APRIL KEY POINTS

SHORT-TERM

• The trend estimate of visitor arrivals during April 1997 was 360,000, a marginal increase over March 1997. To maintain the current trend growth, the seasonally adjusted figure for May 1997 would have to increase by 1.5%.

PERMANENT

- There were 6,460 permanent arrivals in Australia during April 1997, bringing the total for the ten months from July 1996 to April 1997 to 73,410. This was a decrease of 14% compared with the corresponding ten month period to April 1996 (85,500).
- 2,650 Australian residents departed permanently during April 1997, bringing the total for July 1996 to April 1997 to 24,950, 2% higher than the same time the previous year (24,480).

TOTAL PERMANENT AND LONG-TERM

There were 228,780 permanent and long-term arrivals to Australia and 140,550 departures between July 1996 and April 1997. The net gain of arrivals over departures during this period was 88,230, 12% lower than the previous July to April period (100,070).

NOTES

FORTHCOMING ISSUES

ISSUE

May 1997

EXPECTED RELEASE DATE

31 July 1997

REVISIONS TO LAST

Two errors were made in the March issue of this publication. The headings of the March Quarter data in Tables 3, 4, 5, 6 and 7 should read 1996 and 1997, not 1995 and 1996. Further, the figures for the March Quarter 1996 were overstated. Figures for other quarters and for other tables are not affected. The correct figures are included in this issue of the publication.

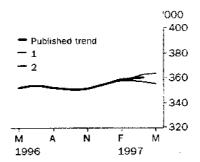

TREND REVISIONS

Each time new seasonally adjusted estimates become available, trend estimates of short-term arrivals and departures are revised (see paragraph 17 of the Explanatory Notes).

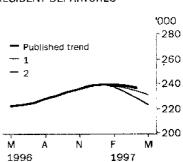

The examples in the graphs below show two illustrative scenarios and the consequent revisions to previous trend estimates of visitor arrivals and resident departures.

- 1 The May seasonally adjusted estimate is higher than the April estimate by:
- 2.89% for visitor arrivals
- 4,52% for resident departures
- 2 The May seasonally adjusted estimate is lower than the April estimate by:
- 2.89% for visitor arrivals
- 4.52% for resident departures

RESIDENT DEPARTURES

The percentage changes of 2.89 and 4.52 were chosen because they represent the average absolute monthly percentage changes in visitor arrivals and resident departures over the last four years.

W. McLennan Australian Statistician

ANALYSES AND COMMENTS

SHORT-TERM MOVEMENTS

VISITOR ARRIVALS

There were 325,900 short-term visitor arrivals in Australia during April 1997 bringing the total number of visitor arrivals for the ten months to April 1997 to 3,655,400, an increase of 8% over the number of overseas visitors arriving during the previous July to April period (3,397,700).

The main source countries of visitor arrivals to Australia during the ten months to April 1997 were Japan (19% of all visitor arrivals), New Zealand (16%), the United Kingdom (10%), the United States of America (7%) and Korea (6%). Although Japan was the major source country of visitors to Australia, the number of arrivals decreased by 1% between the ten months to April 1997 and the corresponding period to April 1996. All of the remaining top nine source countries increased in visitor numbers except for Taiwan which decreased by 7%. Korea showed the largest increase in visitor numbers, increasing by 28%, followed by New Zealand (14%) then the United Kingdom, Indonesia and Malaysia (all increasing by 13%).

RESIDENT DEPARTURES

There were 212,700 short-term departures of Australian residents in April 1997, bringing the total for July 1996 to April 1997 to 2,305,800, an increase of 7% compared with the previous comparable period (2,146,700). The main destinations for departing Australian residents during the ten months were New Zealand (15%), the United States of America (12%), Indonesia (10%), the United Kingdom (10%) and Hong Kong (6%).

During the ten months to April 1997:

- 356,000 Australian residents mainly visited New Zealand, an increase of 4% compared to 1996;
- 273,200 residents mainly visited the United States of America, an increase of 2%;
- 229,200 residents mainly visited Indonesia, an increase of 16%;
- 223,500 residents mainly visited the United Kingdom, an increase of 8%; and
- 149,600 residents mainly visited Hong Kong, an increase of 8%.

