NOTES

FORTHCOMING ISSUES	<i>Issue</i>	<i>Expected release date</i>
	February 2005	31 January 2005
	March 2005	28 February 2005
	April 2005	31 March 2005
	May 2005	29 April 2005
	June 2005	31 May 2005
	July 2005	30 June 2005

IN THIS ISSUE Where available, the statistics in this issue are presented as time series for the last nine years of annual data, the last nine quarters or 15 months of data. To assist analysis most tables include percentage movements, as well as levels, of series.

Quarterly and monthly data for most series, and annual data for a limited number of series, are available from the Australian Bureau of Statistics for earlier periods than that shown in this publication. Many series can be obtained on electronic media. Inquiries should be directed to the National Information Service on 1300 135 070.

EXTENDED TIME SERIES For users requiring longer time series, each February issue of *Australian Economic Indicators* contains, for most series, a greater span of annual, quarterly and monthly data.

SYMBOLS AND OTHER USAGES See the Abbreviations sections following the Explanatory Notes.

Susan Linacre
Acting Australian Statistician

QUARTERLY REVIEW

The Quarterly Review refers to trend estimates unless otherwise specified.

1 INTERNATIONAL ECONOMIC GROWTH, GDP VOLUME TREND, Quarterly % change

4 COMPANY PROFITS BEFORE INCOME TAX, Trend

Note: There is a trend break between Dec 2000 and Mar 2001

Source: Business Indicators, Australia, cat. no. 5676.0.

OVERVIEW

- Growth during the September quarter 2004 was mainly from the domestic sector, with gross national expenditure growing 0.7%. Exports were down 0.1% and there was a 1.8% increase in imports in trend chain volume terms. Australia's September quarter GDP growth of 0.5% is comparable to other major economies and remains below the US growth of 0.9% (graph 1). During 2003 most developed countries were showing accelerating growth in GDP but in the US and Australia growth has slowed in the last three quarters.

- The chain volume measure of GDP is essentially a measure of the volume of output produced within Australia. However, the total real income that Australians derive from this production also depends on the volume of imports able to be purchased from the proceeds of Australia's exports to the rest of the world. Over the past year, Australia's terms of trade have increased by 11.0% so a given volume of exports will enable Australians to purchase a higher volume of imports than was the case in September quarter 2003. Real gross domestic income (GDI) measures the purchasing power of the total incomes generated by domestic production, taking changes in the terms of trade into account. Through the year to September quarter 2004, trend real GDI has increased by 5.3% compared with an increase of 3.2% in the trend chain GDP volume. See also graph 21 below.

- Most industries made positive contributions to production chain volume measures in the September quarter 2004 (graph 3). The strongest quarterly increases were from *cultural and recreational services* (up 1.7%), *retail trade* (up 1.4%), *health and community services* (up 1.3%) and *communication services* (up 1.3%). Four industries declined: *agriculture* (down 1.6%), *accommodation, cafes and restaurants* (down 1.4%), *manufacturing* (down 0.6%) and *personal and other services* (down 0.2%).

- Company profits before income tax* surged to a record of \$22.5b (up 4.4%) in the September quarter. The biggest increases were in *mining* (up 11.9%), *manufacturing* (up 7.7%), *retail trade* (up 4.0%) and *property and business services* (up 4.0%).

CONSUMPTION

- In the September quarter 2004 the chain volume measure of *household final consumption expenditure* (HFCE) grew by 1.0% in trend terms and 1.1% in seasonally adjusted terms (graph 5). The strongest trend growth rates were recorded for *clothing and footwear*, up 2.3%, *furnishings and household equipment*, up 1.5% and *food*, up 1.5%. Household purchases from *hotels, cafes and restaurants* fell 0.6% in trend terms, and was the only component to show a fall.

- The trend chain volume measure of *national general government final consumption expenditure* (GFCE) excluding defence rose 0.9% in the September quarter 2004 (graph 6). The trend rose 6.0% between September 2003 and September 2004. The trend chain volume measure of *defence final consumption expenditure* rose by 0.2% in the September quarter, and fell 1.6% between September quarter 2003 and September quarter 2004.

- In the September quarter 2004, *retail turnover* rose by 1.1% in trend chain volume terms, following an increase of 1.3% for the June quarter 2004. Five of the seven industries showed increases this quarter, with the largest rises recorded in *clothing and soft good retailing* (up 2.1%), department stores (up 1.7%) and *household good retailing* (up 1.7%). *Hospitality and services* fell by 1.0% and *recreational good retailing* fell 0.1%.

- The trend estimate for *sales of new motor vehicles (excluding motor cycles)* rose by 1.2% from September 2004 to 82,234 in October 2004 (graph 8). When compared with October 2003 (77,967) the trend estimate has shown an increase of 5.5%. Sales of both passenger vehicles and sports utility vehicles also recorded increases of 1.2% over the last month. The trend estimate for sales of sports utility vehicles has been increasing continually since September 2003, recording a total increase of 21.4% since this time. All states and territories recorded increases in the trend estimate for sales of new motor vehicles in October 2004.

