APPENDIX	A Data items collected in Tasmania but not published	
	in the bulletin	55
	B Historical Table	56

PREFACE

This report brings together different sets of demographic indicators in a format uniform across all State offices of the Australian Bureau of Statistics.

The bulletin commences with a general summary of findings which includes comparisons with other States and Territories. This is followed by sections on population, births, deaths, marriages and divorces.

Vital statistics are presented on the basis of numbers registered, with the exception of a set of tables at the end of both the Births and the Deaths sections, where data are shown according to years of occurrence, rather than according to year of registration. In relation to occurrence tables, it should be noted that they are progressively subject to revision, as earlier events are registered in later registration periods.

A set of explanatory notes and a glossary of terms are to be found immediately before the appendices. The notes and glossary are aids to interpretation of the data, and should be read in conjunction with the tables.

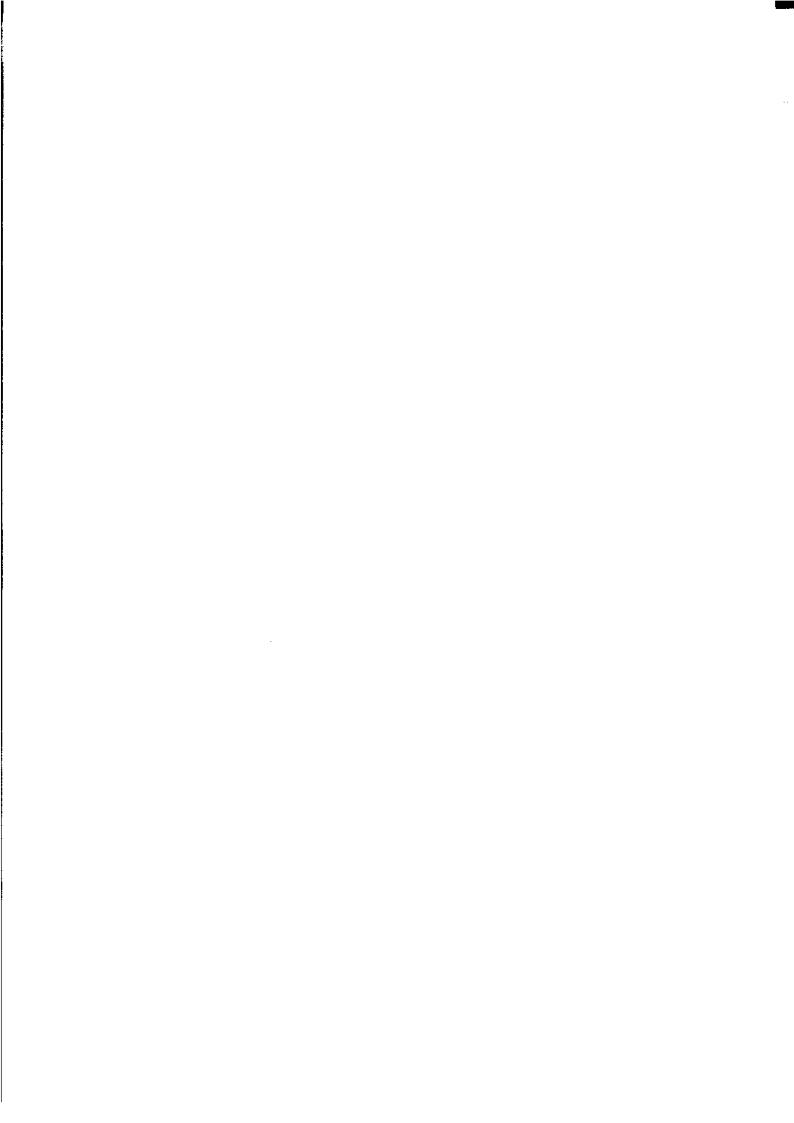

This bulletin provides information to the general user of population and vital statistics. More detailed enquiries concerning these statistics, and other unpublished data, may be made by telephoning Ray Smithurst on (002) 20 5985. For other enquiries, including copies of publications, telephone the Information Officer on (002) 20 5800.

The Tasmanian office of the Bureau is located on the Ground Floor, 175 Collins Street, Hobart.

The mailing address is GPO Box 66A, Hobart 7001.

Denis W. Rogers Acting Deputy Commonwealth Statistician

Australian Bureau of Statistics March 1996

SUMMARY OF FINDINGS

POPULATION

At 31 December 1994, Tasmania's estimated resident population was 472,800 persons, an increase of an estimated 600 persons, or 0.13%. This compared to an increase of 1,400 persons (0.29%) for the year ended December 1993. During the 10 years ended 31 December 1994 the population has increased by 7.4% from 440,100 in 1984. In the same period Tasmania's population growth peaked at 6.110 (1.33%) for the year ended 31 December 1990.

Natural increase

Natural increase was the largest positive component of population growth in Tasmania in 1994. Births exceeded deaths by 2,875 persons.

Interstate movement

More people left Tasmania for other States/Territories than made their homes in Tasmania in 1994. Interstate movement contributed negative growth of 403.6% to the total annual growth of Tasmanian population in 1994. This compares with the positive growth (15.4% of total growth) recorded 10 years ago.

Overseas migration

Overseas migration was a positive component of net population growth in 1994. An estimated 227 more people immigrated to Tasmania than left for overseas. This represented a net gain of 36.9% of the total growth. In 1984 net overseas migration made a positive contribution of 16.2%.

Age structure of the Tasmanian population As at 31 December 1994, the Tasmanian population comprised 234,400 males (49.6%) and 238,400 females (50.4%).

As at 30 June 1994, 30.78% (72.136) of all males and 28.94% (68,911) of all females were under 20 years of age. Conversely, 18.02% of all females and only 14.92% of all males were aged 60 and over. These figures reflect a higher ratio of male births and a longer life expectancy for females.

