BUILDING ACTIVITY, NORTHERN TERRITORY MARCH QUARTER 1997

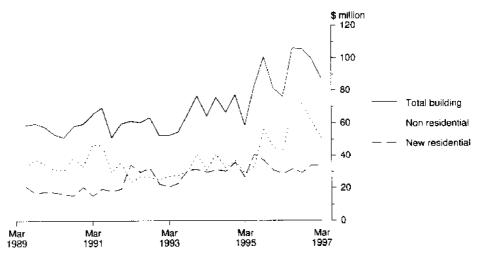

SUMMARY OF FINDINGS

Value of building work done at average 1989-90 prices

	% change on					
	Dec. quarter 1996	Mar. quarter 1996				
New residential building Alterations and additions	-1.5	16.3				
to residential buildings	22.5	-26.2				
Non-residential building	-17.3	17.7				
Total building	-12.1	14.8				

- In average 1989-90 prices, the value of new residential building work done during the March quarter 1997 fell marginally to \$33.6 million. New houses rose by 6.3% and other-residential building fell by 13.5%.
- Work done on non-residential building fell by 17.3% to \$51.1 million, still 17.7% higher than a year ago.
 - The total value of building work done in the March quarter fell by 12.1% to \$87.8 million.

VALUE OF WORK DONE AT AVERAGE 1989-90 PRICES

INQUIRIES

- for more information about statistics contained in this publication, the availability of related unpublished statistics and other ABS statistics and services, please contact Information Inquiries on Darwin (08) 8943 2111.
- for more detailed information about these statistics, contact Tony Bammann on Adelaide (08) 8237 7316 or any ABS State office.

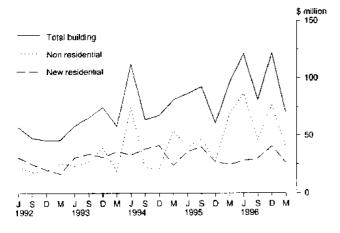

SUMMARY OF FINDINGS - continued

Value of building work commenced at average 1989-90 prices

	% change on					
	Dec. quarter 1996	Mar. quarter 1996				
New residential building Alterations and additions	-35.2	7.3				
to residential buildings	-23.3	26.9				
Non-residential building	-47.5	-41.4				
Total building	-42.6	-27.1				

- In average 1989–90 prices, the value of new residential building work commenced during the March quarter 1997 fell by 35.2% to \$26.5 million. This was mainly attributable to a fall of 65.9% in other residential building.
- Commencements of non-residential building during the quarter fell by 47.5% to \$40.4 million. The private sector accounted for only \$8.4 million of this total.
- The total value of all building work commenced during the quarter fell by 42.6% to \$70.2 million, 27.1% lower than the March quarter 1996.

VALUE OF WORK COMMENCED AT AVERAGE 1989-90 PRICES

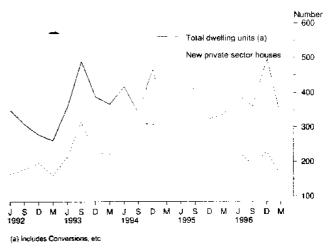

Number of dwelling units commenced

	% change on				
	Dec. quarter 1996	Mar. quarter 1996			
New private sector houses	-29.4	45.0			
New private sector houses Private sector dwelling units	-42.5	27.1			
Total dwelling units	-34.3	-3.6			

- The total number of dwelling units commenced during the March quarter fell by 34.3% to 326.
- Within the private sector, new houses fell by 29.4% to 161 and new other residential dwelling units fell by 64.4% to 78.

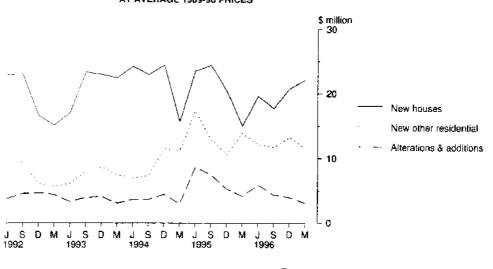

DWELLING UNITS COMMENCED

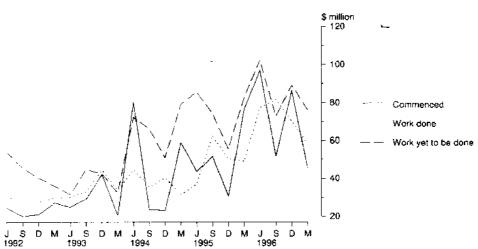

Original data

- The total value of building work commenced during the March quarter fell by 40.7% to \$86.4 million, with nonresidential building falling by 47.5% and residential building falling by 30.9%.
- Work done during the quarter fell by 11.4% to \$106.9 million with the majority of the fall occurring in private sector non-residential building. Work yet to be done on jobs under construction at the end of March 1997 fell 15.0% to \$115.0 million or 1.08 times the work done during the quarter.

