MARCH QTR KEY FIGURES
PRELIMINARY DATA

	Population at end Mar Qtr 2001 '000	Change over previous year '000	%
New South Wales	6 516.6	69.5	1.1
Victoria	4 816.1	60.8	1.3
Queensland	3 612.3	59.7	1.7
South Australia	1 501.4	4.4	0.3
Western Australia	1 904.1	25.9	1.4
Tasmania	470.3	-0.3	-0.1
Northern Territory	196.9	2.2	1.1
Australian Capital Territory	313.4	2.7	0.9
Australia	19 334.2	224.9	1.2

MARCH QTR KEY POINTS
ESTIMATED RESIDENT POPULATION

- The preliminary estimated resident population of Australia at March 2001 was 19,334,000 persons. The population increased by 224,900 persons since March 2000 and by 57,000 persons since December 2000.
- Natural increase for March Quarter 2001 was 30,200 persons, a decrease of 2,700 on March Quarter 2000. Natural increase for the year ended March 2001 was 4,400 persons less than for the year ended March 2000.
- Preliminary net overseas migration was assumed to be 26,800 persons for March Quarter 2001 (see NOTES on page 2).
- For only the second time since September Quarter 1996 Tasmania recorded positive population growth in March Quarter 2001 (200 persons), although this may be a reflection of new notification procedures.

POPULATION GROWTH RATES

- For the year ended March 2001 Queensland recorded the highest growth rate (1.7%) while Tasmania's growth rate was negative (-0.1%). The national annual growth rate was 1.2%, the same as the rate for the year ended March 2000.

SPECIAL ARTICLES

- Populations of Australia and New Zealand: a comparison—Between 1992 and 2000, Australia and New Zealand experienced similar average annual growth rates of 1.1%. While Australia's population growth rate was relatively steady over this period, New Zealand's growth rate declined from 1.6% in 1995–96 to 0.5% in 1998–99, largely because of declining levels of net overseas migration.
- Electronic time series: Australian historical population statistics—ABS has released a total of 103 spreadsheets providing data on population (size, growth, distribution, age-sex structure) births, deaths, migration, marriages and divorces.

NOTES

FORTHCOMING ISSUES

<i>ISSUE (Quarter)</i>	<i>RELEASE DATE</i>
June 2001	13 December 2001
September 2001	21 March 2002

.....

CHANGES IN THIS ISSUE

The preliminary estimate of net overseas migration for March Quarter 2001 is an assumption consistent with the medium net overseas migration assumption included in Population Projections, Australia, 1999–2101 (ABS Cat. no. 3222.0). It is anticipated that a similar approach will also be adopted for the June and September Quarters 2001. Data from passenger cards completed by persons arriving in or departing from Australia, together with other information available to the Department of Immigration and Multicultural Affairs (DIMA), serve as a source for statistics on overseas migration. DIMA has recently automated the processing of passenger cards and the ABS has yet to receive relevant data.

Because net overseas migration is assumed, the resident population at 31 March 2001 is a projection.

Estimates of net overseas migration for September and December Quarters 2000 are based upon a sample of passenger cards from persons arriving in and departing from Australia during the period August through December 2000, along with movement data supplied by DIMA. Further information is available in Demography Working Paper 2001/1—Estimating July to December 2000 Net Overseas Migration, available on the ABS Website <<http://www.abs.gov.au>>. From the navigation bar select Themes; Demography; ABS Demography Working Papers.

Preliminary category jumping data are not yet available for September and December Quarters 2000 and March Quarter 2001. For September and December Quarters 2000 preliminary category jumping has been set to zero. For March Quarter 2001 preliminary category jumping forms a part of the net overseas migration assumption.

.....

FINAL DATA

All ERP, natural increase, net overseas and net interstate migration and estimated resident household data prior to September Quarter 1996 are final.

Marriages and divorces data prior to March Quarter 2001 are final.

.....

REVISED DATA

ERP and natural increase from September Quarter 1999 to June Quarter 2000 have been revised. These revisions are also reflected in subsequent quarterly estimates.

Infant deaths data for Victoria and Australia for September and December Quarters 2000 have been revised.

.....

PRELIMINARY DATA

ERP in major population centres (table 5), by marital status (table 8) and by country of birth (table 9) at June 2000 remain preliminary.

All data from September Quarter 2000 are preliminary for ERP, natural increase and net interstate migration.

Net overseas migration data from September Quarter 1999 are preliminary.

Marriages and divorces data are preliminary for March Quarter 2001.

A N A L Y S E S A N D C O M M E N T S

AUSTRALIA'S POPULATION

The preliminary estimated resident population (ERP) of Australia at March 2001 was 19,334,000 persons, an increase of 224,900 persons since March 2000 and 57,000 persons since December 2000. The national growth rate during the 12 months ended March 2001 was 1.2%, the same as the growth rate for the preceding 12 months.

