NOTES

ABOUT THIS PUBLICATION

This publication contains detailed statistics of the apparent consumption of foodstuffs in Australia for 1994–95 and 1995–96, as well as comparative data for earlier years. Historical data published in table 1 refers to averages for the three-year periods ending 1938–39, 1948–49, 1958–59, 1968–69, 1978–79 and 1988–89. This publication draws extensively on information provided freely by individuals, businesses, governments and other organisations. Preliminary statistics for 1996–97 covering major food items have been published in *Apparent Consumption of Selected Foodstuffs, Australia, 1996–97, Preliminary* (Cat. no. 4315.0), which is available from any ABS office.

Details of nutrient intake in Australia are no longer included in this publication. These nutrient levels are compiled by officers of the Nutrition Monitoring Unit of the Australian Institute of Health and Welfare (AIHW). Users of these data should contact AIHW directly.

REVISIONS TO FIGURES

The figures shown in this publication have been revised where necessary and as a consequence may not agree with similar data shown in previous publications.

W. McLennan Australian Statistician

MEAT AND MEAT PRODUCTS

The apparent per capita consumption of meat and meat products decreased by 3.3% to 73.2 kg in 1995–96, compared with a fall of 4.9% to 75.7 kg in 1994–95. The decline in meat consumption reflected from decreased commercial production. Exports of meat (1,458,000 tonnes) accounted for 52.2% of the total supply with 47.7% available for domestic consumption.

Beef remained the most significant meat consumed, increasing 2.0% in 1995–96, to 35.4 kg per capita. This compares with a fall of 4.8% in 1994–95 when the consumption of beef was 34.7 kg per capita. In 1995–96, demand for veal fell 11.8% to 1.3 kg per capita after falling 6.9% in 1994–95 to 1.5 kg per capita. The per capita consumption of lamb fell 5.1% to 11.3 kg in 1995–96, after an increase in 1994–95 of 2.1% to 11.9 kg. Consumption of lamb in 1995–96 was 20.4% below the 14.1 kg recorded in 1990–91. Since the late 1930s, lamb consumption has grown from a low of 6.8 kg to a 20.5 kg per capita peak in the late 1960s, before its steady decline to the current level.

The per capita consumption of mutton fell in 1995–96 by 11.6% to 5.7 kg. This follows a sharper fall in 1994–95 of 23.6% to 6.4 kg, and is 25.9% below the 7.7 kg recorded in 1990–91. Mutton intake was less than a quarter of that of the late 1930s when the average for the three years ended 1938–39 was 27.2 kg per capita.

Consumption of pigmeat continued to fluctuate, with intake in 1995–96 at 18.1 kg per capita, a decrease of 6.4% on the previous year of 19.3 kg per capita. The 1995–96 level of pigmeat consumption was substantially more than the 3.9 kg consumed in the late 1930s. Despite the fluctuating intake of pigmeat, the per capita consumption of bacon and ham continued to grow in 1994–95 and 1995–96 to 7.5 kg and 7.8 kg respectively.

Offal intake continued the decline of previous years with a record low of 1.5 kg per capita in 1995–96 (down 20.6%). This compares with a similar fall in 1994–95 when consumption was 1.9 kg per capita. Consumption of offal peaked in the late 1970s with an average of 5.9 kg per capita and since then has fallen about 75.0%.

POULTRY

The apparent per capita consumption of poultry increased by 3.9% in 1995–96 to a record high of 28.3 kg per capita. This was 13.6% up on the per capita consumption recorded in 1990–91. Poultry intake has trebled from the 8.3 kg consumed per capita in the late 1960s.

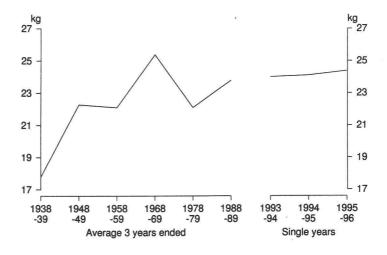

SEAFOOD

The apparent per capita consumption of seafood fell by 6.0% in 1995–96 to 10.2 kg when compared with the previous year's peak of 10.8 kg. The major contributor to the fall in 1995–96 was crustacea and molluscs at 1.7 kg, a decline of 9.8% when compared with the previous year. This reflects decreased production coupled with increased exports. The consumption of Australian fish also fell by 8.3% to 3.2 kg per capita. Since 1990–91 seafood consumption has fallen by 1.3% and this can be attributed to decreased consumption of Australian fish which was 24.3% less than the 4.2 kg per capita consumed in 1990–91. The consumption of seafood has doubled since the late 1930s when intake was 4.9 kg per capita.

