GDP(P)—Production based	1.3	4.2

### SEP QTR 1997 KEY POINTS

#### TREND ESTIMATES

- GDP(A) increased by 1.0% in the September quarter to a level 3.3% higher than in September quarter 1996.
- All three independent measures increased in the September quarter, with GDP(I) up 0.7%, GDP(E) up 1.2% and GDP(P) up 1.1%.
- GDP(A) per capita increased by 0.7% in the September quarter to be 1.9% higher than in September quarter 1996.

#### SEASONALLY ADJUSTED ESTIMATES

- GDP(A) increased by 1.5% in the September quarter to be 3.6% higher than in September quarter 1996.
- All three independent measures recorded increases, with GDP(I) up 1.1%, GDP(E) up 2.0% and GDP(P) up 1.3%.
- The implicit price deflator for GDP recorded little change, falling by 0.1% to a level 1.7% higher than in September quarter 1996.
- As in the June quarter, a number of large transactions took place in September quarter, and although they had no impact on GDP, they had major impacts on some of its components. Refer to the notes on pages 10 and 11 of this issue and the June quarter issue for details.

#### IN QUOTES

- For further information about these and related unpublished statistics, contact Ross Harvey on 02 6252 6713 for current price estimates, and Charles Aspden on 02 6252 6711 for constant price estimates.

## N O T E S

FORTHCOMING ISSUES	ISSUE	RELEASE DATE
	5206.0 <i>Australian National Accounts: National Income, Expenditure and Product</i> , December quarter 1997	4 March 1998
	5206.0.40.001 <i>Australian National Accounts: Quarterly State Details</i> , December quarter 1997	11 March 1998
*****		
REVISIONS IN THIS ISSUE	<p>Estimates of GDP(E) and GDP(I) have been revised as a result of incorporating more complete survey data for recent quarters. In addition, constant price aggregates which include computer equipment have been revised for all quarters from June quarter 1993 following revisions to the BEA price index which is used in the deflation of these aggregates. (For details see the note on page 11.)</p> <p>Estimates of GDP(P) have been revised as a result of incorporating new and revised benchmarks for finance and insurance, forestry and fishing, and cultural and recreational services. In addition, the availability of more complete survey data has affected most industries in recent quarters.</p> <p>*****</p>	
CHANGES IN FORTHCOMING ISSUES	<p>In late 1998 revised international standards, published in <i>System of National Accounts, 1993</i> (SNA93), are to be implemented in the Australian national accounts. This change has been foreshadowed in several ABS information papers, the most recent being <i>Implementation of Revised International Standards in the Australian National Accounts</i> (5251.0) which was released on 30 September 1997.</p> <p>An important recommendation of SNA93 is the use of chain volume measures in preference to constant price estimates for determining "real" growth. The measurement of real growth is a relatively complex topic and so a separate information paper entitled, <i>Introduction of Chain Volume Measures in the Australian National Accounts</i> (5248.0) is being prepared and is expected to be released in February 1998. The information paper will present proposals to replace the existing constant price estimates with chain volume measures in association with the adoption of the other SNA93 changes, starting with the September quarter 1998 edition of 5206.0. The latter will be preceded by a re-release of the June quarter 1998 edition of 5206.0 on a SNA93 basis. The December quarter 1997 and two subsequent editions of 5206.0 will include chain volume measures of GDP(E) and its components in addition to the headline constant price estimates. These chain volume measures will be included in several additional tables to be presented as an appendix within 5206.0.</p>

## SEPTEMBER QUARTER SUMMARY COMMENT

### FINAL CONSUMPTION EXPENDITURE

- Private expenditure showed strong growth of 1.1% (1.8% seasonally adjusted). There were increases in all categories except fares (-0.5%) and cigarettes and tobacco (-0.3%), with food, motor vehicles and other goods making major contributions to growth.

### GROSS FIXED CAPITAL EXPENDITURE

- Dwelling construction grew by 3.1% (2.1% seasonally adjusted). Investment in equipment rose 6.1% (fall of 0.8% seasonally adjusted), while non-dwelling construction rose 0.3% (2.0% seasonally adjusted). Overall, private GFCE rose 4.2% (0.4% seasonally adjusted).

### INCREASE IN PRIVATE NON-FARM STOCKS

- Private non-farm stocks increased by \$132 million (\$181 million seasonally adjusted) in the September quarter. This follows a decrease of \$36 million (increase of \$507 million seasonally adjusted) in the June quarter.

### EXPORTS OF GOODS AND SERVICES

- Exports of goods and services increased by 2.4% (fall of 1.8% seasonally adjusted) in the September quarter, with goods growing 2.3% and services up 2.6%.

### IMPORTS OF GOODS AND SERVICES

- Imports of goods and services increased by 3.1% (2.3% seasonally adjusted) in the September quarter, with goods increasing by 3.7% and services declining by 0.1%.

Comments are based on trend constant price estimates, unless otherwise stated.

### SEPTEMBER QUARTER

#### SUMMARY COMMENT

#### AGRICULTURE, FORESTRY AND FISHING

- The fall of 2.4% (7.0% seasonally adjusted) was mainly due to a decline in wheat production between 1996-97 and 1997-98 (forecast). (See note on page 11.)

#### MANUFACTURING

- Manufacturing production increased by 0.7% (0.6% seasonally adjusted). Most manufacturing industries recorded increases in production, but food, beverages and tobacco was the major contributor to growth.

#### CONSTRUCTION

- Construction increased by 1.5%. Much of the growth was attributable to dwelling construction.

#### WHOLESALE TRADE AND RETAIL TRADE

- Wholesale trade increased by 1.9% and retail trade increased by 1.5%. The 3.2% increase in seasonally adjusted retail trade was mainly due to department stores, other food retailers and motor vehicle retailers.

#### TRANSPORT AND STORAGE

- Increased by 1.0% (2.0% seasonally adjusted). All modes of transport recorded growth.

Comments are based on trend constant price estimates, unless otherwise stated.

## SEPTEMBER QUARTER

### SUMMARY COMMENT

#### WAGES, SALARIES AND SUPPLEMENTS

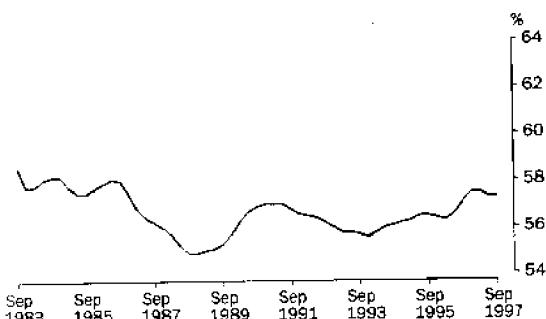

- Rose 0.8% (1.4% in seasonally adjusted terms).
- The rise reflects an increase in average earnings of 1.3%, partly offset by a fall in the number of wage and salary earners of 0.5%. In seasonally adjusted terms, average earnings rose 2.2%, while the number of wage and salary earners declined by 0.8%.

#### GROSS OPERATING SURPLUS

- In the September quarter, the GOS of private corporate trading enterprises increased by 0.6%, following a 1.0% increase in the June quarter. In seasonally adjusted terms, GOS fell by 1.8%, following an increase of 5.1% in June quarter 1997.

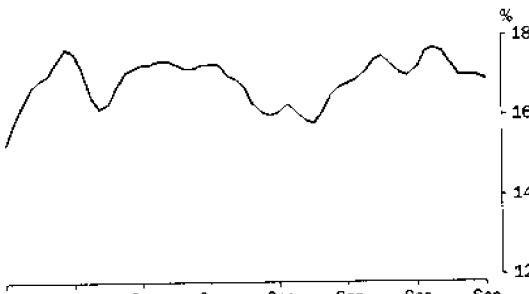

#### WAGES SHARE OF GDP

(AT FACTOR COST) (a)

#### PROFIT(b) SHARE OF GDP

(AT FACTOR COST) (a)

(a) GDP at factor cost is equal to the sum of wages, salaries and supplements and gross operating surplus (i.e. it equals GDP(I) less net indirect taxes).

(b) GOS of private corporate trading enterprises.

## ANALYSES AND COMMENTS

---

### RELIABILITY OF CONTEMPORARY TREND ESTIMATES

Seasonally adjusted series include both the trend effects and the irregular effects which influence movements in a series. As a result, seasonally adjusted estimates do not necessarily provide a good indication of the underlying behaviour of a series. On the other hand, trend estimates represent the underlying direction of the series, excluding seasonal effects and residual/irregular factors. Trend estimates are calculated by smoothing the seasonally adjusted series using a statistical procedure based on centred Henderson moving averages. The procedure used is designed to minimise distortions in the trend level, turning point shape and timing of turning points.

For the most recent quarters, insufficient data exist to use centred Henderson moving averages to calculate the trend values and so approximations to the Henderson moving averages are used for the latest three quarters. This means that revisions to the trend estimates for the last few quarters are unavoidable, even if none of the original data have been revised. More details about trend estimation are contained in the ABS Information Paper *A Guide to Interpreting Time Series — Monitoring Trends: An Overview* (1348.0) which was released on 19 April 1993.

Potential revisions to trend estimates can be indicated by showing the effects of particular changes in seasonally adjusted estimates that might occur in the next quarter. The table below shows the trend estimates for the last few quarters and the values to which they would be revised if the notional movements in seasonally adjusted GDP(A) actually occurred in December quarter 1997.

Seasonally adjusted growth of 0.5% is required in December quarter 1997 to maintain the trend growth, in December quarter, of 1.0% currently estimated for September quarter 1997.

### TREND ESTIMATE — PERCENTAGE CHANGE IN GDP(A)

---

### GROWTH RATES IN GDP(A)

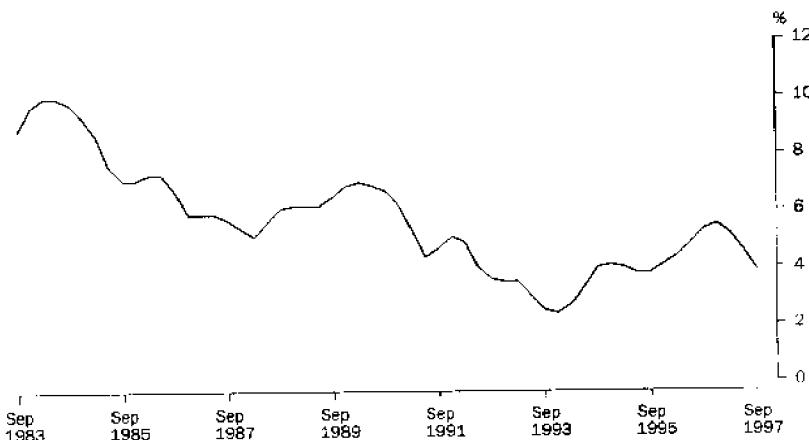

The graph below provides a comparison of the quarterly growth rates (percentage changes) in constant price GDP(A) in both seasonally adjusted and trend terms in recent years.

### HOUSEHOLD SAVING RATIO

The proportion of household disposable income devoted to consumption in the September quarter was 96.1%. The balance, household saving, was 3.9%. Caution should be exercised in interpreting this ratio in recent years, because major components of household income and expenditure may still be subject to significant revisions. The impact of these revisions on the saving ratio can cause changes in the apparent direction of the trend. The following graph presents the household saving ratio derived from trend data (see Explanatory Notes, paragraph 26).

Trend

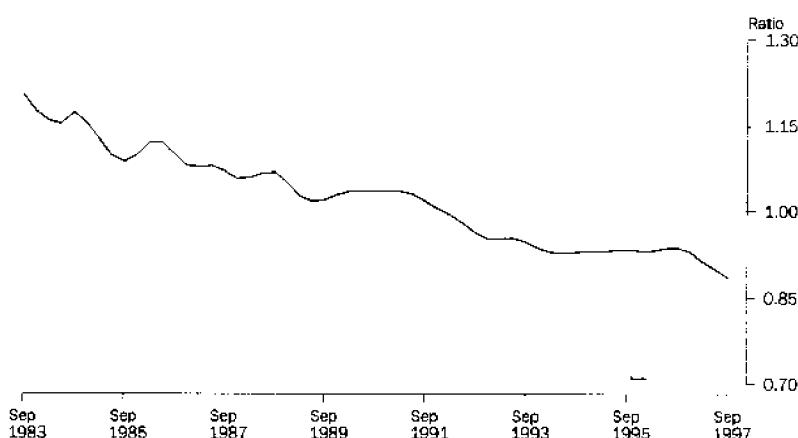

## ANALYSES AND COMMENTS *continued*

---

### PRIVATE NON-FARM STOCKS TO SALES RATIO

In trend current price terms, the book value of private non-farm stocks increased by \$322 million (0.4%) in the September quarter, while sales increased by \$1,622 million (2.0%). Consequently, the stocks to sales ratio fell from 0.900 in June quarter 1997 to 0.886. The following graph presents the ratio of private non-farm stocks to sales over the last fourteen years (see Explanatory Notes, paragraph 24).

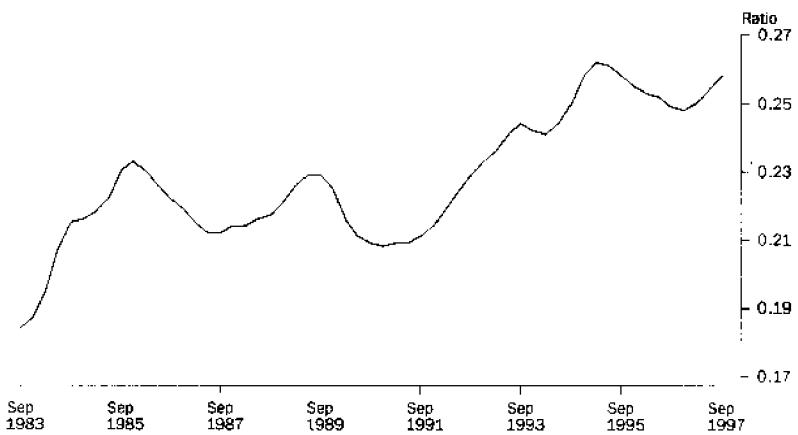

Trend at Current Prices

### IMPORTS TO SALES RATIO

The imports to sales ratio, trended and at current prices, increased from 0.254 in June quarter 1997 to 0.258. The following graph presents the ratio of imports to sales over the last fourteen years (see Explanatory Notes, paragraph 25).

