b)	(b)
Australian Capital Territory(b)	54	59	64	15.7	18.0	19.1	(b)	(b)	(b)
Australia	(c) 347	(c) 340	(c) 334	2,003.5	2,054.8	2,116.2	2.7	2.6	3.0

(a) On preceding year. (b) In some cases union members in the Territories associated with State organizations are reported under the heading of that State. The annual figures reflect, in part, progressive improvements to more accurate reporting, and the comparability of totals for the Territories is affected by this aspect. (c) Without interstate duplication. See below.

In the preceding table, under the heading 'Number of separate unions', a union reporting members in a State or Territory is counted as one union within that State or Territory. The figures do not add to the Australian total (shown in the last line) because a union represented in more than one State or Territory is included in the figure for each State or Territory in which it is represented, but is counted only once in the Australian total.

A table showing the number and membership of trade unions in Australia for the years 1912 to 1964 is included in Appendix XII to *Labour Report* No. 51.

The following table shows the number of unions and members thereof in Australia at the end of each of the years 1963 to 1965 classified according to industry group.

TRADE UNIONS: INDUSTRY GROUPS, AUSTRALIA, 1963 TO 1965

Industry group	1963		1964		1965	
	No. of unions (a)	No. of members	No. of unions (a)	No. of members	No. of unions (a)	No. of members
Agriculture, grazing, etc.		'000		'000		'000
Mining and quarrying	3	60.8	3	63.3	3	63.9
Manufacturing—	12	35.0	12	35.2	12	35.9

(a) Without interstate duplication. See above. (b) Includes communication, municipal, etc. (c) Includes community and business services.

Number of Trade Union members and proportion of wage and salary earners. The following table shows the estimated percentages of wage and salary earners in employment who are members of trade unions. As estimates of wage and salary earners in employment do not include employees engaged in rural industry or in private domestic service, the percentages have been calculated on figures obtained by adding to the end of year estimates the number of employees in rural industry and in private domestic service recorded at the nearest available population census. For this reason, and also because the membership of trade unions includes some persons not in employment, the percentages shown in the table must be regarded as approximations.

TRADE UNIONS: NUMBER OF MEMBERS AND PROPORTION OF TOTAL WAGE AND SALARY EARNERS, AUSTRALIA, 1954 TO 1965

Year	Number of members ('000)			Proportion of total wage and salary earners ^(a) (Per cent)		
	Males	Females	Persons	Males	Females	Persons
1954 . . .	1,448.2	339.3	1,787.5	66	45	61
1961 . . .	1,521.9	372.7	1,894.6	63	41	57
1962 . . .	1,561.9	388.6	1,950.5	64	41	57
1963 . . .	1,588.5	415.0	2,003.5	62	42	57
1964 . . .	1,624.0	430.8	2,054.8	62	41	56
1965 . . .	1,667.2	449.0	2,116.2	62	41	56

(a) See text above.

Interstate or Federated Trade Unions. The following table gives particulars of the number and membership of interstate or federated trade unions in 1965.

INTERSTATE OR FEDERATED TRADE UNIONS^(a): AUSTRALIA, 1965

	Unions operating in—					Total
	2 States	3 States	4 States	5 States	6 States	
Number of unions . . .	10	4	21	35	73	143
„ „ members ('000) .	21.4	26.3	115.9	480.7	1,281.6	1,925.9

(a) Certain unions in this group have, in addition to branches in the States, branches in the Northern Territory or the Australian Capital Territory or both.

Organizations registered under the (Commonwealth) Conciliation and Arbitration Act

Under Part VIII. of the *Conciliation and Arbitration Act 1904-1965* any association of employers in an industry who have, or any employer who has, employed, on an average taken per month, not less than 100 employees during the six months preceding application for registration, and any association of not less than 100 employees in any industry, may be registered. However, the Public Service Arbitration Act provides that an association of less than 100 employees may be registered as an organization under the Conciliation and Arbitration Act if its members comprise at least three-fifths of all persons engaged in that industry in the Public Service. Such organizations are included in the figures shown below. Registered unions include both interstate associations and associations operating within one State only. Registration under Commonwealth legislation began in 1906. At the end of 1965 the number of employers' organizations registered under the provisions of the Act was 66. The number of unions registered at the end of 1965 was 155, with membership of 1,779,100, representing 84 per cent of the total membership of all trade unions in Australia. Lists of organizations of employees and of employers registered under this Act are contained in the *Industrial Information Bulletin*, Vol. 21, No. 1, January 1966 published by the Department of Labour and National Service.

Central Labour Organizations

Trades and Labour Councils. Delegate organizations, usually known as Trades Hall Councils or Labour Councils and consisting of representatives of a number of trade unions have been established in the capital cities and in a number of other centres in each State. In the centres where these councils exist most unions or local branches operating in the district are affiliated. The district councils obtain their finance by means of a *per capita* tax on members of affiliated unions. In States other than Western Australia the district councils are generally independent bodies, although provision usually exists in the rules of the central council in the capital city for the organization of district councils, or for their representation on the central council. In Western Australia there was until 1962 a unified system or organization with a central council and district councils within the framework of the Australian Labor Party. In 1962 this organization was abolished and a separate Trades and Labour Council, to have provincial councils, was established outside the political organization. At the end of 1963 only the central council (the Trades and Labour Council of Western Australia) was operating, but a number of provincial councils were established during 1964.

The following table shows, for each State and Territory, the number of trades and labour councils and the number of affiliated unions or branches of unions at the end of 1965. The figures for the number of unions do not necessarily represent separate unions, since the branches of a large union may be affiliated with the local trades councils in the several towns in which they are represented.

CENTRAL LABOUR ORGANIZATIONS: NUMBER, AND UNIONS AND BRANCH UNIONS AFFILIATED, STATES AND TERRITORIES, 1965

—	N.S.W	Vic.	Qld	S.A.	W.A. (a)	Tas.	N.T.	A.C.T.	Total
Number of councils . . .	12	9	13	6	4	5	..	1	50
Number of unions and branch unions affiliated .	347	282	179	150	164	138	..	27	1,287

(a) See explanation in text above.

As well as trades and labour councils there are councils organized on trade lines and composed of delegates from separate unions whose members' interests are closely connected by reason of their occupations. Delegate councils of bakers, bread carters and mill employees, or of unions connected directly or indirectly with the metal trades, or with the building trades, are examples of such organizations.

Australian Council of Trade Unions. A central labour organization, now called the Australian Council of Trade Unions, came into being during 1927. The Council was created to function on behalf of the trade unions of Australia, and was founded at an All-Australian Trade Union Congress held in Melbourne in May 1927. The A.C.T.U. consists of affiliated unions and affiliated Metropolitan and/or State Labour Councils and Provincial Councils. The Metropolitan or State Labour Council in each State is the State Branch of the A.C.T.U. and it has the right to appoint one representative to act on the executive of the Council. In addition to the representatives of the State Branches of the A.C.T.U., six delegates are elected by and from Congress, one from each of the following industry groups: Building, Food and distributive services, Manufacturing, Metal, Services, and Transport. To this executive are added the four officers, namely, President, two Vice-Presidents, and Secretary, who are elected by and from the Australian Congress of Trade Unions.

The ordinary meetings of Congress are held in alternate years. The 1965 Biennial Congress was held in September 1965, and was attended by 573 delegates from affiliated organizations, State branches of the A.C.T.U., and provincial councils. Special meetings of Congress are held whenever deemed advisable by decision of the executive, as approved by the majority of its branches, or by resolution of unions representing one-third of the total membership of the A.C.T.U.

The objectives of the A.C.T.U. are the socialization of industry, i.e. production, distribution and exchange, and the utilization of the resources of Australia for the benefit of the people—ensuring full employment, with rising standards of living, real security and full cultural opportunities for all. The methods to be adopted are: the closer organization of the workers by the transformation of the Australian trade union movement from the craft to an industrial basis, by grouping of unions in their respective industries and by the establishment of one union in each industry; the consolidation of the Australian labour movement with the object of unified control, administration, and action; the centralized control of industrial disputes; educational propaganda among unions; and political action to secure satisfactory working-class legislation.

The A.C.T.U. was the first interstate body in Australia with authority to deal with industrial matters of an interstate character affecting the trade union movement generally. It is also the body responsible for submitting to the Commonwealth Government the names of persons suitable for selection as the Australian workers' delegate to the annual International Labour Conference. All the major unions are affiliated with the A.C.T.U., with the exception of the largest, the Australian Workers' Union, which is itself virtually a central organization of branches catering in the main for employees in rural and construction industries.

International Labour Organisation

The International Labour Organisation (I.L.O.) was established on 11 April 1919 as an autonomous institution associated with the League of Nations. Its original constitution was adopted as Part XIII. of the Treaty of Versailles and formed part of other treaties of peace. During the years between its establishment and the outbreak of the 1939-45 War the I.L.O., with headquarters at Geneva, played a leading role in promoting the improvement of labour conditions throughout the world.

In 1940, in order to ensure that the I.L.O. should be able to continue to function freely, a working centre was established at Montreal, Canada. In 1946 the Organisation became the first of the specialized agencies of the United Nations. Under the terms of agreement the United Nations recognizes the I.L.O. as a specialized agency having responsibility in the field defined by its constitution, which embraces labour conditions, industrial relations, employment organizations, social security and other aspects of social policy. The Organisation has three basic parts. These are the International Labour Conference, its highest authority, which as a rule meets annually; the Governing Body, its executive council, which usually meets three times each year; and the International Labour Office, which provides the secretariat of the Organisation. The Conference is composed of delegations from the Member States of the Organisation. At the end of 1965 there were 115 Member States, each of which is entitled to be represented by four delegates—two government, one representing employers and one representing workers, together with their advisers. Each delegate speaks and votes independently, so that all points of view in each country are fully expressed. The Governing Body consists of the representatives of twenty-four governments and twelve employers' and twelve workers' representatives. Of the twenty-four government representatives, ten are from the ten countries of major industrial importance and fourteen are elected by the remaining governments. These latter fourteen government representatives and the twelve employers' and twelve workers' titular delegates and the deputy members of the three groups are elected by their groups at the Conference every three years. Particulars are given in *Labour Report* No. 51 of the proceedings of International Labour Conferences up to the 47th Session, held in Geneva in June 1964. For details of I.L.O. conventions ratified by Australia, see *Labour Report* No. 51, pages 235-6.

CHAPTER 13

OVERSEA TRANSACTIONS

This chapter includes the contents of the former chapter Overseas Trade (covering overseas trade and balance of payments) together with the material on overseas investment by private investors which has been transferred from the chapter Private Finance. Because of the limitations of space the statistics in the chapter are, in the main, restricted to summarized form. The half-yearly bulletin *The Balance of Payments* and the *Annual Bulletin of Overseas Investment* contain detailed information on these subjects. For details of imports and exports see the annual bulletins on *Overseas Trade* (preliminary and final), *Australian Exports*, and *Imports Cleared for Home Consumption*. Preliminary information is available in summary form in the statements *Balance of Payments*; *Quarterly Summary*; *Overseas Investment: Preliminary Estimates* (annual); *Australian Overseas Trade: Recorded Trade Excluding Bullion and Specie* (monthly); and *Overseas Trade: Imports by Commodity Divisions* (monthly). Current information is included in the *Quarterly Summary of Australian Statistics*, the *Monthly Review of Business Statistics*, the *Digest of Current Economic Statistics*, and in more detail in the *Monthly Bulletin of Overseas Trade Statistics*. There are also the following additional mimeographed statements: *Exports of Wool* (monthly), *Overseas Trade with Major Groups of Countries* (quarterly), and *Trade of Australia with Eastern Countries* (annually). Additional unpublished details of imports and exports can be supplied on request.

OVERSEAS TRADE

Constitutional provisions and legislation

Constitutional provisions

By the Commonwealth of Australia Constitution Act, section 51 (1), the power to make laws with respect to trade and commerce with other countries was conferred on the Commonwealth Parliament. Under section 86 of the Constitution, the collection and control of duties of customs and excise passed to the Executive Government of the Commonwealth on 1 January 1901. Other references to trade and commerce are contained in sections 87 to 95 of the Constitution (see pp. 17-18).

Commonwealth legislation

Commonwealth legislation affecting overseas trade includes: the Customs Act, the Customs Tariff, the Customs Tariff (Dumping and Subsidies) Act. The Customs Act is the administrative Act under which the Department of Customs and Excise operates. The Customs Tariff provides the statutory authority for imposing the actual rates of duty operative from time to time, while the Customs Tariff (Dumping and Subsidies) Act provides protection for Australian industry against various forms of unfair trading.

The Customs Tariff

The first Commonwealth Customs Tariff was introduced by Resolution on 8 October 1901, from which date uniform duties came into effect throughout Australia. The Australian Customs Tariff has been developed in conformity with the policy of protecting economic and efficient Australian industries and of granting preferential treatment to certain imports from countries of the Commonwealth. Duties are imposed on some goods, generally of a luxury nature, for revenue purposes. Customs collections are a major source of revenue, but in its protective character the tariff has an important influence on the Australian economy.

The present tariff provides for general and preferential rates of duty, and its structure is based on the 'Brussels Nomenclature' which has its origins in the Convention on Nomenclature for the Classification of Goods in Customs Tariffs, signed in Brussels on 15 December 1950. Australia has operated a 'Brussels-type' tariff since 1 July 1965.

Preferential rates. Preferential rates apply to goods the produce or manufacture of the United Kingdom and Ireland and to goods the produce or manufacture of Canada, New Zealand, Papua and New Guinea, and certain goods the produce or manufacture of certain specified countries, provided that such goods comply with the laws in force at the time affecting the grant of preference.

The following are the rules of origin for preference purposes.

'151.—(1.) For the purposes of this Act and the *Customs Tariff* 1965 (other than section nineteen of the last-mentioned Act), goods shall be treated as the produce of a country if they are unmanufactured raw products of the country.

(2.) For the purposes of this Act and the *Customs Tariff* 1965 (other than section nineteen of the last-mentioned Act), goods shall be treated as the manufacture of a country—

- (a) if the goods were wholly manufactured in the country from materials of one or more of the following classes:—
 - (i) unmanufactured raw products;
 - (ii) materials wholly manufactured in the country or in Australia, or in the country and in Australia; and
 - (iii) imported materials that the Minister has, in relation to the country, determined, by notice published in the *Gazette*, to be manufactured raw materials; or
- (b) if the goods were partly manufactured in the country, the process last performed in the manufacture of the goods was performed in the country and—
 - (i) not less than three-quarters, or, in a case where the country is New Zealand, one-half, of the factory or works cost of the goods is represented by the value of labour or materials, or of labour and materials, of the country or of the country and Australia;
 - (ii) in a case where the goods are goods of a class or kind not commercially manufactured in Australia, not less than one-quarter of the factory or works cost of the goods is represented by the value of labour or materials, or of labour and materials, of the country or of the country and Australia; or
 - (iii) in a case where the country is New Zealand, not less than three-quarters of the factory or works cost of the goods is represented by the value of labour or materials, or of labour and materials, of New Zealand and the United Kingdom or of New Zealand, Australia and the United Kingdom.

'151A.—(1.) For the purposes of this Act and the *Customs Tariff* 1965 (other than section nineteen of the last-mentioned Act), goods shall not be treated as the produce or manufacture of the United Kingdom, Canada, New Zealand, Ireland, Malawi, Southern Rhodesia, Zambia, the Territory of Papua or the Territory of New Guinea unless they have been shipped from that country to Australia and, except where the Collector is satisfied that the intended destination of the goods when originally shipped from that country was Australia, have not been transhipped.

(2.) The last preceding sub-section does not apply—

- (a) to goods the produce or manufacture of a country other than New Zealand that are imported into Australia from New Zealand; or
- (b) to goods the produce or manufacture of a country other than the Territory of Papua or the Territory of New Guinea that are imported into Australia from the Territory of Papua or the Territory of New Guinea.

(3.) For the purposes of sub-section (1.) of this section—

- (a) goods may be treated as having been shipped from the Territory of Papua or the Territory of New Guinea if they have been shipped from either of those territories; and
- (b) goods may be treated as having been shipped from Malawi, Southern Rhodesia or Zambia if they have been shipped from any of those countries or from Lourenco Marques or Beira in Mozambique.

General rates. General rates apply to goods from all countries which do not qualify for preferential rates of duty under a particular item.

By-law provisions. Customs By-laws and Ministerial Determinations are instruments made by the Minister for Customs and Excise, under the authority of Sections 271 to 273D of the Customs Act by which goods may be admitted free of duty or at rates of duty lower than those normally applicable. By-laws and determinations may only be made under a by-law item, which is a tariff item containing the words 'as prescribed by by-law'. Such an item sets out the by-law duty rates which will apply to goods only when such goods are included in a by-law or determination made under that item. By-law admission of goods is in general guided by the use to which the goods are to be put, e.g. the goods must be for a use which will assist economic or industrial development. A prerequisite for by-law admission is that suitably equivalent goods be not reasonably available from Australian production. A by-law covers goods by general description with no limit on quantity, and may be used by any importer of the goods. A determination covers a specific quantity of particular goods, and may be used only by the importer mentioned in the determination.

Primage duties. In addition to the ordinary duties of customs imposed by the Customs Tariff, *ad valorem* primage duties at rates of five per cent or ten per cent are charged on some goods according to the types of goods and origin thereof. Other goods are exempt from primage duty. Goods the produce or manufacture of New Zealand, Norfolk Island, Fiji, Cocos (Keeling) Islands, Christmas Island, Papua and New Guinea are exempt from primage duty.

Anti-dumping duties. The *Customs Tariff (Dumping and Subsidies) Act 1961* provides protection for Australian industry against various forms of unfair trading. Under this Act dumping duty may be imposed on goods that are sold to Australian importers at a price which is less than the normal value of the goods, where this causes or threatens material injury to an Australian industry. 'Normal value' under the Act means:

- (a) fair market value in the country of export;
- (b) price in the country of export to a third country;
- (c) fair market value in a third country; or
- (d) cost of production, plus f.o.b. charges, plus selling costs and profit.

Countervailing duty may be levied on goods in respect of which any subsidy, bounty, reduction; or remission of freight or other financial assistance has been, or is being, paid or granted directly or indirectly upon the production, manufacture, carriage or export of those goods. The amount of the countervailing duty in respect of any goods is a sum equal to the amount of the subsidy, bounty, reduction or remission of freight or other financial assistance.

Import controls—Customs (Import Licensing) Regulations

A comprehensive system of import licensing was introduced in Australia at the beginning of the second World War under the authority of the Customs (Import Licensing) Regulations. Following the gradual relaxation of the restrictions from the end of the War, import licensing was reimposed on 8 March 1952 and continued in force until 18 October 1962. From that date restrictions were removed from all commodities with the exception of some goods retained under control for reasons associated with the protection of Australian industry. Further information on import controls is contained in Year Book No. 51, page 492.

Export controls and incentives

Commodity control. Section 112 of the Customs Act provides that the Governor-General may, by regulation, prohibit the exportation of goods from Australia, and that this power may be exercised by: (a) prohibiting the exportation of goods absolutely; (b) prohibiting the exportation of goods to a specified place; and (c) prohibiting the exportation of goods unless prescribed conditions or restrictions are complied with. Goods subject to this export control are listed in the Customs (Prohibited Exports) Regulations.

Exchange control—Banking Act 1959–1965. As an integral part of the framework of exchange control, a control over goods exported from Australia is maintained under the provisions of Part III. of the Banking (Foreign Exchange) Regulations, to ensure that the full proceeds of such goods are received into the Australian banking system and that these proceeds are received in the currency and in the manner prescribed by the Reserve Bank of Australia. This action is complementary to that taken under other parts of the Banking (Foreign Exchange) Regulations and under Part IV. of the *Banking Act 1959* to control the movement out of Australia of capital in the form of securities, currency and gold.

Export licences are issued subject to terms and conditions specified in the Banking (Foreign Exchange) Regulations, and may be subject to such further terms and conditions as are determined, or may be free from terms and conditions. On the receipt in Australia by the Reserve Bank, or by a bank acting as agent for that Bank, of advice that the foreign currency has been paid to the Reserve Bank or to an agent of the Bank in payment for goods exported in accordance with a licence granted under the regulations, the Bank, or an agent of the Bank, pays the licensee, or such other person as is entitled to receive it, an amount in Australian currency equivalent to the foreign currency received. In addition to commercial transactions involving exports, movements of personal effects are also controlled. Persons leaving Australia for overseas are required to obtain licences to cover their bona fide baggage, personal effects and household effects in any individual case where the gold content thereof exceeds \$A250, or where jewellery and other articles of high intrinsic worth either exceed \$A2,000 in value or have not been the personal property of the passenger for at least twelve months.

Export incentives. The Commonwealth Government provides taxation concessions as financial incentives to export. A special income tax allowance for export market development expenditure is designed to encourage firms to incur promotion expenditure in advance of export sales and to assist exporters and potential exports to expand sales in the existing markets and to enter new overseas markets. The allowance is in the form of a special deduction equal and additional to the ordinary deduction allowable in respect of specified expenses allowable in determining

taxable income. Rebates of pay-roll tax are also granted to employers whose export sales of goods or property rights have increased above their average annual level in a base period. The rebate is available in the first place to employers who are producers for export, but a producer for export may issue an export certificate to an employer who has supplied components embodied in the final product.

Trade descriptions

The Commerce (Trade Descriptions) Act 1905–1950 gives power to require the application of a proper trade description to certain prescribed goods imported into or exported from Australia. Goods which must bear a prescribed trade description upon importation into Australia are specified in the Commerce (Imports) Regulations. As regards exports from Australia, marking requirements are prescribed in regulations issued under the Act and relating to specified export commodities.

Government authorities

Tariff Board

The Tariff Board Act 1921–1962 provides for the appointment of a Tariff Board consisting of eight members. Of these, two must, and three may, be members of the Commonwealth Public Service at the time of their appointment (or first appointments in the case of re-appointments). Members of the Board are appointed for terms of not less than one year and not more than five years. The purpose of the Tariff Board is to advise the Government on matters relating to the protection and encouragement of Australian industry.

The Minister of State for Trade and Industry is required to refer to the Board for inquiry and report the following matters: the necessity for new, increased, or reduced duties; the necessity for granting bounties and the effect of existing bounties; and any complaint that a manufacturer is taking undue advantage of the protection afforded him by the Tariff or by the restriction of the importation of any goods by charging unnecessarily high prices for his goods or acting in restraint of trade. In addition, the Minister may refer the following matters to the Tariff Board for inquiry and report: the general effect of the working of the Customs Tariff and the Excise Tariff; the fiscal and industrial effects of the Customs laws on the Commonwealth; the incidence between the rates of duty on raw materials and on finished or partly finished products; and other matters affecting the encouragement of primary and secondary industries in relation to the Tariff. The Minister of State for Customs and Excise may refer to the Tariff Board for inquiry and report the following matters: the classification of goods in the Customs Tariff or Excise Tariff and matters in connection with the interpretation of these Tariffs; the question of the value for duty of goods; whether goods not prescribed in departmental by-laws should be so prescribed; and any matters in respect of which action may be taken under the *Customs Tariff (Dumping and Subsidies) Act 1961–1965*.

Where a matter of the necessity for new or increased duties on any goods has been referred to the Board for inquiry and report, the Board may, in its report, recommend the restriction of the importation of those goods for such period as is specified in the report.

Inquiries conducted by the Board relating to a revision of the Tariff, a proposal for a bounty, a question under the Customs Tariff (Dumping and Subsidies) Act, or any complaint that a manufacturer is taking undue advantage of the protection afforded him by the Tariff or by the restriction of the importation of any goods, are held in public, and evidence in such inquiries is taken in public on oath, unless the Board accepts evidence as confidential or in the form of a written statement by a witness on oath. The Board is required to make available to the public the contents of any such written statement except any matter which it accepts as confidential.

Special Advisory Authority

The Minister for Trade and Industry may also request a Special Advisory Authority to inquire into cases where urgent action appears necessary to protect an Australian industry against import competition pending receipt and consideration of a full report by the Tariff Board. The Special Advisory Authority's report must be submitted to the Minister within thirty days of the making of the request. Temporary protection recommended by a Special Advisory Authority may be imposed, but may only operate for a period of up to three months after the date of receipt of the final report by the Tariff Board on the goods concerned.

Trade agreements

Multilateral—General Agreement on Tariffs and Trade

The General Agreement on Tariffs and Trade (G.A.T.T.), which came into force on 1 January 1948, is a multilateral trade treaty designed to facilitate trading relations between participating countries by reducing tariff and other barriers to the free interchange of goods. The Agreement provides a framework within which negotiations can be held to reduce barriers to trade, and a

structure for embodying the results of such negotiations in a legal instrument. Features of the Agreement are the schedules of tariff concessions participating countries have negotiated with each other, the application of most-favoured-nation treatment among the participants, the avoidance of trade discrimination, and a code of agreed commercial policy rules for international trading. Each participating country retains the right (a) to impose new duties for protective purposes, except in respect of commodities where rates of duty have been fixed in negotiations under the Agreement; (b) to impose import restrictions to protect the balance of payments; and (c) to take emergency action where any industry is endangered by reason of any obligation incurred under the Agreement.

There have been five main tariff negotiations under the provisions of the Agreement, and a number of smaller scale negotiations preceding the accession of individual countries. As a result the tariff rates for many items entering into world commerce have been reduced or bound against increase. Australia has obtained tariff concessions from individual countries on a number of her principal or potential exports to them, both as a result of direct negotiation by Australia and of negotiation by other countries. In the latter case the benefits occurred through the operation under the Agreement of the most-favoured-nation principle. A sixth series of tariff negotiations, the Kennedy Round, based on a plan for linear tariff cuts on all classes of products, including agricultural and primary products with a minimum of exceptions, and on the reduction of non-tariff barriers to trade, began in May 1964.

Increasing attention has been focussed in G.A.T.T. on specific trade and development problems of developing countries. In February 1965 a new Part IV of G.A.T.T., aimed at helping developing countries solve these problems, came into force on a *de facto* basis. The new Part IV gives a contractual and legal basis for commitments on individual and joint action by contracting parties, aimed at ensuring that the less-developed countries can increasingly find the means to raise standards of living and promote rapid economic development through participating in international trade and sustained growth of their export earnings.

Up to the end of March 1965 the contracting parties had held twenty-two sessions, nearly all in Geneva, to deal with matters arising from the administration of the Agreement. As a general rule the contracting parties meet once a year, although in a few instances they have met twice. In 1960 a Council of Representatives was established to undertake work, both of an urgent and of a routine character, between the regular sessions of the contracting parties. Some of the provisions of the Agreement were revised in 1954 and 1955. The revised Agreement contains tighter provisions on non-tariff barriers to trade, and allows more freedom for countries to revise individual tariff items which had been bound against an increase in tariff negotiations under the Agreement.

Since G.A.T.T. has not been accepted definitively by any country, the Agreement is at present being applied pursuant to a Protocol of Provisional Application. At the end of January 1966 sixty-seven countries, whose foreign trade represents about 80 per cent of the total volume of world trade, were full contracting parties to the Agreement, six had acceded provisionally, five countries applied the Agreement on a *de facto* basis, and two countries participated under special arrangements.

Bilateral agreements

The United Kingdom. The original United Kingdom and Australia Trade Agreement (Ottawa Agreement) was signed on 20 August 1932. The provisions and history of the agreement were published in Year Book No. 43, page 329. A new Trade Agreement designed to replace the original agreement and correct the imbalance in benefits which had emerged in the twenty-five years of its operation came into effect on 9 November 1956. Briefly this agreement preserves security for Australian exports in the United Kingdom market, but lowers the obligatory margins of preference which Australia extends to the United Kingdom. The agreement provides for re-negotiation after the initial five-year period, but by arrangement between the two Governments this re-negotiation has been postponed. In the meantime the agreement continues subject to six months notice of termination by either country. Further details for the 1956 Agreement may be obtained from Year Book No. 51, page 495.

Canada. The existing agreement between Australia and Canada came into force on 30 June 1960, replacing an agreement signed on 3 August 1931. The agreement provides for Australian goods to receive British Preferential Tariff rates, or better, upon entry into Canada, and for Canada to maintain margins of preference in favour of Australia on a range of commodities. The agreement specifies that Canadian goods, with some exceptions, shall receive the benefit of the British Preferential Tariff upon importation into Australia and that Australia shall maintain margins of preference in favour of Canada on a range of commodities. The agreement continues subject to six months notice.

New Zealand. The New Zealand-Australia Free Trade Agreement came into force on 1 January 1966. The agreement provides for free trade in certain scheduled goods. Provision is made for the addition of items to the schedule. The provision of the 1933 Trade Agreement between Australia and New Zealand continues in force as part of the Free Trade Agreement, except as superseded or modified by it.

Federation of Rhodesia and Nyasaland. A trade agreement was negotiated with the Federation in June 1955. (Australia's principal undertaking was to grant an exclusive tariff preference to the Federation on unmanufactured tobacco. The Federation accorded preferential tariff treatment on a wide range of Australian goods, including wheat and powdered and condensed milk.) The Federation was dissolved on 31 December 1963, but application of the Agreement was continued on a provisional basis between Australia and each of the three constituent territories Zambia (Northern Rhodesia), Rhodesia (Southern Rhodesia) and Malawi (Nyasaland).

Malaysia. A trade agreement with the then Federation of Malaya became effective in August 1958. Under the agreement Malaya undertook to protect Australian wheat and flour from dumped or subsidized competition and to extend to Australia any tariff preferences it accords. Australia guaranteed free entry for natural rubber so long as the Papua-New Guinea crop was absorbed, and assured the Federation that natural rubber would not be at a disadvantage compared with synthetic rubber in respect of tariff or import licensing treatment. The Agreement continues to apply between Australia and that portion of Malaysia known previously as the Federation of Malaya.

Japan. An Agreement on Commerce between the Commonwealth of Australia and Japan was signed on 6 July 1957, and formally ratified on 4 December 1957. It was provided that the Agreement would remain in force until 5 July 1960, and thereafter unless prior notice of termination should be given by either Government. The agreement provides that each country shall extend most-favoured-nation treatment to the other in respect of customs duties and similar charges, and import and export licensing. Japan is not entitled to claim the benefit of preferences accorded by Australia to Commonwealth countries and dependent territories. Japan also gave certain specific commitments on some important Australian export commodities.

Following a review of the agreement, a Protocol of Amendment was signed on 5 August 1963 and formally ratified on 27 May 1964. Under the Protocol Australia agreed to withdraw action against Japan under Article XXXV of the General Agreement on Tariffs and Trade, and thus a full G.A.T.T. relationship was established between the two countries.

The specific undertakings agreed in 1957 have now lapsed and the following commitments have been entered into.

Japan has:

- (a) undertaken not to accord less favourable import treatment (apart from tariff) for raw wool than for raw cotton,
- (b) stated that it has no present intention of imposing a duty on wool,
- (c) undertaken to continue imports of Australian soft wheat at a stabilized level, and to purchase Australian hard wheat when necessary requirements are met,*
- (d) stated that it will endeavour to expand opportunities for imports into Japan of Australian sugar, canned meat, leather, motor vehicles, butter and cheese.

Australia has:

- (a) undertaken to consult Japan on temporary protection cases affecting Japanese products (in such consultations Japan will consider whether the need for temporary protection can be obviated by measures taken in Japan),
- (b) stated that equal opportunities of fair and equal competition are accorded to Japanese products in Australian Government purchases overseas.

The new agreement will be effective for three years from the date of ratification and thereafter subject to three months' notice of termination by either Government. There is provision for consultations to take place at least annually.

Indonesia. This agreement came into operation on 1 July 1959. It records the desirability of expanding trade between Australia and Indonesia. It also gives special recognition to the importance of the flour trade from Australia to Indonesia. Australia recognizes the importance to Indonesia of its traditional exports to Australia. The agreement is subject to review and renewal annually.

Philippines. A trade agreement with the Philippines was signed in Manila on 16 June 1965. The agreement provides for an exchange of non-discriminatory treatment while recognizing existing preferences. The agreement is to operate for one year initially and continue thereafter unless one Government gives ninety days notice of its intention to terminate it. The Philippines is not a member of G.A.T.T.

U.S.S.R. A trade agreement between Australia and the U.S.S.R. was signed in Moscow on 15 October 1965. The agreement provides for the exchange of non-discriminatory treatment between the two countries. It operates initially for a period of four years. There is provision for consultation on request about any matter affecting the operation of the agreement.

* 'Soft' wheat is fair average quality wheat; 'hard' wheat is premium grade wheat similar to that grown in North America.

Korea. On 21 September 1965 a trade agreement was signed in Seoul between Australia and South Korea. Basically the agreement provides for an exchange of non-discriminatory treatment with allowances for existing preferences. The agreement, to run for one year with provision for automatic extension, also provides for non-discrimination by State trading enterprises. Both Governments undertake to use their best endeavours to increase the volume of trade between the two countries. The importance of the agreement for Australia is that our trade is now guaranteed continued non-discriminatory treatment whereas this was formerly given on a non-contractual basis. Korea is not a member of G.A.T.T.

Trade services

Trade Commissioner Service

The stimulation of interest abroad in Australia's exports is an important government activity in which the Australian Trade Commissioner Service plays a prominent part. A brief account of the establishment and growth of the Trade Commissioner Service before the Second World War is available in Year Book No. 51, page 496. Since the War the service has increased steadily and by December 1965 there were 43 Trade Commissioner posts in thirty-two countries. In 1957 Australia's official commercial representation overseas was extended by the introduction of a system of government Trade Correspondents. These correspondents, who as a rule already reside in particular centres overseas, are engaged on a part-time basis to carry out market research, arrange introductions between buyer and seller, and generally promote Australia's trade interests in the same way as Trade Commissioners. Each Trade Correspondent operates under the general direction of the nearest Trade Commissioner.

Trade Commissioners and, to a lesser extent, Trade Correspondents, are responsible for commercial intelligence in their territories. Particular facilities provided for Australian exporters and export organizations include: surveys of market prospects; advice on selling and advertising methods; arranging introductions with buyers and agents; providing reports on the standing of overseas firms; advice and assistance to business visitors; helping to organize and carry through trade missions, trade displays, newspaper supplements and other promotion and publicity media; providing information on import duties, import licensing, economic conditions, quarantine and sanitary requirements, and other factors affecting the entry and sale of goods; helping to attract desirable investment.

In some countries Trade Commissioners also participate in inter-governmental negotiations in the economic and commercial fields. In certain countries where there is no diplomatic or consular mission he is called upon to act as the Australian representative.

Trade Commissioners usually enter the Service from either private enterprise or the public service, and applications for entry into the Service are called for periodically by public advertisement. In the more important posts the Trade Commissioner is supported by an Assistant Trade Commissioner, who normally qualifies at a later stage for appointment as a Trade Commissioner.

The Trade Commissioner Service is administered by the Commonwealth Department of Trade and Industry (as distinct from the diplomatic and consular services administered by the Department of External Affairs), but in countries where there is an Australian diplomatic or consular mission it is the practice for Trade Commissioners to be attached to the mission and to hold an appropriate diplomatic or consular rank (Commercial Counsellor, Commercial Secretary or Commercial Attaché).

The overseas trade representation is shown in the chapter International Relations.

Trade Missions

Since 1954 the Australian Government has sent a number of Trade Missions abroad as part of the campaign to increase exports, and the experience acquired has indicated the need to vary the technique to suit particular products or markets. At present the following two trade mission techniques are in use.

Survey mission. This is organized to obtain precise knowledge about trade potential for specific products in an overseas market. This method is adopted for new or developing areas where commercial intelligence is not readily available or where a complex industry is involved and requires technical knowledge. Ten such missions have been organized to date.

