NOTES

FORTHCOMING ISSUES	<i>Issue</i>	<i>Expected release date</i>
	September 2002	30 August 2002
	October 2002	30 September 2002
	November 2002	31 October 2002
	December 2002	29 November 2002
	January 2003	10 January 2003
	February 2003	31 January 2003

IN THIS ISSUE Where available, the statistics in this issue are presented as time series for the last nine years of annual data, the last nine quarters or 15 months of data. To assist analysis most tables include percentage movements, as well as levels, of series.

Quarterly and monthly data for most series, and annual data for a limited number of series, are available from the ABS for earlier periods than that shown in this publication. Many series can be obtained on electronic media. Inquiries should be directed to the National Information Service on 1300 135 070.

EXTENDED TIME SERIES For users requiring longer time series, each February issue of *Australian Economic Indicators* contains, for most series, a greater span of annual, quarterly and monthly data.

FEATURE ARTICLE:

FOREIGN OWNERSHIP CHARACTERISTICS OF BUSINESSES UNDERTAKING RESEARCH AND EXPERIMENTAL DEVELOPMENT ACTIVITY IN AUSTRALIA

SUMMARY

As part of an initiative to expand the data available on economic globalisation issues, the ABS has embarked on a series of studies of the economic activity of majority foreign-owned businesses in Australia¹.

The most recent study examines the foreign ownership characteristics of businesses undertaking research and experimental development (R&D) activity in 1999–2000, with the results showing a significant contribution by majority foreign-owned businesses. Majority USA-owned businesses made the largest contribution to R&D activity of all foreign-owned businesses to the extent that they contributed more expenditure and human resources devoted to R&D than all other foreign-owned businesses combined. Majority foreign-owned businesses dominated R&D activity by wholesale and retail businesses, both in terms of R&D expenditure and human resources devoted to R&D. However the overall level of R&D in these industries was relatively low.

The manufacturing industry contributed more than any other to total R&D activity, and this contribution was shared evenly between majority foreign-owned and majority Australian-owned businesses.

INTRODUCTION

Economic globalisation is not a new phenomenon: countries have conducted trade for centuries. However, the intensity of international activity and interdependency of economies gathered pace rapidly over the 1980s and 90s, and has given rise to economic, social and environmental issues which need to be taken into account by policy makers and economic analysts. A working party under the sponsorship of the OECD is developing a framework to guide national statistical agencies in their development of statistical indicators of economic globalisation.

This framework for statistical indicators is currently in draft form (*Manual on Economic Globalisation Indicators* OECD, Paris, in progress). It outlines three sets of indicators necessary to measure economic globalisation:

- Indicators relating to trade.
- Indicators of foreign direct investment and the structure and activities of multinational firms.
- Indicators of the international dissemination of technology.

1 Business are determined to be majority foreign-owned if more than 50% of their equity is held by foreigners.

INTRODUCTION

continued

The ABS has for some time compiled traditional economic indicators for foreign trade and foreign direct investment. These data give some structural information, however, the ABS has not normally compiled data for the economic activity of multinational firms, nor the international dissemination of technology. The ABS has therefore embarked on a series of case studies to test the feasibility of synthesizing activity data for foreign-owned businesses and indicators of technology dissemination by blending data from a number of sources. Early studies examined new capital expenditure by foreign-owned businesses, the economic activity of foreign-owned business in the mining industry and the economic activity of foreign-owned businesses specialising in information technology.

This current study addresses the area of international dissemination of technology by creating indicators for research and development activity by majority foreign-owned businesses².

DATA SOURCES

This study uses data collected by the ABS as part of the Survey of Research and Experimental Development in respect of the year ended June 2000, published in *Research and Experimental Development, Businesses, 1999–2000* (ABS Cat. no. 8104.0). This survey sought data from all businesses identified by the ABS as likely to be undertaking R&D. Businesses responding to the R&D survey were linked to their foreign ownership characteristics from the ABS Survey of International Investment for those businesses included in both surveys.

For other businesses, a number of sources were used, with most ownership data compiled from extensive internet searches. For those businesses where the ABS was not able to determine ownership characteristics, data were imputed based on the ownership characteristics of other, similar businesses. This is discussed further in the Appendix: Businesses with Unknown Ownership.

Since the work reported in this article was completed, the ABS has released *Research and Experimental Development, Businesses, 2000–2001* (ABS Cat. no. 8104.0).

