

OVERSEAS TRADE

1974-75

PART I — EXPORTS AND IMPORTS

Prepared under instructions from the Honourable the Treasurer

R. W. COLE
AUSTRALIAN STATISTICIAN

AUSTRALIAN BUREAU OF STATISTICS
CANBERRA, AUSTRALIA

PREFACE

Basic documents and scope of overseas trade statistics

Overseas trade statistics are compiled by the Australian Bureau of Statistics from information supplied by exporters and importers or their agents to the Bureau of Customs as required by the Customs Act. The statistics are not confined to goods which are the subject of a commercial transaction and all goods moving out of or into Australia are recorded, except for those exclusions listed below. Among the items included are exports and imports on government account including some items of defence equipment, and outside packages (that is, the outside package or outside covering of the goods). Outside packages are included as a separate item in the tabulation of imports (statistical item 931.00.21) but in exports the value recorded for each item includes the value of the outside package.

2. The following are excluded from overseas trade statistics.

- (a) Direct transit trade, that is, goods being transhipped or moved through Australia for purposes of transport only.
- (b) Bunkers and stores supplied to vessels and aircraft prior to departure overseas. (However, a separate "Ships' Stores" collection is made and details are shown in Table 22 of Part 2 of this Bulletin).
- (c) Those migrants' and passengers' effects for which a customs entry is not received.
- (d) Those parcels post exports and imports of small value for which customs entries are not received.
- (e) Certain materials for intergovernmental defence projects for which customs entries are not required.
- (f) The value of ores and concentrates of the various minerals exported and imported includes the value of additional metals (e.g. gold, silver) contained in the ore or concentrate. The values of these additional metals are thus excluded from the specific classifications for such metals.
- (g) Vessels and aircraft engaged in the transport of passengers or goods between Australia and other countries.
- (h) Vessels and aircraft purchased for use on overseas routes and any subsequent sales made of such vessels and aircraft.
- (i) Fish and other sea products landed aboard directly from the high seas by Australian vessels.

Areas applying

3. The area to which all overseas trade statistics issued by this Bureau apply is the whole of Australia, comprising the six States, the Northern Territory and the Australian Capital Territory. External territories under Australian administration are treated as separate countries and appear individually in Australia's overseas trade statistics.

Period covered by the statistics

4. Exports and imports are recorded statistically in the month in which the entries are passed by the Bureau of Customs. Normally this is within a few days of loading or discharge of cargo. Delays sometimes occur in the lodging of export entries and import entries may be cleared early using the Customs' check-to-arrive system.

Containerised goods

5. Containerised goods forwarded interstate for export through a container port are statistically recorded as being exported from the port of location of the Customs House, at which the entry was lodged and not from the port of loading in Australia. For example, containerised goods for which entries were lodged at the Customs House, Port Adelaide but forwarded interstate to Port Melbourne for export would be recorded statistically as exports

from Port Adelaide, hence from South Australia and not from Victoria. The same method of recording, that is, port of lodgment of the entry, applies to imports of containerised goods forwarded interstate following discharge from an overseas vessel.

Valuation

6. Commencing with *Overseas Trade Bulletin* No. 62, 1964–65 values have been expressed in \$A. Prior to this, values for exports were expressed in £A, but the value for imports, while being in £A from 1947–48 were, before that year, expressed in British Currency values. Full explanatory notes on the methods of recording these earlier import values were included in *Overseas Trade Bulletin* No. 45, 1947–48 and the *Official Year Book of Australia* No. 37, page 396.

7. All values in overseas trade statistics are determined on a 'free on board (f.o.b.) port of shipment' basis. This means that all charges (in particular the cost of freight and insurance) incurred after the goods have been exported from the port of shipment are excluded. Only transport and service charges incurred, or usually incurred, prior to export are included in the determination of trade values.

