EXPLANATORY NOTES

Introduction

This publication presents the estimates of the resident population of Western Australia by age and sex at 30 June 1992. Data have been compiled for Statistical Divisions, Sub-Divisions and Statistical Local Areas (SLAs). Estimates of SLA populations at 30 June 1986 and 30 June 1991 are included for comparison.

2. The estimated resident populations (ERP) contained in this publication are the official Australian population estimates. They are derived from the 1986 and 1991 Censuses of Population and Housing.

Methodology

3. The ERP is the official population estimates series compiled according to place of usual residence of the population. An explanation of the conceptual basis is given in the ABS Information Paper *Population Estimates: An Outline of the New Conceptual Basis of ABS Population Estimates* (Catalogue No. 3216.0) issued on 29 March 1982.

4. The ERP at 30 June 1986 and 30 June 1991 for each SLA are based on usual residence counts, adjusted for census underenumeration and the number of residents temporarily overseas at the census date.

5. For intercensal years, the ERP for each SLA at 30 June is calculated using a linear regression model. In this method a mathematical relationship is established between changes in population and changes in other variables, known as predictor variables, over the period between the two most recent censuses for which detailed information is available (i.e. 1986 and 1991). This relationship is then used to estimate the change in population of each area since the date of the last census (i.e. 1991), based on the changes in the predictor variables since that date. The predictor variables in the current model are private dwellings and medicare enrolment data.

6. Other relevant information is also used to supplement the estimates from the regression model when preparing the published estimates. This includes information provided by each local government authority on significant local factors which might have caused population changes during the relevant period.

Area statistics

7. ABS area statistics are classified according to the *Australian Standard Geographical Classification, Edition 2.2* (Catalogue No. 1216.0). Figures previously published for LGAs, Statistical Subdivisions and Divisions are directly comparable with this classification. The Cities of Perth, Fremantle and Stirling are comprised of a number of SLAs. However estimates for individual SLAs were not compiled for these areas prior to 1986.

SLAs are marked (C) for City, (T) for Town or (S) for Shire. The names and designations used in this publication are as they existed at 30 June 1992.

Boundary and name changes

8. There were no significant boundary changes affecting population between 1 July 1991 and 30 June 1992.

Revisions

9. The estimates for 30 June 1986 and 1991 contained in this publication are final figures. The estimates for 30 June 1992 are subject to revision when data from the 1996 Census of Population and Housing become available.

Reliability

10. Although estimates are calculated and presented to the nearest whole number, accuracy to this level is not claimed and should not be assumed.
