OVERSEAS TRADE

1967-68

BULLETIN No. 65

Prepared under instructions from the Right Honourable the Treasurer by

K. M. ARCHER
COMMONWEALTH STATISTICIAN

COMMONWEALTH BUREAU OF CENSUS AND STATISTICS
CANBERRA, AUSTRALIA

PREFACE

Basic documents

Overseas trade statistics are compiled by the Commonwealth Bureau of Census and Statistics from copies of export and import entries submitted by exporters and importers or their agents to the Department of Customs and Excise as required by the Customs Act.

2. The entries show the port of shipment and country of consignment for exports and port of entry and country of origin for imports, the date, the description, quantity where required and value (f.o.b.) of the goods. The export statistical item number is inserted by the exporter or his agent; the importer or his agent is required to insert the Tariff Item number under which the goods are admitted and the Statistical Key Code. These are verified by officers of the Department of Customs and Excise in the local offices of the Collector of Customs.

Scope of the statistics

General

3. Overseas trade statistics record all goods moving into and out of Australia, except those listed in paragraph 4, and are not confined to goods which are the subject of a commercial transaction. The area to which all overseas trade statistics issued by this Bureau apply is the whole of the Commonwealth of Australia, comprising the States of New South Wales, Victoria, Queensland, South Australia, Western Australia and Tasmania, the Northern Territory and the Australian Capital Territory. Non-contiguous territories under Australian administration are treated as outside countries, and trade transactions between Australia and those non-contiguous territories are part of the overseas trade of Australia. Such transactions are shown separately, i.e. the trade of Australia with each particular area is separately recorded and tabulated.

Inclusions and exclusions

4. (a) Exports and imports on government account including defence equipment are treated as normal transactions and are an integral part of overseas trade statistics.
- (b) Direct transit trade, i.e. goods being transhipped or moved through Australia for purposes of transport only, is not recorded.
- (c) Outside packages (containers, crates, etc.) are included as a separate item (statistical item 931.00.21) in the tabulation of imports and have been fully classified by country of origin since 1950-51. For exports, however, the value recorded for each item includes the value of the outside package.
- (d) Bunkers and stores supplied to vessels and aircraft are excluded from statistics of exports, but the quantity and value of these stores shipped during the year 1967-68 is shown in Table 27.
- (e) Those migrants' and passengers' effects for which a customs entry is not received are excluded from exports and imports.
- (f) Those parcels post exports and imports of small value for which customs entries are not received are excluded from overseas trade statistics.
- (g) Certain materials for intergovernmental defence projects for which customs entries are not required are excluded from imports.
- (h) The value of ores and concentrates exported and imported includes the value of the gold content and the latter is not recorded in exports and imports of gold. However, Table 24 shows estimates of the quantity of gold and other metals contained in ores and concentrates exported from Australia.
- (i) Vessels and aircraft engaged in the transport of passengers or goods between Australia and other countries are excluded from exports and imports.
- (j) Vessels and aircraft purchased for use on overseas routes are excluded from imports and any subsequent overseas sales of such vessels and aircraft are excluded from exports.
- (k) Fish and other sea products landed abroad directly from the high seas by Australian vessels are excluded from exports.

Period covered by the statistics

Exports

5. These are recorded statistically in the month in which the export entries are passed by the Department of Customs and Excise. Normally this is within a few days of shipment although delays sometimes occur in the lodging of entries. Shipments are at times delayed by abnormal factors affecting sales, deliveries for export and the loading of ships. When such delays occur, exports during the affected period are diminished and when the delays are overtaken shipments include substantial quantities of accumulated stocks as well as current disposals. Wool shipments in any trade year may be materially affected by the time spread of wool auctions which usually end in July. The carry-over of shipments varies from year to year. New season's wheat usually becomes available for shipment from December onwards, and the quantity shipped in any trade year (ending June) depends on the size of the crop, the time spread of sales for export, and physical factors affecting the scheduling of deliveries.

Imports

6. Imports are recorded statistically in the month in which import entries are passed by the Department of Customs and Excise. Normally this is within a few days of discharge of cargoes.

General

7. Since July 1914, detailed trade statistics have been compiled for financial years (July to June). Prior to that, details were compiled on a calendar year basis.