Trend at Current Prices

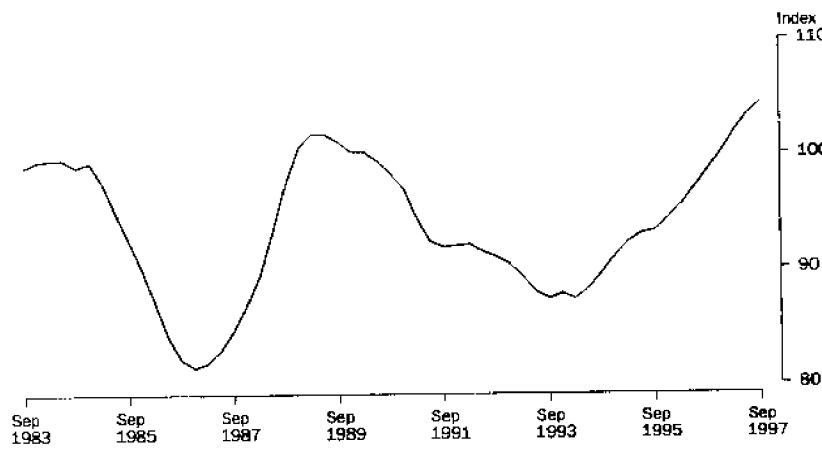

## ANALYSES AND COMMENTS *continued*

### TERMS OF TRADE

In September quarter 1997 the terms of trade index derived from trend estimates (see Explanatory Notes, paragraph 16) rose by 1.1%. The implicit price deflator for exports rose by 1.0%, while the deflator for imports fell by 0.1%.

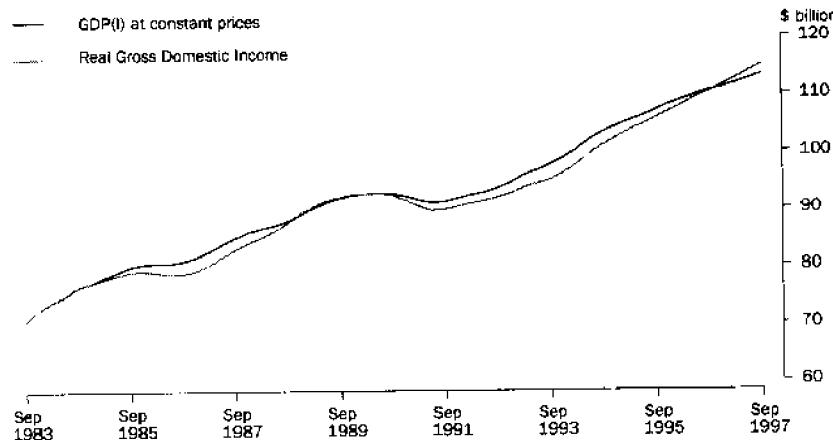

Trend (1989-90 = 100)

### REAL GROSS DOMESTIC INCOME

GDP at constant prices is a measure of the volume of goods and services produced in Australia. If the terms of trade change significantly over the period of comparison, then this measure of real GDP will not accurately reflect the change in real purchasing power of the income generated by domestic production. (See the Technical Note included in the September quarter 1993 issue of this publication for a more detailed discussion.) A better measure of the real purchasing power of income generated by domestic production is GDP(I) at average 1989-90 prices adjusted for the terms of trade effect, which is referred to as *real gross domestic income*. The graph below provides a comparison of trend GDP(I) at average 1989-90 prices and real gross domestic income. Trend and seasonally adjusted estimates of real gross domestic income are shown in Tables 68 and 69 respectively.

Trend

## ANALYSES AND COMMENTS continued

### PRIVATE GROSS FIXED CAPITAL EXPENDITURE— NON-DWELLING CONSTRUCTION AND EQUIPMENT

Movements in private gross fixed capital expenditure can often be affected by large second-hand transactions and large one-off purchases. Second-hand purchases in both the June and September quarters 1997 were unusually high due to large asset sales by the Victorian Government in the June quarter, and the sale of DASFLEET for \$408 million by the Commonwealth Government in the September quarter. Details of recent transactions in second-hand assets between the private and public sectors, expenditure on new equipment, and new work on non-dwelling construction are provided in the table below.

#### BUSINESS INVESTMENT AT AVERAGE 1989-90 PRICES

	NON-DWELLING CONSTRUCTION.....			EQUIPMENT.....		
	New work done - private	Net second-hand purchases from public sector	Total	New assets purchased - private	Net second-hand purchases from the public sector	Total
	\$ million	\$ million	\$ million	\$ million	\$ million	\$ million

## **ANALYSES AND COMMENTS** *continued*

---

### **GROSS FARM PRODUCT**

Gross farm product fell 7.4% in seasonally adjusted constant price terms in the September quarter 1997. On a seasonally adjusted basis production of wheat decreased significantly, while production of other grain crops, livestock slaughterings and other crops also declined.

