## SECTION XI.-CHANGES IN RATES OF WAGE.

1. General.-The collection of information regarding changes in rates of wage throughout the Commonwealth dates from the Ist January, 1913, and the statistical results for the first complete year (1913) were published in Labour Report No. 5. The annual-figures for the year 1914, together with complete figures for the year 1915, were published in Labour Report No. 6, while particulars regarding changes in rates of wage during the years 1916, 1917, and 1918, are given in detail in Labour Reports Nos. 7, 8, and 9, respectively. Details relating to all changes in rates of wage recorded for each quarter of the years 1913, 1914, 1915, 1916, and the first two quarters of the year 1917 were published in Labour Bulletins Nos. 5 to 18 respectively. The annual figures for the year 1919 are given in the following tables.
(i.) Definition of a Change in Rate of Wage.-For the purpose of these statistics a change in rate of wage is defined as a change in the weekly rates of remuneration of a certain class of employees, apart from any change in the nature of the work performed or apart from any revision of rates due to increased length of service or experience. It is obvious that under this definition certain classes of changes are excluded, such, for example, as (a) changes in rates of pay due to promotion, progressive increments, or, on the other hand, to reduction in pay or grade to inefficient workers, and (b) changes in average earnings in an occupation due to a change in the proportions which higher paid classes of workers bear to lower paid classes. Each single change recorded relates to a change in the rates of wage effected in a specific industry or calling, and includes any and all changes to workers in that industry, irrespective of the different number of separate occupations or trades affected. Further, it should be observed that in some instances a change may relate to the employeas of a single employer or to those of a number of employers, according to the instrument or method operating to bring about the change. In a few instances a number of separate instruments, all of which have not necessarily affected rates of wage, but all of which relate to a specific industry or craft, are grouped and taken as a single change. This course is adopted in order to obviate a multiplicity of ehanges affecting only a small number of workers in each instance.
(ii.). Sources of Information.-Primary information merely as to the fact that a change in rate of wage has occurred is obtained through the following channels :-(a) The Commonwealth and State Industrial Registrars and the Chief Inspector of Factories in each State ; (b) Peports from Labour Agents and Correspondents; (c) Quarterly reports from Secretaries of Trade Unions; (d) Returns relating to industrial disputes which resulted in changes in rates of wage; (e) Reports in newspapers, labour and trade reviews, and other publications.
(iii.). Collection of Particulars concerning Changes.-On the occurrence of a change in rate of wage, forms* (prescribed under the Census and Statistics Act 1905) are issued to employers' associations (if any) and also to the secretaries of the trade unions, the members of which are affected by the change. In certain cases forms are also issued, if necessary, to individual employers. The particulars which have to be insorted in these forms furnish information regarding the occupations of the workers affected, the number of workors in each occupation, the ratos of wage paid before and after the change, the locality affected, and the date on which the change took effect. Information must also be furmished rogarding employers and employers' associations concerned, if any, and the method by which the change was effected.

When the forms are returned from the various persons who are required to fill them in, the returns are checked and comparod with each other and with copies of awards, ceterminations, and agroements. In all cases when the information furnished on the forms is incomplete or unsatisfactory, further inquiries are made, and the figures checked by reference to Census results, inclustrial statistics, factory reports, etc.'
(iv.).-Summary of Particulars Tabulated.-The particulars thus obtained are summarised under the following headings:-(a) Number of workpeople affected; (b) the total net amount of increase $\dagger$ in the weekly wage distribution; (c) the consequential average increase per woek to each of the workpeople affected; ( $d$ ) the method by which the change was brought about ; and (e) if effected with or without a stoppage of work. As regards the number of persons affectod, the particulars summarised refer to the total number of persons ordinarily engaged in the specific industry or calling. As to the total net amount of increase in wages. this is computed for a full week's work for all persons ordinarily engaged in the specific industry or calling, and includes particulars of any decreases effected. In cases of changes in the minimum rates of wage payablo under awards or determinations of industrial tribunals, it has ordinarily been assumed (in the absence of any definite information to the contrary) that the whole of the workers in each designated occupation recoived the minimum rates of wage before and after the change.