Specialized selling mission. The approach is to organize a specific industry or group of industries to participate in a planned selling campaign in overseas markets with known sales potential. The group visits the market, exhibits and publicizes its products and negotiates sales. Two specialized selling missions have been organized in recent years.

Surveys and selling missions have developed from the general trade missions of the past which comprised members with a wide variety of interests and objectives. In addition to the missions mentioned above, Australia since 1954 has sent overseas fifteen general trade missions and five trade ships.

Further details on Trade Missions are included in Year Book No. 49, page 544.

Export Payments Insurance Corporation

The *Export Payments Insurance Corporation Act 1956* established the Corporation with the objective of protecting Australian exporters against risks of loss arising from non-payment of their overseas accounts for goods and certain services. The Corporation is charged to be self-supporting and operates on principles similar to those of any other form of insurance. There is, however, no overlap with normal insurance facilities, since the Corporation does not cover risks which can normally be insured with commercial insurers. The main risks of loss against which the Corporation insures are the 'commercial' risks of the insolvency or protracted default of the buyer, and 'political' risks. The cover for 'commercial' risks is a maximum of 90 per cent, and the cover on 'political' risks a maximum of 90 per cent for the amount of loss in the pre-shipment period and a maximum of 95 per cent in the post-shipment period.

The initial capital of the Corporation was £500,000 (\$1,000,000) and the maximum contingent liability limit for contracts of insurance issued to exporters, £25,000,000 (\$50,000,000). Increasing demand on the part of Australian exporters for the facilities offered by the corporation has led to periodic revisions of these limits, which currently stand at \$4,000,000 and \$150,000,000 respectively.

Further information on the Corporation is contained in Year Book No. 49, page 544. For particulars of its operations see the chapter Private Finance.

Collection and presentation of statistics

Source of statistics

Oversea trade statistics are compiled from documents obtained under the *Customs Act 1965* and supplied to the Commonwealth Bureau of Census and Statistics by the Department of Customs and Excise.

Scope of statistics

All goods moving into or out of Australia are recorded in oversea trade statistics except those listed below. The statistics are not confined to goods which are the subject of a commercial transaction. The area to which all oversea trade statistics issued by this Bureau apply is the whole of the Commonwealth of Australia, comprising the States of New South Wales, Victoria, Queensland, South Australia, Western Australia and Tasmania, the Northern Territory and the Australian Capital Territory. Non-contiguous territories under Australian administration are treated as outside countries, and trade transactions between Australia and those non-contiguous territories are part of the oversea trade of Australia. Such transactions are shown separately, i.e. the trade of Australia with each particular area is separately recorded and tabulated.

The following items are *not included* in oversea trade statistics: vehicles engaged in the transport of passengers or goods between countries; bunkers and stores supplied to oversea vessels and aircraft in Australia; direct transit trade, i.e. goods being transhipped or moved through Australia for purposes of transport only; ships and aircraft for use on oversea routes; fish and other sea products landed abroad directly from the high seas by Australian vessels; uranium; those parcels post exports for which customs entries are not submitted; and certain materials for inter-governmental defence projects for which customs entries are not required.

Prior to 1906 bunkers and stores supplied to oversea vessels and aircraft were included in exports, but since then they have been excluded. The value of these stores shipped each year since 1960-61 is shown on page 423. Outside packages (containers, crates, etc.) are included as a separate item in the tabulation of imports, but they have only been fully classified by country of origin since 1950-51. The value of each export item includes the value of outside packages.

Presentation of statistics

Statistics of the inward flow of goods are recorded and published in two forms: *imports cleared for home consumption* and *imports*. *Imports cleared for home consumption* comprise goods which enter Australia directly for domestic consumption (including transformation and repair) and goods withdrawn from customs warehouses. *Imports* comprise goods which enter Australia directly for domestic consumption together with goods imported into customs warehouses.

The outward flow of goods is divided into *domestic exports* and *re-exports*. *Domestic exports* are exports of Australian produce plus exports of foreign goods transformed by a manufacturing process in Australia. *Re-exports* comprise goods re-exported from customs storage warehouses and exports of 'nationalized goods' (foreign goods which have entered Australia for domestic consumption and have subsequently been re-exported without transformation).

Total recorded trade is divided into merchandise and non-merchandise trade. Prior to July 1965 merchandise trade consisted of all recorded trade less imports and exports of specie and gold and silver. In July 1965 merchandise trade was redefined in accordance with international

standards recommended by the United Nations. Since its redefinition merchandise trade includes, as far as possible, all goods which as a result of their movement add to or subtract from the material resources of the country. On this basis the following four categories of goods are treated as non-merchandise trade.

- (a) Goods consigned by governments to their armed forces and diplomatic representatives abroad. Essentially such goods remain a part of the national economy from which they are exported, and this movement, therefore, does not affect the level of national resources although it does affect the level of resources currently available for domestic use.
- (b) Goods whose movement can reasonably be expected to be reversed within a limited time.
- (c) Goods of little or no commercial value, including decorations, awards and samples.
- (d) Specie and gold. The movement of specie and gold, in general, changes monetary rather than material resources and is therefore not included in merchandise trade.

Periods covered by statistics

For Customs ports in the capital cities imports and exports are recorded statistically in the calendar month in which entries are passed by the Department of Customs and Excise. Normally this is within a few days of shipment overseas or discharge of cargoes, although delays do occur in the lodging of entries. For Customs ports other than those in the capital cities (i.e. 'outports') the 'statistical month' differs from the calendar month and generally consists of the period from the twenty-second day to the end of the preceding month plus the first three weeks of the calendar month. In effect, goods for which a customs entry is passed at an 'outport' after the twenty-first day of the month will generally be recorded in the statistics for the following month. During 1964-65 13 per cent of imports measured by value and 29 per cent of exports flowed through outports.

Oversea shipment of some major items is at times delayed by abnormal factors affecting sales, deliveries for export, or the loading of ships. Wool shipments in any financial year may be materially affected by the time spread of wool auctions, which normally end in July. The carry-over for shipment varies from year to year. New season's wheat normally becomes available from December onwards, and the quantity shipped in any financial year is affected by the timing of sales for export.

Since 1 July 1914 detailed trade statistics have been compiled for financial years (July to June). Prior to that details were compiled on a calendar year basis. A table is included on page 428 showing the total value of imports and exports for the calendar years 1961 to 1965.

Valuation

All values in oversea trade statistics are determined on a 'free on board (f.o.b.) port of shipment' basis. This means that all charges, in particular the cost of freight and insurance, incurred after the goods have been placed on board at the port of shipment for import or export are excluded. Only transport and service charges incurred, or usually incurred, in placing the goods on board at the port of shipment are included in the determination of trade values.

The procedure adopted to value imports and exports is as follows.

Exports. The recorded value of goods exported includes the cost of containers and outside packages and has been determined as from 1 July 1937 as follows.

- (a) Goods sold to oversea buyers before export are valued at the Australian f.o.b. port of shipment equivalent of the actual price at which the goods were sold.
- (b) Goods shipped on consignment are valued at the Australian f.o.b. port of shipment equivalent of the price paid for similar goods of Australian origin in the principal markets of the country to which they are dispatched for sale. An account of the bases of valuation in operation prior to 1 July 1937 is given on page 469 of Year Book No. 39.

Imports. The recorded value of goods imported is the amount on which duty is payable or would be payable if the duty were *ad valorem*. Value for duty is the f.o.b. port of shipment equivalent of either:

- (a) the actual price paid or to be paid by the Australian importer plus any special deduction (transactions value); or
- (b) 'the current domestic value' of the goods; whichever is the higher.

'Current domestic value', is defined as 'the amount for which the seller of the goods to the purchaser in Australia is selling or would be prepared to sell for cash, at the date of exportation of those goods, the same quantity of identically similar goods to any and every purchaser in the country of export for consumption in that country'.

The cost of containers and outside packages is excluded from the value of individual import items but is included as a separate item in the tabulation of imports.

Quantity data

Where quantities are shown they are generally, but not invariably, expressed in terms of the normal trade unit. Where 'cental' is used, the unit is equivalent to 100 lb. avoirdupois. Quantities are not tabulated in respect of statistical items for which there is no appropriate unit of quantity (for example a statistical item which covers a number of commodities that cannot be recorded under a uniform unit of quantity).

Commodity classification

Oversea trade statistics for years up to and including 1964-65 were compiled according to the Statistical Classification of Imports and Exports. This classification contained approximately 3,700 import items and 1,300 export items in 1964-65. From July 1965 imports have been classified according to the new *Australian Import Commodity Classification*. This classification is based on the Standard International Trade Classification, Revised—(S.I.T.C.)—which is closely related to the Brussels Tariff Nomenclature used in the new Australian Customs Tariff introduced on 1 July 1965.

Although the basis of the classification of exports remained unchanged for 1965-66, the export section of the Statistical Classification of Imports and Exports was published separately, with some minor revisions, as the *Australian Export Commodity Classification*. A new Australian Export Commodity Classification based on S.I.T.C. was introduced in July 1966.

Country classification

Imports. 'Country of origin' referred to in import tables means the country of production. Classification of imports according to country of shipment was discontinued after the year 1920-21. A brief account of the dual system of import classification by country operating prior to the year 1921-22 was given on page 500 of Year Book No. 51.

Exports. 'Country of consignment' referred to in export tables means the country to which goods were consigned so far as this can be determined at the time of export. Where the country of consignment is not determined at the time of export, goods are shown as exported 'For orders'.

Balance of trade and balance of payments

Balance of trade. Oversea trade statistics are compiled from information recorded in customs documents. The excess of exports or imports in recorded merchandise trade is not an accurate measure of the balance of trade. Imports and exports have to be adjusted for both valuation and coverage differences to provide estimates of the balance of trade as shown in the bulletin *Balance of Payments*. Imports are adjusted for the overall excess of recorded value for duty over the actual selling price to the importer. Imports and exports of goods for repair and return and the value of repairs are deducted; imports and exports of ships and aircraft for use on overseas routes, certain imports of defence equipment, and other trade items, for which customs entries are not required, are added.

Balance of payments. Estimates of the balance of trade do not measure Australia's total balance of payments which includes other transactions such as freight and insurance charges on imports, shipping expenditure in Australian ports, overseas travel, payments of profits and interest, and private and government borrowing overseas. Estimates of these transactions are contained in the bulletin *Balance of Payments* (see also page 435).

Pre-federation records

In the years preceding Federation each State recorded its trade independently, and in so doing did not distinguish other Australian States from foreign countries. The aggregation of the records of the several States is necessarily the only available means of ascertaining the trade of Australia for comparison with later years, but the results obtained may be subject to error, since past records of values and the direction of imports and exports were not on uniform lines. Imports and exports for years prior to Federation may be found in issues of the Year Book prior to No. 41. On the introduction of the *Customs Act* 1901 the methods of recording values were made uniform throughout the States.

Total overseas trade**Including gold**

The following table shows the total trade (including gold) of Australia with overseas countries from 1901 to 1964-65. The period 1901 to 1955-56 has been divided into five-year periods, and the figures shown represent the annual averages for the periods specified. Figures for the individual years were published in earlier issues, but figures for imports in issues prior to No. 37 were expressed in British currency.

VALUE OF OVERSEA TRADE: AUSTRALIA, 1901 TO 1964-65
INCLUDING GOLD
(\$A f.o.b.)

Period	Imports	Exports	Total	Excess of exports (+) or imports (-)	Value per head of population		
					Imports	Exports	Total

(a) 2,000 lb. (b) Excludes railway sleepers.

Imports from the United Kingdom and competing countries

Since 1908, permanent resident Commissioners appointed by the British Board of Trade have been located in Australia for the purpose of advising manufacturers and merchants in the United Kingdom with regard to Australian trade affairs. From 8 August 1907 the Commonwealth Customs Tariffs have provided preferential rates of customs duties on certain goods the produce or manufacture of the United Kingdom, with the object of assisting the British manufacturer to retain or improve his position in this market in relation to other countries. The main provisions in these Acts relating to preference are dealt with on pages 397-8 in this chapter.

In an investigation into the relative position occupied by the United Kingdom in the import trade of Australia, the comparison must, of course, be restricted to those classes of goods which are produced or manufactured in the United Kingdom. Imports into Australia include many commodities, such as tea, rice, raw coffee, unmanufactured tobacco, petroleum products, copra, timber, etc., which the United Kingdom cannot supply. These items, in addition to others not available from that country, have therefore been omitted from the following table.

The imports into Australia have been classified under nine headings, and the trade of the United Kingdom therein is compared with that of France, the Federal Republic of Germany, Japan, and the United States of America. These countries have been selected as being, in normal times, the principal competitors with the United Kingdom for the trade of Australia under the specified headings. Totals for each of the years 1962-63 to 1964-65 are shown in the following table.

VALUE OF IMPORTS FROM THE UNITED KINGDOM AND ITS MAIN
COMPETITORS: AUSTRALIA, 1962-63 TO 1964-65
(\$A'000 f.o.b.)

Nature of imports	Year	United Kingdom	France	Federal Republic of Germany	Japan	United States of America	All countries

(a) 2,000 lb.

Plate 35 shows exports in principal commodity groups in each of the years 1954-55 to 1964-65.

Imports and exports of merchandise and bullion and specie

The following table shows the value of imports into Australia during each of the years 1960-61 to 1964-65, grouped under the headings—Merchandise, and Bullion and specie.

**VALUE OF IMPORTS OF MERCHANDISE, AND BULLION
AND SPECIE: AUSTRALIA 1960-61 TO 1964-65**

(SA'000 f.o.b.)

Year	Merchandise	Bullion and specie	Total imports
1960-61	2,170,662	4,492	2,175,154
1961-62	1,765,092	4,400	1,769,492
1962-63	2,157,554	5,115	2,162,670
1963-64	2,367,874	4,784	2,372,658
1964-65	2,900,405	4,298	2,904,703

The next table shows the value of exports from Australia during each of the years 1960-61 to 1964-65, grouped under the headings Merchandise, and Bullion and specie. The exports of Australian produce and re-exports are shown separately.

**VALUE OF EXPORTS OF MERCHANDISE, AND BULLION AND SPECIE
AUSTRALIA, 1960-61 TO 1964-65**
($\$A^*000$ f.o.b.)

Year	Merchandise			Bullion and specie			Total Exports
	Australian produce	Re-exports	Total	Australian produce	Re-exports	Total	
1960-61 . . .	1,803,618	52,464	1,856,082	81,594	10	81,604	1,937,686
1961-62 . . .	2,082,677	53,093	2,135,770	18,771	27	18,798	2,154,568
1962-63 . . .	2,092,107	45,943	2,138,050	13,711	51	13,761	2,151,812
1963-64 . . .	2,706,797	55,517	2,762,314	20,117	29	20,146	2,782,460
1964-65 . . .	2,561,337	69,476	2,630,813	20,576	60	20,636	2,651,449

Ratios of net customs revenue to values of merchandise imported

The following table shows the ratios of net customs revenue collected, including and excluding net primage, to values of merchandise imported during the years 1960-61 to 1964-65. The calculations are based on Australian currency values and on the assumption that the value of clearances approximated to the value of imports during the same period. For particulars of customs revenue collections *see* the chapter Public Finance.

**RATIOS OF NET CUSTOMS REVENUE COLLECTED TO VALUES OF
MERCHANDISE IMPORTED: AUSTRALIA, 1960-61 TO 1964-65**
(Per cent)

Ratio of—	1960-61	1961-62	1962-63	1963-64	1964-65
Net customs revenue collected (excluding net primage) to value of all merchandise imported	9.2	9.4	9.5	9.6	9.1
Net customs revenue collected plus net primage to value of all merchandise imported	9.4	9.6	9.7	9.8	9.3
Net customs revenue collected (excluding net primage) to value of dutiable goods only	19.5	21.5	20.8	21.8	21.2

Ships' and aircraft stores

The value of stores loaded on overseas ships and aircraft are excluded from export figures. During the last five years oils and all stores respectively were (\$'000): 1960-61—17,874, 28,410; 1961-62—15,638, 26,648; 1962-63—13,738, 25,874; 1963-64—18,262, 29,870; 1964-65—18,591, 30,359. In 1964-65, in addition to oils, the principal items supplied were (\$'000): meats, 3,416; fruit and vegetables, 1,020; sea food, 434; eggs, 408; butter, 331; coal, 221; fodder, etc., 159; flour, 148; rice, 70; milk and cream, 61; alcoholic beverages, 1,387; tobacco and cigarettes, 751.

Movement of bullion and specie

The following table shows the values of gold and silver bullion and specie, and of bronze specie, imported into, and exported from, Australia during each of the years 1962-63 to 1964-65.

**VALUE OF OVERSEA TRADE OF AUSTRALIA IN BULLION AND SPECIE
1962-63 TO 1964-65
(\$A f.o.b.)**

	Imports			Exports		
	1962-63	1963-64	1964-65	1962-63	1963-64	1964-65
Gold—Bullion . . .	4,861,586	4,581,410	4,058,438	12,865,976	14,289,380	18,404,346

Imports of merchandise according to economic classes

The following table shows the value of imports of merchandise into Australia during the years 1962-63 to 1964-65 classified according to economic classes of (i) purpose and (ii) degree of manufacture. The classification according to purpose for the years 1954-55 to 1964-65 is shown in graphical form in plate 36.

IMPORTS OF MERCHANDISE ACCORDING TO ECONOMIC CLASSES 425

 VALUES OF IMPORTS OF MERCHANDISE, BY ECONOMIC CLASS: AUSTRALIA
 1962-63 TO 1964-65

Economic class	Value (\$A'000 f.o.b.)			Proportion of value of imports of merchandise (Per cent)		
	1962-63	1963-64	1964-65	1962-63	1963-64	1964-65
PURPOSE

(a) Owing to insufficient information, it is not possible to treat unassembled tractors and other machinery in a similar manner to motor vehicles, and all such machinery and replacement parts therefor are treated as capital equipment whether imported in an assembled or unassembled condition. (b) Excludes a percentage for piece goods to be sold by retail, and paper to be used solely for wrapping, which are recorded in Finished consumer goods. All other, and Auxiliary aids to production, respectively. (c) See footnote (a). (d) Includes a percentage for piece-goods to be sold at retail; see footnote (b). (e) Excludes crude petroleum, which is included in Producers' materials. Manufacturing—Other. (f) Includes a percentage for paper to be used solely for wrapping; see footnote (b). (g) The class Fuels and lubricants consists of goods 'simply transformed', and the classes Capital equipment and Munitions and war stores entirely of goods 'more elaborately transformed'. The class Auxiliary aids to production is about equally divided between goods 'simply transformed' and 'elaborately transformed'.

Exports according to industry

The following table provides an analysis of the total recorded value of Australian exports for the years 1962-63 to 1964-65. This analysis is designed to show fluctuations in the value of exports of Australian produce dissected according to the main industry of their origin, although any such classification is necessarily arbitrary in some respects.

**VALUES OF EXPORTS OF AUSTRALIAN PRODUCE, BY INDUSTRIAL GROUP
1962-63 TO 1964-65**

Industrial group	Value (\$A'000 f.o.b.)			Proportion of value of exports of Australian produce (excluding gold) (Per cent)		
	1962-63	1963-64	1964-65	1962-63	1963-64	1964-65
Agriculture, horticulture and viticulture—						
Unprocessed	287,560	440,172	375,404	13.7	16.2	14.6
Processed	183,758	282,852	227,422	8.8	10.5	8.9

Forestry—						
Unprocessed	854	1,028	968	0.1	0.0	0.0
Processed	5,726	5,484	4,785	0.2	0.2	0.2
Total, forestry	6,580	6,512	5,753	0.3	0.2	0.2
Total, primary produce—						
Unprocessed	1,324,190	1,720,346	1,587,814	63.3	63.4	61.9
Processed	489,202	639,756	590,089	23.4	23.6	23.0
Total, primary produce	1,813,392	2,360,102	2,177,903	86.7	87.0	84.9
Manufactures	204,176	279,612	320,911	9.8	10.3	12.5
Refined petroleum oils	46,782	38,626	22,315	2.2	1.4	0.9
Unclassified	28,564	34,284	42,379	1.3	1.3	1.7
Total, Australian produce (excluding gold)	2,092,914	2,712,624	2,563,508	100.0	100.0	100.0
Re-exports (excluding gold)	45,958	55,546	69,536
Gold exports	12,940	14,290	18,405
Total recorded value of exports	2,151,812	2,782,460	2,651,449

In the year 1964-65 Australian produce (other than gold) exported amounted to approximately \$2,564 million. Of this, \$2,178 million or 85 per cent was mainly the produce of primary industries, comprising \$1,588 million of unprocessed produce and \$590 million of goods which had been processed to some degree before export. The values of the principal individual items of processed Australian primary produce exported were (\$'000): sugar, 112,685; flour, etc., 37,334; canned fruit, 27,584; dried fruit, 24,100; wool (scoured, tops, etc), 84,604; canned meats, 15,797; butter, 62,165; milk (condensed, dried, etc.), 25,127; pig lead, 42,005; lead bullion, 18,427;

zinc bars, blocks, etc., 24,418; copper ingots, 1,412; and undressed timber, 3,643. The value of manufactures exported as classified on page 426 was \$321 million, approximately 13 per cent of Australian produce (other than gold) exported in 1964-65. The values of principal individual items here included were (\$'000): manufactures of metal, 129,711; implements and machinery, 42,373; drugs and chemicals, 26,412; and paper and stationery, 13,462. Refined petroleum oils exported are shown separately, as they consist largely of imported crude oils refined in Australia and re-exported in the refined form. The values of principal individual items shown as 'unclassified' in 1964-65 were (\$'000): individual consignments of less than \$100 in value, 13,251; and military equipment and stores and supplies for Australian projects overseas, 7,545.

The items enumerated indicate the arbitrariness of the line necessarily drawn between primary produce and manufactures in any classification of this kind. The value of processed primary products exported includes some element of value added by the simpler processes of manufacture, while the value shown for manufactures exported necessarily includes the value of raw materials (primary produce) used in those manufactures.

External trade of Australia and other countries

Essentials of comparison

Direct comparison of the external trade of any two countries is possible only when the general conditions prevailing therein, and the system of record, are more or less identical. For example, in regard to the mere matter of record, it may be observed that in one country the value of imports may be the value at the port of shipment, while in another the cost of freight, insurance and charges may be added thereto. Again, the values of imports and exports in one may be declared by merchants, whereas in another they may be the official prices fixed from time to time by a commission constituted for the purpose. In later years, moreover, a very substantial difference in the value of imports would result from the different methods of converting the moneys of foreign countries, i.e. from the application of current rates of exchange or of the mint par. Lastly, the figures relating to the external trade of any country are also affected in varying degree by the extent to which they include transit or re-export trade. This class of trade represents a much greater proportion of the trade of Switzerland and Belgium-Luxembourg than that of other countries. France and the United Kingdom also re-export largely, whereas in Canada, Australia and New Zealand re-exports account for a comparatively small proportion of the total trade.

Special trade of various countries

In the following table the figures, which are expressed in Australian currency, relate as nearly as possible to imports cleared for home consumption in the various countries specified and to exports of their domestic products. It is to be noted, however, that these figures do not invariably denote the same thing throughout, since, in the United Kingdom and other manufacturing countries, raw or partly manufactured materials are imported as for home consumption and, after undergoing some process of manufacture or further modification, are re-exported as domestic production. Nevertheless, a comparison of this character reveals approximately the extent of the external trade which otherwise would not be manifest. The countries listed on page 428 are not necessarily all the important trading countries of the world, but those important countries for which comparable statistics are available. Information for countries other than Australia has been extracted from publications of the United Nations.

VALUES OF IMPORTS CLEARED FOR HOME CONSUMPTION, AND EXPORTS OF DOMESTIC PRODUCTS (MERCHANDISE ONLY^(a)): VARIOUS COUNTRIES, 1965

Country	Imports cleared c.i.f.	Exports f.o.b.	Total	Trade per head of population

(a) Includes silver. (b) f.o.b. (c) Includes exports of foreign aid. (d) Excludes re-exported goods. (e) Covers goods imported as distinct from goods cleared for home consumption. (f) Year ended June 1965.

Oversea trade in calendar years

For the purpose of comparison with countries which record oversea trade in calendar years, the following table has been compiled to show Australian imports and exports for each of the calendar years 1961 to 1965.

VALUE OF OVERSEA TRADE IN CALENDAR YEARS: AUSTRALIA, 1961 TO 1965 (\$A'000 f.o.b.)

Year	Merchandise		Bullion and specie		Total	
	Imports	Exports	Imports	Exports	Imports	Exports
1961	1,868,666	2,073,900	4,662	35,506	1,873,328	2,109,406
1962	2,019,188	2,093,100	4,448	10,734	2,023,636	2,103,834
1963	2,212,608	2,487,656	6,656	17,346	2,219,264	2,505,002
1964	2,654,376	2,712,370	4,670	19,454	2,659,046	2,731,824
1965 p	3,010,074	2,632,744	4,761	23,482	3,014,835	2,656,226

Excise

Although excise goods have no immediate bearing on overseas trade, the rate of excise duty is in some cases related to the import duty on similar goods. Moreover, as the Excise Acts are administered by the Department of Customs and Excise, it is convenient to publish here the quantities of Australian produce on which excise duty has been paid. Particulars of customs and excise revenue are shown in the chapter Public Finance. The following table shows the quantities of spirits, beer, tobacco, etc., on which excise duty was paid in Australia during the years 1963-64 and 1964-65.

QUANTITY OF SPIRITS, BEER, TOBACCO, ETC., ON WHICH EXCISE DUTY
WAS PAID: AUSTRALIA, 1964-65

(a) As from July 1964 includes supplies to Commonwealth Government on which excise was paid. During 1964-65 refunds were made on 32,701,000 gallons. (b) Operative from 30 October 1963. (c) Operative to 12 August 1964.

OVERSEA INVESTMENT BY PRIVATE INVESTORS

A Survey of Oversea Investment has been conducted since 1947-48 to obtain particulars of certain types of private capital flows to and from Australia. The survey, when supplemented by other information, provides statistics of overseas investment in companies in Australia and in Australian public authority securities domiciled in Australia, and statistics of Australian investment in companies overseas and in foreign government securities. Particulars of investment income from most of those classes of investment are also obtained from the survey.

Certain types of private overseas investment are not included in the statistics which follow. Investment in real estate (except when made through companies), investment by means of bank deposits and advances, and loans between Australian individuals and non-resident individuals are not covered. Nor are changes in short-term liabilities between exporters and importers in Australia and overseas covered, except in so far as they arise from exports and imports between branches or subsidiaries and their home offices—in this case they are included in the figures of investment in branches or subsidiaries.

In some cases the capital invested in a company in Australia may be received from a company in one overseas country even though the ultimate ownership and control of that capital may rest with a parent company in a second overseas country. In the tables which classify investment in

Australia according to country of origin, the investment is shown as an inflow from the country which is the immediate source of the capital rather than from the country in which the parent company with ultimate ownership and control is domiciled. Income payable overseas is classified on a similar basis, i.e., it is classified to the country to which it is directly payable.

Remittances between Australia and overseas by Australian life insurance companies are regarded as capital transactions made to bring assets located in overseas countries into line with commitments in those countries, and are shown as a flow of investment between Australia and overseas in the tables on page 435. Similar considerations apply to overseas life insurance companies with branches in Australia.

The following are some explanatory notes relating to terms used in the tables.

Overseas. For the purpose of these statistics, 'overseas' includes Papua and New Guinea.

Companies. In these statistics the term 'companies' relates to both incorporated and unincorporated businesses.

Subsidiary. For the purpose of these statistics this term is applied to all companies in which there is a 'direct' holding, irrespective of the degree of control, if any, which is actually exercised. A holding is treated as 'direct' when there is ownership of 25 per cent or more of a company's ordinary shares (or voting stock) by one company or a number of companies incorporated in one country, or ownership of 50 per cent or more of a company's ordinary shares (or voting stock) by individuals or companies in one country.

Portfolio investment. Investment in company shares, debentures, etc., other than direct investment in such securities of a subsidiary company.

Unremitted profits. For these statistics this represents the net earnings of branches during the year, after tax, less remittances by the branches to their home offices during the year of net earnings and interest (irrespective of the period to which the earnings and interest relate). 'Net earnings' of Australian branches of overseas companies are, in general, based on the value of their income for taxation purposes.

Undistributed profits. This term refers, in the case of Australian subsidiaries, to the equity of the overseas parent in the net earnings of the Australian company, less tax (or tax provision) and less dividends declared. 'Net earnings' of Australian subsidiaries of overseas companies are, in general, based on the value of their income for taxation purposes. In the case of overseas subsidiaries of Australian companies, this term represents the equity of the Australian parent in the book value of the net earnings of the subsidiary after tax, less dividends paid or payable.

The annual bulletin *Insurance and Other Private Finance* and the *Annual Bulletin of Oversea Investment: Australia* contain additional figures relating to overseas investment, including a longer range of years covered, and also a more detailed description of the figures.

Private overseas investment in companies in Australia and investment income payable overseas by companies in Australia

The inflow of private overseas investment in companies in Australia since 1960-61, and a classification by country of origin, are shown in the following two tables.

ANNUAL INFLOW OF PRIVATE OVERSEA INVESTMENT IN COMPANIES IN AUSTRALIA, BY TYPE OF COMPANY IN WHICH CAPITAL INVESTED(a)
1960-61 TO 1964-65
(\$A million)

Year	Direct investment					Portfolio investment (b)	Annual inflow of overseas investment in companies
	Australian branches		Australian subsidiaries		Total direct investment		
	Un-remitted profits	Other investment	Undis-tributed profits	Other investment

(*a*) Particulars are not available of the domicile of securities issued to the International Bank for Reconstruction and Development.

Minus sign (-) denotes outflow.

BALANCE OF PAYMENTS

Estimates of a country's balance of payments are prepared for the purpose of providing a systematic record in money terms of the economic transactions which take place over a period between that country and all other countries. Such records are essential to the examination of influences which external factors have on the domestic economy. The Australian economy is subject to fairly large fluctuations in export income, and it is also affected in important respects by variations in the level of foreign investment and the demand for imports. Consequently, these estimates have always assumed particular importance in this country.

Official estimates of Australia's balance of payments covering the period 1928-29 to 1930-31 were included in the Appendix to Official Year Book No. 24, 1931. Except for the war years (1939 to 1945), estimates have since been published annually. Detailed estimates are currently provided twice yearly in the form of a mimeographed publication *Balance of Payments*. This publication brings the estimates forward to the end of the most recent financial year or half-year and, together with a printed volume *The Australian Balance of Payments, 1928-29 to 1950-51*, provides also a description of the various items included and the sources from which the information is obtained. A summarized statement of the principal current account items and some identified capital movements is prepared and issued on a quarterly basis in the *Balance of Payments - Quarterly Summary*.

The form in which the Australian estimates are presented follows the pattern originally adopted by the International Monetary Fund. In this presentation a basic distinction is drawn between 'current account' transactions and 'capital account' transactions. Current account transactions are defined as those which involve changes in the ownership of goods or the rendering of services between residents of Australia and the rest of the world. They include such important items as exports, imports, shipping freights, dividends, profits and interest, travel and government expenditure. The current account also includes transfers in the form of personal gifts and government gifts of technical assistance, for which there is no consideration. Capital account transactions

are defined as those which involve claims to money and titles to investments between residents of one country and those of another country. Details are shown according to whether the items with which transactions are concerned are classified as assets or liabilities. For practical purposes, items are also broadly divisible into investment items (including overseas investment in companies in Australia and government loans), certain financing transactions, and monetary movements (including transactions with the International Monetary Fund and changes in the level of international reserves).

By definition the balance of payments on current account is always equivalent to the balance on capital account. The net monetary movement is used as a control figure to which the net sum of all other figures must reconcile. However, errors and omissions occur in the estimation of the amounts involved in various items included in both current and capital accounts, and in addition there are timing differences between the statistical recording of trade transactions and certain invisible items, and the relevant foreign exchange transactions. Therefore, in order to preserve the identity between the total shown in the current account and the total shown in the capital account, it is necessary to introduce a 'balancing item'. The 'balancing item' is included in the capital account, but, as mentioned above, it may include discrepancies in the current account, and it does not, as is frequently supposed, include only errors and timing differences related to investment and financing transactions.

Details of the estimates are assembled from a variety of sources of which the following are the more important: (i) statistics of exports and imports obtained from Australian trade statistics; (ii) details of the import valuation adjustment obtained from a sample of the invoices submitted to the Department of Customs and Excise in respect of imports into Australia; (iii) information on particular invisible current account items and capital movements obtained by regular inquiry from private organizations and government departments; (iv) details of receipts and payments of foreign exchange provided by the banking system; (v) information on dividends remitted, undistributed income and private investment in companies provided by statistics of overseas investment collected by this Bureau; (vi) information on freight on imports and other items concerned with overseas shipping obtained from a sample of the invoices submitted to the Department of Customs and Excise in respect of imports into Australia and a survey of shipping operations conducted by this Bureau; and (vii) information on international reserves supplied by the Reserve Bank of Australia.

Current account

The balance of payments on current account is arranged to show a series of credit items and a corresponding series of debit items. Primarily, entries on the credit side include all current transactions which result in receipts of foreign exchange (for goods and services, investment income or donations), and on the debit side the similar transactions which result in payments of foreign exchange. The principal exceptions to this rule are the amounts shown for undistributed income and where debts incurred for current account items, principally goods, are subsequently capitalized. In respect of these amounts no movement of foreign exchange takes place, the amounts concerned being treated as credits or debits in the relevant sections of the current account, and as corresponding outflows or inflows in the relevant sections of the capital account. A further exception occurs in the case of donations in kind where no foreign exchange movement takes place. The values of donations received or provided in kind are shown as credits or debits respectively.

The largest items shown in the current account are exports and imports, and the difference between them represents the balance of visible trade. This is the most important, and usually the most variable, relationship in the balance of payments. *For balance of payments purposes, certain adjustments are made to the recorded trade statistics.* Briefly, these adjustments are made to exclude those transactions for which there is no change of ownership between residents and non-residents of Australia and to include certain transactions for which there has been a change of ownership but for which customs entries are not required. In addition, a valuation adjustment is made to the recorded import statistics in order to remove the overstatement which results from the basis of valuation for customs duty. A full description of the adjustments was provided in Appendix V. of the publication *Balance of Payments, 1960-61 to 1964-65*. A full evaluation of the overall position on current account, however, occurs only after the invisible items have been taken into account. The most important of these are the transportation items.* Entries appear on both the debit and credit sides, the principal component on the debit side being freight payable overseas on imports into Australia. The principal component on the credit side is expenditure by overseas carriers, which represents mainly overseas ships' expenditure for stevedoring, port charges, etc., incurred in loading and discharging goods at Australian ports, and stores purchased in Australia. The items next in importance are those concerning income from property. Debit entries under this heading include dividends, profits, interest and royalties payable overseas, while the credit entries include similar details of amounts receivable by Australian residents. These items include undistributed income for which, as mentioned above, no

* Changes made in this issue in respect of these items have not been incorporated in Table 6. Oversea Current Account of the chapter National Accounts (see *Balance of Payments, 1963-64, 1964-65 and First Half 1965-66 and Quarterly Estimates of National Income and Expenditure, No. 23, March Quarter 1966*).

monetary payments occur. The remaining items are smaller than those mentioned above, and include travel, government transactions, donations (including foreign aid made available by the Australian Government), and, on the credit side, the net value of Australian gold production.

Capital account

On the assets side of the capital account the most important item is Australia's holdings of monetary gold and foreign exchange, usually referred to as international reserves. On the liabilities side the most important items are government loans, I.M.F. transactions and private investment in Australian companies.

