| IN THIS ISSUE | Where available, the statistics in this issue are presented as time series for the last nine years of annual data, the last nine quarters or 15 months of data. To assist analysis most tables include percentage movements, as well as levels, of series. |  |  |
|  | For users requiring longer time series, each February issue of Australian Economic Indicators contains, for most series, a greater span of annual, quarterly and monthly data. |  |  |
|  | Quarterly and monthly data for most series, and annual data for a limited number of series, are available from the ABS for earlier periods than that shown in this publication. Many series can be obtained on electronic media. Inquiries should be directed to the National Information Service on 1300135070. |  |  |

3. EXPERIMENTAL COMPOSITE LEADING INDICATOR,
(XCLI) AND GDP (Chain volume measure) -
Deviation of trend from historical long-term trend

[^0]
## OVERVIEW

- In the December quarter 2000, the chain volume measure of GDP trend rose $0.1 \%$ and its bistorical long-term trend rose $0.9 \%$ (graph 1). GDP long-term trend growth has been slowing since the June quarter 1998. The chain volume measure of GDP trend rose $2.5 \%$ between December quarter 1999 and December quarter 2000. In seasonally adjusted terms, GDP fell $0.6 \%$ in the December quarter 2000. This is the first decline in seasonally adjusted GDP since June quarter 1991 and follows 37 consecutive quarters of growth.
- Final consumption expenditure contributed 0.2 percentage point of the $0.1 \%$ increase in the chain volume measure of GDP in the December quarter 2000 (graph 2). The contribution of gross fixed capital formation (GFCF) to growth in GDP was -0.9 percentage point. The major positive contributors to growth in GDP in the Dectember quarter were private non-farm inventories and imports of goods and services, which contributed 0.3 percentage points each.
- Graph 3 shows the experimental composite leading indicator (XCLI) and GDP expressed as deviations from their historical long term trend. The XCLI continued to decline in the December quarter 2000 (down 0.19 to -0.27 ), following a peak in the March quarter 2000. This peak, based on historical performance, indicates that the GDP business cycle could be expected to peak two quarters later. However, the latest data show a peak in GDP business cycle also in the March quarter 2000.

[^1]
## CONSUMPTION

- In the December quarter 2000 the chain volume measure of bousehold final consumption expenditure (HFCE) grew by $0.5 \%$ in both trend and seasonally adjusted terms (graph 4). The strongest growth rates were recorded for purchases of vehicles (up 7.0\%), bealth (up 3.6\%) and insurance and other financial services (up 3.1\%). There were some falls, with the largest being clothing and footwear (down 3.1\%). The largest contributors to growth in HFCE were purchases of vehicles ( 0.3 percentage points), and insurance and other financial services and rent and other dwelling services ( 0.2 percentage points each). Clothing and footwear and operation of vehicles each made a negative contribution of 0.1 percentage points. HFCE's contribution to growth in GDP in the December quarter 2000 was 0.3 percentage points.
- The trend chain volume measure of government final consumption expenditure (GFCE), excluding defence, fell by $0.1 \%$ in the December quarter 2000, the first fall since December quarter 1996 (graph 5). In seasonally adjusted terms there was a fall of $0.4 \%$. The trend growth between December 1999 and December 2000 was $2.1 \%$. The trend chain volume measure of defence final consumption expenditure fell by $2.8 \%$ in the December quarter.
- In the December quarter 2000, retail turnover, in trend volume terms, rose $0.4 \%$ while in seasonally adjusted volume terms it rose by $1.8 \%$ (graph 6). All industries recorded seasonally adjusted rises except recreational good retailing (down 1.6\%) and hospitality and service industries (down $1.2 \%$ ). In seasonally adjusted terms, clothing and software good retailing rose $7.8 \%$ while department stores increased 7.5\%.
- The trend estimate of the number of new motor vehicle registrations (excluding motor cycles) increased $0.9 \%$ (to 69,498 ) in January 2001 (graph 7). Passenger vehicles rose by $0.7 \%$ (to 58,986), while other vehicles was up $1.8 \%$ (to 10,512). Estimates for total new vehicle registrations, in seasonally adjusted terms, fell 11.1\% (to 66,921). Passenger vehicles fell $12.6 \%$ (to 56,211 ) while other vehicles declined $2.2 \%$ (to 10,710 ). There is a trend break between June 2000 and July 2000 resulting from the introduction of the New Tax System.