There were slightly more females (9,706,000) than males (9,628,000) in the population at the end of March 2001. This is reflected in the majority of Australian States and Territories, with the exception of Western Australia and the Northern Territory where there were more males than females.

COMPONENTS OF AUSTRALIA'S POPULATION CHANGE

The two components contributing to change in the Australian population are natural increase and net overseas migration. During the 20th century natural increase (the number of births minus the number of deaths) had consistently contributed more to population growth than net overseas migration (net permanent and long-term movement plus an adjustment for category jumping¹).

Natural increase

In March Quarter 2001 natural increase was 30,200 persons, a decrease of 2,700 persons on the number recorded in March Quarter 2000 (33,000) but an increase of 300 persons on December Quarter 2000 (29,900). Births contributed 59,900 babies while deaths removed 29,700 people from the population in March Quarter 2001. Natural increase for the year ended March 2001 was 117,400 compared with 121,800 for the year ended March 2000.

Net overseas migration

Preliminary net overseas migration was assumed to be 26,800 persons in March Quarter 2001 (see NOTES on page 2). For the year ended March 2001 net overseas migration was assumed to be 107,600 compared with 98,000 for the year ended March 2000.

POPULATION OF AUSTRALIA'S STATES AND TERRITORIES

The population of Australia's States and Territories at March 2001 was as follows: New South Wales 6,516,600, Victoria 4,816,100, Queensland 3,612,300, South Australia 1,501,400, Western Australia 1,904,100, Tasmania 470,300, Northern Territory 196,900, and the Australian Capital Territory 313,400.

Since September Quarter 1996 Tasmania has largely experienced a population decline. This is in contrast to the other States and Territories which have mainly sustained positive growth. The March Quarter 2001 saw a reversal to Tasmania's negative population growth with a population increase of 200 persons. This positive growth can partially be explained by a gain in natural increase between the December Quarter 2000 (400 persons) and March Quarter 2001 (800 persons). However, as the Registrar of Births, Deaths and Marriages in Tasmania has introduced new notification procedures this increase may not be sustained in future quarters. Prior to March Quarter 2001 the last time Tasmania had positive growth was in September Quarter 1999.

¹ Category jumping relates to those persons who change their travel arrangements from short-term to permanent/long-term or vice versa.

**POPULATION OF AUSTRALIA'S
STATES AND TERRITORIES**

continued

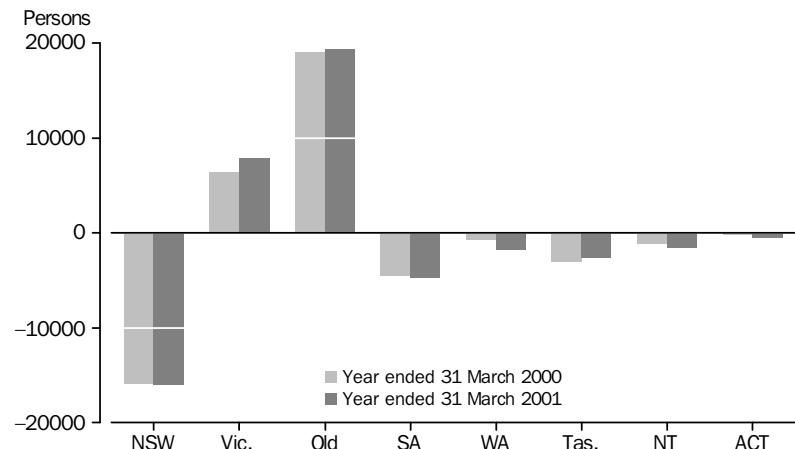

Interstate migration

While natural increase and net overseas migration affect the population growth of Australia's States and Territories these populations are also influenced by interstate migration. Historically, mobility in Australia has been high and volatile. Interstate migration in Australia is unrestricted and because of the large numbers involved it has a profound impact on the growth and distribution of population in the States and Territories.

Queensland (4,200), Victoria (2,700) and the Australian Capital Territory (100) recorded net interstate migration gains for the March Quarter 2001. Losses recorded were from New South Wales (-4,300), South Australia (-1,300), Western Australia (-600), Tasmania (-500), and the Northern Territory (-400).

For the year ended March 2001, Queensland (19,400) and Victoria (7,800) were the only States and Territories to record net interstate migration gains. Losses were recorded by New South Wales (-16,000), South Australia (-4,700), Tasmania (-2,600), Western Australia (-1,800), Northern Territory (-1,600) and the Australian Capital Territory (-500).

NET INTERSTATE MIGRATION, States and Territories

HOUSEHOLDS AND PEOPLE

There were 7,250,000 households in Australia at June 2000, an increase of 123,400 or 2% since June 1999 and 582,200 or 9% since June 1995.

