	Table	Page	
SECTION 1: DEMOGRAPHIC SUMMARY	1.1 States and Territories, year ended 31 December 1994	1	
	.. Demographic summary by statistical divisions	2	
	1.2 Statistical Local Area, 1994	4	
SECTION 2: POPULATION	.. Summary of findings	12	
	2.1 Population: Summary, selected years, 1984 to 1994	14	
	2.2 Estimated resident population: age and sex, 1994	15	
	2.3 Projected population, 1996 to 2041	16	
SECTION 3: BIRTHS AND CONFINEMENTS	.. Summary of findings	17	
	Year of registration		
	3.1 Births and confinements: Summary, selected years, 1984 to 1994	19	
	3.2 Confinements: nuptiality, plurality, age of mother, 1994	20	
	3.3 Confinements: age of parents, 1994	21	
	3.4 Nuptial confinements: birthplace of parents, 1994	22	
	3.5 Nuptial confinements: age of mother, previous issue and average issue, 1994	23	
	3.6 First nuptial confinements: age of mother and duration of current marriage, 1994	23	
	Year of occurrence		
	3.7 Births: year and month of occurrence, number, proportion, selected years, 1984 to 1994	24	
	3.8 Births: age group of mother, year of occurrence, selected years, 1984 to 1994	24	
	3.9 Births: age-specific birth rates, total fertility rates, year of occurrence, selected years, 1984 to 1994	24	
	SECTION 4: DEATHS	.. Summary of findings	25
		Year of registration	
		4.1 Summary, selected years 1984 to 1994	27
4.2 Age at death, sex, 1994		29	
4.3 Age at death, marital status, 1994		30	
4.4 Expectation of life, Queensland, 1971, 1981, 1991 and 1994 and Australia, 1994		30	
4.5 Country of birth, duration of residence, 1994		31	
4.6 State or Territory of usual residence, State or Territory of registration, 1994		32	
4.7 Selected causes of death, sex, 1994		32	
4.8 Selected causes of death, summary, 1994		33	
4.9 Perinatal deaths: numbers and rates, 1989 to 1994	33		
4.10 Perinatal deaths: selected details, 1984 and 1994	34		

INQUIRIES:

- *for further information about statistics in this publication and the availability of related unpublished statistics*, contact the Inquiry Service on Brisbane (07) 3222 6351 or any ABS State office.
- *for information about other ABS statistics and services*, please refer to the back page of this publication.

	Table	Page
Year of occurrence	4.11 Month of occurrence, number, proportion, selected years, 1984 to 1994	35
	4.12 Age at death, sex, selected years, 1984, 1989 and 1994	35
	4.13 Age-specific death rates, sex, 1984, 1989 and 1994	36
	4.14 Infant deaths: month of occurrence, number, proportion, selected years, 1984 to 1994	36
SECTION 5: MARRIAGES	.. Summary of findings	37
	5.1 Summary, selected years, 1984 to 1994	39
	5.2 Age-specific first marriage and remarriage rates, census years, 1966 to 1991	40
	5.3 Previous marital status of parties, 1994	40
	5.4 Age, previous marital status of parties, 1994	41
	5.5 Age of parties, 1994	41
	5.6 Birthplace of parties, 1994	42
	5.7 Category of rite, previous marital status of parties, 1994	43
	5.8 Remarriages: number of previous marriages, number of children under 16, 1994	43
	5.9 Remarriages: interval to remarriage, reason for termination of last marriage, 1994	44
SECTION 6: DIVORCES	.. Summary of findings	45
State of registration	6.1 Summary, selected years, 1984 to 1994	47
	6.2 Age of parties at marriage, duration of marriage, 1994	48
	6.3 Age of parties at final separation, interval between marriage and final separation, 1994	49
	6.4 Age of parties at divorce, 1994	50
	6.5 Number of children of the marriage, average number of children, duration of marriage, 1994	50
	6.6 Birthplace of parties, 1994	51
State of usual residence at separation	6.7 Summary, States and Territories, 1994	52

Crude divorce rate	3.1	2.5	3.1	2.8	2.9	3.2	2.1	3.1	2.7
Median duration of marriage (years)	10.4	11.0	11.3	11.3	11.3	12.0	11.1	10.0	10.9
Median interval between marriage and final separation (years)	7.2	7.8	8.0	8.3	8.1	8.8	7.4	7.2	7.7

(a) See Glossary for definitions of terms used. (b) Population, births and deaths include Jervis Bay Territory, Christmas Island and Cocos (Keeling) Islands. Divorces include Jervis Bay Territory, Christmas Island and Cocos (Keeling) Islands, and usual residence overseas and not stated. (c) Components of population change from previous year. (d) Final figures for births and deaths may differ slightly from those used to compile natural increase for population estimates because it is necessary to use preliminary births and deaths when finalising population estimates. (e) Net overseas migration includes an estimate of those persons who changed category from short-term visitor to long-term visitor or resident of Australia.

DEMOGRAPHIC SUMMARY
BY STATISTICAL DIVISION

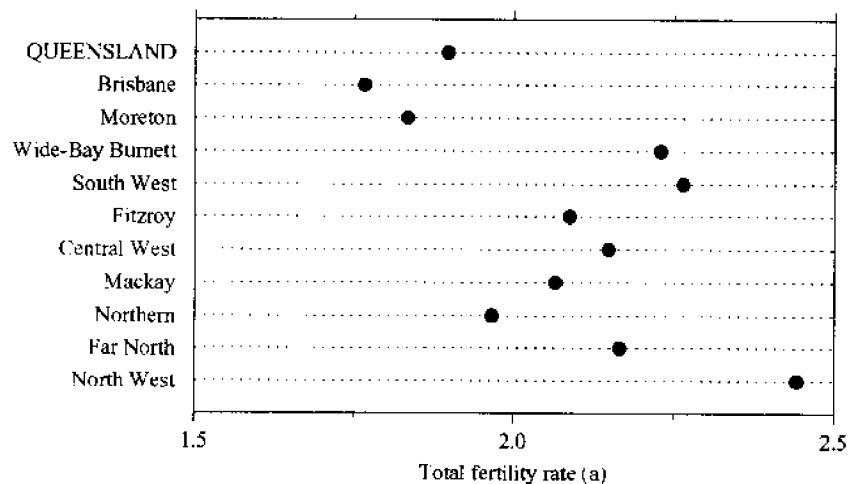

Births

During 1994, there were 20,480 births to mothers resident in the Brisbane Statistical Division, representing 44.0% of total births in Queensland. Over the 3 year period 1992 to 1994, Brisbane recorded the lowest fertility rate (1.766) for all statistical divisions. Brisbane City recorded a fertility rate of 1.548 while all other parts of the Brisbane Statistical Division recorded higher fertility rates with Caboolture Shire Part A (2.292) and Beaudesert Shire Part A (2.193) recording the highest.

In the remainder of the State, the Moreton Statistical Division recorded the largest number of births (7,350). The highest fertility rate (2.442) was recorded in the North West Statistical Division.

The fertility rate is the number of children one woman would expect to bear during her child-bearing lifetime.

