(a) (b) (c)

(d)

Trend data used instead of seasonally adjusted. Sales is defined as gross non-farm product plus imports of goods and services less changes in private non-farm inventories. Corporate gross operating surplus include private corporate trading enterprises plus financial enterprises less imputed bank service charge. GNPFrc = Gross non-farm product at factor cost. Interest paid component contains original data. By convention, zero productivity growth is assumed for industries in the non-market sector, mainly government and some service industries. Therefore, a better indicator of productivity change is provided by the series showing market sector constant price gross product per hour worked. (e)

ACCOUNTS GFS NET OPERATING BALANCE, TOTAL PUBLIC SECTOR 2001-2002 AND 2002-2003

PNFC = Public Non-Financial Corporations PFC = Public Financial Corporations Source: cat. no. 5512.0.

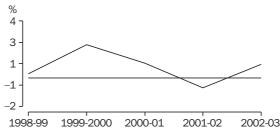

Accruals–based Government Finance Statistics, (GFS) are presented in the form of Operating Statements, Cash Flow Statements, Balance Sheets and Statements of Stocks and Flows and the main analytical measures are described below:

Net Operating Balance(NOB) – the difference between GFS revenues and expenses. This measure reflects the sustainability of government operations.

Net Lending/Borrowing(NLB) – NOB minus the total net acquisition of non-financial assets. It represents the government's call on the financial sector and reflects the economic impact of government operations. A positive result reflects a net lending position and a negative result a net borrowing position.

Net Worth(NW) – the economic measure of 'wealth' is calculated as assets less liabilities for the general government (GG) sector and assets less liabilities and shares and other contributed capital for public corporations (financial and non-financial). Net worth of unlisted corporations will always be zero because owners' equity is the difference between assets and liabilities. For listed corporations net worth will be positive or negative depending upon the difference between the value of shares on the balance sheet and the value of traded shares. As the equity of public

TOTAL PUBLIC SECTOR, NET LENDING/BORROWING AS A PERCENTAGE OF GDP

A negative percentage of GDP represents a net borrowing position. A positive percentage of GDP represents a net lending position. Source: cat. no. 5512.0.

corporations held by the General Government, (GG) sector consolidate out at the total public sector level, only equity held external to the public sector will appear.

Change in Net Worth(CNW) – this is the change in NW over two adjacent periods. CNW (due to transactions) is also equivalent to the NOB and excludes the impact of revaluations and other changes in volume of assets and liabilities.

Surplus(+)/Deficit(-) – is a cash-based measure and is calculated as:

Net cash flows from operating activities

- plus Net cash flows from investments in non-financial assets
- less Distributions paid (public corporations sector only)
- less Acquisitions of assets under finance leases and similar arrangements

The new Surplus(+)/Deficit(-) measure, while conceptually comparable to the previous Deficit(+)/Surplus(-) measure has undergone a sign change – a surplus is now shown as positive and in practice has been compiled on a different methodological basis to that of previous years, hence resulting in a break in series. The Surplus/Deficit is the cash-based equivalent of Net Lending/Borrowing described above.

The estimates for goods and services are not necessarily consistent with the corresponding monthly estimates, shown in Tables 2.4 to 2.7 obtained from *International Trade in Goods and Services, Australia,* (cat. no. 5368.0) issued monthly, due to data revision to the original monthly data not feeding into the quarterly original series until the next quarterly release of *Balance of Payments and International Investment Position, Australia,* (cat. no. 5302.0). In addition to the differences outlined in footnote (a), the quarterly seasonally adjusted estimates for goods and services are not necessarily consistent with the corresponding monthly seasonally adjusted estimates, shown in Table 2.1 (a)

(a) For all time periods, estimates for sugar, sugar preparations and honey are included in Other non-rural.

