NOTES

This publication contains preliminary estimates of the resident population by age and sex of statistical local areas and broader statistical areas of NSW at 30 June 1997, for boundaries existing at that date. These age and sex estimates have been derived by the use of a demographic cohort component method, which is described briefly in the Explanatory notes on page 40 of this publication.

Users should be aware that this publication contains *preliminary* age and sex estimates. These estimates are derived from preliminary State estimates.

SUMMARY OF FINDINGS

ESTIMATED RESIDENT POPULATION

The estimated resident population of NSW at 30 June 1997 was 6,274,370, an increase of 69,642 persons between 1996 and 1997. The average annual growth rate for this period was 1.1%, compared to 1.2% for Australia.

The population of Sydney Statistical Division (SD) was 3,934,717, or 62.7% of the total population for the State. Between 1996 and 1997 the population of Sydney SD increased by 52,981. The local government areas (LGAs) in Sydney SD which experienced the highest average annual percentage growth were Sydney (14.6%), Camden (6.6%), Liverpool (5.0%), South Sydney (3.2%) and Wyong (2.5%).

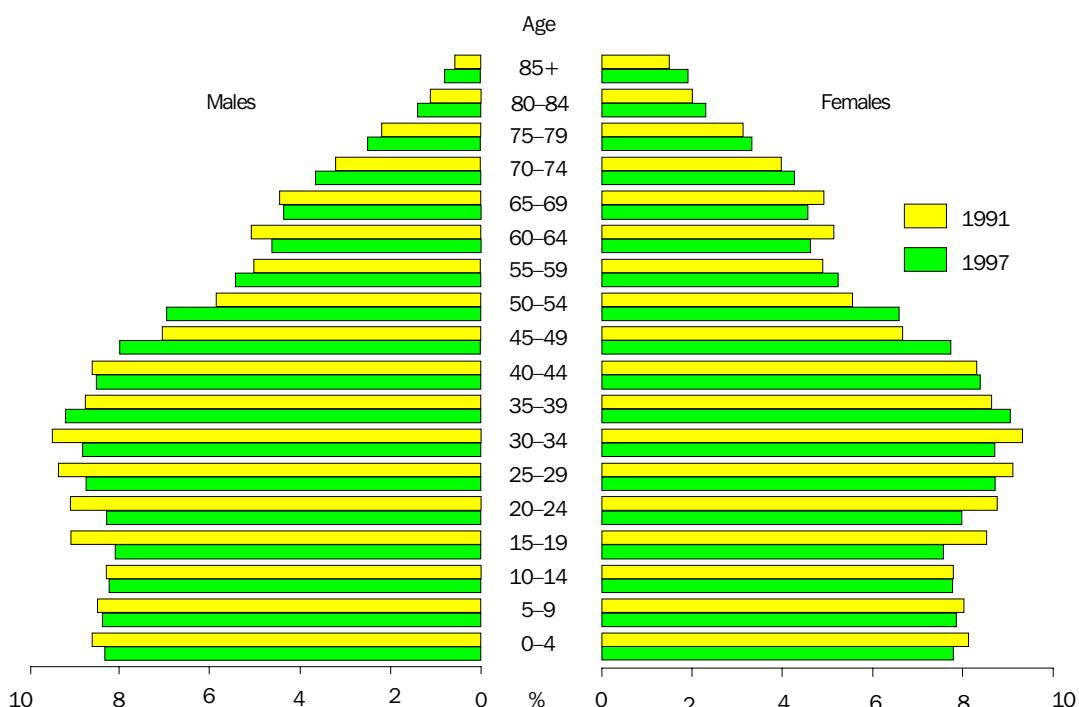

For the remainder of NSW, the coastal statistical divisions of Richmond-Tweed (1.6%), Hunter (1.2%), Illawarra (1.1%) and Mid-North Coast (1.1%) showed the highest average annual percentage growth. The LGAs with the most significant average annual percentage growth during the 1996 to 1997 period were Tweed (3.1%), Maclean (3.0%), Great Lakes (2.9%) and Byron (2.6%).