It should be clearly understood that the comprutations (amount of increase per weok) do not relate to the increase each week, but only to the increase in a single week on the assumption that the full number of persons ordinarily engaged in the particular trade or occupation affected by the change is employed during that week. It is obvious, therofore, that the aggregate effect per annum cannot be obtainod without making due allowance for unemployment and for occupations in which omployment is seasonal or intermittent. It is also obvious that since unemployment and activity in all branches of industry may vary from year to year and in many branches from season to season also, no accurate estimato of the actual effect of the changes in the total amount of wages received or paid per annum can be made, until the determining factors have been investigated. These factors are (a) the amount of unemployment, and (b) the period of employment in seasonal industries.

[^0]Further, it may be pointed out that the aggregate of the particulars given in the Labour Bulletins and Quarterly Summaries relating to each of the four quarters of any year, will not necessarily agree with those given in the annual figures published for that particular year. This is due to the inclusion. as far as possible, in the annual figures of particulars of all changes effected within the year. In some instances the advice of a change is not received in time to allow the full particulars relating thereto being collected and included in the quarterly figures.
2. Number and Effect of Changes in each State for the Years, 1913 to 1919.-The following table gives particulars relating to all changes in rates of wage, recorded for each State. Territory, and the Commonwealth during the years specified. It should be observed that changes brought about by awards and agreements under the Commonwealth Conciliation and Arbitration Act 1904-18 are nécessarily included hereunder as changes in each State to which such awards and agreements apply. The total net amount of increase per week, set out, is subject to the qualifications mentioned in the fourth paragraph of the preceding sub-section. The average increase per head per week is computed to the nearest penny.

Changea in Rates of Wage. -Number and Effect of Changes in each State and Territory, 1913 to 1019.

* Changes recorded in this column are common to all States, as the particulas relating to the number of workpoople affected and the net amonnt of increase per week In each State were not ascertainable, $t$ Including tour changes whtch affected 157 workpeople in the Federal
Capital Terrltory.
In point of number of changes in each State, New South Wales was first, Victoria second, and Queensland third, in each of the years 1913 to 1916. During the year 1917 the number of changes in Queensland exceeded the number recorded in Victoria, while during the year 1918, the number of changes in Queensland was greater than the number recorded
as having taken place in New South Wales. It will be seen from the table that, with the exception of New South Wales, the number of changes in rates of wage recorded during the year 1918 is higher in each State than during any previous year. In the year 1919 tho number of changes recorded for New South Wales was greatly in excess of the number for any other State. In all States, with the exception of Qucensland, the numbers of changes for which particulars were collected during the year 1919, are higher than those reconded during the year 1918, the most noticeable increases occurring in New South Wales, Western Australia and Tasmania. The relative position of the States in point of the numbers of changes effected, and also in regard to the numbers of workers afiected in each year is, of course, largely due to the magnitude of the different industries and callings in which changes took place.

Included in the particulars contained in the foregoing table are those relating to five decreases during the year 1914, seven during the year 1915, eight during the year 1916, eleven during the year 1917, four during the year 1918, and six during the year 1919. The States in which these decreases were recorded were in 1914, New South Wales three, Victoria one, and Tasmania one, affecting 272 persons in all, with a decrease of $£ 59$ per woek; in 1915 New South Wales two, Tasmania two, and in Victoria, South Australia, and Western Australia one each, affecting in all 494 workers to, the extent of a decrease of $£ 81$ per week. Of the eight decreases recorded during 1916 in rates of wage, six affected workpeople in New South Wales, one in Victoria and one in Western Australia. The total number of persons affected was 1730 , and the amount of decrease per week was $£ 286$. In 1917 eleven decreases, affecting 12,828 workpeople, were recorded. Seven of these decreases occurred in New South Wales, two in Queensland, and one each in Victoria and South Australia. The total amount of decrease per week was $\mathfrak{£ 3 2 6 7}$. In 1918, four decreases, affocting 1525 workpeople to the extent of $£ 284$ per week, were recorded. Of these four decreases two occurred in Queensland and one each in New South Wales and Victoria. The six decreases in rates in 1919 affected 4,293 workpeople to the extent of $£ 886$ per weck. Three decreases wore recorded in Queensland, two in South Australia and one in Victoria.