TOTAL FERTILITY RATE BY STATISTICAL DIVISION,
QUEENSLAND

(a) Average total fertility rate over the 3 years, 1992 to 1994.

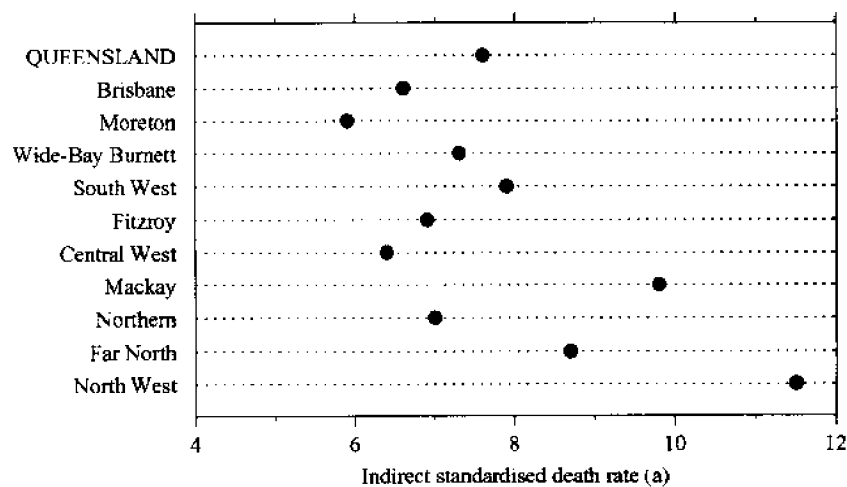

Deaths

During 1994, there were 9,705 deaths of residents in the Brisbane Statistical Division, representing 45.0% of all deaths in Queensland. The standardised death rate over the 3 year period 1992 to 1994 for the Brisbane Statistical Division was 6.6, well below the Queensland rate of 7.6. The standardised death rate for Brisbane City over the same period was 6.5. Most other parts of Brisbane Statistical Division experienced lower standardised death rates with Pine Rivers Shire (4.4) and Beaudesert Shire Part A (4.9) being the lowest.

In the remainder of the State, the Moreton Statistical Division recorded the largest number of deaths (3,948). The highest standardised death rates were recorded in the North West (11.5), Mackay (9.8) and Far North (8.7) statistical divisions. The lowest standardised death rates were recorded in Moreton (5.9) and Central West (6.4) Statistical Divisions.

The standardised death rate is the overall death rate that would have prevailed in a standard population if it had experienced at each age the death rates of the population being studied.

**INDIRECT STANDARDISED DEATH RATE
BY STATISTICAL DIVISION,
QUEENSLAND**

(a) Average indirect standardised death rate over the 3 years, 1992 to 1994.

(d) The average indirect standardised death rate over the 3 years, 1992 to 1994. (e) Excluding usual residence overseas, no fixed abode and Queensland undefined.

NOTE: Care should be exercised when interpreting total fertility rates and indirect standardised death rates in those instances where small numbers have been recorded for estimated population, births or deaths.

SECTION 2: POPULATION

SUMMARY OF FINDINGS

Estimated Resident Population

The estimated resident population of Queensland at 31 December 1994 was 3,232,937, comprising 1,620,537 males and 1,612,400 females. This was an increase of 2.5% on the 31 December 1993 figure of 3,155,494.

For the year ending 31 December 1994, Queensland's population increased by 77,443 persons. While net overseas migration and natural increase remain important contributing factors to Queensland's overall population growth, it is interstate migration that has the greatest impact. In 1994, the contribution made to total population growth by net interstate migration was 59.5%, for natural increase the contribution was 31.8% and for net overseas migration the contribution was 8.8%.

COMPONENTS OF POPULATION INCREASE, QUEENSLAND

Median Age

The median age of the population of Queensland continues to increase. At 30 June 1994, the median age for males was 32.1 years and 33.3 years for females. Ten years ago the median age was 29.1 and 30.2 years, respectively. Since 1974, the proportion of the population aged 14 and under has dropped from 29.4% to 22.1% in 1994, while the proportion of the population aged 65 years or more has increased from 7.8% to 11.2% in 1994. The population aged 35 to 49 years has increased from 16.7% to 21.9% over the same period, a major contributing factor being 'baby-boomers' reaching middle age.

PERCENTAGE OF ESTIMATED RESIDENT POPULATION IN AGE GROUPS, QUEENSLAND, 1984 AND 1994

Permanent Arrivals

There were 11,730 permanent overseas arrivals of persons into Queensland during 1994, an increase of 2,060 (21.3%) from the 1993 figure of 9,670. Compared with 5 years ago, the number of permanent arrivals has decreased by nearly 40% (18,860 in 1989). The level of permanent arrivals is largely due to the size of Australia's migration and humanitarian programs.

PERMANENT MOVEMENT: OVERSEAS ARRIVALS AND DEPARTURES, QUEENSLAND

Tourism

The number of short-term overseas visitor arrivals into Queensland during 1994 was 970,600 persons. This was the highest number ever recorded and represented the fifth consecutive annual increase. The major source countries of overseas visitors to Queensland were Japan (36.3%), New Zealand (15.4%), Singapore (6.5%) and the United Kingdom (5.6%). By comparison, the major source countries in 1984 were New Zealand (37.0%), United States (13.4%) and the United Kingdom (9.7%). Almost 50% of short-term visitors are from the Northeast Asia Region, compared with less than 10% in 1984.

In 1994, 340,000 Queensland residents departed overseas for less than 12 months, the largest number ever recorded. This was an increase of 4,700 on the number for 1993 and more than twice the number recorded in 1984 (168,700).

SHORT-TERM MOVEMENT: OVERSEAS VISITOR ARRIVALS AND RESIDENT DEPARTURES, QUEENSLAND

(a) See Glossary for definitions of terms used. (b) From previous year. (c) Final figures for births and deaths may differ slightly from those used to compile natural increase for population estimates, which are compiled at a preliminary stage. (d) Including an estimate of those persons who changed category from short-term visitor to long-term visitor or resident of Australia. (e) For dates prior to June 1991, differences between total population growth and the sum of natural increase and net migration arise from retrospective adjustments to population estimates (which are made after each census) to eliminate any intercensal discrepancy. (f) Percentage increase over the previous year's estimated resident population. (g) Statistics have been rounded to the nearest 100 for short-term movement, and to the nearest 10 for permanent and long-term movement.

SECTION 3: BIRTHS AND CONFINEMENTS

SUMMARY OF FINDINGS

Overview In 1994, there were 46,578 births registered to Queensland mothers. This was a decrease of 200 (0.4%) from the record high of 46,778 births registered in 1993.

The sex ratio was 107.7 males born for every 100 females.

The crude birth rate was 14.6 per 1,000 estimated resident population, which was the lowest birth rate ever recorded for Queensland.

FEMALE NET REPRODUCTION RATE, QUEENSLAND

Child-bearing patterns The total fertility rate (the number of children a woman would expect to bear in her lifetime) declined slightly from 1.907 in 1993 to 1.861 in 1994. In the 10 years to 1980, the fertility rate declined over one-third from 3.01 in 1970 to 1.933 in 1980. Since 1980 the rate has generally declined and has not been over 2.0 since 1983. (If a population is to replace itself without immigration from overseas in the long term, the total fertility rate needs to exceed 2.1.).

