	October 2000	29 September 2000

IN THIS ISSUE

Where available, the statistics in this issue are presented as time series for the last nine years of annual data, the last nine quarters or 15 months of data. To assist analysis most tables include percentage movements, as well as levels, of series.

For users requiring longer time series, each February issue of *Australian Economic Indicators* contains, for most series, a greater span of annual, quarterly and monthly data.

Quarterly and monthly data for most series, and annual data for a limited number of series, are available from the ABS for earlier periods than that shown in this publication. Many series can be obtained on electronic media. Inquiries should be directed to one of the *Sales and Inquiries* contact telephone numbers given on the back cover.

QUARTERLY REVIEW

The Quarterly Review refers to trend estimates unless otherwise specified.

1 GDP, Chain volume measure—
Quarterly % change

Source: ABS (Cat. no. 1350.0 & 5206.0), Quarterly data.

OVERVIEW.....

- The national accounts statistics for the December quarter 1999 show trend growth in the *chain volume measure of GDP* of 1.0% for the third consecutive quarter (graph 1). Trend growth has now been 1% or above for twelve consecutive quarters, the second longest period of such growth on record. The December quarter 1999 trend growth rate of GDP was slightly higher than the *historical long-term trend* growth of just below 1%. The December quarter seasonally adjusted growth rate was 1.0%, down 0.7 percentage points on the growth in the September quarter 1999.

2 CONTRIBUTION TO GROWTH IN GDP,
Chain volume measure, Trend

Source: ABS (Cat. no. 5206.0), Quarterly data.

- Final consumption expenditure* contributed 0.9 percentage points to growth in the chain volume measure of GDP (graph 2) in the December quarter 1999. Consumption expenditure remains strong and its contribution to growth has been rising since the June quarter 1998. The contribution of *gross fixed capital formation* (GFCF) to growth in GDP fell 0.1 percentage points to 0.2 percentage points in the December quarter 1999. The contribution of GFCF to GDP growth has been declining since the March quarter 1999.

3. EXPERIMENTAL COMPOSITE LEADING INDICATOR,
(XCLI) AND GDP (Chain volume measure)—
Deviation of trend from historical long-term trends

Source: ABS (Cat. no. 1350.0), Quarterly data.

- Graph 3 shows the experimental composite leading indicator (XCLI) and GDP expressed as deviations from their historical long term trend. In the December quarter 1999, the XCLI continued to rise. The December quarter was the fourth consecutive signal of growth in the GDP business cycle since the March quarter 1999, although the rate of growth is slowing. The December quarter 1998 trough in the XCLI has not been reflected in the GDP business cycle to date. On historical performance, the September quarter 1997 peak in the XCLI might have been expected to indicate a peak in the GDP business cycle during 1999.

4 HOUSEHOLD FINAL CONSUMPTION EXPENDITURE,
Chain volume measure— Quarterly % change

6 RETAIL TURNOVER, Trend—
Monthly % change

Source: ABS (Cat. no. 8501.0), Monthly data.

7 NEW MOTOR VEHICLE REGISTRATIONS,
Number per month

Source: ABS (Cat. no. 9301.0), Monthly data.

CONSUMPTION.....

- The chain volume measure of *household final consumption expenditure* (HFCE) grew 1.1% in the December quarter 1999 (graph 4). Growth rates of over 1% have been recorded for each quarter since the June quarter 1998. In seasonally adjusted terms, HFCE for the quarter increased 1.4%, slightly lower than the 1.5% increase recorded in the September quarter 1999. The strongest contributor to the December quarter 1999 growth in HFCE was *recreation and culture* (0.2 percentage points) while negative contributions were made by *cigarettes and tobacco, electricity, gas and other fuel* and *purchases of vehicles*. HFCE's contribution to GDP growth for the December quarter 1999 was 0.7 percentage points, the largest contribution since the December quarter 1998.

- In the December quarter 1999, the growth in the volume measure of *government final consumption expenditure* (GFCE), excluding defence, was 0.4% (down from 0.7% in the September quarter 1999). GFCE, excluding defence, in seasonally adjusted terms rose 0.9% (graph 5). The contribution of GFCE, excluding defence, to GDP growth remained at 0.1 percentage points. The growth in the volume measure of *defence final consumption expenditure* was 6.8%. In seasonally adjusted terms, defence expenditure rose 18.6% and contributed 0.3 percentage points to growth in GDP. Some of the increase in defence expenditure in the September and December quarters 1999 is likely to be attributable to increased spending associated with East Timor.
- The ABS monthly retail trade survey recorded no growth in *retail turnover at current prices* in January 2000 (graph 6), following relatively strong growth throughout most of 1999. *Food retailing, clothing and soft good retailing* and *household good retailing* all rose 0.1% but they were offset by falls in *department stores* and *recreational good retailing*.

