#### **ABOUT THIS SURVEY**

This publication presents the results of the quarterly Australian Business Expectations survey which has been developed in response to a need for better information about future trading conditions in Australia. The latest survey was conducted during August 1995.

The Business Expectations Survey (BES) is the largest and most comprehensive survey of its type conducted in Australia and is the only survey which provides both a *qualitative* indicator of business confidence (a weighted net balance) and a *quantitative* measure of expected change (a weighted aggregate) for a range of business performance indicators.

The survey is conducted by mail each quarter. The results from this survey relate to business expectations in respect of the December quarter 1995 and the September quarter 1996 compared with the September quarter 1995. The survey has the following features:

- 3.000 representative Australian businesses sampled;
- employing businesses of all sizes are fully represented;
- all industries except Agriculture\* and General Government are represented;
- all States and Territories are represented;
- responses are weighted with respect to the size of the reporting business.

This means that the results can be used *indicatively* in terms of expected future levels of economic activity and for providing early warnings about turning points in the economy.

The statistical measure used in the Business Expectations Survey is the *expected (percentage) aggregate change* in comparison with the *actual* level of a previous equivalent period.

Benchmark (or base level) information is obtained from the ABS's annual Economic Activity Survey (EAS). It is used to weight individual business responses and to provide the means whereby percentage responses from different businesses can be aggregated. Results from the EAS are published in Business Operations and Industry Performance 1993-94 (8140.0).

For an outline and details of methodology used in the survey, refer to the September 1994 issue of the ABS publication *Australian Economic Indicators* (1350.0).

see the explanatory note on page 19 regarding the agriculture sector.

### INTRODUCTION TO RESULTS

Surveys of business expectations have been a feature of the economic forecasting intelligence available to decision makers in Australia for many years. The main output from these surveys has been a qualitative indicator which provides the net proportion of business predicting a rise or fall in future business conditions.

The ABS recognises that the simple *net balance* indicator is a useful indicator of business sentiment about future business conditions. However, it considers that such indicators suffer from the limitation of being based on responses which are *unweighted* with respect to the size of the business. This means that each reporting business is given an equal weight in the overall result.

As an alternative to the simple net balance approach, the ABS produces both a weighted net balance indicator and a weighted measure of expected (percentage) aggregated change. The weighted net balance is calculated by assigning a weight to each selected business according to its relative economic contribution based on level of sales, expenditure, employment, etc.

The impact on the net balance indicator and aggregate change as a result of this weighting is presented in the following table.

### COMPARISON OF THREE MEASURES OF BUSINESS EXPECTATIONS, DECEMBER QUARTER 1995

S	imple Net Balance	Weighted Net Balance	Weighted aggregate
Sales	38.6	38.1	2.1
Wage Costs	47.1	50.4	1.4
Employment Full time equiv	-11,2 valent	-10.3	. 0.1

That is, for the December quarter 1995 a simple net balance of 11.2 per cent of businesses expect a fall in employment. However, the smaller fall in the weighted net balance of 10.3 per cent indicates that the businesses expecting a fall in employment tend, on average, to be smaller than those expecting an increase. Tables 2 and 4 present data for the weighted net balance for the December quarter 1995 and the September quarter 1996.

The expected aggregate change measure is calculated by deriving the weighted averages of the responses provided by businesses. Tables 1 and 3 present data for the expected aggregate change for six quarters of the survey and Tables 5 and 6 present data for the expected aggregate change by size of business. The 0.1 per cent expected aggregate rise in employment indicates that while most businesses expect a fall in employment, those businesses expecting a rise expect rises of a larger magnitude than the falls.

The net balance is, therefore, more in the nature of an *indicator of business* confidence while the expected aggregate change measure is a *measure of likely change in economic activity* resulting from that state of confidence. The latter takes account of the sometimes significant proportion of businesses which expect no change whereas the former does not.

### Seasonal influences and price variations

The data presented in this publication cannot currently be adjusted for the impactof seasonal influences or for price variations which may occur between the current period and the expectations periods.

Caution should be exercised in comparing the results across quarters as seasonal influences may outweigh the underlying changes in economic conditions.

It will be at least three years until this survey will have sufficient data to allow a reliable seasonally adjusted series to be estimated. However, with survey results now available for nine quarters the opportunity is available to analyse, largely free of seasonal influences, the results from the latest survey with those for the comparable reference period of the previous year.

Users wanting to discern a trend in expectations are encouraged to study consecutive observations for the medium term outlook, where comparisons are made between the current quarter and the same calendar quarter of the next year.

#### Size of business

The size of a business has been determined by the employment of each business, and whether that business is classified in the Manufacturing industry or another industry. For details see page 19.

