

CATALOGUE NO. 3101.0

EMBARGOED UNTIL 11:30 A.M. 27 NOVEMBER 1991

AUSTRALIAN DEMOGRAPHIC STATISTICS JUNE QUARTER 1991

MAIN FEATURES

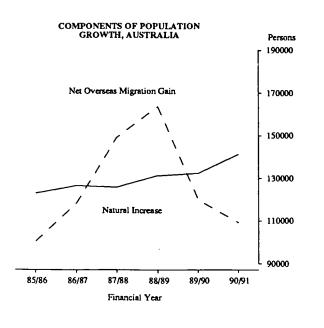

The estimated resident population of Australia at 30 June 1991 is 17,335,900, an increase of 54,800 in the June quarter and 250,600 since June 1990. The national growth rate for the 1990/91 financial year was 1.47%, a small decrease from the 1.50% growth rate for 1989/90. The lower growth rate was due to a 10,700 decline in the level of net overseas migration outweighing a 8,900 rise in natural increase. The rise in natural increase was due to the combination of a 3,100 increase in births and a 5,800 decrease in the number of deaths registered in 1990/91. In the June quarter 1991, 67% of the population growth was natural increase and 33% net overseas migration.

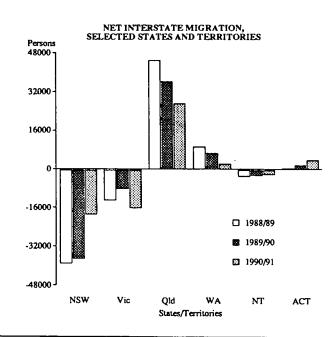

The net gain from overseas migration for the year ended 30 June 1991 was 109,200, 9% less than the previous year (119,800) and the lowest level for five years. An 11% increase in permanent and long-term departures from 128,100 to 141,600 was partially offset by a 2% increase in permanent and long-term arrivals from 231,900 to 236,400.

The Australian Capital Territory had the highest population growth rate during the 1990/91 financial year (3.0%), followed by Queensland (2.2%) and Western Australia (2.0%). Growth rates below the national average occurred in New South Wales (1.3%), South Australia (1.2%), Victoria (1.1%), the Northern Territory (1.0%) and Tasmania (0.8%).

In the June quarter 1990 Victoria continued to experience a high net interstate migration loss (4,300) and Western Australia also recorded a historically low net gain (600). The net interstate migration loss in New South Wales (2,700) was the lowest quarterly figure for that State since 1987 while the Australian Capital Territory experienced its highest net gain since 1985 (1,400).

For the year ended 30 June 1991 most States and Territories experienced significant changes in their net interstate migration trends. The net loss from New South Wales in 1990/91 was half the level of 1989/90 (18,800 compared with 37,000) while Victoria suffered the opposite effect with its net loss in 1990/91 virtually doubling compared with the previous year (16,200 compared with 8,200). The 1990/91 net loss for Victoria was the highest for more than twenty years. The net gain to the Australian Capital Territory also doubled (4,200 in 1990/91 compared with 2,100 in 1989/90) and was the highest figure since 1974/75. Western Australia suffered a substantial fall in its net gain (2,500 in 1990/91 compared with 7,100 in 1989/90) with the 1990/91 figure being the lowest since 1984/85. The net gain to South Australia increased sharply (3,100 in 1990/91 compared with 700 in 1989/90) and was the highest gain since 1974/75. Queensland continued to experience a significant net gain although the level in 1990/91 dropped 25% compared with the previous year (27,400 compared with 36,600).

INQUIRIES

- for further information about statistics in this publication and the availability of related unpublished statistics, contact Paul Nelson on Canberra (06) 252 6021 or any ABS State office.
- for information about other ABS statistics and services please refer to the back page of this publication.