Transactions with international monetary and financial agencies appear on both sides of the capital account. On the assets side items 2 and 3 show increases in subscriptions to these institutions, and on the liabilities side items 10 and 11 show corresponding increases in liabilities or changes in liabilities previously incurred. Liabilities comprise, on the one hand, bank balances and special non-negotiable, non-interest bearing securities (payable in Australian currency but convertible by arrangement into foreign currency or gold) related to capital subscriptions to the various agencies and, on the other hand, drawings from the International Monetary Fund.

Changes in overseas investment in companies by Australian residents are shown on the assets side of the capital account (items 6 and 7), and changes in investment in Australian companies by overseas residents are shown on the liabilities side (items 13 (part) and 14). Figures shown for marketing authorities (item 5) represent changes in the estimated value of commodity stocks held overseas or in amounts owed by overseas debtors to the principal Australian marketing authorities.

The balancing item includes errors and omissions and timing differences, referred to on page 436.

Tables—Balance of payments on current and capital accounts

The following tables show, for the three years 1962-63 to 1964-65, particulars of:

- (i) the balance of payments on current account;
- (ii) the balance of payments on capital account; and
- (iii) the balance of payments on current account, by major groups of countries.

CHAPTER 14

TRANSPORT AND COMMUNICATION

The statistics in this chapter relate in the main to the year 1964–65, with comparisons restricted to a few recent years. More detailed figures and particulars for earlier years are included in the annual bulletins, *Transport and Communication*, *Commonwealth Finance*, and *State, Territory and Local Government Authorities' Finance and Government Securities* published by this Bureau. Current information on subjects dealt with in this chapter appears in the *Quarterly Summary of Australian Statistics*, the *Monthly Review of Business Statistics*, the *Digest of Current Economic Statistics*, the *Monthly Bulletin of Registrations of New Motor Vehicles* and two preliminary monthly statements on *Registrations of New Motor Vehicles*, and *Road Traffic Accidents involving Casualties* (quarterly).

Information additional to that contained in Bureau publications is available in the annual reports and other statements of the Department of Shipping and Transport, the various harbour boards and trusts, the several Government railways authorities, the Department of Civil Aviation, the Postmaster-General's Department, the Overseas Telecommunications Commission, the Australian Broadcasting Control Board, and the Australian Broadcasting Commission.

SHIPPING

Control of shipping

Commonwealth navigation and shipping legislation

By section 51 (i) of the Commonwealth Constitution the Parliament of the Commonwealth is empowered to make laws in respect of 'Trade and commerce with other countries, and among the States'. By section 98 this power is further defined as extending to navigation and shipping. Section 51 (vii) empowers the Commonwealth Parliament to legislate in respect of 'Lighthouses, lightships, beacons and buoys' and section 51 (ix) in respect of 'Quarantine'.

A review of the introduction and development of the *Navigation Act 1912–1950* is given in Year Book No. 40, pp. 110–12. Amendments to the principal Act were made by the Navigation Acts of 1952, 1953, 1956, 1958, 1961, and 1965. Other shipping Acts under the powers of the Commonwealth are the *Sea-Carriage of Goods Act 1924–1961*, the *Seamen's Compensation Act 1911–1964*, the *Seamen's War Pensions and Allowances Act 1940–1965*, the *Pollution of the Sea by Oil Act 1960–1965*, the *Australian Coastal Shipping Commission Act 1956–1964*, the *Australian Coastal Shipping Agreement Act 1956*, the *Stevedoring Industry Act 1956–1965*, the *Beaches, Fishing Grounds and Sea Routes Protection Act 1932–1961* (except Section 3), the *Submarine Cables and Pipelines Protection Act 1963*, and the *Lighthouses Act 1911–1961*.

The control of shipping during, and immediately after, the 1939–45 War and the establishment of the Maritime Industry Commission (abolished in 1952), the Australian Stevedoring Industry Board (replaced in 1956 by the Australian Stevedoring Industry Authority), and the Australian Shipping Board (replaced in 1956 by the Australian Coastal Shipping Commission) are described in Year Books No. 36, pages 121–30, and No. 39, pages 147–8.

Australian Coastal Shipping Commission

This Commission was established in 1956 for the purpose of maintaining and operating interstate, overseas and territorial shipping services, and replaced the Australian Shipping Board. It operates the Australian National Line, a Commonwealth-owned merchant shipping service, which, at 30 June 1965 comprised thirty-nine vessels totalling 196,342 gross tons. These vessels included twelve with a gross tonnage of 500 to 3,000, eleven with a gross tonnage of 3,000 to 5,000, eleven with a gross tonnage of 5,000 to 8,000; the passenger/vehicular vessel *Empress of Australia*, 12,637 gross tons, the bulk ore carriers *Mount Keira*, 10,229 gross tons, *Mount Kembla*, 10,112 gross tons, and *Musgrave Range*, 14,467 gross tons.

The Commission's new 47,500 tons deadweight bulk carrier *Darling River* was launched in December 1965 and is expected to be completed in April 1966.

In the year 1964-65, the *Princess of Tasmania* carried 88,905 passengers, 20,641 accompanied vehicles, 8,133 commercial vehicles and 3,345 trade cars. Between January 1965, when the *Empress of Australia* was commissioned, and 30 June 1965, this vessel carried 10,766 passengers, 1,584 accompanied vehicles, 5,696 commercial vehicles and 231 trade cars. These vessels operate in the mainland-Tasmania trade.

Australian Shipbuilding Board

Established in March 1941 as a wartime measure under the National Security (Shipbuilding) Regulations and constituted in 1948 under the *Supply and Development Act 1939-1948*, the Board now operates under the control of the Minister for Shipping and Transport. In November 1963 the Commonwealth Public Service Board approved its permanent establishment as a branch of the Department of Shipping and Transport. The membership of the Board consists of a Chairman, a Finance Member and three other members, one of whom represents the Naval Board.

The functions of the Board are set out in detail in Regulation 22 (4) of the Supply and Development Regulations and, briefly, in the exercise of those functions the Board is responsible for:

- (a) Recommending to the Minister for Shipping and Transport the price at which vessels may be purchased and disposed of by him on behalf of the Commonwealth;
- (b) the design, construction, outfitting and trials of ships;
- (c) research into all matters connected with or incidental to shipbuilding;
- (d) advice to the Minister on developments in the shipbuilding industry;
- (e) rendering assistance to all sections of the industry.

Up to 31 January 1966 the Board had arranged the construction of ninety-four merchant vessels and one naval survey vessel totalling approximately 591,000 deadweight tons, at a cost of about \$208,000,000, and also twenty-seven smaller vessels on which the Commonwealth Shipbuilding subsidy did not apply.

At 31 January 1966 the Board had current orders for the construction of twenty vessels totalling about 240,000 deadweight tons. These vessels comprised four 49,000 ton deadweight bulk ore carriers, two 19,000 ton deadweight oil tankers, one 2,700 ton deadweight coral carrier, one 2,350 cubic yard hopper dredge, one 250 ton self-propelled floating crane, two roll-on roll-off vehicle deck cargo vessels, one lighthouse supply vessel, five tugs each of average length approximately 105 feet, and three smaller vessels.

There are five major Australian shipyards building merchant vessels, two in Queensland (Evans Deakin and Co. Pty. Ltd., Brisbane, and Walkers Ltd., Maryborough), two in South Australia (Adelaide Ship Construction Pty. Ltd., Port Adelaide, and Whyalla Shipbuilding and Engineering Works, Whyalla), and one in New South Wales (State Dockyard, Newcastle), and two shipyards principally engaged in naval shipbuilding, one in New South Wales (Cockatoo Docks and Engineering Co. Pty. Ltd., Sydney) and one in Victoria (H.M. Naval Dockyard, Williamstown). There are also numerous smaller yards, situated in every State, building smaller steel and wooden working and pleasure craft.

Australian Stevedoring Industry Authority

In March 1947 legislation established a permanent Stevedoring Industry Commission to continue in peace-time the functions performed during the war by the Commission established under National Security legislation. In June 1949 legislation was enacted to abolish the Stevedoring Industry Commission, on which employers and employees were represented, and established in its place a Stevedoring Industry Board of three members, which attended to administrative matters formerly under the control of the Commission, such as the operation of labour bureaux at ports, payment of attendance money and provision of amenities. The industrial functions which previously came within the province of the Commission were assigned to a single Judge of the Commonwealth Court of Conciliation and Arbitration. In August 1956, following a Committee of Inquiry into the stevedoring industry, the Stevedoring Industry Board was replaced by the Australian Stevedoring Industry Authority of three members, including a representative of the management side of industry and a representative of the trade union movement. At the same time the judicial and non-judicial functions formerly exercised by the Commonwealth Court of Conciliation and Arbitration were divided between the Commonwealth Industrial Court and the Commonwealth Conciliation and Arbitration Commission respectively. Awards of the Conciliation and Arbitration Commission subsequently placed payment of sick pay, public holiday pay and annual leave under the administration of the Authority. Under amending legislation which operated from 6 June 1961 the Authority became responsible for payment of long service leave to registered waterside workers, and its disciplinary powers were strengthened to reduce the time lost through unauthorized stoppages. Further amending legislation, which operated from 8 October 1965, made the Authority solely responsible for the recruitment of waterside workers. The statutory provisions regulating the industry are now contained in the *Stevedoring Industry Act 1956-1965*, the *Stevedoring Industry Act 1963*, and Division 4 of Part III of the *Conciliation and Arbitration Act 1904-1965*.

System of record

In the system of recording statistics of oversea shipping, Australia is considered as a unit, and therefore only one entry and one clearance are counted for each voyage, without regard to the number of States visited (*see also* pages 446-8). For the purpose of these statistics all external territories are treated as oversea countries.

On arrival at, or departure from, a port in Australia, whether from or for an oversea country or from or for another port in Australia, the master or agent must 'enter' the vessel with the Customs authorities at the port, and supply certain prescribed information in regard to the ship, passengers and cargo. At the end of each month the information so obtained is forwarded to the Bureau of Census and Statistics. This information relates, in the main, to vessels engaged in the carriage of passengers and/or cargo between Australian States or between Australia and oversea countries.

The size of a vessel may be expressed in a number of ways. A vessel's gross tonnage, expressed in tons of 100 cubic feet, represents the total volume of the enclosed space, i.e. a ship of 25,000 tons has a total enclosed capacity of 2,500,000 cubic feet. Its net tonnage, expressed in tons of 100 cubic feet, represents the volume of enclosed space that can be used for cargo or passengers. Its displacement is its total weight and is expressed in tons of 2,240 lb. Its deadweight tonnage is the difference between the displacement of the vessel loaded to its summer loadline and the displacement light, i.e. it is the weight the vessel can carry, including the weight of bunkers and stores. Net tonnage is the concept generally used in the tables in this chapter, but since it can give a misleading impression of the size of ships which have a function other than carrying passengers and cargo (e.g. a tug has no net tonnage), some figures are given for deadweight tons and tons gross also.

Most cargo is recorded in terms of tons of 2,240 lb. However, some is shipped and recorded on the basis of forty cubic feet representing one ton measurement.

Except in Shipping at principal ports, intra-State (coastal) movements of vessels, including those of vessels engaged solely in trade within State limits, are excluded from the statistics in the following pages.

Oversea shipping

Total movement

The following table shows the number of entrances and clearances combined of oversea vessels at Australian ports, and the aggregate net tonnage, during each of the years 1960-61 to 1964-65.

OVERSEA SHIPPING: ENTRANCES AND CLEARANCES (COMBINED)
OF VESSELS DIRECT, AUSTRALIA, 1960-61 TO 1964-65

—	1960-61	1961-62	1962-63	1963-64	1964-65
Number of vessels	6,778	7,210	6,762	7,477	7,601
Net tonnage '000 tons	34,317	37,662	37,584	41,640	43,295

Particulars of the total oversea movement of shipping for each year from 1822 to 1920-21 were published in Year Book No. 15, page 507, and those for each year from 1921-22 to 1950-51 in Year Book No. 40, page 97.

Total oversea shipping, States

The following table shows, for each State and the Northern Territory, the number of entrances and clearances of vessels direct from and to oversea countries, and the aggregate net tonnage, during the year 1964-65.

**OVERSEA SHIPPING: ENTRANCES AND CLEARANCES OF VESSELS DIRECT
STATES AND NORTHERN TERRITORY, 1964-65**

	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	Aust.
Entrances number	1,317	520	751	299	790	83	53	3,813
'000 net tons	7,690	3,341	3,086	2,332	4,787	281	172	21,689

'000 net tons	7,270	4,287	3,678	1,351	4,640	237	143	21,606

Shipping communication with various countries

A vessel arriving in Australia from overseas is recorded as coming from the country where the voyage commenced, irrespective of the number of intermediate ports of call. Similarly, a vessel leaving Australia is recorded as going to the country where the voyage is scheduled to terminate. The following table shows statistics of the net tonnage entered and cleared, with cargo and in ballast, according to the principal countries where vessels commenced or terminated their voyages to or from Australia during each of the years 1962-63 to 1964-65.

**OVERSEA SHIPPING: COUNTRIES FROM WHICH ENTERED OR FOR WHICH
CLEARED, AUSTRALIA, 1962-63 TO 1964-65**

('000 net tons)

Grand total	18,958	20,723	21,689	18,626	20,917	21,606

(a) For years prior to 1964-65, figures for Malaysia exclude Sarawak, which was included in Other Commonwealth countries.

Country of registration of oversea shipping

Particulars of oversea shipping which entered Australian ports during each of the years 1962-63 to 1964-65 are given in the following table according to country of registration of vessels.

OVERSEA SHIPPING: ENTRANCES DIRECT, BY COUNTRY OF REGISTRATION OF VESSELS, AUSTRALIA, 1962-63 TO 1964-65

('000 net tons)

Vessels registered at ports in—	1962-63	1963-64	1964-65	Vessels registered at ports in—	1962-63	1963-64	1964-65

Italy . . .	898	669	752				
Japan . . .	1,293	1,216	1,850				
Liberia . . .	1,150	1,400	1,833				
Netherlands . . .	831	974	1,122	Grand total	18,958	20,723	21,689

(a) Includes New Caledonia (40 during 1964-65).

Australian registered tonnage which entered Australian ports from overseas during the year 1964-65 represented 0.5 per cent. of the total tonnage entered and was confined mainly to the New Zealand and Pacific Islands trade. Australian-owned oversea-registered tonnage entering Australian ports from overseas represented 2.1 per cent of the total tonnage entered.

Interstate shipping

System of record

Interstate shipping comprises two elements: (a) vessels engaged solely in interstate trade; and (b) vessels trading between Australia and oversea countries and in the course of their voyages proceeding from one State to another. (At 30 June 1965 there were no oversea vessels with permits to carry coastal cargo for an extended period. Oversea vessels may obtain Single Voyage Permits under section 286 of the Navigation Act to perform certain tasks on the Australian coast in cases where no 'licensee' vessel is available. Examples are the numerous tankers that obtain permits to carry petroleum products between interstate ports and, since the withdrawal of most of the interstate passenger liners, the oversea vessels which are given permits to carry passengers and frozen cargoes on the interstate run. At the present time orders in Council exist exempting certain trades from the provisions of the Navigation Act and it is not necessary for 'unlicensed' vessels to obtain a permit to engage in those trades.*) No complexity enters into the record of those in category (a), but with regard to the method of recording the movements of the oversea vessels (b), some explanation is necessary. Each State desires that its shipping statistics should show in full its shipping communication with oversea countries, but at the same time it is necessary to avoid any duplication in the statistics of Australia as a whole. In order to meet these dual requirements, a vessel arriving in any State from an oversea country—say the United Kingdom—via another State, is recorded in the second State as from the United Kingdom 'Oversea via States', thus distinguishing the movement from a direct oversea entry. Continuing the voyage, the vessel is again recorded for the statistics of the third State as from the United Kingdom 'Oversea via States'. On an inward voyage, the *clearance* from the first State to the second State is a *clearance* interstate, and is included with interstate tonnage in conformity with the pre-federation practice of the States, and to preserve the continuity of State statistics. Thus, movements of ships which are, from the standpoint of Australia as a whole, purely coastal movements, must for the individual States be recorded as 'Oversea via States' or 'Interstate' according to the direction of the movement. The significance of the record of these movements will be seen more clearly from the following tabular presentation of the inward and outward voyages to and from Australia

* Australian Shipping and Shipbuilding Statistics published by the Department of Shipping and Transport.

of an oversea vessel which, it is presumed, reaches Fremantle (Western Australia) and then proceeds to the terminal port of the voyage—Sydney (New South Wales)—via South Australia and Victoria. From the terminal port the vessel will commence the outward voyage, in this case retracing its inward track.

ITINERARY OF AN OVERSEA VESSEL ON THE AUSTRALIAN COAST

	Recorded as—		
	For the State and for Australia	For the States	
	1.	2.	3.
Inward Voyage—			
Enters Fremantle from United Kingdom . . .	Oversea direct	Interstate direct	
Clears Fremantle for Adelaide			
Enters Adelaide from United Kingdom via Fremantle			Oversea via States
Clears Adelaide for Melbourne		Interstate direct	
Enters Melbourne from United Kingdom via Adelaide			Oversea via States
Clears Melbourne for Sydney		Interstate direct	
Enters Sydney from United Kingdom via Melbourne			Oversea via States
Outward Voyage—			
Clears Sydney for United Kingdom via Melbourne		Interstate direct	Oversea via States
Enters Melbourne from Sydney			
Clears Melbourne for United Kingdom via Adelaide		Interstate direct	Oversea via States
Enters Adelaide from Melbourne			
Clears Adelaide for United Kingdom via Fremantle		Interstate direct	Oversea via States
Enters Fremantle from Adelaide			
Clears Fremantle for United Kingdom	Oversea direct	Interstate direct	

From the method outlined above the requirements for Australia and for the individual States are ascertained as follows. (a) The aggregate of all ships recorded for each State as 'Oversea direct' gives the oversea shipping for Australia as a whole; (b) the aggregate for all ships recorded in any State as 'Oversea direct' plus those recorded as 'Oversea via States' gives the total *oversea shipping* for that State; and (c) the aggregate for all ships recorded as 'Oversea via States' may also be used, together with those recorded as 'Interstate direct' (including those engaged solely in interstate movement) to furnish figures showing the total *interstate movement* of shipping.

Interstate movement

Interstate direct. The following table shows the number of entrances and the net tonnage of vessels recorded into each State and the Northern Territory from any other State (including oversea vessels on interstate direct voyages as in column 2 above) during each of the years 1962-63 to 1964-65.

INTERSTATE MOVEMENT: ENTRANCES OF VESSELS INTERSTATE DIRECT STATES AND NORTHERN TERRITORY, 1962-63 TO 1964-65

State or Territory	Number			Net tons ('000)		
	1962-63	1963-64	1964-65	1962-63	1963-64	1964-65

Shipping cargo

Oversea and interstate cargo

The table following shows the aggregate tonnage of oversea and interstate cargo discharged and shipped at Australian ports for the years 1960-61 to 1964-65. Most cargo is recorded in terms of tons of 2,240 lb.; the remainder, mainly bulky commodities, is shipped and recorded on the basis of forty cubic feet representing one ton measurement.

SHIPPING CARGO DISCHARGED AND SHIPPED: AUSTRALIA, 1960-61 TO 1964-65
 ('000 tons)

Year	Oversea cargo				Interstate cargo

World shipping tonnage

At 1 July 1965 the total steamships and motorships 100 gross tons and upwards throughout the world was 41,865, with a gross tonnage of 160,391,504. Of those totals, steamships numbered 10,921 for 75,022,485 gross tons, and motorships 30,944 for 85,369,019 gross tons. Included were 5,307 oil tankers of 100 gross tons and upwards, with a gross tonnage of 55,046,070. Australian steamships and motorships, 306 for 726,999 gross tons, constituted 0.73 per cent and 0.45 per cent respectively of the total number and tonnage. This information has been derived from *Lloyd's Register of Shipping*.

Vessels registered in Australia

The following table shows the number and gross tonnage of trading vessels of 200 tons and over registered in Australia at 30 June 1965, classified according to: (i) year of construction, 1961 to 1965 and 1960 and earlier years, (ii) type of trade in which the vessels were engaged, and (iii) vessels built in Australian or in oversea shipyards.

Interstate rates per ton weight or measurement for general cargo at 31 December 1965 (expressed in Australian shillings and pence) were: Sydney-Melbourne, 162s.; Sydney-Brisbane, 160s.; Sydney-Adelaide, 207s.; Sydney-Fremantle, 262s.; Sydney-Hobart, 160s.; Sydney-Darwin, 248s. 6d.

Shipping casualties

Courts of Marine Inquiry are constituted by a magistrate assisted by skilled assessors, and, when necessary, are held at the principal port in each State and at Launceston (Tasmania). Such courts have power to deal with the certificates of officers who are found at fault. Particulars of shipping losses and casualties reported on or near the coast during each of the years 1960-61 to 1964-65 are shown in the table below.

SHIPPING CASUALTIES TO OVERSEA AND INTERSTATE STEAM AND MOTOR VESSELS(a): AUSTRALIA, 1960-61 TO 1964-65

Lighthouses; distances by sea; depths of water and tides at main ports; ferry passenger services

A list of the principal lighthouses on the coast of Australia, giving details of the location, number, colour, character, period, candle-power and visibility of each light so far as particulars are available, will be found in *Transport and Communication, Bulletin No. 46*.

The distances by sea between principal ports of Australia and some important ports in other countries which trade with Australia were published in Year Book No. 48, page 525.

A table showing the depths of water available and tides at principal ports of Australia is published in the annual bulletin, *Transport and Communication*. For some major ports information is given in the chapter Local Government.

For particulars of ferry passenger services operating in several States *see* page 472.

GOVERNMENT RAILWAYS

The Commonwealth Government and each State Government own and operate railway systems in Australia. The State systems were built primarily to provide transport links from the State capitals into the hinterland areas. Because their construction commenced long before Federation, little consideration was given to interstate rail movements, with the result that each State adopted a rail gauge considered best for its requirements. The Commonwealth Government took over the South Australian railways in and to the Northern Territory and extended them to Birdum and Alice Springs. It also constructed new lines from Queanbeyan (New South Wales) into the Australian Capital Territory and from Port Pirie (South Australia) to Kalgoorlie (Western Australia). The 4-ft. 8½-in. gauge line from South Brisbane (Queensland) to Grafton (New South Wales) is jointly owned by the Commonwealth, New South Wales and Queensland Governments. This line was opened for traffic in September 1930. Particulars of operations over the 112 route-miles within New South Wales are included with statistics of the New South Wales system, while those for the remaining sixty-nine route-miles are included with the Queensland system, unless otherwise indicated.

A number of private railways, the majority of which were constructed for mineral haulage, operate in Australia, the more important being from Whyalla to Iron Knob and Iron Baron (South Australia), from Maitland to Cessnock (New South Wales), from Broken Hill (New South Wales) to the South Australian border, and from Burnie to Zeehan (Tasmania). Not all of these railways are open for general traffic. A number of private railways for the haulage of iron ore to various seaports are under construction in the north-west of Western Australia.

In the tables in this division details of the four lines operated by the Commonwealth are grouped and shown with the totals for the various State-owned systems. Separate particulars for each Commonwealth line and more detailed statistics for all lines are shown in the annual bulletin *Transport and Communication*.

An account of the progress of railway construction in Australia since the opening of the first line in 1854 was given in Year Book No. 6, page 681, and in No. 22, page 259. A map showing routes open in Australia in 1965, according to gauge, is shown in Plate 38.

Standardization of railway gauges

Because several adjoining States have systems with different gauges, the flow of interstate rail traffic has been delayed by the need to change trains at intervening break of gauge stations. The first step towards uniform gauge railway communication between the mainland State capitals was effected with the construction of the Uniform Gauge Railway (4 ft. 8½ in. gauge) from South Brisbane to Grafton (*see above*). For details of the agreement whereby the Commonwealth and the State Governments of New South Wales and Queensland participated in its construction *see* Year Book No. 31, page 122.

A plan for the further standardization of Australian gauges was made by Sir Harold Clapp in a report submitted to the Commonwealth Government in March 1945. A summary of his report and recommendations and subsequent agreements with the States was published in Year Book No. 37, pages 146-9. Particulars of the agreement between the Commonwealth and South Australian Governments were set out in Year Book No. 51, pages 553-4.

As a further step towards standardization, a committee consisting of members of the Federal Parliament was formed in March 1956 to ascertain whether a scheme confined to the main trunk routes would be desirable. This committee recommended in October 1956 that standard gauge (4 ft. 8½ in.) lines be provided from Wodonga to Melbourne, from Broken Hill to Adelaide via Port Pirie, and from Kalgoorlie to Fremantle via Perth.

Legislation for a standard gauge link between Albury and Melbourne was enacted by the Commonwealth, Victorian and New South Wales Governments in three separate Acts assented to towards the end of 1958. The agreement on this project between the Commonwealth and the

two State Governments provided for the Commonwealth to meet 70 per cent. of the cost of unification and the two States to share equally the remaining 30 per cent. The Commonwealth was required to advance the whole of the necessary funds initially, the States' proportion, plus interest, being repayable over fifty years. The opening of the uniform gauge between Albury and Melbourne in 1962 completed the standard gauge link between South Brisbane and Melbourne, and through services were operated for the first time between Sydney and Melbourne. The final cost of this project, met initially by the Commonwealth, amounted to \$31.9 million. Details of operations are included in the statistics of the various States.

In 1961 the Commonwealth and Western Australian Governments enacted legislation to enter into an agreement to undertake certain standard gauge railway works, including the provision of rolling stock, in Western Australia at an estimated cost of \$82.4 million. The proposal is linked with the establishment of an integrated iron and steel industry at Kwinana in that State, and the new railway facilities will be used to transport iron ore from the Koolyanobbing deposits some thirty-three miles beyond Southern Cross. These railway facilities will also link Kalgoorlie with East Perth and Fremantle by a standard gauge line. It has been agreed that the project has standardization and developmental components in approximately equal parts, and initially the Commonwealth will, in effect, provide finance for all the standardization portion of the works and 70 per cent of the developmental portion. The State will repay with interest 30 per cent of the standardization costs over fifty years and all the advance for developmental works over twenty years. Work on the project commenced in 1962 and is planned to be completed by December 1968.

In 1964 the South Australian Government submitted to the Commonwealth Government a proposal in outline for the standardization of the existing railway line between Port Pirie and Adelaide. The Commonwealth Government has made available \$30,000 to South Australia for the surveying of this link without committing the Commonwealth to any further action.

Route-miles open for traffic

The following table shows the route-mileage of each Government railway system, according to gauge, at 30 June 1965.

GOVERNMENT RAILWAYS: ROUTE-MILEAGE^(a) OPEN, SYSTEMS
30 JUNE 1965
(Miles)

System	Gauge					Total
	5 ft. 3 in.	4 ft. 8½ in.	3 ft. 6 in.	2 ft. 6 in.	2 ft. 0 in.	
New South Wales	(b) 6,055	6,055
Victoria	(c) 4,000	202	..	9	..	4,211
Queensland	69	5,686	..	30	5,785
South Australia	1,650	..	847	2,497
Western Australia	3,733	3,733
Tasmania	500	500
Commonwealth	(d) 1,330	(e) 922	2,252
Australia	5,650	7,656	11,688	9	30	25,033

(a) Mileage of railway irrespective of whether it consists of single or multiple track. Excludes sidings and marshalling yards. (b) Includes 234 route-miles which are electrified. (c) Excludes 202 miles of 5 ft. 3 in. gauge line which almost parallels the uniform gauge (4 ft. 8½ in.) line between Albury and Melbourne. Includes 263 route-miles which are electrified. (d) Trans-Australian Railway, Australian Capital Territory Railway and portion of Central Australia Railway. (e) North Australia Railway and portion of Central Australia Railway.

As the Commonwealth systems include mileages in South and Western Australia, and the Victorian system extends into New South Wales, the system route-mileages shown in the previous table do not represent mileages within each State and Territory. The mileages within each State and Territory at 30 June 1965 are shown in the next table.

GOVERNMENT RAILWAYS: ROUTE-MILEAGE OPEN, STATES AND TERRITORIES, 30 JUNE 1965
(Miles)

Gauge	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	A.C.T.	Aust.
5 ft. 3 in.	(a) 204	(b) 3,796	..	1,650	5,650

3 ft. 6 in.	5,686	(f) 1,279	3,733	500	(g) 490	..	11,688
2 ft. 6 in.	9	9
2 ft. 0 in.	30	30
Total	6,259	4,007	5,785	3,800	4,187	500	490	5	25,033
Per 1,000 of population	1.49	1.25	3.59	3.60	5.20	1.37	14.08	0.06	2.20
Per 1,000 square miles	20.23	45.59	8.67	10.00	4.29	18.95	0.94	5.32	8.43

(a) Portion of Victorian system. (b) Excludes 202 miles of 5 ft. 3 in. gauge line which almost parallels the uniform gauge (4 ft. 8½ in.) line between Albury and Melbourne. (c) Includes 654 miles of Trans-Australian and 217 miles of the Central Australia Railway systems. (d) Portion of Trans-Australian Railway system. (e) Australian Capital Territory Railway system. (f) Includes 432 miles of the Central Australia Railway system. (g) Includes 173 miles of the Central Australia and 317 miles of the North Australia Railway systems.

The following table sets out route-mileages of Government railways in each State and Territory at various dates since the inauguration of railways in Australia in 1854.

GOVERNMENT RAILWAYS: ROUTE-MILEAGE OPEN, STATES AND TERRITORIES, 1855 TO 1965
(Miles)

At 30 June—	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	A.C.T.	Aust.

(a) At 31 December.

Summary of operations

The following table shows a summary of the operations of the Australian Government railway systems during 1964-65.

GOVERNMENT RAILWAYS: SUMMARY OF OPERATIONS, SYSTEMS, 1964-65

System	Revenue train-miles (a)	Passenger journeys (b)	Passenger-miles (c)	Goods and livestock	
				Tons carried (b)	Ton-miles (d)
	'000	'000	'000	'000	'000
New South Wales	40,194	238,732	n.a.	27,889	4,705,996
Victoria	20,489	149,753	1,682,960	12,596	2,028,201
Queensland	17,605	25,215	n.a.	10,031	(e) 1,751,465
South Australia	6,582	15,196	216,067	5,089	765,366
Western Australia	7,562	10,395	137,888	5,229	842,066
Tasmania	1,272	1,340	19,563	1,091	116,566
Commonwealth	2,914	347	120,947	2,919	885,823
Australia (b)	96,618	440,978	n.a.	64,844	(e) 11,095,483

(a) One train (i.e. a complete unit of locomotive and vehicles, electric train set, or rail motor) travelling one mile for revenue purposes. (b) Inter-system traffic is included in the total for each system (including each Commonwealth Railway) over which it passes. (c) One passenger travelling one mile. (d) One ton carried one mile. (e) Excludes Queensland portion of Uniform Gauge Railway.

Gross earnings

Gross earnings are composed of earnings from (a) coaching traffic, including the carriage of passengers, mails, horses, parcels, etc., by passenger trains; (b) carriage of goods and livestock; and (c) rents and miscellaneous items. In this section particulars of State Government grants are excluded. Details of these grants made during 1964-65 are shown on page 463.

In the following table gross earnings are shown for the years 1960-61 to 1964-65, together with earnings per average route-mile worked and per revenue train-mile.

GOVERNMENT RAILWAYS: GROSS EARNINGS, SYSTEMS, 1960-61 TO 1964-65

Year	System							Aust.
	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	Cwth

Working expenses

In comparing the working expenses of the various railway systems, allowances should be made for the variation in gauges, terrain, traffic handled and method of operation. In addition to variations between systems there are also variations on different portions of the same system. Working expenses, wherever presented in the Railways section of this chapter, include reserves for depreciation in the South Australian, Western Australian, Tasmanian and Commonwealth systems but exclude interest, sinking fund, exchange and certain other payments (*see* page 463).

The following table shows the total working expenses, the ratio of working expenses to gross earnings, and working expenses per average route-mile worked, and per revenue train-mile for the years 1960-61 to 1964-65.

**GOVERNMENT RAILWAYS: WORKING EXPENSES, SYSTEMS

(a) Includes provision for depreciation, (b) Excludes provision for depreciation.
Minus sign (-) denotes loss.

Net earnings, grants to railways, interest, sinking fund, surplus or deficit, 1964-65

The following table shows, for each railway system for the year 1964-65, (i) net earnings as above, (ii) State grants and other items credited to railways accounts, (iii) loan interest, exchange, sinking fund, etc., payments charged against the accounts, and (iv) the net surplus or deficit after these items have been taken into account. Particulars of items (ii) to (iv) are not included in the preceding tables in this section.

The figures shown in this table accord with those published in the Annual Reports of the Railways Commissioners of the several systems. Because of the differences in governmental practice concerning costs other than operative charged against railway accounts, compensation for non-paying and developmental lines, etc., and the inclusion in some railways finances of the operations of ancillary transport services, direct comparison cannot be made between the results

shown in the table. For further information on railways finance, in particular expenditure from loan and other funds, see the chapter Public Finance of this Year Book. See also the Reports of the several Railways Commissioners.

**GOVERNMENT RAILWAYS: SURPLUS OR DEFICIT OF EACH SYSTEM
AT 30 JUNE 1965**

(\$)

System	Net earnings—excess of gross earnings over working expenses(a)	Plus grants and other income	Less other expenses charged to railways				Surplus (+) or deficit (-)

(a) Suburban and country—based on ticket sales, making allowances for periodical tickets. Tickets sold at concession rates are counted as full journeys. (b) Inter-system traffic is included in the total for each system (including each Commonwealth Railway) over which it passes.

Passenger traffic

With the exception of the Commonwealth railway systems, which operate only country services, all systems provide both suburban and country passenger services. Traffic classed as 'suburban' moves between stations within a classified suburban area around each capital city, while traffic classed as 'country' originates or terminates at stations outside this suburban area. Particulars of suburban and country passenger traffic are shown separately in the two tables following.

Suburban passenger traffic. The following table shows a summary of suburban passenger operations for the years 1960-61 to 1964-65. Most of the suburban services in New South Wales and Victoria are operated within electrified areas.

**GOVERNMENT RAILWAYS: SUBURBAN PASSENGER SUMMARY, SYSTEMS
1960-61 TO 1964-65**

Year	Suburban passenger-journeys (a)	Suburban passenger train-miles	Suburban passenger-miles	Average number of passengers per train-mile	Average mileage per passenger-journey	Suburban passenger earnings

Australia	1,782	821	76	147	2,826	(f) 8,777	(f)88,781	(f) 8,144

(a) Included in capital account. (b) Includes non-passenger-carrying diesel power vans. (c) Includes all brake vans. (d) Excludes stock jointly owned with other systems. (e) Includes vehicles not having a capital value. (f) Includes jointly owned stock.

The following table shows the numbers of rolling stock on capital account for all railway systems at 30 June of each of the years 1961 to 1965.

GOVERNMENT RAILWAYS: ROLLING STOCK^(a), AUSTRALIA, 1961 TO 1965

30 June—	Locomotives					Coaching stock ^(c)	Goods stock	Service stock
	Steam	Diesel-electric	Electric	Other ^(b)	Total			
1961 . . .	2,651	491	76	109	3,327	9,172	92,455	6,896
1962 . . .	2,456	541	76	123	3,196	9,177	91,094	7,976
1963 . . .	2,215	608	76	132	3,031	8,969	90,020	7,960
1964 . . .	1,981	694	76	140	2,891	8,829	88,929	7,944
1965 . . .	1,782	821	76	147	2,826	8,777	88,781	8,144

^(a) Included in capital account. ^(b) Includes non-passenger-carrying diesel power vans. ^(c) Includes all brake vans.