The resident population of occupied private dwellings at June 2000 was 18.8 million. This equates to an average household size of 2.6 persons per household. At June 1995 the average household size was 2.7 persons.

S P E C I A L A R T I C L E

POPULATIONS OF AUSTRALIA AND NEW ZEALAND: A COMPARISON

In terms of population characteristics, Australia and New Zealand have much in common. Both countries have a similar history of European settlement, are predominantly English speaking, have minority indigenous populations, and during the latter half of the 20th century have seen a steady stream of migrants from a variety of regions throughout the world. Both countries have experienced similar declines in fertility since the high levels recorded during the baby boom, and have enjoyed the benefits of continually improving life expectancy. One consequence of these trends is that both countries are faced with an ageing population, and the associated challenge of providing appropriate care and support for this growing group within the community.

POPULATION SIZE, GROWTH AND DISTRIBUTION

At June 2000, Australia's population was 19.2 million people, while New Zealand's was 3.8 million. Between 1992 and 2000, Australia and New Zealand experienced similar average annual growth rates of 1.1%. However, while Australia's population growth rate was relatively steady over this period, New Zealand's growth rate declined from 1.6% in 1995–96 to 0.5% in 1998–99, largely because of declining levels of net overseas migration. From a peak gain of 29,500 in 1996–97, New Zealand's net overseas migration became negative to losses of 11,400 in 1998–99 and 9,800 in 1999–00. Most emigration in these years was to Australia.

Both countries have their roots in agriculture, and a century ago had about half their populations living in rural areas. In 1996, 86% of Australians and 85% of New Zealanders lived in urban areas of 1,000 or more people.

RECENT POPULATION CHARACTERISTICS

	Australia	New Zealand	
Population (million)	June 2000	19.2	3.8
0–14 years (%)	June 2000	20.5	22.9
15–64 years (%)	June 2000	67.2	65.3
65 years and over (%)	June 2000	12.3	11.8
Median age (years)	June 2000	35.2	34.3
Population growth (%)			
1999–2000 (%)	June 2000	1.2	0.5
1992–2000 (average annual %)	June 2000	1.1	1.1
Net overseas migration ('000)	1999–2000	99.1	-9.8
Total fertility rate (babies per woman)	1999	1.75	2.00
Life expectancy at birth			
Males (years)	1997–1999	76.2	75.2
Females (years)	1997–1999	81.8	80.4

Sources: Australian Demographic Statistics, June 2000 (Cat. no. 3101.0); Births, Australia, 1999 (Cat no. 3301.0); Deaths, Australia, 1999 (Cat. no. 3302.0); Statistics New Zealand, *Demographic Trends*, 2000, Wellington.

FERTILITY

Since the early 1960s, the total fertility rates of both Australian and New Zealand women have declined, although the rates for New Zealand have generally been slightly higher than for Australia. Between 1962 and 1999, the total fertility rate for Australian women fell from 3.4 to 1.7 babies per woman, compared with a fall from 4.2 to 2.0 babies per woman for New Zealand women.

In common with other developed countries, fertility has fallen below replacement level (the number of babies a woman would need to replace herself and her partner, that is, about

FERTILITY *continued*

2.1 on average) in both countries. This occurred in 1976 in Australia and 1980 in New Zealand. Despite this, in 2000 the number of births exceeded the number of deaths in both countries, because the current age structure of each population is still relatively young. Natural increase is projected to continue to contribute to population growth for the first 30 to 40 years of this century in each country. However, in the longer term, as the population ages and deaths eventually outnumber births, any population growth in either country will stem from net overseas migration gains.

MORTALITY

The people of Australia and New Zealand experienced substantial gains in life expectancy throughout the 20th century. An Australian baby boy and girl born during the years 1997–1999 could expect to live for 76 and 82 years, respectively, based on current patterns of mortality. Newborn New Zealand boys and girls had slightly lower life expectancies (75 years and 80 years, respectively) for the same period. These levels ranked among the highest in the world, behind Japan and some European countries. Gains in life expectancy over the last century can be attributed in part to improvements in the infant mortality rate. The infant mortality rate is an indicator of population health and living conditions. The world infant mortality rate was projected to be 57 infant deaths per 1,000 live births for the year 2000. Australia's and New Zealand's rates of 5.7 and 5.6 respectively in 1999, ranked among the lowest in the world.

The major causes of death in both Australia and New Zealand are cancer, ischaemic heart disease and stroke. In 1997, cancer was the leading cause of death in both countries, accounting for over a quarter of deaths. Ischaemic heart disease accounted for 23% of deaths and stroke for 9% in both countries.

EXTERNAL MIGRATION

Both Australia and New Zealand are countries open to immigration and this has had a major impact on the size, growth and composition of each country's population, particularly since the end of World War II.