12 VALUE OF RESIDENTIAL BUILDING APPROVALS,
Chain volume measure, Trend—
Quarterly % change

Source: Building Approvals, Australia, cat. no. 8731.0

INVESTMENT

- The trend chain volume measure of *total gross fixed capital formation* (GFCF) rose by 0.6% in the September quarter 2004, following rises in the previous thirteen quarters (graph 9). This had been preceded by four quarters of decline. The trend is now 5.4% above that of the September quarter 2003. The seasonally adjusted estimate rose 0.6% in the September quarter 2004.
- The trend chain volume measure of *total private gross fixed capital formation* rose by 0.6% in the September quarter 2004 (graph 10), while *public gross fixed capital formation* rose by 0.7%. In the *private sector*, *dwellings* rose by 0.5%, *non-dwelling construction* fell by 2.5%, and *machinery and equipment* rose 3.1%. *Livestock* fell by 0.3%, *intangible fixed assets* rose by 3.1% and *ownership transfer costs* fell by 7.3%. For public GFCF, *public corporations* rose by 0.4%, *national general government* rose by 1.7%, and *state and local general government* rose by 0.7%.
- Trend *total GFCF for private dwellings* rose by 0.5% in the September quarter 2004 (graph 11). *New and used dwellings* rose by 0.4% while *alterations and additions* rose by 0.5%. Expenditure on *non-dwelling construction* fell by 2.5%. There was a 2.1% decrease in *new engineering construction* and a 2.3% fall in *new building*.
- The trend chain volume measure of *the value of building approvals* fell by 1.6% in the September quarter 2004. There was a 4.1% fall in *total residential building* while *non-residential building* rose by 2.6%. *New residential building* fell 4.6% while *alterations and additions to residential buildings* fell 1.1% (graph 12). The fall in *new residential building* was due to a 4.0% fall in *new houses* and a fall of 5.8% in *new other residential building*. Some building approvals do not proceed, and there is a lag of a few months until work occurs for those that do. In turn, interest rate changes influence approvals (see the feature article on the relationship between changes in interest rates and building approvals in the November 2001 issue of AEI).

13 EMPLOYMENT, Trend—Monthly % change

14 UNEMPLOYMENT RATE, Trend

Source: Labour Force, Australia, cat. no. 6202.0.

15 FEMALE PARTICIPATION RATE, Trend

Source: Labour Force, Australia, cat. no. 6202.0.

16 MALE PARTICIPATION RATE, Trend

Source: Labour Force, Australia, cat. no. 6202.0.

LABOUR MARKET

- In November 2004, the trend total number of employed persons increased 0.3% from the previous month to 9,770,700. Female employment rose 0.4% to 4,376,500 while male employment rose 0.2% to 5,394,200 (graph 13). Full-time employment rose 0.2% to 6,995,100 while part-time employment rose 0.4% to 2,775,600.
- In November 2004, the trend unemployment rate fell 0.1 percentage point to 5.3%. This is the lowest unemployment rate since the series began in February 1978. The male unemployment rate remained steady at 5.3% and the female unemployment rate fell 0.1 percentage point to 5.4% (graph 14). In November 2004 the number of persons looking for full-time work fell 1.7% to 384,500 and the number of persons looking for part-time work fell 0.1% to 164,100.
- In November 2004, the overall participation rate rose 0.1 percentage point to 63.7%. The female participation rate rose 0.1 percentage point to 56.1% (graph 15) while the male participation rate remained steady at 71.5% (graph 16).
- The trend chain volume measure of market sector GDP per hour worked fell by 0.3% in the September quarter 2004 (graph 17). Hours worked in the market sector rose by 0.8% and market sector GDP per hour worked is a measure of labour productivity and in trend terms this is the first fall since the December quarter 2000, after showing no growth in the June quarter 2004. Note however that this measure is also affected by the contribution of capital and other factors to changes in production as well as changes in the overall quality of labour input.

17 LABOUR PRODUCTIVITY (PROXY) TREND, GDP Market sector, Chain volume measure—Quarterly % change

20 HOUSEHOLD SAVING RATIO, Trend

Source: Australian National Accounts: National Income, Expenditure and Product, cat. no. 5206.0

21 GDP AND REAL NET NATIONAL DISPOSABLE INCOME, Chain volume measure, Trend— Quarterly % change

Source: Australian National Accounts: National Income, Expenditure and Product, cat. no. 5206.0

INCOME

- In the September quarter 2004, the *wages share of total factor income* was steady at 53.1% (graph 18). *Compensation of employees* rose by 1.5%, reflecting a rise of 0.5% in *average earnings* and a 1.0% rise in the number of *wage and salary earners*.

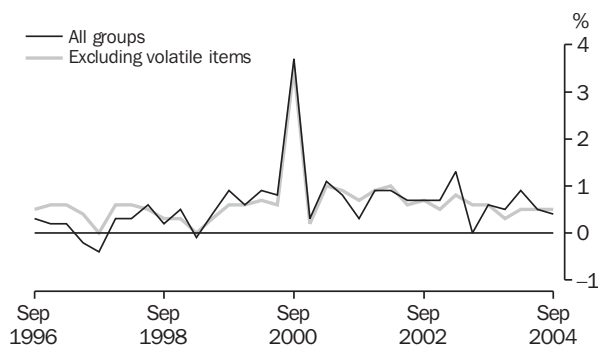

- In the September quarter 2004, the *profits share of total factor income* was steady at 26.8% (graph 19). This profit measure comprises the gross operating surplus (GOS) of financial and non-financial corporations, which rose by 1.4% in the September quarter following a 1.7% rise in the June quarter 2004.

- The *household saving ratio* was negative in the September quarter 2004, implying that household consumption was greater than household disposable income. In trend terms the ratio was -1.8% (graph 20). Although seasonally adjusted household saving has been negative over the past two years, net national saving has been positive over the same period. Caution should be exercised in interpreting the household saving ratio in recent years, because major components of household income and expenditure may still be subject to significant revisions. The impact of these revisions on the saving ratio can cause changes in the apparent direction of the trend.

- During the September quarter 2004 *trend real net national disposable income* rose by 0.9%, compared to the increase in the *trend chain volume measure of GDP* of 0.5% (graph 21). *Real net national disposable income* (RNNDI) is a broad measure of economic well-being. This measure adjusts the chain volume measure of GDP for the terms of trade effect, real net incomes from overseas and consumption of fixed capital. In recent quarters RNNDI has been growing faster than GDP due to the strong growth in the terms of trade.

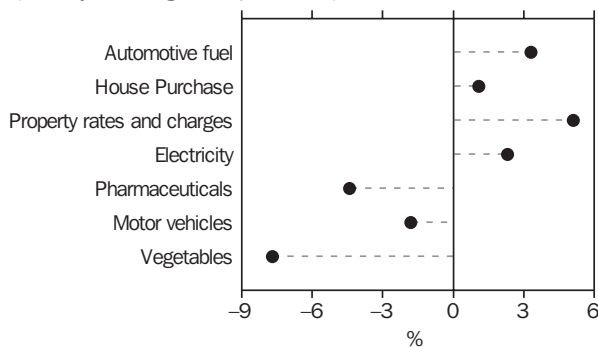

- For further details about RNNDI see the article in the April 2002 issue of AEI.

CONSUMER PRICES

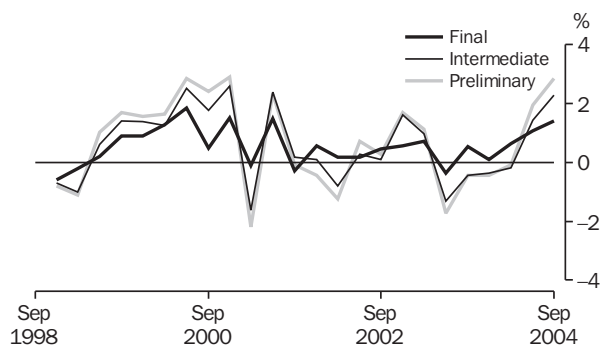

This commentary refers to original estimates unless otherwise specified.

- In the September quarter 2004, the all groups *consumer price index* (CPI) rose by 0.4%, compared with a rise of 0.5% in the June quarter 2004 (graph 22). The major contributors to the increase at the group level were *housing* (up 1.4%), *transportation* (up 0.8%), *alcohol and tobacco* (up 0.9%) and *recreation* (up 0.5%). The *food* (down 0.6%) and *health* (down 0.7%) groups provided the most significant offsetting price decreases.
- Graph 23 shows the major contributors to the change in the CPI for the September quarter. The 3.3% rise in *automotive fuel* contributed over 0.2 index points to the rise in the CPI. The 1.1% increase in *house purchase* contributed 0.14 index points to the rise in the CPI and was driven by increasing labour and material costs. The 7.7% price fall in *vegetables* was the second consecutive quarterly fall and was associated with abundant supplies of lettuce, tomatoes and seasonal winter vegetables. The 1.8% fall in *motor vehicles* was due to competitive pricing between dealers to clear stocks before new models arrive in December quarter and the offering of incentives such as bonus inclusions, drive-away deals and factory cash-back offers.

- At the All groups level, the September quarter 2004 CPI rose in all capital cities (graph 24). The increases ranged from 0.2% in Melbourne to 0.9% in Darwin. The higher result in Darwin was mainly due to that city recording increases in *recreation* and *alcohol and tobacco* which were well above the national average. The lower result in Melbourne was largely due to that city recording an increase in *transportation* costs which was half the national average and the equal largest fall in *food* prices (with Hobart) of all capital cities.

