SUMMARY OF FINDINGS

DIAGRAM 1. ALL PERSONS AGED 15 TO 69: EDUCATIONAL ATTAINMENT, FEBRUARY 1993 (Source: Table 1)

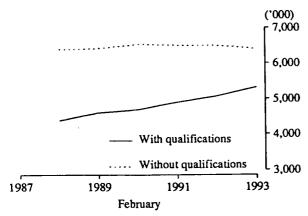

Overview

In February 1993 the estimated civilian population aged 15 to 69 was 12,305,600 persons, an increase of 150,400 since the previous year.

Persons without post-school qualifications (6,396,200) comprise 52% of this population and 4,540,000 (71%) of these had not attended the highest level of school available. A further 1,813,400 (28%) had attended the highest level of schooling while the remaining 42,700 (1%) had never attended school.

Persons with post-school qualifications numbered 5,322,100 and comprised 2,369,500 (45%) with a certificate or diploma, 1,676,600 (31%) with a trade qualification, 1,208,300 (23%) with a degree or higher and 67,700 (1%) with other qualifications.

DIAGRAM 2. PERSONS WITH OR WITHOUT POST-SCHOOL QUALIFICATIONS, FEBRUARY 1988 TO FEBRUARY 1993

Source: Table 4

It was estimated that 587,400 persons were attending school.

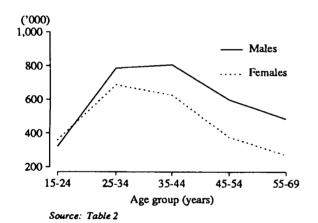

Since February 1988.....

- the number of persons aged 15 to 69 has increased by 8 per cent (936,600)
- the number of persons with post-school qualifications has increased by 21 per cent (935,400), the majority of this increase (670,800) among 35 to 69 year olds
- the number of persons without post-school qualifications who had attended the highest level of school available has increased by 30 per cent (417,000) while the number who did not attend the highest level of school available has decreased by 9 per cent (422,900)
- there has been a decrease of 9 per cent (307,100) in the number of persons without qualifications who had left school at age 15 or under
- employed persons with post-school qualifications increased by 18 per cent (589,400) while those without post-school qualifications decreased by 6 per cent (227,700)
- the number of unemployed persons with degrees or higher rose by 140 per cent (38,100), those with trade qualifications rose by 119 per cent (73,300), certificates or diplomas were up 107 per cent (96,200) and there was an increase of 139 per cent (4,600) in the number of unemployed persons with other post-school qualifications.

Since February 1992.....

- an extra 5 per cent of persons (245,600) were recorded as having post-school qualifications
- persons with degrees increased by 68,800 (6%), trade qualified persons increased by 56,400 (3%) and another 96,700 persons (4%) had attained certificates or diplomas
- the age group 45 to 54 recorded the largest increase in the number of persons with post-school qualifications, rising by 87,000 (10%)
- the number of employed persons with post-school qualifications increased by 108,700 (3%) while the number without qualifications decreased by 137,500 (4%)
- the number of unemployed persons increased by 54,400 - of this increase 49,500 were among persons with post-school qualifications
- the number of persons not in the labour force with post-school qualifications increased by 87,300 (10%) to 989,100.

DIAGRAM 3. NUMBER OF MALES AND FEMALES WITH POST-SCHOOL QUALIFICATIONS BY AGE GROUP, FEBRUARY 1993

Participation in the labour force

Persons with post-school qualifications had a labour force participation rate of 81.4 per cent compared to 63.5 per cent for those without post-school qualifications.

Of persons without post-school qualifications, those who had attended the highest level of school available had a participation rate of 74.4 per cent and persons who had not attended at the highest level had a participation rate of 59.6 per cent.

Persons who had never attended school (42,700) had a participation rate of 26.3 per cent.

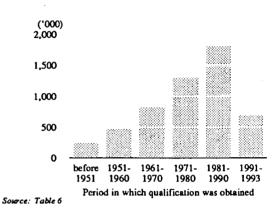

Persons not in the labour force

Since 1988 the number of persons in this category with a post-school qualification increased by 133,700 (16%).

In February 1993, 27 per cent (989,100) of persons not in the labour force had post-school qualifications. Females accounted for 630,500 (64%) of these with the majority (460,000) holding certificates or diplomas.

Among the 2,332,700 persons not in the labour force without post-school qualifications, only 465,100 (20%) had attended the highest level of secondary school available.