8. The procedure adopted to value exports and imports is as follows.

Exports. The recorded value of goods exported includes the cost of the outside package and has been determined, since July 1937, as follows:

- (a) Goods sold to overseas buyers before export are valued at the Australian f.o.b. port of shipment equivalent of the actual price at which the goods were sold.
- (b) Goods shipped on consignment are valued at the Australian f.o.b. port of shipment equivalent of the price paid for similar goods of Australian origin in the principal markets of the country to which they are despatched for sale.

An account of the bases of valuation in operation prior to July 1937 is given in the *Official Year Book of Australia* No. 37, page 396.

Imports. The recorded value of goods imported is the 'value for duty' as required for Customs purposes, that is, the sum of:

- (a) (i) the actual money price paid or to be paid for the goods by the Australian importer plus any special deduction, or
- (ii) the current domestic value of the goods, whichever is the higher; and
- (b) all charges payable or ordinarily payable for placing the goods free on board at the port of export.

In the case of goods consigned for sale in Australia the value for duty shall be the amount which would be the value for duty if the goods were, at date of exportation, sold to an Australian importer instead of being consigned for sale in Australia.

'Special deduction' is defined as, 'any discount or other deduction allowed to the Australian importer which would not ordinarily have been allowed to any and every purchaser at the date of exportation of an equal quantity of identically similar goods.'

'Current domestic value' is defined as, 'the amount for which the seller of the goods to the purchaser in Australia is selling or would be prepared to sell for cash, at the date of exportation of those goods, the same quantity of identically similar goods to any and every purchaser in the country of export for consumption in that country.'

Leasing arrangements. The recorded value of goods exported, or imported, under leasing arrangements is defined as the free on board value, that is, not the value of the lease receipts or payments. However, for balance of payments purposes large items of equipment under lease are normally excluded from exports and imports figures, and therefore from the balance of trade, since no change of ownership has occurred.

Quantity data

9. (a) Where net quantities are shown they are generally, but not invariably, expressed in terms of the normal unit of quantity used in the appropriate industry. Quantities are not tabulated in respect of statistical items for which there is no appropriate unit of quantity (for example, a statistical item which covers a number of different goods that cannot be recorded under a uniform unit of quantity).

(b) Gross weight is included in overseas trade statistics in this bulletin and is at present only applicable to exports. Gross weight statistics appear in Table 1 of Part 1 of this Bulletin (Exports, Commodity by Country) and Table 6 (Principal Countries, Gross Weight Values and Percentages) and Table 13 of Part 2 of this Bulletin (Exports by Mode of Transport).

Gross weight is the shipping weight and is recorded on export entries for each commodity shown. For other statistics of gross weight *see* the publication *Outward Overseas Cargo, Sea and Air* (Reference No. 14.16).

Statistical concepts of trades

Trade Systems

10. There are two generally accepted systems of recording overseas trade statistics defined by the Statistical Office of the United Nations, they are 'special trade' and 'general trade'. The definitions for these two systems are shown in *Overseas Trade Bulletin* No. 68, 1970-71 and earlier issues. This terminology is not usually employed in connection with Australian overseas trade statistics for which the terms defined below are in use.

11. Exports of Australian origin are goods, materials or articles which have been produced, manufactured or partly manufactured in Australia, except goods which were originally imported and have undergone only repair or minor operations that leave them essentially unchanged.

12. Re-exports are goods, materials or articles originally imported which are exported either in the same condition in which they were imported or after undergoing repair or minor operations which leave them essentially unchanged. 'Minor operations' include blending, packaging, bottling, cleaning, sorting, husking and shelling.

13. Total exports are the aggregate of exports of Australian origin and re-exports.

14. Import clearances are imported goods cleared through Customs direct for domestic consumption plus goods cleared from bonded warehouses for domestic consumption.

15. Imports are goods imported direct for domestic consumption plus goods imported into bonded warehouses.

Merchandise and Non-merchandise Trade

16. Total trade is divided into merchandise and non-merchandise trade in accordance with international standards recommended by the United Nations. Merchandise trade is the equivalent of total exports or imports less certain items specified as non-merchandise. Complete lists of commodities in each category are contained in the Australian Export and Import Commodity Classifications published by the Australian Bureau of Statistics.

