

EMBARGO: NOON 19 OCTOBER 1973

# COMMONWEALTH BUREAU OF CENSUS AND STATISTICS, CANBERRA, AUSTRALIA

Reference No. 9.1

# CONSUMER PRICE INDEX - SEPTEMBER QUARTER 1973

Variations in retail prices as measured by the Consumer Price Index for the six State capital cities and Canberra are shown herein.

- 2. Compared with the previous quarter, the All Groups Consumer Price Index for September quarter 1973 increased by 3.6% for the weighted average of the six State capital cities, the largest quarterly increase since June quarter 1952. Changes in individual cities were: Sydney +3.8%, Melbourne +3.4%, Brisbane +4.1%, Adelaide +3.7%, Perth +2.3%, Hobart +3.4%, Canberra +3.6%.
- 3. Recent quarterly changes in the All Groups index have been as follows:

# Percentage Change from Preceding Quarter

Quarter	Six Capitals (a)	Sydney	Melbourne	Brisbane	Adelaide	Perth	Hobart	Canberra
· · · · · · · · · · · · · · · · · · ·	. Per cent	Per cent	Per cent	Per cent	Per cent	Per cent	Per cent	Per cent

1973-74 – September	+5.5	+2.9	+2.1	+2.8	+2.9	+3.6

<sup>(</sup>a) Weighted average of six State capital cities.

- 6. A detailed description of the Consumer Price Index is contained in Labour Report No. 56, 1971 (Reference No. 6.7).
- The Consumer Price Index measures quarterly variations in prices of goods and services as affecting a high proportion of the expenditure of wage-earner households in the aggregate. Changes in the pattern of this expenditure since 1950 have been such as to render it necessary to construct the index with additional items and changes in weighting patterns at intervals (rather than on the basis of a list of items and set of weights which remained unchanged throughout the period). Six series for short periods have therefore been constructed and linked to form a continuous retail price index series published herein as the Consumer Price Index. In each period between links the items and weighting have remained unchanged.
- 8. The quarterly prices for food items used in the index are the averages of prices normally collected as at the middle of each of the three months of the quarter. However, for potatoes and for onions from December quarter 1968, weekly prices are averaged to arrive at monthly prices. Prices of all non-food items are collected at regular quarterly intervals (or at annual intervals with items such as local government rates and seasonal clothing) normally as at the middle of the mid-month of each quarter. However, for furniture, major household appliances and motoring items (other than motor car) the collection is made during the first month of each quarter to facilitate field collection arrangements.
- 9. The indexes measure price movements in each city individually. They do not provide a comparison of the retail price level in any city with the retail price level of any other city.
- 10. Table 1 on page 5 of this Bulletin shows Consumer Price Index numbers for each fiscal year from 1961-62 to 1972-73 and for each quarter from September quarter 1967. Table 2 on pages 6 and 7 shows Group Index numbers quarterly from September quarter 1970 to September quarter 1973.
- Table 3 on page 8 shows monthly Food Group index numbers for each month from January 1971. It also contains information of contributions by the Food Group to the total index in terms of All Groups Index Points for both June quarter 1973 and September quarter 1973 and each of the three months of this quarter, i.e. July, August and September 1973. A more detailed presentation of information on monthly food price movements can be found in the monthly bulletin Consumer Price Index, Food Group Index Numbers (Reference No. 9.11). Since the food group is the only group of the index for which prices are collected monthly, it is not possible to provide monthly indexes tor other groups.
- Table 4 on page 9 shows index numbers for June quarter 1973 and September quarter 1973 for groups and sub-groups of the index and for some special groupings. It also contains information of contributions by index sub-groups to the total index in terms of All Groups Index Points for these two quarters. Users of these figures should bear in mind that the Consumer Price Index is designed to measure the proportionate change in retail prices as combined in the five major groups and more particularly the total of the groups. For sub-groups or particular items, the index does not necessarily provide comprehensive and valid measures of price changes in those particular fields. Nor does it necessarily measure the relative influences of those classes of items in aggregate variations in prices. The Consumer Price Index is essentially a combination of selected items under various headings and not a dissection of total household expenditure into its component parts.
- Major changes in the composition of the sub-group indexes published in Table 4 resulting from the latest link in the Consumer Price Index (December quarter 1968), have been indicated in the footnotes on page 10. The old and new combinations have been linked to provide continuous series of index numbers across this point of time (December quarter 1968), but it should be remembered that all sub-groupings were affected by changes at the link and some significantly so. Each series of index numbers links the average price movement shown by one combination of items up to December quarter 1968 to that shown by a different combination from December quarter 1968.
- Movements of the indexes from one date to another are usually expressed as percentage changes rather than changes in the 'index points' because 'index point' changes are affected by the level of the index in relation to its base period while percentage changes are not. In this bulletin details are given in terms of percentage changes in paragraphs 2-5. However, the analysis in paragraph 15 shows movements in terms of All Groups 'index points'. This analysis shows the contribution of selected items and of the five groups to movements in the total indexes. Table 4 on page 9 shows movements expressed as both percentage changes and changes in 'index points'. The following example illustrates the computation of 'index point' and percentage changes:

# All Groups: Weighted Average of Six State Capital Cities

Index Point Change		Percentage Change
September quarter 1973 CPI (1966-67 = 100.0)	139.6	Index points difference divided by the index for the previous period
less June quarter 1973 CPI Index points difference	134.7 4.9	$\frac{139.6 - 134.7}{134.7}  \text{x } 100 = 3.6\%$

15. The following analysis and Table 4 on page 9 are provided to assist interpretation of movements shown by the Consumer Price Index from June quarter 1973 to September quarter 1973.

<sup>(</sup>a) See explanation in paragraph 14. (b) In terms of 1966-67 base. (c) Weighted average of six State capital cities

Changes in meat and potato prices are frequently the major cause of quarterly movements in the total index and of disparate quarterly movements between cities. Meat prices continued to rise in the current quarter and were responsible for almost one quarter of the total movement in the All Groups index (weighted average of six State capital cities). Increases in potato prices were responsible for almost one eighth of the total movement. The potatoes and onions sub-group index number for September quarter was 49.7 per cent higher than that for June quarter. This is the biggest quarterly increase in this sub-group since 1956, and the level of June quarter does not appear abnormally low. Such fluctuations are regarded as likely to result in some short-term distortion to the index, but such distortion is not capable of current objective measurement by normal index techniques. However, if it were assumed that the average consumption of potatoes and onions during June and September quarters was one-half of normal and that the weight attached to these items was correspondingly reduced while weights attached to all other items were left unchanged, an index compiled on this basis would show a total quarterly increase of approximately 3.4 per cent compared to the 3.6 per cent shown by the Consumer Price Index All Groups index number for the weighted average of the six State capital cities shown herein and compiled in the customary way.

17. A summary of the movements of the various group indexes, together with the *main quarterly* price changes which affected the index between June quarter 1973 and September quarter 1973 is shown below:

Food Group. There were increases in the prices of meat, potatoes and onions, and soft drinks in each city. The price of fresh milk increased in Sydney and Adelaide and that of bread increased in Sydney, Adelaide and Hobart.

The group index for the weighted average of the six State capital cities showed a quarterly increase of 5.5%, and contributed nearly a half of the increase in the all groups index.

Clothing and Drapery Group. There were increases in all sections of the group with increases in footwear and men's clothing predominating.

The group index for the weighted average of the six State capital cities showed a quarterly increase of 2.9%.

Housing Group. There were increases in all sections of the group except for local government rates and charges. The predominant increases occurred in the house price and repairs and maintenance sub-group.

The group index for the weighted average of the six State capital cities showed a quarterly increase of 2.1%.

Household Supplies and Equipment Group. The price of electricity increased in Melbourne and Brisbane and that of gas increased in Sydney and Brisbane. There were increases in all other sections of the group.

The group index for the weighted average of the six State capital cities increased by 2.8%.

Miscellaneous Group. Prices of motor cars, motoring services and medical services increased in each city. There were increases in prices of most other services. Fares increased in Melbourne and Brisbane, and prices of beer increased in Adelaide and Canberra. There was a number of increases in the newspapers and magazines sub-section. The price of petrol increased in Melbourne and motor vehicle third party insurance charges decreased in Perth.

The group index for the weighted average of the six State capital cities increased by 2.9%.

#### FOOTNOTES TO TABLES

- (a) Figures appearing after the decimal point possess little significance for general statistical purposes. They are inserted to avoid the distortions that would occur in rounding off the figures to the nearest whole number.
- (b) Weighted average of six State capital cities.
- (c) Average of three months.
- (d) Any discrepancies between totals and sums of components in this table are due to rounding. For similar reasons quarterly movements shown by sub-group or group index numbers do not necessarily correspond exactly with those shown by the relevant index points.
- (e) See paragraph 14 on page 2.
- (f) Includes poultry as from December quarter 1968.
- (g) Men's, women's, boys' and girls' summerweight outerwear and women's and girls' summerweight underwear.
- (h) Men's, women's, boys' and girls' winterweight outerwear and underwear, and blankets.
- (i) Includes flats as from December quarter 1968.
- (j) Does not include cost of land or interest charges on house purchase.
- (k) Firewood and kerosene. Includes heating oil and briquettes as from December quarter 1968.
- (1) City and suburban rail, bus and tram.
- (m) Motor car, petrol, oil, tyres, tubes, tyre retreading and battery.
- (n) Lubrication service, repairs, registrations, third party insurance and driver's licence.
- (o) Hairdressing, drycleaning, shoe repairs and cinema admission. Includes health services from December quarter 1968.
