### REVISIONS IN THIS ISSUE

Quarterly estimates have been revised as a result of incorporating annual benchmark data. Estimates of wages, salaries and supplements have been revised from 1988-89 as a result of incorporating revised estimates of the number of wages and salary earners from the Labour Force Survey. Estimates for workers' compensation claims, which are included in supplements, have been revised down over the same period following a review of the data available from the Insurance and Superannuation Commission. Revisions have occurred to the constant price estimates of government final consumption expenditure from September quarter 1989, due to a revised treatment of redundancy payments.

### INTERPRETATION OF SEASONALLY ADJUSTED AND TREND ESTIMATES

There are a number of factors that combine to make seasonal adjustment and trend estimation more problematic at the State and Territory level than at the "total Australia" level. Only relatively short time series are available for most aggregates at the State level, making it more difficult to estimate appropriate seasonal factors. Also, because of the lack of disaggregated data for some State series, and the potentially large number of series involved for others, seasonal adjustment has generally been carried out at a more aggregated level than for the Australian estimates. In addition, for gross operating surplus by State, data sources for some components have changed towards the end of the series, possibly introducing new seasonal patterns in the data. Also, the industry composition of the economies of those States and Territories experiencing rapid growth over the last decade has changed significantly, introducing further difficulties for seasonal adjustment.

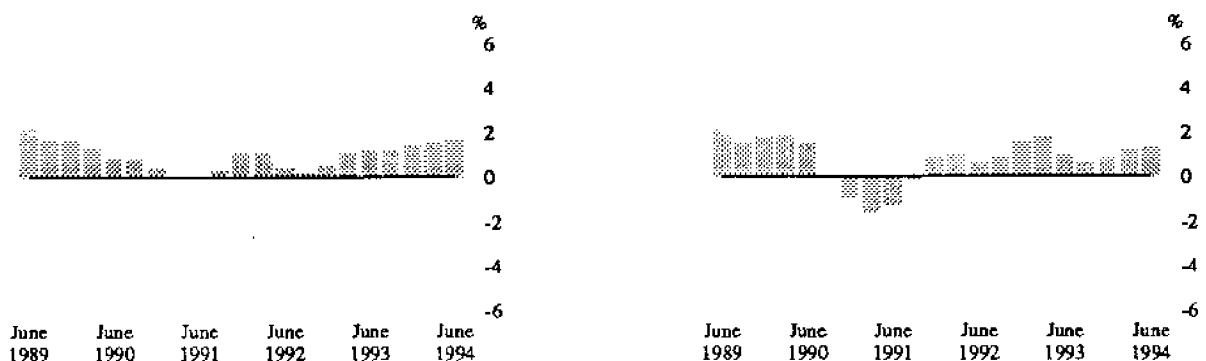

All the above influences result in differences between the sum of seasonally adjusted and trend estimates for the States and the counterpart estimates for Australia. It is anticipated that, as the length of the State series increases, these differences will decrease. Nevertheless, users are strongly advised not to consider the latest quarter in isolation when analysing State economic activity.

A number of the differences between the quarterly Australian estimates and the sum of seasonally adjusted State estimates are quite large. However, the differences in the corresponding trend estimates are generally relatively small. Therefore, it is recommended that the trend estimates be used in preference to the seasonally adjusted estimates in most circumstances.

### JUNE QUARTER 1994

#### Summary comment

#### NEW SOUTH WALES

GSP continued the increasing growth evident since December quarter 1993 rising 1.7% in the June quarter. Over the year to June, total growth was 6.1%, exceeding the Australian rate of 5.5%. The growth in GSP is reflected in both the gross operating surplus and wages, salaries and supplements components. Major contributors to the growth in gross operating surplus of 1.8% were the construction, retail and recreation indicators. Net indirect taxes declined in the June quarter by 0.6%, but was 5.6% higher than June quarter 1993, owing to strong growth in the first two quarters of the year. After only moderate growth in 1992-93, the pace of growth in wages, salaries and supplements strengthened to reach a relatively high 2.2% in the June quarter and 6.3% over the year to June.

Comments are based on trend current price estimates, unless otherwise stated.

#### VICTORIA

In the June quarter, GSP growth strengthened to increase 1.3%, contributing to an increase of 3.9% over the year. Growth in gross operating surplus was only 1.0% for the quarter and 3.6% over the year. Although the construction and retail sector indicators grew in the June quarter, the decline in the manufacturing sector moderated the growth in gross operating surplus. Growth of 1.3% in the June quarter for wages, salaries and supplements was easily the highest quarterly growth for the year. Net indirect taxes less subsidies continued its strong growth with 2.3% for the June quarter compared to the national rate of 0.8%.

#### QUEENSLAND

GSP grew at a rate of 1.7% in the June quarter. The growth rate over the year to June was 6.5%, the second highest of all the States. All three components grew in the June quarter, with wages, salaries and supplements up 2.3%, gross operating surplus up 1.2% and net indirect taxes up 1.4%. The growth rate over the year to June for each component was higher than the corresponding national rate. The steady growth in gross operating surplus is reflected in the retail, construction and transport indicators.