Valuation

8. Commencing with Bulletin No. 62, 1964-65 values in the Overseas Trade Bulletin have been expressed in \$A. Prior to this values were expressed in £(Aust.) except for imports into Australia which, up until 15 November 1947, were recorded in British currency values. Full explanatory notes on the methods of recording import values before and since 15 November 1947, were included in Overseas Trade Bulletin No. 45, 1947-48 and *Official Year Book* No. 37, page 396.

9. All values in overseas trade statistics are determined on a 'free on board (f.o.b.) port of shipment' basis. This means that all charges, in particular the cost of freight and insurance, incurred after the goods have been exported from the port of shipment are excluded. Only transport and service charges incurred, or usually incurred, prior to export are included in the determination of trade values.

10. The procedure adopted to value exports and imports is as follows.

Exports. The recorded value of goods exported includes the cost of containers and outside packages and has been determined, since July 1937, as follows.

- (a) Goods sold to overseas buyers before export are valued at the Australian f.o.b. port of shipment equivalent of the actual price at which the goods were sold.
- (b) Goods shipped on consignment are valued at the Australian f.o.b. port of shipment equivalent of the price paid for similar goods of Australian origin in the principal markets of the country to which they are dispatched for sale.

An account of the bases of valuation in operation prior to July 1937 is given on page 469 of *Official Year Book* No. 39.

Imports. The recorded value of goods imported is the amount on which duty is payable or would be payable if the duty were *ad valorem*. Value for duty is the f.o.b. port of shipment equivalent of either:

- (a) the actual price paid or to be paid by the Australian importer plus any special deduction (transactions value); or
- (b) 'the current domestic value' of the goods; whichever is the higher.

'Current domestic value' is defined as, 'the amount for which the seller of the goods to the purchaser in Australia is selling or would be prepared to sell

for cash, at the date of exportation of those goods, the same quantity of identically similar goods to any and every purchaser in the country of export for consumption in that country.'

Quantity data

11. Where quantities are shown they are generally, but not invariably, expressed in terms of the normal trade unit. Where 'cental' is used, the unit is equivalent to 100 lb avoirdupois. Quantities are not tabulated in respect of statistical items for which there is no appropriate unit of quantity (for example, a statistical item which covers a number of commodities that cannot be recorded under a uniform unit of quantity).

Statistical concepts of trade

Trade Systems

12. There are two generally accepted systems of recording overseas trade statistics, namely (a) special trade and (b) general trade. The Statistical Office of the United Nations defines the two systems as follows.

'System of Trade. Two systems of recording trade are in common use, differing mainly in the way warehoused and re-exported goods are recorded.

(a) **Special Trade.** Special imports are the combined total of imports directly for domestic consumption (including transformation and repair) and withdrawals from bonded warehouses or free zones for domestic consumption. Special exports comprise exports of national merchandise, namely, goods wholly or partly produced or manufactured in the country, together with exports of nationalized goods. (Nationalized goods are goods which, having been included in special imports, are then exported without transformation).

(b) **General Trade.** General imports are the combined total of imports directly for domestic consumption and imports into bonded warehouse or free zone. General exports are the combined total of national exports and re-exports. Re-exports, in the general trade system, consist of the outward movement of nationalized goods plus goods which, after importation, move outward from bonded warehouse or free zone without having been transformed.

Direct transit trade, i.e. goods merely being transhipped or moving through the country for purposes of transport only, is excluded from the statistics of both special and general trade'.

13. Statistics in this bulletin are compiled on the 'General Trade' basis; imports on a 'Special Trade' basis are published in the bulletin *Imports Cleared for Home Consumption* issued annually.

14. Australian produce (national produce) is defined as goods, materials or articles which have been produced, manufactured or partly manufactured in Australia, except goods which were originally imported and have undergone only repair or minor operations which leave them essentially unchanged.

15. Re-exports are defined as goods, materials or articles originally imported which are exported either in the same condition in which they were imported or after undergoing repair or minor operations which leave them essentially unchanged. 'Minor operations' include blending, packaging, bottling, cleaning, sorting, husking and shelling.