Balance of trade and balance of payments

17. The balance of trade is derived by comparing statistics of exports on a balance of payments basis with statistics of imports on that basis. Therefore the excess of the value of exports or imports as shown on the basis of total trade in Tables 1 and 2 of Part 2 of this Bulletin does not on these bases represent the balance of trade. Statistics of the balance for trade for balance of payments purposes are derived by making certain adjustments relating to scope, valuation and timing, to statistics of merchandise exports and imports. Information on these statistics will be found in bulletins relating to the balance of payments.

Country of consignment or origin

18. 'Country of consignment' referred to in export tables means the country to which goods were consigned at the time of export. Where the country of consignment is not determined at the time of export, the goods are recorded as exported 'For orders'.

19. 'Country of origin', referred to in import tables, means the country of production as defined for Tariff purposes.

20. In the presentation of information in Tables 1 and 2 of Part 1 of this Bulletin the following rules have been applied—

- (a) Statistical item and description of goods are always shown irrespective of the value of trade recorded under that item.
- (b) Total quantity (where relevant) and value for an item are shown only where the total value is \$1,000 or more.
- (c) Individual country details are shown only if a country has a value of \$1,000 or more after rounding.
- (d) Countries whose individual values are less than \$500 are combined and shown as 'Other Countries' only if the combined total value is \$1,000 or more after rounding. Differences between the sum of individual country details shown (both quantity and value) and totals for the statistical item are therefore possible and are attributable to the omission, under the rule, of countries with a low value of trade and to rounding (value only).

21. A list of countries, showing the areas included under each individual country, appears on pages x to xii.

Commodity classifications

22. Exports and imports are classified according to the Australian Export and Import Commodity Classifications based on the Standard International Trade Classification, Revised (S.I.T.C.(R)), which is closely related to the Brussels Tariff Nomenclature used in the Australian Customs Tariff.

Description of commodities

23. In this bulletin it has been necessary to abbreviate descriptions for a considerable number of items. A full description of any export or import item can be obtained from the Australian Export or Import Commodity Classifications, 1974-75.

Commodity index

24. An index of commodities showing exports and imports separately is included at the end of this volume. The index is in alphabetical order showing Commodity Classification reference numbers.

Pre-federation records

25. In the years preceding federation each State recorded its trade independently, and in so doing did not distinguish other Australian States from external countries. The aggregation of the records of the several States is necessarily the only available means of ascertaining the trade of Australia for comparison with later years, but the results obtained are subject to error, since past records of values and the direction of exports and imports were not on uniform lines. Exports and imports for years prior to federation may be found in issues of the *Official Year Book of Australia* prior to No. 41. On the introduction of the *Customs Act 1901* the methods of recording values were made uniform throughout the States.

Rounding

26. Any discrepancy between totals and sums of components in tables may be due to rounding (*see* paragraph 20).

Abbreviations

27. A list of abbreviations used throughout this bulletin is given on page xvi.

Special periodical return system

28. A monthly or quarterly subscription service is available to provide for the particular detailed requirements of individual users of overseas trade statistics. These special periodical returns show trade according to items of the Australian Export and Import Commodity Classifications or statistical key code dissections of Annotated Customs Tariff items. A nominal charge is made which varies depending on the amount of detail required.

Publications relating to overseas trade

29. Details of exports and imports are given in the following publications. Reference numbers are shown in brackets.

The index is shown in two parts, Part 1 relating to Exports and Part 2 to Imports. Entries are arranged in alphabetical order and listed against each entry is a reference number. In the case of exports this relates to the Australian Export Commodity Classification and is of 3, 5 or 7 digits, and in imports to the Australian Import Commodity Classification and is of 3 or 5 digits. While the index is not exhaustive it has been designed to allow location of an item within narrow limits, having regard to maintaining an economical size for the bulletin.

If an article has more than one reference number and the leading digits of each reference number are identical, the leading digits are shown for the first reference number only, e.g. the entry relating to 'Hides and Skins, undressed 211.10, 20, 40, 60, 70, 80, 90' means 211.10; 211.20; 211.40; 211.60; 211.70; 211.80; 211.90.