**MAIN FEATURES****GROSS STATE PRODUCT — TREND***continued***SOUTH AUSTRALIA**

GSP increased 1.3% in the June quarter. Over the year to June the rate of growth was 5.1%, slightly below the national average of 5.5%. Net indirect taxes increased 1.5%, higher than the Australian average of 0.8% for the June quarter. Wages, salaries and supplements increased 1.6% in the June quarter and 3.8% over the year to June. Gross operating surplus rose 1.0% in the June quarter, a lower rate of growth than that for the preceding two quarters. The public trading enterprise sector contributed to the slowing growth rate for gross operating surplus. Partially offsetting this were the mining and manufacturing indicators, which showed an increased pace of growth in the June quarter.

**WESTERN AUSTRALIA**

WA continued its strong growth in GSP with the June quarter increasing 3.1% and the annual rate reaching 8.9%. All three components grew strongly for the most part of 1993-94, to record the highest annual growth rates of all the States. Over the year to June, wages, salaries and supplements grew 7.7% in comparison to the Australian rate of 4.6%. Similarly, net indirect taxes grew 15.6% compared to the Australian rate of 8.6%. The growth in gross operating surplus was 8.6% compared to 5.8% for Australia. Major indicators contributing to the growth in gross operating surplus included mining, manufacturing, construction and retail.

**TASMANIA**

In the June quarter, GSP rose 2.2%, the second highest increase of all the States. Growth in GSP over the year to June was 5.1%, owing to slower growth rates in the first two quarters than in the second half of 1993-94. Net indirect taxes declined in both the March and June quarters. Wages, salaries and supplements picked up in the June quarter to increase 3.2%. The 1.6% increase in gross operating surplus for the June quarter was lower than those in the previous two quarters. Major contributors to the growth in gross operating surplus were the manufacturing, retail and transport industries.

**NORTHERN TERRITORY**

GSP recovered in the June quarter increasing 1.6%, higher than the national increase of 1.5%. Declines in GSP for the first two quarters of 1993-94 resulted in a fall of 0.4% in GSP between June quarter 1993 and June quarter 1994. Wages, salaries and supplements fell for the third consecutive quarter, (down 1.9% in the June quarter). Both gross operating surplus and net indirect taxes increased significantly in the June quarter, recording the highest growth rates for all the States. Important contributors to the increase in gross operating surplus were the retail and mining sectors.

**AUSTRALIAN CAPITAL TERRITORY**

The ACT recorded increases in GSP of 0.6% in both the March and June quarters. Falls in wages, salaries and supplements and net indirect taxes contributed to the low growth rates in recent quarters. Wages, salaries and supplements declined for the second consecutive quarter falling 0.8%. Net indirect taxes fell 1.2% in the June quarter, but increased 10.3% over the year to June. Growth in gross operating surplus for the June quarter was a high 3.8%. Strong growth in gross operating surplus is due to growth in a number of indicators, particularly public trading enterprises, construction and transport.

JUNE QUARTER 1994

Summary comment

NEW SOUTH WALES

In June quarter 1994 SFD increased 1.7%, compared with the Australian rate of 1.4%. Private final consumption expenditure grew strongly in the June quarter increasing 1.2%, higher than the Australian growth rate of 0.8%. Growth in government final consumption expenditure remains strong, increasing 2.4% in the June quarter and 9.3% over the year to June. Private capital expenditure rose 2.0% in the June quarter, under the influence of stronger investment in equipment, which rose 3.0%. The decline in private non-dwelling construction, evident since March quarter 1991, appears to have bottomed, with the latest three quarters showing modest growth. Public capital expenditure grew by a relatively strong 4.2% in the June quarter to be 7.3% higher than June quarter 1993.

Comments are based on trend constant price estimates, unless otherwise stated.

VICTORIA

Relatively strong growth in private final consumption expenditure of 1.4% was the main contributor to the 0.9% increase in SFD. The strong rate of growth in private investment since December quarter 1991 slowed in the June quarter, increasing 0.8%. However, expenditure on private equipment continues to be strong, increasing 4.0% in the quarter to be 15.2% above June quarter 1993. Following several years of relatively strong growth, private dwelling investment decreased in the latest two quarters, with the June quarter declining 3.2%. Private non-dwelling construction increased 3.7% in the June quarter. Although public capital investment declined marginally in the June quarter (-0.6%) it is 11.2% higher than in the same period twelve months earlier.

QUEENSLAND

SFD increased 1.7% in the June quarter, just above the Australian rate of 1.4%. Private final consumption expenditure grew at a consistent rate of around 1.0% for the past four quarters. Government consumption expenditure grew 1.8% in the June quarter. The 2.3% increase in private investment was due mainly to the continuing strong performance of dwelling investment which increased 3.1% in the June quarter. Private non-dwelling