Migrants from the United Kingdom and Ireland dominated flows into both countries from colonial days until the end of World War II, and continued to do so in New Zealand until the 1970s. After World War II, the levels of migration were characterised by large fluctuations, often in response to changing economic conditions and shifts in government policy. Australia's migrant stream expanded to include displaced persons from Eastern Europe and people from Mediterranean countries such as Italy, Greece and Yugoslavia. Since the 1970s increasing proportions of migrants have come to both countries from Northeast and Southeast Asia, and, to New Zealand, from the Pacific Islands.

Population movement between Australia and New Zealand is associated with the relative economic conditions in both countries¹. It has occurred since European settlement and has increased substantially in the last three decades. Between 1996 and 2000 the largest group of permanent and long-term arrivals to Australia was from New Zealand (15%). For the same category of arrivals to New Zealand the largest contributor was the United Kingdom (13%) while Australia's contribution was 10%. Because of the difference in the volume of immigration to Australia and New Zealand, there was a substantial net gain in trans-Tasman migration to Australia of approximately 25,000 per year over the period.

Additional analysis and data are available in the ABS publication *Australian Social Trends, 2001* (Cat. no. 4102.0) which was released on 6 June 2001.

ELECTRONIC TIME SERIES

AUSTRALIAN HISTORICAL POPULATION STATISTICS

Australian Historical Population Statistics (ABS Cat. no. 3105.0.65.001) was released on 26 April 2001 as an electronic product. It contains a wide range of time series demographic data in computer spreadsheet form going back, where possible, to the beginnings of European settlement of Australia. Statistics are included on population size and growth, population distribution, population age-sex structure, births, deaths, migration, marriages and divorces.

AusStats subscribers may access a total of 103 spreadsheets which were provided in the initial release. A complete listing is shown below and on the ABS website <<http://www.abs.gov.au>>. From the navigation bar select Themes; Demography; Australian Historical Population Statistics. For further information contact Sue Taylor <sue.taylor@abs.gov.au>.

Data are also available to non-AusStats subscribers. Inquiries should be made to the National Information and Referral Service on 1300 135 070.

Table Description

Population size and growth

- 1 Population by sex, States and Territories, 31 December, 1788 onwards
- 2 Population by sex, States and Territories, 30 June, 1901 onwards

(a) 1996 Census based. Estimates and the low projections series assume no change in the propensity to identify as Indigenous, as recorded on 1996 Census forms. The high projection series assume a change in propensity based on the 1991–1996 period.

(b) Includes Jervis Bay Territory.

EXPLANATORY NOTES

INTRODUCTION

1 This quarterly publication contains estimates of the resident populations (ERP) of Australia and the States and Territories based on the final results of the Census of Population and Housing held on 6 August 1996 (with various adjustments described in paragraph 4). The publication also contains estimates of the number of households by household size as well as the latest available statistics of births, deaths (including infant deaths), marriages, divorces and overseas and interstate migration. In addition, the publication includes estimates of the resident population by age, marital status and country of birth as well as experimental estimates of the Aboriginal and Torres Strait Islander population.

2 Following the 1992 amendments to the Acts Interpretation Act to include the Indian Ocean Territories of Christmas Island and the Cocos (Keeling) Islands as part of geographic Australia, population estimates commencing from September quarter 1993 include estimates for these two territories. To reflect this change, another category of the State and Territory level has been created, known as Other Territories. Other Territories include Jervis Bay Territory, previously included with the Australian Capital Territory, as well as Christmas Island and the Cocos (Keeling) Islands, previously excluded from population estimates for Australia. Data for Other Territories, while not detailed separately, are included in Australia totals commencing from September quarter 1993.

POPULATION AND COMPONENTS OF POPULATION CHANGE

3 Australia's population estimates for the period since 1971 are compiled according to the place of usual residence of the population. An explanation of the place of usual residence conceptual basis for population estimates is given in *Demographic Estimates and Projections: Concepts, Sources and Methods, Statistical Concepts Library, ABS Website*, <http://www.abs.gov.au>.

METHOD OF ESTIMATION

4 The estimates of the population of Australia and the States and Territories at the date of the Census of Population and Housing are census counts based on place of usual residence adjusted for underenumeration and the number of Australian residents estimated to have been temporarily overseas at the time of the census.

5 Quarterly estimates of the Australian population are obtained by adding to the population at the beginning of each period components of natural increase (on a usual residence basis) and net overseas migration. For the States and Territories, account is also taken of estimated interstate movements involving a change of usual residence. After each census estimates are made for the preceding intercensal period by incorporating an additional quarterly adjustment (intercensal discrepancy) to ensure that the total intercensal increase agrees with the difference between the estimated resident population at the two respective census dates.