OVERSEAS TRADE

1974-75

PART 2 — COMPARATIVE AND SUMMARY TABLES

Prepared under instructions from the Honourable the Treasurer by

R. W. COLE
AUSTRALIAN STATISTICIAN

AUSTRALIAN BUREAU OF STATISTICS
CANBERRA, AUSTRALIA

PREFACE

Basic documents and scope of overseas trade statistics

Overseas trade statistics are compiled by the Australian Bureau of Statistics from information supplied by exporters and importers or their agents to the Bureau of Customs as required by the Customs Act. The statistics are not confined to goods which are the subject of a commercial transaction and all goods moving out of or into Australia are recorded, except for those exclusions listed below. Among the items included are exports and imports on government account including some items of defence equipment, and outside packages (that is, the outside package or outside covering of the goods). Outside packages are included as a separate item in the tabulation of imports (statistical item 931.00.21) but in exports the value recorded for each item includes the value of the outside package.

2. The following are excluded from overseas trade statistics:

- (a) Direct transit trade, that is, goods being transhipped or moved through Australia for purposes of transport only.
- (b) Bunkers and stores supplied to vessels and aircraft prior to departure overseas. (However, a separate "Ships' Stores" collection is made and details are shown in Table 22 of Part 2 of this Bulletin).
- (c) Those migrants' and passengers' effects for which a customs entry is not received.
- (d) Those parcels post exports and imports of small value for which customs entries are not received.
- (e) Certain materials for intergovernmental defence projects for which customs entries are not required.
- (f) The value of ores and concentrates of the various minerals exported and imported includes the value of additional metals (e.g. gold, silver) contained in the ore or concentrate. The values of these additional metals are thus excluded from the specific classifications for such metals.
- (g) Vessels and aircraft engaged in the transport of passengers or goods between Australia and other countries.
- (h) Vessels and aircraft purchased for use on overseas routes and any subsequent sales made of such vessels and aircraft.
- (i) Fish and other sea products landed abroad directly from the high seas by Australian vessels.

Areas applying

3. The area to which all overseas trade statistics issued by this Bureau apply is the whole of Australia, comprising the six States, the Northern Territory and the Australian Capital Territory. External territories under Australian administration are treated as separate countries and appear individually in Australia's overseas trade statistics.

Period covered by the statistics

4. Exports and imports are recorded statistically in the month in which the entries are passed by the Bureau of Customs. Normally this is within a few days of loading or discharge of cargo. Delays sometimes occur in the lodging of export entries and import entries may be cleared early using the Customs' check-to-arrive system.

Containerised goods

5. Containerised goods forwarded interstate for export through a container port are statistically recorded as being exported from the port of location of the Customs House at which the entry was lodged and not from the port of loading in Australia. For example, containerised goods for which entries were lodged at the Customs House, Port Adelaide but forwarded interstate to Port Melbourne for export would be recorded statistically as exports

from Port Adelaide, hence from South Australia and not from Victoria. The same method of recording, that is, port of lodgment of the entry, applies to imports of containerised goods forwarded interstate following discharge from an overseas vessel.

Valuation

6. Commencing with *Overseas Trade Bulletin* No. 62, 1964–65 values have been expressed in \$A. Prior to this, values for exports were expressed in £A, but the value for imports, while being in £A from 1947–48 were, before that year, expressed in British Currency values. Full explanatory notes on the methods of recording these earlier import values were included in *Overseas Trade Bulletin* No. 45, 1947–48 and the *Official Year Book of Australia* No. 37, page 396.

7. All values in overseas trade statistics are determined on a 'free on board (f.o.b.) port of shipment' basis. This means that all charges (in particular the cost of freight and insurance) incurred after the goods have been exported from the port of shipment are excluded. Only transport and service charges incurred, or usually incurred, prior to export are included in the determination of trade values.