⁽a) For dates prior to June 1986, differences between the total increase shown and the sum of the natural increase and net overseas migration arise from retrospective adjustments to population estimates (which are made after each Census) to eliminate any intercensal discrepancy. A description of the intercensal discrepancy is contained in the ABS technical paper (Catalogue no. 3103.0) on the methods and procedures of compilation of population estimates. (b) Final figures for births and deaths may vary from those shown in Part B of this publication because it is necessary to use preliminary births and deaths when finalising population estimates. (c) An adjustment for the effect of persons whose travel intentions changed from short-term to permanent/long-term or vice versa. See paragraph 6 of the Explanatory Notes at the back of this publication.

(d) Sum of the net permanent and long-term movement plus category jumping. (e) Increase for the twelve month period up to the end of the quarter.

⁽a) Divorce figures shown refer to dissolutions of marriage only. (b) Many divorces registered in the ACT involve applicants normally resident in areas surrounding the ACT. In 1990, only 35 per cent of ACT divorces granted were to applicants normally resident in the ACT. The corresponding figures for 1985, 1986, 1987, 1988 and 1989 were 44, 44, 45, 40 and 39 respectively. The ACT rate is therefore not a statistically accurate reflection of the extent of divorce among ACT residents.

TABLE 19. SELECTED SUMMARY MEASURES OF FERTILITY AND MORTALITY(a)

		Fer	tility		Mortality		
Year ended	Total fertility	Female gross reproduction	Female net reproduction	Proportion ex-nuptial	Life expecte	ancy at birth(b)

1989	1.85	0.90	0.88	20.0	73.30	79.55	
1990	1.91	0.93	0.91	22.0	73.86	80.01	

(a) For crude rates, see Tables 14 and 15. (b) For Census years 1947 to 1981 figures are based on Official Life Tables calculated by the Australian Government Actuary. For years after 1981 figures are based on life tables calculated by the Australian Statistician. Whereas the annual ABS life tables summarise mortality conditions prevailing for that year, the Actuary's life tables take into account mortality and related conditions for a three-year period (the Census year and the year before and after the Census) limiting the effects of short-term fluctuations. (c) Proportion of total live births. (d) The figures for Australia have been adjusted for late registrations in 1984 in NSW. See paragraph 12 of the Explanatory Notes.

EXPLANATORY NOTES

Introduction

This quarterly publication contains estimated resident populations for Australia and the States and Territories. It also provides the latest available statistics of births, deaths (including infant deaths), marriages, divorces and overseas as well as interstate migration. In addition, the publication includes age estimates of the resident population for 1988, 1989, 1990 and 1991. It should be noted that in State and Territory tables, Jervis Bay Territory is included in estimates for the Australian Capital Territory.

NOTES AND DEFINITIONS

Population and Components of Population Change

- 2. Australia's population estimates for the period since 1971 are compiled according to the place of usual residence of the population. An explanation of the 'place of usual residence' conceptual basis for population estimates is given in the ABS technical paper, Methods and Procedures in the Compilation of Estimated Resident Population 1981 and in the Construction of the 1971-81 Time Series (3103.0) issued on 11 March 1983.
- 3. Method of estimation. The estimates of the population of Australia and the States and Territories at the date of the Census are the adjusted (for under-enumeration) Census Counts, Place of Usual Residence, to which are added the number of Australian residents estimated to have been temporarily overseas at the time of the Census.
- 4. Quarterly estimates of the Australian population are obtained by adding to the population at the beginning of each period components of natural increase (on a usual residence basis) and net overseas migration gain. For the States and Territories, account is also taken of estimated interstate movements involving a change of usual residence. After each Census, final estimates for the preceding intercensal period are provided by incorporating an additional quarterly adjustment (intercensal discrepancy) to ensure that the total intercensal increase agrees with the difference between the estimated resident populations at the two respective census dates.
- 5. Natural increase. Excess of births over deaths by State of Usual Residence.
- Net estimated overseas migration. Figures are based on net permanent and long-term overseas movements (see notes and definitions, Overseas Migration section) with State or Territory 'not stated' allocated pro rata. Shortterm movements are excluded. The estimates from July 1976 onwards include an adjustment for the net effect of 'category jumping'. This adjustment is necessary because net permanent and long-term migration figures can be affected by changes in travel intentions from short-term to permanent/long-term or vice versa. For example an Australian resident departing for a short-term visit overseas (stating that he/she intends to stay abroad for less than 12 months) in fact stays more than 12 months, thereby changing his/her travel category from short-term to long-term. Prior to the December quarter 1989, adjustments for category jumping were only made to final population estimates. These adjustments are now also included in preliminary estimates. For further details see the