### PROPORTION OF BUSINESSES SELECTED BY SIZE WITHIN AUSTRALIA - DECEMBER QUARTER 1995

	Small	Medium	Large	All business
Manufacturing	45.0	30.0	25.0	100
Other industries	38.7	20.4	40.9	100
All industries	40.3	22,9	36.8	100

#### **Benchmarks**

The actual data used by BES to benchmark data items is historical and becomes increasingly out of date as the number of the surveys increase. In May each year a new sample is selected and new benchmarks introduced for the survey conducted in August each year.

(continued)

## Sales of goods and services +2.1%

Sales are expected to increase during the December quarter 1995 by 2.1 per cent. This is largely influenced by the Retail and Transport, storage and communication industries which expect rises of 5.2% and 4.3% respectively.

### Selling prices +0.9%

Selling prices are expected to increase by 0.9% in the December quarter 1995.

### Profit +2.9%

An increase in *profit* of 2.9% is expected in the December quarter. This is lower than the equivalent expectation for the same quarter last year (+11%).

### Capital expenditure +5.9%

Capital expenditure is expected to increase in the December quarter 1995 by 5.9%. This is comparable with levels of expectations in the two previous quarters.

### Expected change for the December quarter 1995 compared with the September quarter 1995

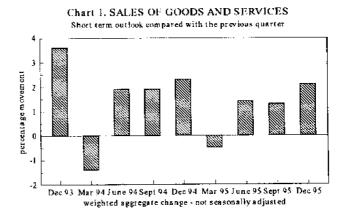

Chart 2. SELLING PRICES

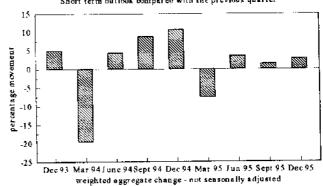

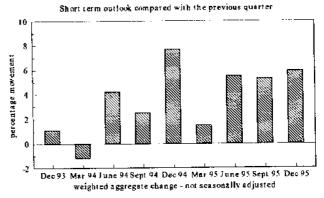

Chart 4, CAPITAL EXPENDITURE

(continued)

#### Stocks +0.1%

A very small increase is expected in the level of Stocks in the December quarter 1995.

### Employment +0.1%

An increase of 0.1% is expected in *full time* equivalent employment when compared to the previous quarter.

### Total Operating Expenses +1.9%

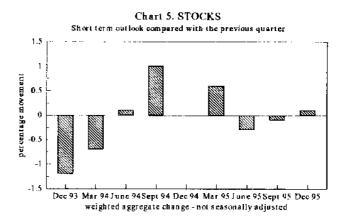

Total operating expenses are expected to rise in the December quarter 1995. Contributing to this rise are wages +1.4%, Other labour costs +0.9% and Other non labour costs +2.1%.

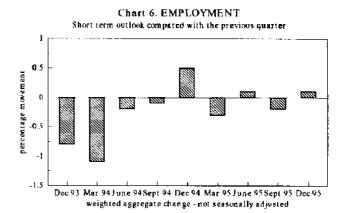

### International trade Imports +3.7% Exports +2.6%

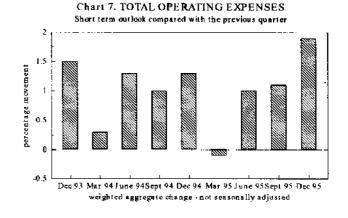

The expected increase in *Imports* for the December quarter 1995 is significantly higher than the expectation for the December quarter 1994.

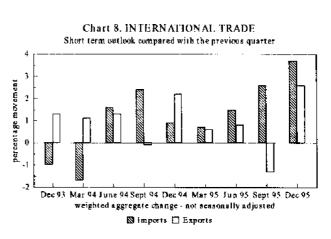

The expected increase in *Exports* for the December quarter 1995 is similar to the increase expected in December quarter 1994, and is stronger than in recent quarters.

### Expected change for the December quarter 1995 compared with the December quarter 1995

### Expected change for the September quarter 1996 compared with the September quarter 1995

### (continued)

### Expected change for the September quarter 1996 compared with the September quarter 1995

Chart 9. SALES OF GOODS AND SERVICES

### Sales of goods and services +3.4%

Sales in the September quarter 1996 are expected to be 3.4% higher than in the September quarter 1995.

### Selling prices

+1.5%

The expected increase in selling prices has remained constant over the past two quarters.

### **Profit** +11.0%

An increase in profit of 11.0% is expected for the September quarter 1996. This expectation is lower than the corresponding estimate for the September quarter 1995, but is higher than the expectations from the two previous surveys.

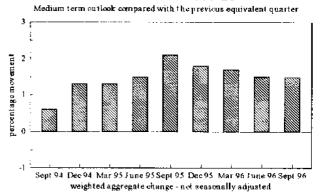

### Capital expenditure +2.3%

Capital expenditure in the September quarter 1996 is expected to be 2.7% higher than expenditure the in September quarter 1995.

(continued)

#### Stocks

+0.4%

Stock levels are expected to increase marginally compared with the September quarter 1995.

