Where available, the statistics in this issue are presented as time series for the last nine years of annual data, the last nine quarters or 15 months of data. To assist analysis most tables include percentage movements, as well as levels, of series.
Quarterly and monthly data for most series, and annual data for a limited number of series, are available from the Australian Bureau of Statistics for earlier periods than that shown in this publication. Many series can be obtained on electronic media. Inquiries should be directed to the National Information Service on 1300135070.
Users who require longer time series data should note that the February 2006 issue of the Australian Economic Indicators will be the final issue to contain long time series data. This is because long time series data can now be accessed for free from the ABS web site.
See the Abbreviations sections following the Explanatory Notes.

Australian Statistician

## FEATURE ARTICLE

INTRODUCTION

## FOREIGN OWNERSHIP OF EQUITY

This article updates the analysis of foreign ownership of Australian equity presented in the September quarter 2004 issue of Balance of Payments and International Investment Position, Australia (cat. no. 5302.0) ${ }^{1}$.

A brief explanation of how the financial accounts can be used to derive estimates of foreign ownership of equity in Australian enterprise groups is provided below. For a more detailed explanation, see the article Foreign Ownership of Equity in Australian Enterprise Groups published in the June quarter 1992 issue of International Investment Position, Australia (cat. no. 5306.0) which is also available on the ABS web site. That article also explains the relationship between these measures and measures derived from earlier foreign participation studies.

The data cover financial instruments classified as equity, which are mainly listed and unlisted shares and units in trusts. Instruments convertible to equity, such as convertible notes, are not treated as equity until converted. Ownership of property by non-residents and ownership of Australian branches of foreign companies are also treated as equity for the purposes of these statistics. The data for amounts on issue for each sub-sector are consolidated by excluding amounts held by related companies in the same sub-sector.

Market valuations are used where possible; for the cases where market values are not available, net asset value (total assets less non-equity liabilities and less the paid up value of non-voting shares) has been used as a proxy. A non-resident is defined as any individual, enterprise or other organisation ordinarily domiciled in a country other than Australia. For further definitions of the concepts and methods employed in compiling the source data see the publications Balance of Payments and International Investment Position, Australia: Concepts, Sources and Methods (cat. no. 5331.0) and Australian National Accounts: Financial Accounts (cat. no. 5232.0) which are also available on the ABS web site.

By expressing the value of equity issued by a particular sector and held by the rest of world (non-residents) as a percentage of the total value of all equity issued by that sector, it is possible to derive an estimate of the percentage of foreign ownership in that

1 The data presented here are sourced from:
For rest of world holdings of Australian equity, Table 28 of the December Quarter 2005 issue of Balance of Payments and International Investment Position, Australia (cat. no. 5302.0) and more detailed data underlying the published aggregates; and
For total and sectoral aggregates of Australian equity on issue, Tables 40 and 41 of the September quarter 2005 issue of Australian National Accounts: Financial Accounts (cat. no. 5232.0).

INTRODUCTION continued
sector. For example, at 30 June 2005, equity held by 'rest of world' in Australian banks was $\$ 55.2 \mathrm{~b}$, or $24 \%$ of the total equity of $\$ 225.4 \mathrm{~b}$ issued by Australian banks. Likewise, an estimate of total foreign ownership of equity in all Australian enterprises can be derived by summing the equity held by non-residents across all sectors and dividing this by the total value of equity issued by all sectors. Estimates of foreign ownership by sector are shown in Table F1.

(a) Equity includes units in trusts.
(b) Includes private non-financial corporations; and national, state and local public non-financial corporations.
(c) Includes life and other insurance corporations; central borrowing authorities; and other financial institutions.
(d) There is no foreign ownership in this sub-sector.

Source: Australian National Accounts: Financial Accounts, September quarter 2005 (cat. no. 5232.0) and Balance of Payments and International Investment Position, Australia, December Quarter 2005 (cat. no. 5302.0)

ANALYSIS OF RESULTS

Table F1 shows that the value of equity on issue by Australian enterprise groups at 30 June 2005 stood at $\$ 1,540.1$ b. Of this total, $63 \%$ related to shares or similar equity interests issued by non-financial corporations. Other financial sub-sectors, including life and other insurance corporations and central borrowing authorities accounted for $19 \%$; banks accounted for a further $15 \%$ of total equity issued; while lesser amounts were issued by 'non-bank deposit taking institutions' (3\%); and the Central Bank (1\%).

Of the total equity on issue at 30 June 2005 , non-residents held equity valued at $\$ 432.5$ b ( $28.1 \%$ ), while residents held $\$ 1,107.6$ b (71.9\%).

ANALYSIS OF RESULTS continued

The total value of equity on issue increased by $10 \%$ from $\$ 1,404.4 \mathrm{~b}$ to $\$ 1,540.1 \mathrm{~b}$ from 30 June 2004 to 30 June 2005. The main quarter in which the increase occurred was the December quarter 2004, when the value of equity on issue increased by $\$ 113.5 \mathrm{~b}(8 \%)$. This increase was driven by the non-financial corporations which rose $\$ 77.2 \mathrm{~b}$ ( $8 \%$ ), other financial sub-sectors which rose $\$ 18.6 \mathrm{~b}$ (7\%) and banks which rose $\$ 18.3 \mathrm{~b}$ (10\%).

At 31 December 2004, the proportion of equity held by non-residents reached a peak of $31.3 \%$. The proportion of equity held by non-residents declined to $28.1 \%$ by 30 June 2005 , with most of the fall occurring during the June quarter 2005. In this quarter, the proportion of equity in non-financial corporations held by non-residents fell from $36.1 \%$ to $32.2 \%$. While the value of equity on issue for this sector fell $\$ 78.9 \mathrm{~b}$ ( $7 \%$ ), the amount held by non-residents fell $\$ 67.0 \mathrm{~b}$ (18\%), resulting in the fall in the proportion of equity held by non-residents. The proportion of equity held by non-residents in other sectors was relatively stable during June quarter 2005, rising or falling by less than 0.5 percentage points.