The number of males exceeds the number of females in the 0-24 and 40-59 age groups. Beyond 60 years, however, the longer life expectancy is clearly evident with significantly more females than males in the older age groups. At age 70, there are 14.0% more females than males, at age 80, 45% more and at age 90, 197% more.

Projected population

Population projections, based on 1991 data, vary according to different fertility and migration assumptions. Using the most optimistic assumptions, the Tasmanian population could be as high as 581,000 by the year 2041.

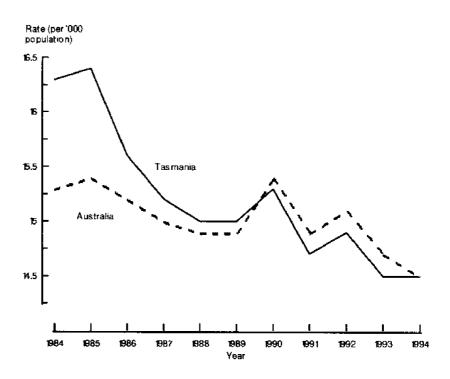

BIRTHS

In 1994, Tasmanian mothers gave birth to 6,844 children from 6,768 confinements. This was an increase of 9 from the 6,835 births recorded in 1993.

Birth rates

Tasmania's crude birth rate of 14.5 per thousand of mean population, the lowest on record, was the same as 1993 but is part of a long-term downward trend. It is also the same as the Australian crude birth rate.

BIRTH RATES, TASMANIA AND AUSTRALIA, 1984 TO 1994

Historically, Tasmanian birth rates have been higher than the overall rate for Australia, but over recent years the results reveal a trend in which the Tasmanian rate has been falling faster than the Australian equivalent. This has resulted in the Tasmanian rate being lower than the Australian rate since 1990.

Medians

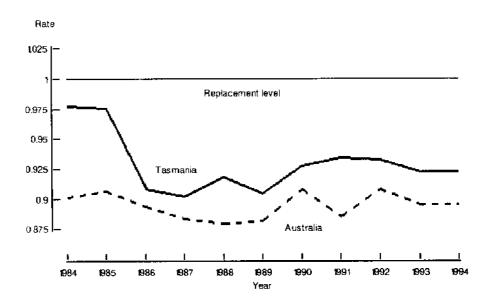

The median age of the mother for all confinements was 28.1 years in 1994. The mother's median age for nuptial confinements was 29.3 years, whilst for the father it was 31.7 years. The median age of the mother for ex-nuptial confinements was 23.8 years.

The median duration of marriage for nuptial first confinements was 2.5 years, compared to 2.4 years for 1993. The median age of the mother for nuptial first confinements was 28.0 years.

Fertility

The female net reproduction rate (the extent to which the population can reproduce itself over time) for Tasmania in 1994 was 0.94, lower than the 1984 rate of 0.98. The net reproduction rate fell below the replacement level in 1979 and has remained below that level ever since.

NET REPRODUCTION RATE, TASMANIA AND AUSTRALIA, 1984 TO 1994

Between 1984 and 1994, age-specific birth rates decreased in all age-specified groups up to the age of 30. The birth rate for females in the 30-34 year age group increased by 28.7%, whilst the rate for the 35-39 year age group increased by 37.8%. In 1994 females in the 25-29 year age group continued to be the most fertile with 138.6 births per 1,000, a slight fall on the figure of 140 recorded in 1993.

Confinements

From the 6,768 confinements in 1994, 6,692 (98.9%) were single births. Of the 4,661 nuptial confinements 2,022, or 43.4%, produced the first child of the marriage, whilst only 7.9% (370) resulted in a fourth or subsequent child.

Ex-nuptial births

The number of ex-nuptial births fell by 36, to 2,119 in 1994, from 2,107 ex-nuptial confinements. Nuptial births increased by 45 to 4,725, from 4,661 nuptial confinements.

Ex-nuptial births accounted for 31.0% of all births in 1994, down 0.5% on 1993, and a small change in the upward trend in evidence since 1961. Of all ex-nuptial confinements, 57.4% were to females aged less than 25 years, an increase from the 56.8% recorded in 1993, whilst 20.0% of confinements were to mothers aged 30 years or over, a decrease on the 20.7% recorded in 1993.

In 1984, 62.2% of ex-nuptial births had paternity acknowledged but by 1994 this had increased to 85.3% of births. While the number of ex-nuptial births grew by nearly 100% between 1984 and 1994 the absolute number of cases where paternity was not acknowledged actually fell slightly over the same period.

DEATHS

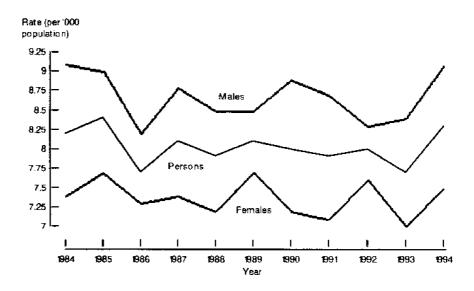

In 1994, a record number of 3,911 deaths was recorded in Tasmania, 274 more than in 1993. Male deaths accounted for 2,136 of the total whilst female deaths numbered 1,775, a ratio of 120 male deaths to every 100 female deaths.

There were 171 more male deaths in 1994, representing an 8.7% increase on 1993. Female deaths increased by 103 or 6.2%, during the same period.

Death rates

The crude death rate for 1994 was 8.3 deaths per 1,000 of mean population, higher than the 1993 figure of 7.7 and representing the highest crude death rate of any State or Territory in Australia. The Australian crude death rate for 1994 was 7.1 deaths per 1,000 of mean population.

DEATH RATES, TASMANIA, 1984 TO 1994

The crude death rate for males increased from 8.4 per 1,000 of mean population in 1993 to 9.1 in 1994. The female crude death rate increased over the same period from 7.0 per 1,000 in 1993 to 7.5 in 1994.

Medians

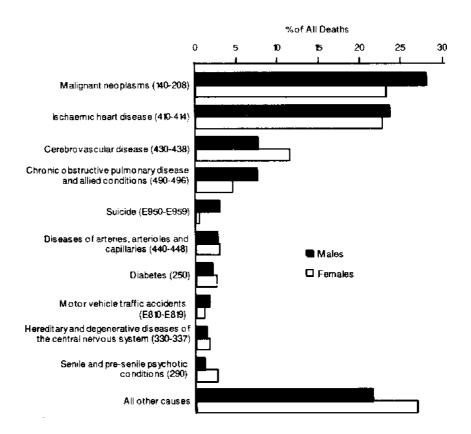

The median age at death for Tasmanian males in 1994 was 74 years, only marginally higher than the Australian median of 73.5 years. The median age at death for Tasmanian females was 79.3 years, lower than the Australian median of 80.2 years and significantly higher than that of their male counterparts.

Causes of death

Ischaemic heart disease and malignant neoplasms (cancer) were the major causes of death for Tasmanians in 1994, accounting for 1,009 and 908 deaths respectively. Malignant neoplasms were responsible for 28.0% of male deaths and 23.2% of female deaths. Ischaemic heart disease brought about a further 23.6% of male deaths and 22.7% of female deaths.

Diseases of the circulatory system brought about the deaths of 1,655 Tasmanians in 1994, accounting for 42.3 % of recorded deaths during that year. Some 40.0% of male deaths (854) and 45.1% of female deaths (801) were attributable to these diseases.

MAJOR CAUSES OF DEATH, TASMANIA, 1994

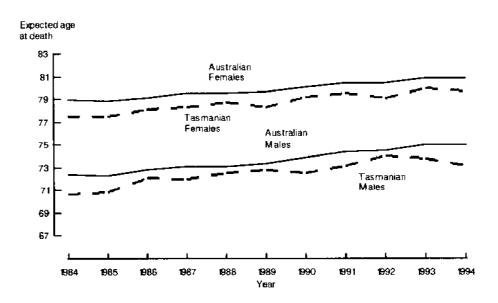

Respiratory diseases accounted for 351 deaths or 9.0% of all deaths. Deaths from cerebrovascular disease (stroke) were more common for females than for males. Some 11.5% (205) of female deaths resulted from this cause compared to 7.6% (163) of male deaths. Conversely, male deaths (167 or 7.8%) were more likely to occur from accidents, poisoning and violence than female deaths (60 or 3.4%).

Life expectancy

Based on the mortality conditions prevailing in Tasmania in 1994, the life expectancy at birth was 73.2 years for males and 79.8 years for females. Australian life expectancy at birth for 1994 was 75 years for males and 80.9 years for females.

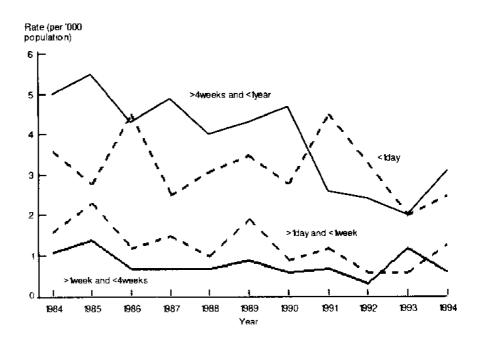

LIFE EXPECTANCY, TASMANIA AND AUSTRALIA, 1984 TO 1994

Infant mortality

In 1994 there were 51 infant deaths (30 males and 21 females), an increase of 11 (27.5%) from the 1993 total. The male infant mortality rate was 8.6 per 1,000 live births, while for females it was 6.3 per 1,000 live births. A perceptible downward trend in Tasmanian infant mortality is evident over the past 20 years.

INFANT DEATH RATES, TASMANIA, 1984 TO 1994

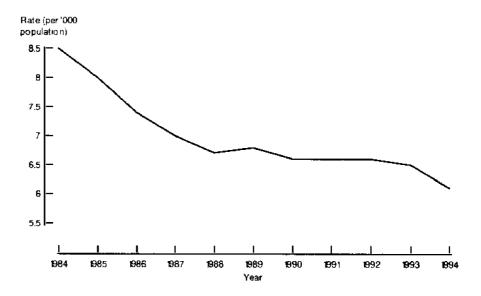

MARRIAGES

There were 2,887 marriages registered in Tasmania during 1994, the lowest since 1994. This was a decrease of 168 (5.5%) on the number of 1993 registrations.

Marriage rates

Tasmania's crude marriage rate for 1994 was 6.1 per 1,000 of mean population, slightly less than the rate recorded for 1993 of 6.5 but much less than the rate for 1984 of 8.5. The rate for 1994 is the lowest recorded since 1896.

MARRIAGE RATES, TASMANIA, 1984 TO 1994

Medians

In 1994 the median age of bridegrooms was 28.8 years and that of brides was 26.2 years, both higher than the 1993 figures of 28.6 and 26.0 years respectively.

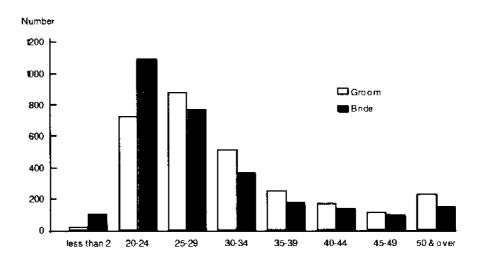

Median age at marriage varies significantly according to previous marital status. The median ages of grooms and brides who had never previously been married was 26.5 years for males and 24.5 years for females respectively, a marginal increase over the 1993 median ages of brides but the same for grooms.