### **Employment**

+0.1%

The full time equivalent employment is expected to be 0.1% higher in the September quarter 1996 than in the September quarter 1995.

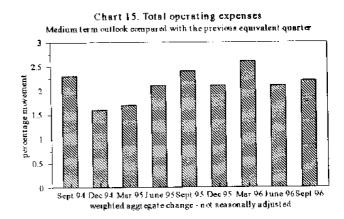

# Total operating expenses +2.2%

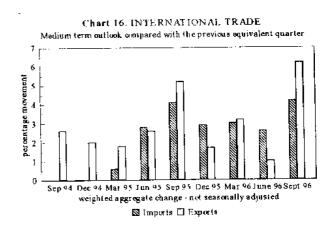

Expectations for Total operating expenses show an increase of 2.2% in the September quarter 1996. Contributing to this rise are Wages +2.4%, Other labour costs +1.5% and Other non-labour expenses +2.2%.

### International trade Imports +4.2% Exports +6.2%

The expected percentage increases in *Imports* (4.2%) and *Exports* (6.2%) are the highest medium term changes recorded since the survey commenced.

### Expected change for the September quarter 1996 compared with the September quarter 1995

### Expected change for the December quarter 1995 compared with the September quarter 1995

#### **Trading Performance**

Sales

Businesses of all sizes are expecting growth in *Sales of goods and services*. Large businesses expect the greatest increase of 3.3%, while medium businesses are expecting an increase of 1.3% and small businesses expect an increase of 1.2%.

### Selling prices

Profit

Businesses of all sizes are expecting increases in Selling prices.

Both large and medium sized businesses expect increases in *Profits* in the quarter (7.0% and 2.3% respectively), while small businesses expect a fall in profit of 3.1%.

#### Investment

Capital investment

An increase in *Capital expenditure* is expected by businesses of all sizes. Small businesses are expecting the largest increase (10.8%) in the December quarter 1995, with large and medium employment businesses expecting growth in expenditure of 3.3% and 5.2% respectively.

#### Stocks

Employment
(Full time equivalent)

Medium businesses expect a fall in *stocks* of 0.4% while small businesses expect a rise of 0.7%. Large businesses expect no change in stock levels.

Large businesses expect a rise in *full time equivalent employment* of 1.0% while small and medium size businesses expect small falls of 0.4% and 0.3% respectively.

### Operating Expenses

**International Trade** 

Total operating expenses are expected to increase in all sizes of businesses in the December quarter 1995.

Mediuim businesses expect *Imports* to rise by 8.6% while *Exports* are expected to rise by 4.3%. Large and small businesses each expect both imports and exports to be at lower levels.

### Expected change for the September quarter 1996 compared with the September quarter 1995

Sales of goods and services are expected to increase for businesses of all sizes (3.4%) with medium businesses expecting the greatest increase (4.4%).

Medium size businesses expect the largest increase in Selling prices (1.9%).

Medium size businesses are expecting a rise in *Profit* of 29.2 per cent between the September quarters of 1995 and 1996, while small and large businesses expect more moderate rises of 8.5% and 8.3% respectively.

Businesses of all sizes are expecting to increase Capital expenditure.

Small and medium businesses expect *Stocks* will rise (0.4% and 1.5% respectively), while large businesses are expecting a fall of 0.1 per cent.

Large and medium businesses expect marginal increases in Employment,

small businesses expect no change to employment levels.

Increases in Total operating expenses are expected by businesses of all sizes.

An increase in both *Imports* and *Exports* is expected by all business sizes between the September quarter 1996 and the September quarter 1995. Large businesses are expecting export growth of 7.2%.

Table 6. Australian Business Expectations - September Quarter 1996 Compared with September Quarter 1995, Expected Aggregate Change, by Size of Business (Per cent)

### Expected change for the December quarter 1995 compared with the September quarter 1995

### Sales of goods and services +2.1%

The only industries to expect a fall in sales for the December quarter 1995 are Electricity, gas and water and Construction.

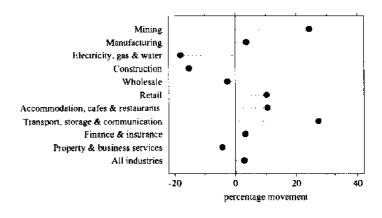

#### Chart 17. SALES OF GOODS AND SERVICES Main industry comparison Short term outlook - December quarter 1995

### **Profit** +2.9%

Profit expectations vary between the different industries with Electricity, gas and water (-18.0%) expecting the largest decrease and the Transport, storage and communication industry expecting the largest increase (27.3%).

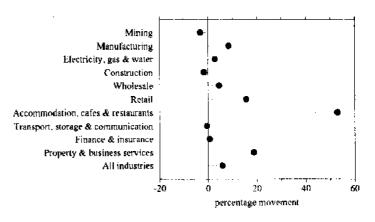

### Chart 18, PROFIT Main industry comparison Short term outlook - December quarter 1995

### Capital expenditure +5.9%

Expectations for Capital expenditure in the December quarter vary. The Accommodation, cafes and restaurants industry expect a rise of 53.0% while the Mining industry expects a fall of 3.0%.