## I N V E S TMENT............. . .

- The trend chain volume measure of total gross fixed capital formation (GFCF) fell $3.8 \%$ in the December quarter 2000 following falls in the September and June quarters (graph 8) to a level $5.9 \%$ below that of December quarter 1999. In seasonally adjusted terms GFCF fell $5.7 \%$ in the December quarter, breaking the "saw-tooth" pattern exhibited over the past two years.
- Total private gross fixed capital formation fell $5.4 \%$ in the December quarter 2000 (graph 9), while public sector gross fixed capital formation rose $2.5 \%$. The only components not showing a fall in private GFCF were livestock and intangible fixed assets. Dwellings fell $15.9 \%$, other buildings and structures fell $6.5 \%$, and machinery and equipment fell $0.7 \%$. For public GFCF public corporations fell by $0.5 \%$, national general government rose $8.8 \%$, and state and local general government increased by $3.5 \%$.
- Total private dwellings fell $15.9 \%$ in the December quarter 2000 (graph 10). New and used dwellings fell $17.0 \%$ while alterations and additions fell $13.7 \%$. Expenditure on other buildings and structures continued to decline for the eighth consecutive quarter, falling by $6.5 \%$. This decline was due to a fall of $9.9 \%$ in new building and a fall of $5.5 \%$ in the new engineering component.
- The value of total buildings approved declined $8.7 \%$ in the December quarter 2000-the fourth consecutive fall. All major components showed a decline. The main contributor was new residential buildings (down 17.9\%), with new houses falling by 22.6\%. Alterations and additions to residential buildings fell $8.0 \%$ (graph 11). A gap of a few months exists between building approvals and the actual undertaking of the work which is recorded in the national accounts, and work that is approved may not necessarily go ahead. Movements over recent months have been affected by changing patterns in demand and price changes brought about by the "bringing forward" of building activity prior to 1 July 2000, when the introduction of the Goods and Services Tax (GST) and the abolition of the Wholesale Sales Tax occurred.

15 MALE PARTICIPATION RATE, Trend

[^2]
## LABOURMARKET

- In February 2001, the total number of employed persons increased slightly to $9,084,800$. Female employment increased by $0.1 \%$ while male employment fell by $0.1 \%$ (graph 12). Full-time employment declined by $0.1 \%$ while part-time employment rose by more than $0.2 \%$.
- In February 2001, the unemployment rate increased by 0.1 percentage points to $6.8 \%$. The male unemployment rate was steady at $7.0 \%$ while the female unemployment rate rose to $6.4 \%$ (up 0.1 points). In February 2001, both the number of persons looking for full-time and part-time work rose by $1.3 \%$ and $1.4 \%$ respectively.
- In February 2001, the overall participation rate remained staedy at $63.5 \%$. The female participation rate was steady at 54.9\% (graph 14) while the male participation rate was steady at $72.4 \%$ (graph 15 ).
- The chain volume measure of market sector GDP per bour worked fell $1.0 \%$ in the December quarter 2000 (graph 16). As market sector GDP per hour worked is a proxy for labour productivity, this implies a fall in labour productivity. This is, however, an imperfect measure of labour productivity as it reflects the contribution of capital and other factors to changes in production as well as the contribution of labour. Using this proxy measure implies that labour productivity grew in every quarter from the December quarter 1994 to March quarter 2000 before falling in the last three quarters. Hours worked in the market sector showed a fall (down $0.2 \%$ ), the first fall since June quarter 1997.

20 GDP AND REAL GROSS DOMESTIC INCOME,
Chain volume measure, Trend-
Quarterly \% change

Source: ABS (Cat. no. 5206.0), Quarterly data.