Merchandise and Non-merchandise Trade

16. Total trade is divided into merchandise and non-merchandise trade. Merchandise trade is the equivalent of total imports and exports less certain items specified as non-merchandise. Prior to July 1965 non-merchandise trade consisted of imports and exports of specie and gold and silver. In July 1965 merchandise and non-merchandise trade were redefined in accordance with international standards recommended by the United Nations and since that date non-merchandise items include commodities such as gold, legal tender, decorations, trophies, samples, passengers' personal effects, military equipment and stores for Australian Forces abroad, goods for the use of diplomatic and consular representatives, goods imported

with the intention of being re-exported, goods exported with the intention of being re-imported, etc. A complete description of these commodities is contained in the Australian Export and Import Commodity Classifications published by the Bureau.

Balance of Trade

17. Statistics of the balance of trade for balance of payments purposes are derived by making certain adjustments, relating both to scope and valuation, to statistics of merchandise exports and imports. Statistics on the adjusted basis are published in statistical bulletins relating to the balance of payments. The adjustments include the following: imports are adjusted for the overall excess of recorded value for duty over the actual selling price to the importer; exports and imports of goods for repair and return and the value of repairs are deducted from merchandise trade; exports and imports of ships and aircraft for use on overseas routes, certain imports of defence equipment, and other trade items for which customs entries are not required are added. Adjustments are also made for timing differences between the change of ownership and the lodgment of import entries, in the case of certain large items of equipment (e.g. warships).

Excess of Exports or Imports

18. The excess of the value of exports or imports is shown on the basis of total trade and merchandise and non-merchandise trade in Tables 4 and 6. The excess of exports or imports does not, on these bases, represent the balance of trade. The balance of trade is derived by comparing statistics of exports on a balance of payments basis with statistics of imports on that basis. (See paragraph 17.)

Balance of payments

19. Estimates of the balance of trade do not measure Australia's total balance of payments which includes other transactions such as freight and insurance charges on imports, shipping expenditure in Australian ports, overseas travel, payments of profits and interest, and private and government borrowing overseas. Estimates of these transactions will be found in statistical bulletins relating to balance of payments.

Country of consignment or origin

20. 'Country of consignment' referred to in export tables means the country to which goods were consigned at the time of export. Where the country of consignment is not determined the goods are recorded as exported 'For orders'.

21. 'Country of origin', referred to in import tables, means the country of production. Classification of imports according to country of shipment was discontinued after the year 1920-21. A brief account of the dual system of import classification by country, operating prior to the year 1921-22, was given on page 500 of *Official Year Book* No. 51.

22. Throughout this bulletin, countries are shown in alphabetical order. Details for Singapore prior to October 1965 are included with Malaysia. Bechuanaland was renamed Botswana on 30 September 1966 and Basutoland was renamed Lesotho on 4 October 1966. For purposes of this bulletin the new countries' titles have been used.

23. Where, in respect of any statistical item in Tables Nos. 1 and 3, the total value is less than \$10,000, details of Australian States and overseas countries are omitted. Where country details are shown for a statistical item, only those countries with totals of \$10,000 or more are shown separately. In Table No. 2 the same Australian States and overseas countries are shown as for the corresponding statistical items in Table No. 1. However, where there are no re-exports for a State or country that State or country has been excluded.

24. A list of countries, showing the areas included under each individual country, appears on pages xi to xiii.

Commodity classifications

25. Overseas trade statistics were compiled according to the Statistical Classification of Imports and Exports up to and including 1964–65 for imports and 1965–66 for exports. From July 1965, imports have been classified according to the Australian Import Commodity Classification. Exports have been classified according to the Australian Export Commodity Classification from July 1966. Both classifications are based on the Standard International Trade Classification, Revised (S.I.T.C.), which is closely related to the Brussels Tariff Nomenclature used in the new Australian Customs Tariff introduced in July 1965.

26. Because of the introduction of the new commodity classifications it has not been possible to show exactly comparable figures for years prior to their introduction. However, comparable figures at the Division (2 digit) level by country of origin or consignment from 1963–64 to 1967–68 can be obtained from Overseas Trade Bulletin No. 64 and this bulletin. Apart from these figures, details on a comparable basis are not available prior to 1965–66 for imports and 1966–67 for exports.

Description of commodities

27. In this bulletin it has been necessary to abbreviate descriptions for some items and generic headings have been used extensively. Descriptions of commodities appearing thereunder have been indented appropriately and the extent of such indentation is shown by the number of asterisks (*) which appear before the first line of a description. A full description of any export or import item can be obtained from the Australian Export or Australian Import Commodity Classifications, 1967–68.

