NOTES

ABOUT THIS PUBLICATION

This publication contains the estimated resident population by age (in five-year age groups) and sex for each Statistical Local Area, Statistical Subdivision and Statistical Division in the Australian Capital Territory, at 30 June 2000.

.....

FINAL ISSUE

This is the final issue of *Population by Age and Sex, Australian Capital Territory* (Cat. no. 3235.8). In future years the age-sex data will be made available electronically in a SuperTABLE dataset or as companion data in AusStats. Data at all levels within the Australian Standard Geographical Classification main structure will be included. The new companion data will also effectively replace *Estimated Resident Population by Age and Sex in Statistical Local Areas, Australian Capital Territory: Data on Floppy Disk* (Cat. no. 3227.8).

Regional Director

SUMMARY OF FINDINGS

TOTAL POPULATION

The estimated resident population of the Australian Capital Territory (ACT) at 30 June 2000 was 310,800, an increase of 1,500 people since June 1999. This corresponds to an annual growth rate of 0.5%, compared with an increase of 0.4% for the previous year. In contrast the growth rate for Australia was 1.2% in 1999–2000. At June 2000 the population of the ACT made up 1.6% of Australia's population.

POPULATION OF THE AUSTRALIAN CAPITAL TERRITORY

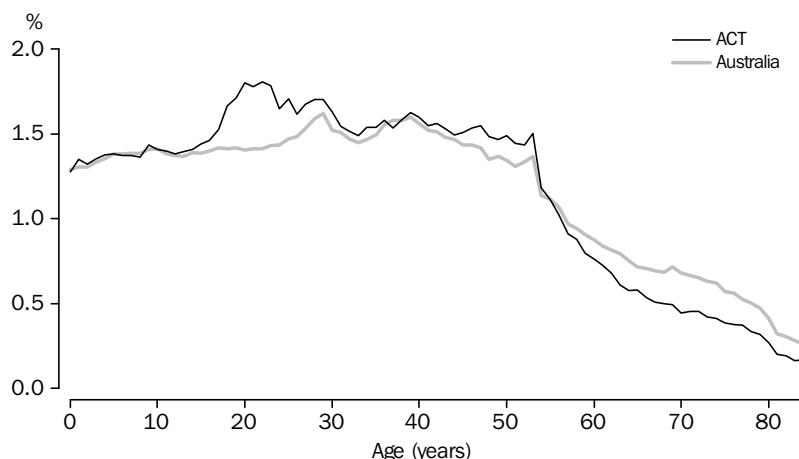

AGE AND SEX STRUCTURE

The median age of the population (the age at which half of the population is older and half is younger) of the ACT at June 2000 was 32.8 years, an increase of 0.3 years since June 1999, 3.5 years since 1990 and 6.3 years over the last 20 years. The ACT has a much younger population than Australia as a whole, which in June 2000 had a median age of 35.2 years. At June 2000 the sex ratio of the ACT population was 99.2 (males for every 100 females), the same as for Australia overall.

The age structure of the ACT population is noticeably different to that of Australia. The ACT has higher proportions of young adults (aged 15 to 34 years) and people aged 45 to 54 years, and lower proportions of older people (55 years and over). The peak in the young adult age groups in the ACT reflects the number of students who move to Canberra to undertake tertiary education.

AGE STRUCTURE OF THE POPULATION—ACT and Australia

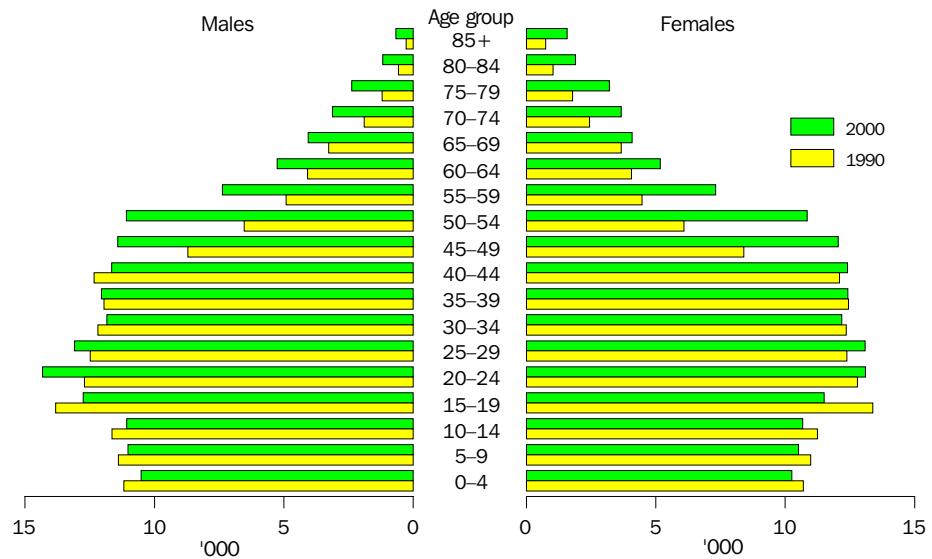

SUMMARY OF FINDINGS *continued*

.....

POPULATION AGEING

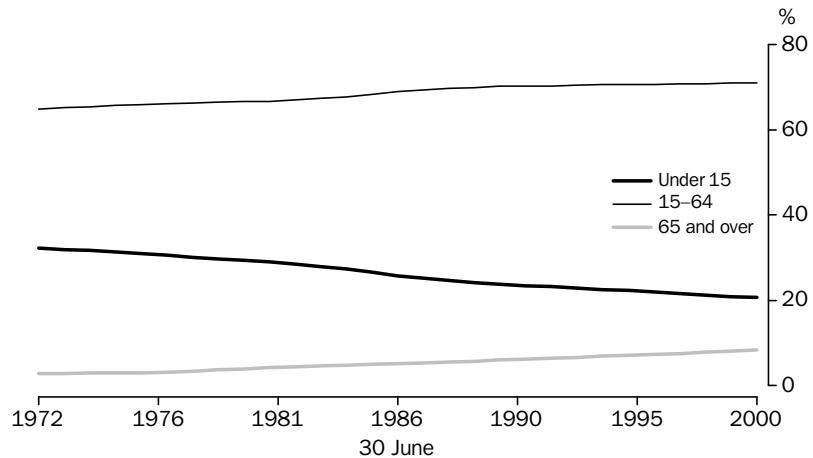

The population of the ACT is continuing to age, following the national trend. Over the last ten years the number of children aged 0–14 years has decreased (−4.6%), while the population aged 65 years and over has increased by over 50%. The number of people in the ACT aged 85 years and over has more than doubled since 1990. Corresponding growth in the population for Australia over the last ten years has been 4.4% (0–14 years), 25% (65 years and over) and 71% (85 years and over).

AGE STRUCTURE OF THE AUSTRALIAN CAPITAL TERRITORY

Over the last three decades the ACT has experienced a steady decline in the proportion of persons aged 0–14 years and a steady increase in the proportion aged 65 years and over. The proportion of the ACT population aged 15–64 years has increased slightly over the same period.

THE CHANGING AGE STRUCTURE OF THE AUSTRALIAN CAPITAL TERRITORY

SUMMARY OF FINDINGS *continued*

.....

MEDIAN AGES OF SUBDIVISIONS

The median age of the populations of the statistical subdivisions varied considerably in 2000. Gungahlin-Hall (28.7 years) and Tuggeranong (30.3 years) had the lowest median ages, followed by Belconnen (32.4 years) and North Canberra (32.8 years). South Canberra (38.3 years), Weston Creek-Stromlo (38.1 years) and Woden Valley (38.1 years) had the highest median ages.

ANALYSIS

POPULATION AGED UNDER 15 YEARS

The population aged under 15 years was 64,100 (20.6% of the population of the ACT) at 30 June 2000, compared with 67,100 (23.8%) ten years ago. The areas with the highest proportions of children aged under 15 years were generally concentrated in the outer areas to the north and south of the ACT, in the newer suburbs of Tuggeranong (which were settled in the 1980s and early 1990s), Gungahlin–Hall (which were settled in the 1990s) and Belconnen (Dunlop was first settled in 1994).

The suburbs with the highest proportions of children aged 0–14 years were all located in Tuggeranong. These included Conder (35%), Gilmore (34%), Chisholm (33%), Macarthur (33%) and Richardson (32%).