8. The procedure adopted to value exports and imports is as follows.

Exports. The recorded value of goods exported includes the cost of the outside package and has been determined, since July 1937, as follows.

- (a) Goods sold to overseas buyers before export are valued at the Australian f.o.b. port of shipment equivalent of the actual price at which the goods were sold.
- (b) Goods shipped on consignment are valued at the Australian f.o.b. port of shipment equivalent of the price paid for similar goods of Australian origin in the principal markets of the country to which they are despatched for sale.

An account of the bases of valuation in operation prior to July 1937 is given in the *Official Year Book of Australia* No. 37, page 396.

Imports. The recorded value of goods imported is the 'value for duty' as required for Customs purposes, that is, the sum of:

- (a) (i) the actual money price paid or to be paid for the goods by the Australian importer plus any special deduction, or
- (ii) the current domestic value of the goods, whichever is the higher; and
- (b) all charges payable or ordinarily payable for placing the goods free on board at the port of export.

In the case of goods consigned for sale in Australia the value for duty shall be the amount which would be the value for duty if the goods were, at date of exportation, sold to an Australian importer instead of being consigned for sale in Australia.

'Special deduction' is defined as, 'any discount or other deduction allowed to the Australian importer which would not ordinarily have been allowed to any and every purchaser at the date of exportation of an equal quantity of identically similar goods.'

'Current domestic value' is defined as, 'the amount for which the seller of the goods to the purchaser in Australia is selling or would be prepared to sell for cash, at the date of exportation of those goods, the same quantity of identically similar goods to any and every purchaser in the country of export for consumption in that country.'

Leasing arrangements. The recorded value of goods exported, or imported, under leasing arrangements is defined as the free on board value, that is, not the value of the lease receipts or payments. However, for balance of payments purposes large items of equipment under lease are normally excluded from exports and imports figures, and therefore from the balance of trade, since no change of ownership has occurred.

Quantity data

9. (a) Where net quantities are shown they are generally, but not invariably, expressed in terms of the normal unit of quantity used in the appropriate industry. Quantities are not tabulated in respect of statistical items for which there is no appropriate unit of quantity (for example, a statistical item which covers a number of different goods that cannot be recorded under a uniform unit of quantity).

(b) Gross weight is included in overseas trade statistics in this bulletin and is at present only applicable to exports. Gross weight statistics appear in Table 1 of Part 1 of this Bulletin (Exports, Commodity by Country) and Table 6 (Principal Countries, Gross Weight, Values and Percentages) and Table 13 of Part 2 of this Bulletin (Exports by Mode of Transport).

Gross weight is the shipping weight and is recorded on export entries for each commodity shown. For other statistics of gross weight see the publication *Outward Overseas Cargo, Sea and Air* (Reference No. 14.16).

Statistical concepts of trade

Trade Systems

10. There are two generally accepted systems of recording overseas trade statistics defined by the Statistical Office of the United Nations, they are 'special trade' and 'general trade'. The definitions for these two systems are shown in *Overseas Trade Bulletin* No. 68, 1970-71 and earlier issues. This terminology is not usually employed in connection with Australian overseas trade statistics for which the terms defined below are in use.

11. Exports of Australian origin are goods, materials or articles which have been produced, manufactured or partly manufactured in Australia, except goods which were originally imported and have undergone only repair or minor operations that leave them essentially unchanged.

12. Re-exports are goods, materials or articles originally imported which are exported either in the same condition in which they were imported or after undergoing repair or minor operations which leave them essentially unchanged. 'Minor operations' include blending, packaging, bottling, cleaning, sorting, husking and shelling.

13. Total exports are the aggregate of exports of Australian origin and re-exports.

14. Import clearances are imported goods cleared through Customs direct for domestic consumption plus goods cleared from bonded warehouses for domestic consumption.

15. Imports are goods imported direct for domestic consumption plus goods imported into bonded warehouses.

Merchandise and Non-merchandise Trade

16. Total trade is divided into merchandise and non-merchandise trade in accordance with international standards recommended by the United Nations. Merchandise trade is the equivalent of total exports or imports less certain items specified as non-merchandise. Complete lists of commodities in each category are contained in the Australian Export and Import Commodity Classifications published by the Australian Bureau of Statistics.