FOREIGN OWNERSHIP OF AUSTRALIAN ENTERPRISE GROUPS BY SECTOR

Source: Balance of Payments and International Investment Position, Australia, (cat. no. 5302.0).

As shown in Table F2, the value of holdings of equity in Australian enterprise groups by non-residents can also be further disaggregated according to the country of residence of the immediate holder. This disaggregation has been done as at the end of each financial year.

The residents of the United Kingdom (UK), United States of America (USA) and Japan hold the largest proportions of foreign-owned Australian equity on issue. At 30 June 2005, UK residents owned $\$ 116.8 \mathrm{~b}(27 \%)$ of the foreign-owned equity in Australian enterprise groups, accounting for $8 \%$ of total equity on issue. At the same time, USA residents owned $\$ 142.2 \mathrm{~b}$ (33\%) of the foreign equity holdings in Australian enterprise groups, while residents of Japan owned a further $\$ 20.9 \mathrm{~b}(5 \%)$. The USA and Japanese holdings accounted for $9 \%$ and $1 \%$, respectively, of total equity on issue.

COUNTRY ANALYSIS
continued

The proportion of ownership of total non-resident equity in Australia held by residents of each of these countries varies significantly by sector. For example, at 30 June 2005, residents of the UK owned $47 \%$ of the total non-resident equity investment in Australian banks, but did not hold any non-resident equity in non-bank deposit taking institutions. Residents of the USA dominate the foreign ownership of equity in non-bank deposit taking institutions, but hold less equity in banks than UK residents. While residents of Japan owned $8 \%$ of the total non-resident equity investment in non-bank deposit taking institutions at 30 June 2005, their participation rates in the banks and other financial sub-sectors were relatively small.

Residents of APEC economies accounted for $\$ 203.1$ b ( $47 \%$ ) of foreign-owned equity in Australian enterprise groups at 30 June 2005, while residents of EU countries accounted for $\$ 160.8$ b (37\%). The holdings of residents of APEC and EU countries accounted for $13 \%$ and $10 \%$ respectively of the total equity on issue. The holdings of residents of OECD member countries amounted to $\$ 359$ b, which accounted for $83 \%$ of total foreign-owned equity and $23 \%$ of total equity on issue.

[^0]SIGNIFICANT
FOREIGN
INFLUENCE

Direct investment is defined as capital invested in an enterprise by an investor who exerts a significant influence, either actually or potentially, over the key policies of the enterprise (called a direct investment enterprise). Ownership of $10 \%$ or more of the voting shares (or an equivalent equity interest) is regarded as indicative of significant influence by an investor.

Three enterprise group dissections are shown in Table F3 and these can be associated with three different levels of foreign influence: foreign control; significant foreign influence but not necessarily foreign control; and other foreign influence:

- Foreign control - direct investment enterprise groups over $50 \%$ owned by a direct foreign investor. The level of ownership is sufficient to allow foreign control.
- Significant influence - direct investment enterprise groups $10 \%$ to $50 \%$ owned by their direct foreign investors. The level of ownership allows the potential for significant foreign influence but is not necessarily sufficient to allow foreign control.
- Other influence - other enterprise groups with foreign ownership. The level of ownership is below the threshold used in defining significant foreign influence, as no single foreign investor holds $10 \%$ or more of the equity. The equity ownership is classified as portfolio investment.

FURTHER
INFORMATION

Analysis of data on equity issued to non-residents by direct investment enterprise groups in Australia, as a proportion of total equity on issue, provides an indication of the amount of influence non-residents have as a result of their equity holdings.

As shown in Table F3, at 30 June 2005, $\$ 232.8$ b (54\%) of the total foreign equity holdings of $\$ 432.5$ b was in the form of direct investment, with the remaining $\$ 199.8 b$ being in the form of portfolio investment. Of the total equity on issue, these amounts represent $15 \%$ for direct investment and $13 \%$ of portfolio investment. These proportions vary significantly across sectors.

Of the $\$ 232.8$ direct investment, $\$ 209.1$ b ( $90 \%$ ) was in enterprise groups where a direct foreign investor held more than $50 \%$ of the shares. The direct investment equity associated with majority direct foreign ownership accounted for $48 \%$ of all foreign equity and $14 \%$ of all equity issued in Australia.

The data used in this analysis are available from the International Investment Section of the Australian Bureau of Statistics. For more information on the availability of related statistics, contact Wendy Raedt on Canberra 0262525541 or email wendy.raedt@abs.gov.au.

December quarter 2005

[^2]
## OVERVIEW . . . . . . . . . .