The number of *new motor vehicle registrations (excluding motor cycles)* rose to 63,888 (up 1.5%) in January 2000. This was the fourth consecutive monthly rise following eight months of decline (graph 7). The upward trend for total registrations reflects rises in both *passenger vehicles* (1.6%) and *other vehicles* (0.8%).

8 TOTAL GROSS FIXED CAPITAL FORMATION,
Chain volume measure—
Quarterly % change

Source: ABS (Cat. no. 5206.0), Quarterly data.

9 PRIVATE GROSS FIXED CAPITAL FORMATION (PGFCF),
Chain volume measure—
Quarterly % change

10 PRIVATE GFCF: SELECTED COMPONENTS,
Chain volume measure, Trend—
Quarterly % change

Source: ABS (Cat. no. 5206.0), Quarterly data.

11 VALUE OF RESIDENTIAL BUILDING APPROVED,
Chain volume measure, Trend—
Quarterly % change

Source: ABS (Cat. no. 8731.0), Quarterly data.

INVESTMENT.....

- The *chain volume measure of total gross fixed capital formation* (GFCF) rose 0.8% in the December quarter 1999 (down from a rise of 1.4% recorded in the September quarter 1999). Seasonally adjusted GFCF fell 2.9% and has been relatively volatile since the March quarter 1998.

- Public sector gross fixed capital formation* rose 4.9% in the December quarter 1999. This increase was partly offset by a 0.6% fall in *total private gross fixed capital formation* (graph 9). The most significant contributor to the rise in public GFCF was *total general government* (up 11.3%). Major movements in private GFCF included reduced expenditure on *total other buildings and structures* (down 2.6%) and on *new machinery and equipment* (down 1.8%). Partly offsetting these falls were rises in expenditure on *intangible fixed assets* (up 4.9%), *livestock* (up 3.9%) and on *ownership transfer costs* (up 2%). Public GFCF contributed 0.2 percentage points to growth in GDP. Within private GFCF, *new machinery and equipment* and *new engineering construction* both made negative contributions of 0.1 percentage points to growth in GDP.

- Growth in expenditure on *total private dwellings* slowed to 0.5% in the December quarter 1999. Growth in the *alterations and additions* component of dwellings was 0.8% (down from 1.3% in the September quarter 1999), while growth in *new and used dwellings* was more moderate at 0.2%. *Total other buildings and structures* fell 2.7% (down from a fall of 2.1% recorded in the September quarter 1999).

- The *value of total building approved* continued to show growth, rising 0.7% in the December quarter 1999. The main contributors to this growth were *new residential buildings* (up 5.9%) and *alterations and additions* (up 3.8%), graph 11. *Non-residential building approvals* recorded a fall of 6.1%, continuing the decline in this series since the June quarter 1998. There tends to be a gap of a few months between building approvals and the actual undertaking of the work which is recorded in the national accounts. Also work that is approved may not necessarily go ahead.

12 EMPLOYMENT, Trend—
Monthly % change

Source: ABS (Cat. no. 6202.0), Monthly data.

13 UNEMPLOYMENT RATE, Trend

Source: ABS (Cat. no. 6202.0), Monthly data.

14 FEMALE PARTICIPATION RATE, Trend

Source: ABS (Cat. no. 6202.0), Monthly data.

15 MALE PARTICIPATION RATE, Trend

Source: ABS (Cat. no. 6202.0), Monthly data.

LABOUR MARKET.....

- In February 2000, growth in the total number of *employed persons* was 0.2%. Similar increases were recorded for both *female employment* and *male employment* (graph 12). Growth in *full-time employment* has been decelerating since August 1999 and slowed to 0.1% in February 2000. *Part-time employment* rose 0.3%.

- The *unemployment rate* remained at 6.8% in February 2000, the lowest rate since July 1990. The *male unemployment rate* and the *female unemployment rate* (graph 13) remained steady at 6.9% and 6.7%, respectively. The number of persons looking for both full-time and part-time work declined (down 1.1% and 0.3% respectively).