Areas with low proportions of children aged 0–14 years were located in the inner north and inner south of Canberra as well as inner Belconnen, where students and young working adults without children lived. Low proportions of children were also found in the older suburbs of Canberra which were originally settled in the 1950s and 1960s.

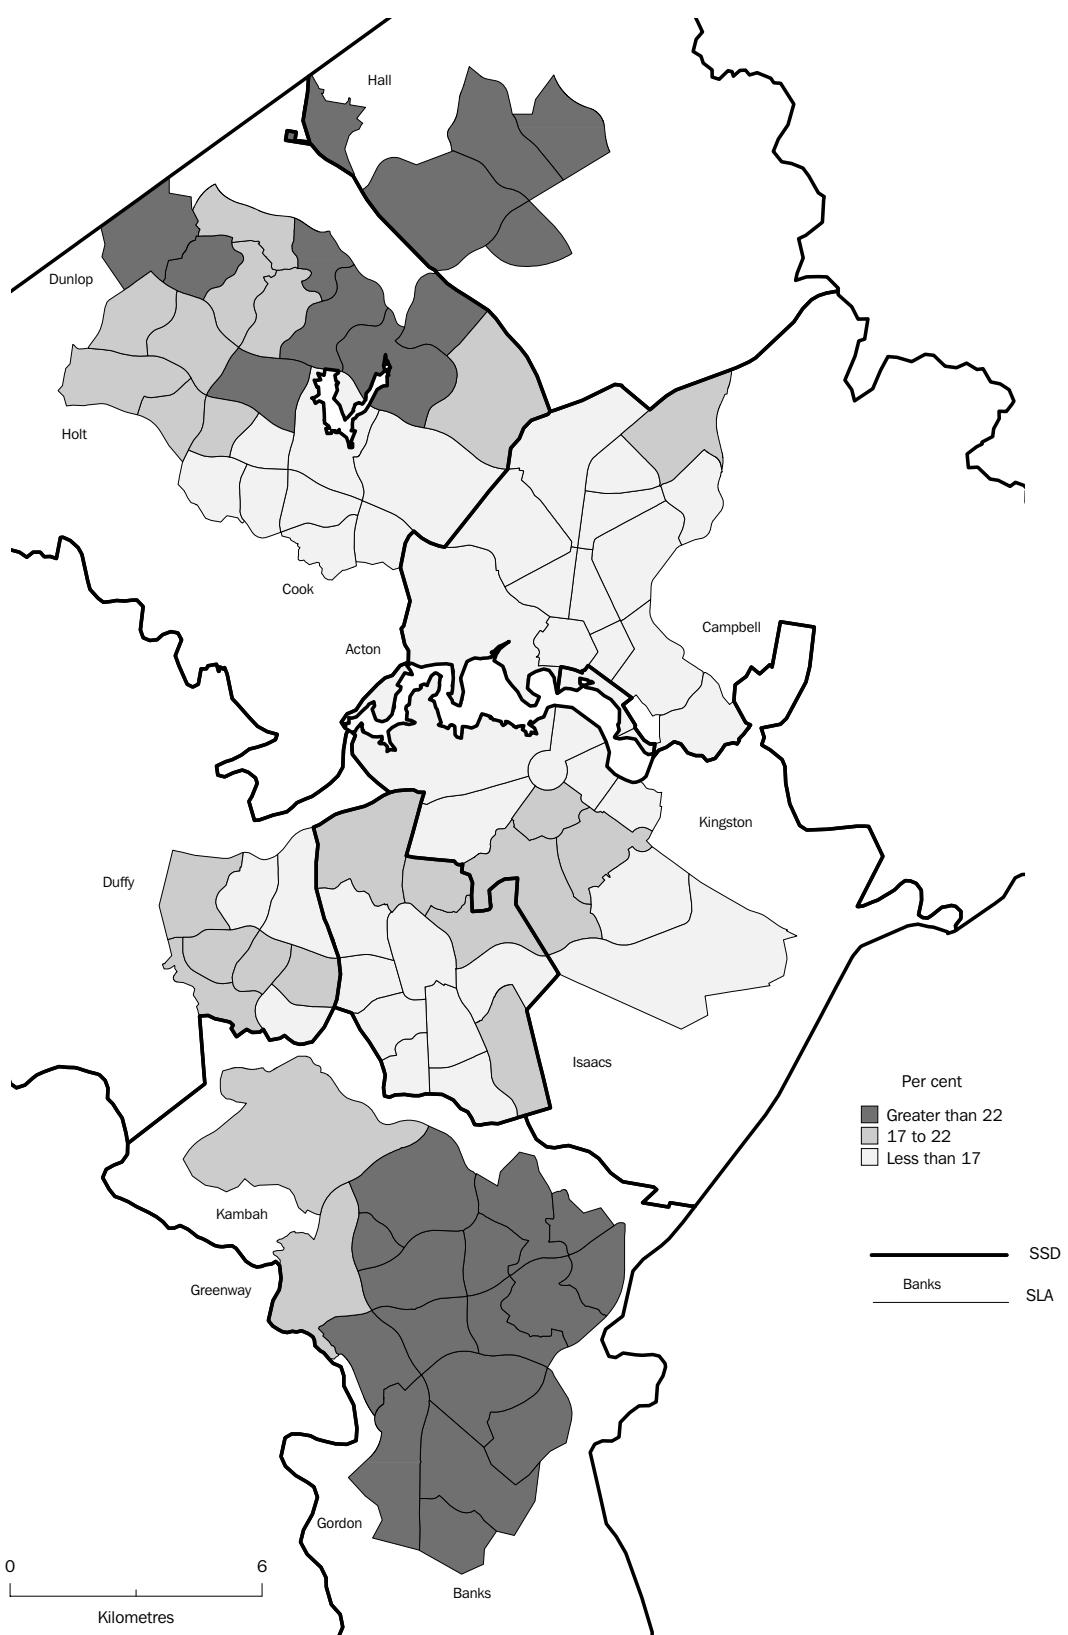

Acton, with a large student population living in residential colleges at the Australian National University, had the lowest proportion of children (2%). Low proportions of children were also found in Phillip (5%), Belconnen Town Centre (6%), Braddon (7%) and Kingston (11%). These areas are characterised by mainly young adult populations living in medium to high density dwellings.

ANALYSIS *continued*

POPULATION AGED UNDER 15 YEARS AS A PROPORTION OF THE TOTAL POPULATION, Selected Statistical Local Areas

ANALYSIS *continued*

.....

POPULATION AGED 15–24 YEARS

The population aged 15–24 years was 51,700 or 16.6% of the population of the ACT as at June 2000, compared with 52,700 persons (18.7%) ten years ago. The suburbs with the highest proportion of people aged 15–24 years were those with large student populations: Acton (74%), which has the Australian National University, Duntroon (70%) with the Australian Defence Force Academy, and Bruce (43%) with Canberra University. Belconnen Town Centre (40%), Braddon (31%) and Phillip (24%) have large numbers of medium to high density dwellings, attracting young childless adults.

As to be expected, many of the newly developed suburbs in Tuggeranong (such as Banks and Conder) and Gungahlin–Hall (such as Amaroo and Nicholls) had low proportions of people aged 15–24 years, reflecting the life cycle stage of these suburbs. The older and more established suburbs in Canberra's centre (such as Campbell and Yarralumla) also had low proportions of people in this age group.