- Australia's December quarter trend GDP growth of $0.5 \%$ is comparable to the trend growth of $0.5 \%$ in the Euro area, but is still below the US trend growth of $0.7 \%$ (graph 1). In the fourth quarter of 2005 most developed countries were showing a slowdown in growth rates of GDP, with the only exception being Japan whose growth rate was $1.4 \%$. Australian growth during the December quarter 2005 was driven by private business investment, government consumption and household consumption with offsets from net exports and changes in inventories.
- Through the year to December quarter 2005, trend real gross domestic income (GDI) increased by $5.2 \%$ compared with an increase of $2.7 \%$ in trend volume GDP. Real GDI measures the purchasing power of the total incomes generated by domestic production, taking changes in the terms of trade into account. The chain volume measure of GDP is a measure of the volume of production within Australia. However, the total real income that Australians derive from this production also depends on the volume of imports able to be purchased from the proceeds of Australia's exports to the rest of the world. Over the past year, Australia's terms of trade have increased by $13.1 \%$, so a given volume of exports will enable Australians to purchase a higher volume of imports than was the case in December quarter 2004. See also graph 21 below.
- The chain volume measures of the Australian economy at industry level for the December quarter 2005 showed a mixed picture (graph 3). The strongest quarterly increases were from cultural and recreational services (up 2.9\%), communication services (up 2.1\%), construction (up 1.8\%) and health and community services (up $1.4 \%)$. Negative contributors to growth in GDP were accommodation, cafes and restaurants (down $1.0 \%$ ), electricity, gas and water (down $0.8 \%$ ) and mining (down 0.6\%).
- The price index for established bouses (preliminary), covering transactions in detached residential dwellings on their own block of land, rose by $2.1 \%$ in the December quarter 2005 (graph 4) for the eight Australian capital cities. The most prominent price increases were recorded for Perth and Darwin. It is also notable that Sydney, after experiencing consecutive price decreases for the previous three quarters, recorded a $1.0 \%$ rise. On an annual basis, the Australia-wide house prices increased 2.3\% from December 2004 to December 2005. These figures are subject to revision when further data become available. For information on improvements made to the house price index series and associated measurement issues, see the ABS Information Paper: Renovating the Established House Price Index (cat. no. 6417.0).

8 GOVERNMENT FINAL CONSUMPTION EXPENDITURE, (Excluding defence) Chain volume measureQuarterly \% change

Source: Australian National Accounts: National Income, Expenditure and Product, cat. no. 5206.0.

- In the December quarter 2005 the chain volume measure of bousebold final consumption expenditure (HFCE) grew by $0.7 \%$ in both trend and seasonally adjusted terms (graph 5). The strongest trend growth rates were recorded for alcobolic beverages, recreation and culture, hotels, cafes and restaurants (all three components up 1.4\%), and insurance and other financial services (up 1.2\%) There were only two components which fell; operation of vehicles (down 1.4\%) and purchase of vehicles (down 1.2\%).
- In the December quarter 2005, retail turnover rose by $0.3 \%$ in trend chain volume terms, following an increase of $0.4 \%$ for the September quarter 2005. Four of the seven industries showed increases this quarter, with bospitality and services up $1.3 \%$, bousebold good retailing up $0.8 \%$, food retailing up $0.7 \%$ and clothing and soft good retailing up $0.3 \%$. Other retailing fell by $2.3 \%$, recreational good retailing fell $1.3 \%$ and department stores fell by $0.7 \%$.
- The trend estimate for sales of new motor vehicles (excluding motor cycles) increased by $0.2 \%$ from December 2005 to 81,839 in January 2006 (graph 7). This is the first month since February 2005 in which the trend estimate has recorded an increase. Compared with December 2005, small increases were recorded in January 2006 for sales of passenger vehicles ( $0.2 \%$ ) and other vehicles ( $0.2 \%$ ), with no movement for sports utility vehicles. Most states and territories recorded slight increases in the trend estimate for total sales of new motor vehicles in January 2006 compared with December 2005, with the exception of Tasmania and the Australian Capital Territory which recorded decreases of $0.7 \%$ and $1.1 \%$ respectively. When compared with January 2005 however, the trend estimate for total sales showed a $1.6 \%$ decrease.
- The trend chain volume measure of national general government final consumption expenditure (GFCE) excluding defence rose $2.0 \%$ in the December quarter 2005 (graph 8) and 6.5\% between December 2004 and December 2005. The trend chain volume measure of defence final consumption expenditure grew by $1.6 \%$ in the December quarter and by $0.5 \%$ between December quarter 2004 and December quarter 2005.

[^3]
## INVESTMENT . . . . . . . . .

- The trend chain volume measure of total gross fixed capital formation (GFCF) rose by $2.0 \%$ in the December quarter 2005, following solid rises in the previous eighteen quarters (graph 9). The trend is now 9.2\% above that of the December quarter 2004.
- The trend chain volume measure of private gross fixed capital formation rose by $2.3 \%$ in the December quarter 2005 (graph 10), while public gross fixed capital formation fell by $0.2 \%$. In the private sector, dwellings fell by $0.9 \%$, non-dwelling construction rose by $3.5 \%$, and machinery and equipment rose by 4.5\%. Livestock rose by $0.3 \%$, intangible fixed assets rose by $1.1 \%$ and ownership transfer costs fell by $1.9 \%$. For public GFCF, public corporations rose by $3.2 \%$, national general government rose by $1.7 \%$, and state and local general government fell by $4.2 \%$.
- Trend total GFCF for private dwellings fell by $0.9 \%$ in the December quarter 2005 (graph 11). New and used dwellings fell by $1.6 \%$ while alterations and additions remained unchanged. Expenditure on non-dwelling construction rose by $3.5 \%$. There was a strong 5.8\% rise in new engineering construction and a $1.0 \%$ rise in new building.
- The trend chain volume measure of the value of building approvals fell by $0.6 \%$ in the December quarter 2005. There was a $1.8 \%$ fall in total residential building while non-residential building rose by $2.1 \%$. New residential building fell $2.0 \%$ while alterations and additions to residential buildings fell 1.2\% (graph 12). The fall in new residential building was due to a $1.6 \%$ fall in new bouses and a fall of $2.8 \%$ in new other residential building. Some building approvals do not proceed, and there is a lag of a few months until work occurs for those that do.

Source: Labour Force, Australia, cat. no. 6202.0.

## 15 FEMALE PARTICIPATION RATE, Trend

Source: Labour Force, Australia, cat. no. 6202.0.