### Chert 19. CAPITAL EXPENDITURE Main industry comparison Short term outlook - December quarter 1995

(continued)

### Expected change for the December quarter 1995 compared with the September quarter 1995

### Employment +0.1%

The majority of industries are expecting a modest rise in full time equivalent employment. Electricity, gas and water (-2.0%), Construction (-2.4%) and Manufacturing (-0.3%) are the only industries to expect a fall

# Total operating expenses +1.9%

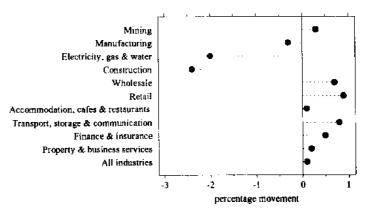

Increases in *Operating expenses* are expected by all industries except Electricity, gas and water (down 1.4%). The Retail industry is expecting the greatest increase (up 4.1%).

### International trade Imports +3.7% Exports +2.6%

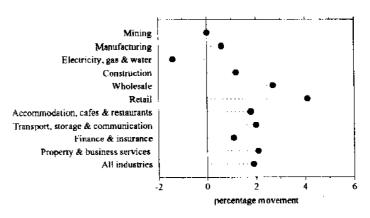

Most industries are expecting an increase in *Imports*, particularly the Electricity, gas and water industry which expects a 19.3% increase.

Exports are showing a small rise due mainly to the Retail and the Finance and insurance industries.

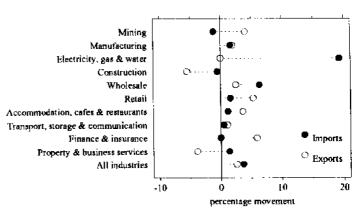

### Chart 21. TOTAL OPERATING EXPENSES Main industry comparison Short term outlook - December quarter 1995

#### Chart 22. INTERNATIONAL TRADE Main industry comparison Short term outlook - December quarter 1995

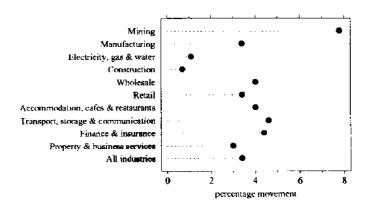

### Expected change for the September quarter 1996 compared with the September quarter 1995

# Sales of goods and services +3.4%

All industries, are expecting an increase in Sales of goods and services in the medium term ranging from the Construction with industry 0.7% to the Mining industry with 7.8%.

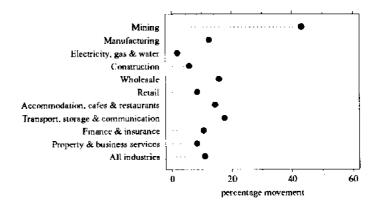

#### Chart 23. SALES OF GOODS AND SERVICES Main industry comparison Medium term outlook - September quarter 1996

### Profit +11.0%

Profit increases are expected for all industries. The Mining industry expects the largest increase (43.2%).

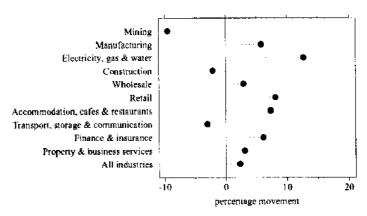

### Chart 24. PROFIT Main industry comparison Medium term outlook - September quarter 1996

### Capital expenditure +2.3%

Capital expenditure is expected to increase in the medium term for most industries with the largest growth being in Electricity, gas and water (12.7%).

### Chart 25. CAPITAL EXPENDITURE Main industry comparison Medium term outlook - September quarter 1996

### Expected change for the September quarter 1996 compared with the September quarter 1995

Chart 26. EMPLOYMENT

### **Employment**

(Full-time equivalent) +0.1%

Most industries expect only small changes in full time equivalent employment. The largest expected decreases are in the Construction industry (-3.9%), and the Electricity, gas and water industry (-3.7%).

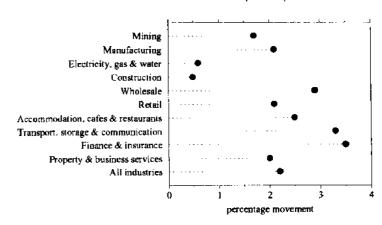

# Main industry comparison Medium term outlook - September quarter 1996 Mining Manufacturing Electricity, gas & water Construction Wholesale Retail Accommodation, cafes & restaurants Transport, storage & communication Finance & insurance Property & business services All industries

### Chart 27. TOTAL OPERATING EXPENSES Main industry comparison Medium term outlook - September quarter 1996

percentage movement

# Total operating expenses +2.2%

All industries are expecting Total operating expenses to rise in the September quarter 1996, ranging from Construction with 0.5% to the Finance and insurance industry with 3.5%.