- In the December quarter 2000, the wages share of total factor income rose to $54.5 \%$ (up 0.4 percentage point) (graph 17). Compensation of employees rose $1.1 \%$. This reflected a rise of $0.7 \%$ in average earnings and a rise of $0.4 \%$ in the number of wage and salary earners. In seasonally adjusted terms, compensation of employees fell by $0.5 \%$. Average earnings rose by $0.6 \%$, while the number of wage and salary earners fell by 1.0\%.
- In the December quarter 2000, the profits share of total factor income fell to $24.4 \%$ (down 0.2 percentage points) (graph 18). This profit measure comprises the gross operating surplus (GOS) of financial and non-financial corporations, which fell by $0.5 \%$, following an increase of $1.0 \%$ in the September quarter 2000.
- The proportion of household disposable income devoted to consumption in the December quarter 2000 was $96.6 \%$. The remaining $3.4 \%$ is the Household Saving Ratio (graph 19). The trend continues to move upwards. However, caution should be exercised as the household saving ratio is a derived measure and major components of household income and expenditure may still be subject to significant revisions which could cause changes in both the magnitude and direction of the household savings ratio trend.
- The trend chain volume measure of GDP rose $0.1 \%$ in the December quarter 2000 (graph 20). However, this measure does not fully reflect the change in real purchasing power of income generated by domestic production if the terms of trade change significantly over the period of comparison. A better measure of real purchasing power of income is movements in trend real gross domestic income, as this measure incorporates an adjustment for the terms of trade. In the December quarter 2000, the trend of real gross domestic income rose $0.3 \%$, somewhat more than the increase in GDP. This reflects a rise of $0.9 \%$ in Australia's terms of trade during the quarter.

This commentary refers to original estimates unless otherwise specified.

- In the December quarter 2000 , the all groups consumer price index (CPI) rose $0.3 \%$, down from $3.7 \%$ in the September quarter 2000 (graph 21) which was affected by the introduction of the GST. Contributing the most to the increase were rises in automotive fuel (up 1.3\%), take away and fast foods (up 1.9\%), tobacco (up 2.1\%) and fruit (up 5.5\%). Partially offsetting these rises were falls in the cost of pharmaceuticals (down 3.6\%), vegetables (down 2.7\%), soft drinks, water and juices (down $2.3 \%$ ) and motor vehicles (down $0.4 \%$ ).
- The national accounts domestic final demand chain price index rose $0.4 \%$ in the December quarter 2000, down from $2.4 \%$ growth in the previous quarter (graph 22). The largest rises were recorded by machinery and equipment (up 1.9\%) and general government defence (up 1.6\%). The domestic final demand chain price index is a broad based measure of price change and it includes both consumption and capital items, for both private and public sectors.
- In the December quarter 2000, the price index of materials used in manufacturing industries rose $4.8 \%$, reflecting a $5.7 \%$ increase in the price index for domestic materials and a 3.1\% increase in the price index for imported materials (graph 23). The main reasons for the rises were further crude oil price rises and the depreciation of the \$A.
- The export price index rose $7.3 \%$ in the December quarter 2000, the largest quarterly increase since the June quarter 1985 (graph 24). Major contributors to the rise were the depreciation of the $\$$ a against its major trading currencies and price rises for alumina and mineral fuels and oils.

In the December quarter 2000, the import price index rose $6.7 \%$ (graph 24). This was the largest rise since the December quarter 1990, when the index rose $6.8 \%$. Major contributors to the rise were the depreciation of the Australian dollar against its major trading currencies combined with increases in prices for petroleum and related products and price rises for road vehicles and transport equipment.

[^3]
## I NTERNATIONAL........ .