SCOPE OF THIS STUDY

The ABS compiles a range of R&D statistics for government and non-profit organisations, higher education organisations and businesses. This study aims to provide experimental indicators of international technology dissemination by foreign-owned businesses, and therefore focuses on R&D expenditure by businesses only.

RESULTS

In 1999-2000, expenditure on R&D by all businesses in Australia was estimated to be \$4,045m in current price terms, down slightly

² hereafter the word 'majority' is omitted but it is implied.

from \$4,068m in 1998–1999, following a pattern of small annual falls from the 1995–1996 financial year. The recently released estimates for 2000–2001 show an expenditure of \$4,828 in current price terms, an increase of 18% over the previous year, and reversing the decline in previous years.

In 1999–2000, foreign-owned businesses made a significant contribution to Australia's R&D activity (see Table 1), spending \$1,690m (42% of total R&D expenditure) and investing 10,747 person years (41% of total human resources devoted to R&D). Both Australian and foreign-owned businesses invested approximately 10% of their total R&D expenditure on capital items, however foreign-owned businesses spent a slightly higher proportion of their total expenditure on labour costs than Australian-owned businesses (47% and 43%, respectively) and a slightly lower proportion on other current expenses (44% and 47%, respectively).

TABLE 1. TOTAL R&D EXPENDITURE AND HUMAN RESOURCES DEVOTED TO R&D, 1999–2000

	Expenditure								Human Resources	
	Capital Expenditure		Labour Costs		Other Current Expenditure		Total			
	\$m	%	\$m	%	\$m	%	\$m	%	Person Years	%
Australian	241.1	61	1 008.9	56	1 104.9	60	2 354.9	58	15 362	59
% of Aust exp		10		43		47		100		
Foreign	152.8	39	787.8	44	749.8	40	1 690.4	42	10 747	41
% of foreign exp		9		47		44		100		
Total	393.9	100	1 796.7	100	1 854.7	100	4 045.3	100	26 109	100

For the mining industry (see Table 2), foreign-owned businesses had significantly less R&D expenditure than Australian-owned businesses (\$97m and \$176m respectively) and devoted fewer human resources to R&D (331 person years and 419 person years respectively). However, foreign-owned businesses reported higher capital expenditure on R&D than Australian-owned businesses (\$18m and \$10m respectively), which differs from the expenditure patterns for all other major industries.

On an industry basis, R&D activity was dominated by businesses in the manufacturing industry. Foreign-owned manufacturing businesses (see Table 3) contributed strongly to R&D, accounting for 45% of total manufacturing R&D expenditure and 44% of human

resources. Of the R&D expenditure by businesses manufacturing motor vehicles and parts and other transport equipment, \$295m (70%) was attributed to foreign-owned businesses, while for manufacturers of petroleum, coal, chemical and associated products, \$226m (55%) was attributed to foreign-owned businesses. Human resources devoted to R&D by both these types of manufacturers was also dominated by foreign-owned businesses (71% of the total for manufacturers of motor vehicles and parts and other transport equipment and 52% of the total for petroleum, coal, chemical and associated products).

For the wholesale and retail industries (see Table 4), foreign-owned businesses dominated R&D expenditure and human resources, spending \$265m (75% of the industry total) and investing 1,681 person years (68% of the industry total). This domination of R&D expenditure was across the board, with capital expenditure, labour costs and other current expenditure at 74%, 72% and 79% respectively.

RESULTS
continued

For the property and business services industry, R&D indicators for businesses involved in scientific research have been compiled separately to assist analysis (see Tables 5 and 6). For businesses involved in the property and business services industry (but not scientific research), the proportion of total R&D expenditure by foreign-owned businesses was similar to the all industries total (45% and 42% respectively). In contrast, for businesses mainly involved in scientific research, the proportion of total R&D expenditure by foreign-owned businesses was relatively low (8%).

Table 8 presents R&D indicators by country of majority ownership and provides estimates for businesses' source of R&D funds. The source of R&D funds has been aggregated into three main groups. Own Funds are the funds that are set aside by businesses for R&D as a normal part of their day-to-day activity, while Other Australian Funds are those funds sourced from other Australian-based businesses, Commonwealth government grants, other government funding and other funds. Overseas Funds are those funds that flow into Australia for R&D purposes.