DIAGRAM 4. NUMBER OF PERSONS WITH POST-SCHOOL QUALIFICATIONS BY YEAR OBTAINED QUALIFICATIONS, FEBRUARY 1993

Educational characteristics of family members In February 1993.....

- 53 per cent (2,128,100) of persons identified as husbands or wives with dependent children had a post-school qualification
- 36 per cent (1,441,100) of husbands or wives with dependent children had not attended the highest level of school available
- 49 per cent (220,000) of sole parents had not attended the highest level of school available
- 39 per cent (176,200) of sole parents had attained post-school qualifications.

Occupation

Just over half of the 850,800 employed managers and administrators had post-school qualifications compared to 90 per cent of the 1,000,800 professionals, 78 per cent of the 453,700 para-professionals and 69 per cent of the 1,122,900 tradespersons. Labourers and related workers had the lowest proportion of persons with post-school qualifications with 28 per cent of the 1,119,000 employed.

Industry

The industry recording the highest proportion of persons with post-school qualifications was community services with 72 per cent (1,008,800). The lowest level was in the agriculture, forestry, fishing and hunting industries with 33 per cent (402,100).

Of the 992,300 employed persons with degrees, 42 per cent were in the community services industry.

Three industries accounted for almost two-thirds of persons with trade qualifications. These were manufacturing with 280,800 (23%), wholesale and retail trade with 262,300 (21%) and construction with 241,600 (19%).

EXPLANATORY NOTES

Introduction

The monthly population survey (which is described in *The Labour Force*, *Australia* (6203.0)) comprises the monthly labour force survey and supplementary topics. This publication contains some results of a supplementary survey run in association with the February 1993 labour force survey conducted throughout Australia.

2. Of the respondents to the labour force survey, those who fell within the scope of the supplementary survey were asked additional questions. They were asked about their highest educational qualifications. For persons with post-school qualifications, the information sought included field of study, and year and country in which they obtained their highest qualification; and for those without post-school qualifications, it included whether they completed the highest level of secondary schooling available, and if not, at what age they left school. For those persons aged 15 to 25, information was also sought on their attendance at an educational institution in the previous calender year, type of institution attended, student status and whether they attended for the full academic year.

Scope

- 3. The scope of this supplementary survey includes all persons aged 15 to 69 except:
 - (a) members of the permanent defence forces;
 - (b) certain diplomatic personnel of overseas governments, customarily excluded from census and estimated populations;
 - (c) overseas residents in Australia:
 - (d) members of non-Australian defence forces (and their dependents) stationed in Australia;
 - (e) visitors to private dwellings;
 - (f) some patients in hospitals and sanitoriums; and
 - (g) inmates of reformatories, gaols etc.

Coverage

4. In the population survey, coverage rules are applied which aim to ensure that each person is associated with only one dwelling, and hence has only one chance of selection. See *The Labour Force*, *Australia* (6203.0) for more details.

Definitions

- 5. Further definitions of labour force and demographic classifications appearing in this publication are given in *The Labour Force, Australia* (6203.0).
- 6. Unless otherwise stated, all characteristics referenced in this publication relate to the week before the interview.

Results of the survey

- 7. Due to differences in the scope and method of estimation used in this supplementary survey and that used in the labour force survey, there are some small variations between estimates in this publication and those in the corresponding issue of *The Labour Force*, Australia (6203.0).
- 8. The estimates in this publication refer to information collected in the survey month and, due to seasonal factors, may not be representative of other months of the year.
- 9. Results of similar surveys, conducted annually since February 1979, have been given in previous issues of this publication.
- 10. This survey will be conducted again in February 1994.

Unpublished tables

11. As well as the statistics included in this and related publications, the ABS may have other relevant unpublished data available. Inquiries should be made to Ms Nicolle Wittmann on Canberra (06) 252 6578.

Survey sample redesign

12. The Labour Force Survey (LFS) sample has been redesigned and reselected using information collected in the 1991 Population Census. As a result, the standard errors used in this supplementary survey differ from those used in surveys of the same topic run prior to September 1992. For details, see *Information Paper—Labour Force Survey—Sample Design* (6269.0).

Estimation procedure

13. The estimates are derived from the population survey by use of a ratio estimation procedure which ensures that the estimates conform to an independently estimated distribution of the population for each capital city and remainder of state by age, gender and labour force status, rather than to the corresponding distribution within the sample itself.

Reliability of the estimates

14. Estimates in this publication are subject to sampling and non-sampling error. For more information refer to the Technical Note, on page 18.

16. Current publications produced by the ABS are listed in the Catalogue of Publications and Products, Australia (1101.0). The ABS also issues, on Tuesdays and Fridays, a Publications Advice (1105.0) which lists publications to be released in the next few days. The Catalogue and Publications Advice are available from any ABS office.

Symbols and other usages

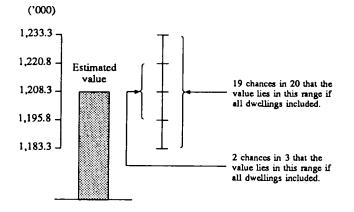

- subject to sampling variability too high for most practical uses. See the Technical Note.
- . not applicable
- r revised
- 17. Because estimates have been rounded, discrepancies may occur between sums of the component items and totals.

TECHNICAL NOTE

Estimation procedure

Since the estimates in this publication are based on information obtained from occupants of a sample of dwellings, they are subject to sampling variability, that is. they may differ from those that would have been produced if all dwellings had been included in the survey. One measure of the likely difference is given by the standard error, which indicates the extent to which an estimate might have varied by chance because only a sample of dwellings was included. There are about two chances in three that a sample estimate will differ by less than one standard error from the number that would have been obtained if all dwellings had been included, and about nineteen chances in twenty that the difference will be less than two standard errors. Another measure of the likely difference is the relative standard error, which is obtained by expressing the standard error as a percentage of the estimates.

- 2. Space does not allow for the separate indication of the standard errors of all estimates in this publication. A table of standard errors for general application is given on the following page. Since they are averages based on calculations for a limited number of past surveys over a wide range of labour force characteristics these numbers will not give a precise measure of the standard error of a particular estimate but they will provide an indication of its magnitude.
- 3. An example of the calculation and the use of standard errors in relation to estimates of persons is as follows. Table 1 shows the estimated number of persons with a Degree qualification in February 1993 is 1,208,300. Since this estimate is between 1,000,000 and 2,000,000 in the standard error table, the standard error for Australia will be between 11,800 and 15,200 and can be approximated by interpolation as 12,500 (rounded to the nearest 100). Therefore, there are about two chances in three that the value that would have been produced if all dwellings had been included in the survey will fall in the range 1,195,800 to 1,220,800. There are about nineteen chances in twenty that the value will fall between 1,183,300 and 1,233,300. This example is illustrated in the following diagram.

- 4. As can be seen from the standard error table, the smaller the estimate the higher is the relative standard error. Very small estimates are thus subject to such high standard error (relative to the size of the estimate) as to detract seriously from their value for most reasonable uses. In the tables in this publication only estimates with relative standard errors of 25 per cent or less and percentages based on such estimates are considered sufficiently reliable for most purposes. However, estimates and percentages with larger relative standard errors have been included and are preceded by an asterisk (e.g. *3.4) to indicate they are subject to high standard errors and should be used with caution.
- 5. Proportions and percentages formed from the ratio of two estimates are also subject to sampling errors. The size of the error depends on the accuracy of both the numerator and the denominator. A formula to approximate the relative standard error (RSE) of a proportion is given below:

RSE
$$(x/y) = \sqrt{[RSE (x)]^2 - [RSE (y)]^2}$$

- 6. Considering the example from paragraph 3 above, of the 1,208,300 persons with a Degree qualification in February 1993, 1,057,700 or 87.5 per cent participated in the labour force. The standard error of 1,057,700 is approximely 12,000 so the relative standard error is 1.1 per cent. The relative standard error for 1,208,300 is 1.0 per cent. Applying the above formula, the relative standard error of the proportion is $\sqrt{(1.1)^2 (1.0)^2}$ or 0.5 per cent, giving a standard error for the proportion (87.5 per cent) of 0.4 percentage points. Therefore, there are about two chances in three that the participation rate of persons with a Degree qualification in February 1993 is between 87.1 per cent and 87.9 per cent and nineteen chances in twenty the proportion is within the range 86.7 per cent to 88.3 per cent.
- 7. Published estimates may also be used to calculate the difference between two survey estimates (of numbers or percentages). Such an estimate is subject to sampling error. The sampling error of the difference between two estimates depends on their standard errors and the relationship (correlation) between them. An approximate standard error (SE) of the difference between two estimates (x-y) may be calculated by the following formula:

SE
$$(x-y) = \sqrt{[SE(x)]^2 + [SE(y)]^2}$$

While this formula will only be exact for differences between separate and uncorrelated characteristics of subpopulations it is expected to provide a good approximation for all differences likely to be of interest in this publication. 8. The imprecision due to sampling variability, which is measured by the standard error, should not be confused with inaccuracies that may occur because of imperfections in reporting by interviewers and respondents, and errors made in coding and processing data. Inaccuracies of this kind are referred to as the non-sampling error, and they

may occur in any enumeration, whether it be a full count or a sample. Every effort is made to reduce the non-sampling error to a minimum by careful design of questionnaires, intensive training and supervision of interviewers and efficient operating procedures.

GLOSSARY

Average duration of unemployment: obtained by dividing the aggregate number of weeks a group has been unemployed by the number of persons in that group.

Certificate or diploma: completion of an approved certificate or diploma in secretarial or business studies, administration, teaching, nursing, etc.

Degree: a bachelor degree (including honours), a graduate or post-graduate diploma, masters degree or a doctorate.

Educational attainment: measures the highest qualification obtained by the respondent. Qualifications may include those obtained at other than educational institutions (e.g. nursing qualifications obtained at a hospital).

Highest level of secondary school available: the highest level of secondary schooling (or equivalent) offered by the education system at the time the respondent left school.

Industry: all occurrences of industry in this publication refer to Industry Division as defined by the Australian Standard Industry Classification (ASIC).

Main field of study: respondents with a degree; trade qualification; or a certificate or diploma (as defined) indicated the main field of study for their highest qualification.

Median duration of unemployment: the duration which divides unemployed persons into two equal groups, one comprising persons whose duration of unemployment is above the median and the other, persons whose duration is below it.

Occupation: all occurrences of occupation in this publication refer to Major Group as defined by the Australian Standard Classification of Occupation (ASCO).

Other post-school qualifications: completion of other types of education, e.g. adult education, preparatory/bridging course or non-vocational course.

Post-school qualifications: qualifications held by those persons who had left school and answered 'Yes' to the question: 'Since leaving school have you obtained a trade qualification, certificate, diploma, degree or any other qualification?'. Respondents indicated which of the following groups best described their highest qualification: Degree; Trade qualification; Certificate or diploma; Other post-school qualification.

Still at school: current school attendance was recorded only for persons aged fifteen to twenty years.

Trade qualification: completion of an approved trade/technical apprenticeship in fitting and turning, hairdressing, plumbing, carpentry, etc.

Unemployment/population ratio: the number of unemployed persons, for any group, expressed as a percentage of all persons in the same group.

DATA ITEMS AND HOW TO ORDER SPECIAL TABLES FROM THIS SURVEY

The ABS offers a range of unpublished data from this survey upon request. When ordering special tables from this survey, please ensure you identify the population(s) and the variable(s) which you require.

This section specifies the variables and populations which relate to the survey and includes an order form for special tables.

The population(s) for a particular variable refers to the person in the survey to whom the variable relates.

POPULATION 14:

POPULATIONS

POPULATION 1: Persons aged 15 to 69 **POPULATION 2:** Employed persons aged 15 to 69 **POPULATION 3:** Unemployed persons aged 15 to 69 **POPULATION 4:** Persons not in the labour force aged 15 to 69 Persons in the labour force aged 15 to 69 **POPULATION 5:** Persons aged 15 to 69 who had a degree qualification **POPULATION 6:** Persons aged 15 to 69 who had a trade/technical qualification or apprenticeship **POPULATION 7: POPULATION 8:** Persons aged 15 to 69 who had a certificate or diploma POPULATION 9: Persons aged 15-25 years **POPULATION 10:** Persons aged 15-25 years who attended an educational institution last year Employed persons aged 15 to 69 who had a degree qualification **POPULATION 11:** Employed persons aged 15 to 69 who had a trade/technical qualification or apprenticeship **POPULATION 12: POPULATION 13:** Employed persons aged 15 to 69 who had a certificate or diploma

TRANSITION FROM EDUCATION TO WORK, AUSTRALIA, MAY 1992

This annual publication, released on 19th November 1992, provides current information from a household based survey on the labour force characteristics of persons aged 15 to 64 in the educational system, both at the time of the survey and in the previous calendar year. For those attending and those not attending an educational institution it gives a broad picture of their contribution to the workforce, their level of education and the type of work they are engaged in.