The female net reproduction rate was 0.880 which is the second lowest ever recorded for Queensland (the lowest was 0.87 in 1987). This rate has been consistently below the long-term replacement level of 1.0 since 1977. This has led to a situation where, although there is no immediate prospect of population decline due to the high fertility of previous generations and net migration gain, the age distribution of the population is changing. The proportion of elderly people is continually growing and that of children is continually decreasing.

Teenage births There were 3,008 births to teenage mothers, a rate of 25.6 births per 1,000 population (of females aged 15-19 years). This rate has more than halved in the past 20 years with the highest birth rate of 63.84 being recorded in 1972.

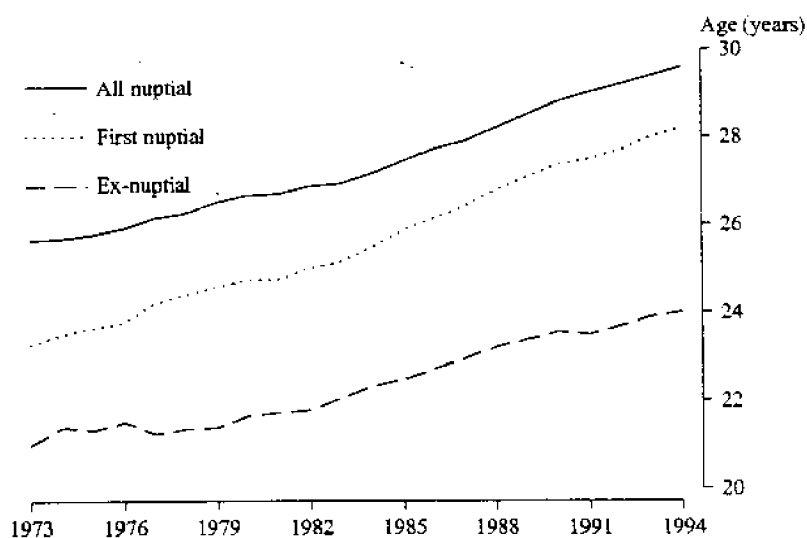

Almost 90% of teenage mothers were unmarried, as were half of the mothers in the 20-24 year age group.

Nuptial births In 1994, there were 32,727 nuptial live births from 32,244 nuptial confinements.

The median age of mothers at the birth of the first child of their current marriage has increased steadily since the mid-1960s, and reached 28.2 in 1994. The median age of fathers at the birth of a child from their current marriage has also increased steadily to 31.9 years in 1994.

Almost 60% of first nuptial confinements occurred during the first 2 years of marriage. Slightly less than 80% of first nuptial confinements occurred in the first 4 years of marriage.

MEDIAN AGE OF MOTHER AT TIME OF CONFINEMENT, QUEENSLAND

Multiple births One in every 74 confinements resulted in a multiple birth in 1994. Of the 46,578 births resulting from 45,941 confinements, there were 602 sets of twins and 22 sets of triplets.

(a) Includes births to mothers aged less than 15. (b) Includes births to mothers aged 50 and over.

SECTION 4: DEATHS

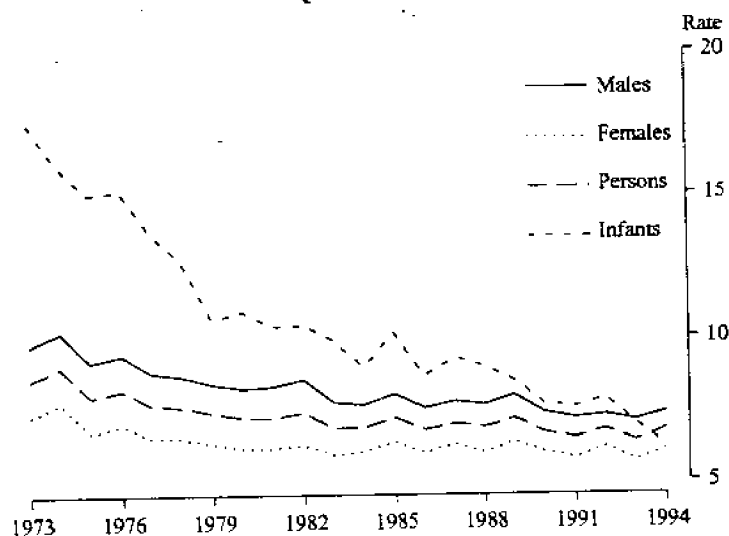

SUMMARY OF FINDINGS

Overview In 1994, there were 21,655 deaths registered in Queensland (11,896 males and 9,759 females). This is an increase of 1,683 (8.4%) over the 1993 figure and is the highest number of deaths ever recorded for Queensland.

The increase in deaths reflects a rise in the number of older people in the population. Over the 20 years from 1974 to 1994 the population has increased 59.1% while the population of persons aged 75 years and over has increased 126.0%.

Crude death rate The crude death rate (deaths per 1,000 estimated resident population) in 1994 was 6.8, an increase of 0.4 from 1993.

CRUDE DEATH RATES AND INFANT MORTALITY RATES,
QUEENSLAND

Infant deaths There were 289 infant deaths (deaths under 1 year) in 1994, which is a decrease of 38 (11.6%) compared with 1993. Historically, male infant deaths are higher than female infant deaths in Australia. In 1994, there were 181 male infant deaths compared with 108 female infant deaths. This represents a sex ratio of 167.6.

Approximately one third of infant deaths occurred within the first day of life, 48.1% within the first week and 58.1% within the first month.

The infant mortality rate (the number of deaths of children under 1 year of age per 1,000 live births) represents the lowest ever recorded in Queensland. Over the last 20 years the rate has more than halved (16.0 in 1974 compared with 6.2 in 1994). This can be attributed to greater access to medical care, improvements in medical technology and in the treatment of infants.

Age at death For both sexes the median age at death has continued an upward trend. Median age at death for males increased from 72.6 years in 1993 to 73.2 years in 1994 and for females increased from 79.0 in 1993 to 79.7 in 1994.

In 1994 there were 3 male deaths for every female death in the age range between 20 and 34 years. In the 5-year age groupings, female deaths outnumber male deaths only in the later years. In the 90 years and over age group, there were five female deaths for every two male deaths.

Life expectancy Life expectancy for females is greater than that for males at all ages. In 1994, the life expectancy of a newborn child in Queensland was 74.8 years for males and 80.9 years for females. This is an increase of more than 7 years for males and 6 years for females, when compared with 1974.