16 MALE PARTICIPATION RATE, Trend

Source: Labour Force, Australia, cat. no. 6202.0.

LABOUR MARKET . . . . . .

- In February 2006 both the participation rate and the unemployment rate remained steady.
- In February 2006, the trend total number of employed persons rose marginally from the previous month to $10,041,200$. Female employment rose marginally to $4,511,900$ while male employment rose marginally to 5,529,200 (graph 13). Full-time employment rose $0.1 \%$ to $7,172,200$ while part-time employment fell $0.2 \%$ to $2,868,900$.
- In February 2006, the trend unemployment rate remained steady at $5.2 \%$. The female unemployment rate rose 0.1 percentage point to $5.3 \%$ while the male unemployment rate remained steady at $5.2 \%$ (graph 14). In February 2006 the number of persons looking for full-time work rose $0.5 \%$ to 393,400 and the number of persons looking for part-time work rose $0.4 \%$ to 160,800 .
- In February 2006, the overall participation rate remained steady at $64.4 \%$. The female participation rate remained at $57.0 \%$ (graph 15) while the male participation rate remained at $72.0 \%$ (graph 16).
- The trend chain volume measure of market sector GDP per hour worked rose by $1.0 \%$ in the December quarter 2005 (graph 17). Hours worked in the market sector fell by $0.7 \%$ and market sector GDP rose by $0.4 \%$. As a measure of labour productivity, market sector GDP per hour worked is also affected by the contribution of capital and other factors to changes in production as well as changes in the overall quality of labour input. Further details about this effect can be found in the feature article 'Estimates of productivity in the Australian national accounts', (cat. no. 5206.0 September 2005 issue).

## 21 GDP AND REAL NET NATIONAL DISPOSABLE INCOME, Chain volume measure, TrendQuarterly \% change

[^4] Product, cat. no. 5206.0.

INCOME

Total factor income is derived by summing compensation of employees, gross operating surplus and gross mixed income.

- In the December quarter 2005, the wages share of total factor income remained 53.7\% (graph 18). Compensation of employees rose by $1.8 \%$, reflecting a rise of $1.6 \%$ in average earnings and a $0.2 \%$ rise in the number of wage and salary earners.
- In the December quarter 2005 , the profits share of total factor income was $27.0 \%$ (graph 19). This profit measure comprises the gross operating surplus (GOS) of financial and non-financial corporations, which rose by $1.9 \%$ in the December quarter ( $1.4 \%$ in seasonally adjusted terms), following a rise of $2.7 \%$ in the September quarter.
- The bousebold saving ratio was negative in the December quarter 2005, implying that household consumption was greater than household disposable income. In trend terms the ratio was $-2.1 \%$ in the December quarter 2005 (graph 20). This ratio is being driven by expenditure growing faster than disposable income. Caution should be exercised in interpreting the household saving ratio in recent years, because major components of household income and expenditure may still be subject to significant revisions. The impact of these revisions on the saving ratio can cause changes in the apparent direction of the trend.
- During the December quarter 2005 trend real net national disposable income rose by $0.7 \%$, compared to the increase in the trend chain volume measure of GDP of $0.5 \%$ (graph 21). Real net national disposable income (RNNDI) is a broad measure of economic well-being. This measure adjusts the chain volume measure of GDP for the terms of trade effect, real net incomes from overseas and consumption of fixed capital.
- For further details about RNNDI see the feature article in the April 2002 issue of AEI.

## CONSUMER PRICES . . . .

This commentary refers to original estimates unless otherwise specified.

- In the December quarter 2005, the all groups consumer price index (CPI) rose by $0.5 \%$, compared with a rise of $0.9 \%$ in the September quarter 2005 (graph 22). The major contributors at the group level were food (up 1.8\%), housing (up 0.6\%), financial and insurance services (up 1.5\%) and household contents and services (up 0.7\%). Transportation (down $0.5 \%$ ) and bealth (down $1.1 \%$ ) provided offsetting price decreases.
- Graph 23 shows the major contributors to the change in the CPI for the December quarter. The $2.3 \%$ rise in deposit and loan facilities contributed 0.15 index points to the $0.5 \%$ rise in the CPI. This rise was due to increases in some banking charges, such as account keeping and transaction fees. The $6.8 \%$ price rise in vegetables contributed 0.12 index points to the rise in the CPI and was due to adverse weather in major growing areas affecting supplies, particularly of potatoes, broccoli, onions and tomatoes. Poor weather also impacted on supplies of pears, apples and oranges, pushing fruit prices up overall.. The fall in the net cost of pharmaceuticals (-4.6\%)was a direct result of the cyclical effect of the Pharmaceutical Benefits Scheme safety net.
- At the all groups level, the December quarter 2005 CPI rose in all capital cities (graph 24). The increases ranged from $0.3 \%$ in Sydney to $0.8 \%$ in Brisbane, Perth and Canberra. Canberra recorded the largest rises in food, housebold contents and services and financial and insurance services. Perth had the largest increase in bousing costs, at almost four times the weighted average of eight capital cities. Brisbane recorded increases above the weighted average of eight capital cities in food, alcohol and tobacco, bousing, bousehold contents and services and recreation. Sydney recorded movements that were below the weighted average of eight capital cities in a number of categories including alcohol and tobacco, clothing, transportation and financial and insurance services.
- The national accounts domestic final demand chain price index rose by $0.6 \%$ in the December quarter 2005, following a rise of $0.7 \%$ (revised) in the September quarter (graph 25). The domestic final demand chain price index is a broad based measure of price change and comprises final consumption and capital expenditure, for both private and public sectors. The chain price index for final consumption expenditure rose by $0.6 \%$ (by $0.4 \%$ for households and $1.2 \%$ for general government), while the chain price index for gross fixed capital formation rose by $0.6 \%$ (by $0.6 \%$ for private and by $0.4 \%$ for public).