TABLE 8. INDICATORS FOR R&D BY COUNTRY OF MAJORITY OWNERSHIP, 1999–2000

	Source of Funds									
	Own Funds		Other Australian Funds		Overseas Funds		Total Expenditure		Human Resources	
	\$m	%	\$m	%	\$m	%	\$m	%	Person Years	%
Australian	2 062.5	58	259.6	84	32.8	17	2 354.9	58	15 362	59
USA	769.1	22	23.8	8	99.6	52	892.5	22	6 187	24
European Union	448.5	13	16.5	5	12.4	7	477.4	12	2 878	11
Other	265.9	7	9.3	3	45.3	24	320.5	8	1 682	6
Total	3 546.0	100	309.1	100	190.2	100	4 045.3	100	26 109	100

Table 8 shows that businesses with majority ownership from the USA had a total R&D expenditure of \$893m (22% of total expenditure), more than the combined total for all other foreign-owned businesses. Most funding for businesses owned by major countries was sourced from funds generated from within the resident businesses. In contrast, the use of other Australian funds for R&D activity was dominated by Australian-owned businesses, while the use of overseas funds was dominated by foreign-owned businesses, mostly those with majority USA ownership. Businesses that were majority USA-owned used more than half of all funds that flowed into Australia for R&D purposes.

TABLE 9. INDICATORS FOR R&D BY SIZE OF BUSINESS

	Total Expenditure		Human Resources	
	\$m	%	Person Years	%
Small Businesses (employment 0–19)				
Australian	289.5	7	2 731	10

Total	399.6	10	3 762	14
Medium Businesses (employment 20–199)				
Australian	869.9	22	6 880	26
Foreign	342.0	8	2 225	9
Total	1 212.0	30	9 105	35
Large Businesses (employment 200+)				
Australian	1 195.5	30	5 751	22
Foreign	1 238.3	31	7 490	29
Total	2 433.8	60	13 242	51

Note: For confidentiality reasons it was necessary to combine some of the size categories used in Cat. no. 8104.0.

RESULTS

continued

Large foreign-owned businesses (those with employment of 200 or more) had the same share of R&D expenditure and human resources, both approximately 30% (see Table 9). This close correspondence between R&D expenditure and human resources for foreign-owned businesses continued in the medium and small business size ranges. Conversely, while large Australian-owned businesses, with 30% of R&D expenditure, used only 22% of human resources, smaller Australian-owned businesses had a proportionately smaller share of R&D expenditure than human resources.

OTHER STUDIES

Several globalisation case studies were undertaken prior to this exercise³. They examined the foreign ownership characteristics of businesses in other areas of interest. The study of businesses in the mining industry in 1997–1998 showed that foreign-owned businesses made a larger contribution to industry turnover than Australian-owned businesses (56% and 43% respectively), but a lower contribution to industry employment (40% and 59% respectively) and capital expenditure (34% and 59% respectively). Foreign-owned and Australian-owned businesses contributed similar amounts to expenditure on wages and salaries by the mining industry (50% and 49%).

A study of the ownership of businesses undertaking capital expenditure for the 1998–1999 financial year showed the lower contribution of foreign-owned businesses to capital expenditure was not restricted to the mining industry, with the capital expenditure by foreign-owned businesses across all industries estimated at \$11.5b (26%) and capital expenditure by Australian-owned businesses estimated at \$27.9b (62%).

The study of the foreign ownership characteristics of information technology businesses in the 1998–1999 financial year showed a strong contribution by foreign-owned businesses.

Foreign-owned businesses provided more employment than Australian-owned businesses (43% and 29% respectively) and gained higher total income (62% and 25% respectively).

USA-owned businesses had the largest economic activity of foreign-owned businesses to the extent that they rivalled Australian businesses in terms of employment (26% and 29% respectively) and exceeded Australian-owned businesses in terms of income (32% and 25% respectively).

3 Totals for previous studies did not all add to 100% because in those studies, ownership was not established or imputed for some businesses. See Appendix 1 for this study.

OTHER STUDIES
continued

Further studies are underway to investigate the foreign ownership characteristics of information technology businesses in respect of the 2000–2001 financial year and to profile the characteristics and activities of importing and exporting businesses.

FURTHER
INFORMATION

For more information about the foreign ownership of businesses undertaking R&D expenditure, contact Glen Malam on 02 6252 5040 or email <glen.malam@abs.gov.au>.

APPENDIX 1

BUSINESSES WITH UNKNOWN OWNERSHIP

When conducting this study, it was not possible to establish the country of ownership for a significant number of units (see Table A for their values). Detailed analysis of these unknown units showed that the overwhelming majority were either small or medium sized businesses. However, there were no reliable patterns of unknown business size or industry upon which assumptions of ownership could be based.