EXPECTATION OF LIFE AT BIRTH, QUEENSLAND

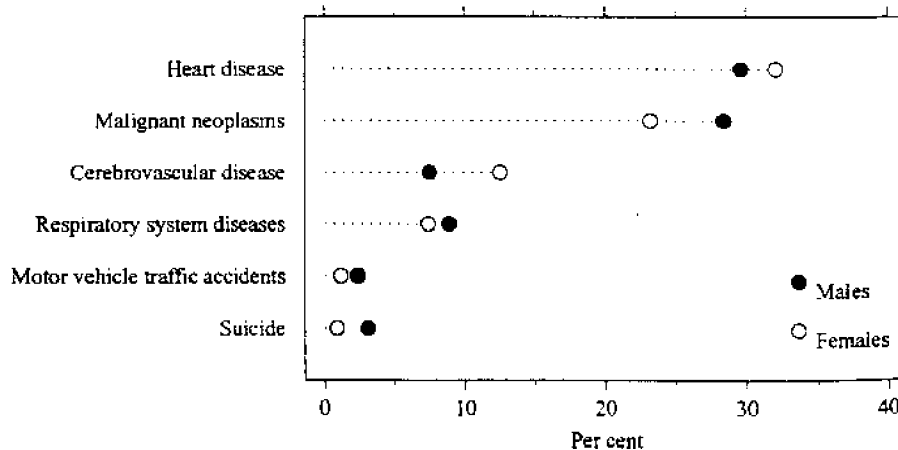

Cause of death Heart disease and cancer (malignant neoplasms) were the two leading causes of death in Queensland in 1994, accounting for 30.7% and 26.0% of all deaths, respectively.

For females, the incidence of death from heart disease (32.1% of all female deaths) was higher than for males (29.6% of all male deaths).

The most common cause of death for younger persons was accidents, poisoning and violence, accounting for 78.1% of all deaths in the 15-24 year age group. In the 25-44 year age group, nearly 40% more males died as a result of suicide (146 deaths) than died in motor vehicle traffic accidents (105 deaths).

SECTION 5: MARRIAGES

SUMMARY OF FINDINGS

Number of marriages There were 20,798 marriages registered in Queensland in 1994, the highest number ever recorded. This was an increase of 94 (or 0.5%) over the previous record in 1993 of 20,704 marriages.

The number of marriages has increased annually since 1985 and in 1994, Queensland had the highest crude marriage rate, at 6.5 per 1,000 population, of all States and Territories in Australia.

Marrying later in life The increase in the median age at marriage shows that both sexes are marrying later in life. The median age at first marriage has increased 2 years from 24.8 years in 1984 to 26.8 years in 1994 for bridegrooms. For brides entering their first marriage, the median age has increased from 22.5 years in 1984 to 24.8 years in 1994.

For both sexes the number of under 25 year olds marrying has continued to decline. The most significant decrease in the age-specific marriage rate was in the 19 and under age group. For males, the rate of marriage has dropped from 4.4 (for every 1,000 males aged 15-19 years) in 1984 to 1.3 in 1994. The female marriage rate decreased from 24.0 in 1984 to 7.5 in 1994.

The rate of marriage for males in the 20-24 year age group has almost halved from 62.2 in 1984 to 36.3 in 1994. Although the rate for females in the 20-24 year age group marrying has continued to decline since 1984, at 56.0 per 1,000, the numbers are still well above the male rate of 36.3.

AGE-SPECIFIC MARRIAGE RATE, QUEENSLAND, 1994
(Age group)

Birthplace of partners In 69.2% of marriages in Queensland, both partners were born in Australia. Both partners were born overseas in 7.9% of marriages.

For overseas born partners, 30% of brides and over 34% of bridegrooms were born in the United Kingdom and 20.8% of brides and 21.1% of bridegrooms were born in New Zealand.

Vietnamese born persons are more likely to choose a partner born in their homeland. Vietnamese born men and women had the highest percentage of marriages to partners born in the same country, 90.2% for males and 87.1% for females.

Previous marital status In 1994, 65.3% of marriages involved partners who had never been married. Marriages of couples where one partner had never been married accounted for 18.8% of total marriages. Marriages where both partners were remarrying accounted for 16.0% of total marriages.

Marriage rites The proportion of marriage ceremonies performed by ministers of religion has continued to decline. In 1974, 84.3% of marriages were by religious rites, compared with 54.6% in 1994. Catholic ceremonies represented 16.9% of all marriages in 1994, followed by Anglican, 12.2% and Uniting Church, 9.5%.

Marriages performed by civil celebrants accounted for 45.4% of all marriages in 1994, compared to 40.3% in 1984 and 15.7% in 1974. Couples who had previously been divorced preferred to marry in a civil ceremony (67.6% of bridegrooms and 71.9% of brides). Over half of the partners who had been widowed also chose a civil ceremony (54.0% of bridegrooms and 59.8% of brides).

MARRIAGES: TYPE OF RITE AS A PERCENTAGE OF ALL WEDDINGS, QUEENSLAND

(a) The Uniting Church was formed in June 1977.

Remarriages In over one-third of all marriages, one or both partners were remarrying.

Men tend to remarry earlier than women. For marriages in 1994, 35.6% of bridegrooms remarried within 2 years of the last marriage ending, compared with 30.7% of brides.

The interval between the death of a spouse and remarriage differs also for men and women. For previously widowed bridegrooms, 60.5% married within 5 years compared to 40.5% for previously widowed brides.

Children The majority of couples remarrying are without children under 16 years of age. The number of males remarrying who had children under 16 years of age is 1,866, representing 35.5% of bridegrooms remarrying. For previously married brides, 1,971 or 37.4% had children under 16 years.

SECTION 6: DIVORCES

SUMMARY OF FINDINGS

Total divorces

In 1994, there were 9,762 divorces granted in Queensland. This was 173 fewer than in 1993 (9,935) and the first decrease since 1989.

Couples, whose usual residence at the time of separation was Queensland, accounted for 8,359 (85.6%) of all divorces.

Crude divorce rate

The crude divorce rate was 3.1 per 1,000 population in 1994. The graph below indicates the movement in the crude divorce rate for Queensland over the last 20 years. The peak in 1976 indicates the large number of divorces granted during the first year of operation of the Family Law Act. The rates have decreased since, but are still significantly higher than the rates attained in the years prior to 1976, reflecting the ease of obtaining a divorce under the Family Law Act in comparison with the previous Matrimonial Causes legislation.

CRUDE DIVORCE RATES, QUEENSLAND

Age-specific divorce rates

Divorce rates for young people are decreasing, this may be attributable to a decrease in marriages in younger age groups. The divorce rate for females in the 24 years and under age group has more than halved in the last 10 years, from 4.8 in 1984 to 2.1 in 1994. Similarly, the rates for males have shown a significant decrease from 2.3 in 1984 to 0.9 in 1994.

In the last 10 years, divorce rates for the 25-29 year age group have also shown a significant decrease, from 13.2 (for every 1,000 males in this age group) to 8.6 in 1994 for males and 17.1 (for every 1,000 females in this age group) to 12.8 in 1994 for females.

Males are most likely to divorce between the ages of 35 and 39 (with a rate of 14.9) and females between the ages of 30 and 34 (a rate of 15.5).

AGE-SPECIFIC DIVORCE RATES, QUEENSLAND, 1994
(Age group)

Previous marital status Most divorces in Queensland come from first marriages. In 1994, 78.9% of husbands and 79.6% of wives who divorced had never been previously married.

