## SUMMARY OF FINDINGS

Estimates of the value of agricultural commodities produced are on the same basis as previous years for livestock slaughterings and livestock products. However, crop estimates for 1991-92 and 1992-93 are based on production from farms having a minimum Estimated

Value of Agricultural Operations (EVAO) of \$22,500 (see paragraph 3 of the Explanatory Notes). For the years 1989-90 and 1990-91 estimates are based on an EVAO of \$20,000. Prior to 1989-90 estimates were made in respect of farms with EVAO of \$5,000 or more.

PERCENTAGE CONTRIBUTION TO TOTAL GROSS VALUE  
OF AGRICULTURAL COMMODITIES PRODUCED, AUSTRALIA  
1980-81 TO 1992-93

### National estimates

Following a decline in each of the previous two years, the final estimate of the gross value of agricultural commodities produced in 1992-93 increased by 4.7 per cent to \$21,836.4m. Two of the three broad commodity groups, crops and livestock slaughtered, rose. The value of livestock products fell for the fourth consecutive year with wool again declining markedly (down 13.8%).

The total gross value of crops (including pastures and grasses) rose 7.4 per cent to \$10,594.5m, the highest value ever for crops. The main contributors to this increase were crops for grain up 16.9 per cent to \$4,008.0m, legumes up 11.8 per cent to \$441.6m and sugar cane up 32.4 per cent to \$797.7m.

GROSS VALUE OF AGRICULTURAL COMMODITIES  
1983-84 TO 1992-93

The most significant contributor to the increase in gross value of cereal grains was wheat which increased by 27.3 per cent to \$2,669.6m. A large increase in the quantity of wheat produced, partially offset by a fall in the unit value, contributed to this increase. The other cereal grain to increase substantially was barley, due to a large increase in production.

Crops to show a decline in gross value included cotton, down 19.6 per cent to \$706.0m, oilseeds down 6.5 per cent to \$101.0m, grapes down 12.8 per cent to \$377.6m and vegetables down 1.3 per cent to \$1,226.6m.

The gross value of total livestock slaughterings increased by 5.0 per cent to \$6,023.5m. Sheep and lamb slaughterings increased 43.9 per cent to \$663.0m, and poultry slaughterings rose by 7.1 per cent to \$833.5m.

Livestock products decreased in gross value by 0.7 per cent to \$5,205.3m, with the value of wool the largest contributor to this decrease, down 13.8 per cent to \$2,568.5m. This is the fourth consecutive year the value of wool has

fallen. Partly offsetting this fall was an 18.1 per cent increase in the value of milk produced.

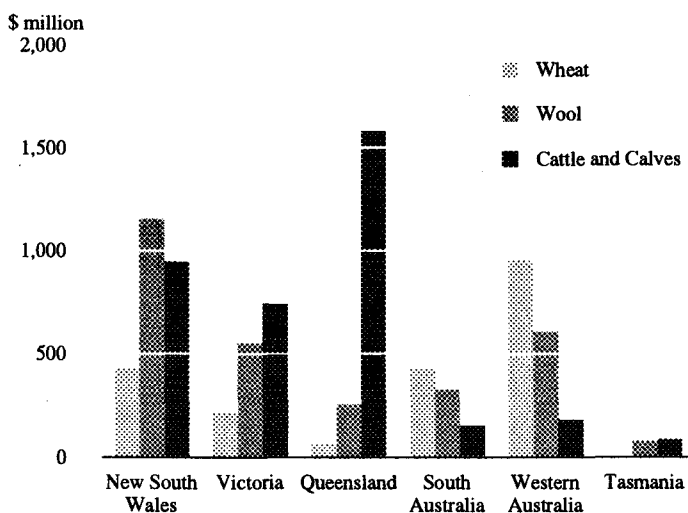

The total gross value of the four largest commodities accounted for 52.2 per cent of the total gross value of agricultural production. Cattle and calves slaughterings accounted for 17.6 per cent (compared with 18.2% in 1991-92), wheat 12.2 per cent (compared with 10.1% in 1991-92), wool 11.8 per cent (compared with 14.3% in 1991-92) and milk 10.6 per cent (compared with 17.8% in 1991-92).