AGE DISTRIBUTION

The established trend of the ageing of the State's population continues. In 1997, older people (those aged 65 years or more) constituted 12.7% of the NSW population, compared to 11.9% in 1991.

While the proportion of older residents in NSW continues to increase, the proportion of younger people, particularly the 15-34 age groups continues to diminish. In 1997 the proportion of children (persons aged less than 15 years) was 21.0%, down from 21.6% in 1991.

Percentage of population in age groups, NSW

SUMMARY OF FINDINGS *continued*

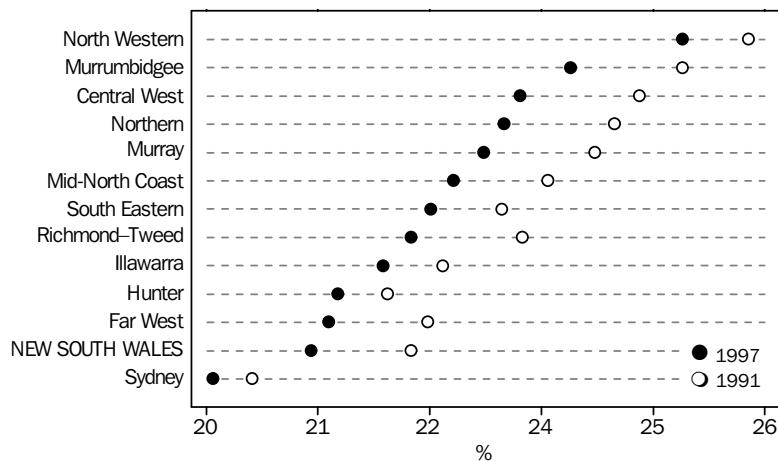

CHILDREN (UNDER 15 YEARS)

At 30 June 1997, there were 1,315,746 children residing in NSW — 673,735 males and 642,011 females.

Sydney SD maintained its position of having the lowest proportion of children (20.1% of the estimated resident population) of all the statistical divisions in NSW. The lowest proportions of children within Sydney SD were in Sydney (7.1%), South Sydney (8.5%) and North Sydney (8.9%). Within Sydney SD the highest proportions of children were located in the outlying LGAs of Campbelltown (28.2%), Wollondilly (26.6%), Penrith (25.8%) and Blacktown (25.8%).

Outside Sydney SD, North Western SD (25.1%) and Murrumbidgee SD (23.9%) continued to have the highest proportions of children, while Far West SD (21.3%) and Hunter SD (21.4%) had the lowest proportion of children in their resident population.

Children: proportion of population in statistical divisions, NSW, at 30 June

OLDER PEOPLE (65 YEARS OR MORE)

At 30 June 1997, there were an estimated 797,025 older residents in NSW — 346,066 males and 450,959 females.

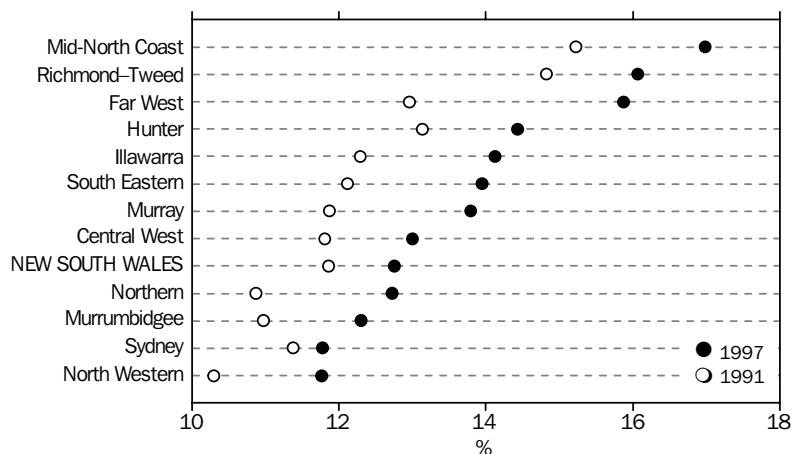

Older people represented 11.8% of the population of Sydney SD. The LGAs with the highest proportions of older people within Sydney SD were Hunters Hill (18.1%), Wyong (18.1%), Gosford (17.2%), Rockdale (16.2%), Hurstville (16.1%), Drummoyne (15.9%), Kogarah (15.9%) and Manly (15.9%). The lowest proportions of older people were found in Campbelltown (5.4%), Penrith (6.3%), Blacktown (6.9%) and Liverpool (6.9%).

