

AUSTRALIAN DEMOGRAPHIC STATISTICS

EMBARGO: 11:30AM (CANBERRA TIME) THURS 22 MAR 2001

NOTE:
Some Sept Qtr 2000 data is
not available for this issue.
See important notes on
page 2.

SEPTEMBER QTR KEY POINTS

NATURAL INCREASE

- Natural increase for the year ended September 2000 was 122,400 persons, an increase of 2% on the number recorded in the year ended 30 September 1999 (120,200).
- Natural increase was 27,800 persons in the September Quarter 2000, a 6% increase on September Quarter 1999 (26,200).

INTERSTATE MIGRATION

- There were 370,600 interstate movements in the year ended September 2000 compared with 359,600 in the year ended September 1999, an increase of 3%.
- In the September Quarter 2000, 84,500 interstate movements were recorded, a 4% increase on September Quarter 1999 (81,300).
- With the exception of Victoria and Queensland all States and Territories recorded net interstate migration losses for the year ended September 2000. New South Wales lost 15,800 persons while Queensland gained 19,400 persons and Victoria gained 7,500.

SPECIAL ARTICLES

- Australia's regional population growth—With the exception of Tasmania all the States and Territories recorded gains in population in 1999–2000. Not all regions in Australia experienced population growth; 350 Local Government Areas (LGAs) gained or had a constant population, while 274 LGAs experienced population loss. Internal migration mainly determines the level of population growth in many regions of Australia.
- Deaths of people aged 25–39 years—The Australian death rate has declined by around one-fifth (22%) since 1989 but the death rate for people aged 25–39 years has declined only 6%. In 1999 the leading cause of death among 25–39 year olds was intentional self-harm (21% of all deaths). In 1999, the Northern Territory had the highest death rate for 25–39 year olds, 207 deaths per 100,000 population while the Australian Capital Territory had the lowest rate, 91 deaths per 100,000 population. The Australian rate was 99 deaths per 100,000 population.
- For further information about these and related statistics, contact the National Information Service on 1300 135 070, or Anne Ward on Canberra 02 6252 6296

NOTES

FORTHCOMING ISSUES

| ISSUE (Quarter) | RELEASE DATE |
|-----------------|-------------------|
| December 2000 | 7 June 2001 |
| March 2001 | 20 September 2001 |

.....

In commentary based on the statistics in this publication, it is recommended that the relevant statistics be rounded. All data are affected by errors in reporting and processing. Registered birth, death, marriage and divorce data are also affected by delays in registration. These data, and overseas arrival and departure data, have had small values randomised to protect confidentiality. No reliance should be placed on statistics with small values.

.....

CHANGES IN THIS ISSUE

Overseas migration data for September Quarter 2000 and, as a consequence, estimates of the resident population (ERP) at 30 September 2000 are not yet available. Data from passenger cards completed by persons arriving in or departing from Australia, together with other information available to the Department of Immigration and Multicultural Affairs (DIMA), serve as a source for statistics on overseas migration. DIMA is currently automating the processing of passenger cards and ABS has yet to receive relevant data.

For the December Quarter 2000 special arrangements will be put in place to enable State and Territory population estimates at 31 December 2000 to be determined before 10 June 2001, a requirement for financial allocation purposes. Further information is available in *Demography Working Paper 2001/1—Estimating July to December 2000 Net Overseas Migration*, available on the ABS website <http://www.abs.gov.au>. From the navigation bar select Themes; Demography; ABS Demography Working Papers.

.....

FINAL DATA

All ERP, natural increase, net overseas and net interstate migration and estimated resident household data prior to September Quarter 1996 are final.

Marriages and divorces data prior to March Quarter 2000 are final.

.....

REVISED DATA

Nil data revised in this issue.

.....

PRELIMINARY DATA

All data from September Quarter 1999 are preliminary for ERP, natural increase, net overseas and net interstate migration.

Marriages and divorces data are preliminary for all quarters in 2000.

.....

Dennis Trewin
Australian Statistician

Estimated resident population (ERP) and overseas migration data for September Quarter 2000 are not yet available. For further information see 'Changes in this issue' on page 2.

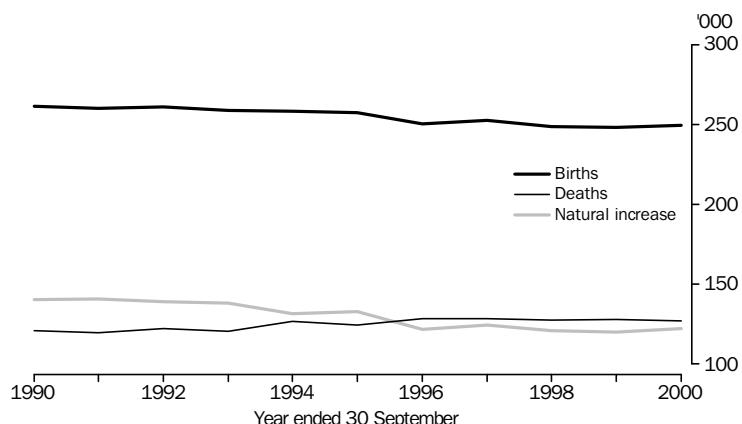

NATURAL INCREASE

Natural increase is the excess of births over deaths. In Australia births outnumber deaths by about 2 to 1. Over the ten year period ended September 2000 births averaged 255,300 per year while deaths averaged 125,000 leaving natural increase to contribute positively to population growth. Over the last ten years, the positive contribution of natural increase has diminished, mainly as a result of the falling number of births.

Natural increase for the year ended September 2000 was 122,400 persons, an increase of 2% on the number recorded in the year ended September 1999 (120,200). Births contributed 249,700 babies while deaths removed 127,200 persons from the population in the year ended September 2000.

In September Quarter 2000 natural increase was 27,800 persons, a 6% increase on September Quarter 1999 (26,200).

NATURAL INCREASE, BIRTHS AND DEATHS

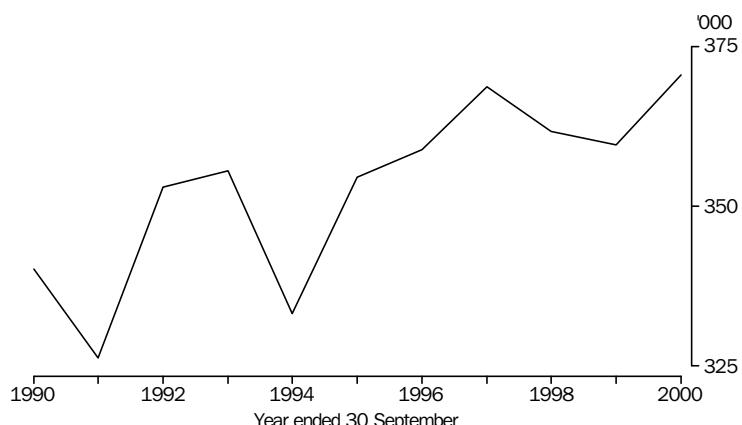

INTERSTATE MIGRATION

The movement of people across States and Territories is an important determinant of Australia's population distribution. It also impacts on population growth at the State or Territory and regional level. As recorded by the 1996 Census, between 1991 and 1996, 6.6 million people aged 5 years and over (43%) changed their usual residence. Of these, 770,000 people or 12% moved interstate.

During the past ten years interstate movers have ranged between a low of 326,300 in the year ended September 1991 and a high of 370,600 in the year ended September 2000, a 14% variation. When compared with the year ended September 1999 (359,600) interstate movements in the year ended September 2000 were 3% higher.

TOTAL INTERSTATE MIGRATION

ANALYSES AND COMMENTS *continued*

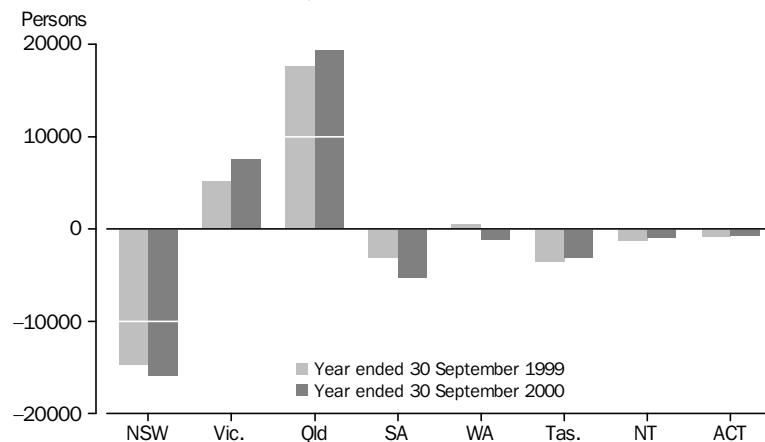

• • • • •

Net interstate migration, States and Territories

With the exception of Queensland and Victoria all States and Territories recorded net interstate migration losses during the year ended September 2000. Queensland gained 19,400 persons and Victoria gained 7,500. Losses recorded were New South Wales 15,800, South Australia 5,200, Western Australia 1,100, Tasmania 3,000, Northern Territory 900 and the Australian Capital Territory 800. This pattern held true for the September Quarter 2000 where all States and Territories other than Queensland and Victoria lost population through net interstate migration.

Net interstate migration levels in the two years ended September 1999 and 2000 show an increase in losses for New South Wales and South Australia and a decline in losses for Tasmania, Northern Territory and the Australian Capital Territory. Western Australia went from a gain in 1999 to a loss in 2000. Victoria and Queensland gained an increased number from interstate migration over the same period.

NET INTERSTATE MIGRATION, States and Territories

Where people move

In September Quarter 2000, there were 84,500 interstate movers in Australia. Queensland and Victoria recorded gains while the remaining States or Territories recorded net interstate migration losses during the quarter. For example, Queensland had an inflow of 22,600 persons with 52% coming from New South Wales. In outflow terms Queensland (18,000) was second to New South Wales (24,800), with 47% of Queensland movers choosing New South Wales as their destination.

SPECIAL ARTICLE

AUSTRALIA'S REGIONAL POPULATION GROWTH

POPULATION CHANGE

With the exception of Tasmania all States and Territories recorded gains in population in 1999–2000. This gain was not experienced by all regions in Australia; 350 Local Government Areas (LGAs) gained or had a constant population, while 274 LGAs experienced population loss.

At a regional level, differences in population change occur as a result of the interplay of the components of population growth: natural increase (the excess of births over deaths), net overseas and net internal migration. While there are variations for regions in all these components, it is internal migration that mainly determines the level of population growth in many regions of Australia.

Over recent years growth has occurred in several different types of regions throughout Australia, and these trends largely continued in 1999–2000. Examples of growth regions include outer suburban areas of capital cities, the inner cities, coastal regions, and regional centres. Some regions may fall into more than one kind of category as the distinction between the categories is not always clear.

CAPITAL CITY GROWTH

Growth in the capital cities accounted for most (73%) of Australia's population growth in the year to June 2000. Taken together capital city SDs grew by 1.3% (160,200) over the year to June 2000, while the balance of the States and Territories grew by 0.9%. Sydney and Melbourne experienced the largest population increases of Australia's capital cities in the year to June 2000, increasing by 53,600 and 52,100 people respectively, while Darwin and Brisbane recorded the fastest population increases (2.2% and 1.7% respectively). At June 2000 capital city SDs were home to 64% of the Australian population.

Inner city growth

Inner areas of Australia's capital cities continued to experience considerable population growth in 1999–2000. The LGAs of Sydney (up 9.6%), Melbourne (up 9.6%), and Perth (up 6.7%), continued to experience rapid population growth, while the SLAs of Fortitude Valley — Inner in Brisbane and Canberra City in the ACT increased by 740 people (102%) and 180 (72%) respectively in 1999–2000. The SLAs of City — Inner (9.6%), Coconut Grove (8%) and Stuart Park (6.8%) in Darwin also experienced relatively fast growth in 1999–2000.

GROWTH ALONG THE COAST

Many regions located along the coastline continued to record population gains during 1999–2000. Examples include Tweed (A), Lake Macquarie (C), Hastings (A), Shoalhaven (C) and Port Stephens (A) in New South Wales, and Surf Coast (S), Bass Coast (S) and Mornington Peninsula (S) in Victoria. Gold Coast (C) LGA in Queensland experienced the second largest population increase of all LGAs in Australia, and growth continued in the Queensland coastal areas of Maroochy (S), Pine Rivers (S) and Hervey Bay (C). Victor Harbour (DC) in South Australia continued to record population growth in 1999–2000, while coastal areas of Western Australia, such as Broome (S) and Busselton (S) were among the fastest growing LGAs in Australia.

GROWTH IN REGIONAL CENTRES

Population growth continued in a number of regional centres in the year to June 2000, such as Maitland (C), Griffith (C) and Dubbo (C) in New South Wales, Ballarat (C), Greater Shepparton (C) and Wodonga (RC) in Victoria, the cities of Townsville (C) and Toowoomba (C) in Queensland, Mount Gambier (C) in South Australia and Albany (C) in Western Australia.

SMALL AREA GROWTH AND DECLINE

Of the ten largest growth LGAs in Australia in 1999–2000, four were in the capital city of Melbourne, three were in Queensland and three were in Sydney. Queensland experienced the two largest LGA population increases to June 2000, with Brisbane (C) increasing by 14,700 people and Gold Coast (C) increasing by 13,300.

Among the ten largest declining LGAs in 1999–2000, eight were in the balances of the States and Territories. The balance of Victoria experienced the two largest LGA declines, with Latrobe (C) declining by 800 people and Wellington (S) down by 600 people.

ADDITIONAL INFORMATION

Further information about regional population growth and decline is available in *Regional Population Growth, Australia and New Zealand, 1999–2000* (Cat. no. 3218.0) released on 20 February 2001.

SPECIAL ARTICLE

DEATHS OF PEOPLE AGED 25–39 YEARS

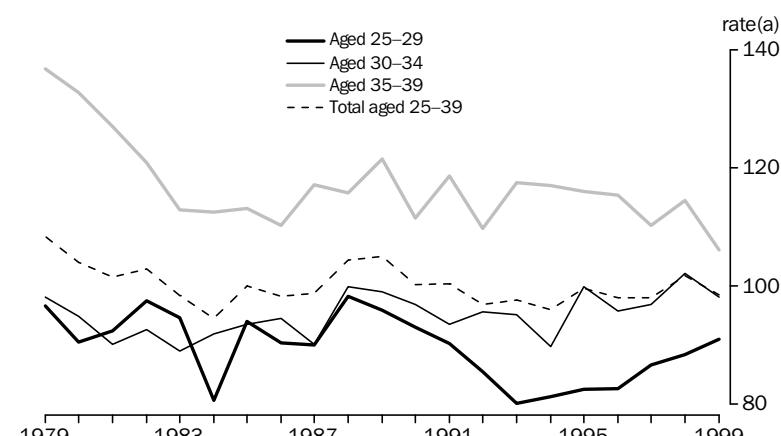

INTRODUCTION

Over the past 10 years, declining death rates have increased the Australian life-expectancy at birth by around 3 years for males and 2 years for females. In 1997–99 the average life expectancy at birth was 76 years for boys and 82 years for girls. While overall death rates have declined by around one-fifth since 1989, the death rates for people aged 25–39 years have not undergone the same general decline. In 1999, 4,300 deaths (3% of all deaths) occurred in this age group.

Since 1989, the age-specific death rate (ASDR) among 25–39 year olds decreased by 6% overall, from 105 per 100,000 in 1989 to 99 per 100,000 in 1999. The decrease in the male death rate (7%) was more than double that of the decrease in the female death rate (3%). Females aged 30–34 years were the only group for which death rates did not decline (increased by 0.1%).

The ASDR for persons aged 25–39 has not declined steadily over time. Since a peak of 108 deaths per 100,000 population in 1979, the death rate dropped to a low of 95 per 100,000 population in 1984 before rising again to 105 per 100,000 population in 1989. These continuing fluctuations mean that the death rates registered for this age group in 1999 are little different to those which occurred throughout much of the 1980s and 90s.

AGE-SPECIFIC DEATH RATES, Persons Aged 25–39 Years

(a) ASDR per 100,000 population.

LEADING CAUSES OF DEATH¹

In 1999, the leading causes of death among 25–39 year olds were intentional self-harm (21% of all deaths), malignant neoplasms (cancer) (15%), accidental poisoning by, and exposure to, noxious substances (accidental poisoning) (13%) and transport accidents (excluding water, air and space accidents) (12%). For each of these except cancer, the death rate for males was considerably higher than that for females.

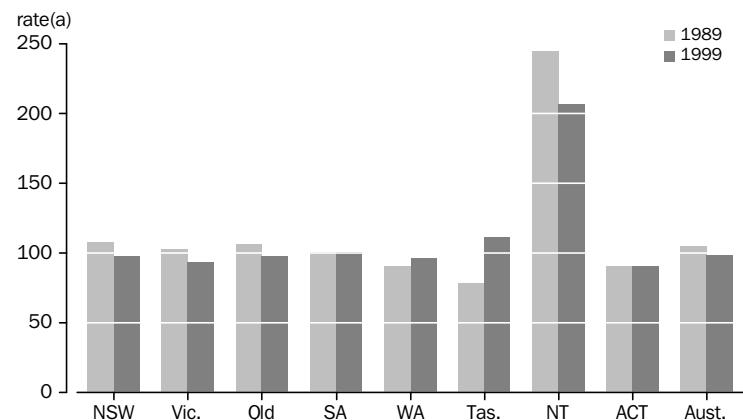

Overall, males accounted for more than 70% of all deaths in this age group. Among the leading causes of death, males comprised 82% of all deaths due to intentional self-harm, 80% of deaths due to accidental poisoning and 78% of deaths due to transport accidents, but less than half (47%) of all cancer deaths.

STATES AND TERRITORIES

In 1999, death rates for 25–39 year olds varied among the States and Territories with an Australian rate of 99 per 100,000 population. The Northern Territory had the highest rate (207 per 100,000 population), more than twice the Australian rate while the ACT had the lowest rate (91 per 100,000 population).

¹ ICD codes 10th revision: Intentional self-harm (X60–X84), cancer (C00–C97), transport accidents (excluding water, air and space accidents) (V01–V89), and accidental poisoning by, and exposure to, noxious substances (X40–X49).

DEATH RATE OF 25–39 YEAR OLDS

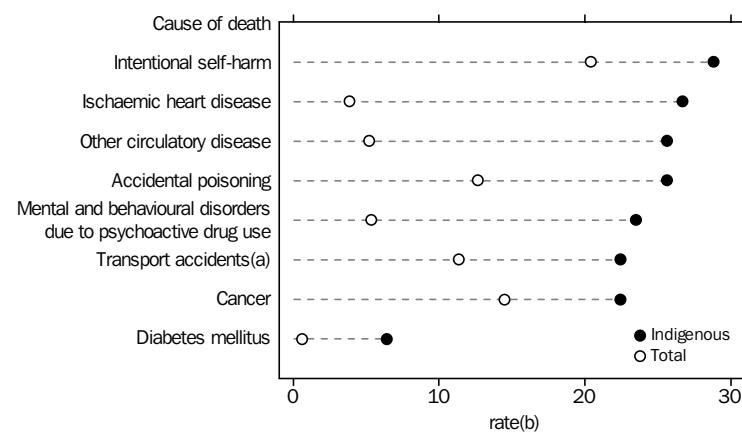

(a) ASDR per 100,000 male or female population aged 25–39 years.

INDIGENOUS DEATHS¹

Based on registered deaths in 1999, the ASDRs for Indigenous males and females aged 25–39 were more than three times higher than the corresponding ASDRs for total Australian males and females in this age group.

The four top causes of Indigenous deaths accounted for 32% of all Indigenous deaths compared with 60% for the four top causes of death for all persons aged 25–39. As with the total Australian population, intentional self-harm was the leading cause of death among Indigenous 25–39 year olds, accounting for 9% of all Indigenous deaths in this age group (29 deaths per 100,000 Indigenous population, compared with 20 deaths per 100,000 total population). In this age group the largest difference in death rates was for those dying of ischaemic heart disease (ASDRs of 27 for Indigenous and 4 for total population).

INDIGENOUS AND TOTAL AUSTRALIAN DEATH RATES, Persons Aged 25–39 Years—1999

(a) Excluding water, air and space accidents.

(b) ASDR per 100,000 population aged 25–39 years

ADDITIONAL INFORMATION

Further information on deaths of persons aged 25–39 years and deaths in general is available in *Deaths, Australia, 1999* (Cat. no. 3302.0) released on 18 December 2000.

¹ Rates in this section are calculated using the 1996-based Indigenous population projections (low series). See *Experimental Projections of the Aboriginal and Torres Strait Islander Population 1996–2006* (Cat. no. 3231.0).

(a) 1996 Census based. Estimates and the low projections series assume no change in the propensity to identify as Indigenous, as recorded on 1996 Census forms. The high projection series assume a change in propensity based on the 1991–1996 period.

(b) Includes Jervis Bay Territory.

EXPLANATORY NOTES

INTRODUCTION

1 This quarterly publication contains estimates of the resident populations (ERP) of Australia and the States and Territories based on the final results of the Census of Population and Housing held on 6 August 1996 (with various adjustments described in paragraph 4). The publication also contains estimates of the number of households by household size as well as the latest available statistics of births, deaths (including infant deaths), marriages, divorces and overseas and interstate migration. In addition, the publication includes estimates of the resident population by age, marital status and country of birth as well as experimental estimates of the Aboriginal and Torres Strait Islander population.

2 Following the 1992 amendments to the Acts Interpretation Act to include the Indian Ocean Territories of Christmas Island and the Cocos (Keeling) Islands as part of geographic Australia, population estimates commencing from September quarter 1993 include estimates for these two territories. To reflect this change, another category of the State and Territory level has been created, known as Other Territories. Other Territories include Jervis Bay Territory, previously included with the Australian Capital Territory, as well as Christmas Island and the Cocos (Keeling) Islands, previously excluded from population estimates for Australia. Data for Other Territories, while not detailed separately, are included in Australia totals commencing from September quarter 1993.

POPULATION AND COMPONENTS OF POPULATION CHANGE

3 Australia's population estimates for the period since 1971 are compiled according to the place of usual residence of the population. An explanation of the place of usual residence conceptual basis for population estimates is given in *Demographic Estimates and Projections: Concepts, Sources and Methods, Statistical Concepts Library, ABS Website*, <http://www.abs.gov.au>.

METHOD OF ESTIMATION

4 The estimates of the population of Australia and the States and Territories at the date of the Census of Population and Housing are census counts based on place of usual residence adjusted for underenumeration and the number of Australian residents estimated to have been temporarily overseas at the time of the census.

5 Quarterly estimates of the Australian population are obtained by adding to the population at the beginning of each period components of natural increase (on a usual residence basis) and net overseas migration. For the States and Territories, account is also taken of estimated interstate movements involving a change of usual residence. After each census estimates are made for the preceding intercensal period by incorporating an additional quarterly adjustment (intercensal discrepancy) to ensure that the total intercensal increase agrees with the difference between the estimated resident population at the two respective census dates.

NATURAL INCREASE: BIRTHS AND DEATHS

6 In this publication births and deaths data are presented by State and Territory of usual residence. For preliminary estimates, births and deaths by quarter of registration are used as a proxy for quarter of occurrence. For revised estimates a factor has been applied to the number of occurrences to allow for those occurrences which are yet to be registered. For final estimates after 30 June 1991 year/quarter of occurrence data are used. The births and deaths data detailed in the *Components of population* section of this publication are shown by year of occurrence for revised and final data and year/quarter of registration for preliminary data which may affect analysis of relevant tables.

EXPLANATORY NOTES

- NET OVERSEAS MIGRATION **7** Figures are based on net permanent and long-term overseas movements with State and Territory not stated allocated pro rata. Short-term movements are excluded. The estimates from July 1976 onwards include an adjustment for the net effect of category jumping. This adjustment is necessary because net permanent and long-term migration figures can be affected by changes in travel intentions from short-term to permanent/long-term or vice versa. For example, an Australian resident departing for a short-term visit overseas (stating that he/she intends to stay abroad for less than 12 months) in fact stays 12 or more months, thereby changing his/her travel category from short-term to long-term. Prior to December quarter 1989, adjustments for category jumping were only made to revised population estimates. These adjustments are now also included in preliminary estimates. For further details see *Demographic Estimates and Projections: Concepts, Sources and Methods, Statistical Concepts Library, ABS Website*, <http://www.abs.gov.au>.
- NET INTERSTATE MIGRATION **8** Estimates of interstate migration since June 1986 have been derived from latest census data on interstate movement in the preceding one year and unidentified information on interstate changes of address advised to the Health Insurance Commission in the process of administering Medicare.
- RATES OF POPULATION GROWTH **9** These express population change over a period as a proportion (%) of the population at the beginning of the period.
- EXPERIMENTAL ESTIMATES OF ABORIGINAL AND TORRES STRAIT ISLANDER POPULATION **10** Estimates of the Indigenous population are experimental in that the standard approach to population estimation is not possible because satisfactory data on births, deaths and internal migration are not generally available. Furthermore, there is significant intercensal volatility in census counts of the Indigenous population, thus adding to the problem of estimating the true Indigenous population. This volatility can in part be attributed to changes in the propensity of persons to identify as being of Indigenous origin. As a result, a method based on the use of life tables is used to produce time series data. For further details see *Experimental Estimates of the Aboriginal and Torres Strait Islander Population* (Cat. no. 3230.0).
- EXPERIMENTAL PROJECTIONS OF ABORIGINAL AND TORRES STRAIT ISLANDER POPULATION **11** Experimental estimates of the Indigenous population as at 30 June 1996 are used as the base population for projections of the Indigenous population to 30 June 2006. A low and a high projection series have been generated, and respectively imply a low and high overall growth rate of the Indigenous population. The low series uses a nil change in propensity to identify assumption based on the premise that the Indigenous population (as recorded in the 1996 Census) will only change as a result of natural increase. The high series uses a change in propensity to identify assumption based on the increase in the Indigenous population observed between the 1991 and 1996 Censuses which cannot be attributed to natural increase. For further details see *Experimental Projections of the Aboriginal and Torres Strait Islander Population* (Cat. no. 3231.0).
- ESTIMATED RESIDENT HOUSEHOLDS **12** Estimates of households are based on the estimated resident population series, to which propensities to form households are applied. These propensities were estimated from the Census of Population and Housing, and updated using the monthly Labour Force Survey. A detailed description of the method used to produce household estimates is contained in *Household Estimates 1986, 1991–94* (Cat. no. 3229.0).

EXPLANATORY NOTES

.....

MARRIAGES AND DIVORCES **13** All marriage and divorce data are shown by State or Territory of registration. While divorce data are presented by year/quarter of occurrence, marriage data are presented by year/quarter of registration.

14 Divorce data for States and Territories are affected by persons applying to the nearest Family Court rather than the court in their State or Territory of usual residence. The Canberra registry of the Family Court of Australia is particularly affected as it serves, in addition to the Australian Capital Territory, a large area of south-eastern New South Wales and part of Victoria. Around 55% of divorces granted in the Australian Capital Territory are to applicants who are not usual residents of the Territory. The number of divorces granted and the crude divorce rate for the Australian Capital Territory therefore does not accurately reflect the incidence of divorce among Australian Capital Territory residents.

OVERSEAS ARRIVALS AND DEPARTURES ESTIMATION METHOD **15** Overseas arrival and departure statistics are derived from a combination of full enumeration and sampling. All permanent movements and all movements with a duration of stay of one year or more are fully enumerated and processed. All movements with a duration of stay of less than one year are sampled. Statistics relating to these movements are therefore estimates which may differ from statistics which would have been obtained if details of all these movements had been processed.

16 From July 1998 the Department of Immigration and Multicultural Affairs (DIMA) is able to determine the actual length of stay for departing overseas visitors and arriving Australian residents which was previously collected from information on intended length of stay supplied on the arrival or departure card by the passenger. This new method has resulted in a change in data distribution with the number of passengers staying for one year exactly declining significantly.

COUNTRY OF BIRTH **17** The classification of countries in this publication is the Australian Standard Classification of Countries for Social Statistics (ASCCSS). For more detailed information refer to the ABS publication *Australian Standard Classification of Countries for Social Statistics* (Cat. no. 1269.0).

18 Political developments in Europe and the former USSR have resulted in a number of changes to the ASCCSS. These changes have affected some of the categories in this publication and are detailed in Revisions 1.01, 1.02 and 1.03 of the ASCCSS.

19 Overseas migration statistics by country of birth have certain limitations. For instance, it is not possible to separately identify England, Scotland and Wales (United Kingdom).

ROUNDING **20** In this publication population estimates and their components have sometimes been rounded to the nearest hundred. Neither rounded figures nor unrounded figures should be assumed to be accurate to the last digit shown.

21 Where figures have been rounded, discrepancies may occur between sums of component items and totals.

ADDITIONAL STATISTICS AVAILABLE

23 In most cases, the ABS can also provide information which is not published. This information may be made available in one or more of the following forms: microfiche, photocopy, data tape, floppy disk, computer printout or clerically extracted tabulation.

24 Current publications produced by the ABS are listed in the *Catalogue of Publications and Products, Australia* (Cat. no. 1101.0). The ABS also issues, on Tuesdays and Fridays, a *Release Advice* (Cat. no. 1105.0) which lists publications to be released in the next few days. Both are available from any ABS office.

25 Statistics of overseas arrivals and departures and related data are also published regularly by the Department of Immigration and Multicultural Affairs (see that Department's quarterly publication, *Immigration Update*) and by the Bureau of Tourism Research (on international travel and tourism).

| Age-specific fertility rates | Age-specific fertility rates are the number of live births (occurred or registered) during the calendar year, according to age of mother, per 1,000 of the female estimated resident population of the same age at 30 June. For calculating these rates, births to mothers under 15 are included in the 15–19 age group, and births to mothers aged 50 and over are included in the 45–49 age group. Pro rata adjustment is made in respect of births for which age of mother is not given. |
| Average household size | Average household size refers to the number of persons per household in private dwellings. |
| Birth | The delivery of a child, irrespective of the duration of pregnancy, who, after being born, breathes or shows any other evidence of life such as heartbeat. |
| Category jumping | Category jumping is the term used to describe changes between intended and actual duration of stay of travellers to/from Australia, such that their classification as short-term or as long-term/permanent movers is different at arrival/departure from that after 12 months. Category jumping consists of two components—an Australian resident component and an overseas visitor component. The Australian resident component of category jumping for a reference quarter is estimated by comparing the number of residents departing short-term in that quarter with all residents who left in that quarter and return in the following 12 months, to obtain the net number of Australian residents who jump category. Similarly, the number of overseas visitors arriving short-term in a quarter is compared with all overseas visitors and permanent arrivals who arrived in that quarter and depart in the following 12 months, to obtain the net number of overseas visitors who jump category. Estimates of category jumping are derived by subtracting the Australian resident component from the overseas visitor component. |
| Category of movement | Overseas arrivals and departures are classified according to length of stay (in Australia or overseas), recorded in months and days by travellers on passenger cards. There are three main categories of movement: <ul style="list-style-type: none">▪ permanent movements;▪ long-term movements (one year or more); and▪ short-term movements (less than one year). A significant number of travellers (i.e. overseas visitors to Australia on arrival and Australian residents going abroad) state exactly 12 months or one year as their intended period of stay. Many of them stay for less than that period and on their departure from, or return to, Australia are therefore classified as short-term. Accordingly, in an attempt to maintain consistency between arrivals and departures, movements of travellers who report their actual or intended period of stay as being one year exactly are randomly allocated to long-term or short-term in proportion to the number of movements of travellers who report their actual length of stay as up to one month more, or one month less, than one year. |
| Crude divorce rate | The crude divorce rate is the number of decrees absolute granted during the financial year, per 1,000 estimated resident population at 31 December. In the interpretation of this rate, it must be kept in mind that a large and varying proportion of the population used in the denominator is unmarried or is below the minimum age of marriage. |

G L O S S A R Y

| | |
|--------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Crude marriage rate | The crude marriage rate is the number of marriages registered during the financial year, per 1,000 estimated resident population at 31 December. In the interpretation of this rate, it must be kept in mind that a large and varying proportion of the population used in the denominator is below the minimum age of marriage or is already married. |
| Divorce | Decrees absolute of dissolution of marriage. |
| Estimated resident population (ERP) | Estimated resident population (ERP) are estimates of the Australian population obtained by adding to the estimated population at the beginning of each period the components of natural increase (on a usual residence basis) and net overseas migration. For the States and Territories, account is also taken of estimated interstate movements involving a change of usual residence. After each census, estimates for the preceding intercensal period are revised by incorporating an additional adjustment (intercensal discrepancy) to ensure that the total intercensal increase agrees with the difference between the ERPs at the two respective census dates. Estimates of the resident population are based on adjusted (for underenumeration) census counts by place of usual residence, to which are added the number of Australian residents estimated to have been temporarily overseas at the time of the Census. Overseas visitors in Australia are excluded from this calculation. |
| | The concept of ERP links people to a place of usual residence within Australia. Usual residence is that place where each person has lived or intends to live for six months or more from the reference date for data collection. |
| Former Yugoslav Republics | Consists of Bosnia-Herzegovina, Croatia, the former Yugoslav Republic of Macedonia, Slovenia, the former Yugoslav Republics of Serbia and Montenegro, and Yugoslavia n.f.d. |
| Household | A household is a group of two or more related or unrelated people who usually reside in the same dwelling, who regard themselves as a household and who make common provision for food or other essentials for living; or a person living in a dwelling who makes provision for his or her own food and other essentials for living, without combining with any other person. Households include group households of unrelated persons, same-sex couple households, single-parent households as well as one-person households. A household usually resides in a private dwelling (including caravans etc. in caravan parks). Persons usually resident in non-private dwellings, such as hotels, motels, boarding houses, jails and hospitals, are not included in household estimates. This definition of a household is consistent with the definition used in the Census. The number of households can be either based on count or estimated resident population. |
| Household estimate | Household estimate is a measure of the number of households of the usually resident population. It is based on the census count of households which is adjusted for missed households, households of overseas visitors, households of Australian residents where all members were temporarily overseas at the time of the Census and households of Australian residents where all members were not home on census night and spent census night in a non-private dwelling in Australia. |

G L O S S A R Y

| | |
|---------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Household population | The household population is the estimated resident population (ERP) that usually lives in private dwellings. It is the ERP less the population that usually lives in non-private dwellings. |
| Household size | Household size refers to the number of persons in a household. |
| Infant mortality rate | The number of deaths of children under one year of age in a financial year per 1,000 live births in the same financial year. |
| Intercensal discrepancy | Intercensal discrepancy is the difference between two estimates of a census year population, the first based on the latest census and the second arrived at by updating the previous census date estimate with intercensal components of population change which take account of information available from the latest census. It is caused by errors in the start and/or finish population estimates and/or in estimates of births, deaths or migration in the intervening period which cannot be attributed to a particular source. |
| Long-term arrivals | Long-term arrivals comprise: <ul style="list-style-type: none">▪ overseas visitors who intend to stay in Australia for 12 months or more (but not permanently); and▪ Australian residents returning after an absence of 12 months or more overseas. |
| Long-term departures | Long-term departures comprise: <ul style="list-style-type: none">▪ Australian residents who intend to stay abroad for 12 months or more (but not permanently); and▪ overseas visitors departing who stayed 12 months or more in Australia. |
| Marital status | Two separate concepts are measured by the Australian Bureau of Statistics. These are registered marital status and social marital status. They have different personal characteristics and are independent variables with separate classifications. Marital status relates to registered marital status which refers to formally registered marriages or divorces for which the partners hold a certificate. Four categories of marital status are identified: never married, married, widowed and divorced. |
| Marriage | Under the <i>Australian Marriage Act 1961</i> (Cwlth), a marriage may be celebrated by a minister of religion registered as an authorised celebrant, by a district registrar or by other persons authorised by the Attorney-General. Notice of the intended marriage must be given to the celebrant at least one calendar month but within six calendar months before the marriage. A celebrant must transmit an official certificate of the marriage for registration in the State or Territory in which the marriage took place. |
| Natural increase | Excess of births over deaths. |
| Net interstate migration | The difference between the number of persons who have changed their place of usual residence by moving into a given State or Territory and the number who have changed their place of usual residence by moving out of that State or Territory. This difference may be either positive or negative. |
| Net overseas migration | Net overseas migration is net permanent and long-term overseas migration plus an adjustment for the net effect of category jumping. |

|------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Net permanent and long-term overseas movement | The difference between the number of permanent (settler) and long-term overseas arrivals and the number of permanent and long-term overseas departures. Short-term movements are excluded. |
| Overseas arrivals and departures (OAD) | Overseas arrivals and departures (OAD) refer to the arrival or departure of persons, through Australian airports (or sea ports), which have been recorded. Statistics on OAD relate to the number of movements of travellers rather than the number of travellers (i.e. the multiple movements of individual persons during a given reference period are all counted). |
| Permanent arrivals (settlers) | Permanent arrivals (settlers) comprise: <ul style="list-style-type: none">▪ travellers who hold migrant visas (regardless of stated intended period of stay);▪ New Zealand citizens who indicate an intention to settle; and▪ those who are otherwise eligible to settle (e.g. overseas born children of Australian citizens). |
| | This definition of settlers is used by the Department of Immigration and Multicultural Affairs (DIMA). Prior to 1985 the definition of settlers used by the Australian Bureau of Statistics (ABS) was the stated intention of the traveller only. Numerically the effect of the change in definition is insignificant. The change was made to avoid the confusion caused by minor differences between data on settlers published separately by the ABS and the DIMA. |
| Permanent departures | Permanent departures comprise movements of persons who on departure state that they do not intend to return to Australia. |
| Population growth | For Australia, population growth is the sum of natural increase and net overseas migration. For States and Territories, population growth also includes net interstate migration. After the Census, intercensal population growth also includes an allowance for intercensal discrepancy. |
| Short-term arrivals | Short-term arrivals comprise: <ul style="list-style-type: none">▪ overseas visitors who intend to stay in Australia for less than 12 months; and▪ Australian residents returning after a stay of less than 12 months overseas. |
| Short-term departures | Short-term departures comprise: <ul style="list-style-type: none">▪ Australian residents who intend to stay abroad for less than 12 months; and▪ overseas visitors departing after a stay of less than 12 months in Australia. |

|-------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Standardised death rate | <p>Standardised death rates enable the comparison of death rates between populations with different age structures by relating them to a standard population. The ABS standard populations relate to the years ending in 1 (eg 1991). The current standard population is all persons in the 1991 Australian population. They are expressed per 1,000 or 100,000 persons. There are two methods of calculating standardised death rates:</p> <ul style="list-style-type: none">▪ The <i>direct method</i>—this is used when the populations under study are large and the age-specific death rates are reliable. It is the overall death rate that would have prevailed in the standard population if it had experienced at each age the death rates of the population under study.▪ The <i>indirect method</i>—this is used when the populations under study are small and the age-specific death rates are unreliable or not known. It is an adjustment to the crude death rate of the standard population to account for the variation between the actual number of deaths in the population under study and the number of deaths which would have occurred if the population under study had experienced the age-specific death rates of the standard population. |
| | <p>Wherever used, the definition adopted is indicated.</p> |
| State or Territory of registration | <p>State or Territory of registration refers to the State or Territory where the marriage was registered or the divorce was granted.</p> |
| State or Territory and Statistical Local Area (SLA) of usual residence | <p>State or Territory and Statistical Local Area (SLA) of usual residence refers to the State or Territory and SLA of usual residence of:</p> <ul style="list-style-type: none">▪ the population (estimated resident population);▪ the mother (birth collection); or▪ the deceased (death collection). |
| | <p>In the case of overseas movements, State or Territory of usual residence refers to the State or Territory regarded by the traveller as the one in which he/she lives or has lived. State or Territory of intended residence is derived from the intended address given by settlers, and by Australian residents returning after a journey abroad. Particularly in the case of the former, this information does not necessarily relate to the State or Territory in which the traveller will eventually establish a permanent residence.</p> |
| Total fertility rate | <p>The sum of age-specific fertility rates (live births at each age of mother per female population of that age). It represents the number of children a woman would bear during her lifetime if she experienced current age-specific fertility rates at each age of her reproductive life.</p> |