**MAIN FEATURES**      **STATE FINAL DEMAND**  
**AT AVERAGE 1989-90 PRICES — TREND**  
*continued*

\*\*\*\*\*

QUEENSLAND (continued)	construction improved in the June quarter increasing 2.5%. In contrast, investment in private equipment continued to deteriorate, dropping a further 0.8% to be 6.3% below its level in June quarter 1993. Public capital expenditure increased by a solid 6.7% in the June quarter.
SOUTH AUSTRALIA	Private capital expenditure declined 2.4% in the June quarter 1994 reaching its lowest level since September quarter 1984. The poor performance of private investment constrained the overall growth rate of SFD to 0.6% in the June quarter 1994. Apart from real estate transfer expenses, which remained constant, all components of private capital expenditure declined in the June quarter. Private final consumption expenditure and public capital expenditure increased by modest rates of 0.4% and 0.7% respectively, in the June quarter. The growth rate for government final consumption was stronger, increasing 3.1%.
WESTERN AUSTRALIA	For the second successive quarter, Western Australia achieved the highest growth in SFD of all the States. Contributing strongly to the 2.2% rise in June quarter SFD was private capital expenditure which increased 7.1%. The 5.3% increase in private non-dwelling construction in the June quarter contributed to a growth rate of 38.1% over the year to June. The 11.8% increase in private equipment expenditure in the June quarter followed an 8.1% increase recorded for the March quarter. Public capital expenditure increased 2.9%. Private and public consumption expenditure increased 0.6% and 1.2% respectively in the June quarter 1994.
TASMANIA	Tasmania's SFD has declined for the last two quarters, with the June quarter falling 0.7%. Tasmania is the only State to record a decline in the SFD growth rate (down 0.3% between June quarter 1993 and June quarter 1994). The June quarter contraction in SFD was due mainly to decreases in government expenditure and private investment. The latter declined 5.7%. The main contributor to the 2.3% June quarter fall in public final demand was public capital expenditure which declined 12.7%. Private final consumption expenditure increased by 0.9% in the June quarter to be 2.9% higher than in June quarter 1993.
NORTHERN TERRITORY	Despite a fall of 0.4% in SFD in the June quarter, the Northern Territory recorded a high 6.2% rise in SFD over the year to June 1994. With private final consumption expenditure being flat and public final demand increasing 1.0% in the June quarter 1994, the 5.8% fall in private investment was the cause of the decline in SFD. The increase in public final demand in June quarter was due mainly to a 6.0% rise in public capital expenditure.
AUSTRALIAN CAPITAL TERRITORY	SFD increased 0.4% in the June quarter 1994. After about five years of steady growth, private final consumption expenditure declined 0.5% in the latest quarter. Private investment remained weak, declining for the fifth consecutive quarter and is now 13.4% lower than in June quarter 1993. Government final consumption expenditure, which represents just under 50% of total SFD in the ACT, increased 1.6% in the June quarter.

## EXPLANATORY NOTES

---

### INTRODUCTION

1 This publication contains estimates of gross domestic product and domestic final demand and their major components for each State and Territory from September quarter 1984 to the latest quarter. Trend data for the thirteen most recent quarters are shown in summary tables (Tables 4-12). Data for each aggregate in trend, seasonally adjusted and original terms are also shown in a set of long-term tables. The List of Tables, pages 9-10, indicates the range of data provided.

2 The term *gross State product (GSP)* is used to denote GDP(I) by State/Territory. Conceptually, GSP and GDP(I) are identical. Likewise, the term *State final demand (SFD)* is conceptually identical to domestic final demand at the national level (i.e. the sum of private and government final consumption expenditure and private and public gross fixed capital expenditure). Where *State* is referred to in the text, it is also meant to encompass the two Territories.

### CONCEPTS, SOURCES AND METHODS

3 Information on concepts, definitions, data sources and methodology for the Australian national accounts in general is contained in the current edition of *Australian National Accounts: Concepts, Sources and Methods* (5216.0). Although annual estimates of State Accounts are covered in that publication, information relating to quarterly estimates by State is not currently included. However, conceptual issues relevant to annual State accounts also apply to the quarterly estimates.

4 National estimates are based on the concepts and conventions embodied in the United Nations, *A System of National Accounts* (SNA) 1968. No such standard is available for sub-national (regional/State) accounts. In the main, the national concepts are applicable to State accounts, but there remain a number of conceptual and measurement issues that either do not apply or are insignificant at the national level. These are discussed in detail in *State Accounts, Australia: Issues and Experimental Estimates*, ABS Occasional Paper 1984/4.

5 While it is possible in some cases to derive quarterly estimates by State using the same data sources as used for the Australian estimates (or to derive the Australian estimates as the sum of the States), it is often necessary to derive dissections of the Australian estimate using a variety of allocators. These allocators vary from being fairly closely related to the aggregate being measured to being only indirectly related. Information on some of the more important conceptual, methodological and data issues relating to quarterly estimates by State are provided below.

### ACCURACY OF QUARTERLY ESTIMATES

6 The estimates contained in this publication represent allocations of quarterly estimates published for Australia in 5206.0. Therefore, they will reflect any inaccuracies in those estimates as well as inaccuracies introduced by the particular conceptual, methodological and data problems inherent in the allocation of Australian estimates to States and Territories. As such, the degree of accuracy and reliability will necessarily be lower than that for the counterpart Australian estimates. Some components by State are particularly deficient compared with the corresponding Australian estimates and are subject to potentially large revisions.

7 Estimates of GOS by State are especially deficient as a result of both conceptual issues in some industries and the lack of appropriate State data in some instances. The accuracy of the quarterly estimates is linked to the accuracy of the annual State

## EXPLANATORY NOTES *continued*

\*\*\*\*\*

### ACCURACY OF QUARTERLY ESTIMATES (continued)

estimates. For some industries, it is only possible to derive annual State estimates of GOS on the basis of fairly crude allocations of national estimates, or on conceptual bases that have particular limitations for some uses. As a result, the accuracy of annual State estimates is poorer, and sometimes significantly so, than that of the corresponding national estimates. By necessity, the quarterly State GOS estimates are substantially based on indirect indicators that do not necessarily have a direct relationship with GOS. While these indicators are benchmarked to both the annual State estimates in 5220.0 and the quarterly Australian estimates in 5206.0, the accuracy of the quarterly estimates by State is considered to be significantly poorer than the corresponding "benchmark" estimates. Therefore, they should be regarded as indicative only. Despite this qualification, it is considered that useful information is provided by these estimates as they draw together the various partial indicators of State economic activity within a consistent national accounting framework. It is expected that the quality of estimates will improve over time as new data sources and methodologies are developed.

