ABOUT THIS PUBLICATION

This publication contains estimates of the resident populations of Statistical Local Areas (SLAs) and Local Government Areas (LGAs) of Tasmania as at 30 June 1997. Also included are estimated resident populations for the census years of 1986, 1991 and 1996.

The publication also presents an analysis of the components of population change in Tasmania over the last six years.

Information on the methodology used to estimate resident population in Tasmania (and in the LGAs and SLAs) is contained in the Explanatory Notes at the back of this publication. The notes also contain an assessment of the quality of the estimates produced.

Denis W. Rogers
Regional Director, Tasmania

SUMMARY OF FINDINGS

POPULATION DECLINE CONTINUES

Tasmania's population decreased by an estimated 942 persons between 30 June 1996 and 30 June 1997. This was the first twelve month period since 1940-41 in which Tasmania's population has fallen.

Tasmania's population growth rate for 1996-97 was -0.20% compared with Australia's growth rate of 1.21% for the same period. Australia's rate represented a small decrease over the 1.32% recorded for 1995-96, whereas Tasmania's rate represented a significant decrease from the 0.16% for 1995-96.

INTERSTATE MIGRATION THE MAJOR FACTOR

Tasmania's declining population growth results from an increasingly negative net interstate migration movement. In 1996-97, Tasmania recorded a net loss through interstate migration of 3,713 persons. This is a further extension of a downward trend commencing from a high point in 1989-90 when a net gain of 2,790 was recorded.

The 1996-97 net loss figure was created by an excess of departures of 14,339 over arrivals of 10,626. Notably, compared to 1995-96, there were 95 more persons arriving in the State, but this was offset by 1,218 more departing the State.

SMALL OVERSEAS MIGRATION

The negative trend of net interstate migration was only offset in a very minor way by net overseas migration. The figure for 1996-97 was just 329, a small decrease from the 398 recorded in 1995-96. Tasmania's net overseas migration rate of 0.07% for 1996-97 compared with Australia's figure of 0.52%.

NATURAL INCREASE ..STEADILY DECLINING

Tasmania's natural increase in 1996-97 was 2,442, a decrease of 79 on the previous year. This increase resulted from 154 fewer births and 75 fewer deaths registered in 1996-97 than in 1995-96.

Tasmania's natural increase rate, whilst normally lower than Australia's, decreased further in comparison. In 1996-97, Tasmania's rate was 0.51% compared to 0.69% for Australia. Tasmania's natural increase rate for 1996-97 was marginally less than the 1995-96 figure of 0.53% and continues the downward trend from the recent high of 0.74% in 1989-90.

AGEING OF THE POPULATION

The median age of Tasmanians in 1996-97 was 35.1 years, an increase on the 34.6 years for 1995-96. The median age for males was 34.3 years in 1996-97 (33.8 years in 1995-96) and for females was 35.8 years (35.3 years in 1995-96). The median age of Australians in 1996-97 was 34.3 years.

Factors contributing to increased median ages include longer life expectancy, declining fertility (evident in smaller families and deferred first births) and changes in net migration age profiles.

SUMMARY OF FINDINGS *continued*

POPULATION 65 AND OVER

With the trend towards increasing median ages, the proportion of the State's population in older age groups continues to rise. At 30 June 1987, persons aged 65 years and over accounted for 11.1% of the population, compared to 12.9% at 30 June 1997.

Conversely, the proportion of persons in the younger age groups has declined. Children under 15 years accounted for 23.7% of the State's population at 30 June 1987, but by 30 June 1997 this had fallen to 22.1%. A similar decline was estimated for 20-29 year olds, from 16.1% at 30 June 1987 to 13.5% at 30 June 1997.

REGIONS

The Greater Hobart-Southern Region accounted for 48.6% of Tasmania's estimated resident population at 30 June 1997; the Northern Region had 28.2%; and the Mersey-Lyell Region, 23.2%. Since 1991, Greater Hobart-Southern and Northern Regions have both increased their shares slightly at the expense of the Mersey-Lyell Region, which has experienced a small decrease in population at an average annual rate of -0.32%.

Between 1991-96, the Greater-Hobart Southern Region showed an average annual growth rate of 0.57% and the Northern Region 0.45%. The average annual growth rate for the State as a whole for this period was 0.33%.

LOCAL GOVERNMENT AREAS

In the period 1990-91 to 1995-96, Sorell municipality recorded the largest growth rate with an average annual increase of 4.52%. Other local government areas (LGAs) showing moderate growth were Meander Valley (2.85%), Tasman (2.45%), Latrobe (2.41%) and Kingborough (2.01%).

Significant decreases occurred in West Coast (-3.69%), Central Highlands (-2.97%), Burnie (-1.06%), Derwent Valley (-0.94%) and George Town (-0.67%).

CHANGES IN 1996-97

Only twelve of the twenty nine LGAs recorded growth in 1996-97. Sorell municipality continued to be the fastest growing LGA with an average annual increase of 1.56% followed by Latrobe (0.94%), Tasman (0.82%), Kingborough (0.62%) and Huon Valley (0.59%).