NATURAL INCREASE: BIRTHS AND DEATHS

6 In this publication births and deaths data are presented by State and Territory of usual residence. For preliminary estimates, births and deaths by quarter of registration are used as a proxy for quarter of occurrence. For revised estimates a factor has been applied to the number of occurrences to allow for those occurrences which are yet to be registered. For final estimates after 30 June 1991 year/quarter of occurrence data are used. The births and deaths data detailed in the *Components of population* section of this publication are shown by year of occurrence for revised and final data and year/quarter of registration for preliminary data which may affect analysis of relevant tables.

NET OVERSEAS MIGRATION

7 Figures are based on net permanent and long-term overseas movements with State and Territory not stated allocated pro rata. Short-term movements are excluded. The estimates from July 1976 onwards include an adjustment for the net effect of category jumping. This adjustment is necessary because net permanent and long-term migration figures can be affected by changes in travel intentions

EXPLANATORY NOTES

- NET OVERSEAS MIGRATION *continued* from short-term to permanent/long-term or vice versa. For example, an Australian resident departing for a short-term visit overseas (stating that he/she intends to stay abroad for less than 12 months) in fact stays 12 or more months, thereby changing his/her travel category from short-term to long-term. Prior to December quarter 1989, adjustments for category jumping were only made to revised population estimates. These adjustments are now also included in preliminary estimates. For further details see *Demographic Estimates and Projections: Concepts, Sources and Methods, Statistical Concepts Library, ABS Website*, <http://www.abs.gov.au>.
- NET INTERSTATE MIGRATION **8** Estimates of interstate migration since June 1986 have been derived from latest census data on interstate movement in the preceding one year and unidentified information on interstate changes of address advised to the Health Insurance Commission in the process of administering Medicare.
- RATES OF POPULATION GROWTH **9** These express population change over a period as a proportion (%) of the population at the beginning of the period.
- EXPERIMENTAL ESTIMATES OF ABORIGINAL AND TORRES STRAIT ISLANDER POPULATION **10** Estimates of the Indigenous population are experimental in that the standard approach to population estimation is not possible because satisfactory data on births, deaths and internal migration are not generally available. Furthermore, there is significant intercensal volatility in census counts of the Indigenous population, thus adding to the problem of estimating the true Indigenous population. This volatility can in part be attributed to changes in the propensity of persons to identify as being of Indigenous origin. As a result, a method based on the use of life tables is used to produce time series data. For further details see *Experimental Estimates of the Aboriginal and Torres Strait Islander Population* (Cat. no. 3230.0).
- EXPERIMENTAL PROJECTIONS OF ABORIGINAL AND TORRES STRAIT ISLANDER POPULATION **11** Experimental estimates of the Indigenous population as at 30 June 1996 are used as the base population for projections of the Indigenous population to 30 June 2006. A low and a high projection series have been generated, and respectively imply a low and high overall growth rate of the Indigenous population. The low series uses a nil change in propensity to identify assumption based on the premise that the Indigenous population (as recorded in the 1996 Census) will only change as a result of natural increase. The high series uses a change in propensity to identify assumption based on the increase in the Indigenous population observed between the 1991 and 1996 Censuses which cannot be attributed to natural increase. For further details see *Experimental Projections of the Aboriginal and Torres Strait Islander Population* (Cat. no. 3231.0).
- ESTIMATED RESIDENT HOUSEHOLDS **12** Estimates of households are based on the estimated resident population series, to which propensities to form households are applied. These propensities were estimated from the Census of Population and Housing, and updated using the monthly Labour Force Survey. A detailed description of the method used to produce household estimates is contained in *Household Estimates 1986, 1991–94* (Cat. no. 3229.0).
- MARRIAGES AND DIVORCES **13** All marriage and divorce data are shown by State or Territory of registration. While divorce data are presented by year/quarter of occurrence, marriage data are presented by year/quarter of registration.
- 14** Divorce data for States and Territories are affected by persons applying to the nearest Family Court rather than the court in their State or Territory of usual residence. The Canberra registry of the Family Court of Australia is particularly

EXPLANATORY NOTES

MARRIAGES AND DIVORCES affected as it serves, in addition to the Australian Capital Territory, a large area of south-eastern New South Wales and part of Victoria. Around 55% of divorces granted in the Australian Capital Territory are to applicants who are not usual residents of the Territory. The number of divorces granted and the crude divorce rate for the Australian Capital Territory therefore does not accurately reflect the incidence of divorce among Australian Capital Territory residents.

OVERSEAS ARRIVALS AND DEPARTURES ESTIMATION METHOD **15** Overseas arrival and departure statistics are derived from a combination of full enumeration and sampling. All permanent movements and all movements with a duration of stay of one year or more are fully enumerated and processed. All movements with a duration of stay of less than one year are sampled. Statistics relating to these movements are therefore estimates which may differ from statistics which would have been obtained if details of all these movements had been processed.