**8** Estimates for wages, salaries and supplements, private final consumption expenditure and private gross fixed capital expenditure are based on the results of sample surveys. By their nature, survey results become less accurate as they are disaggregated (for example into States and/or industries). Generally, the ABS surveys used to derive these aggregates are designed to provide accurate estimates at the Australian total level and individual State estimates that are less accurate but still of an acceptable quality. However, it should be noted that relative standard errors are generally higher for the smaller States and Territories than they are for the larger States. This may result in greater volatility in the quarterly estimates for the smaller States and the two Territories.

**9** Estimates of indirect taxes less subsidies, government final consumption expenditure, and general government and public enterprise gross fixed capital expenditure can be substantially affected by the indicators chosen to apportion the Commonwealth government component to States and Territories. Care is required when interpreting these estimates.

### REVISIONS

**10** Most figures are subject to revision as more complete and accurate information becomes available. Revisions are of two types: those made to recent quarters and those made as a consequence of a redistribution across all quarters within a year following revisions to annual totals. In addition, the sources and methods used to compile these estimates will be further developed to improve the quality and scope of the estimates presented. Such developments may result in significant revisions to previously published estimates, particularly as experience is gained in assessing any biases which may be present in the estimates projected forward from the last annual benchmark available.

### TREND ESTIMATES

**11** Given the qualifications regarding the accuracy and reliability of the quarterly national accounts, the ABS considers that trend estimates provide the best guide to the underlying movements, and are more suitable than either the seasonally adjusted or original data for most business decisions and policy advice.

**12** A trend estimate is obtained by removing the irregular component from the seasonally adjusted series. For estimates in this publication, it is calculated using a centred 7-term Henderson moving average of the seasonally adjusted series. Estimates

## EXPLANATORY NOTES *continued*

---

### TREND ESTIMATES (continued)

for the three most recent quarters cannot be calculated using this centred average method; instead an asymmetric average is used. This can lead to revisions in the trend estimates for the last three quarters when data become available for later quarters, even if none of the original data for earlier quarters have changed.

13 If a series has a high "irregular" component, then the trend estimates will be subject to greater revision than would otherwise be the case for the latest few quarters as data become available for subsequent quarters. However, it is important to note that this does not make the trend series inferior to the seasonally adjusted or original series. In fact, in such cases the effect of the irregular component on overall movements is likely to be even more marked in the seasonally adjusted and the original estimates than in the trend series.

14 For more information about ABS procedures for deriving trend estimates and analysis of advantages of using them over alternative techniques for monitoring trends, refer to the three ABS Information Papers:

- *A Guide to Interpreting Time Series - Monitoring 'Trends': an Overview* (1348.0),
- *A Guide to Smoothing Series - Estimates of 'Trend'* (1316.0), and
- *Time Series Decomposition - An Overview* (1317.0).

Two Feature Articles which have appeared in the ABS monthly publication *Australian Economic Indicators* may also be of interest:

- *Picking Turning Points in the Economy* (April 1991), and
- *Smarter Data Use* (March 1992).

15 Data that are affected by seasonal factors are adjusted to remove the effects of these factors. The general methods for doing so are described in Appendix I of *Australian National Accounts: Concepts, Sources and Methods* (5216.0). Three important points should be noted here :

- The methods used in seasonal adjustment do not force the sum of the adjusted estimates for each quarter of a year to equal the original annual total.
- Where constant price estimates have no apparent seasonality in their implicit price deflators, the estimates are adjusted using the corresponding factors for current price estimates.
- Special methods have been used to adjust some components of gross farm product. These concern the adjustment of crop production where production/harvest only occurs in one or two quarters each year. In these instances, the output for each financial year is distributed equally over the four quarters.

### STATE AND TERRITORY VERSUS AUSTRALIAN SERIES

16 For trend and seasonally adjusted series, the sum of the States and Territories generally does not equal the corresponding estimate for "total Australia", nor are the quarter-to-quarter movements identical. On a few occasions, these differences have been significant, particularly for the seasonally adjusted series. This reflects both the relatively short span of data available for seasonal analysis at the State level and the fact that seasonal analysis was generally carried out at a more aggregated level than for the "total Australia" series. The State and Territory trend and seasonally adjusted series are less accurate than the Australian data. However, as the State and Territory time series lengthen, the quarterly movements in the sum of the State estimates should more closely match those in the Australian series.

## EXPLANATORY NOTES *continued*

---

### STATE AND TERRITORY VERSUS AUSTRALIAN SERIES (continued)

17 For private final consumption expenditure an interim means of producing closer alignment between State seasonally adjusted series and the Australian total has been adopted. It involves using the quarterly movements in the total Australian series prior to September quarter 1984 to extrapolate back each of the individual State series before analysing the seasonal pattern of the series. This process has enabled account to be taken of the effects on trading patterns of the changing incidence of Easter on the assumption that there are no significant differences between States in this effect.

