SUMMARY OF FINDINGS

POPULATION AT 30 JUNE 1999

The estimated resident population (ERP) in Victoria was 4,712,200, an increase of 57,200 (1.2%) since 1998 and 224,600 (5.0%) in the five years since 1994.

The population (ERP) for the Melbourne Statistical Division (MSD) was 3,417,200, an increase of 50,200 (1.5%) since 1998 and 204,200 (6.4%) since 1994.

AGE STRUCTURE

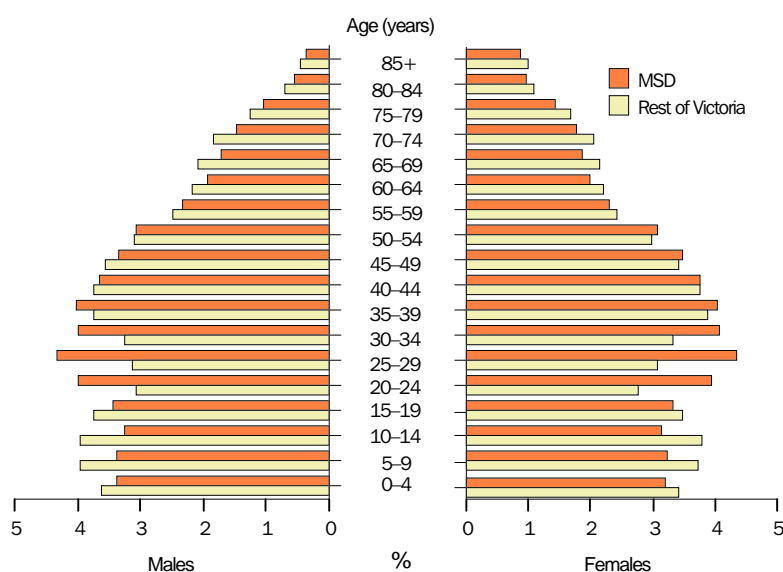

The age distribution of the Victorian population is significantly concentrated around the age range of 20–44 years. During the 12 months to 30 June 1999, the largest increase was in the 50–54 years age group which increased by 10,000 (3.5%). The highest growth rate was in the 85-years-or-older age group (4,100 or 6.9%) followed by the 75–79 years age group with growth of 7,700 (6.4%).

The number of older persons (65 years and over) increased by 10,300 (1.8%) in the 12 months. As a proportion of the population, older persons have increased from 12.2% in 1994 to 12.7% in 1999.

The number of children (aged under 15 years) in Victoria has remained stable during the 12 months to 30 June 1999. As a proportion of the population, children have decreased from 21.0% of the total in 1994 to 20.1% in 1999.

The median age of Victorians has continued to rise from 33.6 years in 1994 to 34.9 years in 1998 and 35.1 years in 1999. This is slightly higher than the median age for all Australians (34.9 years).

EXPLANATORY NOTES

INTRODUCTION

- 1** This publication contains preliminary estimated resident population by age and sex of Statistical Local Areas (SLAs), Statistical Subdivisions (SSDs) and Statistical Divisions (SDs) of Victoria at 30 June 1999.
- 2** The estimated resident population is compiled according to the place of usual residence of the population.

METHODOLOGY

- 3** The estimated resident population of an area is the estimate of the number of persons who usually reside in that area, irrespective of where they were on the date of the estimate.
- 4** The total population of each SLA is based on results of the 1996 Census of Population and Housing data and calculated for intercensal years by a linear regression model. The model uses independent indicators of population change, such as occupied dwellings and Medicare enrolments.
- 5** The age and sex estimates were obtained using the demographic cohort component method. Estimates for 1999 were updated from 1998 using SLA population estimates by age and sex at June 1998, recorded births and deaths during the year 1998–99 and the total population estimates at 30 June 1999. The total population growth for an SLA during 1998–99 was split into natural increase and net migration components, the latter being the difference between the total growth and natural increase during 1998–99. Age–sex estimates of natural increase were obtained from vital registrations (i.e. births and deaths), and those for net migration were derived as follows:
 - the net migration component was subdivided into internal arrivals and departures and overseas arrivals and departures, and proportionate age–sex distributions were allocated to each of these subdivisions for each SLA.
 - SLA specific migration profiles (the proportionate age–sex distributions) for inter SLA arrival, inter-SLA departure and overseas arrival to each SLA were obtained from the 1996 Census data on usual residence one year prior to the Census data, and
 - age–sex migration profiles for overseas departures were based on an average of overseas departures from the State/Territory which incorporated the SLA as recorded on passenger cards completed by incoming and outgoing travellers for the Department of Immigration and Multicultural Affairs.
- 6** A detailed explanation of the concept of estimated resident population, as adopted by the Australian Bureau of Statistics (ABS) for official population estimates, is contained in the *ABS Information Paper: Demographic Estimates, Concepts, Sources and Methods* (Cat. no. 3228.0).

RELIABILITY

7 Population figures over 1,000 in the text of this publication are rounded to the nearest hundred, and figures less than 1,000 are rounded to the nearest 10. While unrounded figures are provided in tables, accuracy to the last digit is not claimed and should not be assumed.

AUSTRALIAN STANDARD GEOGRAPHIC CLASSIFICATION

8 The geographic areas used in this publication are defined in the *Australian Standard Geographical Classification (ASGC) 1999 Edition* (Cat. no. 1216.0). The Appendix shows changes to SLA boundaries that have taken place since 1 July 1996.

ELECTRONIC DATA

9 Estimated resident population classified by age and sex for 30 June of each year from 1986 to 1999 is available electronically (Cat. no. 3227.2). A separate file for each year is available.

POPULATION PROJECTIONS

10 The ABS compiles and publishes population projections for Australia, States and Territories (Cat. no. 3222.0).
