1996 CENSUS ESTIMATES

This publication contains final estimates of resident populations of States, Territories and Australia based on results of the 1996 Census of Population and Housing. Previously published estimates and their components dating back to 30 September 1991 have been revised to take account of this new information.

The estimated resident population at the Census date is derived by adjusting the Census count of Australian usual residents for undercount, as determined by the Post Enumeration Survey (PES) and demographic methods, and adding the number of Australian residents estimated to have been temporarily overseas at the time of the Census. Further adjustments are made for births, deaths and net migration in the period 1 July to 6 August 1996 (see Appendix) to bring the estimates to 30 June 1996. Further information is contained in the Explanatory Notes.

INQUIRIES

For further information about statistics in this publication and the availability of related unpublished statistics, contact Peter Routh by phone, (02) 6252 6027, fax (02) 6252 7494, internet e-mail peter.routh@abs.gov.au or any ABS State office.

For information about other ABS statistics and services, please refer to the back of this publication.

W. McLennan Australian Statistician

MAIN FEATURES

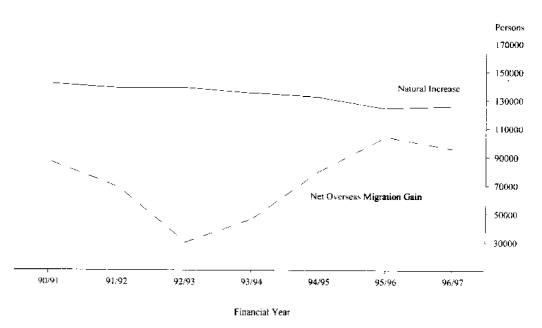

The estimated resident population of Australia at 30 June 1997 was 18,532,200 an increase of 44,500 in the quarter and 221,500 since 30 June 1996. The national growth rate during 1996-97 was 1.2% compared to a growth rate of 1.3% for 1995-96. This growth rate was similar to the growth rates of countries such as New Zealand (1.1%), Thailand (1.0%), the United States of America (0.9%), China (0.9%) and Indonesia (1.5%). The growth rates of Germany (0.1%), Japan (0.2%) and the United Kingdom (0.2%) were well below that of Australia, while Hong Kong (2.7%), Papua New Guinea (2.3%), Malaysia (2.2%), Singapaore(1.8%) and India (1.8%) all experienced growth rates above that of Australia.

POPULATION AND RATE OF GROWTH OF SELECTED COUNTRIES (MID YEAR)

	Population 1996	Population 1997	Rate of growth
	million	million	%
Australia	18.31	18.53	1.2
China	1 214.99	1 226.28	0.9
Germany	82.02	82.07	0.1
Hong Kong S.A.R.	6.38	6.55	2.7
India	950.07	966.78	1.8
Indonesia	206.61	209.78	1.5
Japan	125.46	125.69	0.2
Malaysia	20.05	20.49	2.2
New Zealand	3.55	3.59	1.1
Papua New Guinea	4.40	4.50	2.3
Singapore	3.38	3.44	1.8
Thailand	58.85	59.45	1.0
United Kingdom	57.45	57.59	0.2
United States of America	265.56	267.96	0.9
World	5 766.00	5 847.00	1.4

The slightly lower growth rate for Australia in 1996-97 was mainly due to a decrease in net overseas migration, the first decrease since 1992-93. In 1996-97 the net gain from overseas migration was 95,800, 8% fewer than the previous year (104,100). The decline was more a result of an increase in permanent and long term departures (from 153,100 in 1995-96 to 166,600 in 1996-97) than from the decrease in permanent and long term arrivals (from 262,700 in 1995-96 to 261,000 in 1996-97).

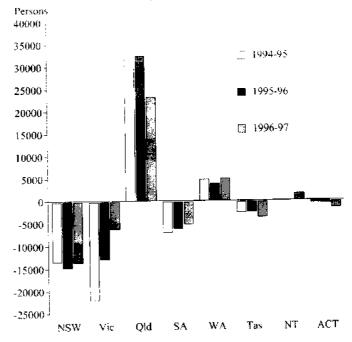

The natural increase for 1996-97 was 125,800, a slight increase from 124,000 for 1995-96, the first increase since 1992-93. This was mainly due to an increase in the number of births to 253,400 in 1996-97 from 250,400 in 1995-96, with a slight increase in the number of deaths from 126,400 to 127,600 in the same period.