PURPOSE OF JOURNEY

Nearly two thirds (60%) of all short-term visitors to Australia between July 1996 and April 1997 stated on arrival that they had come here for a holiday (2,199,800). A further 19% stated that they were visiting friends/relatives (688,100), 9% were on business trips (342,100), while 3% arrived for educational purposes and 3% arrived for a convention or conference.

STATE OF STAY

Overseas visitors departing Australia during the ten months to April 1997 stated that they had spent most of their time in New South Wales (43%), followed by Queensland (29%), Victoria (13%) and Western Australia (9%). The number of visitors who spent most of their time in Victoria increased by 16%, the highest of all States, followed by Queensland (up by 13%), South Australia and Western Australia (both up by 8%).

HOLIDAY DESTINATIONS OF AUSTRALIAN RESIDENTS

During 1996 there were almost 2 million overseas departures by Australian residents for a period less than 12 months either for a holiday, or to visit friends/relatives. This combined category of short-term holiday-makers has increased by 160,000 (9%) on the previous year, and has more than doubled since the early 1980s with annual growth averaging 6.7% since 1980.

AGE AND SEX

The median age of Australians departing for holidays was 36.8 years in 1996, slightly older than the median age of all Australian residents (33.7 years). The 50–59 years group had the largest departure rate with 150 departures per 1,000 residents, followed by the 40–49 years group (136 per 1,000 residents), and the 20–29 years group with 127 departures per 1,000 residents.

In 1996, holiday-makers had a sex ratio of 84 (there were 84 males for every 100 females departing for holidays). However, more males than females travelled abroad short-term for all purposes (sex ratio of 117), suggesting that a proportion of these females are accompanying males departing for reasons other than holidays.

DESTINATIONS

There is a great diversity in the overseas destinations of Australians travellers. In 1996, 26 countries received more than 10,000 Australian holiday visitors, although the top ten countries attracted 69% of departures (1.35 million). However, countries which are stop-over points or visited only briefly will be under-represented by this data because it refers only to the single main destination of an overseas journey.

ANALYSES AND COMMENTS

HOLIDAY DESTINATIONS OF AUSTRALIAN RESIDENTS

NEW ZEALAND

New Zealand has been the most visited country for Australian residents holidaying overseas since 1920. In 1996, 288,000 Australian residents went for holidays across the Tasman. Despite this being a record number, New Zealand's share of Australia's total overseas holiday destinations has shrunk considerably. In 1976, 28% of all Australia's overseas holidays were to New Zealand, falling to 16% by 1986, and 15% for 1996. While the close proximity of New Zealand has led to high numbers of visits by Australians, it has also led to shorter holidays than more distant countries, with a median length of visit of only 14 days in 1996.

UNITED KINGDOM

The United Kingdom was the second most frequented country of main destination by Australian holiday visitors in 1996. A total of 239,000 visitors arrived for holidays, which represents 12% of all Australian holiday departures. As with New Zealand, growth to the United Kingdom has been slower than to other international destinations over the last twenty years.

The United Kingdom attracted a greater proportion of older visitors and females than other major destinations. The median age of the visitors was 43 years, six years more than the median age of all Australian holiday-makers. The sex ratio of 74, was considerably lower than the average for all Australian holiday-makers. The duration of visits to the United Kingdom also tended to be longer than for other destinations (except continental Europe) with a median length of stay of 46 days. The lengthy visits are consistent with the general trend of duration of stay being related to the relative distance from Australia. Australians touring Europe who used the United Kingdom as a base, would also have contributed to the lengthy visits.

CONTINENTAL EUROPE

Continental Europe (including the former USSR) attracted 12% of Australian holidays in 1996. Visits to Europe by Australians were characterised by their long duration, with the median length of stay being 49 days. Italy was the second most visited European country by Australians, and holidays to Italy were generally the longest of the ten most visited destinations.