It should be noted that the convention used to seasonally adjust wheat, sugar cane, other grain crops and other crops, has particular implications for the interpretation of quarter-to-quarter changes in seasonally adjusted gross farm product. The method used is to divide the annual production (actual or forecast) of these crops by four and to allocate this amount to each of the four quarters in a financial year. Although this avoids problems that would be associated with the application of standard methods of seasonal adjustment to the production of crops, it introduces a step in the seasonally adjusted estimates between June and September quarters because it concentrates the whole of the annual change for these crops into the September quarter, followed by zero growth in December, March and June quarters. (A more detailed description of the seasonal adjustment of gross farm product is provided in Appendix 1 of *Australian National Accounts: Concepts, Sources and Methods* (5216.0).)

### **COMPUTER EQUIPMENT PRICE INDEX**

In deriving constant price estimates of aggregates that include computer equipment, the ABS makes extensive use of a computer equipment price index compiled by the United States Bureau of Economic Analysis (BEA), after suitable lagging and adjustment for exchange rate movements. Recently, the BEA made improvements to the way the computer equipment price index is calculated, resulting in a more rapid decline in the index over recent years. Hence, there have been large upward revisions to the constant price estimates of those aggregates, such as private gross fixed capital expenditure on equipment and imports, which have a large computer equipment component. These revisions extend back to June quarter 1993. The associated implicit price deflators and fixed-weighted price indexes are also affected.

### **EXPORTS OF GOLD**

Large irregular transactions relating to gold sales by the Reserve Bank of Australia (RBA) are included in exports of goods and services (in both original and seasonally adjusted terms) in September quarter 1997. These latest transactions have been treated in the same manner as those that occurred in the June quarter. In the domestic production account, the contribution to GDP from the gold sales is exactly offset by a reduction in other public authority stocks. For further information about the treatment of RBA gold transactions in ABS statistics refer to the Technical Note on page 18 of the June quarter issue of *International Trade in Goods and Services, Australia* (5368.0) or on page 8 of the June quarter 1997 issue of *Balance of Payments, Australia* (5302.0).

All of the above transactions in the June and September quarters 1997 have been treated as extreme irregulars in the exports of goods and services series and other public authority stocks series. Consequently, the values of these transactions are included in seasonally adjusted estimates (although without the application of normal seasonal factors), but they have been excluded from the derivation of the trend estimates.

## ANALYSES AND COMMENTS *continued*

---

### INTRODUCTION OF BPM5 AND SNA93

In September 1997, the ABS announced a change in the basis of compilation and presentation of balance of payments (BOP) and international investment position (IP) statistics in an information paper entitled *Implementing New International Statistical Standards in ABS International Accounts Statistics* (5364.0). The paper provided a description of the revisions to international standards for international accounts statistics, and addressed both the reasons for the revisions and the benefits to Australia from adopting the standards.

The new standards were adopted in the September quarter 1997 issue of *Balance of Payments and International Investment Position, Australia* (5302.0). However, as outlined in the information paper *Implementation of Revised International Standards in the Australian National Accounts* (5251.0), released on 30 September 1997, the national accounts will not be moving to the new national accounting standard, *System of National Accounts, 1993* (SNA93) until September quarter 1998. For the next four quarters the overseas transactions account in 5206.0 will continue to be compiled on the existing basis. A reconciliation table is being included in 5302.0 for each of these quarters to account for the differences in treatment for various component series. From September quarter 1998 the national accounts and balance of payments will be fully consistent.

### WAGES, SALARIES AND SUPPLEMENTS

Quarterly movements in wages, salaries and supplements can at times be significantly affected by changes in two of the component series: severance, termination and redundancy payments, and supplements to wages and salaries (i.e. employers' contributions to superannuation and workers' compensation claims). Severance, termination and redundancy payments for recent quarters are shown below (although an estimate for September quarter 1997 is not yet available separately from the total wages and salaries figure) together with estimates for supplements for the last nine quarters. (The estimates can be shown only in original terms because wages, salaries and supplements are seasonally adjusted in total.)

(d) Import duties have been added and the imputed bank service charge associated with this sector has been deducted to derive these estimates. (b) ANZSIC divisions A to K and P. See paragraph 21 of the *Explanatory notes*.(c) ANZSIC divisions B to K and P. See paragraph 22 of the *Explanatory notes*. (d) For the iron-market industries the methods used to estimate gross product at constant prices do not adequately capture the change in gross product per unit of labour input. Hence the estimates for the market and non-market sectors provide more useful indicators of changes in labour productivity than the estimates for all industries. (e) The seasonally adjusted estimates of hours worked have a history of substantial volatility, and so the most recent trend estimates are subject to revision when seasonally adjusted data for subsequent quarters become available.

