

AUSTRALIAN BUREAU OF STATISTICS

Reference No. 4.3

OVERSEAS ARRIVALS AND DEPARTURES JANUARY 1974

EXPLANATORY NOTES

Introduction

This publication contains summary statistics of overseas arrivals in and departures from Australia during the month of January 1974 and the six months ended December 1973, together with statistics for earlier periods. More detailed statistics are published quarterly and annually in *Overseas Arrivals and Departures*, (Reference numbers 4.1 and 4.23).

NOTE. This publication has been delayed owing to problems encountered in introducing the new system of recording overseas arrivals and departures, and deriving statistics from them described in the explanatory notes. It is proposed to issue a preliminary bulletin, giving summary statistics for the March quarter 1974, within a few weeks, followed shortly by a corresponding publication for the June quarter. It is expected that more detailed statistics for these quarters will be published in normal quarterly bulletins before the end of the year. Thereafter the usual series of monthly and quarterly bulletins will be resumed.

Source of the statistics

2. Persons arriving in or departing from Australia are required by the *Immigration Act* 1958-1973 to complete questionnaires in the form of Incoming and Outgoing Passenger Cards. These cards have a dual purpose, providing information to the Department of Labor and Immigration for administrative purposes and serving as the main source of statistics of overseas arrivals and departures. In accordance with the *Census* and Statistics Act 1905-1973, all information relating to individuals, individual flights or ships and to individual carriers which is contained on these cards or other documents is treated as confidential by the Bureau.

Coverage

3. These statistics exclude air crew and ships' crew, transit passengers who pass through Australia but are not cleared for entry, and passengers on pleasure cruises commencing and finishing in Australia aboard ships not then engaged on regular voyages. Summary information about transit and cruise passengers is, however, included as an Appendix to the quarterly issue of *Overseas Arrivals and Departures* (Reference No. 4.1).

Changes in 1974

4. From 1 January 1974 new passenger cards, and processing arrangements, were introduced. This has affected comparability, in certain instances, with statistics from earlier periods. The more important differences are described below.

Seasonally adjusted series

5. The seasonally adjusted figures of total and short-term arrivals and departures, which are contained in Tables 2 and 5, have been revised following the annual re-analysis of the series. In the adjustments, account is taken of "trading day" effects as well as of normal seasonal factors. Details of the methods used and selected measures of variability are available on request and were published in *Seasonally Adjusted Indicators* 1974 (Reference No. 1.10).

Long-term and short-term movement

6. Long-term movement is defined as comprising visitors arriving and Australian residents departing with the intention to stay, in Australia or abroad, respectively, for twelve months or more, together with the departure of visitors and the return of Australian residents who had stayed, in Australia or abroad for twelve months or more. Travellers whose intended or actual period of stay was for less than twelve months are classified as short-term.

7. In the past, a significant number of travellers stated exactly 12 months or one year as their intended period of stay and were accordingly classified as long-term. A study of the statistics leads to the conclusion that in fact many of them stayed for less than that period and on their departure from, or return to, Australia were therefore classified as short-term. Travellers who report their actual or intended period of stay as being one year are now randomly allocated to long-term or short-term in proportion to the number of returning travellers who report their actual length of stay as thirteen or eleven months. A proportion of those who fail to state their period of stay is also allocated to long-term, whereas previously they were all classified as short-term. A further change in definition concerns Australian residents who were previously regarded as long-term only if their intended or actual length of stay in any one country abroad was twelve months or more. Their classification will now be governed by their intended or actual period of absence from Australia.

Permanent movement

8. Permanent movement consists of settlers arriving and Australian residents departing permanently. The former consists of assisted settlers and other settlers, i.e. settlers who pay their own way. Residents departing permanently are sub-divided into former settlers, (persons who state on departure that they had come to Australia intending to settle), and other residents departing permanently.

9. Previously, former settlers were not classified as such unless they had spent at least twelve months in Australia, but this distinction has now been removed. In addition, the new outgoing passenger card has been designed to reduce the possibility of temporary residents or visitors departing classifying themselves in error as former settlers and the statistics are now expected to be more accurate. This category does not include Australian-born children of former settlers.

Category of traveller

10. In 1973 and earlier years, category of traveller was determined from the answers to a series of questions on the cards. The new cards, however, invite the passenger to select his or her own category and this selection is accepted provided it is consistent with other information on the card. Assisted settlers are identified as such by the Department of Labor and Immigration.

Country of embarkation or disembarkation

11. Country of embarkation or disembarkation refers to the country in which the traveller boards the actual ship or flight which brings him to Australia, or alights from the actual ship or flight which takes him from Australia. Travellers may answer this incorrectly, perhaps naming the country in which their journey commenced or will end, notwithstanding any changes of flight or ship en route. In the past it was possible to check their replies against a passenger manifest, but the requirements for airlines to present such manifests have been waived and this check is no longer possible.

State of clearance

12. State of clearance has replaced State of embarkation or disembarkation, and refers to the State in which the passenger is cleared by Customs and Immigration authorities. Embarkation or disembarkation and clearance are usually in the same State but this is not always so.

13. Date of movement is the date of clearance, and not necessarily the date of embarkation or disembarkation.

State or country of residence

14. State of residence or country of residence formerly referred to the Australian State or the country

abroad in which the traveller had last lived for twelve months or more. The qualification no longer applies and[•] the terms now refer to the State or country in which the traveller regards himself as living or as last having lived.