Accidents

The following table shows particulars of the number of persons killed or injured through train accidents and the movement of rolling stock on the Government railways of Australia during 1964-65.

GOVERNMENT RAILWAYS: ACCIDENTS^(a), SYSTEMS, 1964-65

—	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	Cwlth	Aust.
Persons killed . . .	53	48	23	9	10	1	..	144
Persons injured . . .	743	638	181	39	76	8	11	1,696

^(a) Excludes accidents to railway employees.

Consumption of coal, oil and petrol

The following table shows the value of coal, oil and petrol consumed by the various Government railways during 1964-65.

GOVERNMENT RAILWAYS: VALUE OF COAL, OIL AND PETROL CONSUMED, SYSTEMS, 1964-65
(\$'000)

System	Coal		Oil				Petrol for rail cars
	Locomotives	Other purposes	Diesel ^(a)	Fuel ^(b)	Lubrication	Other purposes	
New South Wales	(c)	(c)	3,426	168	428	310	..
Victoria . . .	1,033	39	1,324	612	231	224	..
Queensland . . .	1,998	66	1,542	..	91	217	..
South Australia . . .	262	34	809	59	n.a.	n.a.	(d)
Western Australia	1,047	21	618	..	250	177	9
Tasmania . . .	8	1	161	..	30	11	..
Commonwealth . . .	1	2	641	..	70	92	1

^(a) Used in internal combustion engines of locomotives and rail cars. ^(b) Used in oil-fired furnaces of steam locomotives. ^(c) Not available. The quantity of coal used was 635,763 tons for locomotives and 13,326 tons for other purposes. ^(d) Less than \$500.

Staff employed and salaries and wages paid

The following table shows details of the average staff employed and the salaries and wages paid by the government railways of Australia during 1964-65.

GOVERNMENT RAILWAYS: AVERAGE NUMBER OF EMPLOYEES, AND SALARIES AND WAGES PAID, SYSTEMS, 1964-65

System	Operating staff			Construction staff			Total salaries and wages paid (\$'000)	Average earnings per employee (\$)
	Salaried	Wages	Total	Salaried	Wages	Total		
New South Wales	9,136	37,502	46,638				125,017	2,681
Victoria	(a) 5,319	(a) 22,593	(a) 27,912	(b)	(b)	(b)	75,667	2,711
Queensland(c)	4,264	21,345	25,609	10	210	220	64,874	2,512

Tasmania	377	1,837	2,214	26	123	149	5,355	2,266
Commonwealth	473	2,337	2,810	8,422	2,997
Australia	23,386	101,476	124,862	61	1,335	1,396	330,635	2,619

(a) Includes construction staff.
of Uniform Gauge Railway.

(b) Included with operating staff.

(c) Excludes Queensland portion

TRAMWAY, TROLLEY-BUS AND OMNIBUS SERVICES

Systems in operation

Tramway and trolley-bus. Since 1 April 1947 all systems have been operated by government or municipal authorities. During the year 1964-65, tramway systems were in operation in the following cities: Melbourne, Bendigo, and Ballarat, Victoria; Brisbane, Queensland; and Adelaide, South Australia. Trolley-bus services operated in Brisbane, Queensland; Perth, Western Australia; and Hobart and Launceston, Tasmania. All systems were electric.

In many parts of Australia private lines used for special purposes in connection with the timber, mining, sugar, or other industries are often called tramways, but they are more properly railways, and the traffic on them has nothing in common with that of the street tramways for the convenience of passengers, which are dealt with in the present section.

Motor omnibus. Services are operated by government or municipal authorities and private operators. Statistics are collected for government and municipal omnibus services located in all State capital cities; Canberra, Australian Capital Territory; Newcastle, New South Wales; Maryborough and Rockhampton, Queensland; Fremantle and the Eastern Goldfields area, Western Australia; Launceston and Burnie, Tasmania; Darwin, Northern Territory; and for country road services operated by the Western Australian Government Railways and the Tasmanian Transport Commission. In Sydney the Government tramway system has been replaced by omnibus services, and in Perth the Metropolitan (Perth) Passenger Transport Trust has replaced privately owned services in the metropolitan area. In Hobart the Government trolley-bus and omnibus services have replaced the Government tramway service.

Particulars of motor omnibus services under the control of private operators are recorded for the States of New South Wales, Victoria, Queensland, South Australia and Western Australia. In New South Wales particulars of private services are compiled for the Sydney metropolitan and Newcastle transport districts and the City of Greater Wollongong. In Victoria particulars since 1963-64 relate to operations within the Melbourne metropolitan area. Prior to this they referred to services operating within eight miles of the General Post Office, Melbourne. In South

Australia particulars relate to services licensed by the Municipal Tramways Trust and the Transport Control Board. In Queensland they relate to all cities with a population of 10,000 persons or more. In Western Australia particulars of all private services throughout the State are included.

Government and municipal services

Because of the development in recent years of the various forms of public road transport under the control of single authorities, and the gradual replacement of tramway services by motor omnibus services, it is no longer possible to obtain separate statistics for all phases of the activities of each form of transport, particularly financial operations. In this section, therefore, statistics of public tramway, trolley-bus and motor omnibus services are combined in single tables with separate details shown for each form of transport where possible. The following table gives a summary for 1964-65 of the operations of tramway, trolley-bus and omnibus systems controlled by government and municipal authorities.

TRAMWAY, TROLLEY-BUS AND OMNIBUS SERVICES: GOVERNMENT AND MUNICIPAL, STATES AND TERRITORIES, 1964-65

(a) Includes particulars of New South Wales tramway services up to cessation of operation in February, 1961. (b) Includes particulars for Tasmanian trams (to October, 1960) and trolley-buses. (c) Excludes government grants. (d) Includes provision of reserves for depreciation, etc., where possible. (e) Excludes accidents to employees.

Minus sign (-) denotes deficit.

Private omnibus services

The following table shows the operations of motor omnibus services under the control of private operators in New South Wales, Victoria, Queensland, South Australia and Western Australia during each of the years 1960-61 to 1964-65. Particulars are not available for Tasmania and the Northern Territory.

MOTOR OMNIBUS SERVICES: PRIVATE, STATES, 1960-61 TO 1964-65

1964-65	44	791	1,446	123	155	45

(a) At 30 June. (b) At end of period. (c) Metropolitan, Newcastle and Wollongong transport districts only. (d) Nine months ended March 1961; subsequent figures relate to the years ended 31 March. (e) Partly estimated. (f) Vehicles only. (g) Drivers only. (h) Figures relate only to services operating within eight miles of General Post Office, Melbourne. (i) All cities with a population of 10,000 persons or more. (j) Services licensed by the Municipal Tramways Trust and the Transport Control Board. (k) Includes services operated in metropolitan and rural areas. (l) Decrease due to Metropolitan (Perth) Passenger Transport Trust's acquisition of services previously privately owned.

FERRY (PASSENGER) SERVICES

Ferry passenger services are operated in the following States—New South Wales, at Sydney and Newcastle; Western Australia, on the Swan River at Perth; Tasmania, on the Mersey River at Devonport. Control is exercised by both governmental authorities and private operators. In Victoria and Queensland the services operated are not extensive. There are no ferry passenger services in South Australia.

Summary of operations

The operations of ferry passenger services in New South Wales, Western Australia and Tasmania during the years 1960-61 to 1964-65 are summarized in the following table. Particulars of vehicular ferries are not included.

FERRY (PASSENGER) SERVICES: STATES, 1960-61 TO 1964-65

Year	Number of vessels	Passenger accommodation	Passenger-journeys	Gross revenue	Persons employed
			'000	\$'000	
New South Wales—Sydney and Newcastle—					
1960-61	40	19,211	15,093	1,744	316
1961-62	39	17,641	14,452	1,660	295
1962-63	38	17,653	14,456	1,672	300
1963-64	38	17,463	14,777	1,763	289
1964-65	40	17,506	15,062	1,911	302
Western Australia—Perth—					
1960-61	4	785	180	18	7
1961-62	4	800	168	20	8
1962-63	4	800	192	22	8
1963-64	4	800	185	24	8
1964-65	5	865	201	31	8
Tasmania—Hobart and Devonport—					
1960-61	4	1,482	436	21	12
1961-62	4	1,482	406	19	12
1962-63	4	1,482	380	21	12
1963-64(a)	1	40	177	8	3
1964-65(a)	1	40	180	8	3

(a) Devonport only.

MOTOR VEHICLES

The arrangements for the registration of motor vehicles and the licensing of drivers and riders are not uniform throughout Australia, since they are the function of a separate authority, or authorities, in each State and Territory. Particulars of registration, licences, fees payable, etc., in each State and Territory at 30 June 1960 were given in Year Book No. 47, pages 553-6, and at 30 June 1963 in *Transport and Communication*, Bulletin No. 54, 1962-63.

Motor vehicles on register; licences

Tables in this section include vehicles owned by private individuals, local government authorities, State Governments and the Commonwealth Government (excluding those belonging to the defence services).

Census of Motor Vehicles, 1962

A census of motor vehicles on register at 31 December 1962 was conducted by the Commonwealth Statistician in co-operation with the Deputy Commonwealth Statisticians and the motor vehicle registration authorities. The census covered items shown on the motor vehicle registration certificate such as make of vehicle, year of model, type of vehicle, horsepower, motive power, location (i.e. address on registration certificate), ownership (private, government, etc.), and for specific types of vehicles such items as unladen weight, carrying capacity, passenger capacity, and in some States gross vehicle weight. Details were published in printed bulletins for each State and Territory and for Australia, and in issue No. 54, 1962-63 of the annual bulletin *Transport and Communication*. Year Book No. 50, 1964, contains summarized particulars of the census (pages 591-4). Reference is made to the publication of results of previous enumerations of this nature in Year Book No. 51 (page 571).

The following table contains a summary for each State and Territory of the number of motor vehicles of each type on the register at 31 December 1962. The total number of each type recorded for Australia at the previous motor vehicle census (31 December 1955) is included for purposes of comparison.

**CENSUS OF MOTOR VEHICLES, 31 DECEMBER 1962: TYPES OF VEHICLE

Australian Capital Territory	25,019	4,571	313	29,903	353
Australia	2,707,193	862,434	69,450	3,639,077	323

(a) On a basis comparable with the Census of Motor Vehicles, 1962. All figures are subject to revision. (b) Includes other truck-type vehicles. (c) Excludes tractors, trailers, plant and equipment, etc.

The table following shows a summary for Australia of the number of motor vehicles on register and the number per 1,000 of population at 31 December each year 1960 to 1965.

MOTOR VEHICLES ON REGISTER: AUSTRALIA, 1960 TO 1965

31 December—	Motor cars, station wagons, ambulances, hearses	Utilities, panel vans, trucks(a), omnibuses	Motor cycles	Total(b)	Per 1,000 of population
1960(c) . . .	2,027,298	798,828	97,696	2,923,822	281
1961(c) . . .	2,126,339	803,551	88,855	3,018,745	285
1962(d) . . .	2,300,134	827,344	81,859	3,209,337	297
1963(e) . . .	2,498,925	844,481	74,719	3,418,125	310
1964(e) . . .	2,707,193	862,434	69,450	3,639,077	323
1965(e) . . .	2,894,203	872,394	67,435	3,834,032	334

(a) Includes other truck-type vehicles. (b) Excludes tractors, trailers, plant and equipment, etc. (c) Estimates for inter-censal years on a basis comparable with the Censuses of 1955 and 1962. (d) Census figures. (e) Subject to revision.

The table following shows the number of motor vehicles on register per 1,000 of population in each State and Territory at 31 December for each of the years 1961 to 1965.

MOTOR VEHICLES(a) ON REGISTER PER 1,000 OF POPULATION
STATES AND TERRITORIES, 1961 TO 1965

31 December—	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	A.C.T.	Aust.
1961(b) . . .	267	290	278	332	311	275	386	309	285
1962(c) . . .	281	300	288	338	331	284	406	319	298
1963(d) . . .	293	312	306	349	344	299	428	341	311
1964(d) . . .	307	322	326	360	355	316	444	353	323
1965(d) . . .	317	330	343	367	369	331	432	363	334

(a) Excludes tractors, trailers, plant and equipment, etc. (b) Estimates for inter-censal years on a basis comparable with the Censuses of 1955 and 1962. (c) Census figures. (d) Subject to revision.

Drivers' and riders' licences

At 30 June 1965 the numbers of licences in force to drive or ride motor vehicles were: New South Wales, 1,608,213; Victoria, 1,215,435; South Australia, 438,666; Western Australia, 329,157; Tasmania, 136,744; Australian Capital Territory, 46,612. Particulars are not available for Queensland and the Northern Territory.

Registrations of new motor vehicles

The following table shows the number of new motor vehicles registered in each State and Territory during the year ended 31 December 1965.

REGISTRATIONS OF NEW MOTOR VEHICLES: STATES AND TERRITORIES, 1965

State or Territory	Motor cars and station wagons	Utilities, panel vans, trucks(a) and omnibuses	Motor cycles	Total
New South Wales	121,423	25,749	3,251	150,423
Victoria	93,115	17,865	1,058	112,038
Queensland	44,855	12,502	1,758	59,115
South Australia	34,168	6,966	1,090	42,224
Western Australia	22,655	8,081	594	31,330
Tasmania	10,443	2,564	122	13,129
Northern Territory	1,153	744	72	1,969
Australian Capital Territory	3,939	719	117	4,775
Australia	331,751	75,190	8,062	415,003

(a) Includes other truck-type vehicles, ambulances and hearses.

Particulars of the registrations of new motor vehicles during each of the years ended 31 December 1961 to 1965 are shown in the following table.

**REGISTRATIONS OF NEW MOTOR VEHICLES
AUSTRALIA, 1961 TO 1965**

Year	Motor cars and station wagons	Utilities, panel vans, trucks(a) and omnibuses	Motor cycles	Total
1961	188,132	49,608	6,103	243,843
1962	266,789	56,457	5,414	328,660
1963	307,380	66,783	5,272	379,435
1964	333,063	75,492	6,482	415,037
1965	331,751	75,190	8,062	415,003

(a) Includes other truck-type vehicles, ambulances and hearses.

ROADS AND BRIDGES

Information on the length of roads in Australia, the class of roads and their composition, together with particulars of the financial operations of the roads authorities in the several States, is included in the chapter Local Government of this Year Book.

ROAD TRAFFIC ACCIDENTS

Accidents reported

Accidents involving casualties, persons killed, persons injured

The following table gives a summary of road traffic accidents involving casualties in each State and Territory for the year ended December 1964.

ROAD TRAFFIC ACCIDENTS INVOLVING CASUALTIES(a): NUMBER OF ACCIDENTS, PERSONS KILLED AND PERSONS INJURED STATES AND TERRITORIES, 1964

State or Territory	Accidents involving casualties	Persons killed			Persons injured		
		Number	Per 100,000 of mean population	Per 10,000 motor vehicles registered	Number	Per 100,000 of mean population	Per 10,000 motor vehicles registered
New South Wales	19,399	1,010	25	8	26,631	646	215
Victoria	13,991	904	29	9	19,836	634	200
Queensland	7,220	461	29	9	10,383	655	207
South Australia(b)	6,998	238	23	7	9,222	894	252
Western Australia	4,062	222	28	8	5,450	690	197
Tasmania	1,184	89	24	8	1,709	465	148
Northern Territory	224	25	80	19	297	946	228
Australian Capital Territory	476	17	21	6	730	904	259
Total	53,554	2,966	27	8	74,258	667	210

(a) Accidents (reported to the police) which occurred in public thoroughfares and which resulted in the death of any person within a period of thirty days after the accident, or injury to an extent requiring surgical or medical treatment. (b) Includes all accidents resulting in bodily injury to any person whether or not requiring medical or surgical treatment.

The following table shows the number of road traffic accidents involving casualties and persons killed or injured in road traffic accidents in each State and the Australian Capital Territory during each of the years ended December 1960 to 1964 and for the Northern Territory for the years ended December 1963 and 1964.

Australian Road Safety Council

Origin, objectives and organization

The Australian Road Safety Council was formed in 1947 by the Australian Transport Advisory Council, which comprises Commonwealth and State transport ministers and Commonwealth ministers with associated interests, to co-ordinate road safety activities in Australia. It was re-constituted in February 1961 by the Australian Transport Advisory Council, in order to provide a smaller, more effective, organization.

The Council comprises twenty-two members, representing the Commonwealth and State Governments and the major categories of organized road users and includes six independent specialists in the fields of medicine, enforcement, road research, statistics, road engineering, and traffic engineering who were added to the Council in 1965. It meets approximately twice each year and has established a number of temporary sub-committees to investigate and report upon particular aspects of its activities.

The Department of Shipping and Transport provides the secretariat for the Council. Each section represented on the Australian Road Safety Council—Commonwealth, State and community/commercial—exercises full control over its own activities.

Mode of operation

The media used by the Australian Road Safety Council include metropolitan daily press and metropolitan radio and television, platform and pulpit, plus a wide variety of posters, pamphlets, booklets, publications and films. The official publication of the Council is the *Australian Road Safety Council Report* which is published monthly. Through its secretariat in the Department of Shipping and Transport, the Council works in close collaboration with other committees established by the Australian Transport Advisory Council. These include the Australian Road Traffic Code Committee, which prepares model regulations with the object of attaining national uniformity of traffic laws; and the Australian Motor Vehicle Standards Committee, which devises national standards for the construction, equipment, and operational efficiency of all road vehicles. At the present time a special committee of Commonwealth and State educationists, called together by the Australian Road Safety Council, is investigating ways and means of broadening and strengthening the impact of road safety education throughout the school system. Another committee is looking into the question of more comprehensive and purposeful road accident statistics.

Jointly with the Australian Motor Vehicle Standards Committee the Council is investigating the desirability of compulsory vehicle inspections, and works in co-operation with the National Health and Medical Research Council and the Australian Traffic Code Committee in examining existing arrangements on the policy and procedures best suited to Australian conditions for the promotion of driver improvement through health standards, licensing and enforcement. The Council recently brought together representatives of commerce and industry and seat-belt manufacturers to promote a national seat-belt campaign. The move resulted from both Australian and overseas studies which indicated that the risk of death or serious injury to drivers and passengers could be reduced substantially by the use of seat belts.

CIVIL AVIATION

Department of Civil Aviation

Control of civil aviation in Australia is exercised by the Department of Civil Aviation, which was established in 1939 to take over from the Civil Aviation Board the regulation of civil aviation in Australia. The Department's jurisdiction covers not only Australia but also Papua, New Guinea and areas of the Indian and Pacific Oceans. Year Book Nos. 16, 19 and 38 trace the establishment of civil aviation control in Australia and the appropriate Acts of Parliament and Regulations under which this control is exercised. The present functions of the Department are shown in Year Book No. 51, pages 578-9, and further details about its operations are given in the annual reports to the Commonwealth Parliament by the Minister for Civil Aviation.

International activity

International organizations. A full report of the formation of the International Civil Aviation Organization, the Commonwealth Air Transport Council and the South Pacific Air Transport Council appeared in Year Book No. 37, and particulars of subsequent activity in the international field were included in No. 38. The International Civil Aviation Organization had a membership of 110 nations in December 1965. Australia has continued its representation on the Council, a position which it held since I.C.A.O. was established in 1947. Further details will be found in Year Book No. 40 and earlier issues.

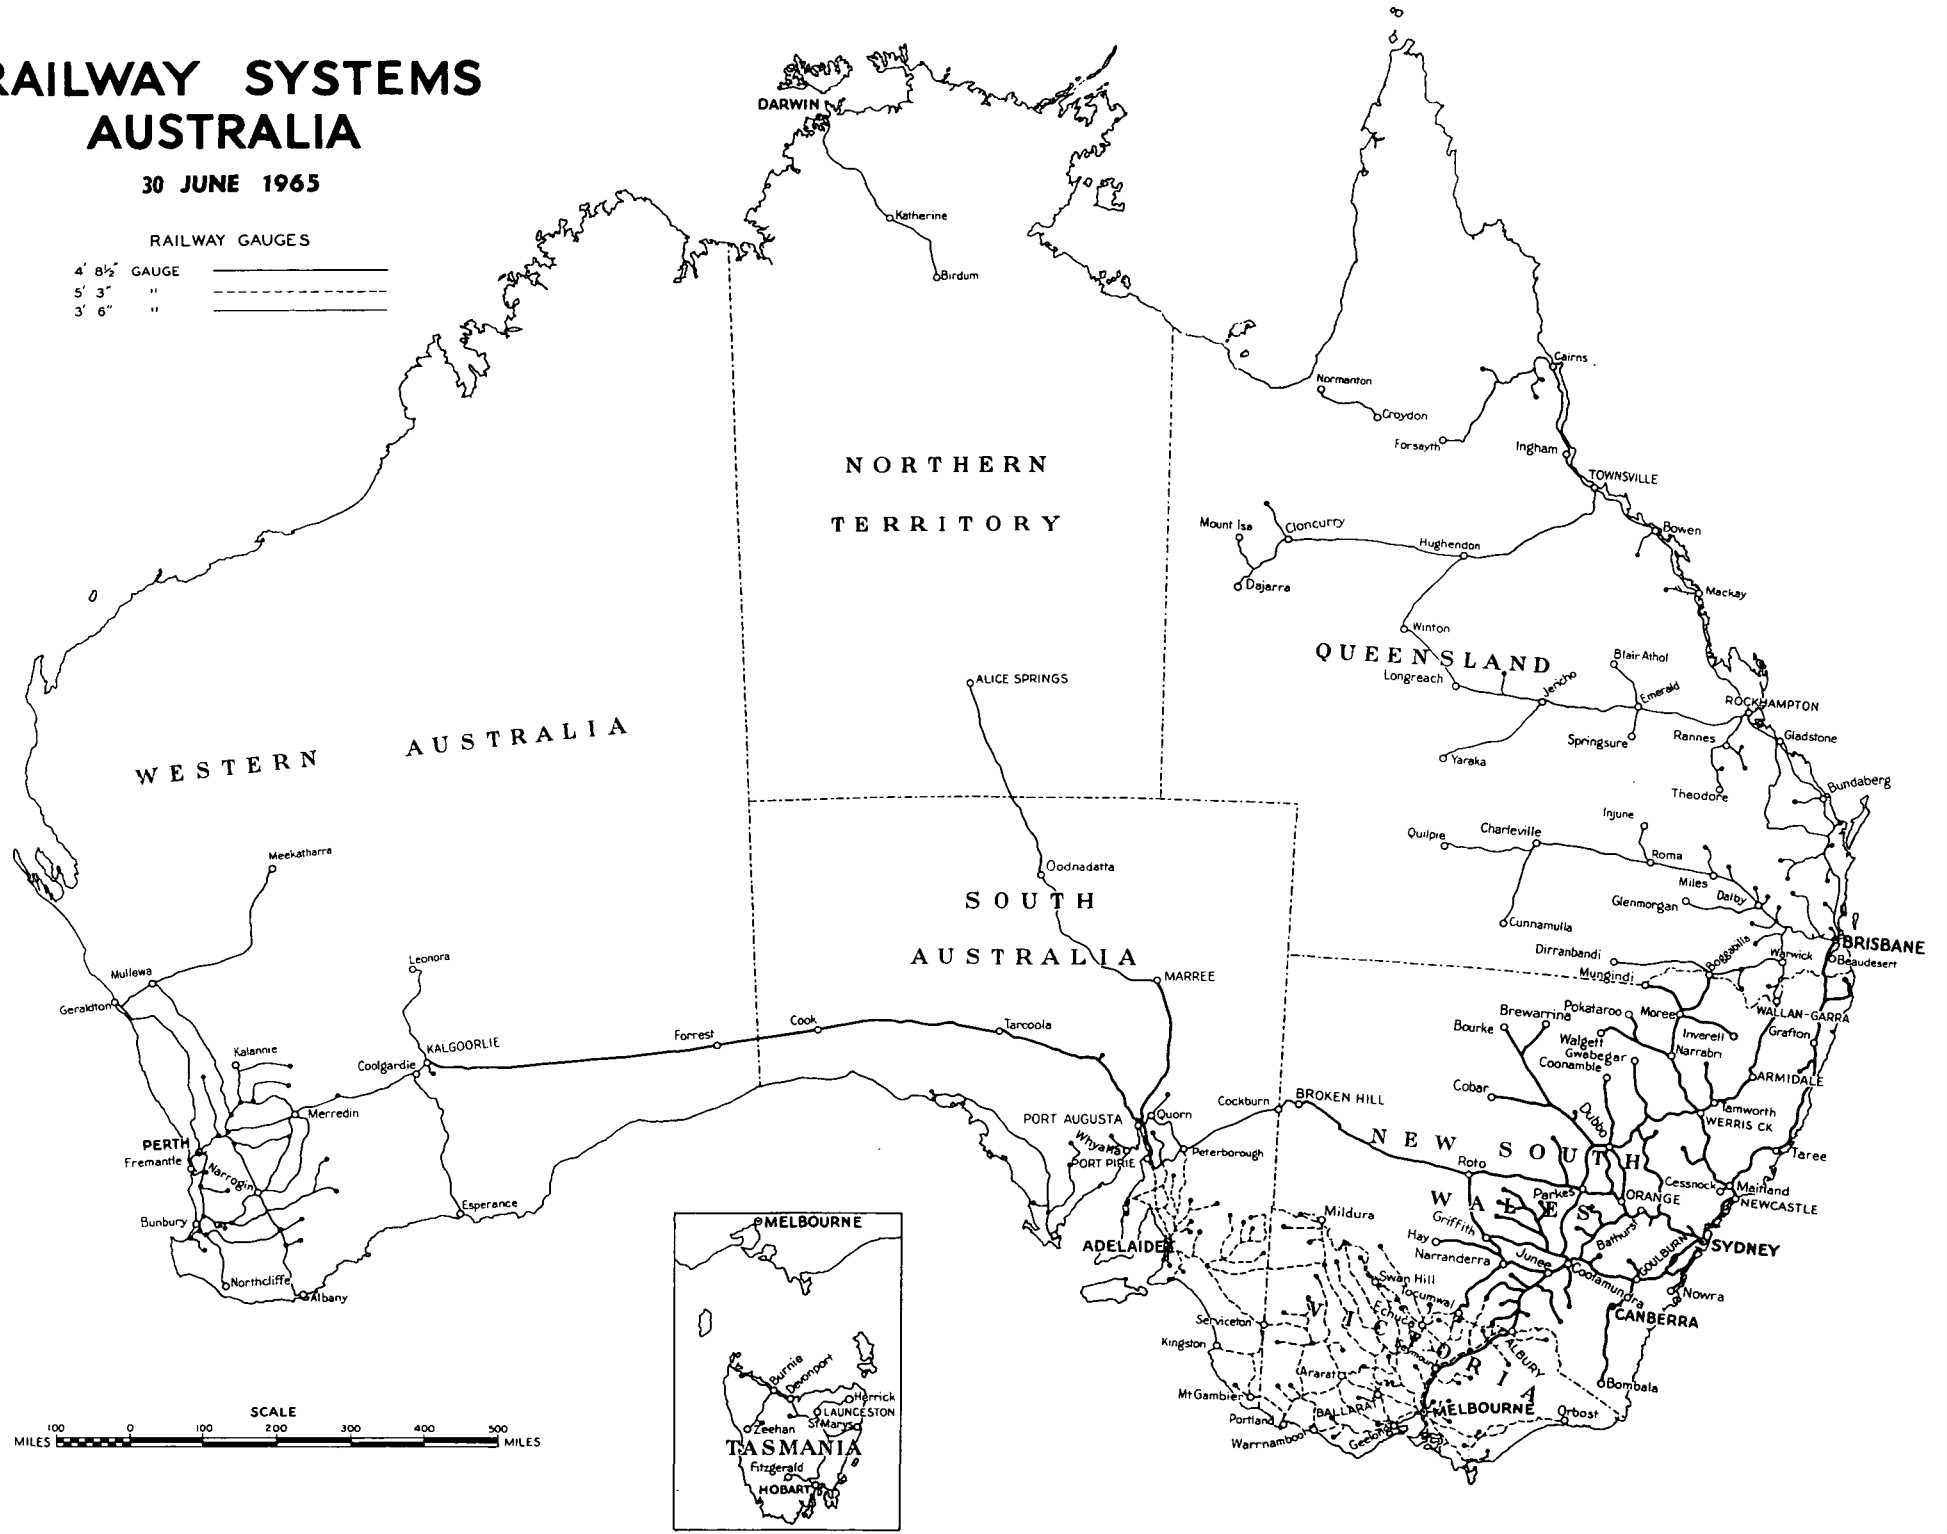

International agreements. Since 1946 Australia has signed air services agreements with twenty countries. Of these, eighteen were in force at December 1965. The countries concerned were Canada, Ceylon, France, Federal Republic of Germany, India, Ireland, Italy, Japan, Lebanon, Malaysia, Netherlands, New Zealand, Pakistan, South Africa, Thailand, United Arab Republic, United Kingdom and United States of America. The agreement with France was signed and entered into force on 13 April 1965. Agreements with Iran and Turkey had not come into operation by December 1965. Under these agreements traffic rights are granted to Australia's international airline, Qantas Empire Airways Ltd., in return for reciprocal traffic rights for the designated international airlines of the countries concerned to operate air services into Australia. Australia has also concluded arrangements with the following six countries, Austria, Greece, Indonesia, Mexico, Philippines and Singapore, under which Qantas is currently exercising traffic rights.

International air services. In December 1965 eleven overseas international airlines were operating regularly scheduled services to Australia. These included: Air-India (India), Air New Zealand, formerly Tasman Empire Airways Ltd. (New Zealand), Alitalia (Italy), British Overseas Airways Corporation (United Kingdom), Canadian Pacific Air Lines (Canada), Deutsche Lufthansa (Federal Republic of Germany), Koninklijke Luchtvaart Maatschappij (Netherlands), Pan-American World Airways (United States of America), Philippine Air Lines (Philippines),

PAYING PASSENGERS AND FREIGHT CARRIED

* INCLUDES ONLY SERVICES OPERATING WITHIN THE AUSTRALIAN MAINLAND AND TASMANIA. † AIRLINES WHOLLY OR PARTLY OWNED BY AUSTRALIAN INTERESTS.
 NOTE:— VERTICAL SCALE IS LOGARITHMIC, AND THE CURVES RISE AND FALL ACCORDING TO RATE OF INCREASE OR DECREASE; ACTUAL NUMBERS ARE INDICATED BY THE SCALES.

South African Airways (South Africa), and Union de Transports Aeriens (France). In addition, the Indonesian airline P.N. Merpartu Nusantara operated services on demand between Sukarnapura in West Irian and Lae in New Guinea, and Trans-Australia Airlines operated services between Darwin and Portuguese Timor under charter to Transportes Aereos de Timor. By December 1965 Qantas, Australia's international airline, was operating thirteen Boeing 707-138B jet aircraft, four larger Boeing 707-338C jet aircraft, and three Lockheed Electra aircraft, over a world-wide network of 81,994 unduplicated route-miles. Firm orders had been placed by Qantas for a further five Boeing 707-338C aircraft for delivery in 1966-67, and tentative orders had been lodged for two more aircraft of this type to be delivered late in 1967. All the shares in Qantas Empire Airways are owned by the Commonwealth Government.

International operations. The table following shows particulars of international airline traffic during 1964-65 moving into and out of an area which embraces the Commonwealth of Australia, Papua-New Guinea and Norfolk Island. These figures do not include traffic between Australia and Papua-New Guinea and Norfolk Island.

**CIVIL AVIATION: INTERNATIONAL AIRLINE TRAFFIC
TO AND FROM AUSTRALIA(a), 1964-65**

Type of traffic	Aircraft movements	Passengers	Freight	Mail
Traffic to Australia—				
Qantas Empire Airways	2,055	123,635	3,931	1,214
Other airlines	2,529	127,636	2,531	830
<i>All airlines</i>	<i>4,584</i>	<i>251,271</i>	<i>6,462</i>	<i>2,044</i>
Traffic from Australia—				
Qantas Empire Airways	2,103	110,492	2,478	919
Other airlines	2,523	113,745	1,921	485
<i>All airlines</i>	<i>4,626</i>	<i>224,237</i>	<i>4,399</i>	<i>1,404</i>

(a) Australian mainland and adjacent Territories (Papua-New Guinea and Norfolk Island).

Particulars of the operations of all Australian-owned airlines to places outside the Commonwealth of Australia are set out in the following table. Services to the external Territories of Papua-New Guinea and Norfolk Island are included, but services wholly within Papua-New Guinea are excluded. Details of the operations of Tasman Empire Airways Limited are included for 1960-61, but excluded after that year following the Commonwealth Government's sale of its half interest in this airline to the New Zealand Government.

**CIVIL AVIATION: OVERSEA OPERATIONS OF AUSTRALIAN-OWNED AIRLINES(a)
1960-61 TO 1964-65**

(a) Includes Tasman Empire Airways Ltd. for 1960-61 only. Includes considerable traffic which neither originates in nor enters Australia. Includes operations of Australian internal airlines to and from Papua-New Guinea but excludes operations of all services wholly within Papua-New Guinea. (b) In terms of short tons.

Regular air services within Australia

Interstate services. Scheduled services with passenger and all-freight aircraft are provided by two airlines only, namely, the private enterprise airline Ansett-A.N.A. (a subsidiary of Ansett Transport Industries) and the Commonwealth-owned instrumentality, Trans-Australia Airlines. All principal routes are competitive, with both airlines providing equal capacities in accord with legislation passed by the Commonwealth Parliament. The two principal Acts which establish the legislative basis of this controlled competition are the *Airlines Agreement Act 1952-1961* and the *Airlines Equipment Act 1958*. The Airlines Equipment Act established the machinery for the achievement and maintenance of comparable, but not necessarily identical, aircraft fleets between T.A.A. and Ansett-A.N.A., and is designed to prevent the provision of excess aircraft capacity. The Airlines Agreement Act established the basis of control of the two-airline competitive system and extended this machinery to 1977.

In addition to purely interstate services, both Ansett-A.N.A. and Trans-Australia Airlines operate routes to New Guinea and non-competitive intrastate routes in Australia. The Ansett-A.N.A. non-competitive routes radiate mainly from Melbourne, while those of Trans-Australia Airlines are located mainly within Queensland and Tasmania. In addition, Trans-Australia Airlines operate services within Papua-New Guinea in competition with another Ansett subsidiary, Ansett-M.A.L., and Papuan Airlines.

At 30 June 1965 the Ansett-A.N.A. fleet included two Boeing 727's, three Electras, eleven Viscounts, three DC6B's, three Friendships, a number of DC4's and DC3's, ten helicopters, and smaller aircraft. At the same date Trans-Australia Airlines operated a fleet of two Boeing 727's, three Electras, twelve Viscounts, three DC6B's, nine Friendships, a number of DC4's and DC3's, three helicopters, and smaller aircraft.

Intrastate services. In addition to the intrastate services operated by Ansett-A.N.A. and Trans-Australia Airlines there are a number of smaller regional airlines operating from Sydney (Airlines of New South Wales and East-West Airlines), Brisbane (Queensland Airlines), Adelaide (Airlines of South Australia), Perth (MacRobertson Miller Airlines), and Alice Springs (Connellan Airways). With the exception of Connellan Airways, which provides regular service to outback homesteads and communities, all the remainder are concerned primarily with traffic moving to and from the respective capital city. With the exception of the independently owned East-West Airlines and Connellan Airways, all regional airlines are subsidiaries of Ansett Transport Industries. The largest aircraft used by these regional airlines are DC4's, Metropolitan, and Friendships supported by DC3's. Connellan Airways uses smaller aircraft types.