#### State comparisons

All states recorded a rise in the gross value of total agriculture, although gross value in the two territories decreased. Western Australia reported the highest increase, up 9.3 per cent to \$3,114.8m, followed by Victoria, up 7.8 per cent to \$5,207.5m.

With gross value of \$5,817.2m, New South Wales continued to record the highest gross value of production of any State. The relativities between the other States remained

COMPARISON OF THREE MAJOR COMMODITIES  
BY STATE, 1991-92

on a par with the previous year. Overall New South Wales contributed 26.6 per cent to the total value of agriculture, followed by Victoria 23.8 per cent and Queensland 21.8 per cent.

The gross value of total agriculture in New South Wales increased by 0.2 per cent to \$5,817.2m with the value of total crops up 2.1 per cent to \$2,665.8m. Crops for grain rose 26.1 per cent to \$1,108.3m with the large contributors being wheat up 52.3 per cent to \$653.8m and barley up 24.7 per cent to \$148.4m.

In Victoria the gross value of agriculture production increased by 7.8 per cent to \$5,207.5m with crops for grain up 45.5 per cent to \$601.0m. Wheat increased 64.8 per cent to \$360.2m and barley 25.2 per cent to \$181.6m.

Other crops to increase were legumes up 32.2 per cent to \$139.9m and oilseeds up 11.3 per cent to \$15.7m.

The gross value of agriculture in Queensland increased 5.6 per cent to \$4,760.3m despite the continuation of adverse seasonal conditions in many regions. Rainfall patterns generally suited the growing of sugar cane which increased in value by 33.7 per cent to \$751.0m. This amounted to 15.8 per cent of the Queensland gross value of agriculture. Although the value of crops for grain fell 4.4 per cent to \$247.8m the value of wheat increased 97.8 per cent to \$134.6m as yields increased from the low levels of the previous year. Livestock slaughterings rose 4.7 per cent to \$1,961.3m.

In South Australia the gross value of agriculture rose 1.8 per cent to \$2,218.6m. Although the value of total crops fell 1.8 per cent to \$1,355.1m the value of livestock slaughterings rose 15.6 per cent to \$388.8m. The gross value of grapes fell by 20.3 per cent due mainly to a significant fall in production caused by an attack of downy mildew in some growing areas. The gross value of sheep and lambs slaughtered and other disposals increased by 64.2 per cent to \$110.0m due to an increase in both the number of live sheep exported and to the number slaughtered as well as increases in the associated values per head.

The gross value of agriculture in Western Australia rose 9.3 per cent to \$3,114.8m with the value of total crops for grain up 15.9 per cent to \$1,330.9m and legumes by 9.1 per cent to \$168.4m. The gross value of wheat, the major component of crops for grain increased by 14.0 per cent to \$1,083.8m due to an increase in production assisted in most areas by good opening rainfall although unseasonal rain delayed harvesting and affected the quality of the harvest. Crops for hay decreased in value by 13.8 per cent to \$41.1m.

GROSS VALUE OF SELECTED AGRICULTURAL COMMODITIES PRODUCED, AUSTRALIA, 1991-92 AND 1992-93

The gross value of agriculture production in Tasmania rose by 6.6 per cent to \$568.7m with crops for grain up 7.4 per cent to \$9.5m and livestock slaughterings up 8.2 per cent to \$136.0m. The gross value of potatoes increased by 3.8 per cent due to an increase in production.

In the Northern Territory the gross value fell by 5.5 per cent to \$138.5m and in the Australian Capital Territory by 10.5 per cent to \$12.1m.