- In the December quarter 2000 the trend current account deficit was $\$ 5.5$ billion. This was a decrease of $\$ 0.9$ billion ( $14 \%$ ) on the previous quarter (graph 25). The impact of the Olympic Games has been excluded from these trend estimates. The main contributor to this improvement was goods exports (up $\$ 1.4$ billion), attributable to rising exports of rural and non-rural goods. In seasonally adjusted terms the current account deficit rose $\$ 0.1$ billion to $\$ 5.3$ billion, with a fall of $\$ 1.1$ billion in the net services surplus. The trend estimate of the net income deficit was stable at $\$ 4.7$ billion.
- In the December quarter 2000, the balance on financial account in original terms was a net inflow of $\$ 4.6$ billion (down $\$ 2.6$ billion on the net inflow recorded in the previous quarter). This comprised a net debt inflow of $\$ 5.3$ billion and a net equity outflow of $\$ 0.7$ billion (graph 26). In terms of type of investment, the $\$ 4.6$ billion net inflow was composed of:
- a net inflow of $\$ 1.0$ billion on direct investment in Australia, a rise of $\$ 0.2$ billion from the previous quarter (graph 27). Australia's direct investment abroad was an outflow of $\$ 3.3$ billion, up $\$ 2.2$ billion from the previous quarter;
- a $\$ 2.2$ billion net inflow on portfolio investment, a fall of $\$ 6.5$ billion from the previous quarter (graph 27) when there was a record net inflow of $\$ 12.6$ billion into money market instruments issued by residents across a number of sectors;
- a net outflow of $\$ 0.3$ billion on financial derivatives;
- a net inflow of $\$ 11.2$ billion in other investment, a turnaround of $\$ 12.9$ billion on the previous quarter; and
- a $\$ 6.2$ billion net outflow on reserve assets, a turnaround of $\$ 7.0$ billion on the September quarter 2000 inflow, as foreign exhange reserves were increased.
- Australia's net international investment position at 31 December 2000 was a net foreign liability of $\$ 379$ billion, up $\$ 24$ billion from September quarter 2000. The rise resulted from net transactions of $\$ 5$ billion, price changes of $\$ 16$ billion, net exchange rate variations of $\$ 1$ billion and other adjustments of $\$ 2$ billion. During the December quarter 2000 the level of net equity liabilities rose $\$ 18$ billion to $\$ 78$ billion, mainly due to price changes. Net foreign debt rose $\$ 6$ billion to $\$ 301$ billion, mostly due to net debt inflows.
- Graph 28 shows the Trade Weighted Index (TWI) of the value of the \$A. In the December quarter 2000 the quarterly average TWI declined to 49.6 (from 52.1 in the previous quarter), reflecting the continued depreciation of the Australian dollar against the currencies of its major trading partners.

(a) Trend data used instead of seasonally adjusted.
(b) Sales is defined as gross non-farm product plus imports of goods and services less changes in private non-farm inventories
(c) Corporate gross operating surplus include private corporate trading enterprises plus financial enterprises less imputed bank service charge. GNFPfc = Gross non-farm product at factor cost.
(d) Interest paid component contains oribinal data.
(e) By convention, zero productivity growth is assumed for industries in the non-market sector mainly government and some service industries Therefore, a better indicator of productivity change is provided by the series showing market sector constant price gross product per hour worked.

NATIONAL ACCOUNTS

GFS NET LENDING/BORROWNG TOTAL PUBLIC SECTOR 1998-1999

Source: ABS (Cat. no. 5512.0), Annual data.

Until recently, government finance statistics (GFS) comprised only cash-based statistics for general government (GG). Accrual-based data was previously only collected for public corporations. The first final annual accrual-based government finance statistics are available for 1998-99 and were published in the 1998-99 issue of Government Finance Statistics, Australia (ABS Catalogue No. 5512.0) released on 12 July 2000.

A paper outlining the conceptual changes reflected in the new statistical measures and changes in table formats, Information Paper: Accrual-Based Government Finance Statistics (ABS Catalogue No. 5517.0), was released on 13 March 2000.

GFS are now presented in the form of Operating Statements, Cash Flow Statements, Balance Sheets and Statements of Stocks and Flows and the focus is on the new analytical measures described below:

Net Operating Balance(NOB) - the difference between GFS revenues and expenses. This measure reflects the sustainability of government operations;

Net Lending/Borrowing(NLB) - NOB minus the total net acquisition of non-financial assets. It represents the government's call on the financial sector and reflects the economic impact of government operations. A positive result reflects a net lending position and a negative result a net borrowing position.

