Australian Capital Territory	309.2	-0.8	-0.3
Australia	18 709.7	221.9	1.2

MARCH QTR KEY POINTS

ESTIMATED RESIDENT POPULATION

- The estimated resident population of Australia at 31 March was 18,709,700 persons.
- The population increased by 78,600 persons since 31 December 1997 and 221,900 persons since 31 March 1997.
- The national growth rate during the 12 months to 31 March 1998 was 1.2% compared with a growth rate of 1.3% for the preceding 12 months. The Northern Territory had the highest growth rate of any State or Territory (2.1%). Negative growth was recorded for Tasmania (-0.5) and the Australian Capital Territory (-0.3).

COMPONENTS OF POPULATION GROWTH

- Net overseas migration for the year ended 31 March was 100,200 persons, a decrease of 5.0% on the year ended 31 March 1997 (104,900). Net category jumping for the March quarter 1998 contributed 14,000 persons.
- Natural increase decreased by 1.0% on the previous 12 months.
- Queensland recorded the highest net gain from interstate migration (21,500) for the 12 months ended 31 March 1998. However this was 16% below the net gain recorded for the previous 12 months.

- For further information about these and related statistics, contact any ABS office as shown on the back cover of this publication.

FEATURE ARTICLES

- Population projections: Australia's population is projected to grow to between 23.5 million and 26.4 million by the year 2051. Over this period the Northern Territory is projected to experience the greatest increase (between 84% and 154%).
- Marriages and divorces: For the second successive year (1996 and 1997) Australia recorded its lowest marriage rate this century (5.8 marriages per 1,000 population). However, the number of people choosing to enter de facto partnerships is increasing. Divorce rates on a long-term basis have been on the increase.

N O T E S

FORTHCOMING ISSUES	ISSUE (<i>Quarter</i>)	RELEASE DATE
	June 1998	22 December 1998
• •		
CHANGES IN THIS ISSUE	Based on the 1996 Census of Population and Housing, estimated resident household data for 30 June 1992 to 30 June 1996 are now final.	
• •		
PRELIMINARY DATA	With the exception of overseas arrivals and departures and marriages and divorces data, all data from September 1996 on are preliminary. Preliminary information for September 1996 to June 1997 will be revised in the next issue. All overseas arrivals and departures data are final while March quarter 1998 data for marriages and divorces are preliminary.

A N A L Y S E S A N D C O M M E N T S

The estimated resident population of Australia at 31 March 1998 was 18,709,700, an increase of 78,600 in the quarter and 221,900 since 31 March 1997. The national growth rate during the twelve months to March 1998 was 1.2% compared to a growth rate of 1.3% for the preceding twelve month period.

In the year ended 31 March 1998, the slightly lower growth rate was mainly due to a decline in net overseas migration. The net gain from overseas migration was 100,200, 5% lower than in the previous year (104,900). The decline was more a result of the increase in permanent and long-term departures (from 161,900 in 1997 to 179,600 in 1998) than from the decrease in permanent and long-term arrivals (261,400 in 1997 to 260,900 in 1998). The net overseas migration figure was boosted by a net increase in category jumpers from 5,400 in the 12 months to 31 March 1997 to 18,900 for the 12 months to 31 March 1998. Category jumpers are persons who change their travel intentions from short-term to permanent or long-term or vice versa.

The preliminary category jumping estimate for the March quarter 1998 was 14,000 persons, the highest recorded since the September quarter 1988. The number of Australian resident category jumpers in the March quarter 1998 was 2,600 (a net loss to the Australian population). The number of overseas visitor category jumpers was 16,600 (a net gain to the Australian population).

In the year ended 31 March 1998 natural increase decreased by 1% to 121,700 from 123,000 in the previous 12 months. The number of births increased slightly from 250,800 in the 12 months to 31 March 1997 to 251,500 in the 12 months to 31 March 1998. However, the number of deaths also increased from 127,800 to 129,800 in the same period.