Note: Annual data derived from original series. (a) Import duties have been added and the imputed bank service charge associated with this sector has been deducted to derive these estimates. (b) ANZSIC divisions A to K and P. See paragraph 21 of the *Explanatory notes*. (c) ANZSIC divisions B to K and P. See paragraph 22 of the *Explanatory notes*. (d) For the non-market estimates the methods used to estimate gross product at constant prices do not adequately capture the changes in gross product per unit of labour input. See paragraph 21 of the *Explanatory notes*. Hence the estimates for the market and non-farm market sectors provide more useful indicators of changes in labour productivity than the estimates for all industries.

Note: Annual data derived from original series. (a) Import duties have been added and the imputed bank service charge associated with this sector has been deducted to derive these estimates. (b) ANZSIC divisions A to K and P. See paragraph 21 of the *Explanatory notes*. (c) ANZSIC divisions B to K and P. See paragraph 22 of the *Explanatory notes*. (d) For the non-market industries the methods used to estimate gross product at constant prices do not adequately capture the changes in gross product per unit of labour input. See paragraph 21 of the *Explanatory notes*. Hence the estimates for the market and non-market market sectors provide more useful indicators of changes in labour productivity than the estimates for all industries. (e) The seasonally adjusted estimates of hours worked have a history of substantial volatility, and so the most recent estimates are subject to revision when seasonally adjusted data for subsequent quarters become available.

## EXPLANATORY NOTES

---

### INTRODUCTION

**1** This publication contains estimates of the components of gross domestic product and national expenditure and supporting tables for the latest quarter, together with comparative estimates for the eight previous quarters and the last four financial years. Seasonally adjusted and trend estimates of the major aggregates and some selected series are also provided for the latest quarter, together with comparative estimates for the twelve previous quarters. The list of tables, pages 13-14, shows the full range of data provided.

### CONCEPTS, SOURCES AND METHODS

**2** These are documented in *Australian National Accounts: Concepts, Sources and Methods* (5216.0). An updated version of the 5216.0 publication, along with other similar ABS publications, is now available on a CD-ROM product, which is entitled *Statistical Concepts Reference Library on CD-ROM* (1361.0). It was released in July 1996.

### ACCURACY OF QUARTERLY ESTIMATES

**3** Estimating for a period of less than one year presents special problems. It is often difficult to adhere strictly to definitions used in annual estimates when deriving quarterly ones. This is particularly the case for the quarterly measure of income, because it is not always possible to match the value of production for a quarter with the cost incurred in that production. Difficulties are also encountered in obtaining detailed data for short periods and in preparing consistent estimates from different sources with different accounting procedures and periods. Furthermore, the quarter-to-quarter growth in seasonally adjusted terms is very sensitive to the timing of recording a transaction. If the recording of a transaction is delayed by one quarter, seasonally adjusted movements will be distorted for three consecutive quarters. All these problems affect the accuracy of the current and constant price estimates and should be taken into account in interpreting the estimates.

### REVISIONS

**4** Most figures are subject to revision as more complete and accurate information becomes available. The revisions are of two types: those made to recent quarters and those made as a consequence of a redistribution across all quarters within a year following revisions to annual totals. Major revisions made this quarter are discussed on page 2.

### TREND ESTIMATES

**5** Given the qualifications regarding the accuracy and reliability of the quarterly national accounts, the Australian Bureau of Statistics (ABS) considers that trend estimates provide the best guide to the underlying movements, and are more suitable than either the seasonally adjusted or original data for most business decisions and policy advice.

**6** A trend estimate is obtained by removing the irregular component from the seasonally adjusted series. For estimates in this publication, it is calculated using a centred 7-term Henderson moving average of the seasonally adjusted series. Estimates for the three most recent quarters cannot be calculated using this centred average method; instead an asymmetric average is used. This can lead to revisions in the trend estimates for the last three quarters when data become available for later quarters, even if none of the original data for earlier quarters has changed.

**7** If a series has a high 'irregular' component, then the trend estimates will be subject to greater revision for the latest few quarters as data become available for subsequent quarters than would otherwise be the case. However, it is important to note that this does not make the trend series inferior to the seasonally adjusted or original series. In fact, in such cases the effect of the irregular component on overall movements is likely to be even more marked in the seasonally adjusted and the original estimates than in the trend series.

## EXPLANATORY NOTES

---

### TREND ESTIMATES *continued*

**8** For more information about ABS procedures for deriving trend estimates and an analysis of the advantages of using them over alternative techniques for monitoring trends, see *A Guide to Interpreting Time Series — Monitoring 'Trends': an Overview* (1348.0) or contact the Assistant Director, Time Series Analysis on (06) 252 6345.

Two feature articles which have appeared in the ABS monthly publication *Australian Economic Indicators* (1350.0) may also be of interest:

- *Picking Turning Points in the Economy* (April 1991), and
- *Smarter Data Use* (March 1992).

### IMPLICIT PRICE DEFULATOR (IPD)

**9** The quarterly implicit price deflators (IPDs) are derived by dividing seasonally adjusted and trend current price estimates by the corresponding constant price estimates.