The percentage of divorces granted to men and women who had previously been divorced has continued to rise. During 1994, 19.9% of men and 19.0% of women who divorced, had been previously divorced.

Birthplace Australian-born couples who divorced in 1994 accounted for 65.0% of all divorces in Queensland. Couples where one or both partners were born in the United Kingdom accounted for 14.0% of Queensland divorces. Slightly less than 7.0% of divorces involved one or both partners who were born in New Zealand.

Duration of marriage The median interval between marriage and final separation was 8.0 years and the median interval between marriage and divorce was 11.3 years.

Divorces involving children Queensland divorces during 1994 involved 10,784 children. The percentage of total divorces involving children decreased from 62.7% in 1984 to 55.8% in 1993, then increased slightly to 56.9% in 1994.

EXPLANATORY NOTES

INTRODUCTION

1 This publication brings together a number of closely related series of statistics on demography including Births, Deaths, Marriages and Divorces. It also includes some information on estimated resident population and migration. For details of publication of other data related to demography, see Related Publications, at the end of these Notes.

POPULATION ESTIMATES

2 This section consists of estimates of the resident population, with information on overseas arrivals and departures and net interstate migration.

3 Estimates of the population of Queensland are made to varying degrees of detail throughout the year, and this publication has used the most up-to-date estimates available for each particular table.

POPULATION PROJECTIONS

4 Population projections are published twice in each intercensal period. The latest projections are based on the results of 1991 Census of Population and Housing and relate to the period from 1996-2041.

5 The population projections are not intended as predictions or forecasts; they are illustrations of growth and change in the population which would occur if certain specified assumptions about future demographic trends were realised. While the selection of the assumptions is based on analysis of past demographic trends, both in Australia and overseas, and an assessment of their likely future movement, there is no certainty that any of the assumptions will be realised.

6 Four alternative projections have been provided in recognition of the uncertainty of future movements in demographic trends, and to give users a range of options.

7 The mortality assumptions are the same for all series, while for fertility, a higher rate is assumed for Series A and B. For the migration assumptions, Series A, B, and C have a higher level of overseas migration, while Series B and C have a high level of interstate migration. Further detail is available in *Projections of the Populations of Australia, States and Territories, 1993 to 2041* (3222.0).

8 Data on overseas arrivals and departures relate to the number of movements of travellers rather than to the number of travellers. However, the statistics exclude the movements of operational air crew and ships' crew, transit passengers who pass through Australia but are not cleared for entry, and passengers on pleasure cruises commencing and finishing in Australia aboard ships not engaged on regular voyages. Estimates of transit sea passengers are no longer available.

MIGRATION

9 Data on interstate migration have been derived from aggregated statistical information on interstate changes of addresses advised to the Health Insurance Commission in the process of administering Medicare. The ABS adjusts the Health Insurance Commission data to make allowance for the number of persons who do not inform the Commission of their change of residence. Further details are available in *Australian Demographic Statistics* (3101.0).

BIRTHS

10 Birth statistics are presented on the basis of the State or Territory of usual residence of the mother, regardless of where in Australia the birth occurred or was registered.

11 Births to mothers usually resident in Australia which took place overseas are excluded. Births to mothers usually resident overseas which occurred in Australia are included in the State or Territory where the birth occurred.

12 Except for Tables 3.7 to 3.9, the statistics in this publication refer to births registered during the calendar year shown. There is usually an interval between the occurrence and registration of a birth, and, as a result of delay in registration, some births occurring in one year are not registered until the following year, or even later. However, most births are registered soon after they occur. More than 99% of births occurring in one year are registered by 30 June of the following year. Tables 3.7 to 3.9 show the number of births occurring in a particular year.

13 Data on stillbirths (fetal deaths) may be found in summary form in Section 4 (Deaths) of the publication.

14 The live birth statistics used to calculate the fetal and neonatal death rates have been adjusted (in accordance with the WHO definition of perinatal death) to exclude cases where the birthweight was known to be less than 500 grams. However, infant death rates are calculated using all live births registered, because figures are not available for infants who weigh less than 500 grams at birth, and who live for 28 days, but die before they are 1 year old.

DEATHS

15 Death statistics are presented on the basis of the State or Territory of usual residence of the deceased, regardless of where in Australia the death occurred and was registered.

16 Except for Tables 4.11 to 4.14, the statistics in this publication refer to the deaths registered during the year shown. There is usually an interval between the occurrence and registration of a death, and as a result some deaths are not registered in the year in which they occur. However, most deaths are registered within 6 months of occurrence. More than 99% of deaths occurring in one year have been registered by 30 June of the following year. Tables 4.11 to 4.14 show the number of deaths occurring in a particular year.

17 Life expectancy data prepared by the Australian Bureau of Statistics is included in Table 4.4 and summarises mortality expectation relating to the number of deaths registered in 1994. These tables are not constructed according to strict actuarial principles. Readers wishing to use life tables for actuarial purposes are advised to refer to the official Life Tables prepared by the Australian Government Actuary published in 1995.

MARRIAGES

18 The statistics in this publication refer to marriages registered by the Queensland Registrar-General during the years shown. There is usually an interval between the celebration and the registration of a marriage. As a result of the delay in registration, some marriages celebrated in one year are not registered until the following year. Under the *Australian Marriage Act 1961*, marriages may be celebrated by a minister of religion registered as an authorised celebrant, by a district registrar or by other persons authorised by the Attorney-General. Notice of the intended marriage must be given to the celebrant at least 1 calendar month, and within 6 calendar months before the marriage. A celebrant must transmit an official certificate of the marriage for registration to a District Registrar in the State in which the marriage took place.

19 From 20 June 1973, the minimum age at which a person may marry without parental consent has been 18 years. Further amendment to the Marriage Act in 1991 designated that persons between the age of 16 and 18

years may marry with parental or guardian consent and an order from a judge or magistrate. Any two persons under the age of 18 years may not marry each other.

DIVORCES

20 State of registration in Tables 1.1 and 6.1 to 6.6 is based on the location of the Family Court where the divorce is granted and registered. The number of divorces shown for Queensland is dependent on the number of cases heard by Family Law Courts in Queensland. As there is no residential requirement under Family Law, applicants may be resident anywhere in Australia.

21 The State of usual residence in Table 6.7 is the State or Territory of usual residence at the time of separation. This takes account of some Family Courts having responsibility for hearing divorce cases relating to other States or Territories. Another factor influencing the difference between State or Territory of usual residence and State or Territory of registration is that many applications are lodged at the nearest Family Court rather than the court in their State or Territory of usual residence at separation.

22 Under the *Family Law Act 1975*, the only ground on which a divorce may be granted is that of irretrievable breakdown of the marriage. This ground is established by the husband and wife having lived apart for 12 months or more, and there being no reasonable likelihood of reconciliation. Application for nullity of marriage under Family Law legislation must be on the ground that there was a failure to meet a legal requirement, such as that neither party be already lawfully married to another person. There is no provision for judicial separation under Family Law legislation.

23 Successful applicants for a divorce are initially granted a decree nisi. This becomes absolute after one month, unless it is rescinded or appealed against, or the Court is not satisfied that proper arrangements have been made for the welfare of any children involved.