Between 31 March 1997 and 31 March 1998 the population of the Northern Territory grew by 2.1%, the highest growth rate of any State or Territory, followed by Queensland (1.8%), Western Australia (1.7%), New South Wales and Victoria (both 1.1%) and South Australia (0.5%). The populations of Tasmania and the Australian Capital Territory declined between 31 March 1997 and 31 March 1998; Tasmania by 2,300 people or 0.5% and the Australian Capital Territory by 800 people or 0.3%.

The population of Australia's States and Territories at 31 March 1998 was as follows: New South Wales 6,329,800, Victoria 4,648,400, Queensland 3,450,500, South Australia 1,485,400, Western Australia 1,821,600, Tasmania 471,300, Northern Territory 190,500 and the Australian Capital Territory 309,200.

Queensland recorded the highest net gain from interstate migration for the 12 months ended 31 March 1998, 21,500 people. However, this was 16% lower than the increase recorded for the previous 12 months. Western Australia (3,400) and the Northern Territory (600) were the only other States or Territories to gain population through interstate migration. New South Wales had the highest net loss (-12,100) followed by Tasmania (-4,700), the Australian Capital Territory (-4,000), South Australia (-3,700) and Victoria (-1,200).

A N A L Y S E S A N D C O M M E N T S *continued*

NET INTERSTATE MIGRATION, States and Territories

There were 6,968,800 households in Australia on 30 June 1997, an increase of 8% from June 1993 (6,445,900). The majority of Australian households (70%) had no children under 15 years of age. The most common household type contained only two persons 15 years or over (31% of all households), followed by single person households (24%).

POPULATION PROJECTIONS

POPULATION SIZE AND GROWTH

Australia's population is projected to grow to between 23.5 million and 26.4 million by the year 2051, a rise of up to 7.9 million or 42% from the 1997 population of 18.5 million. Although the rate of growth varies at different times during the projection period, in the long-term it declines from 1.2% in 1996–97 to between 0.0% and 0.3% by 2051.

IMPACT OF FERTILITY AND OVERSEAS MIGRATION

The two factors which have the greatest impact on national population growth are fertility and overseas migration.

Each shift in the total fertility rate of 0.1 births per woman changes the projected 2051 population by about 1 million persons.

If there were no net overseas migration gain from 1997, the population would decline to between 18.3 million and 19.5 million in 2051, after reaching a peak of between 20.1 million and 20.6 million in the period 2025–29.

Each additional 1,000 net overseas migrants per year to 2051 would add 77,000 to the total Australian population by 2051, given a total fertility rate of 1.75 births per woman.

Changes in net overseas migration have little effect on the median age of the Australian population. With net overseas migration of 70,000 per year by 1999, the median age in 2051 would be 44–46 years. With no net overseas migration, the median age in 2051 would be 47–49 years.

STATE AND TERRITORY PROJECTIONS

The highest growth in population between 1997 and 2051 is projected to occur in the Northern Territory (between 84% and 154%), Queensland (between 76% and 90%) and Western Australia (between 67% and 74%).

Queensland is projected to replace Victoria as the second most populous State between 2022 and 2048, while the population of the Australian Capital Territory would pass that of Tasmania between 2037 and 2043. The Northern Territory would pass the populations of both Tasmania and the Australian Capital Territory after 2039.

Tasmania is the only State or Territory where the population is expected to decline under each of the projection series. The population of Tasmania is projected to decline by between 20% and 58%, from 474,000 in 1997 to between 198,000 and 381,000 in 2051.

CAPITAL CITY/BALANCE OF STATE AND TERRITORY PROJECTIONS

The populations of most capital cities are projected to increase over the projection period, with the largest proportionate increases in Darwin (between 53% and 179%), Brisbane (between 80% and 90%) and Perth (between 70% and 78%).

Under projection Series II and III, the population of Darwin would pass the population of Hobart between 2025 and 2030.

The population of Hobart is projected to decline under each projection series. Under Series II, Hobart's population could drop by 36% over the projection period.

POPULATION AGEING

The projections show that the ageing of Australia's population will continue. This is the inevitable result of fertility remaining at low levels over a long period. As growth slows, the population ages progressively with the median age of 34 years in 1997 increasing to 40–41 years in 2021 and to 44–46 years in 2051.

