DISTRIBUTION OF THE
ESTIMATED RESIDENT
POPULATION**

QUEENSLAND

Catalogue No. 3224.3

AGE AND SEX DISTRIBUTION OF THE ESTIMATED RESIDENT POPULATION, QUEENSLAND, 1993

MAIN FEATURES

- QUEENSLAND**
 - The estimated resident population of Queensland at 30 June 1993 was 3,116,150 persons, a rise of 83,316 persons or 2.7 per cent since 30 June 1992.

- CHILDREN**
 - Children (aged under 15 years) numbered 695,659 in 1993, an increase of 13,666 since 1992. In 1993, children represented 22.3 per cent of Queensland's population with the lowest proportion occurring in the Moreton Statistical Division (20.7 per cent). The highest proportions of children were found in the North-West (27.9 per cent) and South-West (25.6 per cent) Statistical Divisions. In south-east Queensland, the outer Brisbane suburbs of Carole Park, Marsden and Parkinson-Drewvale recorded the highest proportions of children along with the Gold Coast suburb of Ernest-Molendinar. In the rest of the State, the highest proportions were found in the Townsville statistical local areas of Vincent and Townsville City Balance, and the Shires of Torres, Mornington and Burke.

- AGED PERSONS**
 - The aged (65 years or more) numbered 344,765 in 1993, an increase of 13,125 persons since 1992. In 1993, aged persons represented 11.1 per cent of Queensland's population with the lowest proportion occurring in the North-West Statistical Division (4.2 per cent). The highest proportion of aged persons was in the Moreton Statistical Division (14.1 per cent) with Gold Coast suburbs such as Coolangatta, Bilinga, Burleigh Heads and Tugun among the most prominent. Wide Bay-Burnett Statistical Division (13.7 per cent) also contained a high proportion of aged persons particularly in the Cities of Gympie and Hervey Bay. The proportion of aged persons in the Brisbane Statistical Division was 10.8 per cent. The highest proportions occurred in the suburbs of Karawatha (which contains a large retirement establishment), Fortitude Valley, Chermside and Sandgate.

- DEPENDENCY RATIO**
 - The dependency ratio (number of children 0-14 years and persons aged 65 years and over per 100 persons aged 15 to 64 years) was 50.1 for Queensland in 1993, having decreased from 50.2 in 1992. In 1993, the dependency ratio was highest in the Statistical Divisions of Wide Bay-Burnett (59.1) and Darling Downs (56.4) and lowest in the Northern Statistical Division (47.2). The ratio in the Brisbane Statistical Division was 47.5.

EXPLANATORY NOTES

Introduction

1. This publication contains estimates of the age and sex distribution of the resident population of statistical divisions, statistical subdivisions, statistical local areas (SLAs), legal local government areas and statistical districts in Queensland for 30 June 1993.

Methodology

2. The estimated resident population (ERP) as at 30 June 1991 for each SLA was calculated by adjusting usual residence census counts for under-enumeration and adding the number of residents temporarily overseas at the census date. Persons who did not state their usual residence on the census form were proportionately allocated to all the SLAs in the State.

3. As the 1991 Census was held on 6 August, a further adjustment was made to obtain the ERP at 30 June 1991. This involved subtracting the increase in population of each SLA, due to the natural increase and net migration between 1 July and 6 August, from the 6 August 1991 population estimate.

4. For intercensal years, the total ERP for each SLA is calculated using a linear regression model. The model establishes a mathematical relationship between changes in population and other variables over the period between the two most recent censuses for which the required data are available, i.e. 1986 to 1991. The main variables used include building commencements, estimates of persons in dwellings (adjusted for changes in occupancy rates) and medicare registrations.

5. Other indicators of resident population movement used to supplement the estimates from the regression model include information from councils about mining and other development projects in their area.

6. Estimates of the age and sex distribution of SLA populations were obtained by the demographic cohort method i.e. by advancing births, subtracting deaths and adjusting for inward and outward migration. Total population growth in 1992-93 was split into natural increase and net migration components, the latter being the difference between total growth and natural increase for each SLA. Age/sex estimates of natural increase were obtained from birth and death registrations and those for net migration are described in the following paragraph.