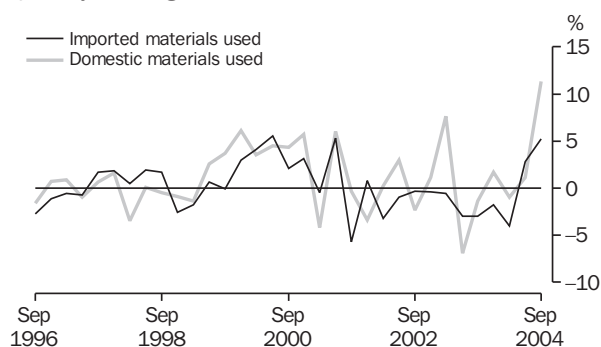

- The national accounts *domestic final demand chain price index* rose 0.5% in the September quarter 2004, following a rise of 0.4% in the June quarter (graph 25). The *domestic final demand chain price index* is a broad based measure of price change and comprises final consumption and capital expenditure, for both private and public sectors. The chain price index for *final consumption expenditure* rose by 0.3% (by 0.3% for *households* and 0.1% for *general government*), while the chain price index for *gross fixed capital formation* rose by 0.9%, (by 1.0% for *private* and by 0.5% for *public*).

PRODUCER PRICES.

This commentary refers to original estimates unless otherwise specified.

- The *final (Stage 3) stage of production price index* rose by 1.4% in the September quarter 2004 (graph 26). For the final (Stage 3) index, there was a rise of 1.4% in domestic commodities and a 1.2% rise in imported commodities due to exchange rate driven price rises for both consumer and capital goods. The *intermediate (Stage 2) stage of production index* rose by 2.3%, due to a rise of 2.0% in the domestic index and a 4.3% rise in the imports index. The *preliminary (Stage 1) of production producer price index* rose by 2.9%, due to a rise of 2.4% in the domestic index and a rise of 5.5% in the imports index. The depreciation of the Australian dollar against the US dollar in the September quarter has resulted in an increase in all three stage of production indexes. The impact of the global rise in the price of crude oil can also be seen across all three indexes.

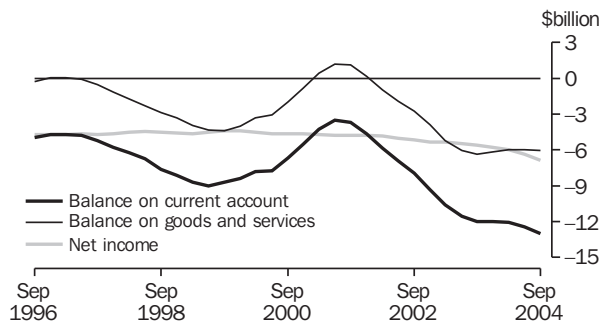

- In the September quarter 2004, the *price index of materials used in manufacturing industries* rose by 7.9% (graph 27). This was the highest quarterly increase since December quarter 1990. Increases in the price of crude oil (both imported and domestic), sheep and lambs, iron and steel, iron ore mining, and cattle and calves were the main contributors to the quarterly result. Price decreases for wheat and meslin, and electricity provided some offsets to these increases.

- The *price index for materials used in house building* rose by 0.8% in the September quarter 2004 (graph 28), reflecting price increases for a range of materials. The most significant contributors to the increase were reinforcing steel, steel beams and sections, concrete tiles, clay bricks, and cupboards and fittings. Small offsetting price decreases were recorded for this index, with the most significant being ceramic tiles, and aluminium doors and windows. All state capital city indexes recorded increases for the materials used in house building price index in the September quarter 2004, ranging from 0.5% in Sydney to 2.1% in Hobart.

- The *export price index* rose by 6.9% in the September quarter 2004 (graph 29), following an 8.4% increase in the June quarter 2004. Increases were registered this quarter for the majority of commodities, with the most significant contributors being coal and semi-coke, crude petroleum oils, frozen beef and manganese ores and concentrates.

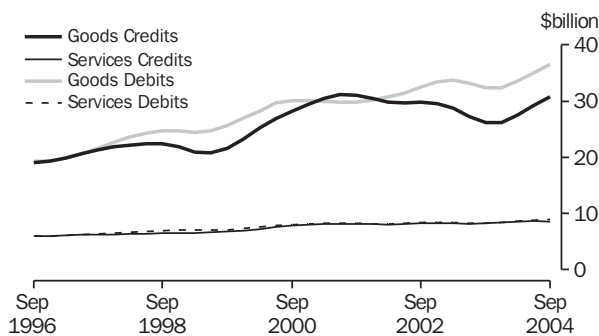

The *import price index* rose by 2.6% in the September quarter 2004 (graph 29), following a 4.1% increase in the June quarter 2004. Contributing most to the increase were crude petroleum oils and other fuel oils and related products, due to world prices, and aircraft and motor vehicle parts. The increases were partially driven by the depreciation of the Australian dollar against all major currencies. The most significant offsetting price decreases were observed for colour televisions and monitors, and communication transmission apparatus.