Internal operations. Particulars of the operations of all regular air services within Australia, both interstate and intrastate, during each of the years 1960-61 to 1964-65 are set out in the next table.

**CIVIL AVIATION: OPERATIONS OF REGULAR INTERNAL SERVICES
AUSTRALIA(a), 1960-61 TO 1964-65**

(a) Excludes operations between Australia and the External Territories of Papua-New Guinea and Norfolk Island, and operations within Papua-New Guinea. (b) In terms of short tons.

General aviation

General aviation activity, which covers all non-airline operations such as charter, aerial work and private flying, has grown rapidly throughout Australia in the post-war period so that now it is an important sector of the Australian aviation industry. In 1964, hours flown totalled 613,925 compared with 336,597 hours flown by aircraft belonging to the Australian airline industry. At 30 June 1965, aircraft employed in general aviation numbered 1,996.

Training of air pilots

Since 1926 the Commonwealth has subsidized flying training in Australia largely through the Aero Club movement. In 1961 the Government altered the basis of financial assistance to flying training organizations. The new system provides for the payment of \$1,274,000 in subsidies to Australian flying training organizations, including the aero clubs, flying schools and the Gliding Federation of Australia, spread over a four-year period from 1961 to 1965. A feature of the new subsidy arrangements was the establishment of the Australian Flying Scholarship scheme which is designed to train career pilots for the Australian commercial aviation industry. The scholarships provide financial assistance in much the same way as Commonwealth scholarships provide for people undertaking other professions. In the first three years of the scheme 566 scholarships were granted—406 for training to commercial licence standard, 144 to instrument rating and sixteen to agricultural rating.

During 1964-65 pupils of the Australian flying training organizations (aero clubs and commercial flying schools) received 351 private licences, 180 commercial licences and forty-seven instructor ratings. Subsidized hours flown by aero clubs and flying schools totalled 139,877 hours out of a total of 185,903 hours flown and their subsidy earnings totalled \$215,890. A limit placed on the subsidy restricted the total payment to \$150,000. During the year fourteen clubs were also assisted with the purchase of eighteen aircraft. The value of this assistance under the Aircraft Replacement Fund was \$20,000. The permanent secretariats of the Royal Federation of Aero Clubs and the Commercial Flying Schools also received \$16,000 and \$2,000 respectively during 1964-65 as additional financial assistance.

Thirty-nine clubs were affiliated with the Gliding Federation of Australia in 1964-65 and there were 1,572 members. During 1964-65 the Commonwealth assisted gliding clubs to the extent of \$12,000. This amount was allocated as follows: \$6,000 on the basis of active membership and certificates and awards gained, \$2,000 to the National Gliding School, \$4,000 for development and design work and secretarial functions. The total of all subsidy payments and financial assistance to flying training organizations and the gliding movement during 1964-65 was \$300,000.

Aerodromes

The number of aerodromes throughout Australia and its Territories at 30 June 1965 was 647. One hundred and twenty-two were owned by the Commonwealth Government and 525 by local authorities and private interests. Capital expenditure on aerodrome construction increased from \$4.54 million in 1963-64 to \$9.10 million in 1964-65. Maintenance expenditure on Commonwealth-owned aerodromes was \$3.31 million, and development grants to licensed aerodromes participating in the Local Ownership Plan totalled \$1 million. The two major projects at Melbourne and Sydney included in the five-year airports programme, which ends in 1967-68, are proceeding, and each is estimated to cost approximately \$40 million. The projects as a whole are expected to be completed in 1969, but progressive use will be made of the facilities as they become available. The Commonwealth Government approved an additional expenditure of \$16 million over the next five years to make those airport improvements necessary for the operation of additional Boeing 727's and the first DC9's to be introduced by airlines.

Airways facilities

Concurrently with the five-year aerodrome development programme, the Commonwealth Government has approved major extensions and improvements to Australia's air navigation and communications system. New long-range radar units have been installed at Sydney and Adelaide to assist air traffic control, and other units are being established at Melbourne, Brisbane, Perth, Canberra, and Point Lookout, northern New South Wales. Total cost of this radar programme is approximately \$8 million.

Further progress has been made with the programme, started in 1961, of increasing the number of laterally spaced air routes in heavy traffic areas throughout Australia and improving the network of radio navigational aids defining them. A further seventeen navigational aids were put into operation during the year and another fourteen are being installed. The number of navigational aids operating throughout the Commonwealth at 30 June 1965 totalled 295. These included 84 distance measuring equipment (DME) beacons, 37 visual aural ranges (VAR), 150 non-directional beacons (NDB), 7 VHF omni radio ranges (VOR), and 13 instrument landing systems (ILS).

Aircraft on the Australian register

The numbers of aircraft of various types on the Australian register at 30 June 1965 are set out in the following table.

CIVIL AVIATION: AIRCRAFT ON AUSTRALIAN REGISTER, 30 JUNE 1965

Type of aircraft	Number of engines				Total aircraft
	One	Two	Three	Four	
Fixed-wing powered aircraft—					
Turbo-jet	1	4	15	20
Turbo-prop	24	..	32	56
Piston-engined 20,000 lb. and over all-up weight	79	..	20	99
Piston-engined under 20,000 lb. all-up weight	1,829	150	9	3	1,991
Helicopters	40	1	41
<i>Total powered aircraft</i>	<i>1,869</i>	<i>255</i>	<i>13</i>	<i>70</i>	<i>2,207</i>
Gliders	164

Particulars of powered aircraft according to manufacturer and air navigation class in which registered, and further details of gliders, may be found in the bulletin *Transport and Communication*, No. 56, 1964-65.

Registrations, licences, etc. in force in Australia

The following table provides a summary of the civil aviation registrations and licences in force in Australia at 30 June in each year 1961 to 1965.

CIVIL AVIATION: REGISTRATIONS, LICENCES, ETC., AUSTRALIA^(a)
1961 TO 1965

	30 June—				
	1961	1962	1963	1964	1965
Registered aircraft owners	850	938	1,006	1,167	1,293
Registered aircraft ^(b)	1,502	1,600	1,787	1,936	2,207
Pilots' licences—					
Private	3,206	3,627	4,066	4,720	5,382
Private helicopter	2	2	3	6	6
Commercial	973	1,090	1,159	1,263	1,411

Commercial helicopter	34	33	42	53	59
Senior commercial helicopter	5
Student	4,151	4,433	4,845	5,676	6,907
Student helicopter	10	12	15	41	66
1st class airline transport	659	690	684	670	750
2nd class airline transport	471	432	464	603	725
Flight navigators' licences	142	141	135	137	154
1st class flight radio-telegraph operators' licences	43	37	20	19	18
Flight radio-telephone operators' licences	3,679	5,370	6,552	7,956	9,102
Flight engineers' licences	200	175	168	215	429
Aircraft maintenance engineers' licences	2,492	2,485	2,521	2,553	2,779
Aerodromes, Australia—					
Government ^(c)	132	129	122	113	110
Licensed ^(d)	351	359	380	381	386
Flying-boat bases ^(e)	13	13	13	13	13

(a) Except for aerodromes and flying-boat bases, includes the Territory of Papua-New Guinea. (b) Excludes gliders. At 30 June 1965 there were 164 gliders registered. (c) Under the control and management of the Department of Civil Aviation. (d) Under the control and management of a municipality, shire, station owner, private individual, etc. Includes emergency aerodromes. (e) Includes alighting areas.

Accidents and casualties

Particulars of accidents in which persons were killed or injured, involving aircraft on the Australian register, are shown in the following table for the years 1960–61 to 1964–65.

**CIVIL AVIATION: AUSTRALIAN AIRCRAFT^(a), ACCIDENTS
INVOLVING CASUALTIES^(b), 1960-61 TO 1964-65**

—	1960–61	1961–62	1962–63	1963–64	1964–65
Number	40	46	32	33	30
Persons killed	28	52	16	24	20
Persons injured	38	38	26	26	22

(a) Aircraft on Australian register and gliders irrespective of location of accident.
(b) Includes parachutists killed.

**POSTS; INTERNAL AND OVERSEA TELECOMMUNICATION SERVICES;
RADIOCOMMUNICATION STATIONS**

In this division, particulars for the Australian Capital Territory are included with those for New South Wales, and the South Australian figures include particulars for the Northern Territory, unless otherwise indicated. The Central Office of the Postmaster-General's Department is located in Melbourne, Victoria.

Postmaster-General's Department—General

Under the provisions of the *Post and Telegraph Act 1901–1961*, the Postmaster-General's Department is responsible for the control and operation of postal, telegraphic and telephonic services throughout Australia. The Postmaster-General's Department is also responsible for the provision and operation of the transmitters and technical facilities required for broadcasting and television services by the Australian Broadcasting Commission (see pages 496–8), and, in conjunction with the Overseas Telecommunications Commission (see pages 493–5), with whom there is close co-operation, provides facilities for communication with overseas countries. Subsidiary to its major activities, the Postmaster-General's Department performs a number of important functions for other Commonwealth and State departments, including the payment of pensions, child endowment, and military allotments, the provision of banking facilities on behalf of the Commonwealth Savings Bank, the sale of tax and duty stamps, and the collection of land tax.

Postal facilities

The following table shows the number of post offices, the area in square miles and the number of inhabitants to each post office (including non-official offices), and the number of inhabitants to each 100 square miles in each State and in Australia at 30 June 1965.

**POSTAL FACILITIES: RELATION TO AREA AND POPULATION, STATES
30 JUNE 1965**

—	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	Aust.

Australia	118,901	61,000	1,230	1,662	2,032,287	380,178	18,156	12,151

(a) Number of distinct articles handled. (b) Includes letters, cards and other postal articles enclosed in envelopes and sorted with letters. (c) Includes newspapers and postal articles not included in letter mail. (d) Includes registered, cash on delivery and duty parcels. (e) Includes registered articles other than parcels.

The next table shows the total postal articles handled in Australia during each of the years 1960-61 to 1964-65.

POSTAL ARTICLES HANDLED(a): AUSTRALIA, 1960-61 TO 1964-65
(*000)

Year	Letters(b)	Newspapers and Packets(c)	Parcels(d)	Registered articles(e)	Total postal articles handled
1960-61 . . .	1,700,544	318,614	15,976	12,935	2,048,069
1961-62 . . .	1,748,054	324,694	15,854	12,357	2,100,959
1962-63 . . .	1,835,869	337,644	16,545	12,339	2,202,397
1963-64 . . .	1,952,029	360,510	17,010	12,315	2,341,864
1964-65 . . .	2,032,287	380,178	18,156	12,151	2,442,772

For footnotes see previous table.

During 1964-65 the total amounts paid for the carriage of mails, as disclosed by the Profit and Loss Account of the Postal Branch, were as follows: road, \$8,918,882; railway, \$3,462,384; sea, \$567,012; air—internal, \$3,314,886, oversea, \$12,446,966; grand total, \$28,710,130.

Money orders and postal notes

The issue of money orders and postal notes is regulated by sections 74-79 of the *Post and Telegraph Act* 1901-1961. The maximum amount for which a single money order payable within Australia may be obtained is \$80, but additional orders will be issued upon request when larger amounts are to be remitted. The maximum amount permitted to be sent by any one person to a person or persons outside Australia is \$A20 a week. A postal note is not available for a sum larger than two dollars. The following table shows the number and value of money orders and postal notes issued in Australia in each of the years 1960-61 to 1964-65 and the income therefrom which has accrued to the Post Office.

MONEY ORDERS AND POSTAL NOTES: TRANSACTIONS, AUSTRALIA
1960-61 TO 1964-65

Year	Money orders			Postal notes		Poundage
	Issued		Net commission received	Issued		
	Number	Value		Number	Value	
	'000	\$'000	\$'000	'000	\$'000	\$'000
1960-61 . . .	9,652	201,520	1,734	15,959	16,388	614
1961-62 . . .	(a) 10,176	(a) 264,992	1,752	15,514	16,192	614
1962-63 . . .	(a) 11,076	(a) 306,866	1,858	16,330	17,240	642
1963-64 . . .	(a) 11,838	(a) 338,674	2,004	15,987	17,234	634
1964-65 . . .	(a) 12,176	(a) 376,356	2,103	15,338	16,737	618

(a) Includes official money orders used in bringing to account telephone accounts and collections on War Service Homes repayments.

Of the total money orders issued in Australia during 1964-65, 11,746,719 valued at \$373,606,462 were payable in Australia, and 429,554 valued at \$2,749,122 were payable overseas. Of the total money orders paid in Australia during 1964-65, 11,756,029 (\$372,832,788) were issued in Australia, and 176,746 (\$2,671,744) were issued overseas.

Of the total postal notes paid in Australia during 1964-65 (15,626,991 valued at \$17,106,624), 10,566,493 (\$12,083,294) were paid in the State in which issued, and 5,060,498 (\$5,023,330) were paid in States other than those in which issued.

Internal telecommunication services

A review of the development of telegraph services in Australia up to 1921 appeared in Year Book No. 15, page 625, and subsequent developments of importance have been dealt with in later issues. Internal telecommunication operations now comprise telephone, telegraph and telegraph exchange (telex) services.

Wire and pole mileages

At 30 June 1965 there were 13,841,000 single wire miles of cable and 1,331,000 miles of aerial wire used for telecommunication purposes in Australia. The aerial wires were mounted on 120,630 miles of pole routes, and joint use is made of these poles for both power and telecommunication reticulation.

Telephone services in operation

In recent years there has been a noticeable increase in the number of telephone services in operation, with the two-millionth service being connected in May 1965. The following table shows the number of services in operation in each State at 30 June 1965 classified according to type of service, type of exchange to which connected, and location.

TELEPHONE SERVICES IN OPERATION: STATES, 30 JUNE 1965

—	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	Aust.
Type of service—							
Ordinary exchange services	634,793	543,097	223,679	158,973	105,316	52,975	1,718,833

Number at 30 June 1965 per 100 population	25.9	26.8	21.2	23.5	20.4	22.5	24.7

Internal telephone traffic

Local and trunk telephone calls made in Australia during the years 1960-61 to 1964-65 are set out hereunder.

LOCAL AND TRUNK LINE TELEPHONE CALLS: AUSTRALIA, 1960-61 TO 1964-65

Year	Effective paid local calls		Trunk line calls		Total calls
	Total	Per service	Total	Per service	
	^{'000}	number	^{'000}	number	^{'000}
1960-61	1,625,000	997	75,000	46	1,700,000
1961-62	1,650,000	960	76,500	45	1,726,500
1962-63	1,809,000	998	84,500	47	1,893,500
1963-64	1,958,000	1,020	95,700	50	2,053,700
1964-65	2,043,000	1,016	106,500	53	2,149,500

Subscriber trunk dialling (S.T.D.) facilities were introduced during the year 1961-62 from Canberra to the Sydney network and from Warragul (Victoria) to Melbourne. At the end of 1965 subscriber trunk dialling was in operation at fifty-two exchanges, serving some 116,000 subscribers.

Internal telegraphs

Telegrams can be lodged at any post office, telephone office or from any public telephone equipped for multi-coin operation. In addition, telegrams can be despatched from any subscriber's telephone or telegraph exchange (telex) equipment. The number of telegrams of various types transmitted within the Commonwealth during the years 1960-61 to 1964-65 is set out hereunder.

INTERNAL TELEGRAPH TRAFFIC: AUSTRALIA, 1960-61 TO 1964-65
(^{'000})

Year	Ordinary (a)	Urgent	Press	Letter- grams	Meteoro- logical service	Unpaid (depart- mental)	Total telegrams
1960-61	16,522	592	145	98	886	631	18,874
1961-62	16,429	558	147	89	914	602	18,739
1962-63	16,663	492	148	91	948	582	18,924
1963-64	17,783	545	130	86	920	621	20,085
1964-65	18,302	532	96	65	912	643	20,550

(a) Includes radiograms.

Of the total number of 20,550,000 internal telegrams despatched during 1964-65, 10,496,500 or 51 per cent were lodged by telephone and 1,594,000 were lodged by telex subscribers.

Teleprinter exchange service (Telex)

Particulars of the operations of the teleprinter exchange network, which are additional to the telegraph traffic shown above, are given hereunder.

TELEPRINTER EXCHANGE NETWORK (TELEX) AUSTRALIA, 1960-61 TO 1964-65

1964-65 . .	2,179	143,631	1,634,359

Oversea telecommunication services

The Overseas Telecommunications Commission (Australia) is the authority responsible for the establishment, maintenance, operation and development of Australia's oversea public telegraph, phototelegraph and telex services by cable and by radio, and the provision, maintenance, and development of cable and radio facilities for the conduct of Australia's oversea telephone services and of the facilities for radiotelephone services with ships at sea.

The Commission was established under the *Overseas Telecommunications Act 1946-1963*. This Act implemented, in Australia, a recommendation of the 1945 Commonwealth Telecommunications Conference for national ownership of the external telecommunication services of the British Commonwealth countries concerned and for the establishment of a representative advisory board, the Commonwealth Telecommunications Board, to co-ordinate their development.

The Commission provides telegraph, telex, phototelegraph, and, in conjunction with the Postmaster-General's Department, telephone services with oversea countries and Australian Territories. Leased one- and two-way circuits are also provided for large commercial users. In addition, it operates the Australian coastal radio services for communication with ships at sea in Australian waters and high frequency radio services for communication with ships in any part of the world. The Commission's coastal radio stations also provide certain services to a number of remote stations within Australia and its Territories.

Details of oversea communication systems operating in Australia prior to 1946 and developments leading to the establishment of the Commission were published in Year Book No. 37, pages 220-4.

To meet Australia's increasing demand for oversea communication channels, and because of limitations to performance and capacity inherent in current forms of telegraph cables and high frequency radio systems, the Commission, in partnership with the oversea telecommunications authorities of Britain, Canada and New Zealand, installed a large capacity telephone cable across the Pacific Ocean, connecting Australia, New Zealand and Canada via Suva and Honolulu. This project stemmed from the Pacific Cable Conference between representatives of Britain, Canada, Australia and New Zealand held in Sydney during 1959. Work was commenced in August 1960, and the cable (COMPAC) was opened in December 1963. This cable forms part of the British Commonwealth round-the-world large capacity cable scheme, in which a complementary cable between Britain and Canada (CANTAT) was officially opened in December 1961. The two cable connections are linked across Canada by a microwave system. The Commonwealth cable system feeds into the United States of America network at Hawaii, and into the European network at London.

The next stage of the system, the south-east Asia cable project (SEACOM), will extend the large capacity telephone cable from Sydney to Singapore and Kuala Lumpur via Cairns, Madang, Guam, Hong Kong and Jesselton. The Singapore-Jesselton section was opened for service on 15 January 1965, and the Jesselton-Hong Kong section on 31 March 1965. The whole project is scheduled for opening early in 1967.

Separate management committees, comprising representatives of the overseas telecommunication authorities and the partner Governments, Britain, Canada, Australia and New Zealand, with the addition, for SEACOM, of Malaysia and Singapore, administered COMPAC and SEACOM projects up to November 1965, when these committees were amalgamated into the Commonwealth Cable Management Committee.

Two years of international discussion and negotiations were climaxed by the signing in August 1964 by a number of countries, including Australia, of agreements to establish the first global commercial communications satellite system, of which the 'space segment' is estimated to cost \$US200 million. 'Space segment' is a broad description of the communications satellites and the tracking, control, command and related facilities required to support operation of the satellites. An Australian ground station, owned and operated by the Overseas Telecommunications Commission, is being built at Carnarvon, Western Australia, at a cost exceeding \$A2 million.

International telecommunication traffic

Particulars of the volume of international telegram business, originating and terminating in Australia, transacted over the cable and radio services during 1964-65 are shown in the following table.

INTERNATIONAL TELEGRAPHIC TRAFFIC: AUSTRALIA, 1964-65(a)
(^{'000} words)

Class of traffic	Words transmitted to—			Words received from—

(a) Year ended 31 March. (b) Excludes 3,298,000 words to Australian external Territories. (c) Excludes 5,163,000 words from Australian external Territories.

The following table shows particulars of overseas telecommunication traffic other than telegraphic between Australia and overseas countries for the year ended 31 March 1965.

INTERNATIONAL TELECOMMUNICATION TRAFFIC OTHER THAN TELEGRAPHIC
AUSTRALIA, 1964-65(a)

Service	Transmissions to—			Transmissions from—		
	Common-wealth countries	Foreign countries	Total (b)	Common-wealth countries	Foreign countries	Total (c)
Telephone paid minutes	774,378	371,487	1,145,865	892,648	350,481	1,243,129
Telex paid minutes	279,419	433,967	713,386	274,730	504,111	778,841
Phototelegrams pictures	931	40	971	8,627	91	8,718

(a) Year ended 31 March. (b) Excludes 55,735 paid telephone minutes and 1,240 paid telex minutes transmitted to Australian external Territories. (c) Excludes 76,692 paid telephone minutes, 594 paid telex minutes and 28 phototelegram pictures transmitted from Australian external Territories.

Coast stations

The Overseas Telecommunications Commission operates fifteen coastal radio stations at points around the Australian coast, five around the Papua-New Guinea coast and one at Norfolk Island. During the year ended 31 March 1965 the coastal radio service handled 4,272,136 paid words to ships and 2,750,969 words from ships. Ship calls over the radio telephone service extended over 24,414 paid minutes.

Radiocommunication stations authorized

The following table shows particulars of the different classes of radiocommunication stations authorized in Australia at 30 June 1965. Figures relate to radiocommunication (radio telegraph and radiotelephone) stations only; particulars of broadcasting stations and of broadcast listeners' licences are shown on pages 497 and 499 respectively.

**RADIOCOMMUNICATION STATIONS AUTHORIZED, STATES AND TERRITORIES

(a) Stations established at fixed locations for communication with other stations similarly established. (b) Stations established in out-back areas for communication with control stations such as those of the Royal Flying Doctor Service. (c) Stations established at fixed locations for communication with mobile stations. (d) Land stations for communication with ocean-going vessels. (e) Equipment installed in aircraft (aeronautical), motor vehicles (land mobile services), harbour vessels (harbour mobile services) and ocean-going vessels (ships), and mobile equipment of organizations such as the Royal Flying Doctor Service. (f) Includes 184 stations which cannot be classified according to State or Territory.

BROADCASTING AND TELEVISION

Broadcasting and television services in Australia operate under the *Broadcasting and Television Act 1942-1965* and comprise the National Broadcasting Service, the National Television Service, the Commercial Broadcasting Service and the Commercial Television Service. General control of these services is a function of the Australian Broadcasting Control Board. Licence fees for commercial broadcasting and television stations are payable under the *Broadcasting Stations Licence Fees Act 1964* and the *Television Stations Licence Fees Act 1964* respectively.

Particulars of the composition, functions and responsibilities of the Australian Broadcasting Control Board are shown in Year Book No. 51, pages 594-5.

Broadcasting services

The National Broadcasting Service

In sound broadcasting the programmes of the National Broadcasting Service are provided by the Australian Broadcasting Commission through transmitters operated by the Postmaster-General's Department.

Technical facilities. At 30 June 1965 the National Broadcasting Service comprised seventy-one transmitting stations, of which sixty-three were medium frequency and eight high frequency.

The medium-frequency transmitters operate in the broadcast band 525 to 1,605 kilocycles a second. The high-frequency stations, using frequencies within the band three to thirty megacycles a second, provide service to listeners in sparsely populated parts of Australia such as the north-west of Western Australia, the Northern Territory, and northern and central Queensland.

Many of the programmes provided by country stations are relayed from the capital cities, high-quality programme transmission lines being used for the purpose. A number of programme channels are utilized to link national broadcasting stations in the capital cities of Australia, and, when necessary, this system is extended to connect both the national and commercial broadcasting stations.

In June 1965 fifty-one of the Australian medium-frequency stations were situated outside the six State capital cities. Additional country stations are to be established, and, when these additions are complete, the medium-frequency and high-frequency stations together will provide for clear reception of the programmes of the National Broadcasting Service in practically every part of Australia.

Programme facilities. The programmes of the Australian Broadcasting Commission cover a wide range of activities. The proportion of broadcasting time allocated to the various types of programme during 1964-65 was as follows: classical music, 24.6 per cent; light entertainment, 21.4 per cent; news, 8.0 per cent; sporting, 5.9 per cent; light music, 6.4 per cent; talks, 7.0 per cent; drama and features, 3.7 per cent; education, 3.5 per cent; Parliament, 3.8 per cent; religious, 3.1 per cent; children's programmes, 2.5 per cent; rural, 1.6 per cent; and non-departmental and special programmes, 8.5 per cent. Further particulars of the operations of the Australian Broadcasting Commission in respect of music, drama and features, youth education, talks, rural broadcasts, news and other activities are shown in Year Book No. 51, pages 596-7.

The Commercial Broadcasting Service

Commercial broadcasting stations are operated under licences granted and renewed by the Postmaster-General after taking into consideration any recommendations which have been made by the Broadcasting Control Board. The initial period of a licence is five years and renewals are granted for a period of one year. The fee payable for a licence is \$50 on the grant of the licence, and thereafter \$50 a year plus an amount ascertained by applying the following rates to 'gross earnings', within the meaning of the *Broadcasting Stations Licence Fees Act 1964*, during the preceding financial year—1 per cent up to \$1,000,000; 2 per cent \$1,000,001 to \$2,000,000; 3 per cent \$2,000,001 to \$4,000,000; and 4 per cent over \$4,000,000.

Overseas Broadcasting Service

There are seven high-frequency stations at Shepparton and one at Lyndhurst, Victoria, which provide the overseas service known as 'Radio Australia'. As in the case of the National Broadcasting Service, these stations are maintained and operated by the Postmaster-General's Department, and their programmes are arranged by the A.B.C. The programmes, which give news and information about Australia presented objectively, as well as entertainment, are directed mainly to south-east Asia and the Pacific. The overseas audience has grown very substantially in recent years, as evidenced by a large and increasing number of letters from listeners abroad.

Broadcasting stations

The following table shows the number of broadcasting stations in operation at 30 June 1965.

BROADCASTING STATIONS: STATES AND TERRITORIES, 30 JUNE 1965

Type of station	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	A.C.T.	Aust.

Tables showing the call sign, location, frequency and aerial power of national and commercial broadcasting stations in operation at 30 June 1965 are shown in *Transport and Communication Bulletin No. 56*.

Television services

The National Television Service

The National Television Service is provided by the Australian Broadcasting Commission through transmitters operated by the Postmaster-General's Department. The first national station (ABN Sydney) commenced regular transmissions on 5 November 1956. At 30 June 1965 twenty-four stations were operating. Ten additional national television stations had been authorized but had not commenced to operate by that date. It is planned that all services will be in operation by the end of 1966.

The television programmes provided by the Australian Broadcasting Commission cover a wide range of activities. The proportion of television time allocated among the A.B.C.'s various departments to 30 June 1965 was as follows: Drama and features, 21.3 per cent; talks, 18.2 per cent; sport 10.7 per cent; children's session, 8.7 per cent; news, 6.4 per cent; light entertainment, 7.2 per cent; education, 14.6 per cent; music, 3.1 per cent; religion, 2.6 per cent; rural services, 2.2 per cent; non-departmental, 5.0 per cent. A summary of the activities of the departments in the field of television is given in the following paragraphs. Transmission time for the year ended 30 June 1965 totalled 68,500 hours.

Further particulars of the operation of the National Television Service in respect of talks, drama and features, music, rural services, education, news and other activities are shown in Year Book No. 51, pages 598-9.

The Commercial Television Service

Commercial television stations are operated under licences granted and renewed by the Postmaster-General. The first commercial station (TCN Sydney) commenced regular transmission on 16 September 1956. At 30 June 1965 thirty-one television stations were operating.

The initial grant of a licence is for a period of five years and thereafter the licence is renewable annually. The fee payable is \$200 for the first year and thereafter \$200 a year plus an amount ascertained by applying the following rates to 'gross earnings', within the meaning of the *Television Stations Licence Fees Act 1964*, during the preceding financial year—1 per cent up to \$1,000,000; 2 per cent \$1,000,001 to \$2,000,000; 3 per cent \$2,000,001 to \$4,000,000; and 4 per cent over \$4,000,000.

Television stations

During the year ended 30 June 1965 the following national television stations commenced regular transmissions: New South Wales—ABDN channel 2, Grafton-Kempsey area; ABMN channel 0, South Western slopes and Eastern Riverina area; Victoria—ABAV channel 1, Upper Murray area; Queensland—ABTQ channel 3, Townsville area; South Australia—ABNS channel 1, Spencer Gulf North area; Western Australia—ABSW channel 5, Bunbury area. The following commercial television stations also commenced regular transmissions during the year ended 30 June 1965. New South Wales—TEN channel 10, Sydney; NEN channel 9, Upper Namoi area; NRN channel 10, Grafton-Kempsey area; Victoria—ATV channel 0, Melbourne; AMV channel 4, Upper Murray area; Queensland—WBQ channel 8, Wide Bay area; Western Australia—STW channel 9, Bickley area. Particulars of all television stations in operation at 31 December 1964 are shown in Year Book No. 51, pages 598-9. The following table shows the number of television stations in operation at 30 June 1965.

**TELEVISION STATIONS: STATES AND AUSTRALIAN CAPITAL TERRITORY

Tables showing the call sign, location, frequencies, polarization, aerial power and weekly hours of transmission of National and Commercial television stations in operation at 30 June 1965 are shown in *Transport and Communication*, Bulletin No. 56.

Broadcast listeners' and television viewers' licences

Broadcast listeners', television viewers', and combined receiving licences are issued at post offices in accordance with the provisions of the *Broadcasting and Television Act 1942-1964*, which stipulates that, except as prescribed, a person shall not use, maintain or have in his possession a broadcast or television receiver unless there is in force a licence which applies to that receiver. A broadcast listener's licence or a television viewer's licence, whichever is appropriate, authorizes the operation of any broadcast receiver or any television receiver, which is: (a) in the possession of the holder of a licence, or of a member of his family, at the address specified in the licence and is ordinarily kept at that address; (b) installed in a vehicle which is ordinarily in the possession of the holder, or a member of his family, and is ordinarily kept at that address when not in use. A person who has both broadcast and television receivers at the one address is required to take out a combined receiving licence, provision for which was introduced by legislation effective from 1 April 1965.

A licence may be granted free of charge to a blind person over 16 years of age or to a person or authority conducting a school, and at a concession rate to certain classes of pensioners. Receivers provided for the use of inmates of an institution (including a hospital) are covered by an appropriate licence held by the institution. Persons residing in Zone 2 may also be granted a broadcast listener's licence at a reduced rate. Zone 1 is the areas within 250 miles of specified broadcasting stations and Zone 2 is the remainder of Australia.

Each broadcast or television receiver let out on hire (except under a hire purchase agreement) must be covered by a hirer's licence held by the person or firm from whom the receiver is hired. The keeper of a lodging house (which includes a hotel, motel, boarding house or any other premises where lodging or sleeping accommodation is provided for reward) must take out a lodging house licence for each broadcast or television receiver provided by the proprietor in any room or part of the lodging house occupied or available for occupation by lodgers.

The fees payable for the various classes of licence are as follows.

BROADCAST LISTENERS' AND TELEVISION VIEWERS' LICENCES: RATES

Licence	Ordinary rate	Pensioner rate
	\$	\$
Broadcast listener's licence and hirer's licence for a broadcast receiver Zone 1	5.50	1.00
Zone 2	2.80	0.70
Lodging house licence for a broadcast receiver Zone 1	5.50	..
Zone 2	2.80	..
Television viewer's licence and hirer's licence for a television receiver	12.00	3.00
Lodging house licence for a television receiver	12.00	..
Combined receiving licence	17.00	4.00

Numbers of broadcast listeners' and television viewers' licences

The following table shows the number of broadcast listeners' licences in force at five-year intervals from 1925 to 1965.

BROADCAST LISTENERS' LICENCES IN FORCE(a): STATES, 1925 TO 1965

30 June—	N.S.W. (b)	Vic.	Qld	S.A.(c)	W.A.	Tas.	Aust.
1925	34,857	20,290	1,267	3,331	3,562	567	63,874

1960	832,659	606,587	344,198	249,148	171,693	78,900	2,283,185
1965(e)	849,291	644,618	343,401	269,040	175,443	75,849	2,357,642

(a) Includes short-term hirers' licences. (b) Includes Australian Capital Territory. (c) Includes Northern Territory. (d) Excludes licences for receivers in excess of one. These licences were introduced in July 1942 and were abolished on 31 December 1951. (e) Includes combined broadcast listeners' and television viewers' licences.

The following table shows the number of television viewers' licences in force each year at 30 June 1957 and 1960 to 1965.

TELEVISION VIEWERS' LICENCES IN FORCE(a): STATES, 1957 TO 1965

30 June—	N.S.W. (b)	Vic.	Qld	S.A.	W.A.	Tas.	Aust.
1957	28,912	44,986	(c) 11	73,909
1960	409,334	353,091	67,337	84,967	35,604	4,662	954,995
1961	488,516	401,395	113,954	124,808	69,628	18,985	1,217,286
1962	564,707	460,558	142,422	143,794	83,951	29,003	1,424,435
1963	637,766	530,256	178,391	167,502	95,907	45,503	1,655,325
1964	721,043	581,286	214,763	194,430	115,272	55,305	1,882,099
1965(d)	787,507	620,996	243,660	208,642	123,741	60,079	2,044,625

(a) Includes short-term hirers' licences. (b) Includes Australian Capital Territory. (c) These licences were for television sets in the north coast area of Tasmania which were able to receive programmes from Victoria. (d) Includes combined broadcast listeners' and television viewers' licences.

The numbers of combined receiving licences included in both of the foregoing tables as at 30 June 1965 are: New South Wales, 162,510; Victoria, 132,413; Queensland, 41,539; South Australia, 49,976; Western Australia, 30,670; Tasmania, 12,906; Australia, 430,014.

Of 2,044,625 television viewers' licences in force at 30 June 1965, 90,389 were held by short-term hirers, and could not be separated into metropolitan licences or country licences. Persons living in the metropolitan area held 1,325,211 or 65 per cent of the remainder. Short-term hirers' licences (included above) at 30 June 1965 were: New South Wales, 32,605; Victoria, 15,686; Queensland, 11,463; South Australia, 19,856; Western Australia, 8,807; and Tasmania, 1,972.

Revenue received from broadcast and television licence fees

The following table shows the revenue received from broadcast listeners' licence fees and television viewers' licence fees during the years 1960-61 to 1964-65. Figures for 1964-65 include revenue from fees for combined licences which took effect on 1 April 1965.

REVENUE RECEIVED FROM BROADCAST AND TELEVISION LICENCE FEES STATES, 1960-61 TO 1964-65 (\$'000)

Year	N.S.W. (a)	Vic.	Qld	S.A. (b)	W.A.	Tas.	Aust.
1960-61 . . .	8,569	6,852	2,737	2,427	1,485	564	22,634
1961-62 . . .	9,161	7,243	2,923	2,531	1,574	645	24,077

1964-65 . . .	12,400	9,811	4,230	3,586	2,124	1,006	33,157

(a) Includes Australian Capital Territory.

(b) Includes Northern Territory in respect of broadcast licence fees.