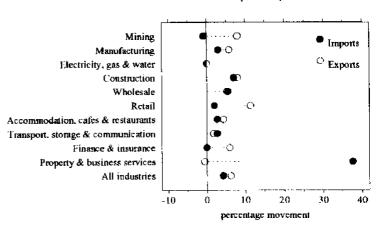

### International trade Imports +4.2% Exports +6.2%

Imports are showing strong growth the in expected business and Property with an industry services increase of 37.6%. Both Electricity, gas and water and Finance and insurance expect no change. The only industry to expect a fall is the Mining industry (-0.8%).

Exports are also expected to grow in the September

### Chart 28. INTERNATIONAL TRADE Main industry comparison Medium term outlook - September quarter 1996

#### STATE PERSPECTIVE

Short and medium term expected change in business performance indicators by State are both difficult to compile and subject to a greater degree of estimation than the Australian estimates. This is because of the difficulties which multi-State businesses face in providing separate expectation responses for each State segment of the business and sampling errors, especially for the smaller states.

The following table shows the distribution by State and Territory of businesses selected in the survey sample.

Table 7. Proportion of Businesses Selected by State and Territory, Australia,
September Quarter 1995
(Per cent)

	All business	
Australia	100.0	
New South Wales	40.1	
Victoria	28.1	
Queensland	13.9	
South Australia	6.4	
Western Australia	8.0	
Tasmania	2.0	
Northern Territory	0.5	
Australian Capital Territory	1.0	

To derive results for each State and Territory, the ABS has apportioned the national expectation of business activity to each State in which the businesses operate. This means that the overall performance in percentage terms, of the *business activity* for a reporting business, is used for each State within which the reporting business operates.

Business activity, as defined for BES, is the State of production for manufacturers, State of sales for retailers where they maintain a retail presence, and Finance and Service businesses report on their business activity for each State in which they are based.

For all businesses which only operate in a single State the responses are directly attributed to that State. For those businesses which do not indicate State business activity, the responses are attributed to the State within which the business resides.

The following results relate to the *Sales of goods and services*. Other performance indicators for individual States and Territories may be made available as unpublished data or as a special data service.

Because of the greater degree of estimation and the associated larger variances, the State estimates should be interpreted with care.

Caution should be exercised by users of expectations data for State activity because it is derived from information about the reporting unit's current rather than expected State activity.

### Expected change for the December quarter 1995 compared with the September quarter 1995

Table 8. Australian Business Expectations - States and Territories, Sales of Goods and Services, Short Term Outlook (Per cent)

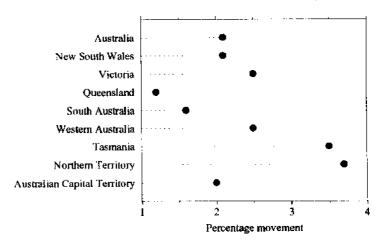

(Not seasonally adjusted)

	Expected (	Expected aggregate change between						
States	Sept qtr 1994	Dec qtr 1994	Mar qtr 1995	June qir 1995	Sept qtr 1995	Dec qtr 1995

Assatuatio	1 0	3.6	0.5	1 4	1 7	7.1		

saues -	Sept qtr 1994	Liec gir 1994	Margir 1993	June qur 1999	sepi qir 1772	Dec det 1227
and Territories	and Jun qtr 1994	and Sept qir 1994	and Dec qtr 1994	and Mar qtr 1994	and Jun qtr 1995	and Sept qtr 1995
Australia	1.9	3.6	-0.5	1.4	1.3	2.1
New South Wales	1.8	2.8	-0.3	1.8	0.8	2.1
Victoria	2.3	2.7	-0.7	1.2	1.1	2.5
Queensland	2.4	3.6	-0.5	1.0	3.6	1.2
South Australia	2.0	4.5	-0.1	1.8	0.2	1.6
Western Australia	1.5	6.8	-0.8	0.3	-0.1	2.5
Tasmania	1.3	3.1	1.1	1.4	1.4	3.5
Northern Territory	0.4	1.5	n.a.	2.5	0.7	3.7
Australian Capital Territor	ry 1.3	1.1	-1.3	5.2	0.8	2.0

All States and Territories expect an increase in Sales of goods and services. This growth ranges from 1.2% in Queensland to 3.7% in the Northern Territory.

Chart 29, SALES OF GOODS AND SERVICES State estimates Short term outlook - December quarter 1995

### Expected change for the September quarter 1996 compared with the September quarter 1995

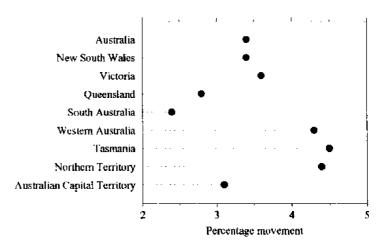

Table 9. Australian Business Expectations - States and Territories, Sales of Goods and Services, Medium Term Outlook (Per cent)

(Not seasonally adjusted)

	Expected aggregate change between						
States and	June qir 1995 Seps qir 1995 and and June qir 1994 Seps qir 1994		Dec gir 1995 and Dec gir 1994	and and		and	
Australia	3.3	2.9	3.3	3.0	2.3	3.4	
New South Wales	3.5	2.8	3.7	3.5	2.0	3.4	
Victoria	3.0	2.3	3.7	2.8	2.6	3.6	
Queensland	3.6	3.6	2.3	3.1	3.6	2.8	
South Australia	4.1	3.2	2.8	1.1	8.0	2.4	
Western Australia	2.4	4.3	2.7	2.8	1.9	4.3	
Tasmania	3.3	3.1	3.0	2.4	2.9	4.5	
Northern Territory	2.6	2.9	n.a.	2.8	2.2	4.4	
Australian Capital Territor	y 6.2	1.5	3.5	3.0	-0.8	3.1	

Expected sales of goods and services in the medium term are expected to grow by 3.4%. This growth is based on State rises changing from 2.4% for South Australia to 4.5% for Tasmania.

Chart 30. SALES OF GOODS AND SERVICES State estimates Medium term outlook - September quarter 1996

### Introduction

This publication contains estimates of future economic activity based on the business expectations of senior executives, managers and proprietors of businesses operating in Australia. The estimates have been compiled from data collected by the Australian Bureau of Statistics (ABS) in its quarterly survey of business expectations.

This is the ninth issue of this series and it contains estimates of the expected change in a range of business indicators for two time periods. The first reports expected change between the September quarter 1995 and the December quarter 1995 and the second reports expected change between the September quarter 1995 and the September quarter 1996.

### Survey methodology

The survey is conducted by mail each quarter.

It is based on a stratified random sample of approximately 3,000 businesses selected from the ABS's annual Economic Activity Survey (EAS). EAS in turn derives its survey population from the ABS central register of business units.

The sample is stratified by industry, sector (private and government business) and size of business (measured by number of employees).

The sample is supplemented by a further sample of businesses which have been added to the ABS business register since the original EAS sample was selected. This ensures that the expectations of relatively new businesses are taken into account in the overall estimates.

### Scope of the survey

The statistics in this publication relate to employing businesses in all industries and sectors of the Australian economy except:

- agriculture\*
- general government

### \* Agriculture

Data related to intended crop plantings and sheep matings are collected by the ABS and published in catalogue 7221.0 and 7330.0 (final) publications from the Agriculture Census.

The Australian Bureau of Agriculture and Resource Economics (ABARE) publishes its forecasts for specific commodities and for the Agriculture industry generally, as part of the annual Outlook conference in February each year. ABARE updates these forecasts in its quarterly publication "Australian Commodities - Forecasts and Issues".

Each statistical unit selected in the survey is classified to an industry, according to the Australian and New Zealand Standard Industrial Classification (ANZSIC).

**Business size** 

Classification

Data presented in this publication is classified by three business sizes:

- small (generally less than 20 employees, except for manufacturers where it is less than 100).
- medium (generally between 20 and 100 employees, except for manufacturers where it is 100 to 599 employees), and
- large (over 100 employees, except for manufacturers where it is 600 or more employees).

#### Statistical unit

The statistical unit used in the survey of business expectations is the management unit. The management unit is the highest level accounting unit within a business for which sub-annual accounts are maintained, having regard for industry homogeneity.

In nearly all cases the management unit coincides with the legal entity owning the business (i.e. company, partnership, trust, sole proprietor, etc.).

In the case of large diversified businesses, however, there may be more than one management unit, each coinciding with a "division" or "line of business".

Business performance indicators The survey uses a set of well recognised economic trading indicators in measuring future trading activity. These indicators are: Sales of goods and services, selling prices, expenses, employment\*, etc. See Description of terms below for details.

### \*Employment (Full time equivalent)

The survey asks for paid persons working. Full-time equivalent employment is not a usual definition of employment as used by the ABS. It would be incorrect to assume a direct comparison with labour force statistics or other ABS employment statistics for instance.

### Simple and Weighted **Net Balance**

The simple net balance for a selected indicator is estimated by subtracting the percentage of respondents predicting a 'fall' from the percentage of respondents expecting a 'rise'.

The net balance is a qualitative statistic best suited to indicating the sentiment of businesses about future business conditions, and measures the net proportion of businesses predicting a rise or fall in future business conditions.

The weighted net balance is estimated by weighting the surveyed direction of change for each unit by its benchmark level response for the equivalent variable in the Economic Activity Survey.

Weighting the responses enables larger businesses to have an influence upon the net balance proportional to the level of their expenditure, employment size, etc. Movements in the weighted net balance indicate the net proportion of business activity predicting a rise or fall in future business conditions.