In 1992-93 the Australian gross value of fruit produced (excluding grapes) reached \$1,380.3m. Queensland reported 30.0 per cent of this with \$413.3m followed by Victoria with 25.0 per cent (\$343.7m) and New South Wales, 22.0 per cent (\$303.7m). Victoria produced 39.7 per cent (\$104.6m) of the apple production (\$263.4m) followed by 17.8 per cent (\$47.0m) in New South Wales and 15.6 per cent (\$41.0m) in Tasmania. Bananas, with a gross value of \$299.8m had the highest individual value with Queensland responsible for 70.5 per cent (\$211.5m) of production.

Although the total gross value of grapes fell by 12.8 per cent to \$377.6m in 1992-93, in terms of gross value of production the grape growing industry remained the most important fruit growing activity in Australia. Victoria recorded the highest percentage in value with 41.2 per cent (\$155.7m), followed by South Australia at 30.4 per cent (\$114.9m) and New South Wales at 21.0 per cent

(\$79.3m). Of the total Australian grape production 57.1 per cent is used for wine making. South Australia uses 93.5 per cent (\$107.4m) of grapes produced for wine making followed by New South Wales at 70.3 per cent (\$55.8m). Victoria uses 37.3 per cent (\$58.1m) of their grape production for drying.

In terms of gross value in 1992-93 Queensland was the largest producer of vegetables with 28.5 per cent (\$350.1m) of Australian production followed by Victoria with 25.8 per cent (\$316.2m) and New South Wales 13.4 per cent (\$164.5m).

The gross value of wool continued to decline since the high level in 1988-89 of \$5,906.0m which was 25.9 per cent of the value of total agriculture. In 1992-93 the value of \$2,568.5m represented 11.8 per cent of the value of total agriculture. The affect of this fall in the value of wool can be seen in Victoria where the number of farming establishments relying upon "sheep only" farming has continued to decline from 19.0 per cent in 1991-92 to 14.0 per cent in 1992-93.

Milk has increased in gross value every year since 1984-85. In that year, the gross value of \$1,035.4m represented 6.7 per cent of total agriculture. The gross value in 1992-93 (\$2,314.4m) was 10.6 per cent of total agriculture. Victoria has the largest percentage of the total value

with 57.6 per cent (\$1,332.5m) followed by New South Wales with 15.8 per cent (\$365.6m).

#### **Average Unit Values**

Commodities to increase in average gross unit value in 1992-93 included onions up 37.9 per cent to \$400/tonne, macadamia nuts up 17.9 per cent to \$2,145/tonne, rice up 5.0 per cent to \$171/tonne and soybeans up 5.3 per cent to \$371/tonne, grain sorghum up 12.7 per cent to \$156/tonne, maize up 19.2 per cent to \$204/tonne, table grapes up 15.7 per cent to \$1695/tonne and sheep and lamb slaughterings up 50.0 per cent to \$16/head.

Commodities decreasing in average gross unit value included wheat, down 8.8 per cent to \$181/tonne, wool down 11.3 per cent to \$3/kilo, bananas down 8.2 per cent to \$1,401/tonne, peanuts down 41.0 per cent to \$1,016/tonne, strawberries down 9.1 per cent to \$4,597/tonne, wine grapes down 5.0 per cent to \$396/tonne and beans down 16.7 per cent to \$897/tonne.

#### **Marketing costs**

Marketing costs represent the difference between the estimates of gross and local values. Although there are difficulties in obtaining complete information on marketing costs (which include freight, cost of containers, commissions and other marketing charges) the following

information provides an interesting perspective on the marketing costs component of these estimates. Significant differences in the marketing costs of individual commodities may occur as a result of different marketing arrangements for commodities.

The total estimate of marketing costs amounted to 11.2 per cent of the total gross value of production.

Marketing expenses for crops were 16.9 per cent (\$1,529.6m) of the gross value of production for crops. These expenses ranged from 0.5 per cent (\$4.2m) for sugar cane, 2.7 per cent (\$18.8m) for cotton, 25.2 per cent (\$537.1m) for wheat, 37.2 per cent (\$78.8m) for total citrus and 76.3 per cent (\$14.2m) for peanuts.