16 From July 1998 the Department of Immigration and Multicultural Affairs (DIMA) is able to determine the actual length of stay for departing overseas visitors and arriving Australian residents which was previously collected from information on intended length of stay supplied on the arrival or departure card by the passenger. This new method has resulted in a change in data distribution with the number of passengers staying for one year exactly declining significantly.

COUNTRY OF BIRTH **17** The classification of countries in this publication is the Australian Standard Classification of Countries for Social Statistics (ASCCSS). For more detailed information refer to the ABS publication *Australian Standard Classification of Countries for Social Statistics* (Cat. no. 1269.0).

18 Political developments in Europe and the former USSR have resulted in a number of changes to the ASCCSS. These changes have affected some of the categories in this publication and are detailed in Revisions 1.01, 1.02 and 1.03 of the ASCCSS.

19 Overseas migration statistics by country of birth have certain limitations. For instance, it is not possible to separately identify England, Scotland and Wales (United Kingdom).

ROUNDING **20** In this publication population estimates and their components have sometimes been rounded to the nearest hundred. Neither rounded figures nor unrounded figures should be assumed to be accurate to the last digit shown.

21 Where figures have been rounded, discrepancies may occur between sums of component items and totals.

- *Experimental Estimates of the Aboriginal and Torres Strait Islander Population* (Cat. no. 3230.0)
- *Experimental Projections of the Aboriginal and Torres Strait Islander Population, 1996 to 2006* (Cat. no. 3231.0)
- *Household Estimates, Australia* (Cat. no. 3229.0)
- *Interstate Arrivals and Departures*—from September quarter 1986, Dataset, <<http://www.abs.gov.au/ausstats>>. From the navigation bar select Publications & Data; Companion Data; By Catalogue/Subject
- *Marriages and Divorces, Australia* (Cat. no. 3310.0)—includes data on the marital status of the estimated resident population of Australia
- *Migration, Australia* (Cat. no. 3412.0)—includes data on the country of birth of the estimated resident population of Australia
- *Overseas Arrivals and Departures, Australia* (Cat. no. 3401.0)—issued monthly
- *Population by Age and Sex: Australian States and Territories* (Cat. no. 3201.0)
- *Population Projections, Australia* (Cat. no. 3222.0)
- *Underlying Cause of Death by Sex and Age at Death, State of Usual Residence and ICD10*—from 1999, Dataset, <<http://www.abs.gov.au/ausstats>>. From the navigation bar select Publications & Data; Companion data; By Catalogue/Subject.

ADDITIONAL STATISTICS AVAILABLE

- 23** As well as the statistics included in this and related publications, the ABS may have other relevant data available on request. Inquiries should be made to the National Information and Referral Service on 1300 135 070.
- 24** Current publications produced by the ABS are listed in the *Catalogue of Publications and Products, Australia* (Cat. no. 1101.0). The ABS also issues, on Tuesdays and Fridays, a *Release Advice* (Cat. no. 1105.0) which lists publications to be released in the next few days. Both are available from any ABS office.
- 25** Statistics of overseas arrivals and departures and related data are also published regularly by the Department of Immigration and Multicultural Affairs (see that Department's quarterly publication, *Immigration Update*) and by the Bureau of Tourism Research (on international travel and tourism).

G L O S S A R Y

Age-specific fertility rates	Age-specific fertility rates are the number of live births (occurred or registered) during the calendar year, according to age of mother, per 1,000 of the female estimated resident population of the same age at 30 June. For calculating these rates, births to mothers under 15 are included in the 15–19 age group, and births to mothers aged 50 and over are included in the 45–49 age group. Pro rata adjustment is made in respect of births for which age of mother is not given.
Average household size	Average household size refers to the number of persons per household in private dwellings.
Birth	The delivery of a child, irrespective of the duration of pregnancy, who, after being born, breathes or shows any other evidence of life such as heartbeat.
Category jumping	Category jumping is the term used to describe changes between intended and actual duration of stay of travellers to/from Australia, such that their classification as short-term or as long-term/permanent movers is different at arrival/departure from that after 12 months. Category jumping consists of two components—an Australian resident component and an overseas visitor component. The Australian resident component of category jumping for a reference quarter is estimated by comparing the number of residents departing short-term in that quarter with all residents who left in that quarter and return in the following 12 months, to obtain the net number of Australian residents who jump category. Similarly, the number of overseas visitors arriving short-term in a quarter is compared with all overseas visitors and permanent arrivals who arrived in that quarter and depart in the following 12 months, to obtain the net number of overseas visitors who jump category. Estimates of category jumping are derived by subtracting the Australian resident component from the overseas visitor component.
Category of movement	Overseas arrivals and departures are classified according to length of stay (in Australia or overseas), recorded in months and days by travellers on passenger cards. There are three main categories of movement: <ul style="list-style-type: none">▪ permanent movements;▪ long-term movements (one year or more); and▪ short-term movements (less than one year). A significant number of travellers (i.e. overseas visitors to Australia on arrival and Australian residents going abroad) state exactly 12 months or one year as their intended period of stay. Many of them stay for less than that period and on their departure from, or return to, Australia are therefore classified as short-term. Accordingly, in an attempt to maintain consistency between arrivals and departures, movements of travellers who report their actual or intended period of stay as being one year exactly are randomly allocated to long-term or short-term in proportion to the number of movements of travellers who report their actual length of stay as up to one month more, or one month less, than one year.
Crude divorce rate	The crude divorce rate is the number of decrees absolute granted during the financial year, per 1,000 estimated resident population at 31 December. In the interpretation of this rate, it must be kept in mind that a large and varying proportion of the population used in the denominator is unmarried or is below the minimum age of marriage.