Reason for journey

15. The categories of reason for journey have been expanded as follows:

Visitors arriving

Original categories	Additional categories
In transit	Convention
Business	Accompanying business
Holiday	visitor
Education	Visiting relatives
Other	Employment

Residents departing temporarily

Original categories	Additional categories
Business	Convention
Holiday	Accompanying business
Education	traveller
Other	Visiting relatives
	Employment

16. An additional category "student vacation" is primarily intended to identify overseas students studying in Australia who are returning to their own countries on vacation, but who may have classified themselves in error as Australian residents. In the tables this group is included in "Holiday".

17. Because of the introduction of the additional categories, certain statistics relating to 1974 are not strictly comparable with those shown for earlier years. For example, travellers who would have been included in the pre-1974 category "Business" may now appear under any one of at least four headings: "Business", "Convention", "Accompanying business visitor" or "Employment", i.e. the category "Business" in 1974 is not directly comparable with the category "Business" in earlier years. Similar comments apply particularly to the category "Holiday".

Country of birth, residence or citizenship

18. Statistics on these items are now available for a much increased range of countries, but the information has certain limitations. For instance, it is not possible to make a reliable distinction between Northern Ireland and the Republic of Ireland, nor to separately identify England, Scotland and Wales. Similarly "Vietnam" could refer to either North or South Vietnam, "Korea" to North or South Korea and "Germany" to the Federal Republic or to the Democratic Republic.

State of stay and country of stay for short-term travellers

19. Until 1974 no information was available about the Australian State or the overseas country where short-term travellers spent most time. Short-term visitors are now asked on arrival for their intended address and on departure for the name of the State in which they spent most time. Similarly, Australian residents travelling overseas are asked on departure for the name of the country in which they intend to spend most time, and on their return for the name of the country in which they spent most time. Thus it will now be possible to produce statistics of State of stay and country of stay for short-term travellers.

Occupation

20. Statistics of the usual occupation of travellers have been expanded, primarily to obtain a more detailed classification of professional occupations. However, it should be noted that description of occupations given by travellers are necessarily brief and cannot be confirmed by reference to industry or educational qualifications.

Sampling

21. Statistics of characteristics of short-term travellers from April 1971 to September 1972 are estimates derived from a fifty per cent sample of cards classified as short-term movement. From October 1972 to November 1973 the sample comprised one third of such cards, and in December 1973 it comprised one quarter. In January 1974 the stratified sample described below was introduced.

Fully enumerated strata -

- . All passengers by sea
- . All permanent movement
- . All travellers with a duration of stay of more than one year or not stated.

Sampled strata -

All passengers by air with a duration of stay equal to or less than one year, sub-stratified as follows:

. Overseas visitors, according to country of citizenship

	Sample
New Zealand or U.S.A.	1 in 30
U.K. or Australia	1 in 20
Canada or Japan	1 in 10
Other	1 in 4
. Australian residents departing	1 in 10
. Australian residents returning	l in 20

22. The statistics presented in this publication fall into two categories, those relating to permanent and long-term movement and those relating to short-term movement. Statistics of permanent and long-term movement are based on completely enumerated records. The figures are nevertheless partly estimated and are subject to very small sampling errors due to a small number of travellers who are classified as short-term at the point of selection during data processing but are reclassified subsequently to the permanent or long-term movement in the course of editing. Statistics of the short-term movement are estimates based on a sample and subject to sampling errors, since the estimates are likely to differ from those that would be obtained from a full enumeration. A measure of the difference which may be expected is given by the "standard error" of the estimate. There are approximately 2 chances in 3 that the difference will be less than 1 standard error, and 19 chances in 20 that it will be less than 2 standard errors.

23. Space prohibits the publication of estimates of standard errors for all figures in individual tables. However, tables of standard errors which give a rough indication of the magnitude of the standard error associated with any estimate of a particular size are given as an Appendix to this publication.

24. Table 1 of the Appendix shows approximate standard errors for statistics of short-term movement prior to January 1974. Note that since the same sampling fraction applied to all short-term travellers in a particular month, it is unnecessary to distinguish in Table 1 between different categories of short-term travellers. Table 2 shows approximate standard errors from January 1974 onwards. From that date the sampling fractions differ for different categories of the short-term movement and three sets of errors are presented corresponding to different categories.

Corrections and imputations

25. The imprecision due to sampling errors should not be confused with errors due to imperfections in reporting, which may occur in any data collection, whether sampled or not. Every effort is made to minimise such errors, both through careful design of the passenger cards and through checks on the information once it is received. Briefly, the officers responsible for the clearance of passengers through ports check the completed cards against passports or other travel documents as far as practicable. The cards are further scanned clerically for obvious errors by the Department of Labor and Immigration. Finally the data is subjected to a series of computerised checks on reaching the Bureau of Statistics. At this stage also, missing replies to certain items such as age, sex and country of birth are imputed by reference to other related items.

Related statistics

26. Related statistics are available from certain surveys, such as those published by the Australian Department of Transport. Statistics of overseas arrivals and departures are also available in other Bureau publications, a catalogue of which is available, free of charge, from offices of the Bureau. The tables in this and other publications are necessarily summarised and additional details may be obtained on request from the Bureau.

Presentation

27. Classifications of some data items have been extended as from January 1974 and some tables in this publication have been expanded. Therefore, in a number

of instances, information for periods before January 1974 is not available and historical comparisons are not possible.

28. Reproductions of the passenger cards in use before and since January 1974 are shown on pages 12 and 13.

Usage

- ____ Break in continuity of series (where drawn across a column between consecutive figures)
- n.a. Not available
 - ... Nil or not applicable.