.....

POPULATION AGEING *continued*

By 2051, between 24% and 26% of Australia's population is projected to be aged 65 years or over, compared with 12% in 1997. The highest annual rates of growth for this age group occur between 2011 and 2021 when the peak of the baby-boom generation (born from the mid-1940s to the 1960s) enter it.

ABS PROJECTIONS AND ASSUMPTIONS

The ABS publication, *Population Projections, 1997 to 2051*, presents projections of the population of Australian States and Territories from 1997 to 2051. The projections are based on a combination of assumptions on future levels of births, deaths, overseas migration and interstate migration to arrive at the size, structure and distribution of Australia's population into the next century. There were two fertility, three overseas migration and three interstate migration assumptions. These assumptions were used to produce 18 series of projections of which three were published.

Series I assumes an annual net overseas migration gain of 90,000, small net internal migration gains and losses for States and Territories, and that the total fertility rate falls to 1.75 births per woman by 2005–06, and then remains constant. Series II assumes an annual net overseas migration gain of 70,000, medium net internal migration gains and losses for States and Territories, and that the total fertility rate falls to 1.75 births per woman by 2005–06, and then remains constant. Series III assumes an annual net overseas migration gain of 70,000, large net internal migration gains and losses for States and Territories, and that the total fertility rate declines to 1.6 births per woman in 2005–06, and then remains constant. All series assume that the decline in mortality experienced between 1987–91 and 1992–96 would continue to 2005–06. From 2005–06 onwards, the average rates of decline experienced in successive 5-year periods from 1967–71 to 1992–96 would be experienced. By 2051, life expectancy is assumed to be 82.0 years for males and 86.1 years for females.

FOR MORE INFORMATION

Additional information and analysis is available from the ABS publication *Population Projections, 1997 to 2051* (Cat. no. 3222.0) released on 14 July 1998.

MARRIAGES AND DIVORCES

MARRIAGE AND DIVORCE NUMBERS AND RATES

The total number of marriages registered in Australia was 106,700 in 1997 and 106,100 in 1996 compared to 114,100 ten years ago. For the second successive year, Australia recorded its lowest marriage rate this century. In both 1996 and 1997, the crude marriage rate (the number of marriages per 1,000 population) was 5.8, compared to 7.4 twenty years ago and 7.0 ten years ago. The highest crude marriage rate this century was recorded in 1942, 12.0 marriages per 1,000 population.

There were 51,300 divorces granted in 1997. While this was a 2% decrease on the number granted in 1996 (52,500), it was a 29% increase on the number granted ten years ago (39,700). Divorce rates on a long-term basis have been on the increase. In 1997, the crude divorce rate (the number of divorces per 1,000 population) was 2.8, compared with 2.4 ten years ago. The highest divorce rate over the past century was recorded in 1976 (4.5 per 1,000 population). This was the year the Family Law Act was introduced. Prior to this the crude divorce rate in Australia was below 1.9 divorces per 1,000 population.

CRUDE MARRIAGE AND DIVORCE RATES(a)

(a) Per 1,000 population.

The 51,300 divorces granted in 1997 occurred from the accumulated stock of all marriages contracted over the years and not from the 106,700 marriages registered in the year. For example, in 1997, there were 8.2 million married persons or about 4.1 million marriages. The 51,300 divorces represent about 12.5 divorces out of every 1,000 marriages.

LIKELIHOOD TO MARRY AND DIVORCE

Based on age-specific marriage rates for 1997, it is estimated that about 56% of men and 58% of women will marry at some time in their lives. This represents a decline of 19% for men and 16% for women from comparable estimates prepared for 1977 (about 69% for both men and women).

Based on an ABS study, published in *Marriages and Divorces, Australia, 1994* (Cat. no. 3310.0), it is estimated that about 10% of all marriages are likely to end in divorce by six years of marriage, 20% by ten years, 30% by twenty years and 40% by thirty years.

MARRIAGES AND DIVORCES *continued*

COUUPLE RELATIONSHIPS

The fall in registered marriages and the increase in divorces granted does not necessarily mean that couple relationships are decreasing. Many people are choosing instead to enter into de facto relationships.

The 1996 Census of Population and Housing showed that 7.6 million men and women were living as partners in couple relationships and that 10% of these were de facto relationships. At the 1991 Census, people in couple relationships numbered 7.2 million and just over 8% were in de facto relationships.

The proportion of those who choose to cohabit prior to entering a registered marriage is also on the increase. In 1977 around 25% of all registered marriages were preceded by a period of cohabitation; this proportion reached 42% in 1987 and by 1997 it had climbed to 65%.

MARITAL STATUS OF THE POPULATION

In 1997 there were 14.6 million people aged 15 years and over, a rise of 16% on 1987 (12.6 million). Of the 14.6 million, 4.5 million were never married (a rise of 23% on 1987), 8.2 million were married (a rise of 10% on 1987), 900,000 were widowed (a rise of 14% on 1987) and around 1 million were divorced (a rise of 61% on 1987). Based on the 1996 Census it is estimated that at least 11% of the never married population in 1997 were living as de facto partners while at least 20% of the divorced population had re-partnered and were living in de facto relationships.

AGES OF MEN AND WOMEN MARRYING AND DIVORCING

The median age at marriage and divorce for men and women in Australia continued to rise in 1997. The median age is the age which divides the relevant population into two equal parts, half falling below the age and half exceeding it.

In 1997 the median age at marriage was 29.7 years for men and 27.5 years for women, compared with 27.6 years and 25.2 years, respectively, in 1987. Those marrying for the first time in 1997 were also older. Between 1987 and 1997 the median age of men and women marrying for the first time increased by 1.9 years for men (to 27.8 years) and 2.1 years for women (to 25.9 years).

The median age at divorce for men was 40.3 years and for women 37.6 years. This was 2.8 years higher for men and 2.9 years higher for women than in 1987 and reflects the increase in the age at both first marriage and remarriage.

CHILDREN OF DIVORCING PARTNERS

Between 1987 and 1997 the number of divorces granted where children under the age of 18 years of age were involved, fell. In 1987, 59% of divorces involved children under 18 years of age. By 1997 this proportion was 54%.

FOR MORE INFORMATION

The commentary above is a sample of the analysis included in *Marriages and Divorces, Australia, 1997* (Cat. no. 3310.0) released 26 August 1998. Also included are two special articles. The first article, *Registered Marital Status and Living Arrangements*, uses data obtained from the 1996 Census of Population and Housing to show how registered marital status, despite changes in partnering, retains an important function of helping to clarify living arrangement data. The second article, *Couple Relationships at the 1996 Census of Population and Housing*, looks at the characteristics of people in couple relationships—registered married and de facto couples.

(a) Excludes Jervis Bay Territory from September 1993.

(b) Includes Other Territories from September 1993—see paragraph 2 of the Explanatory Notes.

(c) Differences between the total growth rate and the sum of natural increase and net migration rates arise from retrospective adjustments (which are made after each Census) to compensate for any intercensal discrepancy.

EXPLANATORY NOTES

INTRODUCTION

1 This quarterly publication contains estimates of the resident populations (ERP) of Australia and the States and Territories based on the final results of the Census of Population and Housing held on 6 August 1996 (with various adjustments described in paragraph 4). The publication also contains estimates of the number of households by household size as well as the latest available statistics of births, deaths (including infant deaths), marriages, divorces and overseas and interstate migration. In addition, the publication includes estimates of the resident population by age, marital status and country of birth as well as experimental estimates of the Aboriginal and Torres Strait Islander population.

2 Following the 1992 amendments to the Acts Interpretation Act to include the Indian Ocean Territories of Christmas Island and the Cocos (Keeling) Islands as part of geographic Australia, population estimates commencing with September quarter 1993 include estimates for these two Territories. To reflect this change, another category of the State and Territory level has been created, known as Other Territories. Other Territories include Jervis Bay Territory, previously included with the Australian Capital Territory, as well as Christmas Island and the Cocos (Keeling) Islands, previously excluded from population estimates for Australia. Data for Other Territories, while not detailed separately, are included in Australia totals commencing with September quarter 1993.