DAIRY PRODUCTS

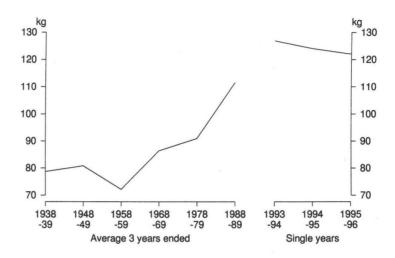

The consumption of dairy products increased by 1.3% to $24.4\,$ kg per capita in 1995-96. The per capita consumption of both full cream and skim condensed milk recorded significant declines at $1.1\,$ kg (down 34.5%) and $0.4\,$ kg (down 52.0%) respectively. These falls were offset by increases in market milk (up 1.2%) at $104.2\,$ litres per capita, powdered full cream milk (up 20.2%) at $1.1\,$ kg per capita and cheese (up 3.2%) at a record high of $10.6\,$ kg per capita.

The per capita consumption of dairy products has increased by 4.5% on intake in the early 1990s and since the late 1930s consumption has grown by about 37.0%.

FRUIT AND FRUIT PRODUCTS

The consumption of fruit (including fruit for fruit juices) decreased marginally to 122.1 kg per capita in 1995–96 following a decrease of 2.3% to 124.1 kg in the previous year. It has increased about 41.0% since the late 1960s and about 55.0% since the late 1930s.

The most significant movement for per capita consumption of fruit was recorded for processed fruit which fell 14.5% to $6.4\,$ kg. Dried fruit consumption also fell, by 7.7% to $2.7\,$ kg per capita. These falls were offset by an increase in other fresh fruit which rose 2.6% to $55.4\,$ kg per capita. In 1994-95, intake of other fresh fruit fell 10.5% to $54.0\,$ kg per capita, while citrus fruit consumption rose 6.7% to $46.2\,$ kg per capita.

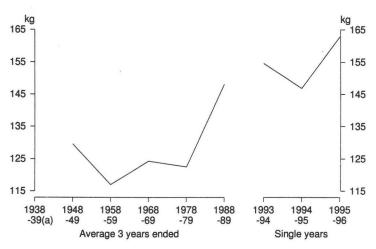

Oranges were the most significant single fruit item available for consumption in 1995–96 with a total of 674,000 tonnes or 37.0 kg per capita. Imports of oranges totalled 359,000 tonnes, which was 44.3% of the total supply of 809,000 tonnes. Commercial production contributed 442,000 tonnes or 54.6% to the supply. Exports accounted for 127,000 tonnes or 15.7% of the supply.

VEGETABLES

Per capita consumption of vegetables rose 10.8% in 1995–96 to a record high of 162.8 kg after falling 5.0% to 146.9 kg in 1994–95. Vegetable consumption in 1995–96 was approximately 39.0% greater than consumption in the late 1950s when it was about 117.0 kg per capita.

Potatoes remained the most popular vegetable with per capita consumption up by 13.9% to 70.1 kg. The consumption of other root and bulb vegetables showed an increase of 12.9% to 24.3 kg per capita. While the consumption of tomatoes remained fairly steady in 1995–96 at 20.6 kg per capita, it was 16.2% down on the 24.6 kg consumed per capita in 1990–91. The per capita consumption of leafy and green vegetables rose 5.5% in 1995–96 to 21.5 kg, but had remained steady in 1994–95. Other vegetables also showed an increase in 1995–96, with consumption up 16.2% to 26.3 kg per capita.

Per capita consumption of vegetables

(a) Data not collected.

