AUSTRALIAN DEMOGRAPHY.

PREFACE.

The present issue of the Demography Bulletin, which is the fifty-eighth of the series, furnishes particulars for 1940 and previous years. Summary tables giving details for States and Territories for 1901, 1906, and 1911 to 1940 are included in each section of the present issue. Similar tables covering the period 1860 to 1938 may be found in Section VII. of Demography Bulletin No. 56, 1938.

In Sections III., Births, and V., Deaths, the tabulations have been made according to the place of usual residence. The classification of occupations appearing in Sections III., IV. and V. is the classification used in the Census of England and Wales, 1931, as adapted to the requirements of the Australian Census of 1933, and further amended in 1939. In Section V., Deaths, the classification of causes of death is mainly in accordance with the "International List of Causes 1938" (International Commission, Paris, 1938), but tables 98 and 99 have been prepared in accordance with the "International List of Causes 1929" to facilitate comparison with previous years.

The tables in the present issue of the Demography generally follow the same form as in the previous year, with the exception of the adoption of the new classification for occupations and causes of death as outlined above. They have, however, been altered in order, and in some cases extended where it was considered that such changes would add to the usefulness of the Bulletin.

Population estimates and migration records have been adjusted on the basis of the results of the various censuses, including that of the 30th June, 1933, and all rates have been computed on the amended mean population figures so ascertained.

To facilitate reference to the matter contained in the various sections of the Demography, a detailed alphabetical Index will be found at the end of the volume.

Thanks are expressed to the various State Departments responsible for the registration of births, deaths, and marriages for the valuable assistance rendered by them in supplying the data for the compilation of the Vital Statistics.

Acting Commonwealth Statistician.

NOTE.—The reference to the different States indicates the place where immigrants left the overseas ship and where emigrants embarked upon the overseas ship. The figures do not indicate the effect of migration on the population of the several States; for that purpose it is necessary to take interstate migration into account.

(a) Per 1,000 of mean population. (b) Not available.

NOTE.—The mean populations shown above for divisions in 1940 are the respective State Statisticians' estimates and are based on data obtained from various local sources. The results differ from those published prior to 1935 as in earlier years the estimates of population used in the table above were calculated for each division according to the proportions ascertained at the previous Census. Owing to the varying methods adopted in the States, it has been impossible in most cases to give separate estimates of the migratory population for 1940. Owing to special war conditions no estimates have been made for South Australia for 1940.

NOTE.—The mortality experience used throughout the table above for the calculation of the net reproduction rate is that for the period 1932-1934.

(a) The rate for each year is calculated on the basis of births in each year. (b) The "gross" reproduction rate is the estimated average number of female children born to every woman who lives through child-bearing age. (c) The "net" reproduction rate allows for the effects of mortality and is an index of the number of women who, in the next generation, will replace the women of reproductive age in this generation.

(a) Number of deaths per 1,000 of mean population. * (b) Not available.

NOTE.—The mean population shown above for divisions in 1940 are the respective State Statisticians' estimates, and are based on data obtained from various local sources. The results differ from those published prior to 1935 as in earlier years the estimates of population used in the table above were calculated for each division according to the proportions ascertained at the previous Census. Owing to the varying methods adopted in the States, it has been impossible in most cases to give separate estimates of the migratory population for 1940. Owing to special war conditions no estimates have been made for South Australia for 1940.

NOTE.—Comparison of causes of death in the table above with years prior to 1931 should be made with caution owing to changes in classification which occurred in 1931 when the 1929 revision of the International Nomenclature of Causes of Death was adopted in Australia. The connexion between the former classification title numbers and present ones is set out in detail in a footnote to this table in No. 53 and previous issues of the Demography. For the year 1940 the causes of death as shown above are shown based on the 1929 revision to afford a comparison with previous years, although in general the 1940 tabulations are based on the 1938 revision.

Causes in respect of which no deaths occurred have been omitted from this table. A complete classification of causes of death is given with Table No. 98.