The number of changes in rates of wage during the year 1919 was 1284, which is the highest number recorded since the systematic collection of these particulars by the Bureau was instituted. It will be observed, also, that in addition to the number of separate changes being higher in the year 1919, the number of workpeople who were affected by changes in rates of wage during that year was higher than the number affected during any previous year. The total net amount of increase per week was also higher than for any prior period.

The number of workpeople who were affected by changes in rates of wage during the year 1919 was 603,891 , and the total net amount of increase per week was $£ 256,445$. The corresponding figures for the yoar 1918 were 361,581 workpeople and $£ 85,260$, net amount of increase per week. Only six decreases in rates of wage were recorded during 1919, so that 1278 of the changes recorded gave increased rates of pay. The number of workpeople affected by the six decreases was 4293.

The average increase per head per week during the year 1919 was 8 s .6 d ., as compared with 4 s . 9 d . during the previous year, 5s. 6d. during the year 1917, and 5s. 10d. during 1916.
3. Changes in Rates of Wage in Male and Female Occupations, Number and Effect of Changes in each State, 1913-1919.-Included in the changes in rates of wage recorded in the tables on pages 115 to 128 are those which in the whole or part thereof affected female occupations. Particulars in respect to these changes in so far as they relate to the numbers of male and female workers affected, etc., are set out hereunder.

In the following tables particulars are given of the effect of changes in rates of wage to male and female workers. as recorded for each State during the years 1913 to 1919 inclusive :-

＊Decrease．$\quad \dagger$ See puragraph on page 122．$\ddagger$ Including particulars of changes which involved decreases in rates of wage．

It should be observed that industrial awards made and agreements filed under the provisions of the Commonwealth Conciliation and Arbitration Act, which extend in their operation to more than one State, are counted as a change in each State affected. This is necessary in order that the total number of changes in each State may be obtained. The particulars for the whole Commonwealth, however, record each award and agreement once only. For example, an award affecting a section of the Commonwealth Public Service is operative in each State, and is accordingly included in the State table as a change in each State, but in the total for the Commonwealth the award is recorded as one change only. The totals of the changes recorded as operating in each State are, therefore, in some cases in excess of the totals given for the Commonwealth. On the other hand an award or agreement affecting marine cooks, stewards or engineers, where the persons affected are not working solely in any one State, the award or agreement is not recorded as a change operating in each State, but is added to the number of changes for all States.