Net Worth(NW) - the economic measure of 'wealth' is calculated as assets less liabilities for the GG sector and assets less liabilities

TOTAL PUBLIC SECTOR,
SURPLUS/DEFICIT AS A PERCENTAGE OF GDP

1994-95 1995-96 1996-97 1997-98 1998-99
A negative percentage of GDP represents a general govemment deficit. A positive percentage of GDP represents a general govemment surplus Source: ABS (Cat. no. 5512.0), Annual data.
and shares and other contributed capital for public corporations (financial and non-financial). Net worth of unlisted corporations will always be zero because owners' equity is the difference between assets and liabilities. For listed corporations net worth will be positive or negative depending upon the difference between the value of shares on the balance sheet and the value of traded shares. As the equity of public corporations held by the GG sector consolidate out at the total public sector level, only equity held external to the public sector will appear.

Change in Net Worth(CNW) - this is the change in NW over two adjacent periods. CNW (due to transactions) is also equivalent to the NOB and excludes the impact of revaluations and other changes in volume of assets and liabilities.

Surplus(+)/Deficit(-) - is a cash-based measure and is calculated as:

Net cash flows from operating activities plus Net cash flows from investments in non-financial assets less Distributions paid (public corporations sector only) less Acquisitions of assets under finance leases and similar arrangements

The new Surplus(+)/Deficit(-) measure, while conceptually comparable to the old Deficit(+)/Surplus(-) measure has undergone a sign change - a surplus is now shown as positive and in practice has been compiled on a different methodological basis to that of previous years, hence resulting in a break in series. The Surplus/Deficit is the cash-based equivalent of Net Lending/Borrowing described above.

TABLE 1.7 ALL AUSTRALIAN GOVERNMENTS

a) The estimates for goods and services are not necessarily consistent with the corresponding monthly estimates, shown in Tables 2.4 to 2.7 obtained from International Trade in Goods and Services, Australia (Cat. no. 5368.0) - issued monthly, due to data revisions to the original monthly data not feeding into the quarterly original series until the next quarterly release of Balance of Payments and International Investment Position, Australia (Cat. no. 5302.0).
(b) In addition to the differences outlined in footnote (a), the quarterly seasonally adjusted estimates for goods and services are not necessarily consistent with the corresponding monthly seasonally adjusted estimates, shown in Table 2.1 obtained from International Trade in Goods and Services, Australia (Cat. no. 5368.0) - issued monthly, because of the independent seasonal adjustment of the monthly and quarterly data.

(a) For all time periods, estimates for Sugar, sugar preparations and honey are included in Other non-rural.
(b) The estimates for goods and services are not necessarily consistant with the corresponding quarterly estimates, shown in Table 2.1 obtained from Balance of Payments and International Investment Position, Australia (Cat. no. 5302.0) due to data revisions to the original monthly data not feeding into the quarterly original series until the next quarterly release of Balance of Payments and International Investment Position, Australia (Cat. no. 5302.0).
(c) In addition to the differences outlined in footnote (b), the monthly seasonally adjusted estimates for goods and services are not necessarily consistent with the corresponding quarterly seasonally adjusted estimates, shown in Table 2.1 obtained from Balance of Payments and International Investment Position, Australia (Cat. no. 5302.0), because of the independent seasonal adjustment of the monthly and quarterly data.

(a) Derived from current price original data. The net international investment position ratios are derived from the net foreign liabilities at the
end of the period and GDP for the year ended with that period. Other ratios use only data for the year ended with the period shown.
(b) For the latest reference period, GDP for the year ended with the previous quarter is used.

(a) There is a series break between 1985-86 and 1986-87, resulting from a change in survey methodology for engineering construction, introduced from the September quarter 1986. The most significant was the introduction of public sector units into the survey.