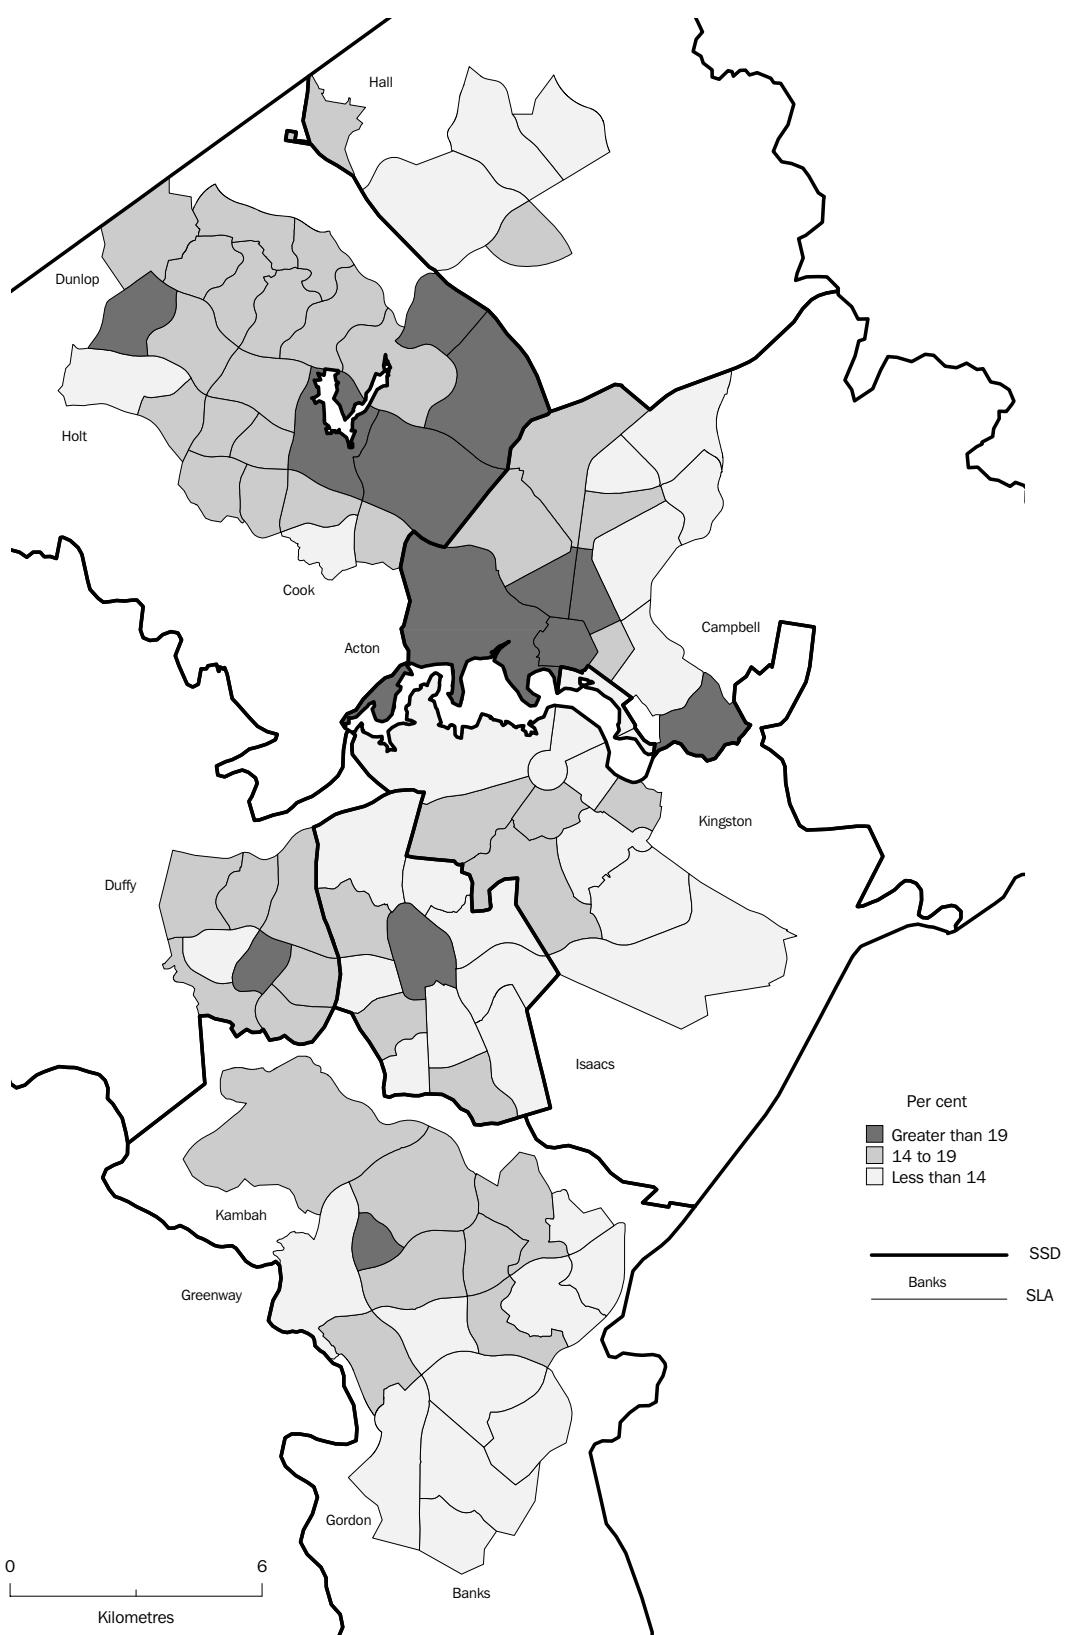

SLAS WITH HIGHEST AND LOWEST PROPORTION OF PEOPLE AGED 15–24 YEARS

ANALYSIS *continued*

POPULATION AGED 15–24 YEARS AS A PROPORTION OF THE TOTAL POPULATION, Selected Statistical Local Areas

ANALYSIS *continued*

.....