### Expected aggregate change

The expected aggregate change measures the forecasted percentage change in the level of a particular indicator. It is estimated by weighting the expected percentage change reported by respondents to the survey by their proportion of aggregate sales, expenditure, employment, etc. in the economy as measured from the benchmark estimate in the Economic Activity Survey.

The weighted aggregate estimate of a particular indicator, combined with an estimated level, can be used to quantify its future movement.

### Comparison of results

The weighted net balance and expected aggregate change are complementary measures which, in combination, give a broad indication of future business conditions. It is possible to obtain estimates in opposite directions for the net balance and weighted aggregate change estimates.

The weighted net balance provide a qualitative measure of the proportion of businesses predicting the direction of change in future business conditions. The expected aggregate change, however, provides a quantitative measure predicting the magnitude of change in a selected variable.

### Reliability of estimates

The expected aggregate change estimates are designed to measure the change to each business performance indicator, according to businesses' confidence. Naturally, the predictive power of the weighted aggregate estimates depends on the predictive ability of individual businesses.

All of the estimates in this publication are subject to:

- sampling error
- non-sampling error
- benchmark bias

### Sampling error

Sampling error is due to the use of a sample rather than a complete enumeration; that is, the estimates differ from the values that would have been obtained if all units were surveyed. A measure of the likely difference is given by the standard error, which indicates the extent to which an estimate might have varied by chance because only a sample of units was included. There are about two chances in three that the difference will be within one

### Reliability of estimates

standard error, and about nineteen chances in twenty that the difference will be within two standard errors.

The table below provides standard errors for some of the main estimates of

publication. As an example of how the standard errors can be interpreted, given that the short term expectation for *Sales of goods and services* for Australia is 2.1 per cent with a standard error of 0.16 there would be two chances in three that the true value would be within the range 1.94 per cent and 2.26 per cent.

### Standard Errors of Key Estimates, December Quarter 1995, Short Term Expectation, Australia

Business perfor <mark>man</mark> ce indicator	Survey estimate	Standard error	
Sales	2.1	0,16	
Selling prices	0.9	0.14	
Profit	2.9	0.05	
Capital expenditure	5.9	0.38	
Stocks	0,1	0.12	
Employment	0.1	0.11	
Wage costs	1.4	0.13	
Imports	3.7	0.49	
Exports	2.6	4.35	

### Non-sampling error

All other inaccuracies are referred to collectively as non-sampling error. The major areas of concern are:

- non-response
- mis-reporting of data by respondents
- deficiency in the central register of economic units particularly in respect of small units

Every effort is made to reduce the non-sampling error to a minimum by careful design of questionnaires and efficient editing and operating procedures.

The expected aggregate change is designed to reflect business expectations for each business performance indicator, as accurately as possible. However, while the estimates should be appropriate measures of business climate, the expectations may not predict actual movements accurately. Businesses may be too optimistic or pessimistic in their predictions at different times.

In addition, actual movements would be partly comprised of activity of relatively recently formed businesses, and businesses which are formed during the expectations reference period which are not immediately represented in BES because they would not have been included on the ABS's central register of economic units. Allowance is made in other ABS series for coverage deficiencies relating to newly formed businesses but no allowance for this is made in BES.

### Benchmark bias

Estimating changes to the aggregate economic indicators requires businesses to be weighted, or benchmarked, by their relative contribution to each business performance indicator. ABS historical data for individual businesses is used for this purpose, where possible. This process introduces a benchmark bias because the historical data may be inaccurate for the current quarter. Benchmark bias cannot be measured from the data. However, the likely extent of bias has been estimated using other ABS data. Every effort has been made to minimise this bias, including the use of modelling techniques to improve benchmarks.

### Symbols and other usages

- 0 nil or rounded to zero
- n.a. not available for publication.

### Sales of goods and services

The expected change in the sale of goods or the provision of services by a business in terms of value.

Financial institutions report on the expected change in gross interest income plus fees and commissions.

Non-profit or charitable organisations report on the expected change in fees received for services, donations from the public and government grants and subsidies.

### Selling prices

The expected change in the unit price of goods sold or services provided by the business. Where a business sells a range of products or services a representative product or service is used.

Financial institutions report on interest rates, services and commissions charged.

The benchmark for weighting the selling prices response is derived from associating selling prices with total expenses.

### Total wage expenses

The expected change in the total amount of direct wage and salaries paid to employees.

### Non-wage labour expenses

The expected change in the total amount of employment related expenses not paid directly to employees.

Some of these expenses are payroll tax, worker's compensation and superannuation.

### All other operating expenses

The expected change in the total amount of all expenses which are not classified as labour expenses.

Some of these expenses are overheads, advertising, raw materials and packaging and handling.

### Total operating expenses

This is a derived estimate from the weighted response for the total of wage, non-wage labour and all other expenses.

#### Closing stocks

The expected change in the book value of closing stocks between the end of the collection quarter and the end of the reference periods.