(a) All annual data are end of period.
(b) All annual data are annual averages.
(c) All annual data are aggregates.
(d) From the March quarter 1998, the scope of the quarterly Survey of Tourist Accommodation has included licensed hotels, motels and guest houses with facilities and serviced apartments with 15 or more rooms or units. The survey no longer collects data on caravan parks, holiday flats, units and houses or visitor hostels on an ongoing basis.

(a) Original data provided.
(b) The weights used are based on the average share of Australia's imports from the US, Japan, UK and West Germany from 1984-85 to 1987-88. The four countries are the source for about 60 per cent of Australia's imports. Observations are quarterly averages. A rise (fall) implies a deterioration (improvement) in Australian costs and prices relative to our four major trading partners after adjusting for exchange rate changes.
(c) The adjusted CPI index is the ratio of the Australian consumer price index to the weighted geometric average of the exchange rate adjusted consumer price indexes of Australia's four major trading partners
(d) The adjusted GDP deflator index is the ratio of the GDP deflator for Australia to the weighted geometric average of the exchange rate adjusted GDP deflators of Australia's four major trading partners.
(e) The adjusted unit labour cost index is the ratio of unit labour costs in the non-farm sector of the Australian economy to the weighted geometric average of the exchange rate adjusted unit labour cost indexes estimated for the business sectors of Australia's four major trading partners.

(a) Total population increase is equal to the change in population. Prior to 1992 this is not equal to natural increase (live births less deaths)
plus net immigration because of the distribution of the intercensal discrepancy. There is now an intercensal discrepancy for 1986-91.
(b) Includes Cocos (Keeling) Islands, Christmas Island and Jervis Bay Territory from September quarter 1993.

(a) Average non-farm wages, salaries and supplements per wage and salary earner. Seasonally adjusted data.
(b) Base for index: 1986-87 = 100.0.
(c) Deflated by the Gross National Expenditure deflator.
(d) Non-farm wages, salaries and supplements, plus payroll tax less employment subsidies plus fringe benefits tax per hours worked by non-farm wage and salary earners.
(e) Ratio of derived private non-farm corporate wages, salaries and supplements plus payroll tax less employment subsidies, plus fringe benefits tax paid by the private non-farm corporate sector to derived private non-farm corporate sector gross product at factor cost plus payroll tax less employment subsidies plus fringe benefits tax.
f) Nominal unit labour costs (see footnote (g)) deflated by the derived implicit price deflator for gross non-farm product.
(g) Ratio of nominal hourly labour costs to average hourly labour productivity (real gross non-farm product per hour worked by all employed persons).

(a) Excludes Commonwealth and State Government and interbank deposits but includes deposits of the non-bank sector with the Reserve Bank.
(b) Currency plus bank deposits (including certificate of deposit with trading banks) of the private non-bank sector.
(c) Borrowings (other than from banks and related corporations) by permanent building societies, credit co-operatives, finance companies, authorised money market dealers, pastoral finance companies, money market corporations, general financiers and cash management trusts; less borrowings by authorised money market dealers from those non-bank intermediaries. Breaks occur from time to time due to changes in number of reporting corporations
(d) M3 plus borrowing from private sector by non-bank financial intermediaries less the latter's holding of currency and bank deposits.
(d) M3 plus borrowing from private sector by non-bank financial intermediaries less the latter's holding of currency and bank deposits.
(e) Holdings of notes and coin by private sector, plus deposits of banks with the Reserve Bank and Reserve Bank Liabilities to the private Holdings of notes
non-bank sector.
(f) Loans and advances of those financial intermediaries whose deposit liabilities are included in broad money.
(g) Bills outstanding under acceptance and endorsement commitments by banks
(h) Credit is equal to bank bills outstanding plus loans and advances by financial intermediaries whose liabilities are included in broad money.

(a) Rates are for the last trading day of the reference period.
(b) On January 1, 1999 eleven European Union nations launched the euro, a single currency giving control of interest rate and exchange rate policy to the European Central Bank. The euro was immediately available for electronic financial and business transactions, but euro coins and notes will not be issued to the general public until January 2002.The participating nations are Austria, Belgium, Finland, France, Germany, Ireland, Italy, Luxembourg, the Netherlands, Portugal and Spain. Greece adopted the Euro on 1 January 2001 and Britain, Denmark and Sweden chose not to adopt the euro.
(c) May $1970=100.0$.

(a) Extreme care should be exercised in using the seasonally adjusted and trend series for turnover of retail establishments for the Northern Territory. The highly erratic nature of these data makes reliable estimation of the seasonal pattern and of the trend very difficult.

(a) Extreme care should be exercised in using the seasonally adjusted series for the number of new motor vehicle registrations in Tasmania, the Northern Territory and the Australian Capital Territory. The highly erratic nature of these data makes reliable estimation of the seasonal pattern very difficult.

## 10 INTERNATIONAL COMPARISONS

TABLES
10.1 Real gross domestic product volume index ..... 120
10.2 Balance on current account : percentage of seasonally adjusted GDP ..... 121
10.3 Balance on merchandise trade ..... 122
10.4 Private consumption expenditure volume index ..... 122
10.5 Private fixed capital investment volume index ..... 123
10.6 Industrial production volume index ..... 124
10.7 Consumer price index : all items ..... 125
10.8 Consumer price index : excluding shelter ..... 126
10.9 Producer prices index ..... 127
10.10 Wages index. ..... 128
10.11 Employment index ..... 128
10.12 Unemployment rates. ..... 129
10.13 M1 plus quasi-money index ..... 130

## NOTES

1. The statistics for Germany in these tables refer to Germany after unification.
2. Consumer price index (CPI). Due to the many differences in the structure of the housing sector in different countries and in the way that housing is treated in their CPIs, a simple comparison of All items (or headline) CPIs is often inappropriate. To provide a better basis for international comparisons, the Fourteenth International Conference of Labour Statisticians adopted a resolution which called for countries to "provide for dissemination at the international level of an index which excludes shelter, in addition to the all-items index."

Table 10.8 presents indexes for selected countries on a basis consistent with the above resolution and comparable to the Australian series All groups excluding housing. The series in this table are presented on a reference base consistent with that used for publication of the Australian CPI (i.e. $1989-90=100.0$ ) and as such are not directly comparable with those for All items published in Table 10.7 (presented on a reference base of $1995=100.0$ ).

Source: Organisation for Economic Co-operation and Development (OECD).

Explanatory notes in the form found in other ABS publications are not included in Australian Economic Indicators. Readers are directed to the explanatory notes contained in related ABS publications.

Australian Economic Indicators presents a statistical summary of the Australian economy, together with international comparisons of selected economic indicators. Except for the special February issue, it also includes commentaries, articles, technical notes, and the Experimental Composite Leading Indicator. Australian Economic Indicators has been developed primarily as a reference document, providing a broad basis for economic analysis and research.

The tables contain mainly ABS data, although data from other sources are included. For ABS sourced data, the publication name and catalogue number are included in the footnotes of the tables. If the data are from other sources, the source organisation's name is included in the footnotes.

The statistics shown are the latest available as at 16 March 2001.

A list of related publications is included in each chapter under the table of contents. These include publications which are the source of the data in the tables and other related publications.

Other useful sources of detailed information are the 'Concepts, Sources and Methods' and classification publications. These are released irregularly, each relating to a specific publication, collection or standard classification. The publications most relevant to Australian Economic Indicators include:

- Australian and New Zealand Standard Industrial Classification (ANZSIC) (Cat. no. 1292.0)
- Classification Manual for Government Financial Statistics, Australia (Cat. no. 5514.0)
- Australian National Accounts: Concepts, Sources and Methods (Cat. no. 5216.0)
- Balance of Payments, Australia: Concepts, Sources and Methods (Cat. no. 5331.0)
- A Guide to Labour Statistics (Cat. no. 6102.0)
- The Australian Consumer Price Index: Concepts, Sources and Methods (Cat. no. 6461.0)

Series in this publication include original, seasonally adjusted and trend series. Special care should always be taken in interpreting data for the most recent months and quarters. Some of the original and all of the seasonally adjusted and trend series are subject to revision.