For divorcees remarrying, the median age at remarriage was much higher, being 40.4 years for grooms and 37.8 years for brides.

Ages of brides and grooms

Brides outnumber grooms significantly in the under 20 and 20-24 year age groups (105 and 1.091 brides compared to 22 and 721 grooms respectively). These two age groups account for 41.4 % of brides, yet only 25.7 % of grooms. The number of women marrying under 20 years decreased from 135 in 1993 to 105 in 1994. The number of grooms in this age group decreased from 27 in 1993 to 22 in 1994.

AGE GROUP OF BRIDES AND GROOMS, TASMANIA, 1994

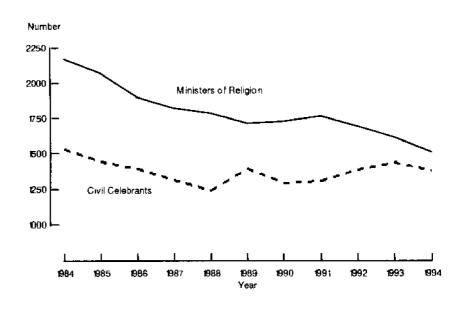

Previous marital status

Some 27.3% of bridegrooms and 25.9% of brides who married in 1994 had previously been married. Overall, 36.3% of marriages in 1994 involved one or both partners who had previously been married (93.8% of these involved at least one partner who had previously been divorced). Re-marriage of both the bride and groom accounted for 16.9% of of all marriages in 1994.

Type of celebrant

Ministers of religion performed 52.2% of marriage ceremonies in 1994, compared to 52.9% in 1993.

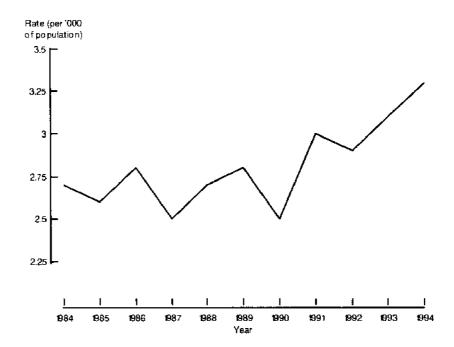

MARRIAGES BY TYPE OF CELEBRANT, TASMANIA, 1984 TO 1994

There were 1,544 divorces registered in Tasmania in 1994, the highest number since 1976 when the Family Law Act commenced, compared with 1,465 registered in 1993.

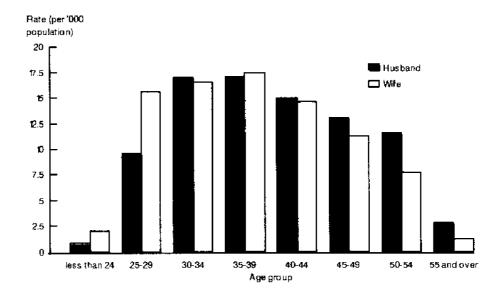

Divorce rates The crude divorce rate of 3.3 divorces registered for every 1,000 of population is the highest for the last ten years.

CRUDE DIVORCE RATES, TASMANIA, 1984 TO 1994

Age distribution The highest divorce rate for both males and females was in the 35-39 year age group in 1994. The male rate for this age group was 17.1 per 1,000 of population while the female rate was 17.5.

AGE SPECIFIC DIVORCE RATES, TASMANIA, 1994

Diovorces involving

The proportion of divorces involving children has fluctuated in recent years being 60.8% of all divorces registered in 1994.

Previous marital status

The proportion of previously divorced husbands among divorcees was 16.8% in 1994, compared to the 18.2% recorded in 1993. Previously divorced women made up 15.9% of divorcees in 1994, a decrease on the 1993 figure of 17.8%. In 1994, 82.4% of husbands and 82.7% of wives were divorcing from their first marriage. In 1993 these figures were 80.7 and 80.6 respectively.

Applicants

Joint applications for divorce are becoming more common with 10.4% in 1994 compared with 5.5% in 1989.

⁽a) The boundaries used in the compilation of these statistics are those in existence at 30 June 1994. (b) As at 30 June 1994. (c) The average total fertility rate over the 3 years 1992 to 1994. (d) The average indirect standardised death rate over the 3 years 1992 to 1994. (e) Excludes usual residence overseas, no fixed abode and Tasmania undefined. NOTE: Care should be exercised when interpreting total fertility rates and indirect standardised death rates in those instances where small numbers have been recorded for estimated population, births or deaths.

⁽a) For definitions used see the Glossary of Terms. (b) From previous year. (c) Final figures for births and deaths may differ slightly from those used to compile natural increase for population estimates, which are compiled at a preliminary stage. (d) Includes an estimate of those persons who changed category from short-term visitor to long-term visitor or resident of Australia. (e) Percentage increase over the previous year's estimated resident population. (f) Statistics have been rounded to the nearest 100 for short-term movement, and to the nearest 10 for permanent and long-term movement.

⁽a) The average number of years of life remaining to persons who reach a specified age and are subject to the mortality conditions of the years shown. The populations used in the calculation of these figures are those based on the concept of 'estimated resident population', as defined in the Glossary of Terms. All figures are based on Annual Life Tables calculated by the Australian Bureau of Statistics. These tables are not constructed according to strict actuarial principles, and consequently, it is recommended that they not be used for actuarial purposes. Those wishing to use life tables for actuarial purposes are advised to refer to the official Life Tables prepared by the Australian Government Actuary, published in 1995.