(b) The estimates for goods and services are not necessarily consistent with the corresponding quarterly estimates, shown in Table 2.1 obtained from Balance of Payments and International Investment Position, Australia, (cat. no. 5302.0) due to data revisions to the original monthly data not feeding into the quarterly original series until the next quarterly release of Balance of Payments and International Investment Position, Australia, (cat. no. 5302.0).

(c) In addition to the differences outlined in footnote (b), the monthly seasonally adjusted estimates for goods and services are not necessarily consistent with the corresponding quarterly seasonally adjusted estimates, shown in Table 2.1 obtained from Balance of *Payments and International Investment Position, Australia,* (cat. no. 5302.0), because of the independent seasonal adjustment of the monthly and quarterly data.

Derived from current price original data. The net international investment position ratios are derived from the net foreign liabilities at the end of the period and GDP for the year ended with that period. Other ratios use only data for the year ended with the period shown. For the latest reference period, GDP for the year ended with the previous quarter is used. (a)

(a)

The exports and imports data presented in this table differ from those in Tables 2.1 to 2.5 because they are recorded by a foreign trade basis rather than a balance of payments basis and are compiled from a different edition of the data. The fifteen Member States of the European Union (EU) are Austria, Belgium, Denmark, Finland, France, Germany, Greece, Ireland, Italy, Luxembourg, Netherlands, Portugal, Spain, Sweden, and the United Kingdom. Figures for Belgium and Luxembourg are presented as combined totals. (b)

(a) All annual data are end of period.
(b) All annual data are annual averages.
(c) All annual data are aggregates.
(d) From the March quarter 1998, the scope of the quarterly Survey of Tourist Accommodation has included licensed hotels, motels and guest houses with facilities and serviced apartments with 15 or more rooms or units. The survey no longer collects data on caravan parks, holiday flats, units and houses or visitor hostels on an ongoing basis.

(a) (b)

Original data provided. The weights used are based on the average share of Australia's imports from the US, Japan, UK and West Germany from 1984–1985 to 1987–1988. The four countries are the source for about 60 per cent of Australia's imports. Observations are quarterly averages. A rise (fall) implies a deterioration (improvement) in Australian costs and prices relative to our four major trading partners after adjusting for exchange rate changes. The adjusted CPI index is the ratio of the Australian consumer price index to the weighted geometric average of the exchange rate adjusted GDP deflator index is the ratio of the GDP deflator for Australia to the weighted geometric average of the exchange rate adjusted GDP deflators of Australia's four major trading partners. The adjusted GDP deflator index is the ratio of the GDP deflator for Australia to the weighted geometric average of the exchange rate adjusted GDP deflator index is the ratio of unit labour costs in the non-farm sector of the Australian economy to the weighted geometric average of the exchange rate adjusted unit labour cost indexes estimated for the business sectors of Australia's four major trading partners.

(a) In April 2001 the ABS implemented a redesigned Labour Force Survey Questionnaire. To ensure continuity revisions have been made to core labour force series. For details refer to Information Paper : *Implementing the Redesigned Labour Force Survey Questionnaire*, (cat. no. 6295.0).
(b) Series is non-seasonal. Original data provided instead of seasonally adjusted and trend data.
(c) For unemployment and participation rates, the changes are given as percentage points.

(a) In April 2001 the ABS implemented a redesigned Labour Force Survey Questionnaire. To ensure continuity revisions have been made to core labour force series. For details refer to Information Paper : *Implementing the Redesigned Labour Force Survey Questionnaire*, (cat. no. 6295.0).
(b) Series is non-seasonal. Original data provided instead of seasonally adjusted and trend data.
(c) For unemployment and participation rates, the changes are given as percentage points.

TABLE 6.9 INDUSTRIAL DISPUTES BY INDUSTRY : WORKING DAYS LOST(a)

As of December 2003, the ABS stopped producing industrial Disputes as a monthly series and now publishes quarterly data only. It is recommended that data is not compared to the monthly statistics provided in previous AEI issues. Comprises Agriculture, forestry and fishing; Electricity, gas and water supply; Wholesale trade; Retail trade; Accommodation, cafes and restaurants; Finance and insurance; Property and business services; Government administration and defence, and Personal and other compared to the service of the servi (b)

(c) Monthly figures relate to twelve months ending in reference month.