GRAIN PRODUCTS

During 1994–95 and 1995–96, the consumption of grain products remained steady at 93.7 kg and 93.1 kg per capita respectively. Flour intake fell in 1994–95, by 2.2% to 77.4 kg per capita, but did not change greatly in 1995–96 at 77.5 kg. The consumption of oatmeal and rolled oats increased by 10.0% to 2.1 kg per capita in 1995–96. This follows an increase of 82.4% to 1.9 kg per capita in 1994–95. This increase in 1995–96 was offset by a decline in the consumption of 'other' (breakfast food from grain), down 16.7% to 7.0 kg per capita compared with 1994–95. Overall, the consumption of 'breakfast foods' in 1995–96 showed a fall of 11.8% to 9.1 kg per capita, but this was partially offset by a 7.5% increase in the consumption of rice at 6.5 kg per capita. Since 1990–91 rice intake has grown by 27.4%, whereas breakfast foods has fallen by 26.1%. The per capita consumption of bread has increased by 12.3% to 49.4 kg since 1990–91. In the longer term, bread is at a similar level as that of the late 1930s, but well below the 69.1 kg consumed per capita in the late 1950s.

The consumption of grain products in 1995–96 was also at a similar level as that of the late 1930s. However, the mix of products has changed during the period, with increases in rice and breakfast food products, and less flour being consumed per capita.

EGGS AND EGG PRODUCTS

Egg consumption declined in 1995–96 by 2.3% to 132 eggs per capita, compared with the previous year when consumption fell by 3.8% to 135 eggs. In the longer term, egg consumption has also shown a decline with intake considerably less than the 255 of the late 1940s.

NUTS

The per capita consumption of peanuts fell 12.3% to 2.1 kg in 1995–96, after an increase of 15.6% in 1994–95. The consumption of tree nuts continued to fluctuate with a rise in 1995–96 of 1.2% to 4.5 kg per capita; a contributing factor to this rise was an increase in production.

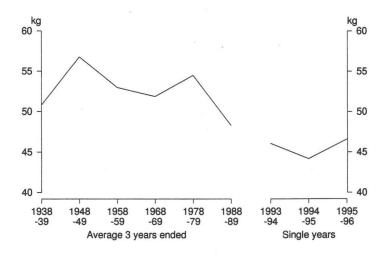

OILS AND FATS

In 1995–96, the apparent consumption of fats rose 1.8% to 19.2 kg per capita; this compares with a 2.3% fall in 1994–95. The principal component of this increased fat intake was other margarine, which was consumed at a rate of 2.5 kg per capita in 1995–96, an increase of 25.0% when compared with the previous year. Butter intake fell in 1995–96 by 8.0% to 2.9 kg per capita, but consumption of dairy spreads rose 12.4% to 0.8 kg per capita. Since 1990–91 the consumption of butter and dairy spreads has increased by 9.6% and 19.9% respectively. The consumption of margarine has recorded a fall of 8.4% since 1990–91; other margarine rose 28.8% over this period but table margarine fell 19.0%. Over the longer term, consumption of fats was below the levels recorded in the late 1970s and 1980s, although it was substantially greater than the amount consumed in the 1960s.

SUGARS

The per capita consumption of sugars in 1995–96 increased by 5.5% to 46.6 kg after the record low of 44.2 kg in 1994–95. Refined cane sugar consumption rose 3.2% to 8.6 kg per capita and sugar consumed in manufactured products also rose, by 8.6% to 32.3 kg per capita. In 1995–96, the per capita consumption of honey was 0.9 kg, almost doubling the 0.5 kg recorded the previous year. The decline in honey consumption in 1994–95 was due to a sharp fall in the production of honey.

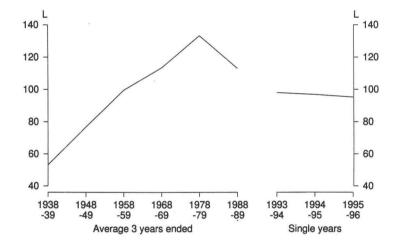

Over the longer term, consumption of sugars has shown a shift from refined sugar consumption to sugar consumed in manufactured goods. In the late 1930s, 63.0% of sugar was consumed as refined sugar. In 1995–96, 18.5% of total sugar was consumed in refined form.