Marketing expenses for livestock slaughterings amounted to 8.5 per cent (\$469.8m) of total gross value. For cattle and calf slaughterings these expenses were estimated at 9.2 per cent (\$322.8m), for sheep and lamb slaughterings 16.3 per cent (\$92.7m).

Marketing expenses for livestock products amounted to 4.1 per cent (\$207.4m) of the total gross value. For wool they were estimated at 7.3 per cent (\$173.8m). As milk is collected at the farm gate by the factory it is viewed as having no producer market selling expenses.

(a) See Explanatory Notes, paragraph 4. Caution should be exercised when using these estimates because

— data collected from establishments with EVAO between \$5,000 and \$22,500 are not as rigorously edited as Census data.

— production data are not collected from these establishments, it is estimated on the basis of area or numbers using yields from Census data. Yields for Census establishments may differ from yields of establishments with EVAO less than \$22,500.

(a) Indexes of values at constant prices (weighted by average unit values of the year 1989-90). (b) Sugar cane cut for crushing and planting. (c) Includes pastures and grasses. Excludes crops for green feed or silage. (d) Includes dairy cattle slaughtered. (e) Component series based on carcass weight. (f) Includes honey and beeswax.

## EXPLANATORY NOTES

### Introduction

This publication contains information on the Value of Agricultural Commodities Produced (VACP) compiled annually for all States and Australia. They include gross and local values of production for all agricultural commodities; unit gross values of selected commodities; gross value of production of selected commodities classified by industry of the producing establishment; and indexes at constant prices of agricultural commodities produced. (For further information on the industry dissection of the gross value of production of selected commodities see paragraph 9 below, and on indexes at constant prices see paragraph 14 below).

### Scope and coverage

2. The statistics are derived by multiplying quantity data by price (or unit value) data. The quantity data are collected in Agricultural Censuses and other ABS collections with some information from external sources. All price information is obtained from non-ABS sources.

3. The ABS excludes from the Census those establishments which make only a small contribution to overall agricultural production. Estimates of VACP are on the same basis as previous years for livestock slaughterings and livestock products. For 1989-90 and 1990-91 crop estimates are based on production from farms having a minimum Estimated Value of Agricultural Operations (EVAO) of \$20,000. For 1991-92 and 1992-93 the minimum EVAO was increased to \$22,500. To calculate EVAO for a farm, three year average weighted prices are applied to livestock turnoff and livestock numbers on the farm, and to area and production data for crops. The resultant aggregation of these commodity values is the EVAO. It is not an indicator of the value of receipts of individual farms but simply an indicator of the extent of agricultural activity.

4. In years prior to 1989-90 estimates were based on farms with EVAO of \$5,000 or more. To enable comparison between the 1992-93 data and data for earlier years coverage ratios reflecting the percentage contribution of farms with EVAO of \$22,500 and over, to the total for farms with EVAO of \$5,000 and over, at State level are presented in Table 16. In addition, Table 17 contains estimates of the gross value of selected commodities at State level from all farms with EVAO of \$5,000 or more.

### Information sources

5. *Quantity data.* Production of crops relates, in the main, to crops sown during the year ended 31 March. Statistics of perennial crops relate to the position as at 31 March and production during the year ended on that date. For example, particulars of production of wheat in Australia refer to wheat sown during the period from April to September and harvested between October and the following February, i.e. the 1992-93 season relates to the harvesting period October 1992 to February 1993. Statistics of other crops which in some States are harvested after 31 March 1993 (e.g. maize and potatoes) are collected by supplementary census returns. Information

covering such commodities as livestock slaughterings, dairy produce and beekeeping is obtained from separate collections and from organisations such as the Australian Dairy Corporation, etc.

6. *Price and marketing costs data.* The method of collection of relevant prices for, and the costs of marketing of, agricultural commodities varies considerably between States and between commodities. Where a statutory authority handles marketing of the whole or portion of a product (e.g. Australian Wheat Board, Australian Barley Board) data are usually obtained from this source. Information is also obtained from marketing reports, wholesalers, brokers and auctioneers. For all commodities, values are in respect of production during the year (or season) irrespective of whether or when payments are made. For that portion of production not marketed (e.g. hay grown on farm for own use, milk used in farm household, etc.) estimates are made from the best available information and, in general, are valued on a local value basis.