Outside Sydney SD, the proportion of older people was 14.3%, which was above the State figure of 12.7%. The statistical divisions with the highest proportions of older people were Mid-North Coast (17.0%) and Richmond-Tweed (16.1%). The statistical divisions with the lowest proportions were North Western (11.8%) and Murrumbidgee (12.3%).

Of the State's 797,025 older people, 336,718 (42.2%) were aged 75 years or more. This proportion has increased since 1991 when 39.0% were aged 75 years or more.

SUMMARY OF FINDINGS *continued*

Older people: proportion of population in statistical divisions, NSW, at 30 June

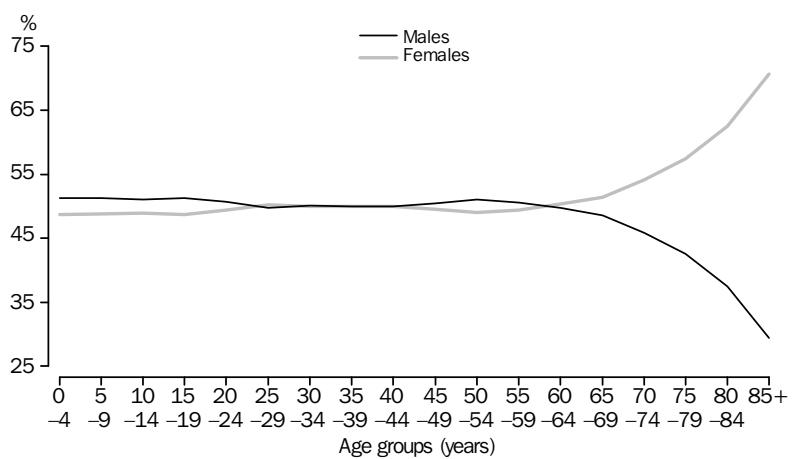

SEX RATIO

Females continue to outnumber males in the older age groups. In 1997 the number of females aged 65 years or more was 450,959 and the number of males aged 65 years or more was 346,066. This represents a ratio of about 1.3 females for every male.

This ratio becomes greater when older age groups are examined. In 1997 there were about 1.6 females aged 75 years or more for every male aged 75 years or more. Although high, this ratio has decreased in recent years. In 1986 there were about 1.8 females aged 75 years or more for every male aged 75 years or more; in 1991 the ratio was about 1.7.

Sex distribution of the estimated resident population by age, NSW, at 30 June 1997

EXPLANATORY NOTES

ESTIMATED RESIDENT POPULATION

1 The *Estimated Resident Population (ERP)* of an area (State, Statistical Local Area, etc.) is the estimate of the number of persons who usually reside in that area irrespective of where they were at the date of the estimate.

2 Intercensal estimates of resident population are based on the ERP at the date of the previous census (in this case, at the 1996 Census) and available measures of change in resident population since that date. As no direct measure of population movement at the statistical local area level is available, the indicators used may give an incomplete picture of such movement. Therefore it should be noted that all intercensal estimates will be subject to revision when final figures are available from the processing of the 2001 Census.

3 Detailed explanation of the concept of estimated resident population, as adopted by the Australian Bureau of Statistics (ABS) for official population estimates, is contained in the ABS Information Paper *Population Estimates: Concepts, Sources and Methods* (Cat. no. 3228.0).

METHOD

4 The figures contained in this publication are preliminary estimates and were obtained by a demographic cohort component method. The age and sex estimates at 30 June 1997 were produced as follows:

- Census-based estimates by age and sex in SLAs at 30 June 1996 were used as the base for updating.
- Estimates of total persons in each SLA at 30 June 1997 were made on the basis indicated in Note 2.
- Age/sex migration profiles are used for each SLA. Using 1996 Census data on usual residence one year prior to the Census date, profiles were derived for:
 - ◆ *Inter-SLA arrivals* — persons residing in the SLA whose usual residence one year ago was in another SLA within Australia.
 - ◆ *Inter-SLA departures* — persons whose SLA of usual residence one year ago was that SLA but whose residence at the date of the Census was another SLA within Australia.
 - ◆ *SLA overseas arrivals* — persons in the SLA whose usual residence one year ago was overseas.

5 SLA overseas departures profiles are derived using an average for the last three years of overseas departures data by usual residence, obtained from passenger cards.

- The total population growth for each SLA during 1996–97 was then split into natural increase and net migration components. Natural increase was derived for each SLA for 1996–97 from birth and death registration statistics. Net migration was derived for each SLA as the difference between total population growth and natural increase.
- Using the migration profiles and the derived net migration component for an SLA, the age/sex distribution of the net migration component was compiled for that SLA. This distribution and data of deaths by age, and births in each SLA were then added to (or subtracted from) the corresponding age/sex cell estimate at 30 June 1997, which was derived from the Census-based estimates described above. The totals for each age/sex group were then forced to the State total for that age/sex group independently determined.

EXPLANATORY NOTES *continued*

STATISTICAL AREAS OF NSW

6 This publication contains data presented according to the Australian Standard Geographical Classification (ASGC) and incorporating changes brought about by the (State) *Local Government Act 1993* to the titles of local government areas (LGAs). Under this classification, statistical areas are defined as follows:

- *Statistical Local Areas (SLAs)*. These geographical areas are, in almost all cases, identical with, or have been formed from a division of, whole local government areas (LGAs) as defined under the (State) *Local Government Act 1993* and comprising cities (C) and areas (A) — prior to this Act these areas were known as cities (C), municipalities (M) and shires (S). In other cases, they represent areas which are unincorporated under the Act. In aggregate, SLAs cover the whole of the State without gaps or overlaps. In some cases LGAs overlap statistical subdivision boundaries and therefore comprise two SLAs (Part A and Part B) or three SLAs in the case of Cabonne (A) (Part A, Part B and Part C). Separate estimates for these LGAs are shown in Table 2.
- *Statistical Subdivisions (SSDs)*. These consist of one or more SLAs and form the intermediate size spatial unit for the presentation of regional data.
- *Statistical Divisions (SDs)*. These consist of one or more SSDs. Where SSDs are not shown, SLAs are ordered alphabetically within SDs. The divisions are designed to be relatively homogeneous regions characterised by identifiable social and economic units within the region, under the unifying influence of one or more major towns or cities.

7 Further information concerning statistical areas is contained in the publication *Regional Statistics, New South Wales* (Cat. no. 1304.1) and in the publication *Australian Standard Geographical Classification* (Cat. no. 1216.0).

BOUNDARY CHANGES

8 A list of name changes, amalgamations and boundary changes of SLAs and other statistical areas of NSW, from 1 July 1996 to 30 June 1997, is contained in the Appendix.

ROUNDING

9 Estimates for each age and sex category are shown to the nearest unit without rounding; **accuracy to this level is not claimed and should not be assumed**. This procedure is consistent with 1987 to 1996 age and sex estimates, and is applied because rounding of small cells could result in substantial year to year fluctuations owing to the rounding process rather than an actual population change.

10 Population estimates in previous publications have been rounded as follows:

- All areas in Sydney SD have been rounded to the nearest 50 persons;
- For the remainder of NSW, the SLA and subdivision totals have been rounded to the nearest 10 persons;
- Statistical division totals have been rounded to the nearest 50 persons.
- The State total has been rounded to the nearest 100 persons.

FLOPPY DISK

11 The data contained in this publication are also available on floppy disk.

UNPUBLISHED STATISTICS

12 In some cases, the ABS can also make available information which is not published. This information may be made available in one or more of the following forms: floppy disk, microfiche, photocopy, computer printout, clerically-extracted tabulation. Generally, a charge is made for providing unpublished information. Inquiries should be made as shown in the inquiries section at the front of this publication.