The total number of changes during the year 1919, according to State distribution, was 1284 , but on classifying the changes according to occupation and industry, and taking into consideration the fact that awards and agreoments made and filed under the provisions of the Commonwealth Conciliation and Arbitration Act cover, in the majority of cases, more than one State, the number of separate changes was reduced to $\mathbf{1 1 6 8}$. Of this number no less than 373 changes affected workpeople engaged in occupations and industries classified in Group XIV. (Miscellaneous). The number of employees who were affected by these changes was 128,856 , and the amount of increase per week in wages was $£ 50,562$ Seventy-four changes, affecting 114,365 workpeople, were classified in Group IX. (Railway and Tramway Services) ; 156 changes affecting 72,003 employees were classified in Group III. (Food, Drink, etc.), while the groups next in order according to workpeople affected were:-Group VI. (Other Manufacturing), with 138 changes affecting 50,530 workpeople; Group II. (Engineering, Metal Works, etc.) with 89 changes, affecting 44,133 workpeople ; Group VLII. (Mining, etc.) with 29 changes affecting 34,501 employees; Group XI. (Shipping, etc.) with 59 changes aflecting 34,294 workpeople; Group IV. (Clothing, Hats, Boots, ete.) with 31 changes affecting 26,905 employees ; and Group XIII. (Domestic, Hotels, etc.) with 49 changes affecting 25,799 workpeople.
(ii.) Changes in Rates of Wage in Femabe Occupations according to Industrial Groups, 1919.-The particulars set out in the immediately proceding table shew the total number of workpeople (male and female) affected by changes in rales of wage. In the following table the number of female employees is shewn, classified according to the industrial groups in which the changes took place in each State during the year 1919. Similar information for the years 1913, 1914 and 1915 was published in Labour Report No. 6; for the year 1916 in Labour Report No. 7, for the year 1917 in Labour Report No. 8, and for the year 1918 in Labour Report No. 9.

Changes in Rates of Wage.-Female Occupations in each State classlfed according to Industrial Groups, 1919.

It will be seen from the above table that 71,693 female employees were affected by changes in rates of wage during the twelve months under review. The total net amount of increase per week received by these employees was $£ 19,545$. In Victoria 19,304 females received increased wages during the year as compared with 26,954 in New South Wales, 17,460 in Queensland, and 3215 in South Australia. Employees engaged in the manufacture of clothing, hats, boots, etc. (Group IV.), to the number of 17,617, were granted higher rates of pay during the year. The group in which the largest number of females who were affected by changes in rates of wage was Group XIV. (Miscellaneous), no less than $24,664 \mathrm{em}$ ployees being classified under this heading. The number of female omployees in hotels and restaurants, etc. (Group XIII.) who received increased rates of wages during the year was 14,430 , and employees numbering 7,895, engaged in preparation and manufacture of food, drink, etc. (Group III.) were granted increases during the year. In the other groups the numbers of workpeople who received increased rates during the year were not large.
(iii.) Changes in Rates of Wage in the Commonwealth, classified according to Industrial Groups, 1913-1919 - In the following table particulars are shewn relating to the number of changes, number of workpeople affected, and the total amount of increase per week resulting from such changes in the Commonwealth, classified according to industrial groups during the seven years 1913-1919. It must be borne in mind that the numbers of changes shewn in the following table are subject to the qualifications mentioned on page 122 in regard to the awards made and agreements filed under the provisions of the Commonwealth Conciliation and Arbitration Act.

[^2]It will be seen from the preceding table that，during each year for which particulars are furnished，the most frequent method by which changes in rates of wage were arranged was by award or determination under State Industrial Acts．Direct negotiations between employers and employees，or their representatives，were responsible for numerous changes． during each of the years．Awards and agreements made and filed under the provisions of the Commonwealth Conciliation and Arbitration Act brought about large numbers of changes daxing the last four years．It must be mentioned that，so far as possible，the effect of awards or agree－ ments are recorded in the figures for the year in which such awards or agreements are made and filed．In certain cases，however，the awards or
agreements are made retrospective as to the date on which the increased rate of wage has to be paid, while in others the particulars as to the number of workpeople affected and the effect of the change are difficult to ascertain.
(ii.) Changes in Rates of Wage and Methods by which Effected in each State and Territory, 1919. The following tables set out particulars of the results of all changes in rates of wage which were recorded for the year 1919, according to the method by which the changes were effected. The particulars relating to changes effected with or without a stoppage of work are given separately, and include those involving any decrease in rates of wage. For comparative information for the year 1913, see Labour Report No. 5; for the years 1914 and 1915 see Labour Report No. 6; for the year 1916 see Labour Report No. 7 ; for the year 1917 see Labour Report No. 8 ; and for the year 1918 see Labour Report No. 9.