In the twelve months to 30 June 1997 the population of the Northern Territory grew by 2.9%, the highest growth rate of any State or Territory, followed by Queensland and Western Australia (both 1.9%), New South Wales (1.1%), Victoria (1.0%), the Australian Capital Territory (0.5%) and South Australia (0.4%). The population of Tasmania declined slightly from 474,400 to 473,500 in 1996–97.

The decline in Tasmania's population was mainly as a result of net losses in interstate migration. Tasmania had a net loss of 3,700 persons to other States and Territories in 1996–97. During the same period Queensland gained 23,400 from interstate migration, 28% fewer than in 1995–96. Western Australia (5,300) and the Northern Territory (1,800) were the only other State or Territory to record net interstate migration gains. New South Wales had a net loss of 13,600 persons, Victoria lost 6,300 persons (51% fewer than in 1995–96), South Australia lost 5,200 and the Australian Capital Territory lost 1,700.

The overall decline in the population of Tasmania is due to the significant decrease in the number of those less than 35 years of age. The population of Tasmania aged 34 years or less decreased by 4,500 in 1996-97, the majority of whom are young adults aged between 15 and 34 years of age. The population of Tasmania aged 35 years and older increased by 3,600 in 1996-97.

All States and Territories showed an increase in the percentage of population aged 65 or more and a decrease in the percentage aged 0 to 14. South Australia remained the State or Territory with the largest percentage of its population aged 65 or more (14.1%) followed by Tasmania (12.9%), New South Wales (12.7%), Victoria (12.6%), Queensland (11.2%), Western Australia (10.5%), the Australian Capital Territory (7.4%) and the Northern Territory (3.3%).

In the 0 to 14 years of age group the Northern Territory remained the State or Territory with the largest percentage (26.7%), followed by Tasmania (22.1%), Western Australia (22.0%), Queensland (21.8%), the Australian Capital Territory (21.6%), New South Wales (21.0%), Victoria (20.6%) and South Australia (20.1%).

Includes 'Other Territories' from September quarter 1993 — see paragraphs 1 and 2 of the Explanatory Notes. (a)

1

⁽b) For dates prior to June 1996, differences between the total increase shown and the sum of the natural increase and net overseas migration arise from retrospective adjustments to population estimates (which are made after each Census) to compensate for any intercensal discrepancy. A description of the intercensal discrepancy is contained in the ABS information paper Population Estimates: Concepts, Sources and Methods (3228.0).

Final figures for births and deaths are on a year of occurrence rather than year of registration basis, and will therefore differ from Part B of this (c) publication.

An adjustment for the effect of persons whose duration of stay (category) differs from their stated intentions, entailing a re-classification from short-term to permanent/long-term or vice versa. See paragraph 6 of the Explanatory Notes at the back of this publication.

Sum of the net permanent and long-term movement plus category jumping. (d)

⁽e)

Increase for the 12 months period up to the end of the quarter. (f)

(a) Divorce figures shown refer to dissolution of marriage only.

(b) Many divorces registered in the Australian Capital Territory involve applicants normally resident in areas surrounding the Australian Capital Territory.

The Australian Capital Territory rate is therefore not a statistically accurate reflection of the extent of divorce among Australian Capital Territory residents. In 1994, only 39% of Australian Capital Territory divorces granted were to applicants normally resident in the Australian Capital Territory. The corresponding figures for 1989, 1990, 1991, 1992 and 1993 were 39, 35, 37, 38 and 37, respectively.

22 SELECTED SUMMARY MEASURES OF FERTILITY AND MORTALITY(a)

(a) For crude rates, see Tables 16 and 17.

(b) For Census years 1947 to 1986 figures are based on Official Life Tables calculated by the Australian Government Actuary. For years from 1986 to 1994 figures are based on life tables calculated by the ABS. These ABS life tables summarise mortality conditions prevaring for that year, the Actuary's life tables take into account mortality and related conditions for a three-year period (the Census year and the year before and after the census) limiting the effects of short-term fluctuations.

(c) Proportion of total live births.

(d) The life expectancy at birth values refer to the period 1993–95. The life tables were constructed jointly by the Australian Government Actuary and the ABS.

(e) The life expectancy at birth values refer to the period 1994–96. The life tables were constructed jointly by the Australian Government Actuary and the ABS.

Final estimates. See paragraph 1 of the Explanatory Notes. On a usual residence basis. Includes 'Other Territories'. See paragraphs 1 and 2 of the Explanatory Notes. (a) (b) (c)

EXPLANATORY NOTES

INTRODUCTION

- This quarterly publication contains final estimates of the resident population of Australia and the States and Territories based on results of the Census of Population and Housing held on 6 August 1996. Resident population estimates for the period 1991-1996 have been revised using results of the 1996 Census.
- Following the 1992 amendment to the Acts Interpretation Act to include the Indian Ocean Territories of Christmas Island and the Cocos (Keeling) Islands as part of geographic Australia, population estimates commencing with the September quarter 1993 include estimates for these two territories. To reflect this change, another category of the State/Territory level has been created, known as Other Territories. Other Territories include Jervis Bay Territory as well as Christmas Island and the Cocos (Keeling) Islands. Data for Other Territories are included in tables where specifically noted. Prior to the September quarter 1993, Jervis Bay Territory is included in estimates for the Australian Capital Territory.

POPULATION AND COMPONENTS OF POPULATION CHANGE

Australia's population estimates for the period since 1971 are compiled according to the place of usual residence of the population. An explanation of the place of usual residence conceptual basis for population estimates is given in Population Estimates: Concepts, Sources and Methods (3228.0) issued on 23 June 1995.

Method of estimation

- The estimates of the population of Australia and the States and Territories at the date of the Census of Population and Housing are Census place of usual residence counts adjusted for under-enumeration, as determined by the Post Enumeration Survey (PES) and demographic methods, and the number of Australian residents estimated to have been temporarily overseas at the time of the Census. Estimates at the 30 June are then determined by adjusting for births, deaths and net migration in the period from 1 July to the Census date.
- Quarterly estimates of the Australian population are obtained by adding to the population at the beginning of each period components of natural increase (on a usual residence basis) and net overseas migration gain. For the States and Territories, account is also taken of estimated interstate movements involving a change of usual residence. After each census, estimates for the preceding intercensal period are provided by incorporating an additional quarterly adjustment (intercensal discrepancy) to ensure that the total intercensal increase agrees with the difference between the estimated resident populations at the two respective census dates.

Net estimated overseas migration

Figures are based on net permanent and long-term overseas movements (see Overseas Arrivals and Departures section below) with State or Territory not stated allocated pro rata. Short-term movements are excluded. The estimates from July 1976 onwards include an adjustment for the net effect of category jumping. This adjustment is necessary because net permanent and long-term migration figures can be affected by changes in travel intentions from short-term to permanent/long-term or vice versa. For example, an Australian resident departing for a short-term visit overseas (stating that he/she intends to stay abroad for less than 12 months) in fact stays more than 12 months, thereby changing his/her travel category from short-term to long-term. Prior to the December quarter 1989, adjustments for category jumping were only made to final population estimates. These adjustments are now also included in preliminary estimates. For further details see the ABS technical paper, Estimates of Residents Temporarily Overseas, Visitors in Australia and Category Jumping (3104.0), published on 10 March 1983.