Movements in IPDs can be greatly affected by changes in the physical composition of the aggregates and their components. For this reason, quarterly IPDs derived from seasonally adjusted or trend data are preferred to those using original data. The seasonal adjustment process itself is also a possible source of distortion. For further information see Appendix VI of *Australian National Accounts: Concepts, Sources and Methods* (5216.0).

### SEASONAL ADJUSTMENT:

#### GENERAL METHOD

**10** Data that are affected by seasonal factors are adjusted to remove the effects of these factors. The general methods for doing so are described in Appendix I of *Australian National Accounts: Concepts, Sources and Methods* (5216.0). Three important points should be noted here:

- The methods used in seasonal adjustment do not force the sum of the adjusted estimates for each quarter of a year to equal the original annual total.
- Where constant price estimates have no apparent seasonality in their implicit price deflators, the estimates are adjusted using the corresponding factors for current price estimates.
- Special methods have been used to adjust some components of gross farm product. These concern the adjustment of crop production where production/harvest only occurs in a couple of quarters each year. In these instances, the output for each financial year is distributed equally over the four quarters.

### MEASURES OF GDP

#### GDP(I) INCOME APPROACH

**11** GDP(I) is the sum of factor incomes, consumption of fixed capital (depreciation) and net indirect taxes. The preferred current price measure of GDP is GDP(I). It is the overall measure which is consistent with subsidiary measures such as national income and the other consolidated tables (such as the national income and outlay account). GDP(I) also provides the base year benchmarks for the constant price estimates of GDP(P). Constant price estimates of GDP(I) are derived by deflating current price estimates of GDP(I) by the implicit price deflator of GDP(E).

#### GDP(E) EXPENDITURE APPROACH

**12** GDP(E) is the sum of all final expenditures, changes in stocks, and exports less imports. Constant price estimates of GDP(E) are the sum of all these components at average 1989–90 prices.

#### GDP(P) PRODUCTION APPROACH

**13** GDP(P) is calculated as the market value of goods and services produced by an industry (i.e. gross output) less the cost of goods and services used in the productive process (i.e. intermediate consumption). Constant price estimates of GDP(P) are the sum of constant price estimates (at average 1989–90 prices) for each industry.

## EXPLANATORY NOTES

---

### MEASURES OF GDP *continued*

GDP(A)  
THE AVERAGE  
**14** While the three measures above are identical in concept, they can differ significantly in practice, especially in the short term, because of the different data sources used for each measure. Using the average of the three, GDP(A), smooths out these differences. GDP(A) is considered by the ABS to be the most satisfactory indicator of short-term seasonally adjusted or trend growth (see the Feature Article in the June quarter 1990 issue of *Australian National Accounts: National Income and Expenditure* (5206.0)).

### ANALYSIS OF CONTRIBUTIONS TO GROWTH

**15** Tables 6 and 7 present analyses of the contribution provided by each major component to the percentage change in trend and seasonally adjusted estimates of constant price GDP(I). The figures in each table are additive within each quarter, unlike the percentage changes shown in other tables in this publication. The formula used to calculate the contribution of each aggregate to the growth in GDP is:

$$\frac{A(t) - A(t-1)}{GDP(t-1)} \times 100$$

where

$A(t)$  = value of aggregate A in quarter under consideration

$A(t-1)$  = value of aggregate A in preceding quarter

$GDP(t-1)$  = value of GDP in preceding quarter.

→

### TERMS OF TRADE

**16** There are several ways of measuring the terms of trade. In this publication, the following index is used :

$$\frac{\text{Implicit price deflator for exports of goods and services}}{\text{Implicit price deflator for imports of goods and services}} \times 100$$

Estimates of the terms of trade are shown in Tables 11, 12, 18, 19, 68 and 69.

### REAL GROSS DOMESTIC INCOME

**17** GDP at constant prices is a measure of the volume of goods and services produced in Australia. If the terms of trade change significantly over the period of comparison, then this measure of real GDP will not accurately reflect the change in real purchasing power of the income generated by domestic production. (See the *Technical Note* included in the September 1993 issue of this publication for a more detailed discussion.) A better measure of the real purchasing power of income generated by domestic production is GDP(I) at average 1989–90 prices adjusted for the terms of trade effect, which is referred to as *real gross domestic income* (or real GDI). The following adjustment is made to GDP(I) at constant prices to obtain an estimate of real GDI:

- exports of goods and services at current prices are deflated by the implicit price deflator for imports of goods and services
- the actual constant price value of exports is then deducted from this value, and
- the resultant terms of trade adjustment is then added to GDP(I) at constant prices to give real GDI presented in Tables 68 and 69.

## EXPLANATORY NOTES

---

### GROSS PRODUCT PER UNIT OF LABOUR INPUT

**18** Indexes of constant price gross product per person employed and per hour worked are commonly referred to as measures of labour productivity. However, it should be noted that these indexes reflect not only the contribution of labour to changes in product per unit of labour, but also the contribution of capital and other factors (such as managerial efficiency, economies of scale, etc.).