BEVERAGES

The per capita consumption of tea and coffee remained steady at 0.9 kg and 2.2 kg respectively in 1995–96. Carbonated and aerated waters increased by 3.6% to 114.6 litres per capita, making it the most popular beverage. Consumption of aerated and carbonated waters was 14.5% up on the 100.0 litres consumed per capita in 1990–91 and more than double the consumption in the late 1960s.

At 22.4 litres, the apparent per capita consumption of low alcohol beer showed a rise of 4.6% in 1995–96, when compared with the previous year which recorded a fall of 3.4%. Consumption of low alcohol beer was 13.7% up on the 19.7 litres per capita recorded in 1990–91. The consumption of other beer fell by 3.4% in 1995–96 to 72.9 litres per capita. This is 19.7% below the 90.9 litres recorded in 1990–91. Total beer consumption fell 1.6% in 1995–96 to 95.3 litres per capita, a decline which began after 1988–89, when consumption was 115.4 litres per capita. Over the longer term, beer consumption was at a level similar to that of the late 1950s when the average for the three years ended 1958–59 was 99.7 litres per capita.

Wine consumption remained steady at 18.3 litres per capita in 1995–96, although it fell 1.2% the previous year. The 1995–96 level of consumption was 2.0% up on the 17.9 litres per capita consumed in 1990–91. Consumption of wine has increased more than threefold since the late 1940s when intake was 5.9 litres per capita.

ALCOHOL CONTENT

The trends in the consumption of beer and wine are reflected in the apparent per capita consumption of alcohol (expressed in terms of alcohol content). The per capita consumption of alcohol consumed as low alcohol beer rose 4.8% to 0.69 litres per capita in 1995–96. Since 1990–91, consumption of alcohol consumed as low alcohol beer has increased 23.1%. However, alcohol consumed as other beer fell in 1995–96 by 3.8% to 3.47 litres per capita; this is 20.1% below the 4.34 litres alcohol consumed as other beer in 1990–91. Alcohol consumed as wine rose over the same period by 1.2% to 2.10 litres alcohol per capita. The consumption of alcohol as spirits increased by 6.5% in 1995–96, to 1.38 litres per capita. The total per capita consumption of alcohol fell marginally to 7.63 litres in 1995–96. Longer term trends in the consumption of alcohol show that alcohol intake in 1995–96 was more than double that of the late 1930s, but 20.4% down on intake in the late 1970s.

⁽a) Sweet potatoes included with 'Other root and bulb vegetables' since 1968–69; formerly included with 'Other vegetables'.

- (b) Includes flour used for breadmaking.
- (c) Data not collected.
- (d) Refer to paragraph 24 of the Technical Notes.
- (e) Includes an estimate for vegetable oils and other fats. Prior to 1975–76 this was estimated at 2 kg, from 1975–76 onwards estimated at 10 kg.
- (f) Includes sugar content of syrups, honey and glucose.
- (g) Coffee and coffee products in terms of roasted coffee.
- (h) Includes bulk pre-mix and post-mix contentrates in terms of drink equivalent.
- (i) From 1984–85 data makes allowance for low alcohol beer and wines. From 1989–90 onwards, data for beer have been compiled on the basis of excise data. Prior to this the alcohol content of beer was calculated using 2.4% by volume for low alcohol beer and 4.8% for other beer.

Manufacturing Production, Commodities Produced, Australia (Cat. no. 8365.0)

National Health Survey: Summary of Results (Cat. no. 4364.0)

Sales of Australian Wine and Brandy by Winemakers (Cat. no. 8504.0)

- **3** The ABS has more detailed agricultural statistics on magnetic tape, compact disk, microfiche, floppy disk and the Integrated Regional Database. AgStats on floppy disk offers a wider range of data, aggregated at smaller geographic areas than those generally available in printed publications.
- 4 FASTTRACCS is a fast international trade access system which utilises high speed report specification and electronic delivery. Statistics can be provided for quantity and value of commodities for all or selected countries/States. Aggregations can be undertaken and can be tailored to client requests by month or quarter, or on a calendar year, financial year or user-specified basis. For more information contact International Trade Client Services on 1800 020 513 or Canberra 02 6252 5400.
- **5** Current publications produced by the ABS are listed in the *Catalogue of Publications and Products* (Cat. no. 1101.0). The ABS also issues, on Tuesdays and Fridays, a *Release Advice* (Cat. no. 1105.0) which lists publications to be released in the next few days. The Catalogue and Release Advice are available from any ABS office.