(a) Total population increase is equal to the change in population. Prior to 1992 this is not equal to natural increase (live births less deaths) plus net immigration because of the distribution of the intercensal discrepancy. There is now an intercensal discrepancy for 1986–1991.
 (b) Includes Cocos (Keeling) Islands, Christmas Island and Jervis Bay Territory from September quarter 1993.

(a) The indexes in Table 7.4 combine ordinary time and overtime hourly rates and therefore include the effect of any changes in overtime penalty rates but are not affected by changes in penalty payments (which fluctuate depending on the number of hours paid at penalty rates) and allowances (which fluctuate according to how much work is performed under special work conditions e.g. height, dirt and/or heat allowances).

(a) (b) (c) (d) (e)

Average non-farm wages, salaries and supplements per wage and salary earner. Seasonally adjusted data. Base for index: 1986–87 = 100.0. Deflated by the Gross National Expenditure deflator. Non-farm wages, salaries and supplements, plus payroll tax less employment subsidies plus fringe benefits tax per hours worked by non-farm wage and salary earners. Ratio of derived private non-farm corporate wages, salaries and supplements plus payroll tax less employment subsidies, plus fringe benefits tax paid by the private non-farm corporate sector to derived private non-farm corporate sector gross product at factor cost plus payroll tax less employment subsidies plus fringe benefits tax. Nominal unit labour costs (see footnote (g)) deflated by the derived implicit price deflator for gross non-farm product. Ratio of nominal hourly labour costs to average hourly labour productivity (real gross non-farm product per hour worked by all employed persons).

(f) (g) persons).

(a) (b) (c)

Excludes Commonwealth and State Government and interbank deposits but includes deposits of the non-bank sector with the Reserve Bank. Currency plus bank deposits (including certificate of deposit with trading banks) of the private non-bank sector. Borrowings (other than from banks and related corporations) by permanent building societies, credit co-operatives, finance companies, authorised money market dealers, pastoral finance companies, money market corporations, general financiers and cash management trusts; less borrowings by authorised money market dealers from those non-bank intermediaries. Breaks occur from time to time due to changes in number of reporting corporations. M3 plus borrowing from private sector by non-bank financial intermediaries less the latter's holding of currency and bank deposits. Holdings of notes and coin by private sector, plus deposits of banks with the Reserve Bank and Reserve Bank Liabilities to the private non-bank sector. Loans and advances of those financial intermediaries whose deposit liabilities are included in broad money. Bills outstanding under acceptance and endorsement commitments by banks. Credit is equal to bank bills outstanding plus loans and advances by financial intermediaries whose liabilities are included in broad money.

(a) Rates are for the last trading day of the reference period.
 (b) On January 1, 1999 eleven European Union nations launched the euro, a single currency giving control of interest rate and exchange rate policy to the European Central Bank. The euro was immediately available for electronic financial and business transactions, but euro coins and notes will not be issued to the general public until January 2002. The participating nations are Austria, Belgium, Finland, France, Germany, Ireland, Italy, Luxembourg, the Netherlands, Portugal and Spain. Greece adopted the Euro on 1 January 2001 and Britain, Denmark and Sweden chose not to adopt the euro.
 (c) May 1970 = 100.0.

(a) Excludes Jervis Bay Territory from September quarter 1993.
(b) Includes Cocos (Keeling) Islands, Christmas Island and Jervis Bay Territory from September quarter 1993.
(c) Special arrangements were put in place to estimate net overseas migration for September and December Quarters 2000, and thereby enable production of State and Territory population estimates. For more details see the December 2000 issue of Australian Demographic Statistics, cat. no. 3101.0.