### Paid persons working

The expected change in the number of paid persons working. Where part time or casual employees are involved employers are requested to convert to a full-time equivalent. It should be noted that other ABS series which provide data on paid persons working do not use a full-time equivalent measure.

### **Imports**

The expected change in the value of all goods and services directly imported by a business.

The benchmark for weighting the import response is derived from associating the current percentage of imports to *All other expenses*, and using that proportion of the *All other expenses* benchmark as the imports benchmark.

### Exports

The expected change in the value of all goods and services directly exported by a business.

The benchmark for weighting the export response is derived from associating the current percentage of exports to the Sales of goods and services, and using that proportion of the Sales of goods and services benchmark as the exports benchmark.

It should be noted that BES has been designed to provide high quality estimates of business expectations covering a wide range of business performance indicators. Businesses selected in the survey can generally provide expectations on the majority of the business performance indicators, however, this is not the case for imports and exports where only a subset of selected businesses are involved in importing or exporting. Accordingly, caution should be exercised when interpreting imports and exports expectations.

### Capital expenditure

The expected change in the value of capital expenditure in new tangible assets.

Capital expenditure is generally classed in two categories, *Plant machinery* and equipment and Buildings.

The proportion of total capital expenditure on *Plant, machinery and equipment* is collected and the amount to be expended on *Buildings* is derived.

#### **Profit**

Profit is a derived item based on the present trading performance of a business and the expected changes to the level of Sales of goods and services and the sum of all expense items.

The difference between the new benchmarks for the sales of goods and services and the sum of all expenses items (the sum of Total wage expense, Non-wage labour expense and All other operating expenses) as determined by the responses received, the Economic Activity Survey benchmarks for those items and an indicator of present trading performance (cost/sales ratio) are used to determine the expected change for profit for the reference periods.

Because of reporting difficulties experienced with the cost/sales ratios, caution should be exercised in interpreting profit expectations.

State information has been derived for businesses in the survey which operate in more than one State.

This has been achieved by

- 1) applying a weight (the proportion of a business's economic activity undertaken in each State) to the benchmarks for that business to arrive at potentially eight different benchmarks for each business performance indicator.
- 2) applying the overall percentage change in the business performance indicators obtained from the survey to each of the State benchmarks for each business performance indicator.

There are two reference periods surveyed each quarter:

Short term (if the current quarter is September 1995 then the quarter being surveyed is December 1995).

Medium term (if the current quarter is September 1995, then the quarter being surveyed is September 1996).

### State Information

### Reference Periods

### Capital expenditure

The expected change in the value of capital expenditure in new tangible assets.

Capital expenditure is generally classed in two categories, *Plant machinery* and equipment and Buildings.

The proportion of total capital expenditure on *Plant, machinery and equipment* is collected and the amount to be expended on *Buildings* is derived.

### **Profit**

Profit is a derived item based on the present trading performance of a business and the expected changes to the level of Sales of goods and services and the sum of all expense items.

The difference between the new benchmarks for the sales of goods and services and the sum of all expenses items (the sum of Total wage expense, Non-wage labour expense and All other operating expenses) as determined by the responses received, the Economic Activity Survey benchmarks for those items and an indicator of present trading performance (cost/sales ratio) are used to determine the expected change for profit for the reference periods.

Because of reporting difficulties experienced with the cost/sales ratios, caution should be exercised in interpreting profit expectations.

State information has been derived for businesses in the survey which operate in more than one State.

This has been achieved by

1) applying a weight (the proportion of a business's economic activity undertaken in each State) to the benchmarks for that business to arrive at potentially eight different benchmarks for each business performance indicator.

2) applying the overall percentage change in the business performance indicators obtained from the survey to each of the State benchmarks for each business performance indicator.

There are two reference periods surveyed each quarter:

Short term (if the current quarter is September 1995 then the quarter being surveyed is December 1995).

Medium term (if the current quarter is September 1995, then the quarter being surveyed is September 1996).

### FOR MORE INFORMATION

The ABS publishes a wide range of information on Australia's economic and social conditions. A catalogue of publications and products is available from any of our offices (see below).

### ELECTRONIC DATA SERVICES

Special tables or in-depth data are available on electronic media. Selections of the most frequently requested data are available, updated daily, on Discovery (Key \*656#). Our TELESTATS service delivers major economic indicator publications ready to download into your computer on the day of release. Our PC AUSSTATS service enables on-line access to a data base of thousands of up-to-date time series. Selected datasets are also available on diskette or CD-ROM.

For more information on our electronic data services, contact Information Services in any of our offices (see below).

### SUBSCRIPTION MAILING SERVICE

There are over 500 titles available from the ABS Bookshop in each of our offices. You can also receive any of our publications on a regular basis. Join our subscription mailing service and have your publications mailed to you in Australia at no additional cost.

Telephone our Publications Subscription Service toll free Australia wide on 1800 020 608.