INTERNATIONAL

- In the September quarter 2004 the *trend current account deficit* was \$13.0b. This was an increase of \$0.6b on the June quarter 2004 (graph 30). The main contributors to the increase in the deficit were *goods debits*, which rose \$1,429m (4%), *income debits* which rose \$712m (7%), *services debits*, which rose \$135m (2%) and *services credits* which fell \$35m, partially offset by increases in *goods credits* of \$1,526m (5%), and *income credits* of \$205m (5%). The trend estimate of the *net income deficit* increased \$0.5b to \$6.8b.

- The main contributor to the balance on goods and services is goods. The value of goods that Australia imports (debits) has reached \$36.5b in the September quarter 2004, while goods exported (credits) rose to \$30.8b, resulting in an overall increase in the deficit on goods and services for Australia of \$5.7b.

- Australia's net international investment position rose \$25b to a net liability of \$524b. Net foreign debt was \$406b, an increase of \$13b, mostly due to net debt inflows of \$17b offset by exchange rate changes of -\$4b, consistent with the appreciation of the Australian dollar between 30 June and 30 September 2004. Net equity rose \$12b, to a net liability of \$117b.

- Graph 33 shows the Trade Weighted Index (TWI) of the value of the \$A. In the September quarter 2004 the quarterly average TWI fell to 60.6 (from 61.2 in the previous quarter). The period average exchange rate for the Japanese yen fell to 77.95 (from 78.30 in the previous quarter), while the period average exchange rate for the United States dollar fell to 0.7094 (from 0.7146 the previous quarter).

(a) Trend data used instead of seasonally adjusted.

(b) Sales is defined as gross non-farm product plus imports of goods and services less changes in private non-farm inventories.

(c) Corporate gross operating surplus include private corporate trading enterprises plus financial enterprises less imputed bank service charge.
GNFPfc = Gross non-farm product at factor cost.

(d) Interest paid component contains original data.

(e) By convention, zero productivity growth is assumed for industries in the non-market sector, mainly government and some service industries. Therefore, a better indicator of productivity change is provided by the series showing market sector constant price gross product per hour worked.

TOTAL PUBLIC SECTOR,
NET LENDING/BORROWING AS A PERCENTAGE OF GDP

A negative percentage of GDP represents a net borrowing position.
A positive percentage of GDP represents a net lending position.

Source: Government Finance Statistics, cat. no. 5512.0.

Accruals-based Government Finance Statistics, (GFS) are presented in the form of Operating Statements, Cash Flow Statements, Balance Sheets and Statements of Stocks and Flows and the main analytical measures are described below:

Net Operating Balance (NOB) – the difference between GFS revenues and expenses. This measure reflects the sustainability of government operations.

Net Lending/Borrowing (NLB) – NOB minus the total net acquisition of non-financial assets. It represents the government's call on the financial sector and reflects the economic impact of government operations. A positive result reflects a net lending position and a negative result a net borrowing position.

Net Worth (NW) – the economic measure of 'wealth' is calculated as assets less liabilities for the general government (GG) sector and assets less liabilities and shares and other contributed capital for public corporations (financial and non-financial). Net worth of unlisted corporations will always be zero because owners' equity is the difference between assets and liabilities. For listed corporations net worth will be positive or negative depending upon the difference between the value of shares on the balance sheet and the value of traded shares. As the equity of public

corporations held by the General Government, (GG) sector consolidate out at the total public sector level, only equity held external to the public sector will appear.

Change in Net Worth (CNW) – this is the change in NW over two adjacent periods. CNW (due to transactions) is also equivalent to the NOB and excludes the impact of revaluations and other changes in volume of assets and liabilities.

Surplus(+)/Deficit(-) – is a cash-based measure and is calculated as:

Net cash flows from operating activities
plus Net cash flows from investments in non-financial assets
less Distributions paid (public corporations sector only)
less Acquisitions of assets under finance leases and similar arrangements

The new Surplus(+)/Deficit(-) measure, while conceptually comparable to the previous Deficit(+)/Surplus(-) measure has undergone a sign change – a surplus is now shown as positive and in practice has been compiled on a different methodological basis to that of previous years, hence resulting in a break in series. The Surplus/Deficit is the cash-based equivalent of Net Lending/Borrowing described above.

(a) The estimates for goods and services are not necessarily consistent with the corresponding monthly estimates, shown in tables 2.4 to 2.7 obtained from International Trade in Goods and Services, Australia, (cat. no. 5368.0) issued monthly, due to data revision to the original monthly data not feeding into the quarterly original series until the next quarterly release of Balance of Payments and International Investment Position, Australia, (cat. no. 5302.0).