TABLE A. TOTAL R&D EXPENDITURE AND HUMAN RESOURCES DEVOTED TO R&D, 1999–2000

	<i>Expenditure</i>								<i>Human Resources</i>	
	<i>Capital Expenditure</i>		<i>Labour Costs</i>		<i>Other Current Expenditure</i>		<i>Total</i>			
	<i>\$m</i>	<i>%</i>	<i>\$m</i>	<i>%</i>	<i>\$m</i>	<i>%</i>	<i>\$m</i>	<i>%</i>	<i>Person Years</i>	<i>%</i>
Australian	204.5	52	765.9	43	965.3	52	1 935.7	48	10.9	42
Foreign	140.1	36	702.6	39	711.6	38	1 554.3	38	9.3	36
Unknown	49.3	13	328.2	18	177.8	10	555.4	14	6.0	23
Total	393.9	100	1 796.7	100	1 854.7	100	4 045.3	100	26.1	100

To create the data used in the main body of this paper, a country of ownership was imputed for each of the unknown units based on the ownership characteristics of similar businesses. All R&D units were stratified by size (large, medium and small businesses) and by fine industry detail. Within each stratum, the predominant country of ownership for known businesses was imputed as the country of ownership for any unknowns within that stratum.

- (a) Trend data used instead of seasonally adjusted.
(b) Sales is defined as gross non-farm product plus imports of goods and services less changes in private non-farm inventories.
(c) Corporate gross operating surplus include private corporate trading enterprises plus financial enterprises less imputed bank service charge.
GNFPfc = Gross non-farm product at factor cost.
(d) Interest paid component contains original data.
(e) By convention, zero productivity growth is assumed for industries in the non-market sector mainly government and some service industries.
Therefore, a better indicator of productivity change is provided by the series showing market sector constant price gross product per hour worked.

NATIONAL ACCOUNTS

GFS NET LENDING/BORROWING —, TOTAL PUBLIC SECTOR 2000-2001

Source: ABS (Cat. no. 5512.0), Annual data.

TOTAL PUBLIC SECTOR, SURPLUS/DEFICIT AS A PERCENTAGE OF GDP

A negative percentage of GDP represents a general government deficit. A positive percentage of GDP represents a general government surplus. Source: ABS (Cat. no. 5512.0), Annual data.

Prior to 1998-1999, government finance statistics (GFS) were compiled on a cash basis. For 1998-1999 and subsequent years, GFS have moved to an accruals-based system of recording. An Information Paper (Information Paper: Accrual-Based Government Finance Statistics (ABS Catalogue No. 5517.0)), aimed at helping users understand the statistics presented in the accruals-based GFS was issued on 13 March 2000.

Accruals-based GFS are presented in the form of Operating Statements, Cash Flow Statements, Balance Sheets and Statements of Stocks and Flows and the main analytical measures are described below:

Net Operating Balance (NOB) — the difference between GFS revenues and expenses. This measure reflects the sustainability of government operations;

Net Lending/Borrowing (NLB) — NOB minus the total net acquisition of non-financial assets. It represents the government's call on the financial sector and reflects the economic impact of government operations. A positive result reflects a net lending position and a negative result a net borrowing position.

Net Worth (NW) — the economic measure of 'wealth' is calculated as assets less liabilities for the general government (GG) sector and assets less liabilities and shares and other contributed capital for public corporations (financial and non-financial). Net worth of unlisted corporations will always be zero because owners' equity is

the difference between assets and liabilities. For listed corporations net worth will be positive or negative depending upon the difference between the value of shares on the balance sheet and the value of traded shares. As the equity of public corporations held by the GG sector consolidate out at the total public sector level, only equity held external to the public sector will appear.

Change in Net Worth (CNW) — this is the change in NW over two adjacent periods. CNW (due to transactions) is also equivalent to the NOB and excludes the impact of revaluations and other changes in volume of assets and liabilities.

Surplus(+)/Deficit(-) — is a cash-based measure and is calculated as:

Net cash flows from operating activities
plus Net cash flows from investments in non-financial assets
less Distributions paid (public corporations sector only)
less Acquisitions of assets under finance leases and similar arrangements

The new Surplus(+)/Deficit(-) measure, while conceptually comparable to the previous Deficit(+)/Surplus(-) measure has undergone a sign change—a surplus is now shown as positive and in practice has been compiled on a different methodological basis to that of previous years, hence resulting in a break in series. The Surplus/Deficit is the cash-based equivalent of Net Lending/Borrowing described above.