ABS technical paper, Estimates of Residents Temporarily Overseas, Visitors in Australia and Category Jumping (3104.0), published on 10 March 1983.

- 7. Net estimated interstate migration. Information about internal migration is available from population censuses and from a sample survey of internal movements (conducted at more or less annual intervals to 1987 and resumed in 1991). These sources, however, do not provide the up-to-date quarterly estimates of interstate migration required for regular population estimates. The only suitable sources for this purpose are administrative records:
 - (i) Prior to June 1986, quarterly estimates were derived from records of interstate changes of addresses advised to the Department of Social Security in connection with family allowance payments. Family allowance transfer data related to children only, and interstate migration for all ages was based on the expansion of these family allowance data using ratios of adult to child populations. These ratios, calculated for each interstate flow, were based on results from the latest available Census. Data from the Internal Migration Survey were used to constrain the total interstate moves to those revealed by the Survey. Data derived from the ratio expansion method were subject to revision in the light of the more accurate census data. For more information on estimates of interstate migration prior to June 1986 see the ABS occasional paper, Postcensal Interstate Migration Estimates, 1966-1981 which was published in April 1984.
 - (ii) Because of difficulties in obtaining adequate coverage of all movements from family allowance transfers, estimates of interstate migration after June 1986 are being derived from unidentified information on interstate changes of addresses advised to the Health Insurance Commission in the process of administering Medicare. Only Medicare transfers aged 0-14 are used, as most other ages suffer from under-registration of transfers of varying amounts. The method used to expand the 0-14 movers is similar to the previous method, with adult to child expansion ratios based on the latest available Census being applied to the Medicare movers data for ages 0-14 for each interstate flow. However, an allowance has been introduced for underenumeration of interstate movers in the Census, and for the ageing of the population (which has resulted in increasing adult to child ratios for interstate movers between recent censuses).
- 8. Rates of population growth. These express population change over a period as a proportion (per cent) of the population at the beginning of the period. These rates should be distinguished from crude rates (of births, deaths,

marriages and divorces) which are expressed per 1,000 of mean population.

9. Mean populations. These are calculated for financial and calendar years to the formula:

mean population =
$$\frac{a+4b+2c+4d+e}{12}$$

where 'a' is the population at the end of the quarter immediately preceding the twelve month period, and 'b', 'c', 'd' and 'e' are the populations at the end of each of the four succeeding quarters. Mean populations are used in the calculation of crude rates. The weights used in the formulation of the mean annual populations have been derived using a mathematical technique which involves the fitting of two quadratic polynomial functions to a series of points. Further explanation of this procedure is available on request to the ABS.

10. Population by age/sex. The estimated age/sex distribution of the resident population at 30 June 1986 was derived from the 1986 Census Counts, Place of Usual Residence by adjusting for underenumeration and adding estimated numbers of Australian residents temporarily overseas on census night. Post censal age distributions were obtained by advancing the estimates to the next age, subtracting deaths and adding births and net estimated interstate and overseas migration.