### Definitions of terms used

7. The following are brief definitions of the terms used.

- (a) *Gross value of commodities produced* is the value placed on recorded production at the wholesale prices realised in the market place.
- (b) *Market place* in general is the metropolitan market in each State. In cases where commodities are consumed locally, or where they become raw material for a secondary industry, these points are presumed to be the market places.
- (c) *Marketing costs* include freight, cost of containers, commission and other charges incurred in marketing. Marketing costs are not on a completely comparable basis between States and, in addition, accurate information is difficult to obtain for many items. In consequence, differences between States in the relationship of local to gross value should be regarded with some caution.
- (d) *Local value of commodities produced* is the value placed on commodities at the place of production and is ascertained by deducting marketing costs from the gross value of commodities produced.

Gross and local values of agricultural commodities produced involve some duplication, as they include certain agricultural commodities which are consumed as raw materials to produce other agricultural commodities (e.g. hay consumed by livestock).

- (e) *Average unit gross values* are calculated by dividing the gross value of each commodity produced by the total production of each corresponding commodity.
- (f) *Values* include any relevant subsidy and bounty payments if based on production.

(g) *Livestock slaughterings and other disposals*. Values for 'livestock slaughterings and other disposals' are published as one figure but include two distinct components:

- (i) Value of livestock slaughtered;
- (ii) Value of net exports, i.e. the total value of livestock intended for slaughter in adjacent State(s) where available (at present these can only be identified between the Northern Territory and adjacent States) and livestock exported overseas whether for slaughter or breeding minus the value of imports of livestock.

Data on value of livestock slaughterings by State of slaughter are available on request.

#### **Gross value of production and industry of producing establishment**

8. Table 28 contains gross values of production for selected agricultural commodities produced, classified by industry of producing establishment.

9. The Australian and New Zealand Standard Industrial Classification (ANZSIC) is used in Table 28 to classify producing establishments by industry. ANZSIC has replaced the Australian Standard Industrial Classification (ASIC) and provides an updated standard framework for the production and analysis of economic and business statistics on the same basis for both Australia and New Zealand. The scope for international comparability will continue as ANZSIC is also based on the recognised international standard.

10. ANZSIC defines the industries of the economy for statistical purposes, thus permitting the scope of the various economic statistics collections to be specified without gaps or overlapping between them. It also sets out standard rules for identifying the economic units operating in the economy and for classifying them to industries of each classification.

11. In Table 28 the gross values of selected agricultural commodities have been derived by allocating the total Australian gross value of production for those commodities to ANZSIC classes or groups of classes according to the proportion of the total production of those commodities reported in the Agricultural Census by establishments classified to those classes or groups of classes. 'Non-agriculture' values are values for those establishments classified to a class other than one in Subdivision 01, Agriculture but which produce the selected agricultural commodities.

12. The Agricultural Census data items used in allocating the proportion of each commodity's production to the various ANZSIC classes are the most relevant available items. For crops, fruit, grapevines, vegetables, and wool the Agricultural Census data used were production data in metric quantity units of tonnes or kilograms, as applicable. For livestock slaughterings, number disposed of or sold

was used; and for milk and eggs, numbers of milk cattle and numbers of egg strain poultry respectively were used in lieu of production data.

13. As the data in Table 28 are derived according to various assumptions (see paragraph 11 above) they should be treated only as indicative.

#### **Indexes of values at constant prices of agricultural commodities produced**

14. Table 30 shows indexes of values at constant prices for agricultural commodities produced. These indexes have the same scope as the data on gross value of agricultural commodities produced and agricultural output shown in Table 29.

15. The indexes of values at constant prices are weighted by the average gross unit values for the year 1989-90 and are published with the reference period 1989-90 = 100.0.