GROWTH REGIONS

North America was the primary destination of 13% of Australian holiday-makers in 1996. From 1986 to 1996 the number of Australians visiting this region has more than doubled, while the share of the overseas holiday market has increased by 3 percentage points. As a result, North America was the fastest growing regional market for Australian's overseas holidays during this period, although most of this growth occurred in the late 1980s and early 1990s. The United States was the main destination of 86% of visitors to North America.

The South East Asian region has more than doubled its share of Australian visitors in the last 20 years. In 1996, 24% of Australian short-term departures for holidays were to this region. Indonesia (including Bali) was the most popular holiday destination, capturing 11% of Australias' overseas holiday market with around 210,000 visitors in 1996. This represents an increase of 124% from 1986, making Indonesia the country with the fastest growing market for Australian's overseas holidays. Holidays to Indonesia tended to be shorter than holidays elsewhere with the median length of stay of just 12 days. As with New Zealand and the rest of South East Asia, short holidays are consistent with the close proximity to Australia.

South East Asia also had the highest ratio of male to female holiday-makers with an 88 males per 100 females. This is partly due to the higher proportion of males visiting the Philippines and Thailand (sex ratios of 140 and 102 respectively).

EXPLANATORY NOTES

INTRODUCTION

1 This publication contains statistics of persons arriving in, and departing from, Australia, together with the major characteristics of travellers. More detailed statistics can be made available on request (see paragraph 21).

SOURCE OF THE STATISTICS

- **2** Persons arriving in, or departing from, Australia are required to complete prescribed questionnaires in the form of Incoming and Outgoing Passenger Cards (see Appendix). These cards provide information to the Department of Immigration and Multicultural Affairs (DIMA) for administrative purposes and serve as the source of statistics of overseas arrivals and departures. In some cases pre-recorded visa data is used in lieu of passenger card data by DIMA. In accordance with the *Census and Statistics Act 1905*, information relating to individuals, individual flights or ships and individual carriers, which is contained in these cards or other documents, is treated as confidential by the Australian Bureau of Statistics (ABS).
- **3** Implementation of the *Migration Reform Act 1992* by DIMA required that a health and character check be incorporated with the Incoming Passenger Card. The redesign of both passenger cards followed and new passenger cards were officially introduced on 1 September 1994, with minor alterations to the cards in March 1995. The two main statistical changes affect *Marital status* and *Purpose of journey* and constitute a break in time series for these data items.
- **4** In addition to the four *Marital status* categories of 'Never married', 'Married', 'Widowed' and 'Divorced', both passenger cards now include 'Separated but not divorced' and 'Common law/de facto'. The following changes were also made to the *Purpose of journey* question: on the Incoming Passenger Card 'In transit' was dropped; on the Outgoing Passenger Card 'Student vacation' was dropped; and on both cards 'Visiting relatives' was changed to 'Visiting friends/relatives', 'Convention' was changed to 'Convention/conference' and 'Accompanying business visitor' was dropped.

5 The statistics in this publication relate to the number of movements of travellers rather than the number of travellers (i.e. the multiple movements of individual persons during a given reference period are each counted separately). The statistics exclude the movements of operational air and ships' crew, of transit passengers who pass through Australia but are not cleared for entry, and of passengers on pleasure cruises commencing and finishing in Australia aboard ships not then engaged on regular voyages.

COUNTRY CLASSIFICATION

SCOPE

- **6** The classification of countries in this publication is the *Australian Standard Classification of Countries for Social Statistics* (ASCCSS). For more detailed information refer to the ABS publication *Australian Standard Classification of Countries for Social Statistics* (1269.0). Political developments in Europe, the former USSR and Africa have resulted in a number of changes, and are detailed in Revisions 1.01, 1.02 and 1.03 of the ASCCSS.
- **7** Statistics on country of birth, citizenship, residence or main destination have certain limitations because of inadequate reporting on passenger cards. For instance, it is not possible to identify separately England, Scotland and Wales. Similarly Korea includes both the Republic of Korea and the Democratic People's Republic of Korea.