STATISTICAL LOCAL AREAS

The growth areas referred to in the previous section are again highlighted in an analysis of major statistical components of local government areas in the period 1990-91 to 1995-96. Of those Statistical Local Areas with a Part A (the Part A indicating that it is the predominantly urban component of the local government area), Meander Valley experienced an average annual growth rate of 7.67%, Sorell 4.70%, Latrobe 2.76%, Northern Midlands 2.18%, Kingborough 2.05% and West Tamar 1.93%.

In the predominantly rural areas (generally with a Part B), over the same period, Sorell experienced an average annual growth rate of 2.81%, Tasman 2.45%, George Town 2.23%, Southern Midlands 1.65% and Kingborough 1.50%.

June p	233 805	239 696	473 501

(a) Mean population is calculated according to the formula : mean population = $\frac{a + 4b + 2c + 4d + e}{12}$

where 'a' is the population at the end of the quarter immediately preceding the twelve-month period and 'b', 'c', 'd' and 'e' are the populations at the end of each of the four succeeding quarters. Mean populations are used in the calculation of crude rates.

EXPLANATORY NOTES

METHODOLOGY

- 1** Australia's population statistics (since 1971) have been compiled according to the place of usual residence of the population. An explanation of the conceptual basis is given in the ABS Information Paper *Population Estimates: Concepts, Sources and Methods* (3228.0) issued on 23 June 1995.
- 2** The estimated resident population of any area at a Census date is derived by adjusting the Census Count Place of Enumeration data to exclude visitors who normally reside outside the area, to include residents who were temporarily absent in other areas or overseas, and to apply a factor for census under-enumeration.
- 3** Due to the 1996 Census being held on 6 August further adjustments have been made for births, deaths and net migration for the period 30 June to 6 August 1996 to arrive at an estimated resident population at 30 June 1996.
- 4** Post-censal estimates at the National and State and Territory levels are made quarterly and are obtained by adding components of natural increase (on a usual residence basis) and net migration gain to the population at the beginning of each period.
- 5** At the National level, estimates of overseas migration are based on net permanent and long-term overseas movements as recorded on passenger cards completed by incoming and outgoing travellers for the Department of Immigration and Multicultural Affairs.
- 6** At the State and Territory level, information about internal migration is available from population censuses and from a sample survey of internal movements (conducted at more or less annual intervals to 1987 and resumed in 1991). These sources, however, do not provide the up-to-date quarterly estimates of interstate migration required for regular population estimates. The only suitable sources for this purpose are administrative records. Since June 1986, quarterly estimates of internal migration have been derived from changes of addresses advised to the Health Insurance Commission in the process of administering Medicare.
- 7** Post-censal Statistical Local Area (SLA) estimates are made annually and are produced with the assistance of local government authorities and other bodies who provide information on significant local factors which may have caused population changes in the relevant period.
- 8** Estimates for Tasmania and component areas, based on 1996 Census results, were published in *Regional Population Growth, Australia, 1991 and 1996* (Catalogue No. 3218.0). This publication was released on 15 July 1997.

DATA QUALITY

- 9** The quality of estimates contained within this publication is dependent on the quality of population census results (including under-enumeration adjustments) and on the various components and indicators of population change.
- 10** Intercensal discrepancy measures the difference between population estimates updated from a past population census and the estimates based on the subsequent population census. For Tasmania, between the 1991 and 1996 censuses, the intercensal discrepancy was measured at 1,213 persons, or 0.3% of the estimated population.

EXPLANATORY NOTES *continued*

DATA QUALITY *continued*

11 Analysis of intercensal discrepancy between 1991 and 1996 revealed that for ten out of fifteen local government areas containing more than 10,000 persons, discrepancy was less than 2% of the final estimated population. For smaller local government areas, estimates for ten out of the fourteen were within 5% of the final estimated population.

12 Estimates of population in each SLA and of overseas and interstate migration are shown in units without being rounded. However, accuracy down to the unit is not claimed and should not be assumed.

STATISTICAL GEOGRAPHY

13 The statistical geography used in this publication is based on *1996 Statistical Geography Volume 1, Australian Standard Geographical Classification (ASGC)* (Catalogue No. 1216.0).

14 Population estimates for statistical local areas and local government areas in this publication are based on the boundaries in existence at 30 June 1996.

RELATED PUBLICATIONS

15 Users may wish to refer to the following publications:

FOR MORE INFORMATION . . .

The ABS publishes a wide range of information on Australia's economic and social conditions. A catalogue of publications and products is available from any of our offices (see below).

INFORMATION CONSULTANCY SERVICES

Information tailored to special needs of clients can be obtained from the Information Consultancy Service available at ABS Offices (see below).

ABS PRODUCTS

A large number of ABS products is available from the ABS Bookshops (see below). The ABS also provides a subscription service – you can telephone the ABS Subscription Service Australia wide toll free on 1300 3663 23.

ELECTRONIC SERVICES

A large range of data is available via on-line services, diskette, magnetic tape, tape cartridge and CD ROM. For more details about our electronic data services, contact any ABS office (see below) or e-mail us at:
