## MAIN FEATURES

Current account, seasonally adjusted
In the December quarter 1986, the deficit on current account, at $\$ 3,222$ million, was down $\$ 266$ million on the previous quarter. The deficit on goods and services fell $\$ 525$ million and the net transfers deficit rose $\$ 259$ million. In the first half of $1986-87$, the current account deficit, at $\$ 6,710$ million, was marginally lower than the deficit in the corresponding period of 1985-86; the reduction in the deficit on goods and services marginally outweighed the increase in the net transfers deficit.

## Exports, seasonally adjusted

Exports of goods and services rose by $\$ 1,146$ million or 12 per cent in the December quarter, reflecting a 13 per cent rise in "volume" (as measured by constant-price data) and a 1 per cent fall in "price" (as measured by the implicit price deflator).

Imports, seasonally adjusted

Imports of goods and services rose by $\$ 621$ million or 5 per cent in the December quarter, as a result of a 3 per cent rise in "volume" and a 2 per cent rise in "price".

## Terms of trade

The terms of trade, as measured by the ratio of implicit price deflators (based on seasonally adjusted data) for total exports and imports of goods and services, fell by 3.5 per cent in the December quarter.

Net transfers, seasonally adjusted
The rise of $\$ 259$ million or 16 per cent in the net transfers deficit reflected an increase of $\$ 256$ million or 13 per cent in the net income deficit and a fall of $\$ 3$ million or 1 per cent in the net unrequited transfers surplus.

Capital account (not seasonally adjusted)
In the December quarter, the preliminary estimate of the balance on capital account was a net inflow of \$2,234 million, down $\$ 2,295$ million on the September quarter. This comprised a net inflow of $\$ 5,018$ million from the transactions of the non-official sector offset by a net outflow of $\mathbf{\$ 2 , 7 8 4}$ million on account of official sector transactions, the latter largely reflecting an increase (or a net debit) in official reserve assets. In the first half of 1986-87, the balance on capital account recorded a net inflow of $\$ 6,763$ million, up $\$ 1,814$ million on the net inflow recorded for this balance in the first half of 1985-86.

Trade-weighted index and exchange rates
The trade-weighted index of the value of the Australian dollar (base May $1970=$ 100) stood at 55.0 at the end of December 1986, up 6.0 per cent on the end of September 1986 but down 9.4 per cent on the end of December 1985. Through the December quarter 1986, the dollar rose against the $\$ \mathrm{US}$ ( 6.0 per cent), the $\mathrm{f} \mathbf{0}$ ( 3.8 per cent), the West German Mark (2.2 per cent) and the Japanese Yen ( 10.4 per cent).

## NOTES ON THE ESTIMATES

Exports and imports of goods and services, seasonally adjusted (all references to "volume" relate to values at 1979-80 prices; all references to "price" relate to implicit price deflators (IPDs)).

In the December quarter 1986, the deficit on goods and services fell $\$ 525$ million from the September quarter 1986. The deficit on merchandise trade fell \$506 million, and the services deficit fell \$19 million.

Exports of rural merchandise at current prices rose $\$ 304$ million or 10 per cent in the December quarter. The main contributors to the increase were: meat and meat preparations, up $\$ 106$ million due to 10 per cent increases in both volume and price; the "other rural" category, up $\$ 108$ million with a 6 per cent increase in volume and a 7 per cent
increase in price; and wool and sheepskins, which rose $\$ 97$ million, mainly due to a 7 per cent increase in volume. Sugar, sugar preparations and honey fell $\$ 21$ million mainly due to an 11 per cent fall in price.

Non-rural merchandise exports at current prices rose $\$ 770$ million or 16 per cent in the December quarter. The increases were spread across all commodity groups except metals and metal manufactures which remained unchanged. Mineral fuels other than coal increased $\$ 175$ million due to increases of 58 per cent in volume and 11 per cent in price. Machinery and transport equipment rose by $\$ 195$ million with a 48 per cent volume increase slightly offset by a 4 per cent price fall. Other non-rural exports rose by $\$ 190$ million with a 10 per cent increase in volume and a 10 per cent increase in price.

In current price terms, services credits rose $\$ 72$ million or 4 per cent in the December quarter. A 4 per cent increase occurred in volume, which was supplemented by a small rise in price.

In the December quarter 1986, merchandise imports at current prices rose by $\$ 568$ million or 6 per cent, of which $\$ 271$ million was due to an increase in exogenous imports, up 13 per cent in volume and 10 per cent in price. Fuels rose $\$ 101$ million as a result of a 19 per cent increase in price and 5 per cent increase in volume.

Endogenous imports increased $\$ 297$ million or 4 per cent. Imports of consumption goods were unchanged. Capital goods rose $\$ 173$ million with increases of 5 per cent in volume and 4 per cent in price. Other goods rose $\$ 124$ million with volume almost unchanged and a rise of 3 per cent in price.

In the December quarter, the implicit price deflator for total exports of goods and services fell 1.1 per cent, mainly reflecting a 1.0 per cent fall in the merchandise component. On a fixed weight basis the overall IPD would have fallen by 0.7 percentage points while compositional shifts between the components explain the additional 0.4 percentage points.

The IPD for total imports of goods and services rose 2.4 per cent in the December quarter with the merchandise IPD up 3.2 per cent and the services IPD down 0.6 per cent. On a fixed weight basis the overall IPD would have increased by 1.9 percentage points while changes in the relative composition of imports explain the additional 0.5 percentage points.

Quarter-on-quarter movements, over the last ten quarters, in exports and imports of goods and services at current and constant (average 1979-80) prices, and in the associated IPDs, are shown in the following table.

EXPORTS AND IMPORTS OF COODS AND SERVICES - SEASONALLY ADUSTED - PERCENTAGE CHANGE FROM PRECEDING QUARTER

|  |  | EXPORTS |  |  | IMPORTS |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

## Terms of trade

Australia's terms of trade deteriorated by 3.5 per cent in the December quarter 1986. A 1.1 per cent fall in export prices (the non-rural merchandise component fell by 2.1 per cent) combined with a 2.4 per cent increase in import prices produce this result. It should be
noted however that at the time of compilation of the statistics in this publication the available information on the prices of internationally traded goods for the latest quarter is preliminary in nature and therefore subject to revision. Since the December quarter 1983, Australia's terms of trade have fallen by 19.9 per cent.

Movements in Australia's terms of trade over the last 10 quarters are presented below.

TERMS OF TRADE

| June | -0.8 |
| $1986-87$ |  |
| September |  |
| December |  |

There are several ways of measuring the terms of trade. In this publication the index is measured by the ratio of the implicit price deflators for total exports and imports of goods and services (see explanatory notes paragraph 31). Changes in the terms of trade have many economic effects, some of which can be estimated statistically. A measure used to provide an estimate of movements in gross domestic product at constant prices adjusted for the effect of the terms of trade is described in the September quarter 1986 issue of Quarterly Estimates of National Income and Expenditure, Australia (6206.0). That measure is designed to quantify the changes that have occurred, as a result of changes in the terms of trade, in the real purchasing power of the income generated by domestic production. A different measure is used in this publication. It estimates the cumulative effect of changes in the terms of trade upon the current account balance. This measure, which is described in the following paragraphs, is designed to calculate how much higher or lower the current account deficit would have been if export prices had grown at the same rate as import prices.

Effects of movements in terms of trade on current account balance

As with the terms of trade, there is no single agreed measure of the effects of changes in the terms of trade on the current account balance. Different measures for Australia have been presented by the Reserve Bank in its April 1986 Bulletin and by the Treasury in its June 1986 Round-up.