STATE AND TERRITORY CLASSIFICATION

8 Following the 1992 amendment to the *Acts Interpretation Act* to include the Indian Ocean Territories of Christmas Island and the Cocos (Keeling) Islands as part of geographic Australia, population estimates commencing with the September quarter 1993 include estimates for these two territories. To reflect this change, another category of the State/Territory classification has been created, known as Other Territories. Other Territories includes Jervis Bay Territory as well as Christmas Island and the Cocos (Keeling) Islands. Data for Other Territories are included in tables where specifically noted.

41

EXPLANATORY NOTES

ESTIMATION METHOD

- **9** Overseas arrival and departure statistics are derived from a combination of full enumeration and sampling. All permanent movements and all movements with a duration of stay of one year or more are fully enumerated. All movements with a duration of stay of less than one year are sampled. Statistics relating to these movements are therefore estimates which may differ from statistics which would have been obtained if details of all these movements had been processed.
- **10** From April 1995, the fractions used for sampling movements of the citizens of Australia, France, Germany, Japan and Taiwan were changed, reflecting increases in the number of movements. From May 1995 further changes were made to the fractions used for sampling movements of citizens of Indonesia, Italy, Malaysia, Netherlands, Singapore, Republic of Korea, Switzerland and Thailand. Comments on the sampling errors associated with the estimates are contained in the Standard Errors pages. All movements with a duration of stay less than one year are sampled.
- **11** The statistics in this publication have been rounded to the nearest 100 for short-term movements and to the nearest 10 for permanent and long-term movements. In tables showing both short-term and permanent and long-term movements the total movements have been rounded to the nearest 100. The sums of the components may, due to rounding, not add exactly to totals.

CORRECTIONS AND IMPUTATIONS

- 12 The imprecision due to sampling errors should not be confused with errors arising from imperfections in reporting, which may occur in any data collection, whether sampled or not. Every effort is made to minimise such errors, both through careful design of the passenger cards and through checks on the information once it is received. During the edit process some items are corrected where they conflict with other known information. Missing replies to certain items such as age and country of birth are also imputed by reference to other related items.
- **13** Errors of this kind differ from discrepancies arising from the fact that certain information reflects the travellers' intentions at the time the passenger cards were completed. These intentions are, of course, subject to change. Particularly affected is the distinction between permanent and temporary movement and in the latter case, length of intended stay, country in which most time will be spent and purpose of journey.
- SEASONAL ADJUSTMENT AND TREND ESTIMATES
- **14** Original and seasonally adjusted short-term overseas visitor arrivals and short-term Australian resident departures are shown in Tables 1 and 2 respectively. In the seasonally adjusted series, account has been taken of normal seasonal factors and trading day effects (arising from the varying numbers of Sundays, Mondays, Tuesdays etc. in the month) and the effect of movement in the date of Easter which may, in successive years, affect figures for different months.
- **15** Seasonal adjustment is a means of removing the estimated effects of normal seasonal variation from the series so that the effects of other influences on the series may be more clearly recognised. Seasonal adjustment procedures do not aim to remove the irregular or non-seasonal influences which may be present in any particular month, such as the effect of major sporting and cultural events, changes in airfares and the fluctuation of \$A relative to other currencies. Irregular influences that are highly volatile can make it difficult to interpret the movement of the series even after adjustment for seasonal variation.

EXPLANATORY NOTES

SEASONAL ADJUSTMENT AND TREND ESTIMATES continued

- **16** The trend estimates for short-term overseas visitor arrivals and short-term Australian resident departures are shown in Tables 1 and 2 respectively. These trend estimates are derived by applying a 13–term Henderson-weighted moving average to all months of the respective seasonally adjusted series except the first and last six months. Trend series are created for the last six months by applying surrogates of the Henderson weighted moving average to the seasonally adjusted series.
- 17 While this technique enables smoothed data for the latest period to be produced, it does result in revisions to the smoothed series, principally of recent months, as additional observations become available. There may also be revisions as a result of the re-estimation of the seasonal factors. For further information, see *A Guide to Interpreting Time Series Monitoring 'Trends', an Overview* (1348.0) or contact the Assistant Director, Time Series Analysis on 06 252 6345.