Births, Deaths, Marriages and Divorces

- 11. Occurrence and registration. Births and deaths are registered in the State or Territory of occurrence which is not necessarily the State or Territory of usual or last residence of the mother or the deceased. Births and deaths are shown in the quarter or year of registration.
- 12. Late registration in 1984. In 1984 there were abnormal delays in the registration process in the New South Wales Registry of Births, Deaths and Marriages. The estimated number of registrations of births which normally would have been expected in NSW in 1984 was 82,392, some 4,000 more than the actual registration of 77,994. This backlog of registrations was made up during 1985, resulting in 87,786 registrations of births, some 4,000 more than would have been expected for the year. Similarly, the estimated number of registrations of deaths which normally would have been expected in NSW in 1984 was 41,089, some 2,000 more than the actual registrations of 39,114. This backlog of registrations was also made up during 1985, resulting in 44,044 registrations of deaths, some 2,000 more than would have been expected for the year. For further information, see ABS publications Births, Australia (3301.0) and Deaths, Australia (3302.0).
- 13. Live births. A live birth is defined as the delivery of a child, irrespective of the duration of pregnancy, who, after being born, breathes or shows any other evidence of life such as heart-beat.
- 14. Crude birth and death rates. The number of live births or deaths per 1,000 mean estimated resident population.

- 15. Infant death rate. The number of deaths under the age of twelve months per 1,000 live births registered in the same year.
- 16. Marriages. Under the Australian Marriage Act 1961, marriages may be celebrated by a minister of religion registered as an authorised celebrant, by a district registrar or by other persons authorised by the Attorney General. Notice of the intended marriage must be given to the celebrant at least one calendar month but within 3 calendar months before the marriage. A celebrant must transmit an official certificate of the marriage for registration to a district registrar in the State in which the marriage took place.
- 17. Divorces. The term divorce, as used in this publication, refers to decrees of dissolution of marriage.
- 18. Crude marriage and divorce rates. This is the number of marriages or divorces per 1,000 mean estimated resident population. (The usefulness of these rates is limited because, in the case of marriages, a large and varying proportion of the population used in the denominator is below the minimum age of marriage or is already married, and, in the case of divorces, a large and varying proportion of the population used in the denominator is unmarried. More refined marriage and divorce rates can be found in the marriage and divorce publications listed under 'Related publications' at the end of this publication).
- 19. Total fertility rate. The sum of age-specific fertility rates (live births at each age of mother per 1,000 female population of that age). It represents the number of children a woman would bear during her lifetime if she experienced current age-specific fertility rates at each age of her reproductive life.
- 20. Female gross reproduction rate. The sum of female age-specific fertility rates. It represents the number of daughters a woman would bear during her lifetime (assuming she survives to the end of the reproductive period) if she experienced the current female age-specific fertility rates at each age of her reproductive life.
- 21. Female net reproduction rate. This allows for mortality during the child-bearing period. It represents the number of daughters a woman would bear if she was subject to current female age-specific fertility rates and to pre-determined mortality rates.
- 22. Life expectancy refers to the average number of additional years a person of a given age and sex might expect to live if the age-specific death rates of the given period continued throughout his/her lifetime.
- 23. The median duration of marriage at divorce is the duration (in years) which divides the number of marriages dissolved into two halves, one half of these marriages having shorter duration, the other half longer than the duration shown.

Overseas Arrivals and Departures

24. Persons arriving in or departing from Australia are required to complete prescribed questionnaires in the form of Incoming and Outgoing Passenger cards. These cards

provide information to the Department of Immigration, Local Government and Ethnic Affairs for administrative purposes and serve as the source of statistics of overseas arrivals and departures. In accordance with the *Census and Statistics Act 1905*, information relating to individuals, individual flights or ships and individual carriers which is contained in these cards or other documents is treated as confidential by the ABS.