EXPLANATORY NOTES

INTRODUCTION

- 1 This publication brings together a number of closely related series of statistics on demography including Births, Deaths, Marriages and Divorces. It also includes some information on numbers of persons counted at the 1991 Census and on estimated resident population and migration. For details of publication of other data related to demography, readers should refer to the section on Related Publications, at the end of these Notes.
- 2 A Glossary of Terms follows the Explanatory Notes. More detailed definitions are given in more specialised publications, a list of which is given in the section on Related Publications.
- **3** This section consists of population projections, and estimates of the resident population, with information on overseas arrivals and departures and net interstate migration.
- 4 Some of the data in this publication may differ from that found in the *Australian Demographic Statistics Quarterly* (3101.0) because of the necessity of using preliminary births and deaths figures in that publication. Population estimate figures should not be assumed to be accurate to the last digit shown.
- **5** Estimates of the Tasmanian population are made to varying degrees of detail throughout the year, and this publication has used the most up to date estimates available for each particular table.
- 6 Population projections are published twice in each intercensal period. The latest projections are based on the results of the 1991 Census of Population and Housing, and relate to the period from 1996 to 2041.
- 7 The population projections are not intended as predictions or forecasts; they are illustrations of growth and change in the population which would occur if certain specified assumptions about future demographic trends were realised. While the selection of the assumptions is based on analysis of past demographic trends, both in Australia and overseas, and an assessment of their likely future movement, there is no certainty that any of the assumptions will be realised.
- **8** Four alternative projections have been provided in recognition of the uncertainty of future movements in demographic trends, and to give users a range of options.
- **9** The mortality assumptions are the same for all series, while for fertility, a higher rate is assumed for series A and B. For the migration assumptions, Series A, B, and C have a higher level of overseas migration, while Series B and C have a higher level of interstate migration.
- **10** Full details of the projection assumptions and results are available in *Projections of the Populations of Australia, States and Territories, 1993 to 2041* (3222.0).
- 11 Data on overseas arrivals and departures relate to the number of movements of travellers rather than to the number of travellers. However, the statistics exclude the movements of operational air crew and ships' crew, transit passengers who pass through Australia but are not cleared for entry, and passengers on pleasure cruises commencing and finishing in Australia aboard ships not engaged on regular voyages. Estimates of transit sea passengers are no longer available.
- **12** Data on interstate migration has been derived from aggregated statistical information on interstate changes of addresses advised to the Health Insurance Commission in the process of administering Medicare. The ABS

POPULATION

MIGRATION

adjusts the Health Insurance Commission data to make allowance for those persons who do not inform the Commission of changed addresses. Further details are shown in the Explanatory Notes to *Australian Demographic Statistics* (3101.0).

BIRTHS

- **13** Birth statistics are presented on the basis of the State or Territory of usual residence of the mother, regardless of where in Australia the birth occurred or was registered.
- **14** Births to mothers usually resident in Australia which took place overseas are excluded. Births to mothers usually resident overseas which occurred in Australia are included in the State or Territory where the birth occurred.
- 15 Except for Tables 3.8 to 3.10, the statistics in this publication refer to births registered during the calendar year shown. Tables 3.8 to 3.10 refer to births which occurred in the years shown, the data being drawn from registrations up to 30 June 1994. There is usually an interval between the occurrence and registration of a birth, and some births occurring in one year are not registered until the following year, or even later. However, most births are registered shortly after they occur, and more than 99 per cent of births occurring in one year are registered by 30 June of the following year.
- **16** Users are advised that data on stillbirths (fetal deaths) may be found in summary form in Section 4 (Deaths) of the publication.
- 17 The live birth statistics used to calculate the fetal and neonatal death rates have been adjusted (in accordance with the WHO definition of perinatal deaths) to exclude cases where the birthweight was known to be less than 500 grams. However, infant death rates are calculated using all live births registered, because figures are not available for infants who weighed less than 500 grams at birth, and who live for 28 days, but die before they are one year old.
- **18** In this publication death statistics are presented on the basis of the State or Territory of usual residence of the deceased, regardless of where in Australia the death occurred and was registered.
- 19 Except for tables 4.11 to 4.14, the death statistics in this publication refer to the deaths registered during the year shown. Tables 4.11 to 4.14 refer to deaths occurring in the years shown, with data drawn from registrations up to 30 June 1994. There is usually an interval between the occurrence and registration of a death, and some deaths occurring in one year are not registered until the following year, or even later. However, most deaths are registered shortly after they occur, and more than 99 per cent of deaths occurring in one year are registered by 30 June of the following year.
- **20** The statistics in this publication refer to marriages registered by the Tasmanian Registrar during the years shown. There is usually an interval of at least some days between the celebration and the registration of a marriage. As a result of the delay in registration, some marriages celebrated in one year are not registered until the following year.
- **21** Under the *Australian Marriage Act 1961*, marriages may be celebrated by a minister of religion registered as an authorised celebrant by a district registrar or by other persons authorised by the Attorney-General. Notice of the intended marriage must be given to the celebrant at least one calendar month, and within 6 calendar months before the marriage. A celebrant must transmit an official certificate of the marriage for registration to a District Registrar in the State in which the marriage took place.
- 22 From 20 June 1973, the minimum age at which a person may marry without parental consent has been 18 years. Further amendment to the Marriage Act in 1991 designated the minimum age at which persons are

DEATHS

MARRIAGES

legally free to marry to be 18 years. Persons between the ages of 16 and 18 years may marry with parental or guardian assent and an order from a judge or magistrate. Any two persons under the age of 18 years may not marry each other.

DIVORCES

- 23 Under the Family Law Act 1975, the only ground on which a divorce may be granted is that of irretrievable breakdown of the marriage. This ground is established by the husband and wife having lived apart for 12 months or more, and there being no reasonable likelihood of reconciliation. Application for nullity of marriage under Family Law legislation must be on the ground that there was a failure to meet a legal requirement, such as that neither party be already lawfully married to another person. There is no provision for judicial separation under Family Law legislation.
- **24** Successful applicants for a divorce are initially granted a *decree nisi*. This becomes absolute after one month, unless it is rescinded or appealed against, or the Court is not satisfied that proper arrangements have been made for the welfare of any children involved.
- 25 The statistics shown in this publication are compiled by the ABS from Statistical Reports completed by the Family Court in respect of each application which resulted in the granting of a decree absolute.
- **26** In the interpretation of data, it is important to bear in mind that the availability of judges, and complexity of the cases brought before them can affect the number of decrees granted or made absolute in any one year. A rise in numbers may reflect only the clearing of a backlog of cases from an earlier period.
- 27 The number of divorces shown for Tasmania is dependent on the number of cases heard by Family Law Courts in Tasmania. As there is no residential requirement under Family Law, applicants may be resident anywhere in Australia. Caution should therefore be exercised in interpreting the rates shown in this bulletin.

STATISTICAL GEOGRAPHY

- **28** The statistical geography used in this publication is based on the *Australian Standard Geographical Classification (ASGC)*, *Edition 2.4* (1216.0). Users should refer to the *ASGC* for further information.
- 29 The boundaries used for Births and Deaths statistics are the Statistical Local Area boundaries at 1 July 1994.
- **30** The country of birth tables use the Australian Standard Classification of Countries (ASCCSS) which was developed for Australian users. In this classification, neighbouring countries are grouped into progressively broader geographic areas on the basis of social, cultural, political and economic similarities. The base units of ASCCSS are broadly compatible with those of the United Nations birthplace classification. ASCCSS has been applied to Demographic statistics since January 1990.
- **31** For more detailed information on the classification of countries, refer to the ABS publication *Australian Standard Classification of Countries for Social Statistics* (1269.0).

RELATED PUBLICATIONS

32 This format for the publication of demographic statistics is repeated, with minor amendments, across all States. Each State Demography bulletin has a catalogue number of 3311 and a suffixed number appropriate to the State of publication.

33 Other ABS publications which may be of interest include:

Australian Demographic Statistics Quarterly, (3101.0)

Estimated Resident Population by Sex and Age; States and Territories of Australia (3201.0)

Population Statistics, Tasmania (3204.6)

Projections of the Populations of Australia, States and Territories, 1993 to 2041 (3222.0)

Overseas Arrivals and Departures (3404.0)

Births, Australia (3301.0)

Deaths, Australia (3302.0)

Perinatal Deaths, Australia (3304.0)

Causes of Death, Australia (3303.0)

Marriages and Divorces, Australia (3306.0)

Migration, Australia (3412.0)

Demography, (State/Territory specific publications) (3311.1 to 3311.8)

Australian Demographic Trends, 1986 (3102.0)

Tasmania at a Glance (1314.6)

ADDITIONAL STATISTICS AND SERVICES AVAILABLE

- **34** In most cases, the ABS can also make available information which is not published. This information may be made available in one or more of the following forms: microfiche, photocopy, data tape, floppy disk, computer printout, or clerically extracted tabulation.
- **35** Current publications produced by the ABS are listed in the *Catalogue of Publications and Products*, *Australia* (1101.0). The ABS also issues, on Tuesdays and Fridays, a *Publications Advice* (1105.0) which lists publications to be released in the next few days. These publications are available from any ABS office.
- **36** Life tables prepared by the Australian Bureau of Statistics are included in Table 4.4, and summarise mortality expectation relating to the number of deaths registered in the years shown. These tables are not constructed according to strict actuarial principles. Readers wishing to use life tables for actuarial purposes are advised to refer to the Official Australian Life Tables 1990-92, prepared by the Australian Government Actuary. These were released in 1995, and copies are available from the AGPS Bookshop in each State capital city.

GLOSSARY

Age specific birth rates

Age specific birth rates are the live births registered during the calendar year, according to age of mother, per 1,000 of the female estimated resident population of the same age as estimated for 30 June. For the purposes of calculating these rates, births to mothers under 15 are included in the 15-19 year age group, and births to mothers aged 50 and over are included in the 45-49 year age group. pro rata adjustment is made in respect of births for which age of mother is not given.

Age specific death rates

The age specific death rate is the number of deaths at a specified age per 1,000 of the population of that age, at 30 June. Pro rata adjustment is made in respect of deaths for which the age of deceased is not given.

Age specific divorce rates

Two different populations are used in the calculation of age specific divorce rates:

- Per 1,000 population as at 30 June this relates the number of divorced parties, by age at decree made absolute, to the estimated mid-year resident population in specific age groups. Males under 18 and females under 15 are excluded from the population.
- Per 1,000 married population as at 30 June this relates the number of divorces, by age at decree made absolute, to the married population in specific age groups. Those classified as permanently separated are included in the married population. Males and females under 15 are excluded from the population.

Pro rata adjustment is made in respect of divorce where the age of divorcing parties is not given.

Age specific marriage rates

Two different populations are used in the calculation of age specific marriage rates:

- Per 1,000 population as at 30 June this relates the number of marriages, by age at marriage, to the estimated mid-year resident population in specific age groups. Males and females aged under 15 are excluded from the population.
- Per 1,000 not currently married population as at 30 June this relates the number of marriages, by age at marriage, to the not currently married population in specific age groups. Those classified as permanently separated are included in the married population. Males and females under 15 are excluded from the population.

Pro rata adjustment is made in respect of divorce where the age of the parties marrying is not given.

Birth, live birth and multiple births

A birth, unless otherwise stated, is a live birth, i.e., the delivery, irrespective of the duration of pregnancy, of a child who, after being born, breathes or shows any other evidence of life such as a heartbeat. A multiple birth is a confinement (see below) which results in two or more births, at least one of which is liveborn.