RELATED PUBLICATIONS

- 18 Users of these statistics may also wish to refer to the following ABS publications:
- Overseas Arrivals and Departures, Australia (3402.0) issued quarterly to December quarter 1994
- Overseas Arrivals and Departures, Australia (3404.0) issued annually to 1993
- Australian Demographic Statistics (3101.0) issued quarterly
- Migration, Australia (3412.0) issued annually
- Tourism Indicators, Australia (8634.0) issued quarterly
- **19** Related statistics are also published by the Department of Immigration and Multicultural Affairs, the Department of Transport and Communications and the Bureau of Tourism Research.
- **20** Current publications produced by the ABS are listed in the *Catalogue of Publications* and *Products, Australia* (1101.0). The ABS also issues, on Tuesdays and Fridays, a *Release Advice* (1105.0) which lists publications to be released in the next few days. Both are available from any ABS office.

ADDITIONAL STATISTICS AVAILABLE

21 In some cases, the ABS can make available information which is not published. This information may be made available in one or more of the following forms: microfiche, photocopy, data tape, floppy disk, computer printout, clerically-extracted tabulations. Generally, a charge is made for providing unpublished information. A full list of unpublished Overseas Arrival and Departure tabulations is available on request. Inquiries should be made to Katrina Phelan on 06 252 6573.

GLOSSARY

Australian resident

Australian residence is self-defined as reported by travellers when completing Incoming and Outgoing Passenger Cards.

Category of movement

Overseas Arrivals and Departures are classified according to length of stay (in Australia or overseas), recorded in months and days by travellers on passenger cards. There are three main *categories of movement*:

- permanent movements
- long-term movements
- short-term movements.

A significant number of travellers (i.e. overseas visitors to Australia on arrival and Australian residents going abroad) state exactly 12 months or one year as their intended period of stay. Many of them stay for less than that period and on their departure from, or return to, Australia are therefore classified as short-term. Accordingly in an attempt to maintain consistency between arrivals and departures, movements of travellers who report their actual or intended period of stay as being one year exactly are randomly allocated to long-term or short-term, in proportion to the number of movements of travellers who report their actual length of stay as up to one month more, or one month less, than one year.

Country of residence

Country of residence refers to the country in which travellers regard themselves as living or as last having lived.

Intended length of stay

On arrival in Australia, all overseas visitors are asked to state their 'Intended length of stay in Australia'. On departure from Australia, all Australian residents are asked to state their 'Intended length of stay abroad'.

Long-term arrivals

Long-term arrivals comprise:

- overseas visitors who intend to stay in Australia for 12 months or more (but not permanently); and
- Australian residents returning after an absence of 12 months or more overseas.

Long-term departures

Long-term departures comprise:

- Australian residents who intend to stay abroad for 12 months or more (but not permanently); and
- overseas visitors departing who stayed 12 months or more in Australia.

Main destination

Australian residents travelling overseas are asked on departure for the name of the country in which they intend to spend most time.

Overseas Arrivals and Departures (OAD)

Overseas Arrivals and Departures refer to the arrival or departure of Australian residents or overseas visitors, through Australian airports (or sea ports), which have been recorded on Incoming or Outgoing Passenger Cards. Statistics on Overseas Arrivals and Departures relate to the number of movements of travellers rather than the number of travellers (i.e. the multiple movements of individual persons during a given reference period are all counted).

GLOSSARY

Permanent arrivals

Permanent arrivals (settlers) comprise:

- travellers who hold migrant visas (regardless of stated intended period of stay);
- New Zealand citizens who indicate an intention to settle; and
- those who are otherwise eligible to settle (e.g. overseas born children of Australian citizens).

This definition of settlers is used by the Department of Immigration and Multicultural Affairs. Prior to 1985 the definition of settlers used by the ABS was the stated intention of the traveller only. Numerically the effect of the change in definition is insignificant. The change was made to avoid the confusion caused by minor differences between data on settlers published separately by the ABS and the Department of Immigration and Multicultural Affairs.