G L O S S A R Y

Crude marriage rate	The crude marriage rate is the number of marriages registered during the financial year, per 1,000 estimated resident population at 31 December. In the interpretation of this rate, it must be kept in mind that a large and varying proportion of the population used in the denominator is below the minimum age of marriage or is already married.
Divorce	Decrees absolute of dissolution of marriage.
Estimated resident population (ERP)	<p>The concept of estimated resident population (ERP) links people to a place of usual residence within Australia. Usual residence is that place where each person has lived or intends to live for six months or more in a reference year.</p> <p>The ERP is an estimate of the Australian population obtained by adding to the estimated population at the beginning of each period the components of natural increase (on a usual residence basis) and net overseas migration. For the States and Territories, account is also taken of estimated interstate movements involving a change of usual residence.</p> <p>Estimates of the resident population are based on census counts by place of usual residence, to which are added the estimated net census undercount and Australian residents estimated to have been temporarily overseas at the time of the Census. Overseas visitors in Australia are excluded from this calculation.</p> <p>After each census, estimates for the preceding intercensal period are revised by incorporating an additional adjustment (intercensal discrepancy) to ensure that the total intercensal increase agrees with the difference between the ERPs at the two respective census dates.</p>
Former Yugoslav Republics	Consists of Bosnia-Herzegovina, Croatia, the former Yugoslav Republic of Macedonia, Slovenia, the former Yugoslav Republics of Serbia and Montenegro, and Yugoslavia n.f.d.
Household	<p>A household is a group of two or more related or unrelated people who usually reside in the same dwelling, who regard themselves as a household and who make common provision for food or other essentials for living; or a person living in a dwelling who makes provision for his or her own food and other essentials for living, without combining with any other person. Households include group households of unrelated persons, same-sex couple households, single-parent households as well as one-person households.</p> <p>A household usually resides in a private dwelling (including caravans etc. in caravan parks). Persons usually resident in non-private dwellings, such as hotels, motels, boarding houses, jails and hospitals, are not included in household estimates.</p> <p>This definition of a household is consistent with the definition used in the Census. The number of households can be either based on count or estimated resident population.</p>
Household estimate	Household estimate is a measure of the number of households of the usually resident population. It is based on the census count of households which is adjusted for missed households, households of overseas visitors, households of Australian residents where all members were temporarily overseas at the time of the Census and households of Australian residents where all members were not home on census night and spent census night in a non-private dwelling in Australia.

G L O S S A R Y

Household population	The household population is the estimated resident population (ERP) that usually lives in private dwellings. It is the ERP less the population that usually lives in non-private dwellings.
Household size	Household size refers to the number of persons in a household.
Infant mortality rate	The number of deaths of children under one year of age in a financial year per 1,000 live births in the same financial year.
Intercensal discrepancy	Intercensal discrepancy is the difference between two estimates of a census year population, the first based on the latest census and the second arrived at by updating the previous census date estimate with intercensal components of population change which take account of information available from the latest census. It is caused by errors in the start and/or finish population estimates and/or in estimates of births, deaths or migration in the intervening period which cannot be attributed to a particular source.
Long-term arrivals	Long-term arrivals comprise: <ul style="list-style-type: none">▪ overseas visitors who intend to stay in Australia for 12 months or more (but not permanently); and▪ Australian residents returning after an absence of 12 months or more overseas.
Long-term departures	Long-term departures comprise: <ul style="list-style-type: none">▪ Australian residents who intend to stay abroad for 12 months or more (but not permanently); and▪ overseas visitors departing who stayed 12 months or more in Australia.
Marital status	Two separate concepts are measured by the Australian Bureau of Statistics. These are registered marital status and social marital status. They have different personal characteristics and are independent variables with separate classifications. Marital status relates to registered marital status which refers to formally registered marriages or divorces for which the partners hold a certificate. Four categories of marital status are identified: never married, married, widowed and divorced.
Marriage	Refers to registered marriages only. Under the <i>Australian Marriage Act 1961</i> (Cwlth), a marriage may be celebrated by a minister of religion registered as an authorised celebrant, by a district registrar or by other persons authorised by the Attorney-General. Notice of the intended marriage must be given to the celebrant at least one calendar month but within six calendar months before the marriage. A celebrant must transmit an official certificate of the marriage for registration in the State or Territory in which the marriage took place.
Natural increase	Excess of births over deaths.
Net interstate migration	The difference between the number of persons who have changed their place of usual residence by moving into a given State or Territory and the number who have changed their place of usual residence by moving out of that State or Territory. This difference may be either positive or negative.
Net overseas migration	Net overseas migration is net permanent and long-term overseas migration plus an adjustment for the net effect of category jumping.