SEASONALLY ADJUSTED AND TREND ESTIMATES continued

Concurrent seasonal adjustment and trend estimates

## CHAIN VOLUME MEASURES

It is not uncommon for movements in original time series data and those provided from seasonally adjusted and trend series to differ significantly. Movements in a time series of original data may reflect several factors, including:

- longer-term changes in the item being measured (i.e. trend movements);
- short-term irregular changes;
- regular seasonal influences;
- normal 'trading', 'working' or 'pay' day patterns; and
- systematic holiday effects.

Seasonal adjustment and trend estimates help the user to identify the effect of these influences on the time series. Seasonal adjustment removes the effect of the last three listed influences from the data, leaving only the trend and short-term irregular movements. Trend estimates are then obtained by removing the effects of the short-term irregularities, which in many series can be a major contributor to movements in the original data. By comparing the historical trend series with the seasonally adjusted series, the user can identify the short-term irregularities which have influenced the original series.

Trend estimates produced by the ABS are based on Henderson Moving Averages, and are therefore subject to revision especially for the latest few months or quarters.

The general methods used in the ABS for making seasonal adjustments are described in Seasonally Adjusted Indicators, Australia 1983 (1308.0). The method used to estimate trends is described in Information Paper: A Guide to Smoothing Time Series - Estimates of Trend (Cat. no. 1316.0).

The ABS has introduced the use of concurrent seasonal adjustment to derive the combined adjustment factors for the Retail Series. This means that data from the current month are used in estimating seasonal and trading day factors for the current and previous months. Concurrent adjustment can result in revisions each month to estimates for earlier periods. However, in most instances, the only noticeable revisions will be to the combined adjustment factors for the current month, the previous month and the same month a year ago. As a result of the concurrent seasonal adjustment the trend estimates are also concurrently estimated.

The chain volume measures appearing in this publication are annually-reweighted chain Laspeyres indexes referenced to the current price values in a chosen reference year (i.e. the year when the quarterly chain volume measures sum to the current price annual values). Chain Laspeyres volume measures are compiled by linking together (compounding) movements in volumes, calculated using the average prices of the previous financial year, and applying the compounded movements to the current price

CHAIN VOLUME MEASURES continued

OTHER USAGES

METRIC PREFIXES
estimates of the reference year. Quarterly chain volume estimates are benchmarked to annual chain volume estimates, so that the quarterly estimates for a financial year sum to the corresponding annual estimate.

Chain volume measures are not generally additive. In other words, in general, component chain volume measures do not sum to a total in the way original current price components do. In order to minimise the impact of this property, the ABS uses the latest base year as the reference year (i.e. the year prior to the latest complete financial year). By adopting this approach, non-additivity does not exist for the quarters following the reference year (currently 1997-98) and is relatively small for the quarters in the reference year and the quarters immediately preceding it. The latest base year and the reference year will be advanced one year with the release of the June quarter Australian National Accounts (Australian Economic Indicators, October issue). A change in reference year changes levels but not growth rates, although some revision to recent growth rates can be expected because of the introduction of a more recent base year (and revisions to the current price estimates underlying the chain volume measures).

Columns in bold in the tables indicate a total. Columns usually sum from the left, with the total appearing on the right. A major exception is the balance of payments and international investment position data in Chapter 2. These data sum from the right with the total appearing on the left - in keeping with the international standard for these statistics. Some tables include sub-total columns and columns which need to be subtracted to obtain the total. Where this is not clear a footnote explains the relationship between the columns.

Columns in italics indicate that seasonally adjusted or trend estimates are not available for that column, and original data are provided instead.

Yearly periods shown as, e.g. 1998-1999, refer to the fiscal year ended 30 June 1999.

Where figures have been rounded, discrepancies may occur between sums of the component items and totals. Percentage changes may not be exactly comparable to tabulated source series due to rounding of the source series, the percentage change series or both.

Deca (da) $=$ ten
Hecto (h) = hundred
Kilo (k) = thousand
Mega (M) = million
Giga (G) $=$ thousand million
Tera (T) $=$ million million