The table below, which is based on the method used by the Treasury, shows the effect on the current account balance of the adverse movement in the terms of trade since the December quarter 1984. Estimates of the terms of trade effect are calculated by adjusting the rate of increase of export prices since that time to equate with the rate of increase of import prices (ie changes in the terms of trade since the December quarter 1984 are removed by the adjustment). In this way estimates are derived of the cumulative effect on the current account balance of changes in the terms of trade over the period. The measure can be expressed algebraically as:
$T=P_{0}^{x} \cdot\left(\frac{P_{1}^{m}}{P_{0}^{m}}\right) \cdot{ }_{1}-P_{1}^{x} \cdot X_{1}$
where: $T=$ terms of trade effect

$$
\begin{aligned}
& \mathrm{P}^{\mathrm{x}}=\text { IPD of exports } \\
& \mathrm{P}^{\mathrm{m}}=\text { IPD of imports } \\
& \mathrm{X}=\text { exports at constant prices }
\end{aligned}
$$

and the subscripts 0 and 1 represent the base period (December quarter 1984) and current period respectively.

The table shows that the decline in the terms of trade has added substantially to Australia's current account deficit in recent quarters. Other things being equal, if prices of exports of goods and services had increased to the same extent as prices of imports of goods and services between the December quarter 1984 and the December quarter 1986, the current account deficit on a seasonally adjusted basis in the December quarter 1986 would have been $\$ 912$ million, about 70 per cent lower than the recorded outcome of $\$ 3,222$ million.

(a) Calculated using the December quarter 1984 as the base period for purposes of comparison.

## Gold Exports

Exports of gold (other than ores, concentrates and monetary gold) are included in the "other non-rural" exports category because, in accordance with international statistical standards, they are classified to Section 9 of the Australian Export Commodity

Classification. (The commodity composition of the various export categories is outlined in paragraph 8 of the Explanatory Notes.) In recent years, gold exports have been increasing more rapidly than the rest of the other nonrural category. The growing contribution of gold to this category is shown in the following table.

## 6

## CONTRIBUTION OF GOLD TO OTHER NON-RURAL EXPORTS (NOT SEASONALLY ADJUSTED)

(a) AECC Group 971 and AECC Item 9910001.

## Exogenous imports

Statistics on the main components of exogenous imports at current prices are
shown in the following table so that the impact of sizeable lumpy transactions upon total imports f.o.b. and other key aggregates can be more readily assessed.

| Period | Fuels (a) | $\begin{gathered} \text { Civil } \\ \text { Aircraft (b) } \end{gathered}$ | Other (c) | Total |

(a) AICC Section 3.
(b) Acquisition of aircraft by selected major airline companies.
(c) Acquisition of associated aircraft equipment (eg spare engines etc), satellites (contributing $\$ 58$ million in each of the September quarter 1985 and the December quarter 1985), defence equipment, ships acquired by selected public sector enterprises and certain other government goods.

## General government borrowing

The net inflow of $\$ 1,443$ million in the December quarter 1986 on account of general government borrowing (representing a turnaround of $\$ 1,972$ million on the net inflow for the September quarter 1986) included drawings of Swiss Franc 300 million (\$A277 million), Japanese Yen 35 billion (\$A353 million), $\$$ US600 million ( $\$$ A931 million) and Netherlands Guilder 400 million ( $\$$ A267 million) which were partially offset by foreign currency loan repayments. Net Australian currency borrowing resulted in an inflow of $\$ 123$ million.

## Non-official capital

Interim estimates of the net capital transactions of the non-official sector showed an inflow of $\$ 5,018$ million; this was up strongly ( $\$ 2,829$ million) on the September quarter. The net inflow on account of foreign investment in Australia rose $\$ 898$ million to $\$ 5,774$ million, mainly due to direct investment transactions. The net outflow on Australian investment abroad fell by $\$ 1,931$ million to $\$ 756$ million, mainly due to transactions classified as lending.