- 25. The statistics in this publication relate to the number of movements of travellers rather than the number of travellers (i.e. the multiple movements of individual persons during a given reference period are each counted separately). However, the statistics exclude the movements of operational air crew and ships' crew, transit passengers who pass through Australia but are not cleared for entry, and passengers on pleasure cruises commencing and finishing in Australia aboard ships not then engaged on regular voyages.
- 26. Category of movement. Passengers are classified according to their length of stay (in Australia or overseas) or 'category'. This is primarily determined by the passenger's selection of his or her own category on the passenger card, which is accepted provided it is consistent with other information on the card. There are three main categories permanent, long-term and short-term.
- 27. Permanent movement. Permanent movement comprises arrivals of settlers (i.e. persons who hold migrant visas, regardless of stated intended period of stay and New Zealand citizens who indicate an intention to settle) and those who are otherwise eligible to settle (e.g. overseas-born children of Australian citizens) and permanent departures of Australian residents (including former settlers) i.e. those who on departure state they do not intend to return to Australia.
- 28. Long-term movement. Long-term movement is defined as the arrivals of visitors (except those who hold migrant visas see paragraph 27 above) and the temporary departures by Australian residents with the intention to stay, in Australia or abroad respectively, for twelve months or more, together with the departure of visitors and the return of Australian residents who had stayed, in Australia or abroad, for twelve months or more (see also paragraph 30 below).
- 29. Short-term movement. Movements of travellers whose intended or actual period of stay is less than twelve months are classified as short-term except those who on arrival hold migrant visas (see also paragraph 30 below).
- 30. A significant number of travellers (i.e. visitors to Australia on arrival and Australian residents going abroad) state exactly 12 months or one year as their intended period of stay. Many of them stay for less than that period and on their departure from, or return to Australia are therefore classified as short-term. Accordingly, in an attempt to maintain consistency between arrivals and departures, movements of travellers who report their actual or intended period of stay as being one year exactly are randomly allocated to long-term or short-term, in proportion to the number of movements of travellers who

report their actual length of stay as up to one month more, or one month less, than one year.

- 31. State of residence. State of residence refers to the State regarded by the traveller as the one in which he/she lives or last lived. State of intended residence is derived from the intended address given by settlers, and by Australian residents returning after a journey abroad. Particularly in the case of the former, this information does not necessarily relate to the State in which a traveller will eventually establish a permanent residence.
- 32. Country of birth. Prior to 1991 the classifications used in the ABS for social, demographic and labour statistics were adaptations of the United Nations (UN) country classifications. Major Australian users indicated that the UN classification did not meet their requirements for analytical purposes. Hence the ABS has developed a new classification of countries called the Australian Standard Classification of Countries for Social Statistics (ASCCSS). In this classification, neighbouring countries are grouped into progressively broader geographic areas on the basis of social, cultural, political and economic similarities. As part of this process emphasis was given to developing aggregations which satisfied the requirements of Australian users. Unlike the previous UN classification, the ASCCSS does not take the conventional notion of continents as a constraint in the design of the classification structure. However, the base units of ASCCSS are broadly compatible with those of the UN classification and it is possible to aggregate statistics based on the ASCCSS to the UN classifications for purposes of comparison. The ASCCSS has been applied to Overseas Arrivals and Departures statistics from January 1991. The major changes are:
 - 'Africa' has been separated into two groups: 'Middle East and North Africa' and 'Africa (excluding North Africa)' which comprises all other African countries.
 - There is no longer a single category 'Asia'. Separate categories 'Southeast Asia', 'Northeast Asia' and 'Southern Asia' have been created. 'Middle East' countries formerly included in 'Asia' are now included in the new category 'Middle East and North Africa'.
 - 'Cyprus' has been included in Europe (formerly included in Asia).
 - 'Tahiti' has been included with 'French Polynesia'.

For more detailed information on the classification of countries refer to the ABS publication Australian Standard Classification of Countries for Social Statistics (1269.0).