Permanent departures

Permanent departures are Australian residents (including former settlers) who on departure state that they intend to settle permanently in another country.

Purpose of journey

On arrival in, or departure from, Australia all overseas visitors and Australian residents are asked to state their purpose of journey. From September 1994, all statistics relating to *purpose of journey* have been published using the following categories:

- convention/conference
- business
- visiting friends/relatives
- holiday
- employment
- education
- other

In tabulations of data collected before September 1994, the 'Other' category includes 'In transit' and the 'Holiday' category includes both 'Student vacation' and 'Accompanying business visitor'.

Short-term arrivals

Short-term arrivals comprise:

- overseas visitors whose intended stay in Australia is less than 12 months; and
- Australian residents returning after an absence of less than 12 months overseas.

Short-term departures

Short-term departures comprise:

- Australian residents who intend to stay abroad for less than 12 months; and
- overseas visitors departing who stayed less than 12 months in Australia.

State/Territory of stay

Overseas visitors are asked on departure for the name of the State or Territory in which they spent the most time.

STANDARD ERRORS

RELIABILITY OF ESTIMATES

- 1 Estimates based on a sample are subject to sampling variability i.e. they may differ from those that would be obtained from full enumeration.
- 2 The sampling error associated with any estimate can be estimated from the sample results and one measure so derived is the standard error. Given an estimate and the standard error on that estimate, there are about two chances in three that the sample estimate will differ by less than one standard error from the figure that would have been obtained from full enumeration, and about nineteen chances in twenty that the difference will be less than two standard errors. The relative standard error is the standard error on the estimate expressed as a percentage of the estimate.
- 3 It would be impractical to publish estimates of standard errors for all figures in individual tables. However, the following tables of standard errors and relative standard errors give an indication of the magnitude of the sampling error associated with any estimate of a particular size for short-term and total movement.

APPROXIMATE STANDARD ERRORS ON ESTIMATES FOR STRATIFIED SAMPLE

		ERM RE OR ARRIVAL ALIAN RESIDENTS		ERM OR DEPARTURE SEAS VISITORS	TOTAL ARRIVALS DEPARTU	
Estimated number of persons	Standard error	Relative standard error	Standard error	Relative standard error	Standard error	Relative standard error
	no.	%	no.	%	no.	%
10 000	550	6	490	5	550	6
5 000	450	9	330	7	410	8
2 000	280	14	230	11	250	13
1 000	200	20	150	15	170	17
750	180	24	140	19	150	20
500	130	26	110	22	125	25
400	120	30	100	25	115	29
300	110	36	84	28	97	32
200	90	45	70	35	80	40
100	63	63	49	49	56	56

- 4 An example of the use of this table is as follows. If the estimate of the number of Australian resident departures for short-term visits abroad is 500, then the standard error on this estimate is 130 i.e. there are two chances in three that the actual number of Australian resident departures for short-term visits abroad will lie between 370 and 630 and nineteen chances in twenty that it will lie between 240 and 760.
- **5** The larger the size of an estimate the smaller the relative standard error. For any estimate of greater than 10,000 the relative standard error will be less than 6%.

STANDARD ERRORS

RELIABILITY OF ESTIMATES continued

- **6** The estimate of the difference between an estimate in two different periods or between different estimates from the same period is also subject to sampling error. The standard error on the difference between any two estimates which are subject to sampling error can be approximated by using the larger standard error of the estimates inflated by a factor of 1.4.
- **7** An example of the use of this procedure is as follows. Assume the estimates of the number of arrivals to Australia from Taiwan during January 1994 and January 1995 are 1,500 and 750 respectively. The difference between the 1994 and 1995 figures is 750 and the standard errors on these estimates are approximately 190 and 140. The standard error on the difference is approximately 266 (1.4 x 190), and there are nineteen chances in twenty that the estimate of the difference between the two years will lie between 218 and 1,282.