Net estimated interstate migration

- Information about internal migration is available from population censuses. This source, however, does not provide the up-to-date quarterly estimates of interstate migration required for regular population estimates. The only suitable sources for this purpose are administrative records.
- Prior to June 1986, quarterly estimates were derived from records of interstate changes of addresses advised to the Department of Social Security in connection with family allowance payments. Family allowance transfer data related to children only, and interstate migration for all ages was based on the expansion of these family allowance data using ratios of adult to child populations. These ratios, calculated for each interstate flow, were based on results from the latest available census. Data from the Internal Migration Survey were used to constrain the total interstate moves to those revealed by the survey. Data derived from the ratio expansion method were subject to revision in the light of the more accurate census data. For more information on estimates of interstate migration prior to June 1986 see the ABS occasional paper, Postcensal Interstate Migration Estimates, 1966-1981 which was published in April 1984.
- Because of difficulties in obtaining adequate coverage of all movements from family allowance transfers, estimates of interstate migration since June 1986 have been derived from unidentified information on interstate changes of address advised to the Health Insurance Commission in the process of administering Medicare. Only Medicare transfers aged 1-14 are used, as most other ages suffer from underregistration of transfers of varying amounts. The method used to expand the 1-14 movers is similar to the previous method, with adult to child expansion ratios based on information from the latest available census being applied to the Medicare movers data for ages 1-14 for each interstate flow. However, an allowance was introduced for under-enumeration of interstate movers in the Census, and

for the ageing of the population (which has resulted in increasing adult to child ratios for interstate movers between recent censuses).

Rates of population growth

10 These express population change over a period as a proportion (per cent) of the population at the beginning of the period. These rates should be distinguished from crude rates (of births, deaths, marriages and divorces) which, for calendar years, are expressed per 1,000 of estimated resident population at 30 June.

Mean populations

11 These are calculated for financial and calendar years to the formula:

mean population =
$$\frac{a+4b+2c+4d+e}{12}$$

where a is the population at the end of the quarter immediately preceding the 12 month period, and b, c, d and e are the populations at the end of each of the four succeeding quarters. The weights used in the formulation of the mean annual populations have been derived using a mathematical technique which involves the fitting of two quadratic polynomial functions to a series of points. Further explanation of this procedure is available on request to the ABS.

Household estimates

12 Estimates of households are based on the estimated resident population (ERP) series, to which propensities to form households are applied. These propensities were estimated from the Census of Population and Housing, and updated using the monthly Labour Force Survey. A detailed description of the method used to produce household estimates is contained in *Household Estimates 1986*, 1991–94 (3229.0).

Births, deaths, marriages and divorces

13 For the compilation of population estimates in Part A, births and deaths by State/Territory of usual residence are used. For preliminary population estimates, births and deaths by quarter of registration are used, but for final estimates year and quarter of occurrence data are used to ensure the accuracy of the single year of age population estimates at ages zero to four. In Part B, the births and deaths data are shown by State/Territory of registration and year/quarter of registration.

Late registrations

14 In 1984 there were abnormal delays in the registration process in the New South Wales Registry of Births, Deaths and Marriages. The estimated number of registrations of births which normally would have been expected in New South Wales in 1984 was 82,392, some 4,000 more than the actual

registration of 77,994. This backlog of registrations was made up during 1985, resulting in 87,786 registrations of births, some 4,000 more than would have been expected for the year. Similarly, the estimated number of registrations of deaths which normally would have been expected in New South Wales in 1984 was 41,089, some 2,000 more than the actual registrations of 39,114. This backlog of registrations was also made up during 1985, resulting in 44,044 registrations of deaths, some 2,000 more than would have been expected for the year. Late registrations in New South Wales marriages affected 1984, 1985 and 1986. For further information, see ABS publications Births, Australia (3301.0); Deaths, Australia (3302.0); and Marriages and Divorces, Australia (3310.0).

Estimation method

- 15 Overseas arrival and departure statistics are derived from a combination of full enumeration and sampling. All permanent movements and all movements with a duration of stay of one year or more are fully enumerated and processed. Characteristics for movements with a duration of stay of less than one year are sampled. Statistics relating to these movements are therefore estimates which may differ from statistics which would have been obtained if all characteristics of these movements had been processed.
- 16 The statistics in this publication have been rounded, to the nearest 100 for short-term movements and to the nearest 10 for permanent and long-term movements. In tables showing both short-term and permanent and long-term movements the total movements have been rounded to the nearest 100. The sums of the components may, due to rounding, not add exactly to totals.