- In February 2000, the *female participation rate* (graph 14) remained at 54.6% for the second consecutive month, and the *male participation rate* (graph 15) remained constant at 72.4%.

- The chain volume measure of *market sector GDP per hour worked* fell 0.1% in the December quarter 1999 (graph 16), the second consecutive quarter of negative growth since the December quarter 1994. The fall was attributable to hours worked in the market sector growing slightly faster than GDP in the market sector. Using market sector GDP per hour worked as a proxy for labour productivity implies a slight fall in labour productivity. This measure of labour productivity is imperfect as it reflects the contribution of capital and other factors to changes in product as well as the contribution of labour.

INCOME

- Compensation of employees rose 1.2% (1.8% in seasonally adjusted terms) in the December quarter 1999, reflecting a rise of 0.5% in both the average earnings and the number of wage and salary earners. The wages share of total factor income declined by 0.2 percentage points to 54.1% (graph 17).

- The profits share of total factor income rose 0.2 percentage points to 23.9% in the December quarter 1999 (graph 18), the third rise since the June quarter 1999. This profit measure includes the gross operating surplus (GOS) of both non-financial and financial corporations. In the December quarter 1999, GOS of corporations increased by 2.4%, following a rise of 2.3% in the September quarter 1999. In seasonally adjusted terms, GOS for corporations rose by 1.1% in the December quarter.

- The proportion of gross household disposable income devoted to consumption was 98.6% in the December quarter 1999. The balance, net household saving, was 1.4%, the lowest household saving ratio on record (graph 19). However, caution should be exercised as this is a derived measure and major components of household income and expenditure may still be subject to significant revisions and could cause changes in both the magnitude and direction of the household savings ratio trend.

- The chain volume measure of GDP does not fully reflect the change in real purchasing power of income generated by domestic production if the terms of trade change significantly over the period of comparison. A better measure of real purchasing power of income is movements in trend real gross domestic income, which is shown in graph 20. This measure incorporates an adjustment for the terms of trade. In the December quarter 1999, growth in real gross domestic income (1.3%) was higher than GDP growth, reflecting an improvement of 1.5% in Australia's terms of trade during the quarter.

PRICES.....

This commentary refers to original estimates unless otherwise specified.

- The all groups *consumer price index* (CPI) rose 0.6 percentage points in the December quarter 1999, following a 0.9% rise in the September quarter 1999 (graph 21). The groups recording the largest rises were *cost of house purchase* (up 3.2%), *domestic holiday travel and accommodation* (up 5.7%) and *cigarettes and tobacco* (up 4.1%). Partly offsetting these rises were falls in *fresh fruit* (down 6.5%), *motor vehicle repair and servicing* (down 3.5%) and *visual and computing equipment* (down 7.7%). The CPI, excluding volatile items (*fresh fruit and vegetables* and *automotive fuel*), also rose by 0.6%.
- The national accounts *domestic final demand chain price index* rose 0.3% in the December quarter 1999, down from the rise of 0.4% recorded in the previous quarter (graph 22). This price index is a broad based measure of price change as it includes both consumption and capital items, for both private and public sectors.

- The *price index of materials used in manufacturing industries* rose 4.9% in the December quarter 1999. This rise reflects a 6.1% rise in the *price index for domestic materials used* and a 3.0% rise in the *price index for imported materials used* (graph 23). The rises in these indexes are attributed to increasing world market prices for *crude oil* and rising prices for *synthetic resins and plastics products*, *some metal ores*, *beef, cattle and pigs*.

- In the December quarter 1999, the *export price index* rose 4.3%, the second consecutive quarterly rise (graph 24). The depreciation of the Australian dollar against major trading currencies contributed to this growth, as did stronger world prices for *crude oil and petroleum products*, *gold* and *aluminium*.

The import price index rose 2.2 percentage points in the December quarter 1999, the second consecutive quarterly rise (graph 24). Major contributors to the rise were higher world oil prices and price increases in *road vehicles* and *general and specialised machinery*.

INTERNATIONAL.....

- The *current account deficit* fell 1.0% (to \$8.9 billion) in the December quarter 1999, the first decline in the trend deficit since the December quarter 1996 (graph 25). The main contributor to the improvement in the current account deficit was the deficit on *goods and services* (down 5% to \$4.1 billion). Rising goods exports, mainly non-rural and 'other' goods, contributed to the fall in the deficit on goods. The trend estimate of the *net income deficit* has remained reasonably constant since the December quarter 1995 and is currently \$4.8 billion (up 2%) in the December quarter 1999.