The December quarter estimates of foreign investment in Australia and Australian
investment abroad include transactions associated with the restructuring of the Australian activities of General Motors Corporation, USA. An injection of funds (estimated at about $\$ 700$ million) by General Motors Corporation, USA, was used to pay out or take over certain Australian liabilities of its Australian subsidiary, General Motors Holden Ltd. This investment in Australia by General Motors Corporation, USA, has been included in direct investment in corporate equities. The offsetting increase in the claims of Australian financial institutions on the rest of the world is reflected in Australian lending abroad.

## Official reserve assets

At 31 December 1986, Australia's holdings of official reserve assets stood at $\$ 15,561$ million. During the December quarter, the value of these holdings rose by $\$ 2,946$ million. The rise was the net result of both valuation effects and economic transactions. Valuation effects reduced the value of these holdings by $\$ 1,124$ million, primarily as a result of changes in exchange rates; these effects are not recorded in the balance of payments. Economic transactions, which are estimated as the residual change, resulted in an increase of $\$ 4,070 \mathrm{million}$ in these holdings which was recorded as a "net debit" on account of official reserve assets in the Reserve Bank sector of the balance of payments capital account.

Changes in official reserve assets, as recorded in the balance of payments, may occur for a variety of reasons. These include:

Purchases and sales of foreign exchange by the Reserve Bank with, or on account of, its customers. The Bank's Australian customers include the Commonwealth Government. Transactions with the Commonwealth Government can include receipt of overseas loan proceeds; payment of interest/ repayment of principal on Commonwealth overseas loans; or other Commonwealth transactions (such as payments for government imports, etc).

- Transactions with official institutions overseas including the International Monetary Fund.

Purchases and sales of foreign exchange on the Reserve Bank's own account.

Receipt of earnings on official reserves.

## Revisions

Estimates in this issue are generally consistent with those published in the monthly balance of payments bulletin (5301.0) on 16 February 1987 and consequently take account of revisions which were described in that issue. However, with the availability of more up to date data from the Surveys of Foreign Investment, the estimates for general government Australian currency borrowing for the December quarter 1986 are revised in this issue.

In addition, this issue incorporates revisions to more detailed series that are not available monthly and which were last published in the previous quarterly issue.

## INTRODUCTION

This publication contains detailed estimates of Australia's balance of payments for December quarter 1986. The estimates are generally consistent with those published earlier this month in Balance of Payments, Australia, January 1987 (5301.0). Longer term estimates, from September quarter 1959, consistent with those shown in this issue, will shortly be available in the publication Balance of Payments, Australia Historical Series on Microfiche (5337.0) December quarter 1986.
2. Information about the classification and presentation of these estimates, and brief item descriptions, are provided in the Information Paper Changes in the Presentation of Australian Balance of Payments Statistics (5340.0) issued on 23 December 1985.
3. This publication contains four main tables and 16 supplementary tables. The main tables (Tables 1 to 4) provide summary statistics; they show the main aggregates and the more important components of the aggregates. The supplementary tables (Tables 5 to 20) provide additional breakdowns, related series (e.g. exchange rates and the trade-weighted index) and reconciliations of selected balance of payments series with other series (i.e. with foreign trade statistics and levels of official reserve assets).

## SCOPE OF THE BALANCE OF PAYMENTS

4. The Australian balance of payments is a statistical statement designed to provide a systematic record of Australia's economic transactions with the rest of the world. The statement is divided into a current account and a
capital account. Table 1 presents summary statistics covering both accounts.