CHAPTER 15

WELFARE SERVICES

This chapter relates to welfare services other than those concerned specifically with education, health and repatriation. The latter are dealt with, in the main, in the relevant chapters of this Year Book. Apart from a summary of government expenditure on welfare services and short descriptions of certain interstate organizations providing welfare services, the chapter is devoted to a description in some detail of the services provided by the Commonwealth. For information on the many important welfare services provided by State and local governments, especially in the fields of child and Aboriginal welfare, reference should be made to the Year Books or Statistical Registers of the States and the annual reports of the State departments concerned. Information on pension and superannuation schemes provided for government and semi-government employees, mine workers, parliamentarians and employees of private business is included in the chapter Private Finance.

In addition, there are numerous services of this nature provided by charitable and other non-government institutions and organizations. There are institutions providing shelter and/or caring for needy, aged, infirm or handicapped persons, neglected children, destitute persons, wayward boys and girls, and the like. Many organizations, too, provide aid in kind (food, clothing, etc.), auxiliary medical and nursing services, and other assistance to relieve suffering and hardship. Considerable work is also done by such organizations in the rehabilitation or establishment in the community of various types of people, such as prisoners and migrants, and in the prevention and alleviation of cruelty and maltreatment of any sort. Comprehensive information regarding the activities of such organizations is not available.

Further information on subjects dealt with in this chapter is included in the annual bulletins *Commonwealth Finance and State, Territory and Local Government Authorities' Finance and Government Securities*. Current and summarized information on Commonwealth social services is contained in the *Quarterly Summary of Australian Statistics* and the *Monthly Review of Business Statistics*.

Expenditure on welfare services

This section deals with various government payments for the relief of the aged, indigent, infirm, widowed and unemployed, assistance to families, Aboriginal welfare, etc.

Commonwealth expenditure on welfare services

Information concerning the cost of administering each Commonwealth benefit separately is not compiled. However, the chapter Public Finance, and, in more detail, the annual bulletin *Commonwealth Finance*, present an analysis of Commonwealth expenditure by function and economic type, from which some estimates of administrative costs can be derived. Commonwealth expenditure on Aboriginal welfare is shown on page 504 and that on grants for the construction of homes for the aged and for accommodation for disabled persons on pages 518 and 519 respectively.

The National Welfare Fund

The National Welfare Fund was established by the *National Welfare Fund Act* 1943 to finance a scheme of national welfare and has operated from 1 July 1943. At its commencement it was used to finance funeral benefits and maternity allowances, but other social and health benefits were made a charge on the fund from time to time and at present expenditure on all benefits except repatriation and a few minor social and health benefits is met from the fund. The fund is used only to finance the benefits themselves; it is not used to finance the cost of administering the benefits, or of capital works associated with the benefits.

The following table shows the income and expenditure of the fund for the years 1960-61 to 1964-65.

NATIONAL WELFARE FUND: RECEIPTS, EXPENDITURE AND BALANCES
1960-61 TO 1964-65
(\$'000)

Year	Income			Expenditure	Balance in fund at end of year
	Contribution from Consolidated Revenue	Interest on investments	Total		
1960-61	661,209	4,034	665,243	661,209	406,033

For footnotes (b), (d), (e), (g) and (h), see table on page 502.

State expenditure on certain welfare services

The following table shows net expenditure from State Government funds on certain welfare services. The figures exclude expenditure on unemployment, bush fire, flood, etc., relief, Aboriginal welfare, and some other items which are excluded because information cannot be obtained for all States. Loan fund expenditure is excluded also. Because of differences in organization and accounting methods, the information shown for some classes is not on exactly the same basis for all States; it may also be incomplete because particulars of some activities are not separately recorded and are therefore excluded. The expenditure shown is 'net' in the sense that receipts for services rendered have been deducted from gross expenditure.

NET EXPENDITURE BY STATE GOVERNMENTS ON CERTAIN WELFARE
SERVICES, 1964-65
(\$'000)

Service	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	Total
Relief of aged, indigent and infirm, child welfare, etc.	12,225	8,361	4,110	2,187	2,638	1,311	30,832

Commonwealth social services

Under the provisions of section 51 of the Constitution, the Commonwealth Government is empowered to legislate on:

'(xxiii) Invalid and old age pensions:

(xxiiiA) The provision of maternity allowances, widows' pensions, child endowment, unemployment, pharmaceutical, sickness and hospital benefits, medical and dental services (but not so as to authorize any form of civil conscription), benefits to students and family allowances:'.

The latter paragraph was inserted in the Constitution after being accepted by the electors at a referendum on 28 September 1946. The enabling Act was assented to on 19 December 1946.

Before 1947, Commonwealth social service benefits were paid under various Acts. On 1 July 1947, with the passage of the *Social Services Consolidation Act 1947*, all Acts providing social service benefits were amalgamated. This Act eliminated certain anomalies and obsolete provisions, and changed the title 'old-age pension' to 'age pension', the word 'Consolidation' was dropped from the short title of the Act in 1954. The Act is at present styled the *Social Services Act 1947-1965*.

Social service benefits provided

The social service benefits provided by the Commonwealth Government, and the date on which each came into operation, are:

Age pension	1 July 1909
Child endowment	1 July 1941
Child endowment—student children	14 January 1964
Commonwealth Rehabilitation Service	10 December 1948
Funeral benefit	1 July 1943
'Guardians' allowances for widowers and other unmarried age and invalid pensioners with children in their care	14 October 1965
Invalid pension	15 December 1910
Maternity allowance	10 October 1912
Sickness benefit	1 July 1945
Special benefit	1 July 1945
Supplementary assistance (age, invalid and widow's pensions)	15 October 1958
Unemployment benefit	1 July 1945
Widow's pension	30 June 1942
Widow's pension—children's allowances	2 October 1956
Wives' and children's allowances for pensioners who are invalids	8 July 1943
Wives' and children's allowances for age pensioners	14 October 1965

Age and invalid pensions

Age pensions are payable to men, sixty-five years of age and over, and women, sixty years of age and over, who are British subjects and who have lived in Australia continuously for at least ten years, which need not be immediately prior to the date of claim for a pension. If a person has completed five years but not ten years continuous residence and has lived in Australia for periods which exceed a total of ten years, the period of continuous residence otherwise required is reduced by the total of his periods of residence in Australia in excess of ten years. Any periods of absence during which a person's home remains in Australia, and absences in certain other circumstances, are counted as residence, and any absence in an external Territory of the Commonwealth, while not counting as residence, does not interrupt continuity of residence in Australia. Residence in New Zealand or the United Kingdom may be treated as residence in Australia.

Invalid pensions are payable to persons, sixteen years of age and over, who have lived in Australia for a continuous period of five years (including certain absences) at any time, and who are permanently incapacitated for work to the extent of at least eighty-five per cent, or permanently blind. If the incapacity or blindness first occurred outside Australia, except during a temporary absence, a period of ten years continuous residence is necessary, but if a person has completed five years but not ten years continuous residence and has lived in Australia for periods which exceed a total of ten years, the period of continuous residence otherwise required is reduced by the total of his periods of residence in Australia in excess of ten years. Residence in New Zealand or the United Kingdom may be treated as residence in Australia. Certain absences do not affect eligibility. A pension is not payable to an alien.

Current rates of pension. The maximum standard rate was increased to \$624 per annum (\$12 a week) from 1 October 1964. This is payable to a single, widowed, or divorced pensioner, a married man whose wife receives a wife's allowance, or a married pensioner whose spouse is not receiving an age or invalid pension, an unemployment, sickness or special benefit, a tuberculosis allowance, or a service pension. The maximum married rate was also increased from 1 October 1964, and is \$1,144 per annum (\$22 a week) for a married couple, both pensioners, i.e., \$572 per annum (\$11 a week) each. For a married person whose spouse receives an unemployment, sickness or special benefit, a tuberculosis allowance, or a service pension, the maximum rate is also \$572 per annum (\$11 a week).

A wife's allowance may be granted, subject to the means test, to the wife of an invalid pensioner or of an age pensioner permanently incapacitated, blind, or (from 14 October 1965) who has the care of a child if she is not receiving an age or invalid pension, or a service pension under the *Repatriation Act 1920-1965* (see the chapter Repatriation). The maximum annual rate of a wife's allowance has been \$312 per annum (\$6 a week) since 3 October 1963. A child's allowance of \$78 per annum (\$1.50 a week), free of the means test, is payable for the first child under sixteen years, and the pension may also be increased by \$78 per annum (\$1.50 a week), subject to the means test, for each other child under 16 years. From 14 October 1965 a guardian's allowance of up to \$4 a week became payable to widowers and other unmarried age or invalid pensioners who have one or more children in their care.

Since 14 October 1965 eligibility for a child's allowance and the additional pension for children has been extended to include a child over sixteen years until he reaches twenty-one years, provided he is wholly or substantially dependent on the pensioner and is receiving full-time education at a school, college or university. Supplementary assistance of up to \$2 a week, subject to a means test is available to pensioners receiving the maximum standard rate pension if they pay rent or pay for board and lodging or for lodging. From 1958 to October 1965 the rate was \$1 a week and supplementary assistance was available only to maximum standard rate pensioners paying rent who were considered to depend entirely on the pension. At 30 June 1965, 544,063 age pensioners (eighty-seven per cent of all age pensioners) and 100,394 invalid pensioners (ninety-three per cent of all invalid pensioners) were receiving the maximum pension.

If the pensioner is an inmate of a benevolent home, the maximum payable to him is \$4.20 a week if he is eligible for the standard rate pension, or \$3.90 a week otherwise. The rest is paid to the home for his maintenance. The balance is not paid to the home if the pensioner is in an infirmary ward, as payments under the Commonwealth Hospital Benefits Scheme are made in that case. The maximum payable to a standard rate pensioner is increased if supplementary assistance is also payable.

A table showing the maximum rates of pension operating since 1 July 1909 at dates prior to 14 October 1965, when the current rates became operative, is included on page 608 of Year Book No. 51.

Means test. Age and invalid pensions (other than pensions paid to blind persons) and allowances paid to wives (but not a child's allowance of \$1.50 a week) are subject to a means test which applies to income and property. From March 1961 the means tests which previously applied separately on income and property were merged into one composite means test. The rate of

pension payable depends on the claimant's *means as assessed*. These consist of his annual rate of income plus a property component equal to \$2 for each complete \$20 of his net property above \$400. A person's *means as assessed* may consist entirely of income, entirely of the property component, or of various combinations of income and property component. The pension payable is calculated by deducting from the applicable maximum annual rate of pension plus, where applicable, guardian's and/or additional pension for children the amount by which *means as assessed* exceed \$364. Where the standard rate applies, no pension is payable where the value of property is \$10,280 or more (\$12,360 or more if qualified for a guardian's allowance). Where the married rate applies, no pension is payable where the value of property is \$9,760 or more. The wife's allowance is affected by income and property on the same basis as the pension, i.e., it is reduced by the amount of *means as assessed* over \$364. Supplementary assistance is reduced by the amount by which *means as assessed* exceed \$52.

Certain types of income are excepted. The main exceptions are: income from property; gifts or allowances from children, parents, brothers, or sisters; benefits (other than annuities) from friendly societies; child endowment or other payments for children; Commonwealth health benefits and amounts received from registered benefit organizations. A pensioner's income may also be reduced by up to \$52 per annum (\$1 a week) for each dependent child under sixteen years (twenty-one years if a full-time student).

Certain types of property are disregarded. They include the permanent home of the pensioner, his furniture and personal effects, the surrender value (up to \$1,500) of life insurance policies, the capital value of annuities or contingent interests, and the value of any reversionary interests.

For the purposes of the means test the income and property of a married person are considered to be half the total income and property of the husband and wife unless they are legally separated or in other special circumstances.

Age and invalid pensions in force. The following table shows the number of pensions in force at 30 June 1965 in each State and Territory.

AGE AND INVALID PENSIONS: STATES AND TERRITORIES, 30 JUNE 1965

Pensions in force	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	A.C.T.	Aust.
Age(a)—									
Males	69,078	46,079	32,763	17,018	12,596	5,799	595	261	184,189
Females	174,715	116,029	67,291	41,290	30,110	13,093	658	725	443,911
Persons	243,793	162,108	100,054	58,308	42,706	18,892	1,253	986	628,100
Invalid—									
Males	22,933	14,767	9,767	4,603	4,911	2,055	244	116	59,396
Females	19,052	12,027	7,635	3,887	3,704	1,477	160	135	48,077
Persons	41,985	26,794	17,402	8,490	8,615	3,532	404	251	107,473

(a) During 1964-65, 6,206 invalid pensioners were transferred to their correct designation of age pensioners.

The number of age and invalid pension claims granted during 1964-65 are shown in the following table, classified according to the sex and marital status of the pensioner.

NEW PENSIONERS, BY SEX AND MARITAL STATUS: AUSTRALIA 1964-65

Conjugal condition	Age pensioners			Invalid pensioners			Total
	Males	Females	Persons	Males	Females	Persons	
Single	2,995	4,748	7,743	3,779	3,143	6,922	14,665
Married	14,249	17,490	31,739	6,565	2,660	9,225	40,964
Widowed	2,892	9,738	12,630	579	666	1,245	13,875
Divorced	318	757	1,075	350	364	714	1,789
Total	20,454	32,733	53,187	11,273	6,833	18,106	71,293

The average age of new age pensioners was sixty-nine years for men and sixty-six years for women. The ages of new invalid pensioners are shown in the following table.

NEW INVALID PENSIONERS, BY AGE GROUP: AUSTRALIA, 1964-65

	16-19 years	20-44 years	45-59 years	60-64 years	65 years and over	Total
Number	1,686	3,312	8,533	4,109	466	18,106
Per cent	9	18	47	23	3	100

Persons at or above the qualifying age for age pensions when granted invalid pensions are generally those with insufficient residence to qualify for age pension.

The following table gives details of age and invalid pensions for the years 1960-61 to 1964-65.

AGE AND INVALID PENSIONS: SUMMARY, AUSTRALIA, 1960-61 TO 1964-65

Year	Pensioners at 30 June				Total payments during year (b)	Average weekly pension as at 30 June		
	Age		Invalid	Total		Age (c)	Invalid (c)	Age and invalid combined (c)
	Number	Rate (a)						
1960-61	562,790	510	No. 88,642	No. 651,432	\$'000 315,852	\$ 9.78	\$ 10.05	\$ 9.82
1961-62	594,012	529	97,246	691,258	360,489	10.19	10.52	10.24
1962-63	607,350	534	104,038	711,388	375,507	10.16	10.52	10.24
1963-64	615,186	533	109,725	724,911	399,880	10.71	11.26	10.79
1964-65	628,100	534	107,473	735,573	426,597	11.18	11.73	11.26

(a) Number of pensioners per 1,000 persons of pensionable age (males aged 65 years and over and females aged 60 years and over). (b) Includes allowances and supplementary assistance. (c) Includes supplementary assistance.

The sum paid in age and invalid pensions in 1964-65, including the amount paid to homes for the maintenance of pensioners and allowances to wives of invalid pensioners, represented an expenditure of \$37.92 per head of population, compared with \$36.20 in 1963-64.

Child endowment

A person who is resident in Australia and has the custody, care and control of one or more children under the age of sixteen years or of a student child over sixteen but under twenty-one years, or an approved institution of which children are inmates, is qualified to receive an endowment in respect of each such child. There are provisions to meet cases of families divided because of divorce, separation, unemployment or death of a parent. There is no means test.

Twelve months' residence in Australia is required if the claimant and the child were not born here, but this requirement is waived if the Department of Social Services is satisfied that they are likely to remain in Australia permanently. Where the child's father is not a British subject, endowment is payable if the child was born in Australia, if the mother is a British subject, or if the Department is satisfied that the child is likely to remain permanently in Australia. Under certain conditions, endowment may be paid to Australians who are temporarily absent overseas.

Rates of endowment. From 1 July 1941 the rate of endowment was 50c a week for each child under sixteen in excess of one in a family, and for each child under sixteen in an approved institution. The rate was increased to 75c a week in June 1945, and to \$1.00 a week in November 1948. From June 1950, 50c a week became payable for the first or only child in a family. From January 1964 the rate was increased to \$1.50 a week for the third and subsequent children under sixteen years in families and for each child in an institution, and that amount also became payable for full-time students between sixteen and twenty-one years. Full-time student children are those receiving full-time education at a school, college or university and who are not in employment or engaged in work on their own account.

Number of claims and endowed children, 30 June 1965. Children under sixteen years. The number of families receiving child endowment at 30 June 1965 in respect of children under sixteen years was 1,582,801, an increase of 27,171 or 1.7 per cent during the year. The following table shows, for each State and Territory, the number of claims for child endowment in force and the number of endowed children under sixteen years at 30 June 1965.

CHILD ENDOWMENT: CLAIMS AND ENDOWED CHILDREN UNDER 16 YEARS, STATES, TERRITORIES, ETC., 30 JUNE 1965

State, Territory, etc.	Family groups			Institutions		Total endowed children under 16 years
	Claims in force	Endowed children under 16 years		Number	Endowed child inmates under 16 years

Child endowment, 1960-61 to 1964-65. The following table shows, for Australia, the number of claims, the number of all endowed children and the annual liability at 30 June for each of the years from 1961 to 1965 and the actual expenditure for the years 1960-61 to 1964-65.

CHILD ENDOWMENT: SUMMARY, AUSTRALIA, 1960-61 TO 1964-65

At 30 June—	Family group claims in force (a)	Institutions	Endowed children	Annual liability for endowment (b)	Total payments (b)(c)
				\$'000	\$'000
1960-61	1,501,180	465	3,340,302	134,665	(d) 148,605
1961-62	1,523,074	479	3,420,134	138,247	132,755
1962-63	1,535,388	497	3,457,620	139,876	135,421
1963-64	1,555,630	502	(e)3,631,047	(e) 175,766	(e)(f)168,758
1964-65	1,582,801	490	(e)3,710,616	(e) 180,065	(e) 172,830

(a) In respect of family groups containing endowed children under sixteen years of age. (b) A number of endowments are paid every twelve weeks. During two years out of every three there are four such payments but every third year there are five. Figures for annual liability, therefore, reflect trends in expenditure on child endowment more accurately than do figures for payments. (c) Year ended 30 June. (d) Endowment payable on 4 July 1961 to the credit of bank accounts and in cash at post offices was brought to account in 1960-61. (e) Includes student children and reflects higher rates for third and subsequent children under sixteen years in families. (f) Expenditure for this year includes five twelve-weekly payments.

Commonwealth Rehabilitation Service

The Commonwealth Rehabilitation Service has been set up to help persons who are unable to work because of physical handicap, or who have had to give up their employment because of sickness or injury. It helps disabled persons to reach their maximum physical fitness and to prepare for suitable employment. They are given suitable treatment and training, the cases selected being those in which the person's disability is remediable and there are reasonable prospects of his engaging in a suitable vocation within three years after the commencement of treatment or training.

The service is available to invalid and widow pensioners, persons receiving unemployment, sickness or special benefits, persons receiving tuberculosis allowances, and persons aged fourteen or fifteen who, without treatment and training, would be likely to qualify for an invalid pension on reaching the age of sixteen years. During treatment payment of pension or benefit continues. When vocational training begins, the pension or benefit is suspended and a rehabilitation allowance, together with a training allowance of \$3.00 a week, is paid instead. With an invalid pensioner, or a sickness, unemployment or special beneficiary, the rehabilitation allowance is equivalent to and calculated in the same manner as an invalid pension. In the case of a widow pensioner the rate is the same as that of the widow's pension.

Living-away-from-home allowances are paid where necessary. Fares and living expenses (including those of an attendant where required) incurred in connection with treatment, training or attendance for an interview or for medical examination may also be paid. A person receiving treatment or training may be provided, free of charge, with necessary artificial replacements, surgical aids and appliances. He may also be provided with books, equipment and tools of trade, costing up to \$80.00. If these are retained by him, he is required to pay the cost, but payments may be made by small instalments after he has commenced employment. If the treatment or vocational training does not result in the trainee's being able to engage in employment, he receives the pension or benefit to which he is entitled. Disabled persons who cannot qualify for the free service may pay for rehabilitation themselves, or they may be sponsored by government or private organizations. Rehabilitation allowances, training allowances, living-away-from-home allowances and other allowances are not payable in these cases. Books, tools, etc., are available on a repayment basis.

Numbers dealt with by the service. The numbers of persons receiving benefits who were examined, accepted, trained and placed in employment during the year 1964-65 are shown in the following table.

COMMONWEALTH REHABILITATION SERVICE: AUSTRALIA, 1964-65

Type	Examined	Accepted	Completed training	Placed in employment	
				After training (a)	Without training
Invalid pensioners	9,125	314	108	109	138
Widow pensioners	10	2
Unemployment and sickness beneficiaries	10,076	957	201	209	698
Special beneficiaries	4	1	..	1	1
Recipients of tuberculosis allowance	285	34	25	26	23
Persons aged 14-15 years	138	53	22	17	26
Persons provided with rehabilitation on payment of the cost by another authority	89	86	3	11	64
Total	19,727	1,447	359	373	950

(a) Includes persons who had received training prior to 1 July 1964.

Of the 1,447 persons accepted during 1964-65, sixty-nine per cent were under forty years of age. The average number receiving rehabilitation training at the end of each month during the year was 993. Total cost of this service during 1964-65 was \$1,603,780.

Funeral benefits

A funeral benefit of up to \$20.00 is payable to the person who has paid, or is liable to pay, the cost of the funeral of an age or invalid pensioner or of a claimant who, but for his death, would have been granted an age or invalid pension, or of a person who at the time of his death was receiving, or was a claimant for, a tuberculosis allowance, if he would otherwise have been qualified to receive an age or invalid pension. Where the cost of the funeral has been met partly by payment from a contributory funeral benefit fund of an organization other than a friendly society, funeral benefit is payable to the extent of the amount (not above \$20.00) by which the cost of the funeral exceeded the amount paid from the fund. From 1 October 1965 the maximum amount payable was increased to \$40.00 where an age, invalid or widow pensioner is liable for the funeral expenses of a spouse, a child under sixteen years, or another age, invalid or widow pensioner.

The following table shows the number of funeral benefits which were granted in each State and Territory in the years 1960-61 to 1964-65.

FUNERAL BENEFITS GRANTED: STATES, TERRITORIES, ETC. 1960-61 TO 1964-65 (Number)

State, Territory, etc.	1960-61	1961-62	1962-63	1963-64	1964-65
New South Wales	15,019	15,228	16,365	16,680	17,709
Victoria	9,200	9,702	10,861	10,594	11,280
Queensland	5,523	6,000	5,952	6,176	6,542
South Australia	3,192	3,103	3,595	3,618	3,801
Western Australia	2,654	2,605	2,589	2,749	2,981
Tasmania	1,100	1,174	1,183	1,242	1,325
Northern Territory	7	11	5	14	18
Australian Capital Territory	54	66	74	73	94
Abroad	2	5
Total	36,749	37,889	40,624	41,148	43,755

Total cost of funeral benefits granted during 1964-65 was \$866,164.

Maternity allowances

Maternity allowances are paid to provide financial assistance towards the expenses associated with the birth of children and are additional to the benefits provided under the Commonwealth health scheme. They are not subject to a means test.

Subject to certain conditions, a maternity allowance is payable to a woman who gives birth to a child, either in Australia or on board a ship proceeding to Australia or from a port in Australia or an Australian Territory to another such port, and, on the date on which she lodges her claim, is residing in Australia or is in Australia and intends to remain permanently, provided she receives no benefit similar to a maternity allowance from the country from which she came. A woman who gives birth to a child during a temporary absence from Australia may also be eligible. An alien mother may receive the allowance if she or her husband resided in Australia for at least twelve months immediately prior to the birth of the child, or if she is likely to remain in Australia permanently.

Rates of allowance. The allowance is \$30.00 if the mother has no other children, \$32.00 if she has one or two children under sixteen, and \$35.00 if she has three or more other children under sixteen. The amount is increased by \$10.00 for each additional child born at a birth. An advance payment of \$20.00 may be made four weeks before the expected date of birth. The balance is payable immediately after the birth. Payment may be made in respect of the birth of a still-born child, or a child which lives for less than twelve hours if the child had developed for at least five and a half months.

Claims paid. The following table shows the number of claims paid in each State and Territory at the several rates of maternity allowances during the year 1964-65.

Unemployment, sickness and special benefits

Unemployment and sickness benefits are paid to males over sixteen and under sixty-five years of age, and females over sixteen and under sixty years of age, who are unemployed or who are temporarily incapacitated for work and thereby suffer loss of income. They must have been living in Australia during the preceding twelve months or be likely to remain permanently in Australia. A person receiving an age, invalid or widow's pension, or a service pension (as distinct from a war pension) under the *Repatriation Act 1920-1965* or a tuberculosis allowance, is ineligible to receive a benefit.

To qualify for an unemployment benefit a person must establish that he is unemployed and that his unemployment is not due to his being a direct participant in a strike, that he is capable and willing to undertake suitable work, and that he has taken reasonable steps to obtain such work. Registration with the local Commonwealth District Employment Office is necessary. To qualify for a sickness benefit, a person must establish that he is temporarily incapacitated for work because of sickness or accident and that he has thereby suffered a loss of salary, wages or other income. A married woman is not eligible to receive a sickness benefit if it is reasonably possible for her husband to maintain her. Where her husband is able to maintain her only partially, a benefit may be paid at such rate as is considered reasonable in the circumstances. In exceptional cases a married woman may qualify for unemployment benefit in her own right.

A special benefit may be granted to a person not qualified for unemployment or sickness benefit who is not receiving an age, invalid or widow's pension or a service pension, and who, because of age, physical or mental disability or domestic circumstances, or for any other reason, is unable to earn a sufficient livelihood for himself and his dependants. Recipients of special benefits include, among others, persons caring for invalid parents, also deserted wives and persons ineligible for age, invalid or widows' pensions because of lack of residence or nationality qualifications.

Special benefits are also paid to migrants who are in reception centres and are awaiting their first placement in employment in Australia. During this time they receive a short instruction in English and in Australian conditions to facilitate their assimilation into the community and employment.

Rates of benefit. The maximum weekly rates of benefit payable and permissible income in respect of benefit periods which commenced on or after 1 March 1962 are as follows.

	Maximum weekly rate	Permissible weekly income
	\$	\$
Unmarried person under 18 years of age	3.50	2.00
Unmarried person 18 to 20 years of age	4.75	2.00
All others	8.25	4.00

An additional benefit of \$6 a week may be paid for a dependent spouse and \$1.50 a week for each dependent child under sixteen years of age if resident in Australia. Additional benefit, at the same rate as that for a dependent spouse, may be paid where a woman is keeping house for a claimant who has one or more children under sixteen years of age in his care. It may be granted only if no such benefit is payable for his wife, and the housekeeper is substantially dependent on him but not employed by him.

The weekly rate of benefit is reduced by the amount by which a beneficiary's other income exceeds the amount shown in the relevant line of the final column in the preceding table. For unemployment benefit purposes the income of the spouse is also taken into account unless the claimant and his spouse are permanently separated. For sickness benefit purposes the income

from an approved friendly society or other similar approved body in respect of the incapacity for which sickness benefit is payable is disregarded. 'Income' does not include child endowment or other payments for children, Commonwealth hospital and pharmaceutical benefits, a tuberculosis allowance, or an amount paid in reimbursement of medical, dental or similar expenses. There is no means test on property.

The amount of compensation, damages or similar payment, or war pension, if paid in respect of the same incapacity as that for which sickness benefit is claimed, is deducted from the sickness benefit. If not paid in respect of the same incapacity, compensation is regarded as income and war pension is ignored.

There is a waiting period of seven days for which unemployment or sickness benefit is not payable.

Benefits. The following table shows the number admitted to unemployment, sickness, and special benefit during 1964-65, the number of persons on benefit at 30 June 1965, and the amount paid for each benefit during 1964-65.

(a) Includes migrants in reception and training centres.

(b) Includes payments to migrants in reception and training centres.

Widows' pensions

Rates and conditions. Widows' pensions are payable according to the following classes. The rates shown have been in operation since October 1964.

Class 'A'. A widow who has the custody, care and control of one or more children under the age of sixteen years—\$832 per annum (\$16 a week). This includes the standard rate pension of \$624 per annum (\$12 a week) and a mother's allowance of \$208 per annum (\$4 a week). In addition, a flat rate allowance of \$78 per annum (\$1.50 a week) for one child and, subject to the means test, extra pension of \$78 per annum (\$1.50 a week) for each other child under sixteen years are payable. Payment may be made for a child over sixteen years until he reaches twenty-one years, if he is wholly or substantially dependent on the widow and is receiving full-time education at a school, college, or university.

Class 'B'. A widow who has no children under sixteen years of age or eligible full-time student children in her custody, care and control, and who is not less than fifty years of age or who, after having attained the age of forty-five years, ceased to receive a Class 'A' widows' pension because she no longer had the custody, care and control of a child—\$559 per annum (\$10.75 a week).

Class 'C'. A widow who is under fifty years of age and has no children under the age of sixteen years, or eligible full-time student children, in her custody, care and control, but is in necessitous circumstances within the twenty-six weeks after the death of her husband—\$10.75 a week for not more than twenty-six weeks after the death of her husband. If the widow is pregnant this period may be extended until the child's birth. She may then become eligible for a Class 'A' widow's pension.

Widow pensioners may receive supplementary assistance of up to \$104 per annum (\$2 a week), subject to a means test, if they pay rent or pay for board and lodging or for lodging. From October 1958 to October 1965 the rate was \$1 a week and was payable to widows, otherwise qualified, who were considered to be entirely dependent on the pension.

For classes 'A' and 'B' the term 'widow' includes a wife who has been deserted by her husband without just cause for a period of at least six months, a divorcee, a woman whose husband has been imprisoned for at least six months, and a woman whose husband is in a mental hospital. Certain dependent females also may qualify for 'A', 'B' or 'C' Class pensions.

The residence qualification is five years' continuous residence in Australia immediately prior to the date of lodgment of the claim, but this period may be reduced to one year if the widow and her husband were living permanently in Australia when he died. Certain absences are ignored.

A widow's pension is not payable to an alien, a woman receiving an age or invalid pension, a tuberculosis allowance, or a war widow's pension, or to a deserted wife or divorcee who has not taken reasonable action to obtain maintenance from her husband or former husband.

Means test. Widows' pensions are subject to a means test on income and property. The pension payable depends on the claimant's means as assessed. These consist of her annual rate of income together with a property component equal to \$2 for every complete \$20 by which the value of her property is in excess of a stipulated sum. In the case of a Class 'B' widow, \$400 of property is exempt. A Class 'A' widow has a basic exemption of \$2,000 when the value of her property exceeds \$4,500, but no property component is calculated where she has property of no more than \$4,500 in value. A Class 'A' pension is not payable where a widow has property valued at \$13,960 or more; no Class 'B' pension is payable where property is \$9,640 or more.

There is no specific means test for the Class 'C' pension, which is paid only where it is evident that a widow has insufficient means of support. The types of income and property disregarded for means test purposes are the same as for age and invalid pensions. Supplementary assistance is reduced by the amount by which *means as assessed* exceed \$52.

Pensions. The following table shows details of widows' pensions paid in each State and Territory in the year 1964-65.

WIDOWS' PENSIONS: STATES, TERRITORIES, ETC., 1964-65

1962-63	12,537	25,261	33,112	104	58,477	10.45	31,353
1963-64	14,207	27,371	34,659	94	62,124	13.57	41,569
1964-65	14,243	29,713	35,574	111	65,398	14.09	47,044

(a) Excludes transfers from one class to another. (b) Includes supplementary assistance and allowances.
(c) Includes payments to benevolent homes for maintenance of pensioners.

Reciprocal social services agreements with other countries

New Zealand. An agreement between the Governments of Australia and New Zealand for reciprocity in social services came into operation on 3 September 1943 and was amended from 1 July 1949. The reciprocal arrangements cover age and invalid pensions, widows' pensions, child endowment, and unemployment and sickness benefits, and apply to both permanent and temporary changes of residence. Residence in one country may be treated as residence in the other country in relation to entitlement to benefits in which a residential qualification applies. Persons from one country taking up permanent residence in the other country become eligible for any of the specified benefits of the new country under the same conditions (with one or two exceptions) as apply to citizens of that country. Persons in receipt of any of the specified benefits in one country may continue to receive those benefits while temporarily absent in the other country.

Britain. A reciprocal agreement on social services between Britain and Australia came into operation on 7 January 1954. Amendments became effective from 1 April 1958 and 1 October 1962. Under the current agreement residence in one country may be treated as residence in the other country as the basis for entitlement to benefits in which a residential qualification applies. Australians going to Britain for permanent residence are treated in Britain as if they had been insured under the National Insurance Scheme while in Australia, so that they can qualify for various National Insurance benefits. There is also provision for the safeguard of social service rights for persons going from one country to the other for temporary residence.

Commonwealth assistance to aged persons homes and homes for disabled persons employed in sheltered workshops

The Aged Persons Homes Act 1954-1957. This Act is designed to encourage the provision of homes in which aged persons may reside in conditions approaching normal domestic life.

To be eligible for assistance under the Act an organization must be:

- (a) carried on otherwise than for purposes of profit or gain to the individual members; and
- (b) a religious organization, an organization the principal objects or purposes of which are charitable or benevolent, an organization of former members of the defence forces established in every State or a State branch of such an organization, or an organization approved by the Governor-General for the purposes of the Act.

An organization conducted or controlled by, or by persons appointed by, the Government of the Commonwealth or of a State or a local governing body established under the law of a State, is not eligible for assistance under the Act.

The Director-General of Social Services may make a grant of money to an organization as assistance towards meeting the cost of the construction or purchase of a home, including land, to be used permanently for the accommodation of aged persons. The grant is made on a basis of \$2 for each \$1 raised by the organization (\$1 for each \$1 from 1954 to 1957), not counting money which the organization received from a governmental body or borrowed. Before a grant is made the Director-General must be satisfied that the sum of the money expended and the money at present available for expenditure by the organization towards the capital cost of the home, together with the amount of the grant will be not less than the capital cost of the home.

The following table gives information regarding grants approved during 1964-65.

AGED PERSONS HOMES: GRANTS APPROVED, AMOUNTS GRANTED, AND BEDS PROVIDED, STATES AND TERRITORIES, 1964-65

	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	A.C.T.	Total
Grants approved . no.	46	26	17	44	12	6	1	1	153
Amounts granted . \$'000	1,953	969	793	1,597	785	200	13	13	6,323
Beds provided . no.	630	318	272	536	255	62	6	4	2,083

The following table gives information regarding grants approved for each of the years 1960-61 to 1964-65.

AGED PERSONS HOMES: GRANTS APPROVED, AMOUNTS GRANTED, AND BEDS PROVIDED, AUSTRALIA 1960-61 TO 1964-65

Year	Grants approved	Amounts granted	Beds provided
	No.	\$'000	No.
1960-61	131	5,584	2,089
1961-62	130	6,105	2,260
1962-63	155	8,366	2,939
1963-64	134	6,934	2,466
1964-65	153	6,323	2,083

Since the commencement of the Act in December 1954, 1,186 grants amounting to \$48,909,000 have been approved, and accommodation has been provided for 20,420 aged persons.

The Disabled Persons Accommodation Act 1963. This Act came into operation on 25 November 1963, and provides that grants may be made to eligible organizations towards the capital cost of approved buildings which will provide residential accommodation for disabled persons engaged, or likely to be engaged, in paid employment in a sheltered workshop. The Act covers both the erection of buildings to be used for accommodation and the purchase of existing premises for conversion into accommodation. In both cases the cost of the necessary land may be included. Eligibility of organizations for grants is on the same basis as for the Aged Persons Homes Act. For the purposes of the Act, a disabled person is a person who is qualified by age (sixteen years or over) and on medical grounds for an invalid pension under the Social Services Act. A sheltered workshop is a factory or workshop, or part thereof, in which all or a substantial number of employees are disabled persons who receive payment for their work.