- The *balance on financial account* in original terms recorded a net inflow of \$7.6 billion in the December quarter 1999 (down \$2.2 billion on the net inflow recorded in the previous quarter). This comprised net inflows of \$4.5 billion in foreign debt and \$3.1 billion in equity. In terms of type of investment, the \$7.6 billion net inflow was comprised of:
 - an inflow of \$4.4 billion in direct investment (graph 26), a turnaround of \$5.2 billion from the outflow recorded in the September quarter 1999;
 - a \$6.3 billion net inflow in portfolio investment (graph 26), a rise of \$3.3 billion from September quarter 1999;
 - an \$8 billion net inflow in other investment, a rise of \$2.1 billion; and
 - a net outflow in reserve assets of \$11.2 billion, a turnaround of \$12.9 billion on the previous quarter.

- Australia's *net international investment position* at 31 December 1999 was one of net foreign liabilities of \$381 billion, up \$22 billion from December 1998. The increase resulted from:
 - net transactions* of \$8 billion (graph 27);
 - price changes* of \$11 billion; and
 - other adjustments* of \$2 billion.

Price changes and inflows of investment were the main contributors to the rise in the level of net equity liabilities (up 15% to \$136 billion) during the December quarter 1999. Net foreign debt rose 2%, reflecting higher inflows of \$4.5 billion during the quarter (graph 27).

- Graph 28 shows the Trade Weighted Index (TWI) of the value of the \$A. In the December quarter 1999 the TWI fell to 55.7 (from 57.2 in the September quarter), reflecting the continued depreciation of the Australian dollar against the currencies of its major trading partners.

(a) Trend data used instead of seasonally adjusted.

(b) Sales is defined as gross non-farm product plus imports of goods and services less changes in private non-farm stocks.

(c) Corporate gross operating surplus include private corporate trading enterprises plus financial enterprises less imputed bank service charge. GNFPfc = Gross non-farm product at factor cost.

(d) Interest paid component contains original data.

(e) By convention, zero productivity growth is assumed for industries in the non-market sector mainly government and some service industries). Therefore, a better indicator of productivity change is provided by the series showing market sector constant price gross product per hour worked.

(a) The estimates for goods and services are not necessarily consistent with the corresponding monthly estimates, shown in Tables 2.4 to 2.7 obtained from *International Trade in Goods and Services, Australia* (Cat. no. 5368.0) — issued monthly, due to data revisions to the original monthly data not feeding into the quarterly original series until the next quarterly release of *Balance of Payments and International Investment Position, Australia* (Cat. no. 5302.0).

(b) In addition to the differences outlined in footnote (a), the quarterly seasonally adjusted estimates for goods and services are not necessarily consistent with the corresponding monthly seasonally adjusted estimates, shown in Table 2.1 obtained from *International Trade in Goods and Services, Australia* (Cat. no. 5368.0) — issued monthly, because of the independent seasonal adjustment of the monthly and quarterly data.

- (a) For all time periods, estimates for Sugar, sugar preparations and honey are included in Other non-rural.
- (b) The estimates for goods and services are not necessarily consistent with the corresponding quarterly estimates, shown in Table 2.1 obtained from *Balance of Payments and International Investment Position, Australia* (Cat. no. 5302.0), due to data revisions to the original monthly data not feeding into the quarterly original series until the next quarterly release of *Balance of Payments and International Investment Position, Australia* (Cat. no. 5302.0).
- (c) In addition to the differences outlined in footnote (a), the monthly seasonally adjusted estimates for goods and services are not necessarily consistent with the corresponding quarterly seasonally adjusted estimates, shown in Table 2.1 obtained from *Balance of Payments and International Investment Position, Australia* (Cat. no. 5302.0), because of the independent seasonal adjustment of the monthly and quarterly data.

Source: *International Trade in Goods and Services, Australia* (Cat. no. 5368.0).

(a) Derived from current price original data. The net international investment position ratios are derived from the net foreign liabilities at the end of the period and GDP for the year ended with that period. Other ratios use only data for the year ended with the period shown.

(b) For the latest reference period, GDP for the year ended with the previous quarter is used.

(a) The exports and imports data presented in this table differ from those in Tables 2.1 to 2.5 because they are recorded on a foreign trade basis rather than a balance of payments basis and are compiled from a different edition of the data.