Country of birth

- 17 The classification of countries in this publication is based on the Australian Standard Classification of Countries for Social Statistics (ASCCSS). For more detailed information refer to the ABS publication Australian Standard Classification of Countries for Social Statistics (1269.0). Political developments in Europe, the Former USSR and Africa have resulted in a number of changes to the ASCCSS, which are detailed in Revisions 1.01, 1.02 and 1.03 of the ASCCSS.
- 18 Overseas arrivals and departures statistics by country of birth have certain limitations. For instance, it is not possible to separately identify England, Scotland and Wales (United Kingdom).

Related publications

19 Detailed annual demographic statistics appeared for many years in the annual publication Demography which ceased after the issue for 1971. Since then, annual statistics have been contained in the publications listed below:

Births, Australia (3301.0)

Deaths, Australia (3302.0)

Marriages and Divorces, Australia (3310.0)

Migration, Australia (3412.0)

Population by Age and Sex, Australian States and Territories (3201.0)

20 Other publications of interest include:

Overseas Arrivals and Departures, Australia (3401.0). A short release of the latest monthly statistics.

Projections of the Populations of Australia, States and Territories 1995 to 2051 (3222.0). Based on preliminary estimated resident population at 30 June 1995, this publication was released in July 1996.

Household Estimates, Australia: 1986, 1991-94 (3229.0)

Australian Life Tables, 1990–92, prepared by the Australian Government Actuary and available from the Australian Government Publishing Service bookshops or Mail Order Sales Services.

- **21** A compendium of all demographic data for each State is released annually in a State-specific publication, *Demography*. The first release contained 1990 data.
- **22** Current publications produced by the ABS are listed in the *Catalogue* of *Publications and Products (1101.0)*. The ABS also issues, on Tuesdays and Fridays, a *Release Advice* (1105.0) which lists publications to be released in the next few days. The Catalogue and Release Advice are available from any ABS office.
- **23** Statistics of overseas arrivals and departures and related data are also published regularly by the Department of Immigration and Ethnic Affairs (see that Department's *Australian Immigration, Consolidated Statistics*) and by the Australian Tourist Commission (on international travel and tourism).

ROUNDING

- **24** In this publication population estimates have generally been rounded to the nearest hundred. Neither rounded figures nor unrounded figures should be assumed to be accurate to the last digit shown.
- 25 Where figures have been rounded, discrepancies may occur between sums of component items and totals.

	break in continuity of series (where drawn
	across a column between consecutive figures)

GLOSSARY

Category of movement Passengers are classified according to their length of stay (in Australia or overseas) or 'category'. This is primarily determined by the passenger's selection of his or her own category on the passenger card, which is accepted provided it is consistent with other information on the card. There are three main categories — permanent, long-term and short-term.

Census count — place of usual residence

This is a count of all people within the scope of the Census on the basis of where they usually live, rather than where they were on census night. Census counts compiled on this basis exclude overseas visitors and Australian residents overseas.

Crude birth and death rates

The number of live births or deaths per 1,000 estimated resident population at 30 June. For years prior to 1994, the rates were based on the mean estimated resident population for the calendar year.

Crude marriage and divorce rates

This is the number of marriages or divorces per 1,000 estimated resident population at 30 June. For years prior to 1994, the rates were based on the mean estimated resident population for the calendar year. (The usefulness of these rates is limited because, in the case of marriages, a large and varying proportion of the population used in the denominator is below the minimum age of marriage or is already married, and, in the case of divorces, a large and varying proportion of the population used in the denominator is unmarried. More refined marriage and divorce rates can be found in the marriage and divorce publications listed under Related publications in the Explanatory Notes.)

Divorces

The term divorce, as used in this publication, refers to decrees of dissolution of marriage.

