

CATALOGUE NO. 9214.0

EMBARGOED UNTIL 11.30 A.M. 24 MARCH 1994

**INTERSTATE ROAD FREIGHT MOVEMENT, AUSTRALIA
DECEMBER QUARTER, 1993**

Note: While movements between the September 1993 quarter and December 1993 quarter estimates are considered to be a reliable indicator of changes in the level of activity, users should exercise caution when comparing current quarterly data with the same quarters in previous years. For details, see paragraph 6 of Explanatory Notes.

MAIN FEATURES

Total interstate road freight moved by major operators during the December quarter 1993 (4,658,000 tonnes) was 4.5 per cent higher than in September quarter 1993 (4,458,000 tonnes). This increase is in line with recent years, where the December quarter figures typically were higher than those reported in the immediately preceding September quarter.

A large number of enterprises indicated that seasonal factors affected their volume of freight moved, particularly cartage of grains and fresh produce. In addition, a number of enterprises reported that increased economic activity resulted in an increase in their volume of freight moved.

EXPLANATORY NOTES

Introduction

This publication contains statistics on interstate freight movements by road within Australia. The statistics are compiled using data collected each quarter from enterprises involved in the movement of road freight (as defined in paragraph 2).

Scope

2. The scope of the quarterly collection is those enterprises which undertake more than 20,000 tonnes of interstate road freight movements in a year either for hire or reward under prime contract arrangements or on own account. Road freight movements, in this context, refer to movements of freight for which road transport was used as the main mode. Movements of freight for which the majority of distance was by modes other than road transport are excluded from these statistics.

3. All movements between Melbourne or Geelong and Tasmania are classified as 'sea' or 'air' and therefore excluded from this publication. However, freight consigned to Tasmania, for example, by road from Sydney to Melbourne and then by sea or air to Tasmania would be classified as 'road' from Sydney to Tasmania because that segment of the journey constituted the majority of the line-haul distance. As Tasmania is treated as a single location for the purposes of this collection, the mode of transport after landing in Tasmania is not taken into account.

Coverage

4. Coverage for this collection was initially established in September quarter 1982 as those enterprises which were found, in the 1980-81 Census of Interstate Freight Movements, to meet the scope criteria. The combined activities of those enterprises at the time of the census constituted approximately 70 per cent of total interstate road freight movements during that year.

5. A coverage survey was conducted in August 1990 to update the list of enterprises included in the Interstate Road Freight Movements survey. Newly identified in-scope enterprises were included as of the September quarter 1990. A further coverage survey was conducted during 1992 resulting in an increase in coverage, as of the September quarter 1992 to over 80 per cent of total interstate road freight movements. It is planned to conduct similar coverage surveys approximately every two years.

6. Because of the high turnover in the number of interstate road freight operators, it is not possible to keep coverage of the survey up-to-date each quarter. Readers should be aware that as the time since the last coverage update increases, relative coverage of the statistics is likely to decline. Accordingly, the figures in this publication should be used with appropriate caution.

Definitions

7. The road freight data reported in this publication refer to movements made under prime contract and own account arrangements. A *prime contract* is defined as an agreement to

move freight, made with the original consignor of the freight. Freight moved on *own account* is freight owned and transported by the same legal entity. Freight moved by road under sub-contract arrangements has been excluded to avoid double counting.

8. Data in this publication are reported in gross tonnes (i.e. tonnages including the weight of the container). Furniture reported in cubic metres and freight reported in litres by respondents have been converted to approximate tonne equivalents.

9. A small number of businesses did not have records of tonnes moved by origin/destination. In these instances respondents were asked to provide estimates on the basis of experience over a typical short period.

Origins / Destinations

10. The geographical boundaries for the cities identified in this collection closely approximate those of their Statistical Divisions/Districts.

11. As from the September quarter 1992, the number of Origins and Destinations identified separately has been increased. The category previously given as "Other Interstate" has been split into "Other New South Wales", "Other Victoria", "Other Queensland", "Other South Australia", "Other Western Australia" and "Other Northern Territory".

Related publications

12. Users may also wish to refer to the following interstate freight movement publication which is available on request:

Interstate Freight Movement, Australia, 1991-92 (9212.0)

13. Current publications produced by the ABS are listed in the *Catalogue of Publications and Products, Australia (1101.0)*. The ABS also issues, on Tuesdays and Fridays, a *Publications Advice (1105.0)* which lists publications to be released in the next few days. The Catalogue and Publications Advice are available from any ABS office.