(a) The estimates for goods and services are not necessarily consistent with the corresponding monthly estimates, shown in Tables 2.4 to 2.7 obtained from *International Trade in Goods and Services, Australia* (Cat. no. 5368.0) — issued monthly, due to data revisions to the original monthly data not feeding into the quarterly original series until the next quarterly release of *Balance of Payments and International Investment Position, Australia* (Cat. no. 5302.0).

(b) In addition to the differences outlined in footnote (a), the quarterly seasonally adjusted estimates for goods and services are not necessarily consistent with the corresponding monthly seasonally adjusted estimates, shown in Table 2.1 obtained from *International Trade in Goods and Services, Australia* (Cat. no. 5368.0) — issued monthly, because of the independent seasonal adjustment of the monthly and quarterly data.

(a) For all time periods, estimates for *Sugar, sugar preparations and honey* are included in *Other non-rural*.

(b) The estimates for goods and services are not necessarily consistent with the corresponding quarterly estimates, shown in Table 2.1 obtained from *Balance of Payments and International Investment Position, Australia* (Cat. no. 5302.0) due to data revisions to the original monthly data not feeding into the quarterly original series until the next quarterly release of *Balance of Payments and International Investment Position, Australia* (Cat. no. 5302.0).

(c) In addition to the differences outlined in footnote (b), the monthly seasonally adjusted estimates for goods and services are not necessarily consistent with the corresponding quarterly seasonally adjusted estimates, shown in Table 2.1 obtained from *Balance of Payments and International Investment Position, Australia* (Cat. no. 5302.0), because of the independent seasonal adjustment of the monthly and quarterly data.

(a) The exports and imports data presented in this table differ from those in Tables 2.1 to 2.5 because they are recorded on an international trade basis rather than a balance of payments basis and are compiled from a different edition of the data.

(b) The ten member nations of ASEAN are Brunei, Cambodia, Indonesia, Laos, Malaysia Myanmar, Philippines, Singapore, Thailand and Vietnam.

(c) The fifteen Member States of European Union (EU) are Austria, Belgium, Denmark, Finland, France, Germany, Greece, Ireland, Italy, Luxembourg, Netherlands, Portugal, Spain, Sweden and the United Kingdom. Figures for Belgium and Luxembourg are presented as combined totals.

(a) The exports and imports data presented in this table differ from those in Tables 2.1 to 2.5 because they are recorded by a foreign trade basis rather than a balance of payments basis and are compiled from a different edition of the data.

(b) The fifteen Member States of European Union (EU) are Austria, Belgium, Denmark, Finland, France, Germany, Greece, Ireland, Italy, Luxembourg, Netherlands, Portugal, Spain, Sweden and the United Kingdom. Figures for Belgium and Luxembourg are presented as combined totals.

(a) There is a series break between 1985–86 and 1986–87, resulting from a change in survey methodology for engineering construction, introduced from the September quarter 1986. The most significant was the introduction of public sector units into the survey.

- (a) All annual data are end of period.
- (b) All annual data are annual averages.
- (c) All annual data are aggregates.
- (d) From the March quarter 1998, the scope of the quarterly Survey of Tourist Accommodation has included licensed hotels, motels and guest houses with facilities and serviced apartments with 15 or more rooms or units. The survey no longer collects data on caravan parks, holiday flats, units and houses or visitor hostels on an ongoing basis.

(a) Original data provided.

(b) The weights used are based on the average share of Australia's imports from the US, Japan, UK and West Germany from 1984–85 to 1987–88. The four countries are the source for about 60 per cent of Australia's imports. Observations are quarterly averages. A rise (fall) implies a deterioration (improvement) in Australian costs and prices relative to our four major trading partners after adjusting for exchange rate changes.

(c) The adjusted CPI index is the ratio of the Australian consumer price index to the weighted geometric average of the exchange rate adjusted consumer price indexes of Australia's four major trading partners.

(d) The adjusted GDP deflator index is the ratio of the GDP deflator for Australia to the weighted geometric average of the exchange rate adjusted GDP deflators of Australia's four major trading partners.

(e) The adjusted unit labour cost index is the ratio of unit labour costs in the non-farm sector of the Australian economy to the weighted geometric average of the exchange rate adjusted unit labour cost indexes estimated for the business sectors of Australia's four major trading partners.

(a) In April 2001 the ABS implemented a redesigned Labour Force Survey Questionnaire. To ensure continuity revisions have been made to core labour force series. For details refer to *Information Paper: Implementing the Redesigned Labour Force Survey Questionnaire* (Cat. no. 6295.0).