POPULATION AND COMPONENTS OF POPULATION CHANGE

3 Australia's population estimates for the period since 1971 are compiled according to the place of usual residence of the population. An explanation of the place of usual residence conceptual basis for population estimates is given in *Population Estimates: Concepts, Sources and Methods* (3228.0).

METHOD OF ESTIMATION

4 The estimates of the population of Australia and the States and Territories at the date of the Census of Population and Housing are census counts based on place of usual residence adjusted for underenumeration and the number of Australian residents estimated to have been temporarily overseas at the time of the census.

5 Quarterly estimates of the Australian population are obtained by adding to the population at the beginning of each period components of natural increase (on a usual residence basis) and net overseas migration. For the States and Territories, account is also taken of estimated interstate movements involving a change of usual residence. After each census estimates are made for the preceding intercensal period by incorporating an additional quarterly adjustment (intercensal discrepancy) to ensure that the total intercensal increase agrees with the difference between the estimated resident population at the two respective census dates.

NATURAL INCREASE: BIRTHS AND DEATHS

6 In this publication births and deaths data are presented by State and Territory of usual residence. For preliminary estimates, births and deaths by quarter of registration are used as a proxy for quarter of occurrence. For revised and final estimates after 30 June 1991 year/quarter of occurrence data are used. The births and deaths data detailed in the *Components of population* section of this publication are shown by year of occurrence for revised and final data and year/quarter of registration for preliminary data which may affect analysis of relevant tables.

EXPLANATORY NOTES

- NET ESTIMATED OVERSEAS MIGRATION **7** Figures are based on net permanent and long-term overseas movements with State and Territory not stated allocated pro rata. Short-term movements are excluded. The estimates from July 1976 onwards include an adjustment for the net effect of category jumping. This adjustment is necessary because net permanent and long-term migration figures can be affected by changes in travel intentions from short-term to permanent/long-term or vice versa. For example, an Australian resident departing for a short-term visit overseas (stating that he/she intends to stay abroad for less than 12 months) in fact stays more than 12 months, thereby changing his/her travel category from short-term to long-term. Prior to December quarter 1989, adjustments for category jumping were only made to final population estimates. These adjustments are now also included in preliminary estimates. For further details see *Population Estimates: Concepts, Sources and Methods* (3228.0).
- NET ESTIMATED INTERSTATE MIGRATION **8** Estimates of interstate migration since June 1986 have been derived from unidentified information on interstate changes of address advised to the Health Insurance Commission in the process of administering Medicare. For further details see *Population Estimates: Concepts, Sources and Methods* (3228.0).
- RATES OF POPULATION GROWTH **9** These express population change over a period as a proportion (%) of the population at the beginning of the period.
- EXPERIMENTAL ESTIMATES OF ABORIGINAL AND TORRES STRAIT ISLANDER POPULATION **10** Estimates of the Indigenous population are experimental in that the standard approach to population estimation is not possible because satisfactory data on births, deaths and internal migration are not generally available. Furthermore, there is significant intercensal volatility in census counts of the Indigenous population, thus adding to the problem of estimating the true Indigenous population. This volatility can in part be attributed to changes in the propensity of persons to identify as being of Indigenous origin. As a result, a method based on the use of life tables is used to produce time series data. For further details see *Experimental Estimates of the Aboriginal and Torres Strait Islander Population* (3230.0).
- ESTIMATED RESIDENT HOUSEHOLDS **11** Estimates of households are based on the estimated resident population series, to which propensities to form households are applied. These propensities were estimated from the Census of Population and Housing, and updated using the monthly Labour Force Survey. A detailed description of the method used to produce household estimates is contained in *Household Estimates 1986, 1991–94* (3229.0).
- MARRIAGES AND DIVORCES **12** All marriage and divorce data are shown by State or Territory of registration. While divorce data are presented by year/quarter of occurrence, marriage data are presented by year/quarter of registration.
- 13** Divorce statistics for States and Territories are affected by persons applying to the nearest Family Court rather than the court in their State or Territory of residence. The Canberra registry of the Family Court of Australia is particularly affected as it serves, in addition to the Australian Capital Territory, a large area of south-eastern New South Wales and part of Victoria. Around 55% of divorces granted in the Australian Capital Territory are to applicants who are not usual residents of the Territory. The number of divorces granted and the crude divorce rate for the Australian Capital Territory therefore does not accurately reflect the incidence of divorce among Australian Capital Territory residents.