(b) In addition to the differences outlined in footnote (a), the quarterly seasonally adjusted estimates for goods and services are not necessarily consistent with corresponding monthly seasonally adjusted estimates, shown in table 2.4.

(a) For all time periods, estimates for sugar, sugar preparations and honey are included in Other non-rural.

(b) The estimates for goods and services are not necessarily consistent with the corresponding quarterly estimates, shown in table 2.1 obtained from *Balance of Payments and International Investment Position, Australia*, (cat. no. 5302.0) due to data revisions to the original monthly data not feeding into the quarterly original series until the next quarterly release of *Balance of Payments and International Investment Position, Australia*, (cat. no. 5302.0).

(c) In addition to the differences outlined in footnote (b), the monthly seasonally adjusted estimates for goods and services are not necessarily consistent with the corresponding quarterly seasonally adjusted estimates, shown in table 2.1 obtained from *Balance of Payments and International Investment Position, Australia*, (cat. no. 5302.0), because of the independent seasonal adjustment of the monthly and quarterly data.

(a) Derived from current price original data. The net international investment position ratios are derived from the net foreign liabilities at the end of the period and GDP for the year ended with that period. Other ratios use only data for the year ended with the period shown.

(b) For the latest reference period, GDP for the year ended with the previous quarter is used.

(a) The exports and imports data presented in this table differ from those in tables 2.1 to 2.5 because they are recorded on an international trade basis rather than a balance of payments basis and are compiled from a different edition of the data.

(b) The ten member nations of ASEAN are Brunei, Cambodia, Indonesia, Laos, Malaysia, Myanmar, Philippines, Singapore, Thailand and Viet Nam.

(c) The fifteen Member States of the European Union (EU) are Austria, Belgium, Denmark, Finland, France, Germany, Greece, Ireland, Italy, Luxembourg, Netherlands, Portugal, Spain, Sweden, and the United Kingdom. Figures for Belgium and Luxembourg are presented as combined totals.

(a) The exports and imports data presented in this table differ from those in tables 2.1 to 2.5 because they are recorded by a foreign trade basis rather than a balance of payments basis and are compiled from a different edition of the data.

(b) The fifteen Member States of the European Union (EU) are Austria, Belgium, Denmark, Finland, France, Germany, Greece, Ireland, Italy, Luxembourg, Netherlands, Portugal, Spain, Sweden, and the United Kingdom. Figures for Belgium and Luxembourg are presented as combined totals.

(a) Total population increase is equal to the change in population. Prior to 1992 this is not equal to natural increase (live births less deaths) plus net immigration because of the distribution of the intercensal discrepancy. There is now an intercensal discrepancy for 1986-1991.
 (b) Includes Cocos (Keeling) Islands, Christmas Island and Jervis Bay Territory from September quarter 1993.

(a) The indexes in Table 7.4 combine ordinary time and overtime hourly rates and therefore include the effect of any changes in overtime penalty rates but are not affected by changes in penalty payments (which fluctuate depending on the number of hours paid at penalty rates) and allowances (which fluctuate according to how much work is performed under special work conditions e.g. height, dirt and/or heat allowances).

(a) Average non-farm wages, salaries and supplements per wage and salary earner. Seasonally adjusted data.

(b) Base for index: 1986-87 = 100.0.

(c) Deflated by the Gross National Expenditure deflator.

(d) Non-farm wages, salaries and supplements, plus payroll tax less employment subsidies plus fringe benefits tax per hours worked by non-farm wage and salary earners.

(e) Ratio of derived private non-farm corporate wages, salaries and supplements plus payroll tax less employment subsidies, plus fringe benefits tax paid by the private non-farm corporate sector to derived private non-farm corporate sector gross product at factor cost plus payroll tax less employment subsidies plus fringe benefits tax.

(f) Nominal unit labour costs (see footnote (g)) deflated by the derived implicit price deflator for gross non-farm product.

(g) Ratio of nominal hourly labour costs to average hourly labour productivity (real gross non-farm product per hour worked by all employed persons).

(a) Excludes Commonwealth and State Government and interbank deposits but includes deposits of the non-bank sector with the Reserve Bank.

(b) Currency plus bank deposits (including certificate of deposit with trading banks) of the private non-bank sector.

(c) Borrowings (other than from banks and related corporations) by permanent building societies, credit co-operatives, finance companies, authorised money market dealers, pastoral finance companies, money market corporations, general financiers and cash management trusts; less borrowings by authorised money market dealers from those non-bank intermediaries. Breaks occur from time to time due to changes in number of reporting corporations.

(d) M3 plus borrowing from private sector by non-bank financial intermediaries less the latter's holding of currency and bank deposits.

(e) Holdings of notes and coin by private sector, plus deposits of banks with the Reserve Bank and Reserve Bank Liabilities to the private non-bank sector.