(b) Series is non-seasonal. Original data provided instead of seasonally adjusted and trend data.

(c) For unemployment and participation rates, the changes are given as percentage points.

(a) In April 2001 the ABS implemented a redesigned Labour Force Survey Questionnaire. To ensure continuity revisions have been made to core labour force series. For details refer to *Information Paper: Implementing the Redesigned Labour Force Survey Questionnaire* (Cat. no. 6295.0).

(b) For civilian population aged 15+ seasonally adjusted and trend estimates are not available. Original data provided.

(c) For unemployment and participation rates, the changes are given as percentage points.

(a) Total population increase is equal to the change in population. Prior to 1992 this is not equal to natural increase (live births less deaths) plus net immigration because of the distribution of the intercensal discrepancy. There is now an intercensal discrepancy for 1986-91.
 (b) Includes Cocos (Keeling) Islands, Christmas Island and Jervis Bay Territory from September quarter 1993.

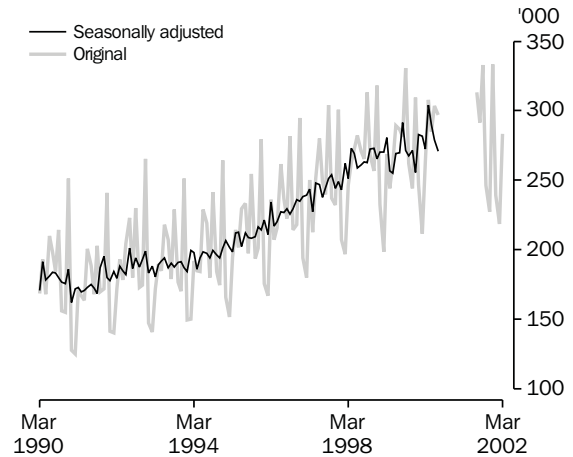

Source: Australian Demographic Statistics (Cat. no. 3101.0).

SHORT TERM VISITOR ARRIVALS

Source: ABS (Cat. no. 3401.0), Monthly data.

SHORT TERM RESIDENT DEPARTURES

Source: ABS (Cat. no. 3401.0), Monthly data.

There have been significant delays in the receipt of final Overseas Arrivals and Departures (OAD) data from August 2000 onwards from the Department of Immigration and Multicultural and Indigenous Affairs (DIMIA). Because of the use of overseas arrivals and departures data in population estimates which affects State and Territory Government funding, DIMIA is giving priority to processing passenger cards for July 2001 and subsequent months before finalising processing for earlier months — August 2000 through to June 2001.

(a) The indexes in Table 7.4 combine ordinary time and overtime hourly rates and therefore include the effect of any changes in overtime penalty rates but are not affected by changes in penalty payments (which fluctuate depending on the number of hours paid at penalty rates) and allowances (which fluctuate according to how much work is performed under special work conditions e.g. height, dirt and/or heat allowances).

(a) Average non-farm wages, salaries and supplements per wage and salary earner. Seasonally adjusted data.

(b) Base for index: 1986–87 = 100.0.

(c) Deflated by the Gross National Expenditure deflator.

(d) Non-farm wages, salaries and supplements, plus payroll tax less employment subsidies plus fringe benefits tax per hours worked by non-farm wage and salary earners.

(e) Ratio of derived private non-farm corporate wages, salaries and supplements plus payroll tax less employment subsidies, plus fringe benefits tax paid by the private non-farm corporate sector to derived private non-farm corporate sector gross product at factor cost plus payroll tax less employment subsidies plus fringe benefits tax.

(f) Nominal unit labour costs (see footnote (g)) deflated by the derived implicit price deflator for gross non-farm product.

(g) Ratio of nominal hourly labour costs to average hourly labour productivity (real gross non-farm product per hour worked by all employed persons).

- (a) Excludes Commonwealth and State Government and interbank deposits but includes deposits of the non-bank sector with the Reserve Bank.
- (b) Currency plus bank deposits (including certificate of deposit with trading banks) of the private non-bank sector.
- (c) Borrowings (other than from banks and related corporations) by permanent building societies, credit co-operatives, finance companies, authorised money market dealers, pastoral finance companies, money market corporations, general financiers and cash management trusts; less borrowings by authorised money market dealers from those non-bank intermediaries. Breaks occur from time to time due to changes in number of reporting corporations.
- (d) M3 plus borrowing from private sector by non-bank financial intermediaries less the latter's holding of currency and bank deposits.
- (e) Holdings of notes and coin by private sector, plus deposits of banks with the Reserve Bank and Reserve Bank Liabilities to the private non-bank sector.
- (f) Loans and advances of those financial intermediaries whose deposit liabilities are included in broad money.
- (g) Bills outstanding under acceptance and endorsement commitments by banks.
- (h) Credit is equal to bank bills outstanding plus loans and advances by financial intermediaries whose liabilities are included in broad money.