24 The statistics shown in this publication are compiled by the ABS from information supplied by the Family Court in respect of each application which resulted in the granting of a decree nisi.

25 In the interpretation of data, it is important to bear in mind that the availability of judges, and complexity of the cases brought before them can affect the number of decrees granted or made absolute in any one year. A rise in numbers may reflect only the clearing of a backlog of cases from an earlier period.

GEOGRAPHIC BOUNDARIES

26 The classification of countries in this publication is based on the *Australian Standard Classification of Countries for Social Statistics* (ASCCSS). For more detailed information refer to the ABS publication *Australian Standard Classification of Countries for Social Statistics* (1269.0). Political developments in Europe, the Former USSR and Africa have resulted in a number of changes, and are detailed in Revision 1.01, 1.02 and 1.03 of the ASCCSS.

27 The boundaries used for Births and Deaths statistics are the Statistical Local Area boundaries at January 1994. The geographic boundaries for small area data are defined in the *Australian Standard Geographical Classification, Edition 2.4* (1216.0). For comparisons with previous years data, a list of statistical area changes which occurred between 1 July 1991 and 30 June 1994 is shown.

STATISTICAL AREA CHANGES, QUEENSLAND, EFFECTIVE FROM 1 JULY 1991 TO 30 JUNE 1994

1994	3,232,937	46,578	21,655	289	20,798	8,359

(a) Registered in Queensland. (b) Decrees absolute granted in Queensland. (c) Excluding full-blood Aboriginal people prior to 1961. (d) Excluding full-blood Aboriginal people prior to 1962. (e) Changed in 1971 from a census count basis to a usual resident basis. (f) Prior to 1978, events registered in Queensland. From 1978, figures relate to usual residents of Queensland, irrespective of the State in which the event was registered.

GLOSSARY

- Age-specific birth rates** *Age-specific birth rates* are the live births registered during the calendar year, according to age of mother, per 1,000 of the female estimated resident population of the same age as estimated for 30 June. For calculating these rates, births to mothers under 15 are included in the 15–19 female age group, and births to mothers aged 50 and over are included in the 45–49 female age group. Pro rata adjustment is made in respect of births for which the age of mother was not given.
- Age-specific death rates** The *age-specific death rate* is the number of deaths at a specified age per 1,000 of the estimated resident population of that age, at 30 June. The *infant mortality rate* is used for the age-specific rate for children under 1 year of age. Pro rata adjustment is made in respect of deaths for which the age of deceased was not given.
- Age-specific divorce rates** Two different populations are used in the calculation of *age-specific divorce rates*:
- Per 1,000 population as at 30 June — this relates the number of divorces, by age at decree made absolute, to the estimated mid-year resident population in specific age groups. Males under 18 and females under 16 are excluded from the population.
 - Per 1,000 married population as at 30 June — this relates the number of divorces by age at decree made absolute, to the married population in specific age groups. Those classified as permanently separated are included in the married population. Males and females under 15 are excluded from the population.
- Pro rata adjustment is made in respect of divorces where the age of divorcing parties was not given.
- Age-specific marriage rates** Two different populations are used in the calculation of *age-specific marriage rates*:
- Per 1,000 population as at 30 June — this relates the number of marriages, by age at marriage, to the estimated mid-year resident population in specific age groups. Males and females aged under 15 are excluded from the population.
 - Per 1,000 not currently married population as at 30 June — this relates the number of marriages, by age at marriage, to the not currently married population in specific age groups. Males and females aged under 15 are excluded from the population.
- Pro rata adjustment is made in respect of marriages where the age of the parties marrying was not given.
- Births** The term *births* relates to live births, i.e. the delivery of a child, irrespective of the duration of pregnancy, who after being born, breathes or shows any other evidence of life such as heartbeat.

Children	In divorce data, the term children refers to <i>unmarried children of the marriage</i> who were aged under 18 years at the time of application for divorce. Under the <i>Family Law Act 1975</i> , these may include (in certain cases) adopted and ex-nuptial children and children from a former marriage. Children who are married or aged 18 years or more are not subject to custody and guardianship orders and were excluded.
Confinements	<i>Confinements</i> are the number of pregnancies resulting in at least one live birth.
Crude birth rate	The <i>crude birth rate</i> is the number of live births registered during the calendar year, per 1,000 of estimated resident population at 30 June of that year. For years prior to 1994, the crude birth rate is based on the mean estimated resident population for the calendar year.
Crude death rate	The <i>crude death rate</i> is the number of deaths registered during the calendar year, per 1,000 of estimated resident population at 30 June of that year. For years prior to 1994, the crude death rate is based on the mean estimated resident population for the calendar year.
Crude divorce rate	The <i>crude divorce rate</i> is the number of decrees absolute granted per 1,000 of estimated population at 30 June of that year. For years prior to 1994, the crude divorce rate is based on the mean estimated resident population for the calendar year. (In the interpretation of this rate, it must be kept in mind that a large and varying proportion of the population used in the denominator is unmarried or below the minimum age of marriage.)
Crude marriage rate	The <i>crude marriage rate</i> is the number of marriages registered per 1,000 of estimated population at 30 June of that year. For years prior to 1994, the crude marriage rate is based on the mean estimated resident population for the calendar year.
Date of final separation	The <i>date of final separation</i> is that date, given on the application for divorce, from which the period of living apart is calculated for the purpose of establishing grounds for divorce. In determining the date of final separation, a single period of resumed cohabitation of less than 3 months may be ignored, provided the periods of living apart before and after resumed cohabitation amount to a total of 12 months or more.
Divorce	The term <i>divorce</i> , as used in this publication, refers to decrees absolute of dissolution of marriage.
Duration of marriage	<i>Duration of marriage</i> is the interval measured in completed years between the date of marriage and the date the marriage ended.
Estimated resident population	The <i>estimated resident population</i> (ERP) is the official ABS estimate of the Australian population. The ERP is based on the results of the latest population census and updated for subsequent births, deaths and overseas and interstate migration.

Rates shown in this publication for the years since 1974 are calculated using estimates of resident population. A description of the conceptual basis of the estimated resident population is contained in *Population Estimates: Concepts, Sources and Methods* (3228.0) published 23 June 1995. Revised population estimates are shown in the *Australian Demographic Statistics* (3101.0) (issued quarterly).

Female gross reproduction rate The *female gross reproduction rate* is the sum of the female age-specific fertility rates (i.e. the number of female live births according to age of mother per 1,000 females of that age) multiplied by 5 and divided by 1,000. It represents the average number of daughters that would be born per woman in a group of women all of whom survive to the end of the reproductive period and had born daughters at each age in accordance with the rates prevailing during that year. It is an indication of the extent to which the population would reproduce itself under these conditions, except that it does not allow for females who fail to survive to the end of the child-bearing period.

Female net reproduction rate The *female net reproduction rate* makes allowance for all women not surviving until the end of the reproductive period. It is obtained by multiplying the female age-specific birth rates by the proportion of survivors at corresponding ages in a life table, adding the products and dividing by 1,000. The female net reproduction rate represents the average number of daughters born to a group of women who are subjected to the fertility rates of that year and to the mortality rates of the life table.