## RECORDING OF TRANSACTIONS

5. Transactions are recorded in the balance of payments as either debits or credits. The following transactions are regarded as debits and identified by a minus sign: the acquisition of goods and services from non-residents, income payable to non-residents, unrequited transfers provided to non-residents, increases in foreign financial assets and decreases in foreign liabilities. Credits have no arithmetic sign and consist of these transactions: the provision of goods and services to nonresidents, income receivable from nonresidents, unrequited transfers received from non-residents, decreases in foreign financial assets and increases in foreign liabilities. These sign conventions apply in all tables except Tables 6, 11 and 20. In Table 6, the implicit price deflator for imports of goods and services is shown with no sign, while in Table 11, imports are shown with no sign. In Table 20, decreases in Australia's official reserve assets are shown with a minus sign and increases in these assets are shown with no arithmetic sign.

## CURRENT ACCOUNT

6. The current account records transactions between Australian residents and non-residents in merchandise, other goods and services, income and unrequited transfers. Table 2 summarises the estimates of current account transactions, while Table 3 provides corresponding seasonally adjusted

## MERCHANDISE (BALANCE OF PAYMENTS BASIS)

7. Merchandise covers movable goods (with a few exceptions) which change ownership from residents to non-residents (exports) and from non-residents to residents (imports). The series are derived from foreign trade statistics which are adjusted for coverage, timing and (imports only) valuation to put them on a balance of payments basis. Table 11 provides details of the adjustments.

## COMMODITY BREAKDOWNS OF MERCHANDISE

8. Commodity breakdowns of merchandise exports and imports are provided in Tables 7 (at current prices), 8 (at average $1979-80$ prices), 9 (at current prices, seasonally adjusted) and 10 (at average 1979-80 prices, seasonally adjusted). The groupings shown consist of the following Australian Export Commodity Classification (AECC) and Australian Import Commodity Classification (AICC) divisions and/or sections:

| Exports | Section or Division of AECC |
| :---: | :---: |
| Rural - |  |
| Meat and meat preparations | 01 |
| Cereal grains and cereal preparations . | 04 |
| Sugar, sugar preparations and honey | 06 |
| Wool and sheepskins | Parts of 21,26 and 65 |
| Other rural | $00,02,03,05,07$ to 09, 21 (part), 22 to 25 , 26(part), 29, 4 |
| Non-rural - |  |
| Metal ores and minerals | 27,28 |
| Mineral fuels Coal, coke and |  |
| briquettes | 32 |
| Other | 33, 34 |
| Metals and metal manufactures | 67 to 69 |

| Machinery and transport equipment | 7 |
| :---: | :---: |
| Other non-rural | $\begin{aligned} & 1,5,61 \text { to } 64,65 \\ & \text { (part), } 66,8,9 \end{aligned}$ |
| Imports | Section or |
|  | Division of AICC |
| Food, beverages and tobacco | 0, 1 |
| Fuels | 3 |
| Basic materials | 2,4 |
| Chemicals (incl |  |
| plastics) | 5 |
| Textiles, fabrics, etc | 65 |
| Metals and metal manufactures | 67 to 69 |
| Machinery and transport equipment | 7 |
| Other imports | 61 to $64,66,8,9$ |

9. In the preparation of this publication confidential 7 -digit items of the AECC or AICC are included with items classified to section 9 . The lists of items for which these adjustments have been made appear in footnotes to the main tables of Exports by Commodity Divisions, Australia (5402.0) and Imports by Commodity Divisions, Australia (5405.0).

## RURAL AND NON-RURAL EXPORTS

10. In defining 'rural' exports largely in terms of divisions (2-digit level) of the AECC, many individual items (7-digit level) are classified differently from what might have been the case with a more detailed system. For example, canned fruit salad (AECC 058.99.47) is included in 'rural', while cotton yarn (651.30.05) is not - both items might equally well have been classified to 'rural' (on the basis of their origin), or to 'nonrural', due to the high proportion of value added during subsequent processing).
11. The terms 'rural' and 'non-rural' are therefore used in a broad sense and the limitations mentioned above should be borne in mind when the estimates are used for analytic purposes.