Category of movement

Category of movement in overseas arrivals and departures is primarily determined by the traveller's own selection of his or her category on the passenger card. This selection is accepted, provided it is consistent with other information on the card.

Children

In divorce data children are unmarried children of the marriage who were aged under eighteen years at the time of application for divorce. Under the Family Law Act 1975, these may include (in certain cases) adopted and ex-nuptial and children from a former marriage. Children who are married or aged 18 years or more are not subject to custody and guardianship orders, and are excluded. In the marriage collection, the term children must not be confused with previous issue, used in the births collection (see below).

Confinement

A confinement is a pregnancy which results in at least one live birth.

Crude birth rate

The crude birth rate is the number of live births registered per 1,000 of the estimated resident population at 30 June of that year. For years prior to 1994, the crude birth rate is based on the mean estimated resident population for the calendar year.

Crude death rate

The crude death rate is the number of deaths registered per 1,000 of the estimated resident population at 30 June of that year. For years prior to 1994, the crude death rate is based on the mean estimated resident population for the calendar year.

Crude divorce rate

The crude divorce rate is the number of decrees absolute granted per 1,000 of estimated resident population at 30 June of that year. For years prior to 1994, the crude divorce rate is based on the mean estimated resident population for the calendar year. (In the interpretation of this rate, it must be kept in mind that a large and varying proportion of the population used in the denominator is unmarried or below the minimum age of marriage.)

Crude marriage rate

The crude marriage rate is the number of marriages registered per 1,000 estimated resident population at 30 June of that year. For years prior to 1994, the crude marriage rate is based on the mean estimated resident population for the calendar year.

Date of final separation

Date of final separation is the date, given on the application for divorce, from which the period of living apart is calculated for the purpose of establishing the grounds for divorce. In determining the date of final separation, a single period of resumed cohabitation of less than 3 months may be ignored, provided the periods of living apart before and after resumed cohabitation amount to a total of 12 months or more.

Divorce

The term divorce, as used in this publication, refers to decrees absolute of dissolution of marriage.

Duration of marriage

Duration of marriage is the interval measured in completed years between the date of marriage and the date the marriage ended.

Estimated resident population

The estimated resident population (ERP) is the official ABS estimate of the Australian population. The ERP is based on the results of the latest population census and updated for subsequent births, deaths and overseas and interstate migration.

Rates shown in this publication for the years since 1974 are calculated using estimates of resident population. A description of the conceptual basis of the estimated resident population is contained in Population Estimates: Concepts, Sources and Methods (3228.0) published 23 June 1995. Revised population estimates are shown in Australian Demographic Statistics (3101.0) (issued quarterly).

Female gross reproduction rate

The female gross reproduction rate is the sum of the female age-specific fertility rates (i.e. the number of female live births according to age of mother per 1,000 females of that age) multiplied by 5 and divided by 1,000. It represents the average number of daughters that would be born per woman in a group of women all of whom survive to the end of the reproductive period and had born daughters at each age in accordance with the rates prevailing during that year. It is an indication of the extent to which the population would reproduce itself under these conditions, except that it does not allow for females who fail to survive to the end of the child-bearing period.

Female net reproduction rate

The female net reproduction rate makes allowance for all women not surviving until the end of the reproductive period. It is obtained by multiplying the female age-specific birth rates by the proportion of survivors at corresponding ages in a life table, adding the products and dividing by 1,000. The female net reproduction rate represents the average number of daughters born to a group of women who are subjected to the fertility rates of that year and to the mortality rates of the life table.

Fetal deaths

Fetal deaths relate to the delivery of a child, weighing at least 500 grams at delivery (or, when birthweight is unavailable, of at least 22 weeks gestation) who did not, at any time after delivery, breathe or show any other evidence of life such as a heartbeat.

Fetal death rate

The fetal death rate is the number of fetal deaths per 1,000 live births of babies who weighed at least 500 grams at birth (or, when birthweight is unavailable, of at least 22 weeks gestation) plus fetal deaths.

First marriage rate

First marriage rates are the numbers of males and females, of a certain age, marrying for the first time per 1,000 (mid-year) population of never married males and females of the same age.

Infant death

An infant death is the death of a live-born child who died when less than one year old.

Infant mortality rate

The infant mortality rate is the number of deaths of children under 1 year of age per 1,000 live births.

Interstate migration

Net estimated interstate migration is derived from unidentified information on interstate changes of address advised to the Health Insurance Commission.

Life expectancy

Life expectancy refers to the average number of additional years a person of a given age and sex might expect to live if the age-specific death rates of the given years continued throughout his or her lifetime.

Live birth

The term live birth relates to the delivery of a child, irrespective of the duration of pregnancy, who after being born, breathes or shows any other evidence of life such as a heartbeat.

Long term arrivals

Long term arrivals comprise overseas visitors (except those who hold migrant visas) who intend to stay in Australia for 12 months or more, and Australian residents returning after an absence of 12 months or more overseas.

Long term departures

Long term departures comprise Australian residents who intend to stay abroad for 12 months or more, and overseas visitors departing who stayed 12 months or more in Australia.

Marital status

Two separate concepts of marital status are measured by the ABS. These are registered marital status and social marital status. They are different personal characteristics and are independent variables with separate classifications. Marital status used in this publication is registered marital status which refers to formally registered marriages for which the partners hold a marriage certificate.

Median

The median value (age, duration or interval) is that value which divides the relevant population into two equal parts, half falling below this value, and half exceeding it. Where the value for a particular record has not been stated, that record is excluded from the calculation.

Multiple birth

A multiple birth is a confinement which results in two or more issue, at least one of which is liveborn.

Natural increase

Natural increase is the excess of births over deaths registered in the recording year.