(b) The nine member nations of ASEAN are Brunei, Indonesia, Laos, Malaysia, Myanmar, Philippines, Singapore, Thailand and Vietnam.

(c) The fourteen member states of European Union (EU) are Austria, Belgium-Luxembourg, Denmark, Finland, France, Germany, Greece, Ireland, Italy, Netherlands, Portugal, Spain, Sweden, and the United Kingdom.

(a) There is a series break between 1985–86 and 1986–87, resulting from a change in survey methodology for engineering construction, introduced from the September quarter 1986. The most significant was the introduction of public sector units into the survey.

(a) All annual data are end of period.

(b) All annual data are annual averages.

(c) All annual data are aggregates.

(d) From the March quarter 1998, the scope of the quarterly Survey of Tourist Accommodation has included licensed hotels, motels and guest houses with facilities and serviced apartments with 15 or more rooms or units. The survey no longer collects data on caravan parks, holiday flats, units and houses or visitor hostels on an ongoing basis.

Source: *Tourist Accommodation, Australia* (Cat. no. 8635.0).

INQUIRIES

If you have any queries about the revised *Survey of Tourist Accommodation*, please contact Paull Hoffman on 07 3222 6201 fax: 07 3222 6284 or Internet: paull.hoffmann@abs.gov.au.

(a) Original data provided.

(b) The weights used are based on the average share of Australia's imports from the US, Japan, UK and West Germany from 1984-85 to 1987-88. The four countries are the source for about 60 per cent of Australia's imports. Observations are quarterly averages. A rise (fall) implies a deterioration (improvement) in Australian costs and prices relative to our four major trading partners after adjusting for exchange rate changes.

(c) The adjusted CPI index is the ratio of the Australian consumer price index to the weighted geometric average of the exchange rate adjusted consumer price indexes of Australia's four major trading partners.

(d) The adjusted GDP deflator index is the ratio of the GDP deflator for Australia to the weighted geometric average of the exchange rate adjusted GDP deflators of Australia's four major trading partners.

(e) The adjusted unit labour cost index is the ratio of unit labour costs in the non-farm sector of the Australian economy to the weighted geometric average of the exchange rate adjusted unit labour cost indexes estimated for the business sectors of Australia's four major trading partners.

(a) See Appendices A and B, *Consumer Price Index* (6401.0), September Quarter 1994.

(b) This series covers approximately 80 per cent of the total CPI basket.

(c) Comprises the All Groups CPI excluding: Fresh fruit and vegetables, and Automotive fuel. The resulting series covers approximately 94 per cent of the total CPI basket.

(d) Comprises the All Groups CPI excluding: items in (c), Government-owned dwelling rents, Utilities, Property rates and charges, Postal and communication services, Other motoring charges, Urban transport fares, Health services, Pharmaceuticals and Education and child care. The resulting series covers approximately 77 per cent of the total CPI basket.

(e) Base of index: June quarter 1998 = 100.0.

June									

(a) Total population increase is equal to the change in population. Prior to 1992 this is not equal to natural increase (live births less deaths) plus net immigration because of the distribution of the intercensal discrepancy. There is now an intercensal discrepancy for 1986-91.

(b) Includes Cocos (Keeling) Islands, Christmas Island and Jervis Bay Territory from September quarter 1993.

(a) The indexes in Table 7.4 combine ordinary time and overtime hourly rates and therefore include the effect of any changes in overtime penalty rates but are not affected by changes in penalty payments (which fluctuate depending on the number of hours paid at penalty rates) and allowances (which fluctuate according to how much work is performed under special work conditions e.g. height, dirt and/or heat allowances).

(a) Average non-farm wages, salaries and supplements per wage and salary earner. Seasonally adjusted data.

(b) Base for index: 1986–87 = 100.0.

(c) Deflated by the Gross National Expenditure deflator.

(d) Non-farm wages, salaries and supplements, plus payroll tax less employment subsidies plus fringe benefits tax per hours worked by non-farm wage and salary earners.

(e) Ratio of derived private non-farm corporate wages, salaries and supplements plus payroll tax less employment subsidies, plus fringe benefits tax paid by the private non-farm corporate sector to derived private non-farm corporate sector gross product at factor cost plus payroll tax less employment subsidies plus fringe benefits tax.

