**STANDARD ERRORS**

## STANDARD ERRORS FOR PERSON BASED ESTIMATES

Since the estimates in this report are based on information obtained from occupants of a sample of dwellings, they are subject to sampling variability, that is, they may differ from those that would have been produced if all dwellings had been included in the survey.

One measure of the likely difference is given by the standard error, which estimates the extent to which an estimate might have varied by chance because only a sample of dwellings was included. There are about two chances in three (67%) that a sample estimate will vary by less than one standard error from the number that would have been obtained if all dwellings had been included, and about 19 chances in 20 (95%) that the difference will be less than two standard errors.

The following table applies to estimates of persons only. These standard errors do not apply to estimates of amount of money donated and quantity of goods donated.

Estimate	Standard Error	Relative Standard Error
('000)	('000)	(%)
10	3.5	35.0
20	4.9	24.5
50	7.6	15.2
100	10.4	10.4
200	13.9	7.0
500	20.2	4.0
800	24.2	3.0

1,500	30.0	2.0
2,000	34.1	1.7
5,000	47.1	0.9