## PRODUCER PRICES. . . . .

This commentary refers to original estimates unless otherwise specified.

- The final (Stage 3) stage of production price index rose $0.8 \%$ in the December quarter 2005 (graph 26). For the final (Stage 3) index, there was a rise of $0.9 \%$ in domestic commodities mainly due to increases in building construction, other agriculture, and meat and meat product, and a $0.1 \%$ rise in imported commodities due to price rises for capital goods. The intermediate (Stage 2) stage of production index rose by $1.0 \%$, due to a rise of $1.0 \%$ in the domestic component and a $1.1 \%$ rise in the imports component. The preliminary (Stage 1) stage of production producer price index rose by $1.1 \%$, due to a rise of $1.1 \%$ in the domestic component and a rise of $1.4 \%$ in the imports component.
- In the December quarter 2005, the price index of materials used in manufacturing industries rose by $0.5 \%$ (graph 27). There was a $1.0 \%$ fall in domestic materials and a $1.9 \%$ rise in imported materials. Increases in the price of imported crude oil, domestically sourced copper oxides and gold, and imported plastic materials were the main contributors to the quarterly result. Price falls for sheep and lambs, whole milk, domestically sourced crude oil and cattle and calves provided some offsets to these increases.

The price index for materials used in house building rose by $0.4 \%$ in the December quarter 2005 (graph 28), reflecting price increases for a range of materials. The most significant contributors to the increase were joinery, in-situ concrete and paint and other coatings. Offsetting price decreases were recorded for boarding and lining, and clay bricks and concrete roof tiles. Increases were recorded in four of the state capitals, ranging from $0.1 \%$ in Adelaide to $0.6 \%$ in Brisbane. Sydney recorded no movement, while Hobart decreased by $-1.3 \%$. Through the year to December quarter 2005, the price index for materials used in bouse building rose $2.3 \%$.

- The export price index rose by $2.2 \%$ in the December quarter 2005 (graph 29), following a $4.7 \%$ increase in the September quarter 2005. The increase this quarter was driven by price rises for gold, coal, alumina, aluminium, wheat, sugar and manganese ores and concentrates. The most significant offsetting price decrease was observed for exports of crude petroleum oils, reflecting lower world prices following two quarters of substantial price increases. There was also an offsetting price decrease for edible offal.

The import price index rose by $0.4 \%$ in the December quarter 2005 (graph 29). Crude and other petroleum oils were the main contributors to the increase, due to the lag in imports of crude and other petroleum oils reacting to changes in global prices. The most significant offsetting price decreases were observed for imports of medicaments and diesel.

## INTERNATIONAL . . . . . . .

- Australia's current account deficit (trend estimate), which measures trade in goods and services, receipts and payments of income and current transfers, increased to $\$ 13.9$ b in the December quarter 2005 from $\$ 13.4$ b (revised) in the September quarter (graph 30). The main contributors to the increase in the deficit were goods imports (debits), which rose $\$ 1.1 \mathrm{~b}$ (3\%), and income payments (debits), which rose $\$ 0.7 \mathrm{~b}$ (5\%). These were partly offset by an increase in goods exports (credits) of $\$ 1.3 \mathrm{~b}$ (4\%). In the December quarter, the overall prices of Australia' export commodities continue to rise, with an increase of $2 \%$ for rural goods and an increase of $2.5 \%$ for non-rural goods. Unlike in the September quarter, the volumes of non-rural goods exports increased in the December quarter, by $4.3 \%$ (seasonally adjusted). The trend estimate of the net income deficit rose $\$ 0.7 \mathrm{~b}$ (7\%) to \$9.6b.
- Australia's goods and services deficit (trend estimate) narrowed in the December quarter 2005 , decreasing $\$ 143 \mathrm{~m}$ from $\$ 4,291 \mathrm{~m}$ in the September quarter to $\$ 4,148 \mathrm{~m}$ in the December quarter (graph 30). Imports of goods (debits) rose $\$ 1,108 \mathrm{~m}(3 \%)$ to $\$ 41,007 \mathrm{~m}$ in the December quarter 2005, with the largest increase in capital and intermediate \& other merchandise goods. Exports of goods (credits) rose $\$ 1,283 \mathrm{~m}(4 \%)$ to $\$ 37,254 \mathrm{~m}$, with the largest increase in non-rural goods, up $\$ 1,145 \mathrm{~m}$ (4\%) (graph 31). The trend estimate of net services was a deficit of $\$ 395 \mathrm{~m}$, a rise of $\$ 32 \mathrm{~m}(9 \%)$ on the September quarter 2005 deficit of $\$ 363 \mathrm{~m}$.
- Australia's net international investment position rose $\$ 18.7 \mathrm{~b}$ ( $3.4 \%$ ) to a net foreign liability of $\$ 560.2$ b at 30 December 2005. Net debt liabilities rose $\$ 22.4 \mathrm{~b}$ (5.0\%) to $\$ 472.8$ b. This comprised net debt raisings of $\$ 16.0 \mathrm{~b}$, exchange rate changes of $\$ 6.0 \mathrm{~b}$ and price changes of $\$ 0.5 \mathrm{~b}$. Net equity liabilities fell $\$ 3.7 \mathrm{~b}$ (4.1\%) to $\$ 87.3 \mathrm{~b}$ (graph 32), reflecting exchange rate changes of $-\$ 5.6 \mathrm{~b}$, transactions of $-\$ 2.1 \mathrm{~b}$, and other adjustments of $-\$ 0.3 \mathrm{~b}$. Partially offsetting these decreases were price changes of $\$ 4.2 \mathrm{~b}$.
- Graph 33 shows the Trade Weighted Index (TWI) of the value of the \$A. In the December quarter 2005 the quarterly average TWI decreased to 63.80 (from 64.20 in the previous quarter). The period average exchange rate for the Japanese yen rose to 87.27 per \$A (from 84.50 in the previous quarter), and the period average exchange rate for the United States dollar fell to 74.41 per $\$ \mathrm{~A}$ (from 75.97 the previous quarter).