POPULATION AGED 65 YEARS AND OVER

The population aged 65 years and over numbered 25,900 or 8.3% of the population of the ACT as at June 2000, compared with 16,900 persons (6.0%) ten years ago. During this period, the number of people aged 85 years and over increased from 1,000 persons (0.4%) in 1990 to 2,300 persons (0.7%) in 2000.

The areas with the highest proportions of people aged 65 years and over are the older suburbs of Canberra, mostly in the inner south — for example, Deakin (21%), Yarralumla (19%) and Narrabundah (17%) — and in the inner north — for example, Campbell (20%) and Ainslie (17%).

Very low proportions of people aged 65 years and over were recorded in most suburbs in Tuggeranong and Gungahlin, as these subdivisions are mostly populated by young families or young adults without children. Most of the suburbs in Belconnen have low proportions of people aged over 65 years, except in the older suburbs (such as Cook, Macquarie and Weetangera) and in areas where retirement villages or nursing homes are located (such as Aranda and Page). The SLA with the lowest proportions of people aged 65 years and over is Duntroon (1%) due to the Australian Defence Force Academy which is located in this SLA.

EXPLANATORY NOTES

INTRODUCTION

1 This publication contains preliminary estimated resident population (ERP) by age and sex for the Statistical Local Areas (SLA) of the Australian Capital Territory at 30 June 2000.

POPULATION ESTIMATES

2 The ERP of an area is the estimate of the number of people who usually reside in that area.

3 An explanation of the concept of ERP, as adopted by the Australian Bureau of Statistics (ABS) for official population estimates, is given in *Demographic Estimates and Projections: Concepts, Sources and Methods*, available via the ABS website <URL: <http://www.abs.gov.au>>. From the navigation bar select Statistics then Statistical Concepts Library.

METHODOLOGY

4 The total population of each SLA is based on results of the 1996 Census of Population and Housing and calculated for post-census dates by a regression model which uses independent indicators of population change such as electricity connections, dwelling approvals and Medicare enrolments. These inter-censal estimates of the resident population are revised each time a population census is taken.

5 The age and sex estimates were prepared using the cohort component method. Post-censal age distributions were obtained by advancing the age and sex estimates for 30 June 1996 to the next age, subtracting deaths and adding births and net estimated inter-regional and overseas migration. Inter-regional and overseas migration was estimated from analysis of arrivals and departures data and individual SLA profiles derived from the 1996 Census.

6 After each census final estimates for the preceding intercensal period are calculated by incorporating an additional adjustment (intercensal discrepancy) to ensure that the total intercensal increase at each age agrees with the difference between the ERP at the two respective census dates.

GEOGRAPHIC BOUNDARIES

7 The geographic areas used in this publication are defined in *Australian Standard Geographical Classification (ASGC), 2000* (Cat. no. 1216.0).

8 The SLAs in Canberra equate directly with the suburbs. Details for the adjacent Queanbeyan Subdivision of New South Wales are not included in this publication. They are published in *Population by Age and Sex, New South Wales* (Cat. no. 3235.1).

RELIABILITY

9 Although estimates of resident population are shown to the nearest unit, accuracy to this level is not claimed and should not be assumed.

ELECTRONIC DATA

10 Data are available electronically upon request.

ACKNOWLEDGMENT

11 ABS publications draw extensively on information provided freely by individuals, businesses, governments and other organisations. Their continued cooperation is very much appreciated: without it, the wide range of statistics published by the ABS would not be available. Information received by the ABS is treated in strict confidence as required by the *Census and Statistics Act 1905*.

RELATED PUBLICATIONS

12 Other ABS publications which may be of interest to users of this publication include:
