Australian Capital Territory	323.3	2.7	0.9
Australia	19 657.4	232.2	1.2

MARCH QTR KEY POINTS

ESTIMATED RESIDENT POPULATION

- The preliminary estimated resident population of Australia at March 2002 was 19,657,400 persons. The population increased by 232,200 persons from March 2001 and 53,900 persons from December 2001.
- Natural increase for March Quarter 2002 was 30,900 persons, a 2% increase on March Quarter 2001 and an 8% increase on December 2001.
- Preliminary net overseas migration was 23,000 persons in March Quarter 2002, a 14% decrease on March Quarter 2001 and a decrease of 16% on December Quarter 2001 (see *Notes* on page 2).

POPULATION GROWTH RATES

- For the year ended March 2002 the Australian population grew by 1.2%. All states and territories had positive growth rates, the highest being for Queensland (1.9%).
- In March Quarter 2002 all states and the Australian Capital Territory had positive growth rates. The highest growth rate for the quarter was recorded by Queensland (0.5%). The Northern Territory recorded negative growth in March Quarter 2002 (-0.1%).

SPECIAL ARTICLES

- Australia's regional population growth 1996–2001—Of Australia's 624 Local Government Areas (LGAs), almost two-thirds (65%) gained population in the five years to June 2001 while the remaining LGAs (35%) decreased in population.
- Marriage and divorce in Australia—2001 saw the lowest number of marriages and the highest number of divorces recorded in Australia in the past 20 years.

N O T E S

FORTHCOMING ISSUES

ISSUE (Quarter)	RELEASE DATE
June 2002	12 December 2002
September 2002	20 March 2003

• •

CHANGES IN THIS ISSUE

Net overseas migration	There have been delays in the receipt of final Overseas Arrivals and Departures (OAD) data from August 2000 onwards from the Department of Immigration and Multicultural and Indigenous Affairs (DIMIA). Because of the use of OAD data in population estimates which affect state and territory Government funding, DIMIA has given priority to processing passenger cards for July 2001 and subsequent months before finalising processing for earlier months—August 2000 through to June 2001.
Category jumping	Net permanent and long-term data for March quarter 2002 was measured using Overseas Arrivals and Departures data from DIMIA. In the absence of data for earlier periods, the preliminary estimate of Category Jumping for March Quarter 2002 was determined in accordance with the medium assumption of net overseas migration included in Population Projections, Australia, 1999–2101 (cat. no. 3222.0).
Western Australian registration data	The Western Australian Registrar of Births, Deaths and Marriages introduced a new processing system on 26 November 2001. The ABS has been advised that implementation of this system has caused some delays in processing.

• •

FINAL DATA

	All ERP, natural increase, net overseas and net interstate migration and estimated resident household data prior to September Quarter 1996 are final.
	Marriages and divorces data prior to March Quarter 2002 are final.

• •

REVISED DATA

	While all ERP data from September Quarter 1996 to June Quarter 2001 were revised in the December Quarter 2001 issue, based on the results of the 2001 Census, components of population change (natural increase, net overseas and net interstate migration) were not revised. It is intended that these components will be finalised with the release of 2001 Census based final ERPs in the September Quarter 2002 issue of this publication.
	Data in table 5 (ERP, Major Population Centres) are revised in this issue, based on the results of the 2001 Census.

• •

PRELIMINARY DATA

	All ERP, natural increase, net overseas and net interstate migration from September Quarter 2001 onwards are preliminary.
	Estimated resident household data from September Quarter 1996 onwards are preliminary based on the 1996 Census.
	Marriages and divorces data from March Quarter 2002 are preliminary.

• •

DATA BASED ON 1996 CENSUS

	Tables 8, 9, 10, 24 and 25 are based on 1996 Census data. For further details on the release schedule for the above tables, based on the 2001 Census, please see the <i>Notes</i> page of the December Quarter 2001 issue.

A N A L Y S E S A N D C O M M E N T S

COMPONENTS OF AUSTRALIA'S POPULATION CHANGE

The preliminary estimated resident population (ERP) of Australia at March 2002 was 19,657,400 persons, an increase of 232,200 persons from March 2001 and 53,900 persons from December 2001. The national growth rate during the twelve months ended March 2002 was 1.2%, compared with 1.3% for the previous 12 months.

Natural increase

The two components contributing to change in the Australian population are natural increase and net overseas migration. Since Federation natural increase (the number of births minus the number of deaths) has consistently contributed more to population growth than net overseas migration (net permanent and long-term movement plus an adjustment for category jumping¹).

In March Quarter 2002 natural increase was 30,900 persons, a 2% increase on March Quarter 2001 (30,200) and an 8% increase on December Quarter 2001 (28,500). This variation was contributed to by the seasonal decrease in deaths; between March Quarters 2001 and 2002 deaths fell by less than 100 while between March Quarter 2002 and December Quarter 2001 deaths fell by 2,600.

Natural increase for the year ended March 2002 was 117,900 persons, a small increase on the number recorded in the year ended March 2001 (117,400). Births contributed 246,400 babies while deaths removed 128,500 persons from the population in the year ended March 2002.

Net overseas migration

See *Notes* on page 2

In March Quarter 2002 preliminary net overseas migration was 23,000 persons, a decrease of 14% on March Quarter 2001 (26,800) and a decrease of 16% on December Quarter 2001 (27,500).

Preliminary net overseas migration was 106,700 persons in the year ended March 2002. This was little variation on the preliminary estimate for the year ended March 2001 (107,600).

STATES AND TERRITORIES

Population and growth rates

The population of Australia's states and territories at March 2002 was as follows: New South Wales 6,654,400, Victoria 4,872,000, Queensland 3,687,800, South Australia 1,520,600, Western Australia 1,923,500, Tasmania 473,500, Northern Territory 199,600 and the Australian Capital Territory 323,300.

All states and the Australian Capital Territory had positive growth in the quarter ended March 2002. Queensland recorded the highest quarterly growth rate (0.5%) followed by Victoria (0.4%), New South Wales, Western Australia and the Australian Capital Territory (each 0.2%) and South Australia and Tasmania (each 0.1%). The Northern Territory recorded negative growth for the quarter (-0.1%).

For the year ended March 2002 all states and territories recorded increased growth. Queensland recorded the highest annual growth rate (1.9%) followed by Victoria (1.3%), Western Australia (1.2%), New South Wales (1.0%) the Australian Capital Territory (0.9%), South Australia (0.5%) and Tasmania and the Northern Territory (each 0.2%).

Interstate migration

With the exception of Queensland and Victoria all other states and territories recorded net interstate migration losses during the quarter ended March 2002. Queensland gained 6,500 persons and Victoria gained 2,500 persons. Losses were recorded by New South Wales (-6,300), Western Australia and the Northern Territory (each -900), South Australia (-500), Tasmania (-300) and the Australian Capital Territory (-50).

¹ Category jumping relates to those persons who change their travel arrangements from short-term to permanent/long-term or vice versa.

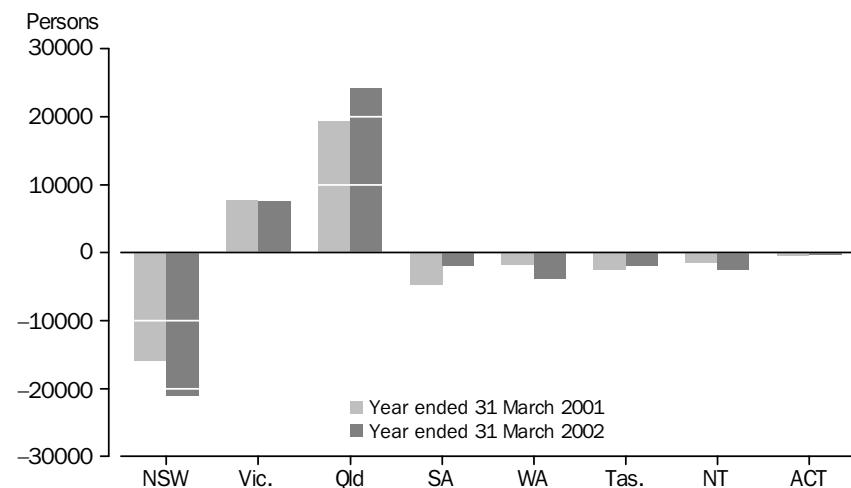

ANALYSES AND COMMENTS *continued*

.....

Interstate migration continued

The quarterly pattern of net interstate migration was the same for all states and territories for the year ended March 2002. Gains were recorded by Queensland (24,200) and Victoria (7,600) while losses were recorded by New South Wales (-21,100), Western Australia (-3,900), the Northern Territory (-2,600), South Australia and Tasmania (each -2,000) and the Australian Capital Territory (-300).

NET INTERSTATE MIGRATION, States and territories

Where people moved

In March Quarter 2002 there were 99,400 interstate movers in Australia. Queensland's inflow of persons was the highest (27,800) with 53% coming from New South Wales. In outflow terms New South Wales was highest (30,700), 48% choosing to move to Queensland.

SPECIAL ARTICLE

AUSTRALIA'S REGIONAL POPULATION GROWTH 1996–2001

POPULATION CHANGE

Australia's estimated resident population at June 2001 was 19.5 million people. This represents an increase of 1.2 million people (or 6.4%) since June 1996, with an average annual growth rate of 1.3%. All states and territories experienced population growth between 1996 and 2001, with the exception of Tasmania which experienced a small decrease in population.

Of Australia's 624 Local Government Areas (LGAs), almost two-thirds (65%) gained population in the five years to June 2001 while the remaining LGAs (35%) decreased in population.

GROWTH IN CAPITAL CITIES

At June 2001, capital city SDs were home to nearly two-thirds (64%) of Australia's population, as in 1991 and 1996. Growth in the combined capital city SDs occurred at an average annual rate of 1.3% between 1996 and 2001 compared with 1.2% between 1991 and 1996.

Between 1996 and 2001, the largest growth occurred in Sydney (up 273,600) and Melbourne (up 205,500). For the same period the fastest average annual growth occurred in Darwin (up 2.5%) and Brisbane (up 1.7%).

Outer suburban growth

Much of Australia's growth between 1996 and 2001 occurred in the outer LGAs of capital cities. Large increases in population were recorded in the Sydney LGAs of Liverpool (C), Blacktown (C), Baulkham Hills (A), Wyong (A) and Camden (A), while the largest growth within Melbourne occurred in the fringe LGAs of Casey (C), Hume (C) and Mornington Peninsula (S).

Outer suburban areas within other capital cities also experienced significant growth in the five years to June 2001, such as Doolandella–Forest Lake and Parkinson–Drewvale in Brisbane, Onkaparinga (C) and Tea Tree Gully (C) in Adelaide, Wanneroo (C), Swan (C) and Rockingham (C) in Perth, Palmerston (C) in Darwin, and Ngunnawal and Nicholls in Canberra.

Inner city growth

Australia's inner city areas, especially in the larger cities, grew rapidly in the five years to June 2001. The LGA of the City of Sydney recorded Australia's highest average annual growth rate (up 18.1% per year), while the LGAs of Perth (up 7.3% per year) and Melbourne (up 5.6% per year) also experienced rapid growth between 1996 and 2001. The inner-Brisbane SLAs of Fortitude Valley — Inner and City — Inner were among the fastest-growing SLAs in Queensland over this period.

GROWTH ALONG THE COAST

Generally, the largest growth outside capital city SDs occurred in coastal Australia. Lake Macquarie (C), Tweed (A), Shoalhaven (C) and Hastings (A) in New South Wales, and Bass Coast (S) and Surf Coast (S) in Victoria experienced significant growth between 1996 and 2001. The City of Gold Coast in Queensland recorded the largest population increase of all LGAs in Australia between 1991 and 1996 and the second largest increase between 1996 and 2001, while growth also continued in the Queensland coastal areas of Maroochy (S) and Caloundra (C). In South Australia, Alexandrina (DC) and Victor Harbour (DC) continued to experience population growth, while in Western Australia the coastal LGAs of Mandurah (C), Busselton (S), Broome (C) and Albany (C) experienced growth.

GROWTH IN REGIONAL CENTRES

Population growth occurred in a number of regional centres in the five years ending June 2001. Centres such as Maitland (C) and Queanbeyan (C) in New South Wales, Greater Geelong (C), Greater Bendigo (C) and Ballarat (C) in Victoria, Cairns (C) in Queensland, Port Lincoln (C) in South Australia, and Albany (C) in Western Australia experienced growth over this period.

**LARGEST GROWTH AND
LARGEST DECLINE**

Eight of the top ten growth LGAs in Australia between 1996 and 2001 were in the capital city SDs. The two LGAs to experience the largest growth were Brisbane (C) which grew by 74,000 people and Gold Coast (C) which grew by 69,000 people.

Six of the top ten largest declines in LGAs in Australia between 1996 and 2001 were in the balances of the states. However, the two largest declines occurred in Greater Dandenong (C) in the Melbourne SD which declined by 3,300 people and Marrickville (A) in the Sydney SD which declined by 2,500 people.

ADDITIONAL INFORMATION

Further information about regional population growth and decline is available in *Regional Population Growth, Australia and New Zealand, 1991 to 2001* (cat. no. 3218.0) released on 25 July 2002.

SPECIAL ARTICLE

MARRIAGE AND DIVORCE IN AUSTRALIA

MARRIAGE AND DIVORCE TRENDS

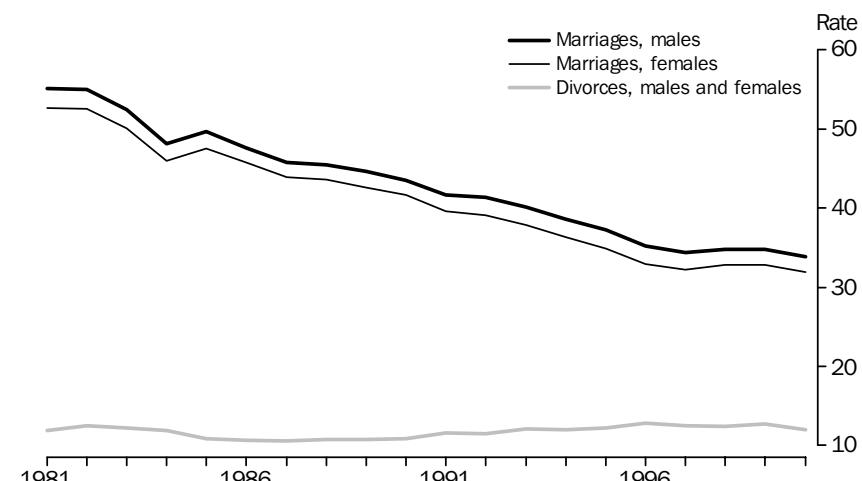

In 2001 there were 103,100 marriages registered in Australia, the lowest number recorded since 1978 (103,000). The 2001 figure was a decrease of 10,300 marriages when compared with 2000 and a decrease of 10,800 marriages when compared with 1981.

While marriage rates per 1,000 unmarried population (aged 15 years and over) are not yet available for 2001, the marriage rate trend since 1981 shows that the occurrence of marriage is declining. Marriage rates for the unmarried population fell in 2000 to 34 per 1,000 unmarried men and 32 per 1,000 unmarried women from 35 and 33 respectively in 1999 and 55 and 53 respectively in 1981.

There were 55,300 divorces granted in Australia in 2001, the highest number granted in the last 20 years. This was an increase of 5,400 on the number of divorces granted in 2000 and an increase of 13,900 on 1981.

Divorce rates for the married population are not yet available for 2001. However, since 1981 divorce rates, while fluctuating, have shown an increasing trend. In 1987 the divorce rate was at a low of 11 divorces per 1,000 married population. Since 1987, divorce rates, while still fluctuating, have shown an upward trend to a high of 13 in 1996. The divorce rate in 2000 was 12.

MARRIAGE RATES(a) AND DIVORCE RATES(b)

(a) Per 1,000 unmarried men or women, aged 15 years and over.

(b) Per 1,000 married men or women, aged 15 years and over.

INTERNATIONAL COMPARISONS

The crude marriage rate in Australia of 5.3 per 1,000 population in 2001 was lower than in the United States of America (8.3 per 1,000 in 1998), the same as New Zealand (5.3 in 1998) and above that of the United Kingdom (5.1 in 1998) and Canada (5.1 in 1997).

The crude divorce rate in Australia was 2.8 per 1,000 population in 2001. It was lower than the United States of America (4.2 per 1,000 in 1998) and the United Kingdom (2.9 in 1996) and higher than New Zealand (2.7 in 1998) and Canada (2.3 in 1997).

AGE AT MARRIAGE AND DIVORCE

The trend towards older age at marriage continued in 2001. The median age at marriage for men was 31 years, rising from 26 years in 1981. For women the median age rose to 29 years in 2001 from 23 years in 1981. The median age at first marriage also rose. In 2001 it was 29 years for men, increasing from 24 years in 1981. For women, the median age at first marriage was 27 years in 2001, increasing from 22 years in 1981.

**AGE AT MARRIAGE AND DIVORCE
*continued***

In line with the increasing age at marriage the median age at divorce also rose. In 2001 the median age at divorce for men was 42 years (up from 36 years in 1981) and 39 years for women (up from 33 years in 1981).

INTRODUCTION OF THE FEDERAL MAGISTRATES SERVICE

In September 2000 the Federal Magistrates Service was introduced. The Federal Magistrates Service was established to provide a simpler and accessible service for litigants and to ease the workload of both the Family Court of Australia and the Federal Court of Australia.

In 2001, the first full year of operation, 51% of all divorces granted were dealt with by the Federal Magistrates Service. All states and territories, with the exception of Western Australia, had a high proportion of cases administered by the Federal Magistrates Service. The Northern Territory had the highest proportion (76%), while Queensland had the lowest (45%). The Federal Magistrates Service was not introduced in Western Australia and all decrees granted in that state were dealt with by the Family Court.

CATEGORY OF CELEBRANT

Marriages performed by civil celebrants now outnumber marriages performed by ministers of religion. In 2001, for the third successive year, 53% of all marriages were performed by civil celebrants, compared with 38% in 1981.

New South Wales was the only state or territory in which marriages performed by ministers of religion marginally outnumbered those by civil celebrants during 2001 (18,200 compared with 17,900). The Northern Territory had the highest proportion of marriages performed by civil celebrants (73%).

COHABITATION PRIOR TO MARRIAGE

The proportion of men and women choosing to cohabit prior to entering a registered marriage continued to rise. In 2001, 72% of couples indicated they had cohabited prior to marriage compared with 31% in 1981.

DURATION OF MARRIAGE OF DIVORCING COUPLES

In 2001, 17% of couples had divorced within the first five years of marriage, while a further 26% had divorced in the following five-year period. The most common single interval between marriage and divorce was between five and six years (6%). In 2001 the median duration of marriage to divorce was 12 years, up from 10 years in 1981.

ADDITIONAL INFORMATION

Further information about marriage and divorce in Australia is available in *Marriages and Divorces, Australia, 2001* (cat. no. 3310.0) released on 22 August 2002.

POPULATION CHANGE, Summary(a)

COMPONENTS OF POPULATION CHANGE..... POPULATION.....

<i>Period</i>	<i>Births</i>	<i>Deaths</i>	<i>Natural increase</i>	<i>Net permanent and long-term movement</i>	<i>Category jumping</i>	<i>Net overseas migration</i>	<i>At end of period</i>	<i>Growth on previous year(b)</i>	<i>Growth on previous year(b)</i>
	'000	'000	'000	'000	'000	'000	'000	'000	%
1995-96	250.4	126.4	124.0	109.7	-5.5	104.1	18 310.7	239.0	1.32

March	60.5	29.6	30.9	50.6	-27.6	23.0	19 657.4	232.2	1.20

(a) See Explanatory Notes for concepts used and the Glossary for definitions of terms used. Includes Other Territories from September quarter 1993—see paragraph 2 of the Explanatory Notes.

(b) The difference between total growth and the sum of natural increase and net migration during 1996–2001 is due to preliminary intercensal discrepancy.

(a) 1996 Census based. Estimates and the low projections series assume no change in the propensity to identify as Indigenous, as recorded on 1996 Census forms. The high projection series assume a change in propensity based on the 1991–1996 period.

(b) Includes Jervis Bay Territory.

(a) Based on 1996 Census data.

EXPLANATORY NOTES

INTRODUCTION

1 This quarterly publication contains preliminary estimates of the resident populations (ERP) of Australia and the states and territories based on the results of the Census of Population and Housing held on 7 August 2001. Resident population estimates for the period 1996–2001 have been revised using the 2001 Census results. Final estimates for the 1996–2001 period will be published in March 2003. The publication also contains estimates of the number of households by household size as well as the latest available statistics of births, deaths (including infant deaths), marriages, divorces and overseas and interstate migration. In addition, the publication includes estimates of the resident population by age, marital status and country of birth as well as experimental estimates and projections of the Aboriginal and Torres Strait Islander population.

2 Following the 1992 amendments to the Acts Interpretation Act to include the Indian Ocean Territories of Christmas Island and the Cocos (Keeling) Islands as part of geographic Australia, population estimates commencing from September quarter 1993 include estimates for these two territories. To reflect this change, another category of the state and territory level has been created, known as Other Territories. Other Territories include Jervis Bay Territory, previously included with the Australian Capital Territory, as well as Christmas Island and the Cocos (Keeling) Islands, previously excluded from population estimates for Australia. Data for Other Territories, while not detailed separately, are included in Australia totals commencing from September quarter 1993.

POPULATION AND COMPONENTS OF POPULATION CHANGE

3 Australia's population estimates for the period since 1971 are compiled according to the place of usual residence of the population. An explanation of the place of usual residence conceptual basis for population estimates is given in *Demographic Estimates and Projections: Concepts, Sources and Methods, Statistical Concepts Library*, ABS web site, <<http://www.abs.gov.au>>.

METHOD OF ESTIMATION

4 The estimated resident population is an estimate of the Australian population obtained by adding to the estimated population at the beginning of each period the components of natural increase (on a usual residence basis) and net overseas migration. For the states and territories, account is also taken of estimated interstate movements involving a change of usual residence. Estimates of the resident population are based on census counts by place of usual residence, to which are added the estimated net census undercount and Australian residents estimated to have been temporarily overseas at the time of the Census. Overseas visitors in Australia are excluded from this calculation.

5 After each census, estimates for the proceeding intercensal period are revised by incorporating an additional adjustment (intercensal discrepancy) to ensure that the total intercensal increase agrees with the difference between the estimated resident populations at the two respective census dates.

NATURAL INCREASE: BIRTHS AND DEATHS

6 In this publication births and deaths data are presented by state and territory of usual residence. For preliminary estimates, births and deaths by quarter of registration are used as a proxy for quarter of occurrence. For revised estimates a factor has been applied to the number of occurrences to allow for those occurrences which are yet to be registered. For final estimates after 30 June 1991 year/quarter of occurrence data are used. The births and deaths data detailed in the *Components of population* section of this publication are shown by year of occurrence for revised and final data and year/quarter of registration for preliminary data which may affect analysis of relevant tables.

NET OVERSEAS MIGRATION

7 Figures are based on net permanent and long-term overseas movements with state and territory not stated allocated pro rata. Short-term movements are excluded. The estimates from July 1976 onwards include an adjustment for the net effect of category

EXPLANATORY NOTES

- NET OVERSEAS MIGRATION *continued* jumping. This adjustment is necessary because net permanent and long-term migration figures can be affected by changes in travel intentions from short-term to permanent/long-term or vice versa. For example, an Australian resident departing for a short-term visit overseas (stating that he/she intends to stay abroad for less than 12 months) in fact stays 12 or more months, thereby changing his/her travel category from short-term to long-term. Prior to December quarter 1989, adjustments for category jumping were only made to revised population estimates. These adjustments are now also included in preliminary estimates. For further details see *Demographic Estimates and Projections: Concepts, Sources and Methods, Statistical Concepts Library*, ABS web site, <<http://www.abs.gov.au>>.
- NET INTERSTATE MIGRATION **8** Estimates of interstate migration since June 1986 have been derived from latest census data on interstate movement in the preceding one year and unidentified information on interstate changes of address advised to the Health Insurance Commission in the process of administering Medicare.
- RATES OF POPULATION GROWTH **9** These express population change over a period as a proportion (%) of the population at the beginning of the period.
- EXPERIMENTAL ESTIMATES OF ABORIGINAL AND TORRES STRAIT ISLANDER POPULATION **10** Estimates of the Indigenous population are experimental in that the standard approach to population estimation is not possible because satisfactory data on births, deaths and internal migration are not generally available. Furthermore, there is significant intercensal volatility in census counts of the Indigenous population, thus adding to the problem of estimating the true Indigenous population. This volatility can in part be attributed to changes in the propensity of persons to identify as being of Indigenous origin. As a result, a method based on the use of life tables is used to produce time series data. For further details see *Experimental Estimates of the Aboriginal and Torres Strait Islander Population* (cat. no. 3230.0).
- EXPERIMENTAL PROJECTIONS OF ABORIGINAL AND TORRES STRAIT ISLANDER POPULATION **11** Experimental estimates of the Indigenous population as at 30 June 1996 are used as the base population for projections of the Indigenous population to 30 June 2006. A low and a high projection series have been generated, and respectively imply a low and high overall growth rate of the Indigenous population. The low series uses a nil change in propensity to identify assumption based on the premise that the Indigenous population (as recorded in the 1996 Census) will only change as a result of natural increase. The high series uses a change in propensity to identify assumption based on the increase in the Indigenous population observed between the 1991 and 1996 Censuses which cannot be attributed to natural increase. For further details see *Experimental Projections of the Aboriginal and Torres Strait Islander Population* (cat. no. 3231.0).
- ESTIMATED RESIDENT HOUSEHOLDS **12** Estimates of households are based on the estimated resident population series, to which propensities to form households are applied. These propensities were estimated from the Census of Population and Housing, and updated using the monthly Labour Force Survey. A detailed description of the method used to produce household estimates is contained in *Household Estimates 1986, 1991–94* (cat. no. 3229.0).
- MARRIAGES AND DIVORCES **13** All marriage and divorce data are shown by state or territory of registration. While divorce data are presented by year/quarter of occurrence, marriage data are presented by year/quarter of registration.

EXPLANATORY NOTES

- MARRIAGES AND DIVORCES **14** Divorce data for states and territories are affected by persons applying to the nearest Family Court rather than the court in their state or territory of usual residence. The Canberra registry of the Family Court of Australia is particularly affected as it serves, in addition to the Australian Capital Territory, a large area of south-eastern New South Wales and part of Victoria. Around 55% of divorces granted in the Australian Capital Territory are to applicants who are not usual residents of the Territory. The number of divorces granted and the crude divorce rate for the Australian Capital Territory therefore do not accurately reflect the incidence of divorce among Australian Capital Territory residents.
- OVERSEAS ARRIVALS AND DEPARTURES ESTIMATION METHOD **15** Overseas arrival and departure statistics are derived from a combination of full enumeration and sampling. All permanent movements and all movements with a duration of stay of one year or more are fully enumerated and processed. All movements with a duration of stay of less than one year are sampled. Statistics relating to these movements are therefore estimates which may differ from statistics which would have been obtained if details of all these movements had been processed.
- 16** From July 1998 the Department of Immigration and Multicultural and Indigenous Affairs (DIMIA) has been able to determine the actual length of stay for departing overseas visitors and arriving Australian residents. This information was previously collected from information on intended length of stay supplied on the arrival or departure card by the passenger. This new method has resulted in a change in data distribution with the number of passengers staying for exactly one year declining significantly.
- COUNTRY OF BIRTH **17** The classification of countries in this publication is the Australian Standard Classification of Countries for Social Statistics (ASCCSS). For more detailed information refer to the ABS publication *Australian Standard Classification of Countries for Social Statistics* (cat. no. 1269.0).
- 18** Political developments in Europe and the former USSR have resulted in a number of changes to the ASCCSS. These changes have affected some of the categories in this publication and are detailed in Revisions 1.01, 1.02 and 1.03 of the ASCCSS.
- 19** Overseas migration statistics by country of birth have certain limitations. For instance, it is not possible to separately identify England, Scotland and Wales (United Kingdom).
- ROUNDING **20** In this publication population estimates and their components have sometimes been rounded to the nearest hundred. Neither rounded figures nor unrounded figures should be assumed to be accurate to the last digit shown.
- 21** Where figures have been rounded, discrepancies may occur between sums of component items and totals.
- RELATED PRODUCTS **22** Other ABS products which may be of interest to users include:
- *AusStats — electronic data* <<http://www.abs.gov.au/ausstats>>
 - *Australian Demographic Trends*, cat. no. 3102.0

RELATED PRODUCTS *continued*

- *Demography*, cat. no. 3311.1–8—state and territory specific publications
- *Estimated Resident Population by Country of Birth, Age and Sex*, cat. no. 3221.0—issued annually to 1994
- *Experimental Estimates of the Aboriginal and Torres Strait Islander Population*, cat. no. 3230.0
- *Experimental Projections of the Aboriginal and Torres Strait Islander Population, 1996 to 2006*, cat. no. 3231.0
- *Household Estimates, Australia*, cat. no. 3229.0
- *Interstate Arrivals and Departures*—from September quarter 1986, Dataset, <<http://www.abs.gov.au/ausstats>>. From the navigation bar select Publications & Data; Companion Data; By Catalogue/Subject
- *Marriages and Divorces, Australia*, cat. no. 3310.0—includes data on the marital status of the estimated resident population of Australia
- *Migration, Australia*, cat. no. 3412.0—includes data on the country of birth of the estimated resident population of Australia
- *Overseas Arrivals and Departures, Australia*, cat. no. 3401.0—issued monthly
- *Population by Age and Sex: Australian States and Territories*, cat. no. 3201.0
- *Population Projections, Australia*, cat. no. 3222.0
- *Underlying Cause of Death by Sex and Age at Death, state of Usual Residence and ICD10*—from 1999, Dataset, <<http://www.abs.gov.au/ausstats>>. From the navigation bar select Publications & Data; Companion data; By Catalogue/Subject.

ADDITIONAL STATISTICS AVAILABLE

- 23** As well as the statistics included in this and related publications, the ABS may have other relevant data available on request. Inquiries should be made to the National Information and Referral Service on 1300 135 070.
- 24** AusStats is a web based information service which provides the ABS full standard product range on-line. It also includes companion data in multidimensional datasets in SuperTABLE format, and time series spreadsheets.
- 25** Current publications and other products released by the ABS are listed in the *Catalogue of Publications and Products* (cat. no. 1101.0). The Catalogue is available from any ABS office or the ABS web site <<http://www.abs.gov.au>>. The ABS also issues a daily Release Advice on the web site which details products to be released in the week ahead.
- 26** Statistics of overseas arrivals and departures and related data are also published regularly by the Department of Immigration and Multicultural and Indigenous Affairs (see that Department's quarterly publication, *Immigration Update*) and by the Bureau of Tourism Research (on international travel and tourism).

SYMBOLS AND OTHER USAGES

ABS	Australian Bureau of Statistics
ACT	Australian Capital Territory

SLA	Statistical Local Area
—	nil or rounded to zero (including null cells)
..	not applicable

G L O S S A R Y

Age-specific fertility rates	Age-specific fertility rates are the number of live births (occurred or registered) during the calendar year, according to age of mother, per 1,000 of the female estimated resident population of the same age at 30 June. For calculating these rates, births to mothers under 15 years are included in the 15–19 years age group, and births to mothers aged 50 years and over are included in the 45–49 years age group. Pro rata adjustment is made in respect of births for which age of mother is not given.
Average household size	Average household size refers to the number of persons per household in private dwellings.
Birth	The delivery of a child, irrespective of the duration of pregnancy, who, after being born, breathes or shows any other evidence of life such as heartbeat.
Category jumping	Category jumping is the term used to describe changes between intended and actual duration of stay of travellers to/from Australia, such that their classification as short-term or as long-term/permanent movers is different at arrival/departure from that after 12 months. Category jumping consists of two components—an Australian resident component and an overseas visitor component. The Australian resident component of category jumping for a reference quarter is estimated by comparing the number of residents departing short-term in that quarter with all residents who left in that quarter and return in the following 12 months, to obtain the net number of Australian residents who jump category. Similarly, the number of overseas visitors arriving short-term in a quarter is compared with all overseas visitors and permanent arrivals who arrived in that quarter and depart in the following 12 months, to obtain the net number of overseas visitors who jump category. Estimates of category jumping are derived by subtracting the Australian resident component from the overseas visitor component.
Category of movement	Overseas arrivals and departures are classified according to length of stay (in Australia or overseas), recorded in months and days by travellers on passenger cards. There are three main categories of movement: <ul style="list-style-type: none">▪ permanent movements;▪ long-term movements (one year or more); and▪ short-term movements (less than one year). A significant number of travellers (i.e. overseas visitors to Australia on arrival and Australian residents going abroad) state exactly 12 months or one year as their intended period of stay. Many of them stay for less than that period and on their departure from, or return to, Australia are therefore classified as short-term. Accordingly, in an attempt to maintain consistency between arrivals and departures, movements of travellers who report their actual or intended period of stay as being one year exactly are randomly allocated to long-term or short-term in proportion to the number of movements of travellers who report their actual length of stay as up to one month more, or one month less, than one year.
Crude divorce rate	The crude divorce rate is the number of decrees absolute granted during the financial year, per 1,000 estimated resident population at 31 December. In the interpretation of this rate, it must be kept in mind that a large and varying proportion of the population used in the denominator is unmarried or is below the minimum age of marriage.

G L O S S A R Y

Crude marriage rate	The crude marriage rate is the number of marriages registered during the financial year, per 1,000 estimated resident population at 31 December. In the interpretation of this rate, it must be kept in mind that a large and varying proportion of the population used in the denominator is below the minimum age of marriage or is already married.
Divorce	Decrees absolute of dissolution of marriage.
Estimated resident population (ERP)	The official measure of the population of Australia is based on the concept of residence. It refers to all people, regardless of nationality or citizenship, who usually live in Australia, with the exception of foreign diplomatic personnel and their families. It includes usual residents who are overseas for less than 12 months. It excludes overseas visitors who are in Australia for less than 12 months.
Former Yugoslav Republics	Consists of Bosnia-Herzegovina, Croatia, the former Yugoslav Republic of Macedonia, Slovenia, the former Yugoslav Republics of Serbia and Montenegro, and Yugoslavia n.f.d.
Household	A household is a group of two or more related or unrelated people who usually reside in the same dwelling, who regard themselves as a household and who make common provision for food or other essentials for living; or a person living in a dwelling who makes provision for his or her own food and other essentials for living, without combining with any other person. Households include group households of unrelated persons, same-sex couple households, single-parent households as well as one-person households. A household usually resides in a private dwelling (including caravans etc. in caravan parks). Persons usually resident in non-private dwellings, such as hotels, motels, boarding houses, jails and hospitals, are not included in household estimates. This definition of a household is consistent with the definition used in the Census. The number of households can be either based on count or estimated resident population.
Household estimate	Household estimate is a measure of the number of households of the usually resident population. It is based on the census count of households which is adjusted for missed households, households of overseas visitors, households of Australian residents where all members were temporarily overseas at the time of the Census and households of Australian residents where all members were not home on census night and spent census night in a non-private dwelling in Australia.
Household population	The household population is the estimated resident population (ERP) that usually lives in private dwellings. It is the ERP less the population that usually lives in non-private dwellings.
Household size	Household size refers to the number of persons in a household.
Infant mortality rate	The number of deaths of children under one year of age in a financial year per 1,000 live births in the same financial year.

G L O S S A R Y

Intercensal discrepancy	Intercensal discrepancy is the difference between two estimates of a census year population, the first based on the latest census and the second arrived at by updating the previous census date estimate with intercensal components of population change which take account of information available from the latest census. It is caused by errors in the start and/or finish population estimates and/or in estimates of births, deaths or migration in the intervening period which cannot be attributed to a particular source.
Long-term arrivals	Long-term arrivals comprise: <ul style="list-style-type: none">▪ overseas visitors who intend to stay in Australia for 12 months or more (but not permanently); and▪ Australian residents returning after an absence of 12 months or more overseas.
Long-term departures	Long-term departures comprise: <ul style="list-style-type: none">▪ Australian residents who intend to stay abroad for 12 months or more (but not permanently); and▪ overseas visitors departing who stayed 12 months or more in Australia.
Marital status	Two separate concepts of marital status are measured by the Australian Bureau of Statistics. These are registered marital status and social marital status. Registered marital status refers to formally registered marriages and divorces. Registered marital status is a person's relationship status in terms of whether he or she has, or has had, a registered marriage with another person. Accordingly, people are classified as either 'never married', 'married', 'widowed' or 'divorced'. Social marital status is the relationship status of an individual with reference to another person who is usually resident in the household. A marriage exists when two people live together as husband and wife, or partners, regardless of whether the marriage is formalised through registration. Individuals are, therefore, regarded as married if they are in a de facto marriage, or if they are living with the person to whom they are registered as married. Under social marital status, a person is classified as either 'married' or 'not married' with further disaggregation of 'married' to distinguish 'registered married' from 'de facto married' person.
Marriage	Refers to registered marriages only. Under the <i>Australian Marriage Act 1961</i> (Cwlth), a marriage may be celebrated by a minister of religion registered as an authorised celebrant, by a district registrar or by other persons authorised by the Attorney-General. Notice of the intended marriage must be given to the celebrant at least one calendar month but within six calendar months before the marriage. A celebrant must transmit an official certificate of the marriage for registration in the state or territory in which the marriage took place.
Natural increase	Excess of births over deaths.
Net interstate migration	The difference between the number of persons who have changed their place of usual residence by moving into a given state or territory and the number who have changed their place of usual residence by moving out of that state or territory during a specified period. This difference can be either positive or negative.
Net overseas migration	Net overseas migration is net permanent and long-term overseas migration plus an adjustment for the net effect of category jumping.

G L O S S A R Y

Net permanent and long-term movement	The difference between the number of permanent (settler) and long-term arrivals and the number of permanent and long-term departures. Short-term movements are excluded.
Overseas arrivals and departures (OAD)	Overseas arrivals and departures (OAD) refer to the arrival or departure of persons, through Australian airports (or sea ports), which have been recorded. Statistics on OAD relate to the number of movements of travellers rather than the number of travellers (i.e. the multiple movements of individual persons during a given reference period are all counted).
Permanent arrivals (settlers)	Permanent arrivals (settlers) comprise: <ul style="list-style-type: none">▪ travellers who hold migrant visas (regardless of stated intended period of stay);▪ New Zealand citizens who indicate an intention to settle; and▪ those who are otherwise eligible to settle (e.g. overseas born children of Australian citizens).
	This definition of settlers is used by the Department of Immigration and Multicultural and Indigenous Affairs (DIMIA). Prior to 1985 the definition of settlers used by the Australian Bureau of Statistics (ABS) was the stated intention of the traveller only. Numerically the effect of the change in definition is insignificant. The change was made to avoid the confusion caused by minor differences between data on settlers published separately by the ABS and the DIMIA.
Permanent departures	Permanent departures are Australian residents (including former settlers) who on departure state that they are departing permanently.
Population growth	For Australia, population growth is the sum of natural increase and net overseas migration. For states and territories, population growth also includes net interstate migration. After the Census, intercensal population growth also includes an allowance for intercensal discrepancy.
Short-term arrivals	Short-term arrivals comprise: <ul style="list-style-type: none">▪ overseas visitors who intend to stay in Australia for less than 12 months; and▪ Australian residents returning after a stay of less than 12 months overseas.
Short-term departures	Short-term departures comprise: <ul style="list-style-type: none">▪ Australian residents who intend to stay abroad for less than 12 months; and▪ overseas visitors departing after a stay of less than 12 months in Australia.

G L O S S A R Y

Standardised death rate	<p>Standardised death rates enable the comparison of death rates between populations with different age structures by relating them to a standard population. The ABS standard populations relate to the years ending in 1 (eg 1991). The current standard population is all persons in the 1991 Australian population. They are expressed per 1,000 or 100,000 persons. There are two methods of calculating standardised death rates:</p> <ul style="list-style-type: none">▪ The <i>direct method</i>—this is used when the populations under study are large and the age-specific death rates are reliable. It is the overall death rate that would have prevailed in the standard population if it had experienced at each age the death rates of the population under study.▪ The <i>indirect method</i>—this is used when the populations under study are small and the age-specific death rates are unreliable or not known. It is an adjustment to the crude death rate of the standard population to account for the variation between the actual number of deaths in the population under study and the number of deaths which would have occurred if the population under study had experienced the age-specific death rates of the standard population.
	<p>Wherever used, the definition adopted is indicated.</p>
State or territory of registration	<p>State or territory of registration refers to the state or territory where the marriage was registered or the divorce was granted.</p>
State or territory and Statistical Local Area (SLA) of usual residence	<p>State or territory and Statistical Local Area (SLA) of usual residence refers to the state or territory and SLA of usual residence of:</p> <ul style="list-style-type: none">▪ the population (estimated resident population);▪ the mother (birth collection); or▪ the deceased (death collection).
	<p>In the case of overseas movements, state or territory of usual residence refers to the state or territory regarded by the traveller as the one in which he/she lives or has lived. State or territory of intended residence is derived from the intended address given by settlers, and by Australian residents returning after a journey abroad. Particularly in the case of the former, this information does not necessarily relate to the state or territory in which the traveller will eventually establish a permanent residence.</p>
Total fertility rate	<p>The sum of age-specific fertility rates (live births at each age of mother per female population of that age). It represents the number of children a woman would bear during her lifetime if she experienced current age-specific fertility rates at each age of her reproductive life.</p>