(a) Rates are for the last trading day of the reference period.

(b) On January 1, 1999 eleven European Union nations launched the euro, a single currency giving control of interest rate and exchange rate policy to the European Central Bank. The euro was immediately available for electronic financial and business transactions, but euro coins and notes will not be issued to the general public until January 2002. The participating nations are Austria, Belgium, Finland, France, Germany, Ireland, Italy, Luxembourg, the Netherlands, Portugal and Spain. Greece adopted the Euro on 1 January 2001 and Britain, Denmark and Sweden chose not to adopt the euro.

(c) May 1970 = 100.0.

(a) Extreme care should be exercised in using the seasonally adjusted and trend series for turnover of retail establishments for the Northern Territory. The highly erratic nature of these data makes reliable estimation of the seasonal pattern and of the trend very difficult. *Source: Retail Trade, Australia* (Cat. no. 8501.0).

(a) Original sales data are provided by the Federal Chamber of Automotive Industries and sourced from VFACTS.

(b) Extreme care should be exercised in using the seasonally adjusted series for the number of new motor vehicle sales in Tasmania, the Northern Territory and the Australian Capital Territory. The highly erratic nature of these data makes reliable estimation of the seasonal pattern very difficult.

Source: Original sales data are provided by the Federal Chamber of Automotive Industries and sourced from VFACTS and *Sales of New Motor Vehicles, Electronic Publication* (Cat. no. 9314.0).

10.11	Employment index	130
10.12	Unemployment rates.	131
10.13	M1 plus quasi-money index	132

NOTES

1. The statistics for Germany in these tables refer to Germany after unification.

2. Consumer price index (CPI). Due to the many differences in the structure of the housing sector in different countries and in the way that housing is treated in their CPIs, a simple comparison of All items (or headline) CPIs is often inappropriate. To provide a better basis for international comparisons, the Fourteenth International Conference of Labour Statisticians adopted a resolution which called for countries to “provide for dissemination at the international level of an index which excludes shelter, in addition to the all-items index.”

Table 10.8 presents indexes for selected countries on a basis consistent with the above resolution and comparable to the Australian series *All groups excluding housing*. The series in this table are presented on a reference base consistent with that used for publication of the Australian CPI (i.e. 1989–90 = 100.0) and as such are not directly comparable with those for All items published in Table 10.7 (presented on a reference base of 1995 = 100.0).

EXPLANATORY NOTES

Explanatory notes in the form found in other ABS publications are not included in *Australian Economic Indicators*. Readers are directed to the explanatory notes contained in related ABS publications.

INTRODUCTION

Australian Economic Indicators presents a statistical summary of the Australian economy, together with international comparisons of selected economic indicators. Except for the special February issue, it also includes commentaries, articles, technical notes, and the Experimental Composite Leading Indicator. *Australian Economic Indicators* has been developed primarily as a reference document, providing a broad basis for economic analysis and research.

The tables contain mainly ABS data, although data from other sources are included. For ABS sourced data, the publication name and catalogue number are included in the footnotes of the tables. If the data are from other sources, the source organisation's name is included in the footnotes.

MOST RECENT DATA

The statistics shown are the latest available as at 16 July 2002.

RELATED PUBLICATIONS

A list of related publications is included in each chapter under the table of contents. These include publications which are the source of the data in the tables and other related publications.

Other useful sources of detailed information are the 'Concepts, Sources and Methods' and classification publications. These are released irregularly, each relating to a specific publication, collection or standard classification. The publications most relevant to *Australian Economic Indicators* include:

- *Australian and New Zealand Standard Industrial Classification (ANZSIC)* (Cat. no. 1292.0)
- *Classification Manual for Government Financial Statistics, Australia* (Cat. no. 5514.0)
- *Australian National Accounts: Concepts, Sources and Methods* (Cat. no. 5216.0)
- *Balance of Payments, Australia: Concepts, Sources and Methods* (Cat. no. 5331.0)
- *A Guide to Labour Statistics* (Cat. no. 6102.0)
- *The Australian Consumer Price Index: Concepts, Sources and Methods* (Cat. no. 6461.0)

SEASONALLY ADJUSTED AND TREND ESTIMATES

Series in this publication include original, seasonally adjusted and trend series. Special care should always be taken in interpreting data for the most recent months and quarters. Some of the original and all of the seasonally adjusted and trend series are subject to revision.