## EXOGENOUS AND ENDOGENOUS IMPORTS

12. Exogenous imports comprise a group of imported goods which it has been found useful to identify separately in economic analysis because the transactions in these goods are lumpy, subject to government arrangements or significantly affected by factors other than the general level of economic activity in Australia. Exogenous imports include fuels; ships, aircraft and certain other large items of equipment acquired by selected public and private sector trading enterprises; defence goods and certain other government goods. Endogenous imports comprise imports of all goods other than those regarded as exogenous.
13. Endogenous imports in Table 7 (at current prices), Table 8 (at average 1979-80 prices), Table 9 (at current prices, seasonally adjusted) and Table 10 (at average 1979-80 prices, seasonally adjusted) are classified into three classes - consumption goods, capital goods and other goods - according to the United Nations' classification by broad economic categories (BEC). Other goods covers the BEC class intermediate goods and the residual BEC category goods not elsewhere specified. The classes consist of the following BEC categories (excluding goods defined as exogenous):

## Consumption goods

Food and beverages, primary, mainly for household consumption (112)
Food and beverages, processed, mainly for household consumption (122)
Passenger motor vehicles (51)
Transport equipment, non-industrial (522)
Consumer goods, not elsewhere specified (6)

## Capital goods

Capital goods (except transport equipment) (41)

Transport equipment, industrial (521)

## Other goods

Food and beverages, primary, mainly for industry (111)
Food and beverages, processed, mainly for industry (121)
Industrial supplies not elsewhere specified (2)

Parts and accessories of capital goods (except transport equipment) (42)
Parts and accessories of transport equipment (53)
Goods not elsewhere specified (7)
14. The BEC attempts to classify merchandise trade statistics for purposes of general economic analysis according to the main end-use of the commodities traded. It does not achieve complete alignment with the particular end-use to which articles are put in specific circumstances; for example some passenger motor cars, which are conventionally classified as consumption goods, and some parts and accessories of capital goods, which are conventionally classified as other goods, are in fact acquired as capital equipment.

## SERVICES

15. Services covers services rendered by Australian residents to non-residents (credits) and by non-residents to residents (debits), together with transactions in a few types of goods (eg goods purchased by travellers). Detailed estimates are shown in Table 12 .

## INGOME AND UNREQUITED TRANSFERS

16. Income covers income earned by Australian residents from non-residents (credits) or by non-residents from residents (debits). It includes investment income (eg dividends and interest), other property income (eg
royalties) and labour income (eg wages and salaries). Tables 13 and 14 give detailed estimates.
17. Unrequited transfers covers the offsetting entries required by the double-entry system of accounting when resources(goods, services and financial assets) are provided, without something of economic value being received in return, by non-residents to Australian residents (offsetting credits required) and by residents to non-residents (offsetting debits required). It includes foreign aid, migrants' transfers, gifts, donations, pensions and taxes. Detailed estimates are provided in Table 15.

## CAPITAL ACCOUNT

18. The capital account records transactions in Australia's foreign financial assets and liabilities, including the creation and extinction of claims on or by the rest of the world and a few specified other changes. Summary estimates for the capital account appear in Table 4.

## RESIDENT INSTITUTIONAL SECTORS

19. Capital transactions, and some current transactions, are grouped into two broad institutional sectors called official and non-official, with the former split into general government and Reserve Bank of Australia. The general government sector comprises the transactions of the Commonwealth, the States, local government authorities and statutory bodies, but it excludes the transactions of public business enterprises. Details of general government and Reserve Bank capital transactions are given in Tables 16 and 17 respectively. The non-official sector covers transactions of all other resident entities including private and government owned banks, private and public business enterprises, and households. Estimates of the capital transactions of the non-official sector are detailed in Tables 18 and 19.

FOREIGN INVESTMENT IN AUSTRALIA AND
AUSTRALIAN INVESTMENT ABROAD
20. Broadly, foreign investment in Australia covers transactions which increase or decrease the liabilities of residents to non-residents and Australian investment abroad covers transactions which increase or decrease Australia's foreign financial assets.