**19** When analysing labour productivity indexes it is critical to note that they are subject to the vagaries of the growth (or business) cycle as well as the effects of any measurement error in either output or labour input. Differences in the amplitude and phase of the output and input cycles can result in labour productivity indexes deviating substantially from their longer-term trend. Analytical work undertaken within the ABS suggests that movements in employment and hours worked tend to lag movements in GDP. Over a 20 year period, the lag at turning points in the growth cycle varied between zero and four quarters, with the average being between two and three quarters. The implication is that, in the period of the growth cycle when the growth in output is declining, indexes of labour productivity are likely to decline, particularly if rapid growth in GDP is abruptly ended. Conversely, labour productivity indexes are likely to grow strongly when the economy comes out of a cyclical trough.

**20** A simple way to estimate the underlying trend in labour productivity is to compare the values of a labour productivity index spanning a growth cycle e.g. from the peak of one growth cycle to the peak of another. Note that such estimates rest on the assumption that labour is being utilised to the same degree at each growth cycle peak. Average annual growth rates, over growth cycles, of estimates of gross product per hour worked in the *market* and *non-farm market* sectors are shown in *Australian National Accounts: Multifactor Productivity* (5234.0).

### MARKET AND NON-FARM MARKET SECTORS

**21** The estimates of gross product at constant prices for five industries are derived either wholly or primarily by using either deflated input cost data or hours worked as indicators of output. These industries are: Property and business services; Government administration and defence; Education; Health and community services; and Personal and other services. As such, the estimates cannot adequately reflect changes in productivity. For the purpose of measuring changes in productivity, it is therefore preferable that these industries be excluded. The constant price product of a group of industries referred to as the *market sector* is defined to be GDP(P) less the above six industries, less Ownership of dwellings (for which capital stock is used as the indicator of output), plus the imputed bank service charge related to the 'non-market' industries.

**22** A second industry group, referred to as the *non-farm market sector*, comprises the market sector less Agriculture, forestry and fishing. Productivity estimates derived for this group are free of the effects caused by the volatility of agricultural production due to changing seasonal conditions.

### INDEXES OF EMPLOYMENT AND HOURS WORKED

**23** The quarterly employment indexes used to derive the gross product per person employed indexes comprise all labour engaged in the production of goods and services and include not only civilian wage and salary earners but also employers; self-employed persons; persons working one hour or more without pay in a family business or on a farm; and members of the Australian defence forces. For details of how the employment and hours worked estimates are formed, refer to Section 23 of *Australian National Accounts: Concepts Sources and Methods* (5216.0), and also Section 4 of the Information Paper *Australian National Accounts: Introduction of Constant Price Estimates at Average 1989-90 Prices* (5243.0) which describes changes in methods introduced in conjunction with the rebase of constant price estimates to average 1989-90 prices.

## EXPLANATORY NOTES

---

PRIVATE NON-FARM STOCKS  
TO SALES RATIO

**24** The ratio is presented in tables 68 and 69. The denominator of this ratio, in current price terms, is defined as:

- private final consumption expenditure on goods
- plus private gross fixed capital expenditure on dwellings, non-dwelling construction and equipment
- plus public gross fixed capital expenditure
- plus exports of non-rural goods.

IMPORTS TO SALES RATIO

**25** The ratio is merchandise imports (ie total imports of goods) to sales (as defined in paragraph 24 above). This ratio is presented in tables 68 and 69.

HOUSEHOLD SAVING RATIO

**26** This is the ratio of household saving to household disposable income, where household saving is the difference between household disposable income and private final consumption expenditure. The ratio is a memorandum item in tables 27 and 28 and is also shown in table 67.

GDP(A) PER CAPITA

**27** This is the ratio of GDP(A) to an estimate of the resident Australian population. For all but the most recent quarters, the resident population data are drawn from *Australian Demographic Statistics* (3101.0). For the most recent quarters, estimates are made by extrapolating from the latest available data.

RELATED PUBLICATIONS

**28** In addition to the publications already mentioned, others of interest include:

- *Australian National Accounts: National Income, Expenditure and Product* (5204.0)—annual
- *Australian National Accounts: State Accounts* (5220.0)—annual
- *Australian National Accounts: Capital Stock* (5221.0)—annual
- *Australian National Accounts: Financial Accounts* (5232.0)—quarterly
- *Australian National Accounts: Multifactor Productivity* (5234.0)—annual
- *Australian National Accounts: National Balance Sheet* (5241.0)—annual
- *A Guide to the Australian National Accounts* (5235.0).

**29** Current publications produced by the ABS are listed in the *Catalogue of Publications and Products, Australia* (1101.0). The ABS also issues, on Tuesdays and Fridays, a *Release Advice* (1105.0) which lists publications to be released in the next few days. The Catalogue and Release Advice are available from any ABS office.