SEASONALLY ADJUSTED
AND TREND ESTIMATES
continued

It is not uncommon for movements in original time series data and those provided from seasonally adjusted and trend series to differ significantly. Movements in a time series of original data may reflect several factors, including:

- longer-term changes in the item being measured (i.e. trend movements);
- short-term irregular changes;
- regular seasonal influences;
- normal 'trading', 'working' or 'pay' day patterns; and
- systematic holiday effects.

Seasonal adjustment and trend estimates help the user to identify the effect of these influences on the time series. Seasonal adjustment removes the effect of the last three listed influences from the data, leaving only the trend and short-term irregular movements. Trend estimates are then obtained by removing the effects of the short-term irregularities, which in many series can be a major contributor to movements in the original data. By comparing the historical trend series with the seasonally adjusted series, the user can identify the short-term irregularities which have influenced the original series.

Trend estimates produced by the ABS are based on Henderson Moving Averages, and are therefore subject to revision especially for the latest few months or quarters.

The general methods used in the ABS for making seasonal adjustments are described in *Seasonally Adjusted Indicators, Australia 1983* (1308.0). The method used to estimate trends is described in *Information Paper: A Guide to Smoothing Time Series — Estimates of Trend* (Cat. no. 1316.0).

Concurrent seasonal
adjustment and trend
estimates

The ABS has introduced the use of concurrent seasonal adjustment to derive the combined adjustment factors for the Retail Series. This means that data from the current month are used in estimating seasonal and trading day factors for the current and previous months. Concurrent adjustment can result in revisions each month to estimates for earlier periods. However, in most instances, the only noticeable revisions will be to the combined adjustment factors for the current month, the previous month and the same month a year ago. As a result of the concurrent seasonal adjustment the trend estimates are also concurrently estimated.

CHAIN VOLUME
MEASURES

The chain volume measures appearing in this publication are annually-reweighted chain Laspeyres indexes referenced to the current price values in a chosen reference year (i.e. the year when the quarterly chain volume measures sum to the current price annual values). Chain Laspeyres volume measures are compiled by linking together (compounding) movements in volumes, calculated using the average prices of the previous financial year, and applying the compounded movements to the current price

CHAIN VOLUME MEASURES
continued

estimates of the reference year. Quarterly chain volume estimates are benchmarked to annual chain volume estimates, so that the quarterly estimates for a financial year sum to the corresponding annual estimate.

Chain volume measures are not generally additive. In other words, in general, component chain volume measures do not sum to a total in the way original current price components do. In order to minimise the impact of this property, the ABS uses the latest base year as the reference year (i.e. the year prior to the latest complete financial year). By adopting this approach, non-additivity does not exist for the quarters following the reference year (currently 1997–98) and is relatively small for the quarters in the reference year and the quarters immediately preceding it. The latest base year and the reference year will be advanced one year with the release of the June quarter Australian National Accounts (*Australian Economic Indicators*, October issue). A change in reference year changes levels but not growth rates, although some revision to recent growth rates can be expected because of the introduction of a more recent base year (and revisions to the current price estimates underlying the chain volume measures).

OTHER USAGES

Columns in bold in the tables indicate a total. Columns usually sum from the left, with the total appearing on the right. A major exception is the balance of payments and international investment position data in Chapter 2. These data sum from the right with the total appearing on the left — in keeping with the international standard for these statistics. Some tables include sub-total columns and columns which need to be subtracted to obtain the total. Where this is not clear a footnote explains the relationship between the columns.

Columns in italics indicate that seasonally adjusted or trend estimates are not available for that column, and original data are provided instead.

Yearly periods shown as, e.g. 1998–1999, refer to the fiscal year ended 30 June 1999.

Where figures have been rounded, discrepancies may occur between sums of the component items and totals. Percentage changes may not be exactly comparable to tabulated source series due to rounding of the source series, the percentage change series or both.

METRIC PREFIXES

Deca (da) = ten
Hecto (h) = hundred
Kilo (k) = thousand
Mega (M) = million
Giga (G) = thousand million
Tera (T) = million million