EXPLANATORY NOTES

- OVERSEAS ARRIVALS AND DEPARTURES ESTIMATION METHOD **14** Overseas arrival and departure statistics are derived from a combination of full enumeration and sampling. All permanent movements and all movements with a duration of stay of one year or more are fully enumerated and processed. All movements with a duration of stay of less than one year are sampled. Statistics relating to these movements are therefore estimates which may differ from statistics which would have been obtained if details of all these movements had been processed.
- COUNTRY OF BIRTH **15** The classification of countries in this publication is the Australian Standard Classification of Countries for Social Statistics (ASCCSS). For more detailed information refer to the ABS publication *Australian Standard Classification of Countries for Social Statistics (ASCCSS)* (1269.0).
- 16** Political developments in Europe and the former USSR have resulted in a number of changes to the ASCCSS. These changes have affected some of the categories in this publication and are detailed in Revisions 1.01, 1.02 and 1.03 of the ASCCSS.
- 17** Overseas migration statistics by country of birth have certain limitations. For instance, it is not possible to separately identify England, Scotland and Wales (United Kingdom).
- ROUNDING **18** In this publication population estimates and their components have sometimes been rounded to the nearest hundred. Neither rounded figures nor unrounded figures should be assumed to be accurate to the last digit shown.
- 19** Where figures have been rounded, discrepancies may occur between sums of component items and totals.
- RELATED PUBLICATIONS **20** Other ABS publications which may be of interest to users include:
- *Australian Demographic Trends* (3102.0)
 - *Births, Australia* (3301.0)
 - *Deaths, Australia* (3302.0)
 - *Demography* (3311.1–8) — State and Territory specific publications
 - *Estimated Resident Population by Country of Birth, Age and Sex* (3221.0) —issued annually to 1994
 - *Population by Age and Sex: Australian States and Territories* (3201.0)
 - *Experimental Estimates of the Aboriginal and Torres Strait Islander Population* (3230.0)
 - *Household Estimates, Australia* (3229.0)
 - *Marriages and Divorces, Australia* (3310.0) — includes data on the marital status of the estimated resident population of Australia
 - *Migration, Australia* (3412.0) — includes data on the country of birth of the estimated resident population of Australia
 - *Overseas Arrivals and Departures, Australia* (3401.0) — issued monthly
 - *Population Estimates: Concepts, Sources and Methods* (3228.0)
 - *Population Projections* (3222.0).

EXPLANATORY NOTES

ADDITIONAL STATISTICS AVAILABLE

21 In most cases, the ABS can also provide information which is not published. This information may be made available in one or more of the following forms: microfiche, photocopy, data tape, floppy disk, computer printout or clerically extracted tabulation.

22 Current publications produced by the ABS are listed in the *Catalogue of Publications and Products, Australia* (1101.0). The ABS also issues, on Tuesdays and Fridays, a *Release Advice* (1105.0) which lists publications to be released in the next few days. Both are available from any ABS office.

23 Statistics of overseas arrivals and departures and related data are also published regularly by the Department of Immigration and Multicultural Affairs (see that Department's quarterly publication, *Immigration Update*) and by the Bureau of Tourism Research (on international travel and tourism). For more information about related unpublished statistics or data concepts contact Anne Ward on Canberra (02) 6252 6296.