No applications for specific projects were lodged during 1964-65; consequently no grants were made.

Selected non-government organizations

National Safety Council of Australia

The National Safety Council of Australia was founded in Victoria in 1927. In 1959 it was reorganized, and new Articles of Association were adopted in 1961, placing it on a more truly federal basis and reflecting the expanded character of the Council in the 38 years since its formation. The objects of the Council are to devise and encourage the adoption of safety measures of all kinds, to promote discussion of all matters relating to safety measures, to conduct an educational campaign among the people of Australia to stimulate the adoption and observance of safety measures, and to consider, initiate and support improvements in the laws of the Commonwealth of Australia, the States and local governing bodies calculated to prevent accidents.

The Council is now registered in Canberra, with Divisions established in all States. It is managed by a Federal Council responsible for those objectives which are of a national character. Each State Division controls its own affairs which are of State or local character.

Lifesaving

There are two lifesaving organizations in Australia, the Royal Life Saving Society—Australia and the Surf Life Saving Association of Australia. The objects of these organizations are the prevention of death from drowning and other forms of asphyxiation; the education of the general public in methods of life saving and resuscitation of the apparently drowned or asphyxiated; technical education in water safety; the encouragement of swimming and life saving in schools and other organizations; the encouragement of all aspects of swimming and aquatics which would assist in saving lives; and the initiation of research within the field of water safety and lifesaving.

The Royal Life Saving Society operates at lakes, rivers, bay and harbour beaches, and gives instruction to school pupils and members of other bodies throughout Australia except on surf beaches. The Surf Life Saving Association of Australia controls all life saving activities on the ocean beaches throughout Australia. In all, over 220 clubs are affiliated, comprising a membership of over 22,000. Volunteer patrols operate every week-end, and in recent years over 5,000 rescues have been recorded during each surfing season. The total number of recorded rescues during the past fifty-eight years is 145,115.

Royal Humane Society

The Royal Humane Society of Australasia has as its main object the granting of awards to all who with bravery, skill and perseverance risk their own lives in saving or attempting to save those of their fellow creatures. The classes of awards are (a) Gold Medal, (b) Silver Medal, (c) Bronze Medal, and (d) Certificate of Merit. The Clarke Medal is awarded for the outstanding case of the year, and the Rupert Wilks Trophy is awarded for the most outstanding bravery by a child under thirteen years of age.

The Order of St. John

The Priory in Australia of the Most Venerable Order of the Hospital of St. John of Jerusalem is the governing body of the various activities of the Order, which comprises the St. John Ambulance Association, the St. John Ambulance Brigade and the Hospitallers' Clubs in all States and Commonwealth Territories. In October 1963, at Canberra, the Priory for the first time held its meetings in Australia under the chairmanship of the Prior, His Excellency the Governor-General.

Members of the St. John Ambulance Association teach first aid, home nursing, hygiene and child welfare, and members of the St. John Ambulance Brigade provide first aid at public functions. The Hospitallers' Clubs in each State undertake the collection of funds for the St. John Ophthalmic Hospital in Jerusalem and other duties which tend to bring together all persons interested in the work of the order. The Order of St. John maintains ambulance transport services in some States, acts as an auxiliary to such services in other States, and provides technical reserves for the medical services of the Crown.

CHAPTER 16

PUBLIC JUSTICE

Statistics of public justice are influenced by a number of factors which affect comparability from State to State and from year to year, e.g.:

- (a) Differences in the jurisdiction of courts;
- (b) Changes in the law in particular States and differences in the laws between States;
- (c) Differences in the methods of compiling the figures (e.g. in respect of persons convicted for more than one offence);
- (d) The attitude to laws such as those connected with liquor, vagrancy, gaming, and traffic offences;
- (e) The strength and distribution of the police force;
- (f) The proportion of various types of crimes reported and solved.

The Australian legal system

Development of the system

The two major factors in the development of the Australian legal system have been its British origin and the Commonwealth Constitution of 1900. When the various parts of Australia were first settled by British colonists, the common law and statutes of England were brought with them by the settlers. When local law-making bodies were established, the law so brought in was gradually modified and augmented by local legislation, but the Imperial Parliament in London also continued to legislate (to a lesser and lesser extent) in respect of Australia. The Commonwealth Constitution of 1900, which is itself an Imperial Act, limited the legislative power of State Parliaments in some respects and created a federal legislature. Since the *Statute of Westminster Adoption Act* 1942, the Imperial Parliament can legislate for Australia only at Australia's request. The sources of Australian law of today are, therefore, found in Commonwealth and State legislation, in some Imperial legislation and in the common law. No significant attempt has been made at codification of the law, but three of the States (Queensland, Western Australia and Tasmania) have Criminal Codes. However, separate consolidations of the statutes of the Commonwealth and of all States except Western Australia (which has adopted a system of reprinting of individual statutes at intervals) have been brought out from time to time.

There are few constitutional or other legislative guarantees of individual rights and liberties in Australia. These rights are nevertheless protected, because a basic feature of the Australian system is the 'rule of law': no act, official or unofficial, however bona fide and apparently reasonable, which infringes the liberty or rights of an individual is justifiable unless it is authorized by law, and for any such unlawful act, by whatever authority commanded, the official or other person is personally liable in an action in the ordinary courts. In the case of subordinate legislation, and even in the case of Commonwealth or State Acts, the validity of the law itself may be challenged in the courts. The remedy for the protection of the personal liberty of the individual is the writ of habeas corpus, which requires the person named therein to be produced in the court.

Australian law adheres to the principle that judicial control must in general be exercised by ordinary courts. There is no integrated system of administrative tribunals, but there is a great variety of such tribunals of various descriptions. The ordinary courts exercise supervision over administrative tribunals either by way of statutory appeal or by the use of prerogative writs of mandamus, prohibition, or *certiorari*, by which the administrative tribunals can be enjoined to perform a duty or to abstain from excess of jurisdiction, or can have their decisions set aside.

Independence of the judiciary is an essential part of the Australian legal system. Security of tenure of superior court judges is guaranteed, mostly by the Constitutions of the Commonwealth and the States, and they can be removed from office only by resolution of both Houses of Parliament of the Commonwealth or the States, as the case may be, for proven misbehaviour or incapacity. Their independence is further secured by relatively high salaries which, in the case of High Court judges, cannot be reduced during their tenure of office, and liberal (mostly non-contributory) pensions for the judges or their widows.

Civil judgments given in the courts of any part of Australia can be enforced in any other part of Australia under the *Service and Execution of Process Act 1901-1963*. Since 1 January 1964 this applies also to fines imposed by courts of summary jurisdiction.

State and Territory courts

Civil jurisdiction. Lower civil courts (i.e. Magistrates' Courts, Courts of Petty Sessions, Local Courts, Small Debts Courts, Courts of Request and Courts of General Sessions) are usually constituted or presided over by a stipendiary or special magistrate or a commissioner. In some limited instances justices of the peace may exercise the jurisdiction of the court. Local Courts are sometimes constituted by a Judge. The powers of the magistrates in the various States and Territories are set out on pages 522-3. In most cases, unless the amount involved is very small, appeal may be made to a higher court against a magistrate's decision. In any case the Supreme Court has a supervisory power, by means of prerogative writs, to examine whether a lower court has properly exercised its jurisdiction. In the higher courts (i.e. District Courts, County Courts, and the Supreme Courts) actions are usually tried by a single judge, sitting with or without a jury, from whose judgment appeal lies to the bench of the Supreme Court. In certain cases the appeal can be carried to the High Court of Australia. Appeals to the Privy Council are referred to on page 522.

Criminal jurisdiction. Criminal courts are of two kinds, namely, courts of summary jurisdiction and higher courts. Courts of summary jurisdiction, usually called Courts of Petty Sessions, may deal summarily with minor offences; higher courts, known as Courts of Sessions, Quarter Sessions or General Sessions (not to be confused with the lower court of civil jurisdiction of that name) and the Supreme Court, hear indictable offences. A court of summary jurisdiction consists of a stipendiary or police magistrate, or two or more justices of the peace; a higher court consists of a judge or chairman, sitting with a jury. The jury finds as to the facts of the case, and the judge determines the applicable law and, within the limits of the law, the punishment of the convicted person.

In the case of other than minor offences a preliminary hearing is held before a stipendiary magistrate or justice of the peace for the purpose of determining whether a *prima facie* case has been made out. If the magistrate or justice of the peace finds that there is a case to answer, the person charged is committed for trial at a higher court. A magistrate or justice of the peace has power to release on bail. There is an appeal to a higher court from the decision of a court of summary jurisdiction hearing a minor offence, and an appeal from a higher court to the full bench of the Supreme Court, or Court of Criminal Appeal. A further appeal may, with leave, be brought to the High Court of Australia.

Federal courts

The judicial power of the Commonwealth is vested in the High Court of Australia (the Federal Supreme Court), in the Federal courts created by Parliament (the Federal Court of Bankruptcy and the Commonwealth Industrial Court), and in the State courts invested by Parliament with Federal jurisdiction, both civil and criminal. The nature and extent of the judicial power of the Commonwealth are set out in Chapter III. (§§ 71-80) of the Commonwealth Constitution (*see* pages 15-16 of this Year Book). Particulars concerning the Federal Court of Bankruptcy are given on pages 539-41 of this chapter, and information regarding the Commonwealth Industrial Court, which was established under the *Conciliation and Arbitration Act 1904-1965*, is included in the chapter Labour, Wages and Prices (page 345).

High Court of Australia

The High Court of Australia consists of a Chief Justice and six other Justices. Its principal seat is in Melbourne, but sittings are held in every State capital as occasion requires. The High Court has both original and appellate jurisdiction. Its original jurisdiction is usually exercised by a single Justice, appellate jurisdiction by at least three Justices.

The Constitution itself confers original jurisdiction on the High Court in all matters (i) arising under any treaty, (ii) affecting consuls or other representatives of other countries, (iii) in which the Commonwealth, or a person suing or being sued on behalf of the Commonwealth, is a party, (iv) between States, or between residents of different States, or between a State and a resident of another State, (v) in which a writ of mandamus or prohibition or an injunction is sought against an officer of the Commonwealth. In addition, Parliament may, under the Constitution, confer additional original jurisdiction on the High Court in certain classes of matters, and has in fact conferred original jurisdiction on the High Court in all matters arising under the Constitution or involving its interpretation and in trials of indictable offences against the laws of the Commonwealth. In matters (i) and (v) and in suits between the Commonwealth and a State or between States the jurisdiction of the High Court is exclusive of that of the State Courts, and in matters (other than trials of indictable offences) involving any question as to the limits *inter se* of the constitutional powers of the Commonwealth and those of the States the jurisdiction of the High Court is exclusive of that of the Supreme Courts of the States.

Under the Constitution the High Court has jurisdiction, with such exceptions and subject to such regulations as the Parliament permits, to hear and determine appeals from all judgments, decrees, orders and sentences of (i) any Justice or Justices exercising the original jurisdiction of the High Court, (ii) any other Federal Court or court exercising Federal jurisdiction and (iii) from the Supreme Court or other court of any State from which appeal lay to Privy Council at the establishment of the Commonwealth. In respect of (iii) the Parliament has prescribed that, generally, appeal can be brought only by special leave of the High Court. However, in the case of judgments affecting the status of any person under the laws relating to aliens, marriage, bankruptcy or insolvency, or in respect of any sum or matter at issue, or involving any claim, demand, or question, to or regarding any property or civil right, amounting to or of the value of \$3,000, appeal may be brought as of right from final judgments, and by leave of the High Court or the Supreme Court from interlocutory judgments.

By Acts of Parliament and by subordinate legislation the High Court has also been given appellate jurisdiction in respect of the courts of the Territories under the control of the Commonwealth. Provision is also made in various enactments for appeal to the High Court on points of law from administrative determinations, such as decisions of the Commissioner of Taxation, Taxation Boards of Review, the Commissioner of Patents, or the Registrar of Trade Marks. Such proceedings, although called appeals, are in reality proceedings in the original jurisdiction of the High Court.

Transactions of the High Court are shown on page 532.

Appeal to the Privy Council

There is an appeal, by special leave of the Privy Council, from the High Court to the Privy Council. In certain important types of constitutional disputes, involving questions of the powers of the Commonwealth *vis-à-vis* the States, a certificate of the High Court in effect granting leave to appeal is necessary. There is also an appeal from the State Supreme Courts direct to the Privy Council.

Lower (magistrates') courts

Powers of magistrates

New South Wales. The powers of the magistrates with regard to offences punishable summarily depend in each case on the statute which creates the offence and gives them jurisdiction. A magistrate may, with the consent of the accused, deal summarily with certain indictable offences under the Commonwealth Crimes Act and offences involving \$500 or less under the State Crimes Act; offences under the Commonwealth Act and certain offences under the State Act may be disposed of summarily without such consent if the amount involved does not exceed \$100. Except in the case of a very few statutes, and excluding cumulative sentences, the power of sentence is limited to twelve months. Imprisonment in default of fine is regulated by a scale limiting the maximum period according to the sum ordered to be paid, but in no case exceeding twelve months. Actions for debt and damage within certain limits also come within magisterial jurisdiction. In cases of liquidated debts, and damages whether liquidated or unliquidated, the amount is limited to \$300 before a court constituted by a stipendiary magistrate. Where the amount claimed exceeds \$100 the Court must transfer the action to the District Court when the defendant gives notice that he objects to the action being heard and determined by a Court of Petty Sessions. Magistrates have power to entertain claims of up to \$1,000 under the *Money Lenders and Infants Loans Act* 1941–1961. The amount in actions of debt or damages before one or more justices of the peace ranges up to \$60 in certain cases.

Victoria. The civil jurisdiction of magistrates is restricted as follows: (a) ordinary debts, to \$200; (b) any action in tort or contract, with the exception of a few torts such as breach of promise or illegal arrest (on which magistrates have no power to adjudicate), to \$600; and (c) any action in tort arising out of any accident in which a vehicle is involved, to \$1,000. No definite limit is fixed to the powers of the magistrates on the criminal side, and for some offences sentences of up to two years imprisonment may be imposed. The proportion of long sentences is, however, comparatively small.

Queensland. Generally speaking, the maximum term of imprisonment which justices can impose is six months, but in certain exceptional cases, such as offences against sections 233, 344 and 445 of the Criminal Code (betting houses, aggravated assaults, and unlawfully using animals), sentences of twelve months may be imposed. There is provision for applying cumulative sentences.

South Australia. The power of special magistrates to impose fines and imprisonment is defined by the special Act creating the offence and conferring jurisdiction. In the case of minor indictable offences which are tried summarily, a maximum penalty of \$200 fine or two years

imprisonment is fixed by the Justices Act, 1921-1960. Magistrates also have power to hear certain civil actions in which the amount claimed is less than \$2,500.

Western Australia. The powers of magistrates and justices with regard to offences which are tried summarily are governed by the Act creating the offence and giving them jurisdiction. Imprisonment in default of payment of a fine is regulated by a scale limiting the period according to the amount of the fine but not to exceed six months. The civil jurisdiction of Local Courts is restricted in general to \$1,000. By consent of the parties, any action that might be brought in the Supreme Court may be dealt with in a Local Court. Justices may act in the case of illness or absence of the magistrate. Magistrates are coroners, and justices may be appointed as acting coroners. Magistrates have appellate jurisdiction under some statutes and in country districts act as Chairmen of the Session Courts. They may be appointed as Commissioners of the Supreme Court. On the goldfields the magistrate is also the warden.

Tasmania. Magistrates are empowered to hear and determine in Courts of Petty Sessions all offences when an enactment expressly or by implication provides that the matter is to be determined summarily, or by or before justices, or that any offence is to be punishable upon summary conviction. In 1963, by an amendment to the *Justices Act 1959*, the categories of crimes triable summarily was extended to include crimes of a less serious nature. In the case of certain crimes the defendant has the option of electing summary trial or trial on indictment in the Supreme Court. However, the choice of election applies only where the property concerned exceeds the value of \$20 but does not exceed \$400. The defendant no longer has any right of election where the value of the property does not exceed \$20. In the case of a charge of forgery or uttering, a right of election exists provided the complaint is in respect of a cheque for not more than \$400. In the case of a charge of breaking into a building, other than a dwelling house, a defendant may elect to be tried summarily under certain conditions. No general limit is fixed in respect of sentences, the statute creating the offence almost invariably laying down the penalty. Where this is not the case, the *Contravention of Statutes Act 1889* provides that a fine of \$100 may be imposed. Sentences of imprisonment which justices may impose vary with the nature of the offence, with a maximum of two years. The aggregate of terms of cumulative sentences may not exceed two years. The civil jurisdiction of magistrates is divided into two categories. A Commissioner of the Court of Requests, provided he is a legal practitioner, may hear actions for the recovery of debts and damages not exceeding \$500. As Commissioners are invariably police magistrates, this jurisdiction is State-wide. Courts of General Sessions, constituted by at least two justices, exercise similar powers, but the jurisdiction cannot exceed \$100. Only one court, that at Flinders Island, has the maximum jurisdiction, the others being limited to \$60.

Northern Territory. Stipendiary and special magistrates constituting courts of summary jurisdiction try offences punishable summarily. The punishment that may be imposed depends on the law creating the offence. Where there is no magistrate available, the offence may be tried by two or more justices of the peace or, if all parties consent, by one justice. Proceedings for committal on indictable offences may be heard by either a magistrate or a justice of the peace. Certain indictable offences under the Territory law may be tried summarily by a magistrate or two justices of the peace, who may impose a fine of up to \$200 or imprisonment for up to two years. A stipendiary magistrate constituting a local court has a civil jurisdiction to hear and determine claims for not more than \$2,000. A local court constituted by two justices of the peace (every special magistrate is also a justice of the peace) has a civil jurisdiction to hear claims up to \$100.

Australian Capital Territory. Stipendiary and special magistrates have general jurisdiction to try offences punishable summarily and also where a person is made liable to a penalty or punishment and no other provision is made for trial. The punishment depends on the law which creates the offence. In addition to jurisdiction (possessed by stipendiary and special magistrates throughout Australia) to try summarily with the consent of the defendant offences indictable under the *Crimes Act 1914-1960* (in which case the magistrate cannot impose a fine exceeding \$200 or imprisonment exceeding one year), under Territory law certain indictable offences may also be tried summarily by a magistrate, who may impose a fine not exceeding \$100 or imprisonment for up to one year. Magistrates also hear proceedings for committal on indictable offences. In civil proceedings, magistrates try actions for amounts up to \$400. Justices of the peace have no judicial functions.

First offenders

In all States and Territories statutes are in force for dealing with first offenders. For particulars of the relevant legislation, see Year Book, No. 46, page 632. Provisions are incorporated in the various Acts whereby courts may extend leniency to the offender by means such as: (i) dismissal of the charge without proceeding to a conviction; (ii) freeing the offender or suspending sentence with the requirement of a recognizance for good behaviour for a specified period; and (iii) by placing the offender under the supervision of a probation officer for a specified period.

Children's courts

Special provisions exist in all States and Territories for dealing with juvenile offenders in special courts. Particulars of the relevant legislation and the constitution and powers of these courts are given in Year Book No. 49, pages 665-6.

Proceedings at lower magistrates' courts

Particulars of the differences in the jurisdiction of Lower Courts in the various States are given under Powers of Magistrates (pages 522-3). The proceedings of these courts are summarized in this paragraph. The statistics in the following tables are influenced by the factors affecting comparability listed at the beginning of this chapter (page 520).

Criminal proceedings—total cases. The total numbers of cases dealt with at magistrates' courts in each State and Territory for the years 1960 to 1964 are shown in the following table.

CASES AT MAGISTRATES' COURTS: OFFENCES CHARGED, STATES AND TERRITORIES, 1960 TO 1964

State or Territory	1960	1961	1962	1963	1964
New South Wales(a)	332,728	345,730	322,848	323,501	341,351
Victoria(a)	268,104	259,268	270,275	290,332	303,925
Queensland(a)(b)	73,804	79,448	79,772	87,737	97,878
South Australia(a)(b)	47,427	59,534	61,276	68,707	64,799
Western Australia(a)	50,107	48,220	52,764	54,907	53,705
Tasmania(a)	24,047	27,227	30,415	34,728	31,702
Northern Territory	2,958	3,091	4,350	5,886	6,581
Australian Capital Territory	3,168	3,305	4,795	6,435	(a) 7,797
Australia	802,343	825,823	826,495	872,233	907,738

(a) Excludes minor traffic offences settled without court appearance. (b) Year ended 30 June.

Differences in the figures in the preceding table between States, and within a State over a period of time, are influenced by the large number of traffic offences and the arrangements which have been introduced at various times for dealing with them. Provision exists in the States and the Australian Capital Territory for settlement of parking and minor traffic offences by payment of fines without court appearance.

**MINOR TRAFFIC OFFENCES SETTLED WITHOUT COURT APPEARANCES
STATES AND A.C.T., 1960 TO 1964**

State or Territory	1960	1961	1962	1963	1964
New South Wales	351,685	370,688	443,689	389,395	381,058
Victoria	69,895	113,874	132,144	170,590	181,479
Queensland(a)	40,648	58,977	75,322	79,237	115,446
South Australia(a)	149,241	156,067	191,592	183,684	198,943
Western Australia	50,879	44,392	42,582	43,970	49,488
Tasmania	25,801	36,745	33,217	34,394	38,555
Australian Capital Territory	(b) 1,419
Total	688,149	780,743	918,546	901,270	966,388

(a) Year ended 30 June. (b) From 14 September 1964.

Criminal proceedings—cases in which convictions were made. Of the cases dealt with in magistrates' courts, the following tables show the number in which convictions were made.

**CASES AT MAGISTRATES' COURTS IN WHICH CONVICTIONS WERE MADE
BY CLASS OF OFFENCE: STATES AND TERRITORIES, 1964**

Class of offence	N.S.W.	Vic.	Qld (a)(b)	S.A. (a)	W.A.	Tas.	N.T.	A.C.T.	Aust.
Against the person	3,382	3,315	743	594	563	278	233	87	9,195

Australia	138,294	133,806	137,081	136,707	131,762

(a) Year ended 30 June.

Civil proceedings. Civil proceedings in the lower courts refer to those in the Small Debts Courts in New South Wales, Courts of Petty Sessions in Victoria, Magistrates' Courts in Queensland, Local Courts in South Australia and Western Australia, Courts of Requests in Tasmania, Local Courts in the Northern Territory and the Court of Petty Sessions in the Australian Capital Territory. Statistics of civil proceedings in the lower courts are given on page 532.

Higher (judges') courts

Higher courts are presided over by a judge, sometimes with a jury (*see page 521*). Jurisdiction of the higher courts, which include District, County and Supreme Courts, includes appeals from the lower courts, cases of serious crime committed from lower courts, and civil cases involving common law, commercial causes, equity, etc. Under powers vested by the Commonwealth under the *Matrimonial Causes Act 1959-1965* and the *Bankruptcy Act 1924-1965* separate courts within the jurisdiction of the Supreme Courts of the various States and Territories deal exclusively with matrimonial cases and bankruptcy cases respectively.

Proceedings at higher courts comprise criminal, civil, divorce and bankruptcy proceedings. Separate details of each are given on pages 531-41.

An account of the methods adopted in each jurisdiction in connection with habitual offenders is given in Year Book No. 49, pages 668-9.

Capital punishment

There were seven executions in Australia during the period 1955 to 1965. Three took place in South Australia (in 1956, 1958 and 1964) and four in Western Australia (one in 1960 and 1961, two in 1964). In each case the offence was murder.

Under '*The Criminal Code Amendment Act of 1922*' capital punishment was abolished in Queensland, and in New South Wales the Crimes Act was amended in 1955, abolishing capital punishment for all offences except treason and piracy with violence. In the Australian Capital Territory the *Child Welfare Ordinance 1957-1962* provides that no death sentence is to be pronounced or recorded against a person under the age of 18 years, and sub-section (2.) of section 389 of the *Tasmanian Criminal Code Act 1924* as amended contains a similar provision.

In the early days of the history of Australia the penalty of death was attached to a large number of offences, many of which would now be dealt with in a court of summary jurisdiction. The present tendency is to restrict death sentences to persons convicted of murder. Although rape is a capital offence in some States the penalty of death has not been imposed in recent years on persons convicted of it. The average annual number of executions in Australia from 1861 to 1880 was 9; from 1881 to 1900, 6; from 1901 to 1910, 4; from 1911 to 1920, 2; from 1921 to 1930, 2; from 1931 to 1940, 1; from 1941 to 1950, 0.5; and from 1951 to 1960, 0.7.

Serious crime

Selected crime reported or becoming known to police

The tables on pages 527-9 show some details of certain categories of offences reported or becoming known to police. This series, which commenced in 1964, is derived from police records and is based, as far as possible, on definitions and procedural arrangements uniformly determined for all States. The following explanations are necessary in order to interpret the figures in this series.

Number of offences reported or becoming known. All incidents reported or becoming known to the police which are found to constitute offences within the scope of the crimes covered are included. Offences are shown as 'reported or becoming known' in the year during which it has been established that the incident constitutes a crime, not necessarily in the period when the incident occurred. However, the incident is included when the police are satisfied that a crime has been committed, even though it may be established in subsequent proceedings that no crime or a crime of a different nature was committed. As far as possible, the offences are recorded in respect of the State in which the incident occurred, regardless of which police force undertakes investigations or prosecutions, or where an arrest is made. In the case of homicide, assault, robbery and rape, one offence is counted in respect of each victim, regardless of the number of offenders involved. In the case of breaking and entering, and fraud, etc., one offence is counted for each act or series of directly related acts occurring at the same time and place and under the same circumstances. Each motor vehicle stolen is counted as a separate offence.

Number of offences cleared. An offence of the type included in this series is counted as 'cleared' when an information (charge, arrest or summons to appear) has been laid against at least one person involved. However, an offence may also be counted as 'cleared' without an information being laid. This may occur when the offender has received an official caution or has died, has committed suicide, has been committed to a mental institution, or is in another jurisdiction from which extradition is not desired or available, or is serving a sentence; or if there are other obstacles to prosecution, such as diplomatic immunity or that the complainant refuses to prosecute. A clearance is always shown against the classification under which the offence was 'reported', regardless of the nature of the charge laid or changes in the description of an offence due to later information. The entries are made in respect of the year when the offence was 'cleared', whether or not the offence was 'reported' in that or an earlier year.

Persons involved in crimes cleared. This is the sum of the number of persons dealt with in each of the offences shown as 'cleared'. If more than one person is involved in the one offence, each person is counted. If the same person is involved in more than one offence cleared, he is

counted separately for each offence. Persons involved are shown against the categories of offences to which an incident was originally allocated, regardless of the actual offences they are charged with. This basis of counting 'persons involved in offences cleared' was adopted to reveal trends in crime participation by persons in various age-groups. The figures in this series are not directly comparable with statistics of persons charged or convicted in court, or of cases brought before the courts; nor do these figures reveal the number of offenders in the community.

Offences included in the statistics.

Homicide. Separate details are provided for murder, attempted murder (i.e. acts done with intent to murder) and manslaughter (unlawful killing other than murder), excluding manslaughter arising from motor traffic accidents.

Serious assault. These are assaults normally dealt with on indictment. Includes wounding, offences causing bodily harm, assaults with a weapon, etc., and attempts of this nature. Excludes sexual assault and robbery.

Robbery. Stealing anything, if at, or immediately before or after, the time of stealing, the offender uses or threatens to use violence to any person or property in order to obtain the thing stolen, or to prevent or overcome resistance to its being stolen. Includes attempts of this nature.

Rape. Includes attempted rape and assault with intent to rape. Excludes unlawful carnal knowledge (i.e., where consent is given, but the girl is below the legal age of consent, etc.) and indecent assault.

Breaking and entering. Breaking and entering a building (or entering a building and breaking out) and committing or intending to commit a crime. Includes burglaries. Separate details are shown according to the type of building involved, namely, *dwellings* (including unoccupied dwellings, tents, caravans, etc., used as dwellings, and the residential parts of hotels, schools, etc.); *shops* (including kiosks, service stations, restaurants, bars, non-residential clubs, etc.); and *offices, factories and warehouses* (including parts of buildings, but excluding dwellings and shops used for such purposes). Includes attempts.

Motor vehicle thefts, illegal use, etc. Includes all offences of illegal, unlawful or unauthorized use, use without consent, unlawfully assuming control, etc., no matter under which legislation these offences are prescribed. Excludes cases of 'interference', but includes attempts at illegal use.

Fraud, forgery, false pretences. Includes embezzlement, 'omit to account', misappropriation, fraudulent appropriation, conversion, larceny as bailee, falsification of accounts, company fraud, forgery, uttering, false pretences, passing of valueless cheques and offences by trustees. Includes attempts, but excludes imposition. As a general rule, offences are included only if there is an element of deception or trickery. Separate details are shown for *valueless cheque* offences (i.e., passing of valueless cheques, whether there is no account, insufficient funds or a false signature of the purported drawer of the cheque. However, this sub-group excludes cases where a genuine cheque is altered or the endorsement of the payee is forged. These cases are regarded as forgery and/or uttering and included in 'other').

Number of offences reported or becoming known to police

The following table shows, for Australia, the number of offences, in each of the seven categories covered by this series which were reported or became known to police in 1964 and 1965.

**SELECTED CRIME REPORTED OR BECOMING KNOWN TO POLICE
NUMBER OF OFFENCES, AUSTRALIA, 1964 AND 1965**

Category of crime	Six months ended—		Total 1964	Six months ended—		Total 1965
	June 1964	Dec. 1964		June 1965	Dec. 1965	
Homicide	140	132	272	149	122	271
Serious assault	970	954	1,924	981	914	1,895
Robbery	301	291	592	346	383	729
Rape	137	125	262	118	139	257
Breaking and entering (dwellings, shops, offices, etc.)	19,472	20,223	39,695	21,566	25,050	46,616
Motor vehicle theft, etc.	11,444	12,095	23,539	11,116	13,165	24,281
Fraud, forgery, etc.	7,407	8,301	15,708	8,880	8,292	17,172

Crimes cleared and persons involved

The tables which follow show, for the various categories of offences, the number of offences reported, the number cleared, and the number of persons involved according to age and sex. Subdivisions of the categories homicide, breaking and entering, and fraud, etc., are provided. See pages 526-7 for definitions used and the bases on which these statistics are prepared.

Homicide. The following table provides information on offences classified as homicide (other than manslaughter arising from motor traffic accidents) during 1964 and 1965.

HOMICIDE: CRIMES REPORTED OR BECOMING KNOWN, CRIMES CLEARED AND PERSONS INVOLVED, AUSTRALIA, 1964 AND 1965

	Murder		Attempted murder		Man-slaughter		All homicide	
	1964	1965	1964	1965	1964	1965	1964	1965
Number reported or becoming known	143	141	95	101	34	29	272	271
Number cleared	137	132	92	99	34	29	263	260
Persons involved in crimes cleared—								
Age(a)—16 years and under	6	14	2	5	2	1	10	20
17 and 18 years	6	5	11	6	1	1	17	12
19 and 20 years	12	2	7	4	6	1	25	7
21 years and over	132	125	82	88	29	26	243	239
Total persons involved	156	146	102	103	37	29	(b)295	(b)278

(a) Age last birthday at time of clearance. (b) Includes 51 females in 1964 and 44 in 1965.

Serious assault, robbery, rape. The next table provides details of offences classified as serious assault, robbery and rape during 1964 and 1965.

SERIOUS ASSAULT, ROBBERY, RAPE: CRIMES REPORTED OR BECOMING KNOWN, CRIMES CLEARED, AND PERSONS INVOLVED, AUSTRALIA, 1964 AND 1965

	Serious assault		Robbery		Rape	
	1964	1965	1964	1965	1964	1965
Number reported or becoming known	1,924	1,895	592	729	262	257
Number cleared	1,693	1,604	308	355	229	210
Persons involved in crimes cleared—						
Aged(a)—16 years and under	164	147	81	55	55	43
17 and 18 years	364	280	122	134	110	72
19 and 20 years	244	251	92	93	79	60
21 years and over	1,284	1,197	219	315	118	143
Total persons involved	(b)2,056	(b)1,875	(c) 514	(c) 597	362	318

(a) Age last birthday at time of clearance. (b) Includes 91 females in 1964 and 71 in 1965. (c) Includes 29 females in 1964 and 15 in 1965.

Breaking and entering. This table shows details of offences classified as breaking and entering during 1964 and 1965.

**BREAKING AND ENTERING: CRIMES REPORTED OR BECOMING KNOWN
CRIMES CLEARED, AND PERSONS INVOLVED, AUSTRALIA, 1964 AND 1965**

	Dwellings		Shops		Offices and warehouses		Total	
	1964	1965	1964	1965	1964	1965	1964	1965
Number reported or becoming known	16,299	18,058	13,777	15,175	9,619	13,383	39,695	46,616
Number cleared	5,540	5,521	4,559	4,522	2,717	3,373	12,816	13,416
Persons involved in crimes cleared—								
Aged(a)—16 years and under	4,403	4,295	2,987	2,952	2,185	2,809	9,575	10,056
17 and 18 years	1,478	1,107	1,246	1,340	589	758	3,313	3,205
19 and 20 years	600	636	797	929	453	588	1,850	2,153
21 years and over	1,575	2,212	2,237	2,306	1,173	1,614	4,985	6,132
Total persons involved	8,056	8,250	7,267	7,527	4,400	5,769	19,723	21,546

(a) Age last birthday at time of clearance. (b) Includes 641 females in 1964 and 505 in 1965.

Motor vehicle theft, etc., fraud, forgery, etc. This table shows details of offences classified as motor vehicle theft, illegal use, etc., and of fraud, forgery and false pretences.

**MOTOR VEHICLE THEFT, ETC., FRAUD, ETC.: CRIMES REPORTED
OR BECOMING KNOWN, CLEARED, AND PERSONS INVOLVED, AUSTRALIA
1964 AND 1965**

	Motor vehicle theft, etc.		Fraud, forgery, false pretences					
			Valueless cheques		Other		All frauds, etc.

Total females	145	188	544	683	2,135	1,915	2,679	2,598
Total persons involved	9,359	9,439	5,208	5,549	8,373	9,405	13,581	14,954

(a) Age last birthday at time of clearance.

The number of stolen motor vehicles recovered were: 1964, 20,957; 1965, 21,678.

Convictions for serious crime at lower (magistrates') courts

The figures given in the tables on page 525 refer to all convictions, and include offences of a technical nature, drunkenness, and minor breaches of good order, which come under the heading of crime in a very different sense from the more serious offences. The following table has therefore been prepared to show convictions at magistrates' courts for the years 1960 to 1964 for what may be regarded as the more serious offences, i.e. offences against the person, offences against property, forgery and offences against the currency.

CONVICTIONS FOR SERIOUS CRIME^(a) AT MAGISTRATES' COURTS: STATES AND TERRITORIES, 1960 TO 1964

State or Territory	1960	1961	1962	1963	1964
New South Wales	31,529	31,696	32,320	32,656	31,826
Victoria	15,646	15,949	19,016	21,540	23,131
Queensland ^{(b)(c)}	4,678	4,736	4,833	5,768	5,707
South Australia ^(b)	2,604	3,552	3,693	3,727	4,145
Western Australia	5,764	5,256	6,814	7,813	7,189
Tasmania	1,788	1,636	1,704	1,570	2,122
Northern Territory	243	285	419	591	469
Australian Capital Territory	331	573	286	492	480
Australia	62,583	63,683	69,085	74,157	75,069

(a) Offences against the person, offences against property, forgery and offences against the currency.
 (b) Year ended 30 June. (c) A person convicted on several counts at the one hearing is included only once.

