Main price changes between March quarter 1981 and June quarter 1981 were as follows:

#### Food

Prices of meals out and take-away food increased in all cities.

Milk prices increased in Sydney, Brisbane and Perth. Prices for soft drinks, ice cream and confectionery increased in all cities.

Prices for fresh fruit and vegetables increased in all cities except Adelaide, Hobart and Canberra.

Beef prices fell in Sydney and Brisbane and rose in Perth and Hobart.

## Clothing

Prices of winter seasonal clothing increased in all cities. Prices of footwear increased in all cities.

## Housing

House prices increased in all cities.

Local government rates and charges increased in Sydney and Melbourne.

Private dwelling rents increased in all cities.

Rents of government-owned dwellings increased in Adelaide and Canberra.

#### Household equipment and operation

Prices of household utensils and tools increased in all cities.

Furniture and floor coverings prices increased in all cities.

#### Transportation

Petrol prices increased significantly in all cities. Prices for motor vehicles increased in all cities. Air fares increased for all cities except Perth.

#### **Tobacco and alcohol**

Beer prices increased in all cities. Cigarette prices increased in all cities.

## Health and personal care

Prices of personal care products increased in all cities except Perth.

#### Recreation

Prices of books increased in all cities and newspaper prices increased in Melbourne and Brisbane. Entertainment charges increased in all cities except

Hobart.

R. J. CAMERON Australian Statistician

#### **Brief description of the CPI**

The Consumer Price Index (CPI) measures quarterly changes in the price of a 'basket' of goods and services which account for a high proportion of expenditures by metropolitan wage and salary earner households. This 'basket' covers a wide range of goods and services, arranged in the following groups: Food; Clothing; Housing; Household equipment and operation; Transportation; Tobacco and alcohol; Health and personal care; and Recreation. Each group is in turn divided into subgroups. Index numbers at the group and All Groups levels are published for each State capital city and Canberra, for the weighted average of six State capital cities and for the weighted average of seven capital cities. This publication also contains subgroup index numbers for the weighted average of six State capital cities.

2. It is important to note that the capital city indexes measure price movements over time *in each city individually*. They do not measure differences in retail price levels between cities.

3. Further information about the CPI is contained in the booklet entitled *A Guide to the Consumer Price Index* which is available from the ABS on request.

#### Prices

4. Prices of *non-food items* are collected quarterly, usually as at the middle of the mid-month of the quarter. However, to facilitate field collection arrangements, some items (furniture, appliances, television sets, radios, sound equipment, motor vehicle operation, clothing and footwear services and hairdressing) are priced during the first month of each quarter. Items such as local government rates and seasonal clothing are priced annually.

5. The quarterly prices for *food items* used in the index are the averages of prices collected as at the middle of each of the three months of the quarter. In the case of some fresh food items (fruit, vegetables and fish) prices are collected more frequently and averaged to obtain monthly prices.

#### Weighting pattern

6. There are 105 expenditure classes (that is, groupings of like items) within the current CPI and each expenditure class has its own weight, or measure of relative importance. In calculating the index, price changes for the various expenditure classes are combined using these weights.

7. Changes in the weighting pattern have been made at approximately five-yearly intervals to take account of changes in household spending patterns. The CPI in fact comprises nine series of price indexes which have been linked to form a continuous series. The ninth series (that is, the current series) was introduced as from September quarter 1976 and its weighting pattern is based on estimated expenditures in 1974-75, obtained from the first household expenditure survey conducted by the ABS.

#### Index points and percentage changes

8. Movements in indexes from one period to another can be expressed either as percentage changes, or as changes in 'index points'. The difference between these two methods of describing movements in indexes is shown by the following example:

All Groups CPI:	Weighted average of six State capital cities
Index numbers:	•

June quarter 1981:	324.7
Less: March quarter 1981:	317.7
Change in index points:	+7.0
Percentage change = $\frac{+7.0}{317.7} \times 100 = +2.2\%$	

The index number of 324.7 for June quarter 1981 indicates an increase of 224.7% since the reference base year (1966-67).

9. Most of the tables in this publication show index numbers or percentage changes calculated from index numbers. Table 3, on the other hand, shows the main changes between March quarter 1981 and June quarter 1981, in terms of 'All Groups' index points, for each capital city.

#### Special tables

10. Table 7 provides a *detailed analysis*, for the weighted average of six State capital cities, of movements in the CPI since the previous quarter, including information on movements for subgroups and for some special series. It also shows the *contribution* which each group and subgroup makes to the total index. For instance, the dairy produce subgroup contributed 6.92 index points to the total All Groups index number of 324.7 for June quarter 1981. The final column shows contributions to the *change in All Groups index points* by each group and subgroup.

11. The All Groups index includes the effects of changes in prices for hospital and medical services. To facilitate analysis of trends in retail prices without the effects of these changes, Table 5 shows percentage changes for a special series 'All Groups excluding hospital and medical services', and compares these with changes in the All Groups index.

#### Monthly food group index

12. The ABS publication Consumer Price Index, Monthly Food Group Index, Six State Capital Cities and Canberra (6402.0) contains monthly index numbers, percentage changes and other data relating to the Food Group of the CPI.

#### Symbols and other usages

- Nil or rounded to zero.

NOTE. Any discrepancies between totals and sums of components in this publication are due to rounding. For similar reasons quarterly movements shown by subgroup or group index numbers in Table 7 do not necessarily correspond exactly with those shown by the relevant index points.