UNPUBLISHED STATISTICS

6 As well as the statistics in this publication, the ABS may have other unpublished data available. Inquiries should be directed to Joanne Gibbons on Canberra 02 6252 5300.

ROUNDING

7 Where the figures have been rounded, discrepancies may occur between sums of the component items and totals.

The following age-group distributions of the estimated resident Australian male and female population at 30 June 1995 and 1996 are based on the results of the 1996 Census of Population and Housing. These revised estimates take account of new information provided by census counts and estimates of census under-enumeration.

Data may be used in conjunction with information in tables 2 and 3 to vary apparent per capita consumption according to the users specific interest.

Estimated resident population, by age—30 June

	MALES				FEMALES			
			of total	Proportion of total population			of total	Proportion of total population

Source: Australian Demographic Statistics, December Quarter 1996 (Cat. no. 3101.0).

FOODSTUFFS

What is apparent consumption?

1 In this context 'consumption' is not 'intake'. Apparent consumption is a measure of the food supply available for human consumption after allowing for all other uses and losses.

Derivation of apparent consumption

2 In general, apparent consumption of the various foodstuffs is estimated from the apparent consumption equation.

Commercial production

- + Estimated home production
- + Imports
- + Opening stocks

MINUS

Exports

- + Usage for process food
- + Non-food use
- + Wastage
- + Closing stocks
- **3** *Per capita apparent consumption* is total apparent consumption divided by the mean population for the period.

Population data

- **4** Population data are derived from those published in *Australian Demographic Statistics* (Cat. no. 3101.0). Figures are revised as more recent data becomes available.
- **5** The following mean population figures (for the year ending 30 June) are used in this issue:

Average 3			
years ended	no.	Individual	no.
		years	
		* * * * * * * * * *	
1938-39	6 870 261	1990-91	17 176 910
1948-49	7 651 558	1991-92	17 393 341
1958-59	9 741 073	1992-93	17 583 167
1968-69	11 919 046	1993-94	17 759 907
1978-79	14 275 870	1994-95	17 953 622
1988-89	16 408 095	1995-96	18 191 265

Components of the apparent consumption equation (as described in tables 3 and 4)

- **6** A brief summary is given here. For more detail on any of the components, refer to relevant related publications (see page 32).
- **7** *Net change in stocks.* Statistics of stocks are for factory stocks and stocks held by marketing authorities. With minor exceptions, no details are available for wholesalers', retailers' or household stocks. This only becomes relevant for non-perishable foods with long shelf lives such as canned food or where there is significant cold storage such as for meat, apples and pears.

Components of the apparent consumption equation (as described in tables 3 and 4) continued

- **8** *Commercial production.* This is given over the financial year for most foodstuffs. Where there is a marked seasonal pattern, the data refer to the crop year. This applies to citrus fruit for which the crop year is the year ending 31 March.
- **9** *Estimated home production.* The data are derived from the 1992 Home Production Survey.
- **10** Estimates of home production are included for poultry and eggs, fresh fish and seafood, fresh fruit (except pineapple), jam fruit, some home processed fruit, fresh vegetables, tree nuts, and beer and wine. For other foods, home production is taken to be nil.
- 11 Imports/exports. Data are reported for most, but not all foodstuffs.
- **12** *Non-food use, waste, etc.* Non-food use indicates food removed from the human food supply, for example, pet food. Wastage does not take into account losses at the retail and household level. Data are given only for meat offals, oranges and fresh vegetables.
- **13** Use for processed food. For some items in the table, data are given for the amount of the total supply used for processed food. These are already included in the total fresh fruit equivalent supply figures, consequently, where processed food data are given, the subtotals in table 3 cannot be added to derive the totals.