[^3]Ohanges in Rates of Wage-Methods by which Eftected, 1819-continued.

* In this eection of the table an Award or Agreement under the Commonwealth Consifation and Arbltration Act, and the Commonwealth (Public Service) Arbitration Act is counted as one change oaly, although guch Award or Agreement may be operative in more than one Stato.

The total number of changes recorded during the yoar 1919, was 1,168, of which 582 , or 50 per cent. of the total number, were brought about by award or determination under State Industrial Acts. The number of workpeople who were affected by these 582 changes was 337,625 , and the total amount of increase per week was $£ 148,632$. 'The number of changes in New South Wales brought about by State award or variation of award was 271 . The number of workpeople affected was 187,955 and the increase in wages per week was $\mathbf{f 9 5}, 125$. In Victoria 61 Wages' Board determinations were made, affecting 27,696 workpeople, as compared with 155 State awards or variations of awards in Queensland; 50 in South Australia; 24 in Western Australia, and 21 in Tasmania. The number of changes in rates of wage brought about by direct negotiations between employers and employees or their ropresentatives was 238, the number of employees affected being 84,555 , for an increase per week of $£ 28,937$. Twenty-nine changes were effected after negotiations with the assistance of a third party not connected with Commonwealth or State Industrial Courts. The number of changes in rates of wage which were recorded as having been made by awards or variations of awards by the Commonwealth Court of Conciliation and Arbitration was 42 , while the number of industrial agreements affecting wages filed under the provisions of the Commonwealth Act was 141. Industrial agreements numbering 100 were filed under the provisions of State Industrial Acts. Included in the total number of changes were 56 changes which were arranged after stoppages of work.

## SECTION XII.-INDUSTRIAL DISPUTES.

1. General-The systematic collection of statistical information regarding industrial disputes (strikes and lock-outs) which occur in each State and Territory throughout the Commonwealth was initiated by this Bureau at the beginning of the year 1913, and particulars relating thereto, for the first complete year, were published in Labour Report No. 5. Section XI. (Strikes and Lock-outs). An examination of the available data contained in official reports, newspapers, and other publications during past years shewed that insufficient material existed, for the compilation of anything like complete or comprehensive statistics regarding industrial disputes in the Commonwealth for years prior to 1913. A considerable amount of information relating to strikes and lock-outs which took place in New South Wales after the lst July, 1907, has been published in the New South Wales Industrial Gazette (April, 1913, January, 1914, and subsequent issues), but even these particulars are stated to be more or less incomplete until after March, 1912. With regard to the other States, very meagre information only can be obtained as to the numbers of industrial disputes, much less as to their duration or the number of persons involved.
(i.) Collection of Particulars.-Under the system initiated in 1913 information as to the occurrence of an industrial dispute is derived from a number of sources, of which the following are the most important:(a) Reports by labour agents and correspondents who have been appointed in all the most important industrial centres of the Commonwealth; (b) official notifications from heads of various Commonwealth

[^0]:    * An these forms are lgsued under the authority of the Census and Statisties Act 1905, it is compulsory upon prescribed persons to furnish the intornation required.

    1 Aiter making allowance for any decreages involved.

[^1]:    - Changes recorded in this column are common to all States as the particulars retating to number of workpoople affected and the net nmount of incseaze per woek in each State were not ascertainable. Tucluding 4 changes which affected 157 workpeople in the Frederal Capital Termtory.

[^2]:    ＊In this table an Industrial Award or Agreement under the Commonwealth Conciliation and Arbitration Act or an Order of the War Precautiont Coal Board is counted as one change only， although such Award，Agreement or Ordel may be operative in more than one State．See also remarica on page 115 with respect to the inclusion of a number of Industrial agreemente fled under the provisions of the Commonwealth Act being recorded as a single change only．

[^3]:    * Including effect of decrease.