(a) Extreme care should be exercised in using the seasonally adjusted and trend series for turnover of retail establishments for the Northern Territory. The highly erratic nature of these data makes reliable estimation of the seasonal pattern and of the trend very difficult.

(a) Original sales data are provided by the Federal Chamber of Automotive Industries and sourced from VFACTS.
 (b) Extreme care should be exercised in using the seasonally adjusted series for the number of new motor vehicle sales in Tasmania, the Northern Territory and the Australian Capital Territory. The highly erratic nature of these data makes reliable estimation of the seasonal pattern very difficult.

NOTES

1. The statistics for Germany in these tables refer to Germany after unification.

2. Consumer price index (CPI). Due to the many differences in the structure of the housing sector in different countries and in the way that housing is treated in their CPIs, a simple comparison of All items (or headline) CPIs is often inappropriate. To provide a better basis for international comparisons, the Fourteenth International Conference of Labour Statisticians adopted a resolution which called for countries to *"provide for dissemination at the international level of an index which excludes shelter, in addition to the all-items index."*

Table 10.8 presents indexes for selected countries on a basis consistent with the above resolution and comparable to the Australian series *All groups excluding housing*. The series in this table are presented on a reference base consistent with that used for publication of the Australian CPI

(i.e. 1989-90 = 100.0) and as such are not directly comparable with those for All items published in Table 10.7 (presented on a reference base of 1995 = 100.0).

| EXPLANATORY NOTES | Explanatory notes in the form found in other ABS publications are not included in <i>Australian Economic Indicators</i> . Readers are directed to the explanatory notes contained in related ABS publications. | | | | |
|---|---|--|--|--|--|
| INTRODUCTION | <i>Australian Economic Indicators</i> presents a statistical summary of the Australian economy, together with international comparisons of selected economic indicators. Except for the special February issue, it also includes commentaries, articles, technical notes, and the Experimental Composite Leading Indicator. <i>Australian</i> <i>Economic Indicators</i> has been developed primarily as a reference document, providing a broad basis for economic analysis and research. | | | | |
| | The tables contain mainly ABS data, although data from other sources are included. For ABS sourced data, the publication name and catalogue number are included in the footnotes of the tables. If the data are from other sources, the source organisation's name is included in the footnotes. | | | | |
| MOST RECENT DATA | The statistics shown are the latest available as at 9 July 2004. | | | | |
| RELATED PUBLICATIONS | A list of related publications is included in each chapter under the table of contents. These include publications which are the source of the data in the tables and other related publications. | | | | |
| | Other useful sources of detailed information are the 'Concepts, Sources and Methods' and classification publications. These are released irregularly, each relating to a specific publication, collection or standard classification. The publications most relevant to <i>Australian Economic Indicators</i> include: | | | | |
| | Australian and New Zealand Standard Industrial Classification (ANZSIC), cat. no. 1292.0 | | | | |
| | Classification Manual for Government Financial Statistics, Australia, cat. no. 5514.0 | | | | |
| | Australian National Accounts: Concepts, Sources and Methods, cat. no. 5216.0 | | | | |
| | Balance of Payments, Australia: Concepts, Sources and Methods, cat. no. 5331.0 | | | | |
| | Labour Statistics: Concepts, Sources and Methods, cat. no. 6102.0 | | | | |
| | • The Australian Consumer Price Index: Concepts, Sources and Methods, cat. no. 6461.0 | | | | |
| SEASONALLY ADJUSTED AND TREND ESTIMATES | Series in this publication include original, seasonally adjusted and trend series. Special care should always be taken in interpreting data for the most recent months and quarters. Some of the original and all of the seasonally adjusted and trend series are subject to | | | | |

revision.

SEASONALLY ADJUSTED AND TREND ESTIMATES continued

It is not uncommon for movements in original time series data and those provided from seasonally adjusted and trend series to differ significantly. Movements in a time series of original data may reflect several factors, including:

- longer-term changes in the item being measured (i.e. trend movements);
- short-term irregular changes;
- regular seasonal influences;
- normal 'trading', 'working' or 'pay' day patterns; and
- systematic holiday effects.