Female gross reproduction rate

The sum of female age-specific fertility rates. It represents the number of daughters a woman would bear during her lifetime (assuming she survives to the end of the reproductive period) if she experienced the current female age-specific fertility rates at each age of her reproductive life.

Female net reproduction rate

This allows for mortality during the child-bearing period. It represents the number of daughters a woman would bear if she was subject to current female age-specific fertility rates and to predetermined mortality rates of women aged 15 to 49.

Infant death rate

The number of deaths under the age of 12 months per 1,000 live births registered in the same year.

Life expectancy

This refers to the average number of additional years a person of a given age and sex might expect to live if the age-specific death rates of the given period continued throughout his/her lifetime.

Live births A live birth is defined as the delivery of a child, irrespective of the duration of pregnancy, who, after being born, breathes or shows any other evidence of life such as heartbeat.

Long-term movement

Long-term movement is defined as the arrivals of visitors (except those who hold migrant visas — see Permanent movement below) and the temporary departures by Australian residents with the intention to stay, in Australia or abroad, respectively, for 12 months or more, together with the departure of visitors and the return of Australian residents who had stayed, in Australia or abroad, for 12 months or more (see also Short-term movement below),

Marriages

Under the Australian Marriage Act 1961 (Cwlth), marriages may be celebrated by a minister of religion registered as an authorised celebrant, by a district registrar or by other persons authorised by the Attorney-General, Notice of the intended marriage must be given to the celebrant at least one calendar month but within three calendar months before the marriage. A celebrant must transmit an official certificate of the marriage for registration to a district registrar in the State in which the marriage took place.

marriage

Median duration of The median duration of marriage at divorce is the duration (in years) which divides the number of marriages dissolved into two halves, one half of these marriages having shorter duration, the other half longer than the duration shown.

Overseas arrivals and departures

Persons arriving in or departing from Australia are required to complete prescribed questionnaires in the form of Incoming and Outgoing Passenger cards. These cards provide information to the Department of Immigration and Ethnic Affairs for administrative purposes and serve as the source of statistics of overseas arrivals and departures. In accordance with the Census and Statistics Act 1905 (Cwlth), information relating to individuals, individual flights or ships and individual carriers which is contained in these cards or other documents is treated as confidential by the ABS.

The statistics in this publication relate to the number of movements of travellers rather than the number of travellers (i.e. the multiple movements of individual persons during a given reference period are each counted separately). However, the statistics exclude the movements of operational air crew and ships' crew, transit passengers who pass through Australia but are not cleared for entry, and passengers on pleasure cruises commencing and finishing in Australia aboard ships not then engaged on regular voyages.

Permanent movement

Permanent movement comprises arrivals of settlers (i.e. persons who hold migrant visas, regardless of stated intended period of stay and New Zealand citizens who indicate an intention to settle) and those who are otherwise eligible to settle (e.g. overseas-born children of Australian citizens) and permanent departures of Australian residents (including former settlers) i.e. those who on departure state they do not intend to return to Australia.

Short-term movement

Movements of travellers whose intended or actual period of stay is less than 12 months are classified as short-term except those who on arrival hold migrant visas.

A significant number of travellers (i.e. visitors to Australia on arrival and Australian residents going abroad) state exactly 12 months or one year as their intended period of stay. Many of them stay for less than that period and on their departure from, or return to Australia are therefore classified as short-term. Accordingly, in an attempt to maintain the integrity of arrivals and departures statistics, movements of travellers who report their actual or intended period of stay as being one year exactly are randomly allocated to long-term or short-term, in proportion to the number of movements of travellers who report their actual length of stay as up to one month more, or one month less, than one year.

State of residence

State of residence refers to the State regarded by the traveller as the one in which he/she lives or last lived. State of intended residence is derived from the intended address given by settlers, and by Australian residents returning after a journey abroad. Particularly in the case of the former, this information does not necessarily relate to the State in which a traveller will eventually establish a permanent residence.

Total fertility rate

The sum of age-specific fertility rates (live births at each age of mother per female population of that age). It represents the number of children a woman would bear during her lifetime if she experienced current age-specific fertility rates at each age of her reproductive life.