The publication features information on:

- socio-demographic characteristics such as sex, age, labour force status and educational attainment
- work history details such as occupation and industry
- type of institution attending
- type of school last attended
- · level of course attended/attending
- · highest level of education obtained
- information on the characteristics of apprentices.

The publication also includes a full list of the extensive range of data items collected in the survey that will assist you in ordering tailored tables to meet your individual requirements.

To order your copy of *Transition from Education to Work, Australia, May 1992 (6227.0)*, priced at \$12.50, contact an **ABS Bookshop** in your State or complete the order form at the back of this publication.

PARTICIPATION IN EDUCATION, AUSTRALIA, SEPTEMBER 1992

This annual publication, released on 24th February 1992, provides current information from a household based survey on the level of current educational attendance of the Australian population aged 15 to 24. Type of institution attending, whether attendance is full-time or part-time and level of course being studied is also collected. Trends in education are monitored by providing comparisons of time series data by age, type of institution attending and labour force status.

The publication features information on:

- demographic characteristics such as age, sex, and country of birth
- labour force status of both the student and non-student population
- type of educational institution currently attending
- level of course being studied
- type of school last attended
- an explanation of concepts and methodology
- a selection of findings from the survey.

The publication also includes a full list of the extensive range of data items collected in the survey that will assist you in ordering tailored tables to meet your individual requirements.

To order your copy of *Participation in Education*, *Australia*, *September 1992 (6272.0)*, priced at \$12.70, contact an ABS Bookshop in your State or complete the order form at the back of this publication.

SCHOOLS, AUSTRALIA, 1992

This annual publication, released on 21st April 1993, provides statistics on schools, students and staff involved in the provision or administration of primary and secondary education, in government and non-government schools.

The publication features information on:

- Schools classified by type
- · Students classified by age level/year of education, sex and type of school attended
- Staff classified by category of school and major function.

The publication includes tables showing student retention rates, student/teaching staff ratios and student/total school staff ratios.

To order your copy of Schools, Australia, 1992 (4221.0), priced at \$20.40, contact an ABS Bookshop in your State or complete the order form at the back of this publication.

EDUCATION AND TRAINING IN AUSTRALIA

This new reference publication, released in November 1992, is a comprehensive report on all levels of education and training across Australia. It provides descriptive and analytical text, quick reference tables, graphs, time series data, and detailed tables.

Areas covered by Education and Training in Australia include::

- · definitions of education and training
- · infrastructure of education and training in Australia
- · attainment in terms of education and training
- students and participants in training
- · staff in education institutions
- financial resources and employer support.

To order your copy of this 200 page publication, Education and Training in Australia (422.0), priced at \$45.00, contact an ABS Bookshop in your State or complete the order form at the back of this publication.

DIRECTORY OF EDUCATION AND TRAINING STATISTICS

This new publication, released on 3 May 1993, is a catalogue of ABS statistics related directly, or indirectly, to education and training in Australia. It provides descriptive information on the various data sources, data items available, frequency of collections, publications produced, and any reliability/confidentiality provisions.

To find out more about the availability of education and training data, or obtain your complimentary copy of the *Directory of Education and Training Statistics* (1136.0), contact Pam Lee on (06) 252 7798 or complete the order form at the back of this publication.

For more information ...

The ABS publishes a wide range of statistics and other information on Australia's economic and social conditions. Details of what is available in various publications and other products can be found in the ABS Catalogue of Publications and Products available at all ABS Offices (see below for contact details).

Information Consultancy Service

Information tailored to special needs of clients can be obtained from the Information Consultancy Service available at ABS Offices (see Information Inquiries below for contact details).

Electronic Data Services

A wide range of ABS data are available on electronic media. Selections of most frequently requested statistics are available, updated daily, on Discovery (Key *656#). The ABS PC Telestats service delivers major economic indicator main features ready to download into personal computers on the day of release. The PC Ausstats service enables on-line access to a data base of thousands of up-to-date time series. Selected datasets are also available on diskette or CD-ROM. For more details on electronic data services available, contact Information Services in any of the ABS Offices (see Information Inquiries below for contact details).

Bookshops and Subscriptions

There are over 500 titles of various publications available from ABS bookshops in all ABS Offices (see below Bookshop Sales for contact details). The ABS also provides a subscription service through which nominated publications are provided by mail on a regular basis at no additional cost (telephone Publications Subscription Service toll free on 008 02 0608 Australia wide).