### GROSS STATE PRODUCT

18 GSP is produced by summing factor incomes i.e. wages, salaries and supplements, and gross operating surplus (GOS), plus indirect taxes less subsidies. An expenditure based estimate of GSP is not available. Although domestic final demand and its components are available by State, estimates of both interstate and international trade and increase in stocks by State are required to complete an expenditure-based estimate of GSP. These missing components, combined with the statistical discrepancy, are included as a balancing item in Tables 4 to 12.

### WAGES, SALARIES AND SUPPLEMENTS

19 Quarterly estimates of wages and salaries by State are obtained from the same data sources as those used for the Australian estimates (i.e. the ABS Labour Force Survey and the Survey of Employment and Earnings, both of which are designed to produce State data). However, it is generally the case that survey results for the smaller States and the Territories are subject to higher standard errors than those for the larger States. Estimates for supplements are essentially quarterly allocations and extrapolations of annual State totals, using wages and salaries by State as an indicator.

### GROSS OPERATING SURPLUS

20 The ABS *Survey of Company Profits*, the major data source used to derive quarterly estimates of the gross operating surplus (GOS) of non-farm trading enterprise companies at the Australian level, does not provide estimates by State. Investigations into the availability of State data in company accounting records are currently underway with a view to collecting such data in the future. In the meantime, the approach adopted in these estimates is to derive synthetic estimates by State using indicators from the *Survey of Company Profits* and other general activity data available from the ABS and other sources.

21 Data from the quarterly *Survey of Company Profits* are used to derive quarterly State estimates of GOS for the mining industry from September quarter 1989. The relatively low number of respondents combined with the relatively high degree of coverage in the survey of mining enterprises made it feasible to allocate GOS to State individually for each respondent. In most cases, large multi-State enterprises already provide GOS details of their separate mining divisions making direct allocation to State possible. Otherwise multi-State mining enterprise GOS was allocated to States using the number of employees in each State. (Quarters prior to September 1989 were estimated using mining activity data by State and mineral price data, both published by the Australian Bureau of Agricultural and Resource Economics.) Investigations are continuing into the possible use of data from the survey to derive State estimates of GOS for some other industries.

## EXPLANATORY NOTES *continued*

---

### GROSS OPERATING SURPLUS (continued)

**22** Quarterly estimates of ownership of dwellings GOS are derived from essentially the same sources used to produce the Australian estimates. Quarterly estimates of GOS by State for the remaining private sector non-farm enterprises and Commonwealth public trading enterprises together were derived by weighting together a variety of general activity indicators. It should be emphasised that some of these general activity indicators are not directly related to GOS, and therefore can only be regarded as indicative (see "Accuracy of Quarterly Estimates" above).

**23** State indicators include turnover for retail and selected service enterprises, building and construction work done, selected manufactured commodities produced combined with data on price movements, airline passenger movements through major airports, road freight movements between capital cities, tourist accommodation statistics and health insurance statistics. These indicators are weighted together (benchmarked) according to their contribution to annual industry estimates of GOS by State published in *Australian National Accounts: State Accounts* (5220.0).

**24** The COS of State and Local public trading enterprises is available directly from ABS collections. Quarterly estimates of GOS by State for the farm sector were prepared from essentially the same sources as those used to provide the Australian estimates, although a higher degree of approximation was required in the estimation of farm costs.

**25** Once a year (the December quarter issue), the composite quarterly indicator derived in the manner described above is balanced to both the quarterly estimates of GOS for Australia published in 5206.0 and the annual estimates for individual States published in 5220.0. It involves alternately balancing the rows and columns. The difference between each row total (Australian total estimates derived from 5206.0) and the sum of the indicators in the row is prorated across the row components. A similar process is followed for the columns (the control totals are derived from the annual State data contained in 5220.0). The rows and columns continue to be balanced alternately until the matrix is completely balanced. In issues subsequent to the December quarter, the fully balanced estimates for each State are extrapolated on the basis of the indicators and balanced to the quarterly estimates for Australia published in 5206.0.

### INDIRECT TAXES LESS SUBSIDIES

**26** Indirect taxes received and subsidies paid by State and Local governments are available quarterly from government financial records. Indirect taxes received and subsidies paid by the Commonwealth government are allocated to State using production data where available, but mainly by applying annual State proportions to the quarterly totals.

### PRIVATE FINAL CONSUMPTION AND GROSS FIXED CAPITAL EXPENDITURES

**27** State estimates of private final consumption expenditure and gross fixed capital expenditure are derived largely from the same sources as used for the Australian estimates, although a higher degree of approximation is required. In the case of private final consumption expenditure, data sources for major components such as household goods, dwelling rent, purchase of motor vehicles, fares, and purchases of gas, electricity and fuel are available quarterly by State.

**28** State and Territory estimates of private gross fixed capital expenditure on dwellings and non-dwelling construction are derived using data from the ABS quarterly surveys of Building Activity and Engineering Construction, while expenditure on

### PRIVATE FINAL CONSUMPTION AND GROSS FIXED CAPITAL EXPENDITURES (continued)

equipment is derived from the quarterly Survey of Private New Fixed Capital Expenditure. Real estate transfer expenses are derived from data supplied by the various State Stamp Duty Offices, and various other data such as the number of real estate property transfers by State and Territory. Essentially, these are the same data sources used to prepare the Australian estimates.