Neonatal death

Neonatal deaths are deaths of babies who weighed at least 500 grams at birth (or when birthweight is unavailable, of at least 22 weeks gestation) and who died within 28 days of birth.

Neonatal death rate

The neonatal death rate is the number of neonatal deaths per 1,000 live births of babies who weighed at least 500 grams at birth, (or, when birthweight is unavailable, of at least 22 weeks' gestation).

Never married

Never married refers to those persons who have never validly been married.

Nuptial first confinements

Nuptial first confinements are the first confinements in the current marriage and therefore do not necessarily represent the woman's first ever confinement resulting in a live birth.

Nuptiality

Nuptiality relates to the relative marital status of parents in the Births collection. Confinements and births are identified as being nuptial where the father registered was married to the mother at the time of the birth, or where the husband died during the pregnancy. Other confinements, and the children resulting from them, are classified as ex-nuptial whether or not the parents were living together at the time of the birth, and whether or not the child may subsequently have been legitimised or adopted.

Paternity-acknowledged

Paternity-acknowledged births refer to ex-nuptial births where paternity was acknowledged by the child's father.

Perinatal death

A perinatal death is either a fetal or a neonatal death, as elsewhere defined.

Perinatal death rate

The perinatal death rate is the number of perinatal deaths per 1,000 live births and fetal deaths combined.

Permanent movement

Permanent movement is comprised of arrivals of settlers, and permanent departures of Australian residents, (i.e., those who, on departure, state that they do not intend to return to Australia).

Rate of population growth

The rate of population growth expresses population change over a period as a proportion (per cent) of the population at the beginning of that period. In this bulletin, population growth rate is measured over the twelve months to 31 December of the recording year.

Previous issue

Previous issue in the births collection refers to previous live-born issue of a mother to the current marriage only, and excludes foster, step, or adopted children.

Remarriage rate

Re-marriage rates are the number of re-marrying males and females, of a certain age, per 1,000 (mid-year) population of widowed or divorced males and females of the same age.

Sex ratio

The sex ratio is the number of males per 100 females.

Short term movement

Short-term movements relate to movements of travellers (other than those who, on arrival, hold migrant visas) whose intended or actual length of stay is less than 12 months.

Standardised death rate

Two different methods are used in the calculation of standardised death rates:

- Direct method expressed per 1,000 persons. It is the overall death rate that would have prevailed in a standard population if it had experienced at each age the death rates of the population being studied. The standard population used in these calculations is all persons in the 1991 Australian population. The direct method is used for State/Territory and Australian rates.
- Indirect method expressed per 1,000 persons. This is calculated by initially applying a standard set of age-specific rates (those for persons in the 1991 Australian population) to the population under study, and comparing the actual number of deaths with the number expected assuming that these standard death rates applied. The standardised death rate for the population under study is then calculated by multiplying the crude death rate of the standard population by the ratio of actual deaths to expected deaths. The indirect method is used in the calculation of standardised death rates for data at Statistical Local Area level.

State/Territory of registration

State/Territory of registration refers to the State/Territory in which the birth, death, or marriage was registered or the State/Territory in which the divorce was granted.

State/Territory of usual residence

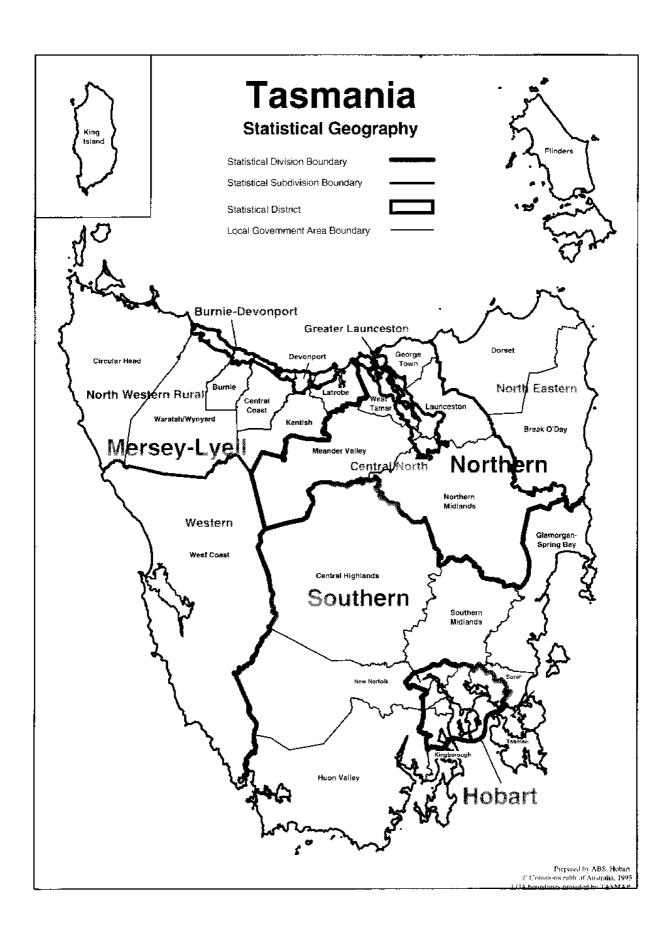

State/Territaory of usual residence refers to the State/Territory of usual residence of:

- the population (estimated resident population)
- the mother (birth collection)
- the deceased (death collection)
- the parties at separation (divorce collection).

Usual residence data are not available for the marriage collection.

Total fertility rate

The total fertility rate is obtained by summing the five year age-specific birth rates, multiplying by five and dividing by 1,000. It represents the number of children 1,000 women would bear if the age-specific rates of the year shown continued during her child-bearing lifetime.

APPENDIX A

Data items relating to Vital Statistics which are collected in Tasmania, but

not published in this bulletin.