G L O S S A R Y

Age-specific birth rates	Age-specific birth rates are the number of live births registered during the calendar year, according to age of mother, per 1,000 of the female estimated resident population of the same age as estimated for 30 June. For calculating these rates, births to mothers under 15 are included in the 15–19 age group, and births to mothers aged 50 and over are included in the 45–49 age group. Pro rata adjustment is made in respect of births for which age of mother is not given.
Birth	The delivery of a child, irrespective of the duration of pregnancy, who, after being born, breathes or shows any other evidence of life such as heartbeat.
Category jumping	The term used to describe the net effect of changes in travel intentions from short-term to permanent/long-term or vice versa. Category jumping consists of two components: an Australian resident component and an overseas visitor component. The Australian resident component of category jumping for a reference quarter is estimated by comparing the number of residents departing short-term with the number of these residents who return in the following twelve months to obtain the net number of Australian residents who jump category. Similarly, the number of overseas visitors arriving short-term is compared with the number of these visitors who depart in the following twelve months to obtain the net number of overseas visitors who jump category. Estimates of category jumping are derived by subtracting the Australian resident component from the overseas visitor component.
Category of movement	Overseas arrivals and departures are classified according to length of stay (in Australia or overseas), recorded in months and days by travellers on passenger cards. There are three main categories of movement: <ul style="list-style-type: none">▪ permanent,▪ long-term and▪ short-term. A significant number of travellers (i.e. overseas visitors to Australia on arrival and Australian residents going abroad) state exactly twelve months or one year as their intended period of stay. Many of them stay for less than that period and on their departure from, or return to, Australia, are therefore classified as short-term. Accordingly in an attempt to maintain consistency between arrivals and departures, movements of travellers who report their actual or intended period of stay as being one year exactly are randomly allocated to long-term or short-term in proportion to the number of movements of travellers who report their actual length of stay as up to one month more, or one month less, than one year.
Crude birth rate	The crude birth rate is the number of live births registered during the calendar year, per 1,000 estimated resident population at 30 June of that year.
Crude death rate	The crude death rate is the number of deaths registered during the calendar year, per 1,000 estimated resident population at 30 June of that year.
Crude divorce rate	The crude divorce rate is the number of decrees absolute granted during the calendar year, per 1,000 estimated resident population at 30 June of that year. In the interpretation of this rate, it must be kept in mind that a large and varying proportion of the population used in the denominator is unmarried or is below the minimum age of marriage.

G L O S S A R Y

Crude marriage rate	The crude marriage rate is the number of marriages registered during the calendar year, per 1,000 estimated resident population at 30 June of that year. In the interpretation of this rate, it must be kept in mind that a large and varying proportion of the population used in the denominator is below the minimum age of marriage or is already married.
Divorce	Decrees absolute of dissolution of marriage.
Estimated resident population (ERP)	Estimated resident population data are quarterly estimates of the Australian population obtained by adding to the estimated population at the beginning of each period the components of natural increase (on a usual residence basis) and net overseas migration. For the States and Territories, account is also taken of estimated interstate movements involving a change of usual residence. After each census, estimates for the preceding intercensal period are revised by incorporating an additional quarterly adjustment (intercensal discrepancy) to ensure that the total intercensal increase agrees with the difference between the estimated resident populations at the two respective census dates. Estimates of the resident population are based on adjusted (for underenumeration) census counts by place of usual residence, to which are added the number of Australian residents estimated to have been temporarily overseas at the time of the census.
	The concept of estimated resident population links people to a place of usual residence within Australia. Usual residence is that place where each person has lived or intends to live for six months or more in a reference year.
Former Yugoslav Republics	Consists of Bosnia-Herzegovina, Croatia, the former Yugoslav Republic of Macedonia, Slovenia, the former Yugoslav Republics of Serbia and Montenegro, and Yugoslavia n.f.d.
Infant mortality rate	The number of deaths of children under 1 year of age in a calendar year per 1,000 live births in the same calendar year.
Intercensal discrepancy	After each census, estimates for the preceding intercensal period are provided by incorporating an additional quarterly adjustment to ensure that the total intercensal increase agrees with the difference between the estimated resident populations at the two respective census dates. For a detailed description see the ABS information paper <i>Population Estimates: Concepts, Sources and Methods</i> (3228.0).
Long-term arrivals	Long-term arrivals comprise overseas visitors who intend to stay in Australia for twelve months or more (but not permanently) and Australian residents returning after an absence of twelve months or more overseas.
Long-term departures	Long-term departures comprise Australian residents who intend to stay abroad for twelve months or more (but not permanently) and overseas visitors departing who stayed twelve months or more in Australia.

