## **ABS Statistical Geography**

The Statistical Division structure of Victoria was formed in 1974 by combining Legal Local Government Areas (LGAs) into coherent socio-economic zones. Since January 1986, ABS statistical geography has been based on the Australian Standard Geographic Classification (ASGC). The ASGC is now regularly updated to reflect both changes in Local Government Areas boundaries and the changing needs of the users of ABS data.

The ASGC is a hierarchical structure designed to cover the whole of Australia. Statistical Local Areas (SLAs) are the building blocks of the ASGC and represent the smallest geographic area at which the ABS releases statistics (with the exception of the Population Census which is discussed below). In the past SLAs have generally represented LGAs in Victoria. Following the 1994 local government amalgamations this one to one link has been severed, due to the new LGAs being too large to meet the statistical needs of ABS users. However, the link between SLAs and LGAs has been maintained by ensuring that each LGA is made up of one or more SLAs.

In the ASGC whole SLAs are combined to form the next level of the classification; Statistical Subdivisions, which in turn combine to form Statistical Divisions. Statistical Divisions in their turn combine to cover the whole State.

Other geographic areas are also incorporated into the ASGC. Statistical Districts, which represent major urban areas, are made up of one or more Statistical Subdivisions, while Labour Force Regions are combinations of whole SLAs.

Population Census data is available at the Collectors District (CD), a much finer geographic level than the SLA. For each Census, the Collectors Districts are designed so that each SLA is made up of one or more CDs. The CD boundaries for the 1996 Census will be finalised in early 1996. However, between Censuses CD boundaries remain fixed and are not changed to reflect changes in either SLA or LGA boundaries that may occur in the interim.

The current version of the ASGC - version 2.5 - (ABS Catalogue number 1216.0) came into force on 1 July 1995. Consultation with state and local government and other users has been completed in preparation for the Census version of the ASGC, which will come into force on 1 July 1996.

The ABS is currently conducting a major review of the ASGC, which will be completed in late 1996. A number of options will be discussed with major users, but the outcome will not impact on Victoria's Statistical Geography for some time.

**Victorian LGA changes**

The following table summarises the changes to the ASGC made as a result of the recent amalgamations of Local Government Areas.

**NUMBERS OF SPATIAL UNITS AS AT 1 JULY, VICTORIA**

|                          | 1991 | 1992 | 1993 |
|--------------------------|------|------|------|
| Local Government Areas   | 210  | 194  | 78   |
| Statistical Local Areas  | 238  | 231  | 187  |
| Statistical Divisions    | 12   | 12   | 12   |
| Statistical Subdivisions | 50   | 50   | 45   |
| Statistical Regions      | 14   | 14   | 14   |
| Statistical Districts    | 7    | 7    | 7    |

The following table reflects the concordance between the old and the new LGAs.