G L O S S A R Y

Net permanent and long-term overseas movement	The difference between the number of permanent (settler) and long-term arrivals and the number of permanent and long-term departures. Short-term movements are excluded.
Overseas arrivals and departures (OAD)	Overseas arrivals and departures (OAD) refer to the arrival or departure of persons, through Australian airports (or sea ports), which have been recorded. Statistics on OAD relate to the number of movements of travellers rather than the number of travellers (i.e. the multiple movements of individual persons during a given reference period are all counted).
Permanent arrivals (settlers)	Permanent arrivals (settlers) comprise: <ul style="list-style-type: none">▪ travellers who hold migrant visas (regardless of stated intended period of stay);▪ New Zealand citizens who indicate an intention to settle; and▪ those who are otherwise eligible to settle (e.g. overseas born children of Australian citizens).
	This definition of settlers is used by the Department of Immigration and Multicultural Affairs (DIMA). Prior to 1985 the definition of settlers used by the Australian Bureau of Statistics (ABS) was the stated intention of the traveller only. Numerically the effect of the change in definition is insignificant. The change was made to avoid the confusion caused by minor differences between data on settlers published separately by the ABS and the DIMA.
Permanent departures	Permanent departures are Australian residents (including former settlers) who on departure state that they are departing permanently.
Population growth	For Australia, population growth is the sum of natural increase and net overseas migration. For States and Territories, population growth also includes net interstate migration. After the Census, intercensal population growth also includes an allowance for intercensal discrepancy.
Short-term arrivals	Short-term arrivals comprise: <ul style="list-style-type: none">▪ overseas visitors who intend to stay in Australia for less than 12 months; and▪ Australian residents returning after a stay of less than 12 months overseas.
Short-term departures	Short-term departures comprise: <ul style="list-style-type: none">▪ Australian residents who intend to stay abroad for less than 12 months; and▪ overseas visitors departing after a stay of less than 12 months in Australia.

G L O S S A R Y

Standardised death rate	<p>Standardised death rates enable the comparison of death rates between populations with different age structures by relating them to a standard population. The ABS standard populations relate to the years ending in 1 (eg 1991). The current standard population is all persons in the 1991 Australian population. They are expressed per 1,000 or 100,000 persons. There are two methods of calculating standardised death rates:</p> <ul style="list-style-type: none">▪ The <i>direct method</i>—this is used when the populations under study are large and the age-specific death rates are reliable. It is the overall death rate that would have prevailed in the standard population if it had experienced at each age the death rates of the population under study.▪ The <i>indirect method</i>—this is used when the populations under study are small and the age-specific death rates are unreliable or not known. It is an adjustment to the crude death rate of the standard population to account for the variation between the actual number of deaths in the population under study and the number of deaths which would have occurred if the population under study had experienced the age-specific death rates of the standard population.
	<p>Wherever used, the definition adopted is indicated.</p>
State or Territory of registration	<p>State or Territory of registration refers to the State or Territory where the marriage was registered or the divorce was granted.</p>
State or Territory and Statistical Local Area (SLA) of usual residence	<p>State or Territory and Statistical Local Area (SLA) of usual residence refers to the State or Territory and SLA of usual residence of:</p> <ul style="list-style-type: none">▪ the population (estimated resident population);▪ the mother (birth collection); or▪ the deceased (death collection).
	<p>In the case of overseas movements, State or Territory of usual residence refers to the State or Territory regarded by the traveller as the one in which he/she lives or has lived. State or Territory of intended residence is derived from the intended address given by settlers, and by Australian residents returning after a journey abroad. Particularly in the case of the former, this information does not necessarily relate to the State or Territory in which the traveller will eventually establish a permanent residence.</p>
Total fertility rate	<p>The sum of age-specific fertility rates (live births at each age of mother per female population of that age). It represents the number of children a woman would bear during her lifetime if she experienced current age-specific fertility rates at each age of her reproductive life.</p>
