NOTES ON THE SEPTEMBER QUARTER ESTIMATES

MAIN FEATURES

NOTE: Changes in individual quarters are necessarily subject to the uncertainties discussed in the explanatory notes under interpretation of quarterly estimates, and furthermore some may be substantially revised as firmer data come to hand. This applies particularly to the estimates for the two most recent years for gross operating surplus, the income of companies and non-farm unincorporated enterprises, depreciation, and therefore to the estimated magnitude of change in gross non-farm product.

ESTIMATES OF MAIN AGGREGATES AT AVERAGE 1974-75 PRICES, SEASONALLY ADJUSTED

	Percentage Change		Percentage points Contribution to Growth in GDP	
	June qtr 1981 to Sept. qtr 1981	Sept. qtr 1980 to Sept. qtr 1981	June qtr 1981 to Sept. qtr 1981	Sept. qtr 1980 to Sept. qtr 1981
Final consumption expenditure—				
Private	1.3	3.5	0.8	2.1
Government	3.8	4.9	0.6	0.8
Gross fixed capital expenditure	5.5	8.4	1.3	1.9
Increase in stocks	3.3	1.0
Statistical discrepancy	-2.9	1.3
Gross national expenditure	3.0	7.2	3.1	7.1
Exports of goods and services	-1.4	-2.5	-0.2	-0.4
Imports of goods and services	7.5	17.6	-1.3	-2.9
Gross domestic product	1.5	3.8	1.5	3.8
Gross farm product	19.3	18.5	1.1	1.1
Gross non-farm product	0.4	2.8	0.4	2.7

.. not applicable

In current price seasonally adjusted terms, wages, salaries and supplements rose by 1.9 per cent in September quarter 1981, while gross operating surplus of trading enterprise companies rose by 4.1 per cent in the same period.

The following notes are provided to aid analysis of the estimates for recent quarters.

Wages, salaries and supplements

Because of problems in recent years in the reliability of estimates of employment, the method used for estimating wages, salaries and supplements has been modified. The estimates of wages, salaries and supplements for 1979-80 and 1980-81 reflect movements in the number of wage and salary earners shown in the monthly Labour Force Survey. Estimates for previous years are based on the now discontinued civilian employees series published in the *Civilian Employees, Australia* (6213.0).

Government final consumption expenditure

The September quarter increase of 3.8 per cent in seasonally adjusted constant price terms was mainly

attributable to above average increases in State and Local Government expenditure on education and on health and welfare.

Public gross fixed capital expenditure

There are two major causes of the rise of 7.9 per cent in the seasonally adjusted constant price estimate in September quarter. A surge in capital expenditure for electricity generation and distribution occurred during the quarter. Also, there was lower than usual capital expenditure for education purposes during June quarter followed by a large increase to a more normal level in September quarter.

Private gross fixed capital expenditure-dwellings

Estimates for private gross fixed capital expenditure on dwellings have been revised from June quarter 1980. Despite these revisions there may still remain some discontinuity between June quarter 1980 and September quarter 1980 estimates of expenditure on dwellings because of the introduction from September quarter 1980 of a new collection system for building activity statistics. For September quarter 1981 it has been assumed that expenditure on dwellings, in constant price terms, remained unchanged from the June quarter level. This assumption is based on the level of building approvals in the September quarter and the large number of dwellings under construction at the end of June 1981.

Statistical discrepancy

The statistical discrepancy represents the difference between the sum of the estimates of gross domestic product (GDP) and imports of goods and services on the one hand and the sum of the estimates of components of gross national expenditure and exports of goods and services on the other hand. Conceptually these two totals are the same. The inclusion of the statistical discrepancy on the expenditure side of the domestic production account is a convention and does not necessarily imply that the sum of the income components more accurately measures GDP than the sum of the expenditure components. However, in recent quarters the expenditure-based measure of GDP has moved more erratically than the income-based measure which suggests that the expenditure aggregates may be more subject to timing problems than the income aggregates.

The aspect of the statistical discrepancy which is of most concern in the quarterly context is the magnitude of change from one quarter to the next. In recent quarters there have been quite significant movements in the seasonally adjusted constant price statistical discrepancy. A useful way of examining the significance of the statistical discrepancy is to compare the change in gross non-farm product as published with the result which would be obtained using the expenditure aggregates excluding the statistical discrepancy. The following table shows such a comparison for the last 6 quarters and indicates that inconsistencies in the recording of transactions in the domestic production account are particularly marked in recent quarters. Users are advised to take these problems into account when interpreting the estimates.

PERCENTAGE CHANGES IN GROSS NON-FARM PRODUCT AT AVERAGE 1974-75 PRICES, SEASONALLY ADJUSTED

<i>Quarters ended</i>	<i>Income-based(a)</i>	<i>Expenditure-based(b)</i>
<i>1980—</i>		
June	1.4	-0.2
September	1.2	3.4
December	1.5	-0.1
<i>1981—</i>		
March	0.4	-0.7
June	0.5	-1.2
September	0.4	3.6

(a) Gross non-farm product as published. (b) Gross non-farm product less statistical discrepancy.

Household saving ratio

Present estimates indicate that, on a seasonally adjusted basis, the proportion of household disposable income devoted to consumption in the September quarter was 88.5 per cent while household saving which is derived as a balancing item represented 11.5 per cent. Both of these ratios are affected by any deficiencies or inconsistencies in the estimation and seasonal adjustment of household income and expenditure.

The household saving ratio in recent quarters is as follows:

<i>Quarters ended</i>	<i>Percentage</i>
<i>1980—</i>	
June	12.5
September	12.5
December	12.8
<i>1981—</i>	
March	10.8
June	12.5
September	11.5

Revisions

The major revisions in this publication are in respect of private gross fixed capital expenditure on dwellings (from June quarter 1980), private gross fixed capital expenditure on non-dwelling construction (June quarter 1981), increase in non-farm stocks (June quarter 1981) and wages, salaries and supplements (June quarter 1981). Generally these revisions resulted from the receipt of more complete information from the various data sources used to compile these estimates.

EXPLANATORY NOTES

Introduction

This publication provides estimates of the components of gross domestic product and national expenditure and supporting tables for the September quarter 1981, together with comparative estimates for the eight previous quarters and the four years 1977-78 to 1980-81. Tables 32-42 provide historical series for the period from September quarter 1966 for the aggregates contained in the domestic production account (at both current and average 1974-75 prices), some selected income aggregates and implicit price deflators.

2. The definitions and concepts used in this publication are identical to those employed in *Australian National Accounts, National Income and Expenditure 1979-80* (5204.0).

3. A discussion of the nature and limitations of implicit price deflators and a brief description of items in this publication are given in the Appendices to the publication *Quarterly Estimates of National Income and Expenditure, December Quarter 1977* (5206.0).

Interpretation of quarterly estimates

4. Estimating for a period of less than one year presents special problems in that it is often difficult to adhere strictly to definitions and concepts used in annual estimates. The measurement of income for a quarterly period is particularly difficult since it is not always possible to match the value of production for a quarter with the cost incurred in that production. This problem occurs, for example, in estimating the income of farm unincorporated enterprises in each quarter, and results in considerable variation of the estimates for this series, and for gross farm product, from quarter to quarter. Difficulties are also experienced in obtaining detailed data for short periods and in preparing consistent estimates from various sources where different accounting procedures and periods are used.

5. These problems inevitably affect the consistency and reliability of the current price estimates, and similarly affect the constant price estimates based on the current price estimates. Accordingly, these factors as well as the approximations and assumptions necessarily made in the revaluation of flows to constant prices should be borne in mind when interpreting or using the estimates, for example, in attempting to draw precise quantitative inferences relating to quarter-to-quarter changes in gross domestic product or its components, or in productivity.

6. Analysis of trends requires allowance for these uncertainties in estimation. The effects are in some measure indicated by the change in the statistical discrepancy for corresponding periods. Uncertainty in trends arises also from the likelihood of revisions as more information becomes available and from the irregularity of short-term movements. The inclusion of the statistical discrepancy on the expenditure side of the accounts is a convention and does not necessarily imply that the sum

of the income components more accurately measures GDP than the sum of the expenditure components (plus exports less imports). As household and other saving are estimated as balancing items in their respective accounts, care should be exercised in their interpretation.

7. Estimates of national income and expenditure are necessarily prepared from a wide range of statistical information, some of which is available quickly and some only with a delay of several years. For this reason most figures should be regarded as subject to revision as more complete and more accurate information becomes available. The revisions will be of two main types — those made to the most recent quarters as firmer quarterly or monthly data come to hand and those which are a consequence of revisions to annual totals and are distributed to the quarters approximately in accordance with existing quarterly patterns.