(f) Loans and advances of those financial intermediaries whose deposit liabilities are included in broad money.

(g) Bills outstanding under acceptance and endorsement commitments by banks.

(h) Credit is equal to bank bills outstanding plus loans and advances by financial intermediaries whose liabilities are included in broad money.

(a) Rates are for the last trading day of the reference period.

(b) On January 1, 1999 eleven European Union nations launched the Euro, a single currency giving control of interest rate and exchange rate policy to the European Central Bank. The Euro was immediately available for electronic financial and business transactions, but Euro coins and notes were not issued to the general public until January 2002. The participating nations are Austria, Belgium, Finland, France, Germany, Ireland, Italy, Luxembourg, the Netherlands, Portugal and Spain. Greece adopted the Euro on 1 January 2001 and Britain, Denmark and Sweden chose not to adopt the Euro.

(c) May 1970 = 100.0.

(a) The latest quarterly estimate of Australian resident population is shown in Table 9.2. This estimation has been used to calculate ratios for subsequent periods.

(b) Private new capital expenditure data are not available for the Australian Capital Territory or the Northern Territory and are included in the Australian total.

TABLE 9.2 ESTIMATED RESIDENT POPULATION AT END OF PERIOD

Period	New South Wales	Victoria	Queensland	South Australia	Western Australia	Tasmania	Northern Territory	Australian Capital Territory(a)	Australia(b)

(a) Excludes Jervis Bay Territory from September quarter 1993.

(b) Includes Cocos (Keeling) Islands, Christmas Island and Jervis Bay Territory from September quarter 1993.

(c) Special arrangements were put in place to estimate net overseas migration for September and December Quarters 2000, and thereby enable production of state and territory population estimates. For more details see the December 2000 issue of Australian Demographic Statistics, cat. no. 3101.0.

(a) Extreme care should be exercised in using the seasonally adjusted and trend series for turnover of retail establishments for the Northern Territory. The highly erratic nature of these data makes reliable estimation of the seasonal pattern and of the trend very difficult.

(a) Original sales data are provided by the Federal Chamber of Automotive Industries and sourced from VFACTS.

(b) Extreme care should be exercised in using the seasonally adjusted series for the number of new motor vehicle sales in Tasmania, the Northern Territory and the Australian Capital Territory. The highly erratic nature of these data makes reliable estimation of the seasonal pattern very difficult.

10 INTERNATIONAL COMPARISONS

TABLES

10.1	Real gross domestic product volume index	120
10.2	Balance on current account – percentage of seasonally adjusted GDP.	121
10.3	Balance of payments – current balance	122
10.4	Private consumption expenditure volume index	122
10.5	Private fixed capital investment volume index	123
10.6	Industrial production volume index	124
10.7	Consumer price index : all items	125
10.8	Consumer price index : excluding shelter	126
10.9	Producer prices index	127
10.10	Wages index.	128
10.11	Employment index	128
10.12	Unemployment rates.	129
10.13	M1 plus quasi-money index	130

NOTES

1. The statistics for Germany in these tables refer to Germany after unification.

2. Consumer price index (CPI). Due to the many differences in the structure of the housing sector in different countries and in the way that housing is treated in their CPIs, a simple comparison of All items (or headline) CPIs is often inappropriate. To provide a better basis for international comparisons, the Fourteenth International Conference of Labour Statisticians adopted a resolution which called for countries to “provide for dissemination at the international level of an index which excludes shelter, in addition to the all-items index.”

Table 10.8 presents indexes for selected countries on a basis consistent with the above resolution and comparable to the Australian series *All groups excluding housing*. The series in this table are presented on a reference base consistent with that used for publication of the Australian CPI (i.e. 1989–90 = 100.0) and as such are not directly comparable with those for All items published in table 10.7 (presented on a reference base of 1995 = 100.0).

EXPLANATORY NOTES

Explanatory Notes in the form found in other ABS publications are not included in *Australian Economic Indicators*. Readers are directed to the Explanatory Notes contained in related ABS publications.

INTRODUCTION

Australian Economic Indicators presents a statistical summary of the Australian economy, together with international comparisons of selected economic indicators. Except for the special February issue, it also includes commentaries, articles, technical notes, and the Experimental Composite Leading Indicator. *Australian Economic Indicators* has been developed primarily as a reference document, providing a broad basis for economic analysis and research.

The tables contain mainly ABS data, although data from other sources are included. For ABS sourced data, the publication name and catalogue number are included in the footnotes of the tables. If the data are from other sources, the source organisation's name is included in the footnotes.

MOST RECENT DATA

The statistics shown are the latest available as at 10 September 2004.

RELATED PUBLICATIONS

A list of related publications is included in each chapter under the table of contents. These include publications which are the source of the data in the tables and other related publications.