Commodity index

28. An index to Articles of Trade is included at the end of this volume. The articles are arranged in alphabetical order and show Commodity Classification reference numbers.

Pre-federation records

29. In the years preceding federation each State recorded its trade independently, and in so doing did not distinguish other Australian States from external countries. The aggregation of the records of the several States is necessarily the only available means of ascertaining the trade of Australia for comparison with later years, but the results obtained may be subject to error, since past records of values and the direction of imports and exports were not on uniform lines. Exports and imports for years prior to federation may be found in issues of the Year Book prior to No. 41. On the introduction of the *Customs Act* 1901 the methods of recording values were made uniform throughout the States.

Rounding

30. Any discrepancies between totals and sums of components in tables are due to rounding.

Abbreviations

31. N.E.I. means 'not elsewhere included' and N.E.S. 'not elsewhere specified'.

Special periodical return system

32. A subscription service is available to provide for the particular detailed requirements of individual users of overseas trade statistics. These special periodical returns show trade according to items of the Australian Export and Import Commodity Classifications or statistical key code dissections of Australian Customs Tariff items. These returns are obtainable monthly or quarterly. A charge is made which varies from 10 cents to 75 cents per item per return depending on the amount of detail required. Tabulation extracts are also available at a fee of 5 cents per item where these are more suitable.

Publications relating to overseas trade

33. Details of exports and imports are given in the following publications. Reference numbers are shown in brackets.

Relative Importance of Industrial Groups.

In the year 1967-68, Australian produce (other than gold) exported amounted to approximately \$2,919 million. Of this, \$2,315 million or 79.3 per cent was mainly produce of primary industries, comprising \$1,717 million of unprocessed produce and \$598 million of goods which had been processed in some degree before export. The values of the principal individual items of processed Australian primary produce exported were:—raw sugar, \$95,584,000; flour (wheat), \$23,534,000; canned fruit, \$51,320,000; dried fruit, \$22,790,000; wool (scoured, tops, etc.) \$72,456,000; canned meats, \$15,790,000; butter, \$46,976,000; milk (condensed, dried, etc.), \$21,961,000; pig lead, \$30,939,000; lead bullion, \$31,052,000; zinc bars, blocks, etc., \$20,877,000; copper ingots, \$33,104,000, and wood rough, roughly squared or simply worked, \$3,604,000.

The value of manufactures exported as classified above was \$492 million, or approximately 16.8 per cent of Australian produce (other than gold) exported in 1967-68. The values of principal individual items here included were:—machinery and transport equipment, \$116,711,000; drugs and chemicals, \$83,813,000; and paper and stationery, \$13,566,000. Other manufactured articles, \$345,456,000.

The items enumerated indicate the arbitrariness of the line necessarily drawn between primary produce and manufactures in any classification of this kind. The value of processed primary products exported includes some element of value added by the simpler processes of manufacture, while the value shown for manufactures exported necessarily includes the value of raw material (primary produce) used in those manufactures.

Refined petroleum oils exported are shown separately, as they consist of imported crude oils refined in Australia and exported in the refined form. The values of principal individual items shown as 'unclassified' in 1967-68 were: individual consignments of less than \$150 in value, \$19,737,000; and military equipment and stores and supplies for Australian projects overseas, \$24,928,000.

INDEX TO ARTICLES OF TRADE, 1967-68

Entries in this index are arranged in alphabetical order and listed against each entry is an Australian Export and/or Import Commodity Classification reference number of 3, 5 or 7 digits. Where a reference number relates to both exports and imports, no distinction has been made, but in those cases where a reference relates to an export item only or an import item only, this has been indicated by an (E) or an (I) respectively after the number. Those entries which cover a homogeneous group of statistical items have a statistical reference of 3 or 5 digits. Entries not readily associated with a homogenous group of items, or which are sufficiently important, have a statistical reference of 7 digits. Consequently any article not specifically mentioned in the index is included under its generic heading, e.g. 'champagne' is not listed but may be located in the classification through 5 digit reference for 'wine' or the 3 digit reference for 'alcoholic beverages'.

If an article has more than one reference number and the leading digits of each reference number are identical, the leading digits are shown for the first reference number only, e.g. the entry 512.21, 22, 23, 24, 25 means 512.21, 512.22, 512.23, 512.24 and 512.25.