Committals to higher (judges') courts

The following tables show the number of offences which were committed to higher courts in each State and Territory.

COMMITTALS TO HIGHER COURTS, BY CLASS OF OFFENCE: STATES AND TERRITORIES, 1964

Class of offence	N.S.W.	Vic.	Qld (a)(b)	S.A. (a)	W.A.	Tas.	N.T.	A.C.T.	Australia
Against the person	1,437	1,619	356	263	71	66	17	22	3,851
Against property	5,332		894	290	336	508	29	155

(a) Year ended 30 June. (b) A person convicted on several counts at the one hearing is included only once.

Civil cases

The statistics in the two tables in this section are influenced by factors which affect comparability between States and between courts. The total number of plaints entered and amounts awarded plaintiffs in the lower courts during 1964 are shown in the following table.

CIVIL CASES AT LOWER COURTS: STATES AND TERRITORIES, 1964

—	N.S.W.	Vic.	Qld (a)	S.A.	W.A.	Tas.	N.T.	A.C.T.	Australia
Plaints entered number	175,835	197,023	48,147	103,218	60,023	40,574	2,452	7,621	634,893
Amount awarded to plaintiffs \$'000	6,509	8,400	3,322	4,329	2,534	574	77	401	26,145

(a) Year ended 30 June.

The following table shows the civil judgments (excluding those for divorce and bankruptcy) in the higher courts during 1964. The particulars given below include the number and amount of judgments entered by default or confession or agreement.

CIVIL CASES AT HIGHER COURTS: STATES AND TERRITORIES, 1964

Transactions of the High Court

TRANSACTIONS OF THE HIGH COURT OF AUSTRALIA, 1964 AND 1965

Original jurisdiction(a)	1964	1965	Appellate jurisdiction	1964	1965
Number of writs issued .	108	122	Number of appeals set down for hearing . . .	107	120
Number of causes entered for trial . . .	51	20	Number allowed . . .	31	39
Judgments for plaintiffs .	7	12	Number dismissed . . .	88	61
Judgments for defendants .	15	5	Otherwise disposed of .	16	27
Otherwise disposed of .	36	23			
Amount of judgments \$	59,244	114,424			

(a) Some matters dealt with by the High Court neither originate as writs nor are entered as causes.

During 1964 and 1965, respectively, the High Court dealt also with the following: appeals from assessments under the Taxation Assessment Acts, 52, 46; special cases stated for the opinion of the Full Court, 22, 16; applications for prohibition, etc., 14, 13. The fees collected amounted to \$9,308 in 1964 and \$7,056 in 1965.

Divorce and other matrimonial causes

Separation and maintenance orders of courts of summary jurisdiction

In all States and Territories there are laws enabling a wife whose husband leaves her or the children of the marriage without adequate means of support to obtain a maintenance order against the husband from a court of summary jurisdiction. In some States and in the Northern Territory, courts of summary jurisdiction also have power to make separation orders. A separation order is intended primarily for the protection of the person of the wife.

Divorce and other matrimonial proceedings in higher courts

A marriage may be terminated by a Supreme Court of a State or Territory, under powers vested in these courts by Commonwealth legislation, in one of three ways. Firstly, there may be a dissolution of the marriage, commonly known as divorce; secondly, the courts may annul a marriage; and thirdly, there can be a judicial separation of the parties. Until the Commonwealth *Matrimonial Causes Act* 1959 came into operation each State was primarily responsible for legislation relating to matrimonial causes. The law varied from State to State, for example, as to the period of desertion needed to obtain a decree for the dissolution of marriage. In 1959, however, the Commonwealth Matrimonial Causes Act was passed, and it came into force on 1 February 1961. The Act establishes uniform grounds throughout the whole of the Commonwealth for the termination of marriage. While the Act displaces corresponding State law, it vests jurisdiction in existing State and Territorial Courts.

Matrimonial Causes Act 1959-1965

Under this Act a decree for the dissolution of marriage may be granted on one or more of fourteen grounds, which include adultery, desertion, separation for five years in certain circumstances, cruelty, drunkenness, and failure to comply with a restitution decree.

Proceedings for nullity of marriage may be instituted in respect of a marriage which is void or voidable. A marriage which is void has no existence at all, and so it is not legally necessary to obtain a decree of nullity of marriage, but since the issue may depend on difficult questions of fact, such as proof that the consent of one of the parties to the marriage was not a real consent, it is advisable and customary to seek a court judgment which decides the question of the validity of the marriage.

Proceedings for annulling a voidable marriage may be instituted on various grounds, as, for example, where at the time of the marriage either party was a mental defective. A voidable marriage is void from the date of the decree absolute, but until then the parties have the status of married people, and transactions concluded on the basis of the existence of that status cannot be undone or re-opened. Since the parties to a marriage which is void or which has been voided do not have the status of married people, they may remarry.

The death of either husband or wife terminates any proceedings under the Act. A decree for dissolution or annulment of a voidable marriage is first a decree *nisi*. The decree automatically becomes absolute at the expiration of three months, unless it is in the meantime rescinded, appeal proceedings are instituted, or there are children of the marriage under the age of 16, in which case the Court must be satisfied that appropriate arrangements have been made for their welfare before the decree will become absolute. The parties cannot remarry until a decree *nisi* has become absolute.

A decree of judicial separation is available on most of the grounds available for divorce. It leaves unimpaired the status of marriage, but suspends rights and duties with respect to cohabitation. A husband is not responsible for the acts of his wife, except that he is liable for necessaries supplied to her if he has failed to pay alimony ordered by a court. Persons who have judicially separated cannot remarry, but a divorce may be obtained on the same facts as those on which the decree of judicial separation was based.

The Act provides for financial grants to approved marriage guidance organizations, and the courts are enjoined to consider at all times the possibility of reconciliation and they may take certain steps to endeavour to effect a reconciliation.

Number of petitions filed

The following table shows the number of petitions for dissolution of marriage, nullity of marriage and judicial separation filed in each State and Territory during 1965.

**PETITIONS FILED FOR DISSOLUTION OF MARRIAGE, NULLITY OF MARRIAGE

Grand total, Australia	6,750	7,290	7,513	7,967	8,534
---	--------------	--------------	--------------	--------------	--------------

(a) Decrees absolute. (b) Final decrees.

The ten-year averages of the numbers of decrees (i.e., dissolutions, nullities and judicial separations) granted annually in Australia for the 80 years from 1881 to 1960 are as follows:

1881-90	1891-1900	1901-10	1911-20	1921-30	1931-40	1941-50	1951-60
70	357	399	741	1,692	2,508	6,187	6,973

Grounds on which decrees were granted

The grounds on which dissolutions of marriage, nullities of marriage and judicial separations were granted in each State and Territory during 1965 are shown in the following table. A few of the decrees granted during 1965 were for petitions lodged under the former, superseded, legislation.

DISSOLUTIONS OF MARRIAGE, NULLITIES OF MARRIAGE AND JUDICIAL SEPARATIONS: GROUNDS, STATES AND TERRITORIES, 1965

(a) See footnote (a) to preceding table.

Number of divorced persons at each census, 1911 to 1961

The following table shows the number and proportion of divorced persons in Australia as recorded from returns supplied at each census from 1911 to 1961. A classification of divorced persons by ages for the censuses from 1891 to 1947 appeared in earlier issues of the Year Book (see No. 39, page 269). Prior to 1911 no record was made of divorced persons in South Australia, so comparisons cannot be made beyond that date.

DIVORCED PERSONS AT CENSUS DATES: AUSTRALIA, 1911 TO 1961

Sex	Number						Proportion per 10,000 of males or females 15 years of age and over					
	1911	1921	1933	1947	1954	1961	1911	1921	1933	1947	1954	1961

Bankruptcy

Particulars of bankruptcy in each State to the end of 1927 were incorporated in issues of the Year Book prior to No. 23. On 1 August 1928 the Bankruptcy Act of the Commonwealth, which is now the *Bankruptcy Act 1924-1965*, came into operation.

Under the *Bankruptcy Act 1924-1965* the Commonwealth is divided into bankruptcy districts which coincide generally with State boundaries. A Federal Court of Bankruptcy has been established with jurisdiction throughout Australia, but it exercises this jurisdiction mainly in the bankruptcy districts of New South Wales, which includes the Australian Capital Territory, and Victoria. Certain State courts have been invested with federal jurisdiction in bankruptcy and, outside New South Wales and Victoria, usually exercise that jurisdiction in the appropriate bankruptcy district.

Any person unable to pay his debts may apply voluntarily for the sequestration of his estate, or his creditors may apply for a compulsory sequestration if he has committed an act of bankruptcy. The act of bankruptcy usually relied on is non-compliance by a debtor with a bankruptcy notice which requires the debtor to whom it is addressed to pay within a specified time, to a creditor who has obtained a final judgment or order to pay, the amount of the debt, or satisfy the Court that he has a counter claim, set-off, or cross demand which equals or exceeds the judgment debt. If a bankruptcy notice is not complied with a creditor may thereupon present a petition against a debtor, provided that the debt or debts amount to \$100, the act of bankruptcy relied on has occurred within the six months preceding the presentation of the petition, and the statutory requirements relating to domicile or residence are applicable to the debtor.

Upon the issue of a sequestration order the property of the bankrupt vests in the official receiver named in the order, and his property is divisible among his creditors in accordance with the provisions of the Act. No creditor to whom the bankrupt is indebted in respect of any debt provable in bankruptcy has any remedy against the property or person of the bankrupt except by leave of the court.

Under Part XI of the Act, instead of having a sequestration order made against his estate a debtor may compound with his creditors or assign his estate for their benefit. Under Part XII of the Act a debtor may enter into a scheme of arrangement. The object of Parts XI and XII of the Act is to allow a debtor and his creditors to enter into an agreement concerning the debts due to the creditors without having a sequestration order made against the debtor.

The Court has power to decide questions of law affecting a bankrupt estate. Questions of fact may be tried before a jury.

The Act provides for an Inspector-General in Bankruptcy. It also provides for a Registrar and an Official Receiver to be appointed for each bankruptcy district. A Registrar in Bankruptcy is controlled by the Court and has such duties as the Attorney-General of the Commonwealth directs, or as are prescribed, and exercises such functions of an administrative nature as are authorized by the Court. He may examine a bankrupt or a person indebted to a bankrupt or having in his possession any of the estate or effects of a bankrupt. Stipendiary magistrates are appointed Deputy Registrars in country districts.

All sequestrated estates are vested in an Official Receiver, who is a permanent officer of the Commonwealth Public Service. His duties are to investigate the conduct, property and transactions of the debtor, and the cause of bankruptcy of a debtor, and to realize and administer the estate of the debtor. In respect of these activities the Official Receiver is under the control of the Court.

Persons registered by the Court as qualified to act as trustees may be appointed by resolution of the creditors to be trustees of estates. In cases where a registered trustee under a deed of arrangement, composition, or assignment (Parts XI and XII of the Act) is removed from or vacates his office, the official receiver may be appointed by the Court to complete the administration of the estate, or the Court may direct the official receiver to convene a meeting of the creditors in the estate to enable them to appoint a registered trustee to complete the administration of the estate.

Bankruptcy proceedings

The following table shows the number of bankruptcies of the various types in each State, together with the assets and liabilities of the debtors, during 1964-65.

BANKRUPTCY PROCEEDINGS: STATES AND TERRITORIES, 1964-65

(a) Includes the Australian Capital Territory.

Police

The primary duties of the police are to prevent crime, to detect and detain offenders, to protect life and property, to enforce the law, and to maintain peace and good order. In addition, they perform many duties in the service of the State, e.g., they act as clerks of petty sessions in small centres, as crown land bailiffs, foresters, mining wardens and inspectors under the fisheries and various other Acts. In metropolitan and large country areas they also regulate the street traffic. With the exception of the Commonwealth Police Force (*see* next page) and the police in the Northern Territory and the Australian Capital Territory, the police forces of Australia are under the control of the State Governments, but their members perform certain functions for the Commonwealth Government, such as acting as aliens registration officers and policing various acts and regulations.

Women police perform special duties at places where young women and girls are subject to moral danger, control traffic at school crossings and lecture school children on road safety. They also assist male police as required in the performance of normal police duties.

The strength of the police force in each State and Territory and the number of persons to each police officer are shown in the following table for the years 1961 to 1965. The figures include traffic and water police, probationers, cadets, special constables and women police, but exclude ancillary staff, viz., parking police, native trackers (Aboriginals employed in outlying districts in tracking lost persons and persons wanted by the police), female searchers, wardresses and interpreters, civilian staff, etc., viz., clerks, typists, artisans, cleaners, etc. Details of ancillary and civilian staff are provided separately. The figures of ancillary and civilian staff shown below vary from State to State because of administrative differences in the allocation to the police of certain functions such as parking control, motor registration and licensing.

STRENGTH OF POLICE FORCES: STATES AND TERRITORIES, 1961 TO 1965

Commonwealth Police Force

The Commonwealth Police Force commenced operations on 21 April 1960, and is the principal agency for the enforcement of the laws passed by the Commonwealth Parliament. It is also responsible for the protection of Commonwealth property and interests at various buildings and establishments under the control of the Commonwealth. This force co-ordinates the work of other Commonwealth investigation and law enforcement agencies and acts on behalf of the United Nations Organization for the suppressing of traffic in women and the suppression of obscene literature.

Under the control of the force is the Australian Police College at Manly, New South Wales, which provides training for officers of various police forces and other agencies in Australia and New Zealand. The force has its Head Office in Canberra and District Offices in each Capital City. The strength of the force at 30 June 1965, was 630 policemen and 3 policewomen. At that date there were, in addition, 3 ancillary and 71 civilian employees.

Prisons

Prisons and prison accommodation

The table below shows the number of prisons in each State and the Northern Territory and the accommodation therein at 30 June 1964.

PRISONS AND PRISON ACCOMMODATION: STATES
AND NORTHERN TERRITORY, 1964

	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	Australia
Prisons	18	13	7	14	19	1	2	74
Accommodation	3,100	2,330	1,049	1,015	1,026	404	97	9,021

There is no gaol in the Australian Capital Territory, but there is a lock-up attached to the police station at Canberra and another lock-up at Jervis Bay where offenders are held while awaiting trial or serving short sentences not exceeding one week imposed by a magistrate's court. Long-term prisoners from the Australian Capital Territory normally serve their sentences in New South Wales prisons.

Convicted prisoners

The number of convicted prisoners at 30 June of each of the years 1960 to 1964 and the proportion per 10,000 of the population are shown in the following table.

CONVICTED PRISONERS: STATES AND TERRITORIES, 1960 TO 1964

30 June—	N.S.W. (a)	Vic.	Qld	S.A.	W.A.	Tas.	N.T. (b)	Australia

1964	7.5	6.3	6.0	6.3	8.3	6.3	15.1	6.7

(a) Includes the Australian Capital Territory.

(b) Excludes full-blood Aborigines.

Patents, trade marks and designs

Patents

Patents for inventions are granted under the *Patents Act* 1952–1962, which applies to the Commonwealth of Australia and the Territories of Norfolk Island, Papua and New Guinea. The Act is administered by a Commissioner of Patents. The principal fees payable up to and including the grant of a patent amount to \$39. Renewal fees are payable as follows: \$10 before the expiration of the fourth year, and an amount progressively increasing by \$2 before the expiration of each succeeding year up to the final fee of \$32, payable before the expiration of the fifteenth year. An extension of time for six months for payment of a renewal fee may be obtained.

PATENTS: AUSTRALIA, 1961 TO 1965

	1961	1962	1963	1964	1965
Applications	12,901	13,026	13,051	14,134	15,150
Applications accompanied by provisional specifications	3,919	3,710	3,557	3,603	3,783
Letters patent sealed	4,940	3,866	5,361	5,456	7,277

Trade marks and designs

Under the *Trade Marks Act 1955-1958* the Commissioner of Patents is also Registrar of Trade Marks. Provision is made for the registration of users of trade marks and for their assignment with or without the goodwill of the business concerned. A new classification of goods was adopted in 1958, and trade marks registered under repealed Acts are reclassified on renewal. Under the *Designs Act 1906-1950* the Commissioner of Patents is also Registrar of Designs.

TRADE MARKS AND DESIGNS: AUSTRALIA, 1961 TO 1965

—	1961	1962	1963	1964	1965
Trade Marks—					
Received	6,209	5,920	6,411	6,280	6,583
Registered	4,592	3,558	4,224	3,606	3,256
Designs—					
Received	1,413	1,392	1,425	1,572	1,567
Registered	1,522	1,064	1,251	1,287	1,260

Copyright

Copyright is regulated by the *Commonwealth Copyright Act 1912-1963* wherein, subject to modifications relating to procedure and remedies, the British Copyright Act of 1911 has been adopted and scheduled to the Australian law. The Act is administered by the Commissioner of Patents.

Reciprocal protection of unpublished works was extended in 1918 to citizens of Australia and of the United States of America, under which copyright may be secured in the latter country by registration at the Library of Congress, Washington. The Commonwealth Government promulgated a further Order-in-Council which came into operation on 1 February 1923 and extended the provisions of the Copyright Act to the foreign countries of the Copyright Union, subject to the observance of the conditions contained therein.

COPYRIGHT: AUSTRALIA, 1961 TO 1965

—	1961	1962	1963	1964	1965
Applications lodged	1,153	1,162	1,265	1,360	1,438
Applications registered	1,042	1,224	1,146	1,275	1,277

Cost of administration of law and order**Expenditure by the States**

The tables following show the net expenditure (i.e., gross expenditure less receipts from fees, fines, recoups for services rendered, etc.) from Consolidated Revenue during 1964-65 in connection with the administration of justice, police and prisons in each State. The figures exclude Loan Fund expenditure, and expenditure on debt charges, pay-roll tax and superannuation payments. Because of differing legislative and administrative arrangements in the various States, the activities covered by the figures shown are not exactly the same in each State. Small differences also result from differing accounting practices. However, the figures shown for individual States are comparable from year to year.

STATE NET EXPENDITURE ON LAW AND ORDER, 1964-65

State	Net expenditure			Per head of population		
	Justice	Police	Prisons (a)	Justice	Police	Prisons
	\$'000	\$'000	\$'000	\$	\$	\$
New South Wales	4,611	21,534	4,625	1.11	5.18	1.11
Victoria	560	18,010	2,458	0.18	5.68	0.78
Queensland	488	11,038	1,232	0.30	6.91	0.77
South Australia	-1,126(b)	6,561	1,106	-1.07	6.29	1.06
Western Australia	486	4,873	726	0.61	6.11	0.91
Tasmania	530	2,322	488	1.44	6.31	1.32
Total	5,549	64,338	10,633	0.50	5.78	0.96

(a) Excludes expenditure on reformatories which for 1964-65 amounted to: N.S.W., \$945,389; Vic., n.a.; Qld, \$97,656; S.A., \$306,002; W.A., \$463,226; Tas., \$157,810. (b) Receipts for fines, legal fees and registrations exceed expenditure.

STATE NET EXPENDITURE ON LAW AND ORDER
AUSTRALIA, 1960-61 TO 1964-65
(\$'000)

Year	Justice	Police	Prisons(a)
1960-61	3,467	50,213	7,375
1961-62	5,253	52,977	8,153
1962-63	5,845	55,450	8,248
1963-64	5,508	60,051	8,462
1964-65	5,549	64,338	10,633

(a) Excludes expenditure on reformatories which for the years 1960-61 to 1964-65 amounted to: 1960-61, \$1,989,826; 1961-62, \$2,207,744; 1962-63, \$2,415,112; 1963-64, \$2,944,662; 1964-65, \$1,970,083. Expenditure on reformatories in Victoria is not included in these amounts.

Commonwealth expenditure

Since the functions of the Commonwealth Government in the administration of law and order differ considerably from those of the States, precise comparison between Commonwealth and State expenditure in this field is not possible. The following table shows expenditure by the Commonwealth Government during the year 1964-65 on the services it performs in relation to law and order.

COMMONWEALTH EXPENDITURE ON LAW AND ORDER, 1964-65
(\$'000)

	Gross expenditure	Receipts	Net expenditure
Justice—			
Administration	994	231	763
Bankruptcy	618	480	138
Crown Solicitor's Office	1,217	..	1,217
High Court	248	..	248
Judges' salaries and pensions	206	..	206
Rent	210	..	210
Court reporting	466	256	209
Territory courts	461	269	193
Repairs and maintenance	78	..	78
Total, justice	4,498	1,236	3,262

COMMONWEALTH EXPENDITURE ON LAW AND ORDER, 1964-65—continued
(\$'000)

	Gross expenditure	Receipts	Net expenditure
Police—			
Commonwealth Police Force	1,062	..	1,062
Australian Police College	71	..	71
Australian Security and Intelligence Organization	1,920	..	1,920
Northern Territory Police	835	..	835
Australian Capital Territory Police	761	..	761
<i>Total, police</i>	<i>4,650</i>	<i>..</i>	<i>4,650</i>
Prisons—			
Northern Territory prisons	194	..	194
<i>Total, prisons</i>	<i>194</i>	<i>..</i>	<i>194</i>
Total, law and order	9,342	1,236	8,106

The preceding table replaces one included in previous issues showing expenditure by the Commonwealth Attorney-General's Department. This table deals more precisely with the function of law and order than did the previous table, and excludes some items of expenditure, previously included, such as conciliation and arbitration and matrimonial causes, which are considered to relate to functions other than law and order.

COMMONWEALTH EXPENDITURE ON LAW AND ORDER
1960-61 TO 1964-65
(\$'000)

Year	Gross expenditure	Receipts	Net expenditure
1960-61	6,024	752	5,271
1961-62	6,482	823	5,659
1962-63	7,150	946	6,203
1963-64	8,280	1,220	7,061
1964-65	9,342	1,236	8,106

CHAPTER 17

PUBLIC HEALTH

STATE GOVERNMENT ACTIVITIES

(Includes activities of the Commonwealth Government in the Northern Territory and the Australian Capital Territory)

Public health legislation and administration

New South Wales

The New South Wales Ministry of Health, which is under the control of the Minister for Health, embraces the Department of Public Health, the Hospitals Commission, and a number of boards, committees and other authorities concerned with health, hospitals and associated services. The *Department of Public Health* undertakes a variety of activities concerned with the prevention of disease and the promotion of the public health of the community. Many of its activities are administered by Medical Officers of Health in the eight health districts into which the State is divided. The principal activities of the Department are described below.

The Bureau of Maternal and Child Health has established pre-natal clinics (for expectant mothers living long distances from obstetric hospitals), baby health centres (where mothers are instructed in the care and management of babies), and paediatric clinics (for pre-school children). It controls the school medical and dental services (see page 555). Assistance with the control of staphylococcal infection and the care of premature babies is given to obstetric hospitals and medical practitioners. Mobile transfusion units for maternity cases have been organized, and a free consultant service is available to medical practitioners who want specialist advice in difficult obstetric cases. A special medical committee investigates every maternal death occurring in the State.

The Division of Occupational Health is concerned with all health problems associated with industry. Some of the more important aspects with which the Division is concerned are the effects of toxic substances in industry and pesticides in agriculture, the suitability of protective devices, ergonomics and radiation hazards. The Division is also concerned with the industrial and residential aspects of noise and air pollution.

Infectious diseases. Many diseases have been proclaimed as infectious diseases, and cases of these diseases must be notified by medical practitioners to the public health authorities. *The Division of Tuberculosis* co-ordinates measures for the prevention, detection and cure of tuberculosis, regulates the admission of patients to institutions, arranges for the treatment of patients not in institutions, and assesses the medical eligibility of applicants for Commonwealth tuberculosis allowance. The Department has directed the anti-poliomyelitis campaign in New South Wales and is responsible for the distribution of Salk poliomyelitis vaccine. It also administers the Venereal Diseases Act and conducts an examination and treatment clinic for men.

Psychiatric services. The Department supervises the care, treatment, and control of persons suffering from mental disorders, and conducts fourteen psychiatric hospitals for those with mental disorders, and a diagnostic centre for mentally retarded children.

Hospital services. The Health Department supervises the operation of private hospitals and rest homes, which must be licensed under the Private Hospitals Act and must comply with regulations as to structure, management and inspection of premises. The Department also maintains four State hospitals and homes, which provide care and treatment for the aged and those chronically ill.

Miscellaneous activities. The Department maintains laboratories which provide diagnostic and analytical services for governmental authorities and private bodies. It administers the pure Food Act (which prescribes standards of quality and purity for food products) and laws relating to sanitation. It also supervises the work of local government authorities relating to public health matters.

The Hospitals Commission supervises the public hospital services, which are organized in terms of the Public Hospitals Act.

The public hospitals and organizations which provide district and bush nursing services and aerial medical services are classified by the Public Hospitals Act into two main groups. One group, termed the *incorporated hospitals*, consists entirely of hospitals incorporated under the Act. The second group, known as *separate institutions*, includes hospitals incorporated under special Acts of Parliament, hospitals conducted under the aegis of religious organizations, and hospitals registered under the Companies Act as non-profit organizations. Most of the incorporated hospitals are managed by a board of directors appointed by the Governor, but the management of the hospital is subject to inspection by the Hospitals Commission. The Commission determines which hospitals are to be subsidized and the amount of subsidy to be paid to each institution.

Other State authorities concerned with health, hospital and associated services in New South Wales include the Master in the Protective Jurisdiction of the Supreme Court (who controls and administers the estates of patients in psychiatric hospitals), the Ambulance Transport Service Board (which supervises district ambulance services throughout the State), boards established for the registration of practitioners in certain professions (chiroprody, dental, medical, nursing, optometry, optical dispensing, pharmacy and physiotherapy), the State Cancer Council (for cancer education and research), and various boards and committees (e.g. the Board of Health, the Poisons Advisory Committee and the Air Pollution Advisory Committee).

Victoria

All health, hospital and associated services either administered directly or supported financially by the Government are under the control of the Minister of Health. The *Department of Health*, set up under the *Ministry of Health Act 1943*, assists the Minister in carrying out the various duties imposed upon him by a variety of Acts associated with health. The Department includes four main service branches—the General Health Branch, the Maternal and Child Welfare Branch, the Tuberculosis Branch, and the Mental Hygiene Branch.

The General Health Branch which, *inter alia*, is the administrative branch for the Commission of Public Health, protects or promotes the health of the community in the following ways. The Engineering Division scrutinizes from a public health point of view the plans of all public buildings and provincial sewerage installations and makes periodical inspections. Other activities include prevention of air pollution from industrial sources, prevention of stream pollution, and supervision of abattoirs and cattle sale yards. The Poliomyelitis Division provides a comprehensive orthopaedic, physiotherapy, and respirator service for all eligible patients and carries out rehabilitation in conjunction with the Commonwealth Government. Facilities developed for poliomyelitis are now being used for other neurological disorders. The Division is also concerned with the Salk immunization campaign being undertaken in Victoria. Through the municipalities, immunization against poliomyelitis, diphtheria, smallpox, whooping cough and tetanus is encouraged and supervised. Prevention and control of infectious diseases are functions of this Branch, which also sponsors original research into virus diseases and epidemiological investigations throughout Victoria. The Venereal Diseases Division provides a centrally situated headquarters where the use of modern remedies is effecting a general improvement in the standard of treatment. Standards of quality and purity of foods and drugs are fixed by the Food Standards Committee and are administered and enforced by both departmental and municipal health inspectors. Investigations into occupational hazards to the health of workers, the treatment and incidence of occupational diseases, and research into the effects of toxic substances used in industry are conducted by the Industrial Hygiene Division. The Poisons Control Division is responsible for administering the law relating to poisons and deleterious substances. Legislation provides for extensive control, particularly at the wholesale (manufacturing and import) level. Control is exercised by a system of licences and permits.

Subsidies are granted to municipalities to provide meals for pensioners, to clubs for elderly citizens, and to emergency housekeeper services. Other services operated by the Branch are: registering plumbers and gasfitters; providing free travel to hospital for people with limited incomes; analysing food, drink, water and sewerage effluents; registering cinematograph operators; administering the Cemeteries Acts; and advising industry on health hazards associated with handling radio-active substances.

The Maternal and Child Welfare Branch is concerned with pre-natal hygiene, infant welfare, the development of pre-school services, and the school medical and dental services.

The Tuberculosis Branch is concerned with the prevention of tuberculosis and the treatment and rehabilitation of tubercular patients. It controls the compulsory chest X-ray programme introduced in October 1963.

The Mental Hygiene Branch is controlled by the Mental Health Authority, appointed in 1951, and consists of institutions for in-patient care, out-patients' clinics and other services necessary for a comprehensive community mental health programme.

The *Victorian hospital system* comprises both public and private hospitals. Since their inception in 1846, Victorian public hospitals have maintained a distinctive pattern. Firstly, they are managed by autonomous committees elected by contributors—following closely the practice applying in the United Kingdom prior to the introduction of the National Health Service. Secondly, they have received financial assistance by way of Government subsidies. With rising costs, this has steadily increased in amount and proportion. At present, hospitals in Victoria derive some seventy per cent of their income from Government sources. Thirdly, medical staffing has followed the pattern of honorary service. In recent years this has been supplemented by salaried doctors employed in university teaching and hospital departments.

Patients are broadly separated into two groups according to an income test. Those earning below a determined level of income are eligible for public hospital care at a fee of approximately half the actual cost; medical care is free through the honorary system. Those patients whose incomes are above the level prescribed, are required to pay intermediate or private hospital accommodation charges at higher rates, but only rarely does the charge cover cost; they must, in addition, meet medical fees.

The *Hospitals and Charities Commission* was established by the 1948 Hospitals and Charities Act as the authority, under the Minister of Health, for the payment of State Government subsidies to public hospitals and other registered charitable organizations. It exercises a close scrutiny of all these organizations, particularly their financial activities. The Commission also has responsibility for co-ordinating hospital and institutional activities throughout the State. In country areas inter-hospital co-operation has led to the development of a regional organization to give specialized services at a reasonable cost. Pathology, radiology, blood banks and various types of therapy are provided from base hospitals to the smaller local hospitals with staff available on a visiting or consultant basis. Equipment is sent to small hospitals as they need it. This system has considerably improved the standard of medical services available in the country areas. The scheme also embraces central laundry and linen service, and engineering service to small hospitals.

The Commission co-operates with universities in developing teaching hospital programmes. Nine general and special teaching hospitals are established. These are affiliated with medical schools of the University of Melbourne and Monash University. Expansion of these teaching facilities is still progressing, with major work currently in progress at all hospitals. Discussions are advanced concerning the establishment of the tenth teaching hospital, which is to be erected on Monash University Campus.

Attention is given to the medical and social care of the aged. Emphasis has been placed upon the development of *geriatric units, rehabilitation services, hostels for the aged, day hospitals and supporting domiciliary services.*

There are more private than public hospitals in Victoria, but they are smaller in size. Their bed capacity is about thirty per cent of the total hospital accommodation available to the community. The Hospitals and Charities Commission registers these hospitals and ensures that adequate architectural, staffing and nursing standards are maintained. Medical, surgical, mid-wifery, convalescent and chronic patients are accommodated in various private hospitals.

The Commission's authority covers the ambulance services in Victoria. Here again emphasis has been placed upon the development of regional services in all areas of the State. This has resulted in a scheme developed along lines similar to that operating among hospitals; however, individual ambulance stations have been merged into one regional controlling organization, whereas within the public hospital regional scheme each hospital still maintains its own autonomy. This type of ambulance organization leads to low operating costs and high standards of staff and equipment. A recent development is an air ambulance service which provides an emergency service for all areas of the State, enabling seriously ill patients to be transported to major metropolitan hospitals with minimum delay and inconvenience.

Queensland

'*The Health Acts 1937 to 1964*' are administered by the Director-General of Health and Medical Services, subject to the Minister for Health. A central staff controls the following divisions.

The Division of Public Health Supervision is controlled by the Deputy Director-General of Health and Medical Services, and comprises separate sections for communicable disease control, environmental sanitation, food and drug control, enthetic (venereal) diseases, hookworm control and Hansen's disease (leprosy) control. Free treatment of venereal diseases is offered at the Department's clinics in Brisbane and at any public hospital. Free immunization against poliomyelitis, diphtheria, whooping cough, tetanus and smallpox is offered by most of the local authorities, and the majority of school children are immunized against diphtheria, whooping cough, tetanus and poliomyelitis.

The Division of Tuberculosis controls a central chest clinic in Brisbane which offers skin tests, X-ray examinations and B.C.G. vaccination of skin negative reactors free of charge. Similar clinics are situated at the Cairns, Rockhampton, Thursday Island, Toowoomba, and Townsville

district hospitals. Children in the eighth grade of school are skin tested and given B.C.G. vaccine. The compulsory X-ray examination of all persons over the age of fourteen years is proceeding. The survey of residents of the metropolitan area has been completed, and a second survey of country areas has covered the State north of Maryborough.

The services of the *Division of Industrial Medicine* are available both to industry and to the trade union movement for the prevention of industrial hazards. The Division is particularly interested in occupational diseases, such as silicosis and lead and other poisoning, and advises on industrial problems such as lighting, ventilation, fatigue, hearing loss and the use of radiation and radio-active isotopes.

The *Division of Maternal and Child Welfare* offers supervision and advice on the rearing and health of infants and pre-school children at 264 infant welfare centres throughout the State. Outlying centres are visited by air or by special rail car. Homes for in-patient treatment of infants with feeding problems have been established at Brisbane, Toowoomba, Ipswich and Rockhampton.

The *Division of School Health Services* comprises the Chief Medical Officer, School Health Services, and a staff of doctors, dentists and visiting school nurses. The dental officers inspect school children and carry out essential treatment at schools or in rail dental clinics. Medical examinations are made every one to two years.

In the *Division of Mental Health* the Director of Psychiatric Services is associated with the planned integration of services. Mentally ill persons requiring special care are admitted to the State's four special hospitals at Brisbane, Toowoomba, Ipswich and Charters Towers. In the metropolitan area of Brisbane out-patient, day hospital and in-patient care is provided by general hospitals and a community-based Psychiatric Clinic. The Brisbane General, Chermside, and Princess Alexandra Hospitals all provide psychiatric services. Regional development of services is based on general hospital services at Townsville, Rockhampton, Toowoomba and Ipswich. Special care for epileptics is provided at a home in Toowoomba.

The *Division of Welfare and Guidance* has clinics for the diagnosis and management of emotional and behaviour disorders in children in the Greater Brisbane Area. Further clinics are planned for Townsville and Toowoomba. A part-time clinic functions in Toowoomba at present. The Wilson Youth Hospital has been opened for the social and psychiatric rehabilitation of boys convicted in the Children's Court. About forty boys can be accommodated. There is an out-patient section which girls also can attend. A Child Guidance Unit for out-patients, day-hospital patients and thirty in-patients is being constructed in the grounds of the Brisbane Children's Hospital. A similar unit is at present being planned for Townsville.

It is the policy of the Department, through the *Division of Social Work*, to establish social work services, where possible, in all relevant aspects of the health, medical and hospital services. Through these services patients in hospitals and sick, elderly and disabled persons in the community may receive assistance with their personal and social problems. Social work departments have been established in the major hospitals in Brisbane and in four country hospitals, and social workers have been appointed to work in health, psychiatric and child welfare and guidance services. Development of this work is co-ordinated through the Division, and the Adviser in Social Welfare acts as official liaison with other State Government Departments as services relating to social work and family welfare are established.

The *Division of Geriatrics* controls a geriatric unit established at Princess Alexandra Hospital. The unit consists of two wards with accommodation for 128 in-patients, administration section, day hospital, and physio-therapy and occupational therapy departments.