Other useful sources of detailed information are the 'Concepts, Sources and Methods' and classification publications. These are released irregularly, each relating to a specific publication, collection or standard classification. The publications most relevant to *Australian Economic Indicators* include:

- *Australian and New Zealand Standard Industrial Classification (ANZSIC)*, cat. no. 1292.0
- *Classification Manual for Government Financial Statistics, Australia*, cat. no. 5514.0
- *Australian National Accounts: Concepts, Sources and Methods*, cat. no. 5216.0
- *Balance of Payments and International Investment Position, Australia: Concepts, Sources and Methods*, cat. no. 5331.0
- *Labour Statistics: Concepts, Sources and Methods*, cat. no. 6102.0
- *Australian Consumer Price Index: Concepts, Sources and Methods*, cat. no. 6461.0.

SEASONALLY ADJUSTED AND TREND ESTIMATES

Series in this publication include original, seasonally adjusted and trend series. Special care should always be taken in interpreting data for the most recent months and quarters. Some of the original and all of the seasonally adjusted and trend series are subject to revision.

SEASONALLY ADJUSTED
AND TREND ESTIMATES
continued

It is not uncommon for movements in original time series data and those provided from seasonally adjusted and trend series to differ significantly. Movements in a time series of original data may reflect several factors, including:

- longer-term changes in the item being measured (i.e. trend movements)
- short-term irregular changes
- regular seasonal influences
- normal 'trading', 'working' or 'pay' day patterns
- systematic holiday effects.

Seasonal adjustment and trend estimates help the user to identify the effect of these influences on the time series. Seasonal adjustment removes the effect of the last three listed influences from the data, leaving only the trend and short-term irregular movements. Trend estimates are then obtained by removing the effects of the short-term irregularities, which in many series can be a major contributor to movements in the original data. By comparing the historical trend series with the seasonally adjusted series, the user can identify the short-term irregularities which have influenced the original series.

Trend estimates produced by the ABS are based on Henderson Moving Averages, and are therefore subject to revision especially for the latest few months or quarters.

The general methods used in the ABS for making seasonal adjustments are described in *Seasonally Adjusted Indicators, Australia 1983* (cat. no. 1308.0). The method used to estimate trends is described in *Information Paper: A Guide to Smoothing Time Series – Estimates of Trend* (cat. no. 1316.0).

Concurrent seasonal
adjustment and trend
estimates

The ABS has introduced the use of concurrent seasonal adjustment to derive the combined adjustment factors for the Retail Series. This means that data from the current month are used in estimating seasonal and trading day factors for the current and previous months. Concurrent adjustment can result in revisions each month to estimates for earlier periods. However, in most instances, the only noticeable revisions will be to the combined adjustment factors for the current month, the previous month and the same month a year ago. As a result of the concurrent seasonal adjustment the trend estimates are also concurrently estimated.

CHAIN VOLUME
MEASURES

The chain volume measures appearing in this publication are annually-reweighted chain Laspeyres indexes referenced to the current price values in a chosen reference year (i.e. the year when the quarterly chain volume measures sum to the current price annual values). Chain Laspeyres volume measures are compiled by linking together (compounding) movements in volumes, calculated using the average prices of the previous financial year, and applying the compounded movements to the current price

CHAIN VOLUME MEASURES
continued

estimates of the reference year. Quarterly chain volume estimates are benchmarked to annual chain volume estimates, so that the quarterly estimates for a financial year sum to the corresponding annual estimate.

Chain volume measures are not generally additive. In other words, in general, component chain volume measures do not sum to a total in the way original current price components do. In order to minimise the impact of this property, the ABS uses the latest base year as the reference year (i.e. the year prior to the latest complete financial year). By adopting this approach, non-additivity does not exist for the quarters following the reference year (currently 2002–03) and is relatively small for the quarters in the reference year and the quarters immediately preceding it. The latest base year and the reference year will be advanced one year with the release of the June quarter Australian National Accounts (*Australian Economic Indicators*, October issue). A change in reference year changes levels but not growth rates, although some revision to recent growth rates can be expected because of the introduction of a more recent base year (and revisions to the current price estimates underlying the chain volume measures).

OTHER USAGES

Columns in bold in the tables indicate a total. Columns usually sum from the left, with the total appearing on the right. A major exception is the balance of payments and international investment position data in Chapter 2. These data sum from the right with the total appearing on the left – in keeping with the international standard for these statistics. Some tables include subtotal columns and columns which need to be subtracted to obtain the total. Where this is not clear a footnote explains the relationship between the columns.

Columns in italics indicate that seasonally adjusted or trend estimates are not available for that column, and original data are provided instead.

Yearly periods shown as, e.g. 2000–01, refer to the fiscal year ended 30 June 2001.

Where figures have been rounded, discrepancies may occur between sums of the component items and totals. Percentage changes may not be exactly comparable to tabulated source series due to rounding of the source series, the percentage change series or both.

METRIC PREFIXES

Deca (da) = ten