Seasonal adjustment and trend estimates help the user to identify the effect of these influences on the time series. Seasonal adjustment removes the effect of the last three listed influences from the data, leaving only the trend and short-term irregular movements. Trend estimates are then obtained by removing the effects of the short-term irregularities, which in many series can be a major contributor to movements in the original data. By comparing the historical trend series with the seasonally adjusted series, the user can identify the short-term irregularities which have influenced the original series.

Trend estimates produced by the ABS are based on Henderson Moving Averages, and are therefore subject to revision especially for the latest few months or quarters.

The general methods used in the ABS for making seasonal adjustments are described in Seasonally Adjusted Indicators, Australia 1983 (cat. no. 1308.0). The method used to estimate trends is described in Information Paper: A Guide to Smoothing Time Series – Estimates of Trend (cat. no. 1316.0).

Concurrent seasonal The ABS has introduced the use of concurrent seasonal adjustment to derive the combined adjustment factors for the Retail Series. estimates This means that data from the current month are used in estimating seasonal and trading day factors for the current and previous months. Concurrent adjustment can result in revisions each month to estimates for earlier periods. However, in most instances, the only noticeable revisions will be to the combined adjustment factors for the current month, the previous month and the same month a year ago. As a result of the concurrent seasonal adjustment the trend estimates are also concurrently estimated.

CHAIN VOLUME The chain volume measures appearing in this publication are MEASURES annually-reweighted chain Laspeyres indexes referenced to the current price values in a chosen reference year (i.e. the year when the quarterly chain volume measures sum to the current price annual values). Chain Laspeyres volume measures are compiled by linking together (compounding) movements in volumes, calculated using the average prices of the previous financial year, and applying the compounded movements to the current price

adjustment and trend

| CHAIN VOLUME MEASURES continued | estimates of the reference year. Quarterly chain volume estimates are benchmarked to annual chain volume estimates, so that the quarterly estimates for a financial year sum to the corresponding annual estimate. |
|---------------------------------|--|
| | Chain volume measures are not generally additive. In other words, in general, component chain volume measures do not sum to a total in the way original current price components do. In order to minimise the impact of this property, the ABS uses the latest base year as the reference year (i.e. the year prior to the latest complete financial year). By adopting this approach, non-additivity does not exist for the quarters following the reference year (currently 2001–2002) and is relatively small for the quarters in the reference year and the quarters immediately preceding it. The latest base year and the reference year will be advanced one year with the release of the June quarter Australian National Accounts (<i>Australian Economic Indicators</i> , October issue). A change in reference year changes levels but not growth rates, although some revision to recent growth rates can be expected because of the introduction of a more recent base year (and revisions to the current price estimates underlying the chain volume measures). |
| OTHER USAGES | Columns in bold in the tables indicate a total. Columns usually sum from the left, with the total appearing on the right. A major exception is the balance of payments and international investment position data in Chapter 2. These data sum from the right with the total appearing on the left – in keeping with the international standard for these statistics. Some tables include sub-total columns and columns which need to be subtracted to obtain the total. Where this is not clear a footnote explains the relationship between the columns. |
| | Columns in italics indicate that seasonally adjusted or trend estimates are not available for that column, and original data are provided instead. |
| | Yearly periods shown as, e.g. 2000–2001, refer to the fiscal year ended 30 June 2001. |
| | Where figures have been rounded, discrepancies may occur between sums of the component items and totals. Percentage changes may not be exactly comparable to tabulated source series due to rounding of the source series, the percentage change series or both. |
| METRIC PREFIXES | Deca (da) = ten Hecto (h) = hundred Kilo (k) = thousand Mega (M) = million Giga (G) = thousand million Tera (T) = million million |