### COMMONWEALTH GOVERNMENT FINAL CONSUMPTION AND GROSS FIXED CAPITAL EXPENDITURES

29 The treatment of Commonwealth government final expenditures in regional accounting is rather problematic. Alternative treatments are to attribute final expenditures to the region in which the expenditure was incurred, or to the region in which the beneficiaries reside, or even to consider the Commonwealth government consumer unit as extra-territorial and therefore to exclude it from all regions. For practical reasons the first approach has been adopted in this publication, although it still required extensive use of indirect indicators. An implication of this is that a large proportion of the consumption of Commonwealth Government services is included in SFD for the ACT, inflating the balancing item for that territory. If data had been available to allocate Commonwealth final consumption expenditure to end users, the balancing item for the ACT would be a much smaller negative because the provision of the services would be regarded as an interstate export instead. Estimates for Commonwealth government expenditures in the States on both an annual and a quarterly basis therefore have to be treated with considerable caution.

30 The wages and salaries component of Commonwealth government final consumption expenditure was directly apportioned to States using data from the ABS Survey of Employment and Earnings and information supplied by the Department of Defence. Expenditures on goods and services classified to defence were allocated according to population while non-defence purchases were allocated on the basis of Commonwealth general government employment by State and Territory.

31 For Commonwealth general government gross fixed capital expenditure, Australian estimates were first subdivided into expenditure on construction and expenditure on equipment. The construction expenditure component was allocated to States and Territories using annual State dissections for projected construction expenditure in each State and Territory, published jointly by the Department of Administrative Services and the Department of Industry, Technology and Commerce. Expenditure on equipment has been allocated using Commonwealth general government employment by State and Territory.

### COMMONWEALTH ENTERPRISES GROSS FIXED CAPITAL EXPENDITURE

32 A variety of allocators has been applied at the individual enterprise level for Commonwealth public enterprise gross fixed capital expenditure. Direct allocators have been used in a few cases where enterprises operated wholly in one State or Territory. For Telecom, State data for construction activity were available by quarter from the ABS Building Activity and Engineering Construction Surveys. Indirect indicators derived from annual estimates were used to allocate gross fixed capital expenditure of the remaining Commonwealth public enterprises by State. For example, purchases of ships and aircraft were allocated using annual State shares for general freight and passenger activity through ports and airports in each State and Territory (consistent with the allocation of GOS).

### OCCASIONAL PAPER

**33** The following Occasional Paper, which discusses issues specific to State Accounts, is available at ABS offices:

*State Accounts, Australia: Issues and Experimental Estimates* — S. Burrell, J. Daniel, A. Johnson and R. Walters (1984/4)

### RELATED PUBLICATIONS

**34** In addition to the publications already mentioned, others of interest include:

*Australian National Accounts: National Income, Expenditure and Product* (5204.0) — annual