## OFFICIAL RESERVE ASSETS

21. Changes in official reserve assets, after allowing for valuation effects, are recorded in the Reserve Bank sector of the capital account and are detailed in Table 17. In accordance with the standard accounting conventions adopted for balance of payments recording outlined in paragraph 5, a decrease in these assets is recorded as a reduction in Australian investment abroad (ie a credit shown with no sign) and an increase in these assets is recorded as an increase in Australian investment abroad (ie a debit shown with a minus sign).
22. Table 20 shows levels of official reserve assets. Changes in the levels at the end of each period are dissected into those which are included in the balance of payments (ie those resulting from transactions and a few specified other changes), and those which are due to the effects of revaluations. In this table, decreases in official reserve assets are shown with a minus sign and increases are shown with no sign.

## BALANCES

23. This publication presents a number of balances, eg balance on goods and services, balance on capital account. A balance is derived as the net sum of the credit and debit. entries selected for inclusion.

## NATURE OF CONSTANT PRICE ESTIMATES

24. Estimates of exports and imports of goods and services at current and constant (average 1979-80) prices, both original and seasonally adjusted, are
presented in Table 5. Commodity details of merchandise exports and imports at constant (average 1979-80) prices, original and seasonally adjusted, are presented in Tables 8 and 10 , respectively.
25. A value at constant prices may be thought of as being derived by expressing the current price value of each component transaction as the product of a price and a quantity, and by substituting for each actual current price the corresponding price in the chosen base year. Aggregates at constant prices for each period are then obtained by summing constant price values for individual transactions. In effect, quantities of the individual commodities involved in the transactions are combined using their prices in the base year as weights.
26. In practice, however, there are many transactions recorded in statistics of foreign trade for which it is not possible to apply such an approach. In such cases it is necessary to make assumptions and approximations (eg revaluing by means of the price index which is considered to be most closely related to the commodity involved). The published constant price estimates should be viewed in this light.
27. A fuller discussion of the methods used in estimating constant price values and the major approximations and assumption made in compiling constant price estimates appears in Chapter 4 of Australian National Accounts: Concepts, Sources and Methods, (5216.0).

## IMPLICIT PRICE DEFLATORS AND TERMS OF TRADE

28. Implicit price deflators (IPDs) for exports and imports of goods and services and index numbers of the terms of trade are presented in Table 6.
29. An IPD is obtained by dividing a current price value by its corresponding constant price value. Thus IPDs are derived measures (hence the term implicit) and are not normally the
direct measures of price change by which current price estimates are converted to estimates at constant prices. They take into account not only the changes in the prices of exports and imports but also the effects of the changes in composition of exports and imports on total recorded price movements.
30. A more detailed discussion of the nature of IPDs is presented in Appendix $B$ of the publication Australian National Accounts: Concepts, Sources and Methods (5216.0).
31. There are several ways of measuring the terms of trade. A common means of doing so is by calculating an index of the form:

$$
\frac{\text { Price index of exports }}{\text { Price index of imports }} \times 100
$$

In this publication, the price indexes used in calculating the terms of trade index are the IPDs for exports and imports.