(a) Trend data used instead of seasonally adjusted.
(b) Sales is defined as gross non-farm product plus imports of goods and services less changes in private non-farm inventories.
(c) Corporate gross operating surplus include private corporate trading enterprises plus financial enterprises less imputed bank service charge. TFI $=$ Total Factor Income.
(d) Interest paid component contains original data.
(e) By convention, zero productivity growth is assumed for industries in the non-market sector, mainly government and some service industries Therefore, a better indicator of productivity change is provided by the series showing market sector constant price gross product per hour worked.

Accruals-based Government Finance Statistics, (GFS) are presented in the form of Operating Statements, Cash Flow Statements, Balance Sheets and Statements of Stocks and Flows and the main analytical measures are described below:
Net Operating Balance(NOB) - the difference between GFS revenues and expenses. This measure reflects the sustainability of government operations.

Net Lending/Borrowing(NLB) - NOB minus the total net acquisition of non-financial assets. It represents the government's call on the financial sector and reflects the economic impact of government operations. A positive result reflects a net lending position and a negative result a net borrowing position.
Net Worth(NW) - the economic measure of 'wealth' is calculated as assets less liabilities for the general government (GG) sector and assets less liabilities and shares and other contributed capital for public corporations (financial and non-financial). Net worth of unlisted corporations will always be zero because owners' equity is the difference between assets and liabilities. For listed corporations net worth will be positive or negative depending upon the difference between the value of shares on the balance sheet and the value of traded shares. As the equity of public

TOTAL PUBLIC SECTOR,
NET LENDING/BORROWING AS A PERCENTAGE OF GDP

A negative percentage of GDP represents a net borrowing position A positive percentage of GDP represents a net lending position. Source: Government Finance Statistics, cat. no. 5512.0.
corporations held by the General Government, (GG) sector consolidate out at the total public sector level, only equity held external to the public sector will appear.

Change in Net Worth(CNW) - this is the change in NW over two adjacent periods. CNW (due to transactions) is also equivalent to the NOB and excludes the impact of revaluations and other changes in volume of assets and liabilities.

Surplus(+)/Deficit(-) - is a cash-based measure and is calculated as:
Net cash flows from operating activities
plus Net cash flows from investments in non-financial assets less Distributions paid (public corporations sector only) less Acquisitions of assets under finance leases and similar arrangements

The new Surplus(+)/Deficit(-) measure, while conceptually comparable to the previous Deficit(+)/Surplus(-) measure has undergone a sign change - a surplus is now shown as positive and in practice has been compiled on a different methodological basis to that of previous years, hence resulting in a break in series. The Surplus/Deficit is the cash-based equivalent of Net Lending/Borrowing described above.

(a) For all time periods, estimates for sugar, sugar preparations and honey are included in Other non-rural.
(b) The estimates for goods and services are not necessarily consistent with the corresponding quarterly estimates, shown in table 2.1 obtained from Balance of Payments and International Investment Position, Australia, (cat. no. 5302.0) due to data revisions to the original monthly data not feeding into the quarterly original series until the next quarterly release of Balance of Payments and International Investment Position, Australia, (cat. no. 5302.0).
(c) In addition to the differences outlined in footnote (b), the monthly seasonally adjusted estimates for goods and services are not necessarily consistent with the corresponding quarterly seasonally adjusted estimates, shown in table 2.1 obtained from Balance of Payments and International Investment Position, Australia, (cat. no. 5302.0), because of the independent seasonal adjustment of the monthly and quarterly data.

(a) Derived from current price original data. The net international investment position ratios are derived from the net foreign liabilities at the end of the period and GDP for the year ended with that period. Other ratios use only data for the year ended with the period shown.
(b) For the latest reference period, GDP for the year ended with the previous quarter is used.

(a) The exports and imports data presented in this table differ from those in tables 2.1 to 2.5 because they are recorded on an international trade basis rather than a balance of payments basis and are compiled from a different edition of the data.
(b) The ten member nations of ASEAN are Brunei, Cambodia, Indonesia, Laos, Malaysia, Myanmar, Philippines, Singapore, Thailand and Viet Nam.
(c) The countries included in the European Union (EU) changed in 2004. The change is treated as if it happened at the end of the June quarter 2004. Transactions for the EU for 2004 are the sum of transactions for EU15 for the March quarter 2004 and June quarter 2004, and transactions for EU25 for September quarter 2004 and December quarter 2004. The twenty five member states of the EU are Austria, Belgium, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Republic of Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Poland, Portugal, Slovak Republic, Slovenia, Spain, Sweden and United Kingdom. Cyprus, Czech Republic, Estonia, Hungary, Latvia, Lithuania, Malta, Poland, Slovak Republic and Slovenia are included from July 2004.