7. Age/sex migration profiles for each SLA were derived from 1986 Census data for inter-SLA arrivals, inter-SLA departures and overseas arrivals. The method involved a comparison of usual residence in 1986 with usual residence at 30 June 1985. (Comparable data was not available from the 1991 Census.) Profiles for overseas departures were derived using an average for the last 3 years of overseas departures data by usual residence, obtained from passenger cards.

Boundary changes

8. The boundaries of SLAs used in this publication are those which existed at 30 June 1993. The data are presented according to *Australian Standard Geographic Classification*, Edition 2.2. Details of boundary changes which occurred between 1 July 1991 and 30 June 1993 are shown in *Estimated Resident Population and Area, Queensland, 1993* (3202.3).

Definitions

9. *Legal local government areas* (LGAs), as defined under the *Local Government Act 1936*, are spatial units which represent the geographical areas of incorporated local government councils, such as cities (C), towns (T) and shires (S).

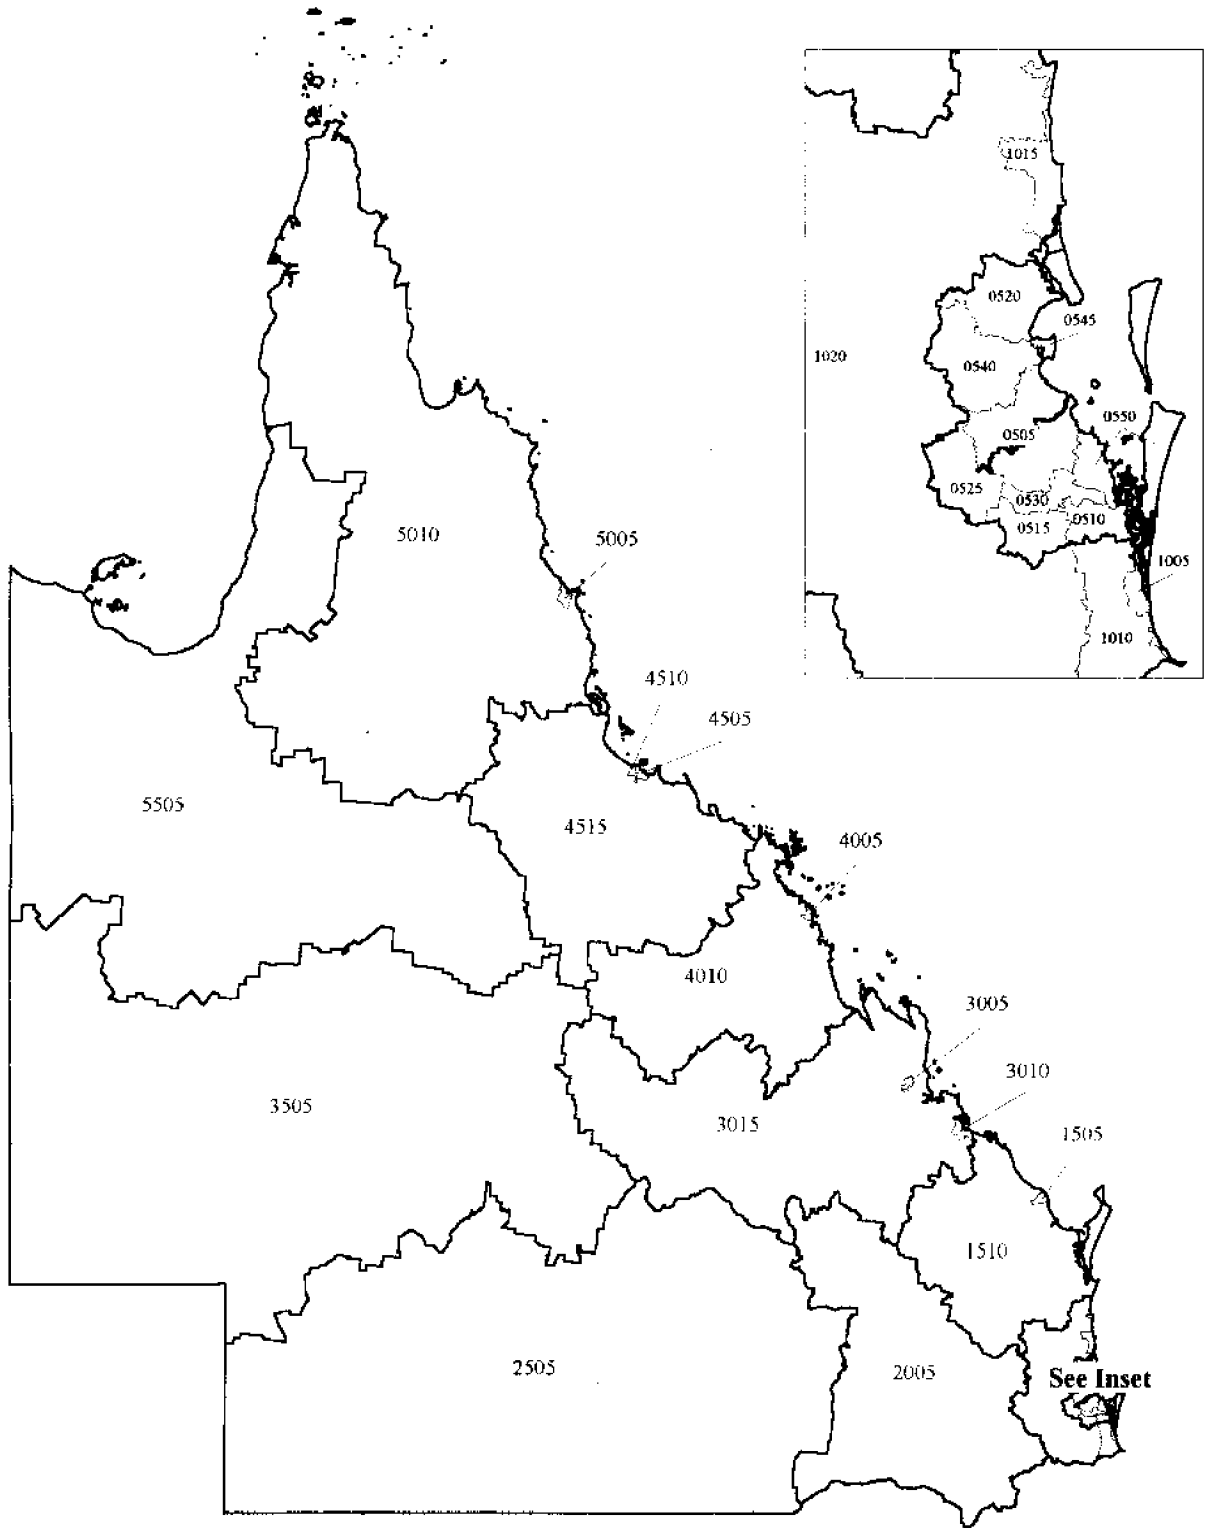

10. *Statistical local areas* are the smallest spatial units for which the estimates of resident population are presented. They correspond either to LGAs, or to suburbs in certain LGAs. Some LGAs are split into two parts, with each part forming a separate SLA. The unincorporated area of Queensland also forms a SLA. In aggregate, SLAs cover the whole of the State without gaps or overlaps.

11. *Statistical subdivisions* consist of one or more SLAs.

EXPLANATORY NOTES — *continued*

- Definitions — *continued*
12. *Statistical divisions*, which are groupings of SLAs, are designed to be relatively homogeneous regions characterised by identifiable social and economic units within the region. The Brisbane Statistical Division comprises the Cities of Brisbane, Ipswich, Logan and Redcliffe, the Shires of Pine Rivers and Redland and parts of the Shires of Albert, Beaudesert, Caboolture and Moreton.
13. *Statistical districts* have been defined around selected urban areas to provide comparable statistics over a period of time. These districts, which are intended to contain the anticipated urban spread for at least 20 years, are generally defined as having a population of 25,000 or more and experiencing urban growth beyond the LGA boundaries.
- Reliability
14. Although estimates of the resident population are shown to the nearest unit, accuracy to this level is not claimed and should not be assumed.