33. Overseas arrivals and departures statistics by country of birth have certain limitations. For instance, it is not

possible to make a distinction between all travellers born in Northern Ireland and the Republic of Ireland because some simply give 'Ireland' as their country of birth (for the tables in this publication 'Ireland' refers to 'The Republic of Ireland' plus 'Ireland, undefined'). Similarly it is not possible to separately identify England, Scotland and Wales ('United Kingdom').

Related publications

34. Detailed annual demographic statistics appeared for many years in the annual publication *Demography* which ceased after the issue for 1971. Since then, annual statistics have been contained in the publications listed below.

Births, Australia (3301.0).

Deaths, Australia (3302.0).

Marriages, Australia (3306.0).

Divorces, Australia (3307.0).

Overseas Arrivals and Departures, Australia (3404.0).

Estimated Resident Population by Sex and Age: States and Territories of Australia (3201.0).

35. Other publications of interest are:

Overseas Arrivals and Departures, Australia (3402.0). A quarterly publication showing detailed classifications of movement.

Overseas Arrivals and Departures, Australia (3401.0). A short release of the latest monthly statistics.

Projections of the Populations of Australia, States and Territories 1989 to 2031 (3222.0). Based on estimated resident population at 30 June 1989, this publication was released in November 1990.

Estimated Resident Population, Australia, States and Territories (3217.0). Issued after each Census. The 1986 issue was released on 1 October 1987. It contained final 1986 Census-based estimates by age and sex at 30 June 1986.

Family Formation Survey, Australia (3223.0). Results of a sample survey in September 1986 were released in June 1988.

Interstate Migration, Australia (3411.0). The 1981 issue, containing statistics on interstate migration compiled from information collected in the population Censuses of 1976 and 1981 was published on 2 November 1984.

Australian Life Tables, 1980-1982, prepared by the Australian Government Actuary and available from the Australian Government Publishing Service bookshops or Mail Order Sales Services.

- 36. Current publications produced by the ABS are listed in the Catalogue of Publications and Products, Australia (1101.0). The ABS also issues, on Tuesdays and Fridays, a Publications Advice (1105.0) which lists publications to be released in the next few days. The Catalogue and Publications Advice are available from any ABS office.
- 37. Statistics of overseas arrivals and departures and related data are also published regularly by the Department of Immigration and Ethnic Affairs (see that Department's Australian Immigration, Consolidated Statistics) and by the Australian Tourist Commission (on international travel and tourism).

Symbols and other usages

- r figures or series revised since previous issue
- p preliminary figure or series subject to revision
- n.a. not available
- n.y.a. not yet available
 - .. not applicable
 - nil or rounded to zero
- break in continuity of series (where drawn across a column between consecutive figures)
- 38. In this publication population estimates have generally been rounded to the nearest hundred. Neither rounded figures, nor unrounded figures should be assumed to be accurate to the last digit shown.
- 39. Where figures have been rounded, discrepancies may occur between sums of component items and totals.

IAN CASTLES Australian Statistician

For more information ...

The ABS publishes a wide range of information on Australia's economic and social conditions. A catalogue of publications and products is available from any of our Offices (see below for contact details).

Information Consultancy Service

Special tables or in-depth data investigations are provided by the ABS Information Consultancy Service in each of our Offices (see below for contact details).

Electronic Data Services

A growing range of our data are available on electronic media. Selections of the most frequently requested data are available, updated daily, on DISCOVERY (Key *656#). Our TELESTATS service delivers major economic indicator publications ready to download into your computer on the day of release. Our PC-AUSSTATS service enables on-line access to a data base of thousands of up-to-date time series. Selected datasets are also available on diskette or CD-ROM. For more details on our electronic data services, contact Information Services in any of our Offices on the numbers below.

Bookshops and Subscriptions

There are over 500 titles available from the ABS Bookshops in each of our Offices. You can also receive any of our publications on a regular basis. Join our subscription mailing service and have your publications mailed to you in Australia at no additional cost. Telephone our Publications Subscription Service toll free on 008 02 06 08 Australia wide.