First marriage rates *First marriage rates* are the number of males and females, of a certain age, marrying for the first time per 1,000 (mid-year) population of never married males and females of the same age.

Infant deaths An *infant death* is the death of a live-born child who died when less than 1 year old.

Infant mortality rates The *infant mortality rate* is the number of deaths of children under 1 year of age per 1,000 live births.

Life expectancy *Life expectancy* refers to the average number of additional years a person of a given age and sex might expect to live if the age-specific death rates of the given period continued throughout his or her lifetime.

Live birth The term *live birth* relates to the delivery of a child, irrespective of the duration of pregnancy, who after being born, breathes or shows any other evidence of life such as heart-beat.

Marital status Two separate concepts are measured by the ABS. These are *registered marital status* and *social marital status*. They are different personal characteristics and are independent variables with separate classifications. Marital status used in this publication is registered marital status which refers to formally registered marriages for which the partners hold a marriage certificate.

Never married refers to those persons who have never been in a registered marriage.

Median values The *median value (age, duration, interval)* is that value which divides the relevant population into two equal parts, half falling below this value, and half exceeding it. Where the value for a particular record was not stated, that record was excluded from the calculation.

Multiple birth A *multiple birth* is a confinement which results in two or more issue, at least one of which is live born.

Nuptial first confinements	<i>Nuptial first confinements</i> are the first confinements in the current marriage and therefore do not necessarily represent the woman's first ever confinement resulting in a live birth.
Nuptiality	Nuptiality relates to the relative marital status of parents. Confinements and births are identified as being nuptial where the father registered was married to the mother at the time of birth, or where the husband died during pregnancy. Confinements and children of Aboriginal mothers considered to be tribally married are classified as nuptial. Other confinements, and the children resulting from them are classified as ex-nuptial whether or not the parents were living together at the time of the birth and whether or not the child may subsequently have been legitimised or adopted.
Paternity-acknowledged births	<i>Paternity-acknowledged births</i> refer to ex-nuptial births where paternity was acknowledged by the child's father.
Previous births	<i>Previous births</i> refer to children born alive (which may be still living or now dead) to a mother prior to the registration of the current birth in the processing period. In some States legitimated and legally adopted children may also be included. Due to variation in data collection and processing methods across States and Territories, different definitions of the concept of previous births have been applied throughout this publication. <i>Previous births of the current marriage</i> relates to nuptial births to the same parents prior to the current nuptial confinement. <i>All previous births of the mother</i> includes all births prior to the current confinement, regardless of nuptiality and paternity. This information is important for measuring fertility.
Previous issue	See <i>previous births</i>
Re-marriage rates	<i>Re-marriage rates</i> are the number of re-marrying males and females, of a certain age, per 1,000 (mid-year) population of widowed or divorced males and females of the same age.
Sex ratio	The <i>sex ratio</i> relates to the number of male live events (births and deaths) per 100 female events.

- Standardised death rates** Two different methods are used in the calculation of *standardised death rates*:
- *Direct method* — expressed per 1,000 persons. It is the overall death rate that would have prevailed in a standard population if it had experienced at each age the death rates of the population being studied. The standard population used in these calculations is all persons in the 1991 Australian population. The *direct method* is used for State/Territory and Australia rates.
 - *Indirect method* — expressed per 1,000 persons. This is calculated by initially applying a standard set of age-specific rates (those for persons in the 1991 Australian population) to the population under study, and comparing the actual number of deaths with the number expected assuming that these standard death rates applied. The standardised death rate for the population under study is then calculated by multiplying the crude death rate of the standard population by the ratio of actual deaths to expected deaths. The *indirect method* is used in the calculation of standardised death rates for data at statistical local area level.

State/Territory of registration *State/Territory of registration* refers to the State/Territory in which the birth, death, or marriage was registered or the State/Territory in which the divorce was granted. (For further information about how this affects divorce see paragraphs 21 to 22 of the Explanatory Notes.)

State/Territory of usual residence State/Territory of usual residence refers to the State/Territory of usual residence of:

- the population (estimated resident population)
- the mother (birth collection)
- the deceased (death collection)
- the parties at separation (divorce collection). (For further information about how this affects divorce see paragraphs 21 to 22 of the Explanatory Notes.)

Usual residence data are not available for the marriage collection.