## SEASONAL ADJUSTMENT

32. Most of the current account series in this publication are affected to some extent by seasonal influences and it is useful to recognise and take account of this element of variation. Therefore seasonally adjusted estimates are presented in Tables $3,5,9$ and 10 . In addition, the implicit price deflator and terms of trade data presented in Table 6 are based on seasonally adjusted data.
33. Seasonal adjustment may be carried out by various methods and the results may vary slightly according to the procedure adopted. Accordingly, seasonally adjusted statistics should not be regarded as in any way definitive. In interpreting particular seasonally adjusted statistics it is important, therefore, to bear in mind the methods by which they have been derived and the limitations to which the methods used are subject. Details of the seasonal adjustment methods used are available on request.
34. For those items showing substantial irregular movement, particular care should be taken in interpreting quarter-to-quarter movements in the adjusted figures, as the short term movements cannot be assumed to indicate changes in trend.
35. In order to maintain an accounting identity, the seasonally adjusted balances (balance on merchandise trade, balance on goods and services and balance on current account) are derived by differencing independently adjusted series.
36. The seasonally adjusted statistics shown in this issue have been revised following a re-analysis which takes into account additional data that have become available since the last seasonal reanalysis.
37. The factors to be used in compiling seasonally adjusted estimates for certain series (principally components of merchandise trade and investment income) up to and including September quarter 1987 are available on request. To obtain the seasonal factors, users should contact Mr Dan Aherne on (062) 52 6689.

## EXCHANGE RATES AND THE TRADE WEIGHTED INDEX

38. Table 20 shows the exchange rates of the Australian dollar with four major currencies and a trade-weighted index of the value of the Australian dollar.
39. The exchange rates shown are provided by the Reserve Bank of Australia and relate to the last trading day of the quarter. Prior to 12 December 1983, the rate for the US dollar was the mid-point of the rates at which the Reserve Bank was prepared to deal with Australian trading banks. From that date, the rate is a representative mid-point determined by the Reserve Bank on the basis of market quotations at 4 pm Eastern Australian time. Rates for the other currencies are calculated by crossing the rate for the US dollar with the mid-points of closing buying and selling rates in New

York (prior to 31 October 1983) or largely in Asian markets (from 31 October 1983). The rates shown are indications of market value only and could differ from those quoted by Australian banks.
40. The trade-weighted index is also provided by the Reserve Bank and is an index of the average value of the Australian dollar vis-a-vis currencies of Australia's trading partners. Prior to 12 December 1983, the index was as published each morning by the Reserve Bank; from that date, the index is as calculated at 4 pm on the basis of the representative rate for the US dollar and .rates for other currencies, mainly from Asian markets.

## ACCURACY AND RELIABILITY OF ESTIMATES

41. Because the transactions recorded in the balance of payments are of many different kinds, compilation of balance of payments estimates entails the use of a very wide range of statistical data of varying degrees of accuracy and timeliness. One feature that is common to all components of the estimates, whatever the source of the basic data, is the element of judgement that has to be applied in compiling them.
42. Therefore care should be exercised in the use and interpretation of estimates in this publication. The latest estimates are preliminary and subject to revision as more accurate data come to hand. Also, the more detailed estimates may be less accurate in relative terms than broader items and aggregates of which they form components.

## COMPARABILITY WITH CAPITAL EXPENDITURE STATISTICS

43. Tables 7 and 9 in this publication contain current price estimates of imports of endogenous capital goods. Shorter-term movements in this series can differ quite significantly from the corresponding movements in the new private capital expenditure on equipment, plant and machinery series
published in Private New Capital Expenditure, Australia (5625.0 and 5626.0). The main reasons for the differences are:

The imports series includes all goods defined as endogenous capital goods (see paragraphs 12 to 14 above), whereas the . capital expenditure series relates only to goods classified as equipment, plant and machinery that are acquired by private enterprises in selected industries.

- The capital expenditure series includes all plant, machinery and equipment, irrespective of whether it has been imported or manufactured in Australia.

Imports are valued f.o.b. at the point of export whereas estimates of capital expenditure are measured at domestic market prices, including international transport margins, government duties and domestic trade and transport margins.
44. Accordingly, while movements in imports of endogenous capital goods can provide a broad indication of movements in the import component of private, new capital expenditure on equipment, plant and machinery, they do not necessarily provide an accurate indication of movements in total private new capital expenditure on these goods.

## SERIES AVAILABLE ON REQUEST

45. Detailed quarterly statistics relating to transportation can be obtained from Mr Dudley Scoullar on Canberra (062) 526057.