*Australian National Accounts: Capital Stock* (5221.0) — annual

*Australian National Accounts: Multifactor Productivity* (5234.0) — annual

*Australian National Accounts: Financial Accounts* (5232.0) — quarterly

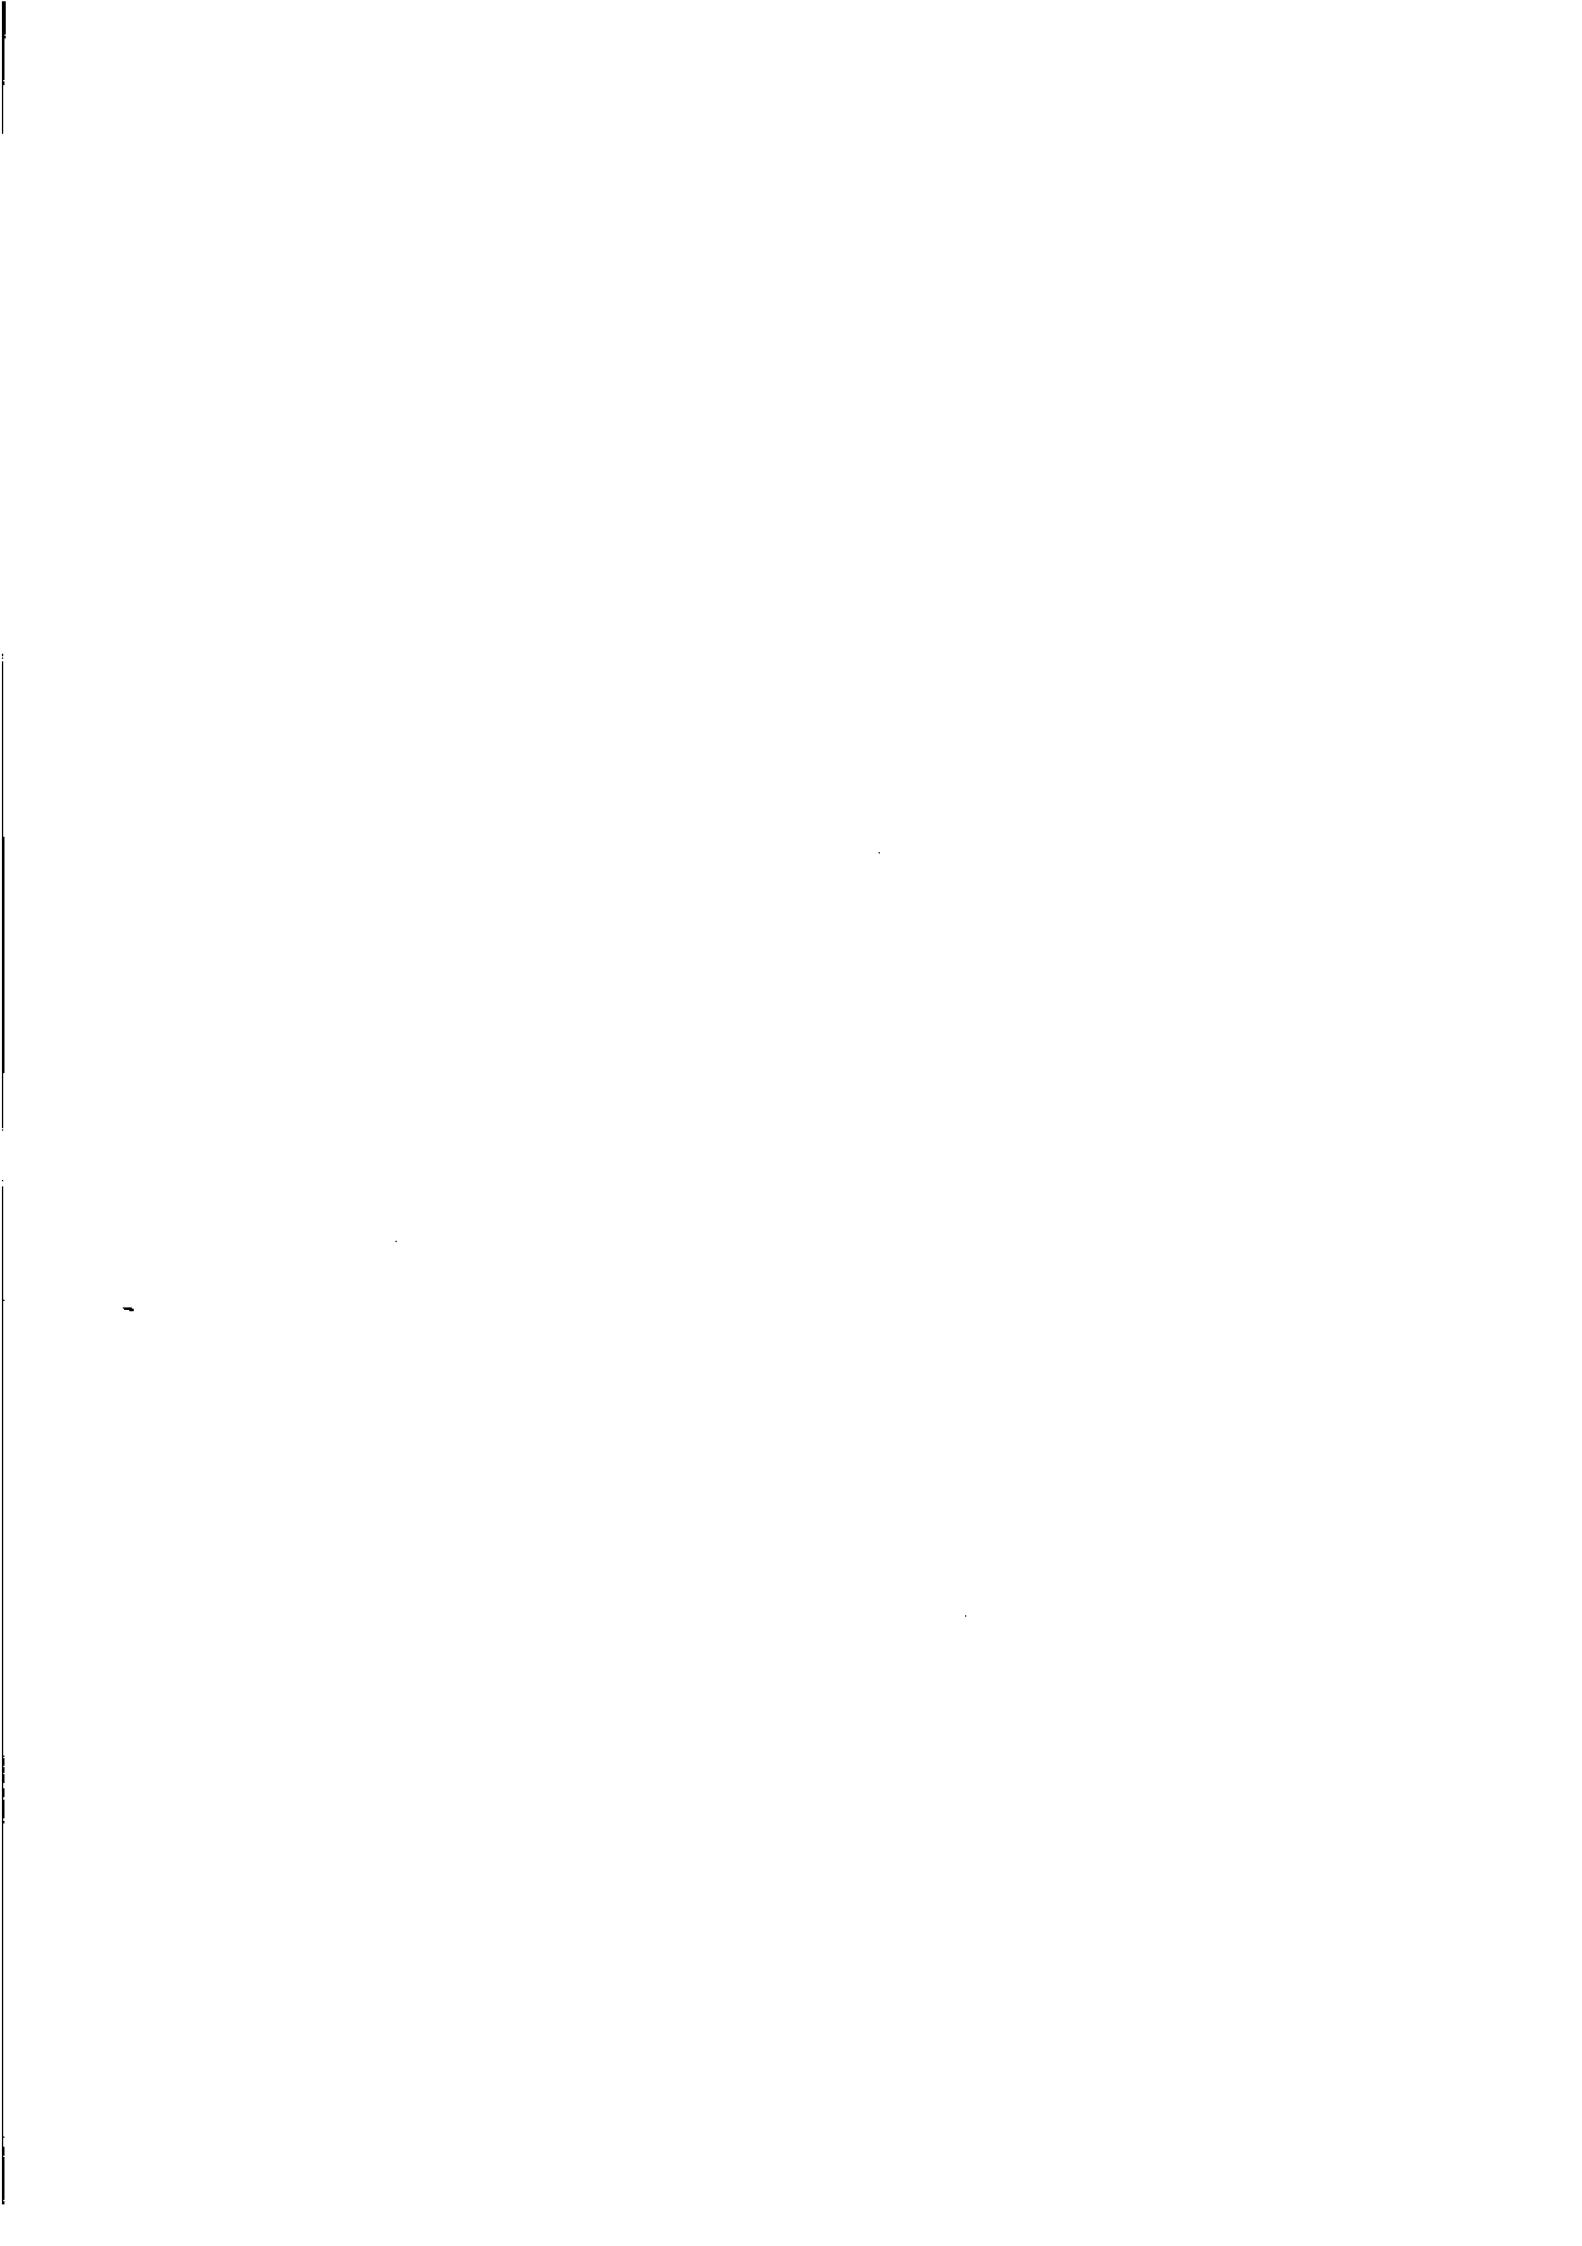

*A Guide to the Australian National Accounts* (5235.0)

**35** Current publications produced by the ABS are listed in the *Catalogue of Publications and Products, Australia* (1101.0). The ABS also issues, on Tuesdays and Fridays, a Publications Advice (1105.0) which lists publications to be released in the next few days. The Catalogue and Publications Advice are available from any ABS office.

## FOR MORE INFORMATION...

The ABS publishes a wide range of information on Australia's economic and social conditions. A catalogue of publications and products is available from any of our Offices (see below).

### INFORMATION CONSULTANCY SERVICE

Special tables or in-depth data investigations are provided by the ABS Information Consultancy Service in each of our Offices (see below for contact details).

### ELECTRONIC DATA SERVICES

A large range of data is available via on-line services, diskette, magnetic tape, tape cartridge and CD-ROM. For more details about our electronic data services, contact any ABS Office (see below).

### BOOKSHOP AND SUBSCRIPTIONS

There are over 500 titles available from the ABS Bookshops in each of our Offices. You can also receive any of our publications on a regular basis. Join our subscription mailing service and have your publications mailed to you in Australia at no additional cost. Telephone our Publications Subscription Service toll free Australia wide on 008 0206 08.