(a) The merchandise trade share relate to data in table 2.16.
(b) The countries included in the European Union (EU) changed in 2004. The change is treated as if it happened at the end of the June quarter 2004. Transactions for the EU for 2004 are the sum of transactions for EU15 for the March quarter 2004 and June quarter 2004, and transactions for EU25 for September quarter 2004 and December quarter 2004
(c) The twenty five member states of the EU are Austria, Belgium, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Republic of Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Poland, Portugal, Slovak Republic, Slovenia, Spain, Sweden and United Kingdom.
(d) Cyprus, Czech Republic, Estonia, Hungary, Latvia, Lithuania, Malta, Poland, Slovak Republic and Slovenia are included from July 2004.

a) Average non-farm wages, salaries and supplements per wage and salary earner. Seasonally adjusted data.
(b) Base for index: 1986-87 = 100.0.
(c) Deflated by the Gross National Expenditure deflator.
(d) Non-farm wages, salaries and supplements, plus payroll tax less employment subsidies plus fringe benefits tax per hours worked by non-farm wage and salary earners.
e) Ratio of derived private non-farm corporate wages, salaries and supplements plus payroll tax less employment subsidies, plus fringe benefits tax paid by the private non-farm corporate sector to derived private non-farm corporate sector gross product at factor cost plus payroll tax less employment subsidies plus fringe benefits tax.
f) Nominal unit labour costs (see footnote (g)) deflated by the derived implicit price deflator for gross non-farm product
(g) Ratio of nominal hourly labour costs to average hourly labour productivity (real gross non-farm product per hour worked by all employed persons).

(a) Excludes Commonwealth and State Government and interbank deposits but includes deposits of the non-bank sector with the Reserve Bank.
(b) Currency plus bank deposits (including certificate of deposit with trading banks) of the private non-bank sector.
(c) Borrowings (other than from banks and related corporations) by permanent building societies, credit co-operatives, finance companies, authorised money market dealers, pastoral finance companies, money market corporations, general financiers and cash management trusts, less borrowings by authorised money market dealers from those non-bank intermediaries. Breaks occur from time to time due to changes in number of reporting corporations.
(d) M3 plus borrowing from private sector by non-bank financial intermediaries less the latter's holding of currency and bank deposits.
(e) Holdings of notes and coin by private sector, plus deposits of banks with the Reserve Bank and Reserve Bank Liabilities to the private non-bank sector.
(f) Loans and advances of those financial intermediaries whose deposit liabilities are included in broad money.
(g) Bills outstanding under acceptance and endorsement commitments by banks.
(h) Credit is equal to bank bills outstanding plus loans and advances by financial intermediaries whose liabilities are included in broad money.

(a) Rates are for the last trading day of the reference period.
(b) On January 1. 1999 eleven
(b) On January 1, 1999 eleven European Union nations launched the Euro, a single currency giving control of interest rate and exchange rate policy to the European Central Bank. The Euro was immediately available for electronic financial and business transactions, but Euro coins and notes were not issued to the general public until January 2002. The participating nations are Austria, Belgium, Finland, France, Germany, Ireland, Italy, Luxembourg, the Netherlands, Portugal and Spain. Greece adopted the Euro on 1 January 2001 and Britain, Denmark and Sweden chose not to adopt the Euro.

TABLES
10.1 Real gross domestic product volume index ..... 128
10.2 Balance on current account - percentage of seasonally adjusted GDP ..... 129
10.3 Balance of payments - current balance ..... 130
10.4 Private consumption expenditure volume index ..... 130
10.5 Private fixed capital investment volume index ..... 131
10.6 Industrial production volume index ..... 132
10.7 Consumer price index : all items ..... 133
10.8 Consumer price index ..... 134
10.9 Producer prices index ..... 135
10.10 Wages index. ..... 136
10.11 Employment index ..... 136
10.12 Unemployment rates. ..... 137
10.13 M1 plus quasi-money index ..... 138

## NOTES

Consumer price index (CPI). Due to the many differences in the structure of the housing sector in different countries and in the way that housing is treated in their CPIs, a simple comparison of All items (or headline) CPIs is often inappropriate. To provide a better basis for international comparisons, the Fourteenth International Conference of Labour Statisticians adopted a resolution which called for countries to "provide for dissemination at the international level of an index which excludes shelter, in addition to the all-items index."

Table 10.8 presents indexes for selected countries on a basis consistent with the above resolution and comparable to the Australian series All groups excluding housing and financial and insurance services. The series in this table are presented on a reference base consistent with that used for publication of the Australian CPI (i.e. $1989-90=100.0$ ) and as such are not directly comparable with those for All items published in table 10.7 (presented on a reference base of $2000=100.0$ ).

[^41]SEASONALLY

Explanatory Notes in the form found in other ABS publications are not included in Australian Economic Indicators. Readers are directed to the Explanatory Notes contained in related ABS publications.

Australian Economic Indicators presents a statistical summary of the Australian economy, together with international comparisons of selected economic indicators. Except for the special February issue, it also includes commentaries, articles and technical notes.
Australian Economic Indicators has been developed primarily as a reference document, providing a broad basis for economic analysis and research.

The tables contain mainly ABS data, although data from other sources are included. For ABS sourced data, the publication name and catalogue number are included in the footnotes of the tables. If the data are from other sources, the source organisation's name is included in the footnotes.

The statistics shown are the latest available as at 14 March 2006.

A list of related publications is included in each chapter under the table of contents. These include publications which are the source of the data in the tables and other related publications.

Other useful sources of detailed information are the 'Concepts, Sources and Methods' and classification publications. These are released irregularly, each relating to a specific publication, collection or standard classification. The publications most relevant to Australian Economic Indicators include:

- Australian and New Zealand Standard Industrial Classification (ANZSIC), cat. no. 1292.0
- Classification Manual for Government Financial Statistics, Australia, cat. no. 5514.0
- Australian National Accounts: Concepts, Sources and Methods, cat. no. 5216.0
- Balance of Payments and International Investment Position, Australia: Concepts, Sources and Methods, cat. no. 5331.0
- Labour Statistics: Concepts, Sources and Methods, cat. no. 6102.0.55.001
- Labour Price Index: Concepts, Sources and Methods, cat. no. 6351.0.55.001
- Australian Consumer Price Index: Concepts, Sources and Methods, cat. no. 6461.0.