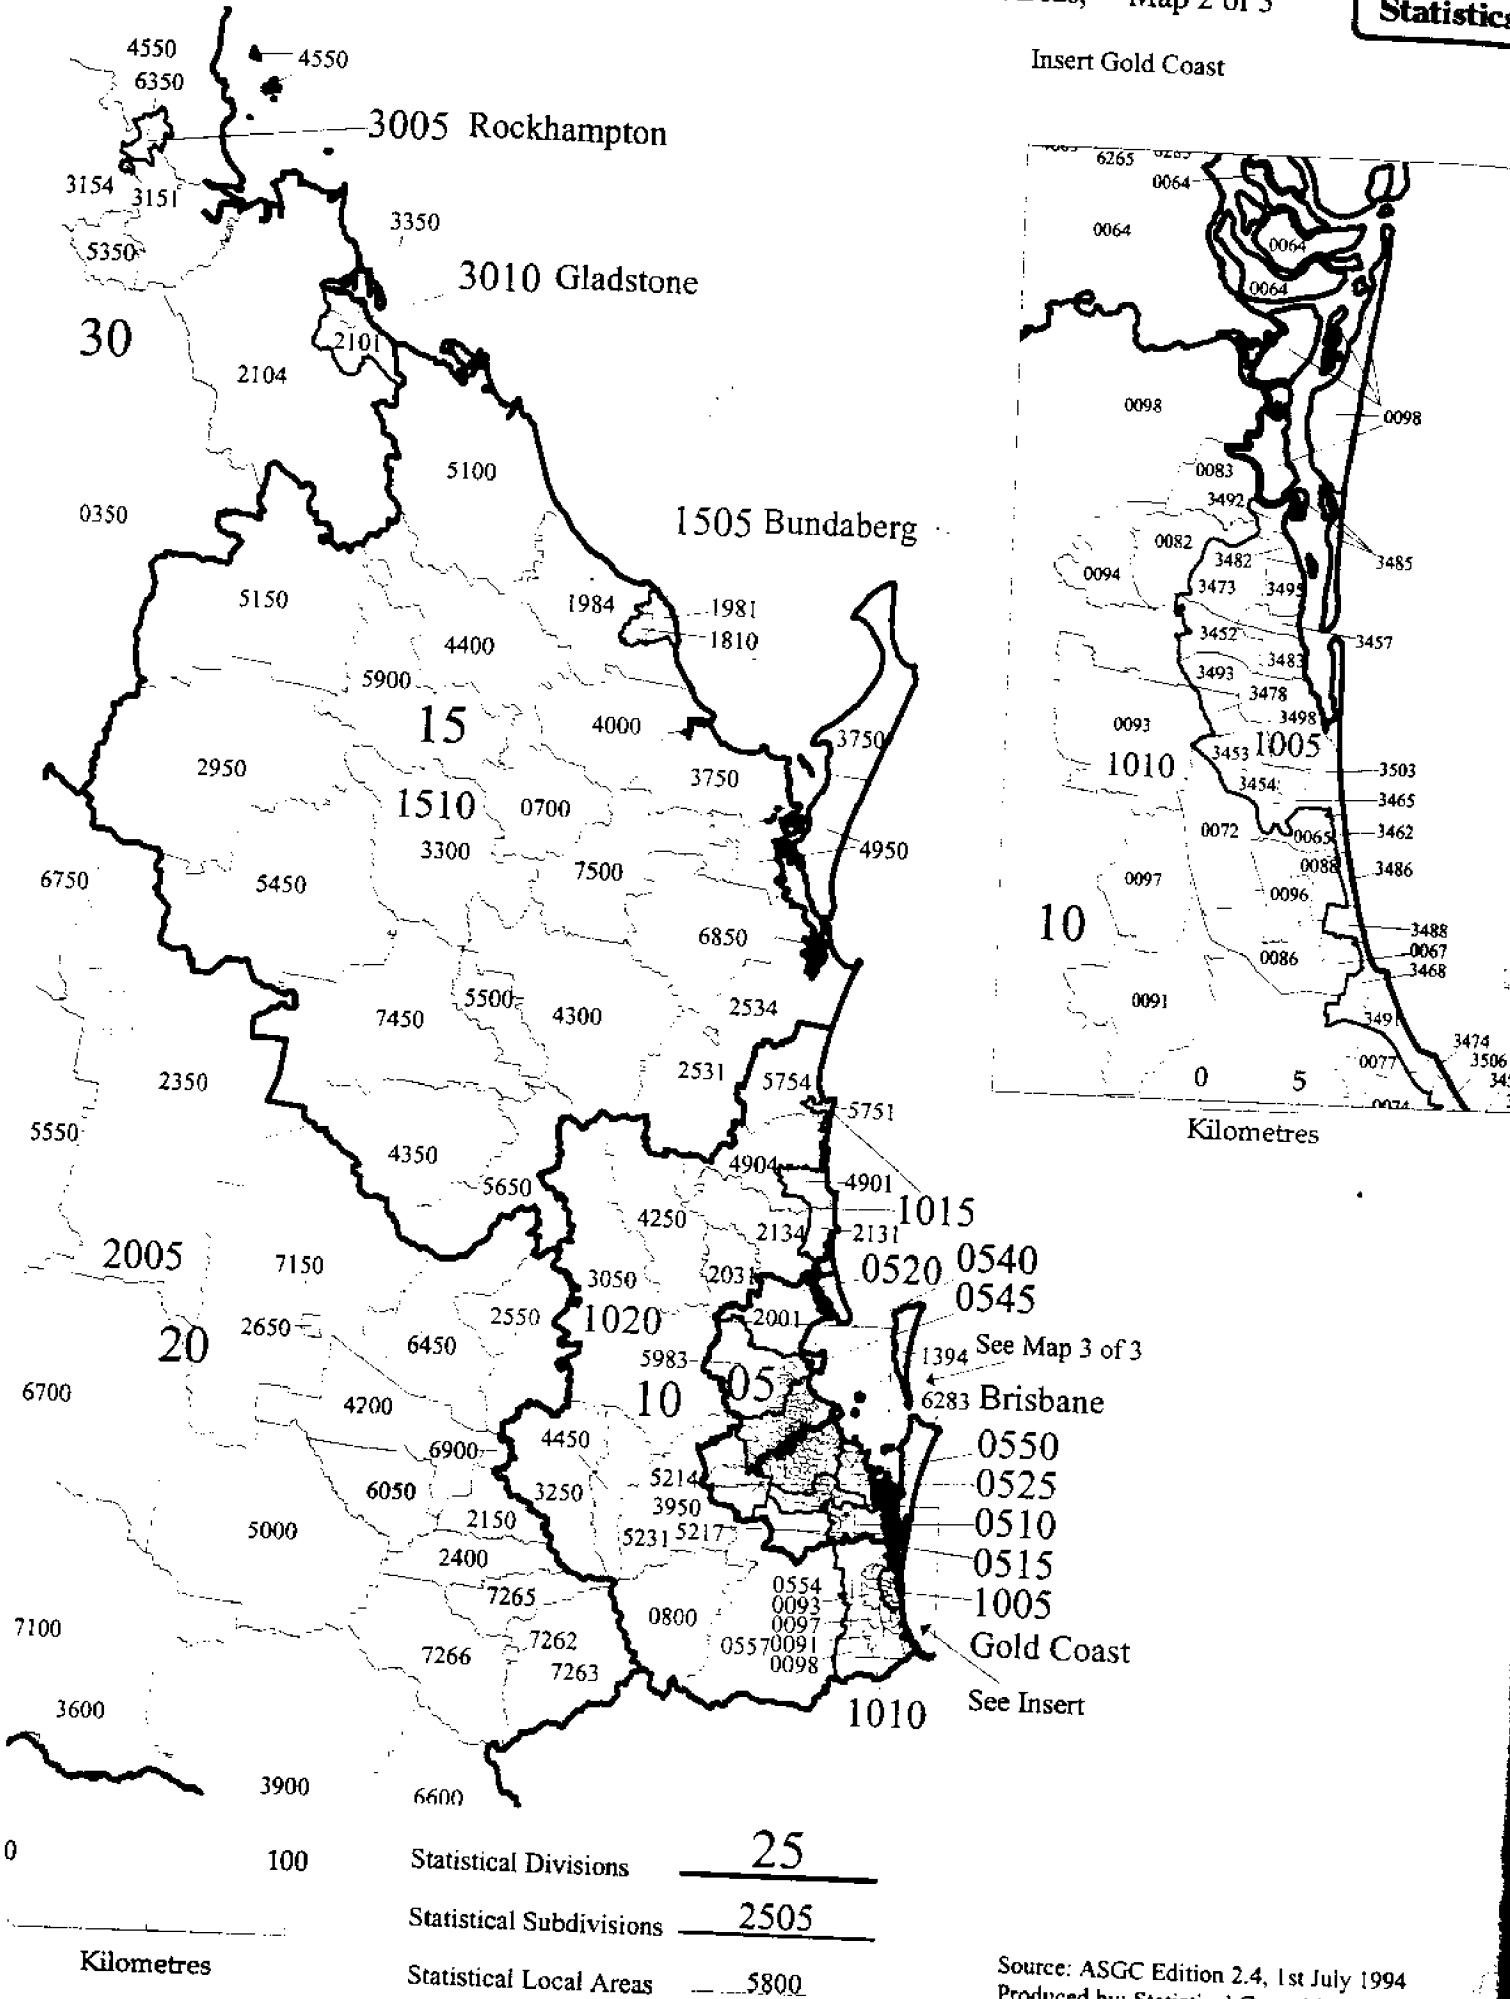

Total fertility rate The *total fertility rate* is obtained by summing the 5-year age-specific birth rates, multiplying by 5 and dividing by 1,000. It represents the number of children one woman would bear if the age-specific rates of the year shown continued during her child-bearing lifetime.