16. The constant price indexes of crops, livestock slaughterings and other disposals, and livestock products are indexes of the gross value of agricultural commodities produced at constant prices. The index of agricultural output is an index of value of agricultural output at constant prices. The latter index relates to that part of agricultural commodities produced and sold outside the agricultural sector and excludes the production of seed, feed and fodder consumed or retained on farms. The relationship between agricultural commodities produced and agricultural output is presented in Table 29 in current price value terms.

17. Indexes of the value of agricultural commodities produced and output at constant prices are measures of change in value after the direct effects of price changes have been eliminated. Measures of this type are, of necessity, subject to approximations and assumptions and they should not be interpreted in any precise quantitative sense.

18. In the main, the method used in compiling the constant price indexes has been to apply to current year quantities for individual farm commodities, the corresponding average unit gross values for 1989-90. Aggregates at constant prices (e.g. for livestock slaughterings) are then obtained by summation and converted to index numbers by dividing by the corresponding values in the reference base period. Indexes so derived may be described as fixed weights indexes, the weights of individual products in the aggregate measures being determined by their relative prices in the weighting base period. As prices do not all move in the same proportion or even in the same direction the choice of a particular weighting base period may affect the trend of the indexes.

#### **Related publications**

19. Users may also wish to refer to the following major priced publications which are available on request:

*Agricultural Industries, Financial Statistics, Australia* (7507.0)

*Characteristics of Australian Farms* (7102.0)

*Summary of Crops, Australia (7330.0)*

*Livestock and Livestock Products, Australia (7221.0)*

*Value of Principal Agricultural Commodities Produced, Australia, Preliminary (7501.0)*

*Value of Selected Agricultural Commodities Produced, Australia, Preliminary (7502.0)*

20. In addition to unpublished data, the ABS has more detailed agricultural statistics on magnetic tape, microfiche and floppy disk. AgStats on floppy disk offers a wider range of commodity data aggregated at smaller geographic areas than those generally available in printed publications, together with an easy-to-use, menu-driven interrogation facility.

Current publications produced by the ABS are listed in the *Catalogue of Publications and Products, Australia (1101.0)*. The ABS also issues, on Tuesdays and Fridays, a *Publications Advice (1105.0)* which lists publications to

be released in the next few days. The *Catalogue and Publications Advice* are available from any ABS office.

#### Symbols and other usages

—	nil or rounded to zero
n.e.i.	not elsewhere included
n.a.	not available
n.p.	not available for publication but included in totals where applicable, unless otherwise indicated.

21. Where figures have been rounded, discrepancies may occur between sums of the component items and totals.

22. The figures shown in this publication have been revised where necessary and as a consequence may not agree with similar data shown in previous publications.

23. Where figures for individual States or Territories have been suppressed for reasons of confidentiality, the resultant totals have been appropriately footnoted in tables displaying State details.

## *For more information ...*

The ABS publishes a wide range of statistics and other information on Australia's economic and social conditions. Details of what is available in various publications and other products can be found in the *ABS Catalogue of Publications and Products* available at all ABS Offices (see below for contact details).

### **Information Consultancy Service**

Information tailored to special needs of clients can be obtained from the Information Consultancy Service available at ABS Offices (see Information Inquiries below for contact details).

### **National Dial-a-Statistic Line**

**0055 86 400**

(Steadycom P/L: premium rate 25c/21.4 secs.)

This number gives 24-hour access, 365 days a year for a range of statistics.

### **Electronic Data Services**

DISCOVERY (Key \*656#): The ABS intends discontinuing its statistical information service on DISCOVERY. Please contact Peter Davidson (Phone 06 252 6684) to discuss possible alternatives for acquiring statistics or if you wish to comment on this proposal. For details on electronic data services available, contact Information Services in any of the ABS Offices (see Information Inquiries below for contact details).

### **Bookshops and Subscriptions**

There are over 400 titles of various publications available from ABS bookshops in all ABS Offices (see below Bookshop Sales for contact details). The ABS also provides a subscription service through which nominated publications are provided by mail on a regular basis at no additional cost (telephone Publications Subscription Service toll free on 008 02 0608 Australia wide).