Series in this publication include original, seasonally adjusted and trend series. Special care should always be taken in interpreting data for the most recent months and quarters. Some of the original and all of the seasonally adjusted and trend series are subject to revision.

SEASONALLY ADJUSTED AND TREND ESTIMATES continued

Concurrent seasonal adjustment and trend estimates

CHAIN VOLUME MEASURES

It is not uncommon for movements in original time series data and those provided from seasonally adjusted and trend series to differ significantly. Movements in a time series of original data may reflect several factors, including:

- longer-term changes in the item being measured (i.e. trend movements)
- short-term irregular changes
- regular seasonal influences
- normal 'trading', 'working' or 'pay' day patterns
- systematic holiday effects.

Seasonal adjustment and trend estimates help the user to identify the effect of these influences on the time series. Seasonal adjustment removes the effect of the last three listed influences from the data, leaving only the trend and short-term irregular movements. Trend estimates are then obtained by removing the effects of the short-term irregularities, which in many series can be a major contributor to movements in the original data. By comparing the historical trend series with the seasonally adjusted series, the user can identify the short-term irregularities which have influenced the original series.

Trend estimates produced by the ABS are based on Henderson Moving Averages, and are therefore subject to revision especially for the latest few months or quarters.

The general methods used in the ABS for making seasonal adjustments are described in Seasonally Adjusted Indicators, Australia 1983 (cat. no. 1308.0). The method used to estimate trends is described in Information Paper: A Guide to Smoothing Time Series - Estimates of Trend (cat. no. 1316.0).

The ABS has introduced the use of concurrent seasonal adjustment to derive the combined adjustment factors for the Retail Series. This means that data from the current month are used in estimating seasonal and trading day factors for the current and previous months. Concurrent adjustment can result in revisions each month to estimates for earlier periods. However, in most instances, the only noticeable revisions will be to the combined adjustment factors for the current month, the previous month and the same month a year ago. As a result of the concurrent seasonal adjustment the trend estimates are also concurrently estimated.

The chain volume measures appearing in this publication are annually-reweighted chain Laspeyres indexes referenced to the current price values in a chosen reference year (i.e. the year when the quarterly chain volume measures sum to the current price annual values). Chain Laspeyres volume measures are compiled by linking together (compounding) movements in volumes, calculated using the average prices of the previous financial year, and applying the compounded movements to the current price

CHAIN VOLUME MEASURES continued

OTHER USAGES

METRIC PREFIXES
estimates of the reference year. Quarterly chain volume estimates are benchmarked to annual chain volume estimates, so that the quarterly estimates for a financial year sum to the corresponding annual estimate.

Chain volume measures are not generally additive. In other words, in general, component chain volume measures do not sum to a total in the way original current price components do. In order to minimise the impact of this property, the ABS uses the latest base year as the reference year (i.e. the year prior to the latest complete financial year). By adopting this approach, non-additivity does not exist for the quarters following the reference year (currently 2003-04) and is relatively small for the quarters in the reference year and the quarters immediately preceding it. The latest base year and the reference year will be advanced one year with the release of the June quarter Australian National Accounts (Australian Economic Indicators, October issue). A change in reference year changes levels but not growth rates, although some revision to recent growth rates can be expected because of the introduction of a more recent base year (and revisions to the current price estimates underlying the chain volume measures).

Columns in bold in the tables indicate a total. Columns usually sum from the left, with the total appearing on the right. A major exception is the balance of payments and international investment position data in Chapter 2. These data sum from the right with the total appearing on the left - in keeping with the international standard for these statistics. Some tables include subtotal columns and columns which need to be subtracted to obtain the total. Where this is not clear a footnote explains the relationship between the columns.

Columns in italics indicate that seasonally adjusted or trend estimates are not available for that column, and original data are provided instead.

Yearly periods shown as, e.g. 2004-05, refer to the fiscal year ended 30 June 2005.

Where figures have been rounded, discrepancies may occur between sums of the component items and totals. Percentage changes may not be exactly comparable to tabulated source series due to rounding of the source series, the percentage change series or both.

Deca (da) $=$ ten
Hecto (h) = hundred
Kilo (k) = thousand
Mega (M) = million
Giga (G) $=$ thousand million
Tera (T) = million million

## FREE ACCESS TO STATISTICS

All ABS statistics can be downloaded free of charge from the ABS web site.

[^0]:    - nil or rounded to zero (including null cells)
    (a) Total equity held by non-residents, includes direct and portfolio equity investment.
    (b) Includes unspecified and all other countries.
    (c) Data for Reserve Bank are not shown, as there is no foreign ownership in this sub-sector.
    (d) Includes private non-financial corporations; and national, state and local public non-financial corporations.
    (e) Includes life and other insurance corporations; central borrowing authorities; and other financial institutions.

[^1]:    - nil or rounded to zero (including null cells)
    (a) The type of equity dissection in the table shows foreign direct investment equity holdings separately from foreign portfolio equity holdings. Direct investment equity holdings refers to holdings of direct investors; that is, investors who own 10\% or more of the voting shares of an enterprise. Portfolio investment equity holdings refers to holdings of all other investors, covering their holdings in both direct investment enterprise groups and other enterprise groups.
    (b) Data for the Reserve Bank are not shown, as there is no foreign ownership in this sub-sector.
    (c) Includes private non-financial corporations; and national, state and local public non-financial corporations.
    (d) Includes life and other insurance corporations; central borrowing authorities; and other financial institutions.