8. No simple measure is available of the accuracy of the national accounting aggregates. However the following example illustrates the *sensitivity* of quarter to quarter growth to the timing of recording a transaction. If, in the latest year, the timing of recording a transaction were delayed by one quarter and if the transaction had an impact on constant price gross domestic product of +\$18 million then the measure of the rate of growth would be affected in three adjoining quarters (centred on the quarter in which the transaction was recorded) by -0.1, +0.2, and -0.1 percentage points respectively. Of course the percentage impact of such a timing delay on relevant sub-aggregates would be greater.

9. The quarterly implicit price deflators (IPDs) shown in Tables 9 and 42 are derived by dividing seasonally adjusted current price estimates by the corresponding seasonally adjusted constant price estimates. Movements in the levels of individual implicit price deflators can be greatly affected by changes in the physical composition of the aggregates and their components. Generally, it is considered that IPDs derived from seasonally adjusted data are more reliable than those obtained by using original (i.e. unadjusted) series, because the former are less likely to be affected by compositional change than are the latter. However the seasonal adjustment process is itself a source of likely distortion, especially to the extent that it is not possible to identify, in a fully consistent way, the seasonality of the current price estimates and of the constant price estimates. A discussion of the limitations involved in using IPDs as measures of pure price change is contained in Appendix C of *Australian National Accounts, National Income and Expenditure, 1976-77* (5204.0).

Seasonal adjustment

10. As most series are affected to some extent by seasonal factors, allowance should be made for normal seasonal variation. In Tables 6, 8, 9, 13, 17, 19, 22, 23, 33, 35 and 37 to 42, *seasonally adjusted* values are presented for selected series. Series which show substantial irregularities in the original or adjusted series should be treated

with some reserve. As different methods of seasonal adjustment tend to produce different results, it is necessary to bear in mind the methods by which they have been derived and the limitations to which those methods are subject. It should also be noted that the methods of seasonal adjustment used by the ABS do not force the sum of the seasonally adjusted estimates for each quarter of a financial year to equal the original annual total.

11. The general methods used in the ABS for making seasonal adjustments are described in *Seasonally Adjusted Indicators, Australia, 1981* (1308.0). However, special methods have been used to adjust some of the components of gross farm product which were not amenable to seasonal adjustment by the usual methods. To obtain the seasonally adjusted estimates, the estimated values of production of wheat, other grain and sugar cane, for any financial year, are distributed equally over the four quarters of the year ended June. One effect of these methods is that changes in the annual production of these commodities first enter into the seasonally adjusted figures in the September quarter. As far as possible the constant price estimates have been adjusted using methods similar to those for the corresponding current price estimates.

Analysis of contributions to growth table

12. Table 3 presents an analysis of the contribution provided by each major aggregate to the percentage change in seasonally adjusted gross domestic product at constant prices. The formula used to calculate the contribution by each aggregate to the growth in GDP is:

$$\frac{A(t) - A(t-1)}{GDP(t-1)} \times 100.0$$

where A(t) = value of aggregate A in quarter under consideration

A(t-1) = value of aggregate A in preceding quarter

GDP(t-1) = value of GDP in preceding quarter

All these values are seasonally adjusted constant price estimates. It should be noted that the figures in this table are additive within each quarter unlike the percentage change tables shown elsewhere in this publication.

Rounding of figures

13. Although percentage changes are given to one decimal place in this publication, this does not imply that they can be regarded as accurate to the last digit shown. The figures after the decimal point are given to avoid distortions which may occur in rounding off the figures to the nearest half or whole number.

14. The procedures used in preparing this publication may occasionally result in rounding differences between figures in this publication and corresponding figures in other publications.

15. Where figures have been rounded, discrepancies may occur between sums of the component items and totals.

Related publications

16. Other ABS publications which may be of interest include:

Quarterly Estimates of National Income and Expenditure, Australia, (Preliminary) (5205.0)—issued for June Quarter only

Historical Series of Quarterly Estimates of National Income and Expenditure, Australia, (5207.0)—issued for December Quarter only

Australian National Accounts, National Income and Expenditure, 1979-80 (5204.0)

Budget Paper: *National Income and Expenditure, 1980-81* (5213.0)

Australian National Accounts, Outline of Principal Sources and Methods (5212.0)

17. Current publications produced by the ABS are listed in the *Catalogue of Publications, Australia* (1101.0). The ABS also issues, on Tuesdays and Fridays, a *Publications Advice* (1105.0) which lists publications to be released in the next few days. The Catalogue and Publications Advice are available from any ABS office.