VALUE OF RESIDENTIAL WORK DONE AT AVERAGE 1989-90 PRICES

VALUE OF NON-RESIDENTIAL BUILDING

EXPLANATORY NOTES

Introduction

This publication contains detailed results from the quarterly Building Activity Survey. Each issue includes revisions to the previous quarter. Therefore data for the latest quarter should be considered to be preliminary only.

- 2. The statistics are compiled on the basis of returns collected from builders and other individuals and organisations engaged in building activity. The quarterly survey consists of two components.
 - (a) A complete enumeration of new residential building construction or alterations and additions valued at \$10,000 or more to residential buildings.
 - (b) A complete enumeration of all non-residential building jobs, including alterations and additions, with an approval value of \$50.000 or more.
- 3. Prior to the June quarter 1991, private sector housing activity was measured by a sample survey. Due to the relatively small size of the total building industry in the Northern Territory the differences resulting between the two survey methods is minimal. The change from a sample survey to a complete enumeration has allowed the collection of accurate small area data, available on request in unpublished form.
- 4. Prior to the September quarter 1990, the cut-off for inclusion of non-residential building jobs (both new and alterations and additions) was \$30,000 or more and prior to the September quarter 1985 it was \$10,000 or more. Care should be taken in interpreting data for specific classes of non-residential building.
- 5. The use of sample survey techniques in the Building Activity Survey means that reliable estimates of private sector house building activity, including alterations and additions to houses are only available at the State, Territory and Australia levels, except for the Northern Territory. However, estimates for capital city Statistical Divisions can be made available. Also, data for regions below State/Territory level are available from the Building Approvals series and from the monthly series of dwelling unit commencements compiled for South Australia and Western Australia by the ABS. Unlike data in this publication compiled from the Building Activity Survey, the series for smaller geographic areas are based on information reported by local and other government authorities.

Scope and coverage

- 6. The statistics relate to building activity which includes construction of new buildings and alterations and additions to existing buildings. Construction activity not defined as building (e.g. construction of roads, bridges, railways, earthworks, etc.) is excluded.
- Activity Survey comprise those building jobs selected in previous quarters which have not been completed (or commenced) by the end of the previous quarter and those building jobs newly selected in the current quarter. The population list from which building jobs are selected for inclusion comprises all approved building jobs which were notified to the ABS up to but not including the last month of the reference quarter (e.g. up to the end of August in respect of the September quarter survey). This introduces a lag to the statistics in respect of those building jobs notified and commenced in the last month of the reference quarter (e.g. for the month of September in respect of the September quarter survey). For example, building jobs which were notified as approved in the month of June and which actually commenced in that month are shown as commencements in the September quarter. Similarly, building jobs

which were notified in the month of September and which actually commenced in that month are shown as commencements in the December quarter.

Definitions

- 8. A building is defined as a rigid, fixed and permanent structure which has a roof. Its intended purpose is primarily to house people, plant, machinery, vehicles, goods or livestock. An integral feature of a building's design, to satisfy its intended use, is the provision for regular access by persons.
- 9. A dwelling unit is defined as a self-contained suite of rooms, including cooking and bathing facilities and intended for long-term residential use. Units (whether self-contained or not) within buildings offering institutional care, such as hospitals, or temporary accommodation such as motels, hostels and holiday apartments, are not defined as dwelling units. The value of units of this type is included in the appropriate category of non-residential building.
- 10. A <u>residential building</u> is defined as a building predominantly consisting of one or more dwelling units. Residential buildings can be either <u>houses</u> or <u>other residential</u> buildings.
 - (a) A house is defined as a detached building predominantly used for long-term residential purposes and consisting of only one dwelling unit. Thus, detached 'granny flats' and detached dwelling units (such as caretakers' residences) associated with non-residential buildings are defined as houses for the purpose of these statistics.
 - (b) An other residential building is defined as a building which is predominantly used for long-term residential purposes and which contains (or has attached to it) more than one dwelling unit (e.g. includes townhouses, duplexes, apartment buildings, etc.).
- 11. From the June quarter 1996 issue of this publication, the number of dwelling units created as part of alterations and additions to or conversions of existing residential or non-residential buildings and as part of the construction of non-residential building is shown separately in Tables 2, 4 and 6 under the heading of 'Conversions, ctc.', and is included in the total number of dwelling units shown in these tables. Previously, such dwellings were only included as a footnote.
- 12. Commenced. A building job is regarded as commenced when the first physical building activity has been performed on site in the form of materials fixed in place and/or labour expended (this includes site preparation but excludes delivery of building materials, the drawing of plans and specifications and the construction of non-building infrastructures such as roads).
- 13. Under construction. A building job is regarded as being under construction at the end of a period if it has been commenced but has not been completed, and work on it has not been abandoned.
- 14. Completed. A building job is regarded as completed when building activity has progressed to the stage when the building can fulfil its intended function. In practice, the ABS regards buildings as completed when notified as such by respondents to the survey.

Valuation of building jobs

15. The value series in this publication are derived from estimates reported on survey returns as follows:

- (a) Value of building commenced or under construction represents the anticipated completion value based, where practicable, on estimated market or contract price of building jobs excluding the value of land and landscaping. Site preparation costs are included. Where building jobs proceed over several quarters, the anticipated completion value reported on the return for the first (commencement) quarter may be amended on returns for subsequent (under construction) quarters as the job nears completion.
- (b) Value of building completed represents the actual completion value based, where practicable, on the market or contract price of building jobs including site preparation costs but excluding the value of land and landscaping.
- (c) Value of huilding work done during the period represents the estimated value of building work actually carried out during the quarter on building jobs which have commenced.
- (d) Value of building work yet to be done represents the difference between the anticipated completion value and the estimated value of work done up to the end of the period on building jobs commenced but not completed.

Building classification

- 16. Ownership. The ownership of a building is classified as either public sector or private sector according to the sector of the intended owner of the completed building as evident at the time of approval. Residential buildings being constructed by private sector builders under government housing authority schemes whereby the authority has contracted, or intends to contract, to purchase the buildings on or before completion, are classified as public sector.
- 17. Functional classification of buildings. A building is classified according to its intended major function. Hence, a building which is ancillary to other buildings or forms a part of a group of related buildings is classified to the function of the building and not to the function of the group as a whole. An example of this can be seen in the treatment of building work approved for a factory complex. In this case a detached administration building would be classified to Offices, a detached cafeteria building to Shops, while factory buildings would be classified to Factories. An exception to this rule is the treatment of group accommodation buildings where, for example, a student accommodation building on a university campus would be classified to Educational.
- 18. Examples of the types of buildings included under each main functional heading are shown in the following list.
 - (a) *Houses*. Includes cottages, bungalows, detached caretakers'/managers' cottages, rectories.
 - (b) Other residential buildings. Includes blocks of flats, home units, attached townhouses, villa units, terrace houses, semi-detached houses, maisonettes.
 - (c) Hotels, etc. Includes motels, hostels, boarding houses, guesthouses, holiday apartment buildings.
 - (d) Shops. Includes retail shops, restaurants, cafes, taverns, dry cleaners, laundromats, hair salons, shopping areades.
 - (e) Factories. Includes paper mills, oil refinery buildings, brickworks, foundries, powerhouses, manufacturing laboratories, workshops as part of a manufacturing process.

- (f) Offices. Includes banks, post offices, council chambers, head and regional offices.
- (g) Other business premises. Includes warehouses, storage depots, service stations, transport depots and terminals, electricity substation buildings, pumping station buildings, telephone exchanges, mail sorting centres, broadcasting stations, film studios.
- (h) Educational. Includes schools, colleges, kindergartens, libraries, museums, art galleries, research and teaching laboratories, theological colleges.
- Religious. Includes churches, chapels, temples.
- Health. Includes hospitals, nursing homes, surgeries, clinics, medical centres.
- (k) Entertainment and recreational. Includes clubs, theatres, cinemas, public halfs, gymnasiums, grandstands, squash courts, sports and recreation centres.
- (1) Miscellaneous. Includes law courts, homes for the aged (where medical care is not provided as a normal service), orphanages, gaols, barracks, mine buildings, glasshouses, livestock sheds, shearing sheds, fruit and skin drying sheds, public toilets, and ambulance, fire and police stations.

Reliability of the estimates

- 19. Since the figures for private sector house building activity (including alterations and additions) are derived from information obtained from a complete enumeration of approved building jobs they are not subject to sampling error, as may be found in sample surveys. Prior to the June quarter 1991, private sector housing activity was measured by a sample survey and there is a small residual proportion of these sampled jobs which are still under construction included in the survey. The effect of this small number of sampled jobs on these estimates and those that would have been obtained if information for all approved jobs for the relevant period had been included in the survey is not considered to be significant.
- 20. Despite the precise nature of complete cnumeration, inaccuracies may occur because of inadequacies in the source of building approval information, imperfections in reporting by respondents, and errors made in the coding and processing of data. Inaccuracies of this kind are referred to as non-sampling error, and may occur in any enumeration whether it be a full count or only a sample. Every effort is made to reduce the non-sampling error to a minimum by the careful design of questionnaires, efforts to obtain responses for all selected building jobs, and efficient operating procedures.

Estimates at constant prices

- 21. Estimates of the value of commencements and work done at average 1989–90 prices are shown in Table 1. Constant price estimates measure changes in value after the direct effects of price changes have been eliminated. The deflators used to revalue the current price estimates in this publication are derived from the same price data underlying the deflators compiled for the dwellings and non-dwelling construction components of the national accounts aggregate 'Gross fixed capital expenditure'.
- 22. Estimates at constant prices are subject to a number of approximations and assumptions. Further information on the nature and concepts of constant price estimates is contained in Chapter 4 of Australian National Accounts: Concepts, Sources and Methods (5216.0).

Unpublished data and related publications

- 23. The ABS can also make available certain building approvals and activity data which are not published. Where it is not practicable to provide the required information by telephone, data can be provided in the following forms: microfiche, photocopy, computer printout, floppy disk and clerically extracted tabulation. Inquiries should be made to Information Inquiries on Darwin (08) 8943 2111 or any ABS State office.
- 24. Users may also wish to refer to the following building and construction publications which are available on request:

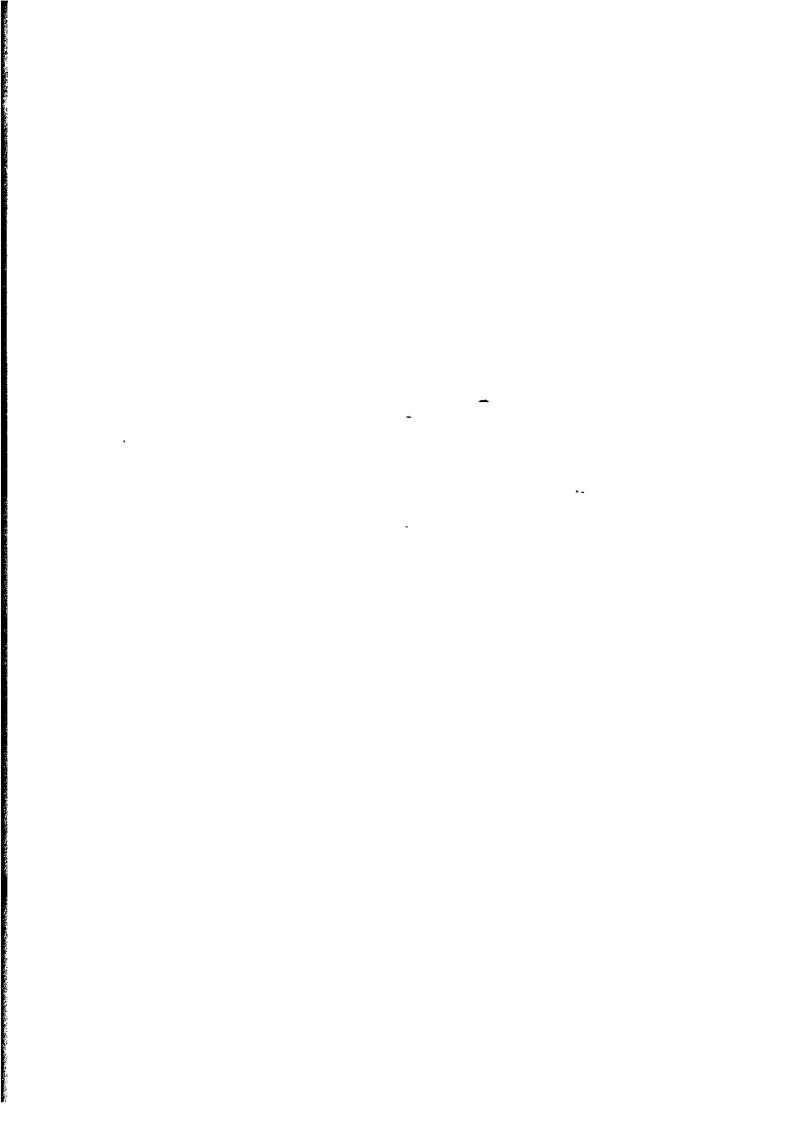

Building Approvals, Australia (8731.0) — issued monthly Building Approvals, Northern Territory (8731.7) — issued monthly

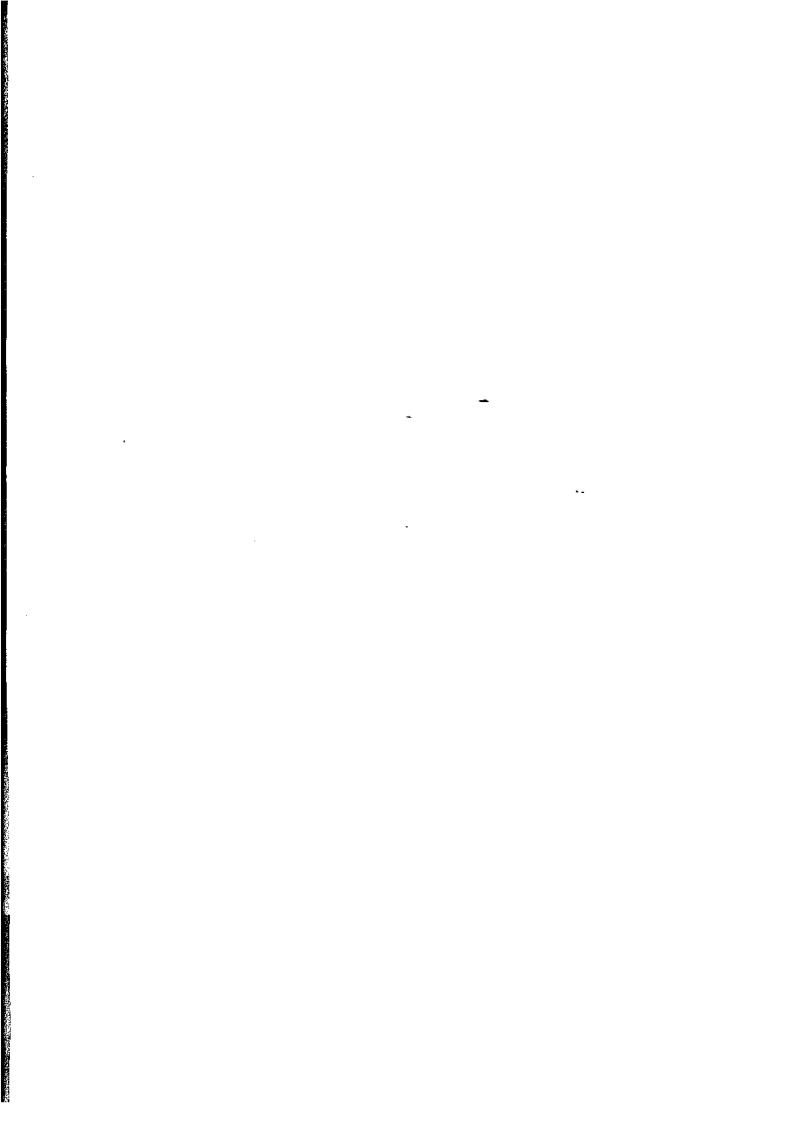

Building Activity, Australia: Dwelling Unit Commencements, Preliminary (8750.0) – issued quarterly Building Activity, Australia (8752.0) – issued quarterly 25. Current publications produced by the ABS are listed in the *Catalogue of Publications and Products, Australia* (1101.0). The ABS also issues, on Tuesdays and Fridays, a *Release Advice* (1105.0) which lists publications to be released in the next few days. The Catalogue and Release Advice are available from any ABS office.

Symbols and other usages

- not applicable
- nil or rounded to zero
- r figure or series revised since previous issue
- 26. Where figures have been rounded, discrepancies may occur between sums of the component items and totals.