Commodity groups

- **14** *Meat and meat products.* Meat data are presented as carcass weight equivalent, i.e. as from the abattoir ('bone-in'). It is not practical to define a 'retail weight of meat' because cutting practices and carcasses are variable.
- **15** The weight shown for bacon and ham (cured carcass weight) is already included as the carcass equivalent weight in the pigmeat and commodity group totals.
- **16** The current methodology for calculating meat data provided in the Apparent Consumption series was introduced in 1983–84. Data were re-calculated back to 1975–76. Thus the average for the three years ending 1978–79, and annual data from 1978–79 published in the 1983–84 and subsequent issues of the series, are directly comparable.
- **17** *Poultry.* Poultry data are presented as dressed weight, i.e. as sold by retailers, as this is a standard practice.
- **18** *Fish and seafood.* Fresh and frozen seafood are presented as edible weight. Processed product is presented as product weight which is in effect 'edible weight'. Fresh and frozen production includes a significant estimate for 'home production' (i.e. recreational and non-commercial fishing), based on the 1992 Home Production Survey. More information is available from the relevant related publication (see page 32).
- **19** *Dairy products.* Data are presented for fluid whole milk by volume, and for milk products by product weight. The commodity group total is presented as total milk solids (fat and non-fat), derived from market milk and process products. Note that butter is counted in the 'fats and oils' group and not in the dairy group.
- **20** *Fruit.* Data are presented as total fresh fruit equivalent. Product weight is also given for processed products, including jam and dried fruit, but the fresh equivalent of these products is included in the commodity group total.

Commodity groups continued

- **21** *Vegetables.* Data are presented as total fresh weight including the fresh equivalent weight of processed products.
- **22** *Grain products.* Flour (including flour for breadmaking), oatmeal and rolled oats, ready-to-eat breakfast cereals, and rice data are presented as product weight. Extra data for bread are also reported, although not available every year.
- **23** Eggs. These are reported as the number of eggs. Data from 1988–89 onwards include estimates for home production based on the 1992 Home Production Survey.
- **24** Data from 1982–83 to 1986–87 report commercial disposals only. Data before 1982–83 include estimates of non-commercial production.
- **25** *Nuts.* Data are presented as total weight in shell. For peanuts, the apparent consumption data excludes peanuts used for processing, the amount processed is shown in tables 3 and 4. For tree nuts, data are directly comparable back to 1987–88 and include estimates for home production based on the 1992 Home Production Survey. Earlier data are for commercial production only.
- **26** Oils and fats. Butter and margarine data are presented as product weight. The group total which is expressed as fat includes an annual per capita allowance of 10 kg to represent the edible oil supply.
- **27** The allowance for edible oils was increased from 2 kg to 10 kg for 1980–81 data. Data were re-calculated back to 1975–76. Thus annual data from 1975–76 published in the 1980–81 and subsequent issues of the series are directly comparable.
- **28** Data published before the 1980–81 issue include an annual per capita allowance of 2 kg.
- **29** Fat associated with carcass meat is included in the meat commodity group.
- **30** *Sugar.* Sugar cane products and honey are represented as product weight. The group total includes the sugar content of syrups and glucose.
- **31** Beverages. Apart from tea and coffee, beverages are reported by volume. Low-alcohol beer (1.15% to less than 3.8% volume per volume (v/v) ethanol) and standard beer (>=3.8% v/v ethanol) have been differentiated since the 1984–85 issue.
- **32** Alcohol content (ethanol). The use of excise data as the source for the alcoholic content of beer was introduced in 1989–90. Data for prior years were not re-calculated, so that only data for 1989–90 and subsequent years are directly comparable. From 1984–85 to 1988–89, this distinction was made using a concentration of 2.4% v/v for low-alcohol beer and 4.8% for standard beer. Before 1984–85, alcohol from beer was calculated using a concentration of 4.8% v/v.

Commodity groups continued

33 Alcohol intake from wine is derived from domestic sales of wine using the following concentrations:

5.00	1771	(7)		-					~					*	*			. 10		- 00				*	*	*	80		
																												9	%
*	*	*	*	*	۵		*	*	*	*	P	*			*	8	*	*	*	*	*	٠	*	4	9	*	*	*	
D	e	SS	e	rt	V	vi	ne	9																		-	17		9
S	he	er	ry	,																						1	L7		7
S	pa	ar	kl	ir	ng	6	n	d	C	a	rb	0	na	at	e	d										1	LC).(6
Ta	ab	ole	9	W	in	е																				1	LC	1.8	8