Marriage	Under the <i>Australian Marriage Act 1961</i> (Cwlth), a marriage may be celebrated by a minister of religion registered as an authorised celebrant, by a district registrar or by other persons authorised by the Attorney General. Notice of the intended marriage must be given to the celebrant at least one calendar month but within six calendar months before the marriage. A celebrant must transmit an official certificate of the marriage for registration to a district registrar in the State or Territory in which the marriage took place.
Marital status	Two separate concepts are measured by the ABS. These are registered marital status and social marital status. They have different personal characteristics and are independent variables with separate classifications. Marital status in this publication relates to registered marital status which refers to formally registered marriages or divorces for which the partners hold a certificate.
Natural increase	Excess of births over deaths.
Net interstate migration	The difference between the number of persons who have changed their place of usual residence by moving into a given State or Territory and the number who have changed their place of usual residence by moving out of that State or Territory. This difference may be either positive or negative.
Net overseas migration	Net overseas migration is net permanent and long-term overseas migration plus an adjustment for the net effect of category jumping. This net effect may be either positive or negative.
Net permanent and long-term overseas movement	The difference between the number of permanent (settler) and long-term overseas arrivals by State or Territory of intended usual residence and the number of permanent and long-term departures of Australian residents (including former settlers) by State or Territory of actual residence. Figures are based on movements with State and Territory not stated allocated pro rata. Short-term movements are excluded.
Overseas arrivals and departures (OAD)	Overseas arrivals and departures refer to the arrival or departure of Australian residents or overseas visitors, through Australian airports (or sea ports), which have been recorded on incoming or outgoing passenger cards. Statistics on overseas arrivals and departures relate to the number of movements of travellers rather than the number of travellers (i.e. the multiple movements of individual persons during a given reference period are all counted).
Permanent arrivals (settlers)	Permanent arrivals (settlers) comprise travellers who hold migrant visas (regardless of stated intended period of stay), New Zealand citizens who indicate an intention to settle and those who are otherwise eligible to settle (e.g. overseas-born children of Australian citizens).
Permanent departures	Permanent departures are Australian residents (including former settlers) who on departure state that they do not intend to return to Australia.
Population growth	For Australia, population growth is the sum of natural increase, net overseas migration and an allowance for intercensal discrepancy. For States and Territories, population growth also includes net interstate migration.
Short-term arrivals	Short-term arrivals comprise overseas visitors whose intended stay in Australia is less than twelve months and Australian residents returning after an absence of less than twelve months overseas.

G L O S S A R Y

Short-term departures	Short-term departures comprise Australian residents whose intended period of stay abroad is less than twelve months and overseas visitors departing who stayed less than twelve months in Australia.
Standardised death rate	The overall death rate, per 1,000 persons, that would have prevailed in a standard population if it had experienced at each age the death rates of the population being studied. The standard population used in these calculations is all persons in the 1991 Australian population. This is the direct method of standardisation.
State or Territory of registration	State or Territory of registration refers to the State or Territory where the marriage was registered or the divorce was granted.
State or Territory of usual residence	State or Territory of usual residence refers to the State or Territory of usual residence of: <ul style="list-style-type: none">▪ the population (estimated resident population)▪ the mother (birth collection)▪ the deceased (death collection) In the case of overseas movements State or Territory of usual residence refers to the State or Territory regarded by the traveller as the one in which he/she lives or has lived. State or Territory of intended residence is derived from the intended address given by the settlers, and by the Australian residents returning after a journey abroad. Particularly in the case of the former, this information does not necessarily relate to the State or Territory in which the traveller will eventually establish a permanent residence.
Total fertility rate	The sum of age-specific fertility rates (live births at each age of mother per female population of that age). It represents the number of children a woman would bear during her lifetime if she experienced current age-specific fertility rates at each age of her reproductive life.