Balance of trade and balance of payments

17. The balance of trade is derived by comparing statistics of exports on a balance of payments basis with statistics of imports on that basis. Therefore the excess of the value of exports or imports as shown on the basis of total trade in Tables 1 and 2 of Part 2 of this Bulletin does not on these bases represent the balance of trade. Statistics of the balance of trade for balance of payments purposes are derived by making certain adjustments relating to scope, valuation and timing, to statistics of merchandise exports and imports. Information on these statistics will be found in bulletins relating to the balance of payments.

Country of consignment or origin

18. 'Country of consignment' referred to in export tables means the country to which goods were consigned at the time of export. Where the country of consignment is not determined at the time of export, the goods are recorded as exported 'For orders'.

19. 'Country of origin', referred to in import tables, means the country of production as defined for Tariff purposes.

20. A list of countries, showing the areas included under each individual country, appears on pages x to xii.

Commodity classifications

21. Exports and imports are classified according to the Australian Export and Import Commodity Classifications based on the Standard International Trade Classification, Revised (S.I.T.C.), which is closely related to the Brussels Tariff Nomenclature used in the Australian Customs Tariff.

Description of commodities

22. In this bulletin it has been necessary to abbreviate descriptions for a considerable number of items. A full description of any export or import item can be obtained from the Australian Export or Import Commodity Classifications, 1974-75.

Commodity index

23. An index of commodities showing exports and imports separately is included at the end of this volume. The index is in alphabetical order showing Commodity Classification reference numbers.

Pre-federation records

24. In the years preceding federation each State recorded its trade independently, and in so doing did not distinguish other Australian States from external countries. The aggregation of the records of the several States is necessarily the only available means of ascertaining the trade of Australia for comparison with later years, but the results obtained are subject to error, since past records of values and the direction of exports and imports were not on uniform lines. Exports and imports for years prior to federation may be found in issues of the *Official Year Book of Australia* prior to No. 41. On the introduction of the *Customs Act 1901* the methods of recording values were made uniform throughout the States.

Rounding

25. Any discrepancy between totals and sums of components in tables may be due to rounding.

Special periodical return system

26. A monthly or quarterly subscription service is available to provide for the particular detailed requirements of individual users of overseas trade statistics. These special periodical returns show trade according to items of the Australian Export and Import Commodity Classifications or statistical key code dissections of Annotated Customs Tariff items. A nominal charge is made which varies depending on the amount of detail required.

Publications relating to overseas trade

27. Details of exports and imports are given in the following publications. Reference numbers are shown in brackets.

The principal individual items of manufactures exported during 1974-75 were:—machinery and transport equipment, drugs and chemicals, and paper and stationery.

The items enumerated indicate the arbitrariness of the line necessarily drawn between primary produce and manufactures in many classifications of this kind. The value of processed primary products exported includes some element of value added by the simpler processes of manufacture while the value shown for manufactures exported necessarily includes the value of raw material (primary produce) used in those manufactures.

The values of principal individual items shown as 'unclassified' in 1974-75 were:—individual consignments of less than \$250 in value, \$31,063,000, and stores and supplies for Australian projects overseas, \$49,699,000.

(a) Owing to insufficient information, it is not possible to treat unassembled tractors and other machinery in a similar manner to motor vehicles and all such machinery and replacement parts are treated as capital equipment whether imported in an assembled or unassembled condition. (b) Excludes a percentage for piece-goods to be sold at retail, and paper to be used solely for wrapping, which are recorded in 'Finished Consumer Goods—All other' and 'Auxiliary Aids to Production' respectively. (c) Includes a percentage for piece-goods to be sold at retail; see footnote (b). (d) Excludes crude petroleum which is included in 'Producers' Materials, Manufacturing—Other'. (e) Includes a percentage for paper to be used solely for wrapping; see footnote (b).
