EXPLANATORY NOTES

Introduction

- 1. This publication contains preliminary estimates of Australia's merchandise imports on a balance of payments basis for October 1994, together with estimates for previous months.
- 2. Descriptions of the classifications used for merchandise imports, detailed item definitions and long term historical data are presented in Change to Commodity Classification of Merchandise Imports in Balance of Payments Publications (5344.0).
- 3. Descriptions of the underlying concepts and structure of merchandise imports on a balance of payments basis and the sources and methods used in compiling the estimates are presented in *Balance of Payments*, *Australia: Concepts, Sources and Methods* (5331.0). That publication also provides explanations of seasonal adjustment and trend estimates; and an analysis of the quality of the estimates.

Accuracy, reliability and volatility

- 4. The latest estimates in this publication are preliminary and subject to revision as more complete and accurate information becomes available.
- Particular care should be exercised in interpret-5. ing month-to-month movements in original and seasonally adjusted series as short term movements cannot be assumed to indicate changes in trend. The monthly estimates are volatile, being subject to seasonal factors (except where adjusted in the table) and large irregular influences. The irregular influences may reflect both random economic events and difficulties of statistical recording. Seasonal adjustment does not aim to remove the irregular or non-seasonal influences which may be present in any particular month. This means that the month-tomonth movements of the seasonally adjusted estimates may not be reliable indicators of trend behaviour. For example, irregular factors unrelated to the trend account for more than half the seasonally adjusted monthly movements in merchandise imports fob in 9 out of 10 months.
- 6. The impact of the irregular influences upon the seasonally adjusted series is reduced by smoothing, as shown by the trend estimates in the table and graph. The trend estimates are generally derived by applying a 13-term Henderson-weighted moving average to the seasonally adjusted series.

Seasonal adjustment

- 7. The factors used in seasonally adjusting the monthly merchandise imports statistics during 1994 can be obtained, for \$65.00, from Mr Trevor Jolly on Canberra (06) 252 6820.
- 8. The seasonally adjusted statistics in this publication should not be regarded as in any way definitive as results from seasonal adjustment vary according to the method used.

Available longer term series

9. Estimates for months prior to those shown in this publication are available and can be obtained by contacting Mr Trevor Jolly on Canberra (06) 252 6820. There may be a charge for this information.