(f) Nominal unit labour costs (see footnote (g)) deflated by the derived implicit price deflator for gross non-farm product.

(g) Ratio of nominal hourly labour costs to average hourly labour productivity (real gross non-farm product per hour worked by all employed persons).

- (a) Excludes Commonwealth and State Government and interbank deposits but includes deposits of the private non-bank sector with the Reserve Bank.
- (b) Currency plus bank deposits (including certificates of deposit with trading banks) of the private non-bank sector.
- (c) Borrowings (other than from banks and related corporations) by permanent building societies, credit co-operatives, finance companies, authorised money market dealers, pastoral finance companies, money market corporations, general financiers and cash management trusts; less borrowings by authorised money market dealers from those non-bank intermediaries. Breaks occur from time to time due to changes in the number of reporting corporations.
- (d) M3 plus borrowings from private sector by non-bank financial intermediaries less the latter's holdings of currency and bank deposits.
- (e) Holdings of notes and coin by the private sector, plus deposits of banks with the Reserve Bank and Reserve Bank liabilities to the private non-bank sector.
- (f) Loans and advances of those financial intermediaries whose deposit liabilities are included in broad money.
- (g) Bills outstanding under acceptance and endorsement commitments by banks.
- (h) Credit is equal to bank bills outstanding plus loans and advances by financial intermediaries whose liabilities are included in broad money.

(a) Rates are for the last trading day of the reference period.

(b) On January 1, 1999 eleven European Union nations launched the euro, a single currency giving control of interest rate and exchange rate policy to the European Central Bank. The euro was immediately available for electronic financial and business transactions, but euro coins and notes will not be issued to the general public until January 2002. The participating nations are Austria, Belgium, Finland, France, Germany, Ireland, Italy, Luxembourg, the Netherlands, Portugal and Spain. Britain, Denmark and Sweden chose not to adopt the euro, while Greece failed to meet the requirements for entry.

(c) May 1970 = 100.0.

(a) Extreme care should be exercised in using the seasonally adjusted and trend series for turnover of retail establishments for the Northern Territory. The highly erratic nature of these data makes reliable estimation of the seasonal pattern and of the trend very difficult.

(a) Extreme care should be exercised in using the seasonally adjusted series for the number of new motor vehicle registrations in Tasmania, the Northern Territory and the Australian Capital Territory. The highly erratic nature of these data makes reliable estimation of the seasonal pattern very difficult.

10.13	M1 plus quasi-money index	128

NOTES

1. The statistics for Germany in these tables refer to Germany after unification.
2. Consumer price index (CPI). Due to the many differences in the structure of the housing sector in different countries and in the way that housing is treated in their CPIs, a simple comparison of All items (or headline) CPIs is often inappropriate. To provide a better basis for international comparisons, the Fourteenth International Conference of Labour Statisticians adopted a resolution which called for countries to "provide for dissemination at the international level of an index which excludes shelter, in addition to the all-items index."

Table 10.8 presents indexes for selected countries on a basis consistent with the above resolution and comparable to the Australian series *All groups excluding housing*. The series in this table are presented on a reference base consistent with that used for publication of the Australian CPI (i.e. 1989–90 = 100.0) and as such are not directly comparable with those for All items published in Table 10.7 (presented on a reference base of 1995 = 100.0).

EXPLANATORY NOTES

Explanatory notes in the form found in other ABS publications are not included in *Australian Economic Indicators*. Readers are directed to the explanatory notes contained in related ABS publications.

INTRODUCTION

Australian Economic Indicators presents a statistical summary of the Australian economy, together with international comparisons of selected economic indicators. Except for the special February issue, it also includes commentaries, articles, technical notes, and the Experimental Composite Leading Indicator. *Australian Economic Indicators* has been developed primarily as a reference document, providing a broad basis for economic analysis and research.

The tables contain mainly ABS data, although data from other sources are included. For ABS sourced data, the publication name and catalogue number are included in the footnotes of the tables. If the data are from other sources, the source organisation's name is included in the footnotes.

MOST RECENT DATA

The statistics shown are the latest available as at 15 March 2000.

RELATED PUBLICATIONS

A list of related publications is included in each chapter under the table of contents. These include publications which are the source of the data in the tables and other related publications.

Other useful sources of detailed information are the 'Concepts, Sources and Methods' and classification publications. These are released irregularly, each relating to a specific publication, collection or standard classification. The publications most relevant to *Australian Economic Indicators* include:

- *Australian and New Zealand Standard Industrial Classification (ANZSIC)* (Cat. no. 1292.0)
- *Classification Manual for Government Financial Statistics, Australia* (Cat. no. 5514.0)
- *Australian National Accounts: Concepts, Sources and Methods* (Cat. no. 5216.0)
- *Balance of Payments, Australia: Concepts, Sources and Methods* (Cat. no. 5331.0)
- *A Guide to Labour Statistics* (Cat. no. 6102.0)
- *The Australian Consumer Price Index: Concepts, Sources and Methods* (Cat. no. 6461.0)

SEASONALLY ADJUSTED AND TREND ESTIMATES

Series in this publication include original, seasonally adjusted and trend series. Special care should always be taken in interpreting data for the most recent months and quarters. Some of the original and all of the seasonally adjusted and trend series are subject to revision.

SEASONALLY ADJUSTED AND TREND ESTIMATES *continued*

It is not uncommon for movements in original time series data and those provided from seasonally adjusted and trend series to differ significantly. Movements in a time series of original data may reflect several factors, including:

- longer-term changes in the item being measured (i.e. trend movements);
- short-term irregular changes;
- regular seasonal influences;
- normal 'trading', 'working' or 'pay' day patterns; and
- systematic holiday effects.

Seasonal adjustment and trend estimates help the user to identify the effect of these influences on the time series. Seasonal adjustment removes the effect of the last three listed influences from the data, leaving only the trend and short-term irregular movements. Trend estimates are then obtained by removing the effects of the short-term irregularities, which in many series can be a major contributor to movements in the original data. By comparing the historical trend series with the seasonally adjusted series, the user can identify the short-term irregularities which have influenced the original series.

The general methods used in the ABS for making seasonal adjustments are described in *Seasonally Adjusted Indicators, Australia 1983* (1308.0). The method used to estimate trends is described in *Information Paper: A Guide to Smoothing Time Series — Estimates of Trend* (Cat. no. 1316.0).

Trend estimates produced by the ABS are based on Henderson Moving Averages, and are therefore subject to revision especially for the latest few months or quarters.

CHAIN VOLUME MEASURES

The chain volume measures appearing in this publication are annually-reweighted chain Laspeyres indexes referenced to the current price values in a chosen reference year (i.e. the year when the quarterly chain volume measures sum to the current price annual values). Chain Laspeyres volume measures are compiled by linking together (compounding) movements in volumes, calculated using the average prices of the previous financial year, and applying the compounded movements to the current price estimates of the reference year. Quarterly chain volume estimates are benchmarked to annual chain volume estimates, so that the quarterly estimates for a financial year sum to the corresponding annual estimate.

Chain volume measures are not generally additive. In other words, in general, component chain volume measures do not sum to a total in the way original current price components do. In order to minimise the impact of this property, the ABS uses the latest base year as the reference year (i.e. the year prior to the latest complete financial year). By adopting this approach, non-additivity does not

CHAIN VOLUME MEASURES
continued

exist for the quarters following the reference year (currently 1997–98) and is relatively small for the quarters in the reference year and the quarters immediately preceding it. The latest base year and the reference year will be advanced one year with the release of the June quarter Australian National Accounts (*Australian Economic Indicators*, October issue). A change in reference year changes levels but not growth rates, although some revision to recent growth rates can be expected because of the introduction of a more recent base year (and revisions to the current price estimates underlying the chain volume measures).

OTHER USAGES

Columns in bold in the tables indicate a total. Columns usually sum from the left, with the total appearing on the right. A major exception is the balance of payments and international investment position data in Chapter 2. These data sum from the right with the total appearing on the left — in keeping with the international standard for these statistics. Some tables include sub-total columns and columns which need to be subtracted to obtain the total. Where this is not clear a footnote explains the relationship between the columns.

Columns in italics indicate that seasonally adjusted or trend estimates are not available for that column, and original data are provided instead.

Yearly periods shown as, e.g. 1998–1999, refer to the fiscal year ended 30 June 1999.

Where figures have been rounded, discrepancies may occur between sums of the component items and totals. Percentage changes may not be exactly comparable to tabulated source series due to rounding of the source series, the percentage change series or both.

METRIC PREFIXES

Deca (da) = ten
Hecto (h) = hundred
Kilo (k) = thousand
Mega (M) = million
Giga (G) = thousand million
Tera (T) = million million
