EXPLANATORY NOTES

CONCEPTS, SOURCES AND METHODS

1 Information on concepts, definitions, data sources and methodology for the Australian national accounts in general is contained in the current edition of *Australian National Accounts: Concepts, Sources and Methods* (5216.0) which is now available along with other similar ABS publications on CD-ROM, entitled *Statistical Concepts Reference Library on CD-ROM* (1316.0). Although annual estimates of state accounts are covered in that publication, information relating to quarterly estimates by state is not currently included. However, conceptual issues relevant to annual state accounts also apply to the quarterly estimates.

2 National estimates are based on the concepts and conventions embodied in the United Nations publication, *A System of National Accounts* (SNA) 1968. No such standard is available for sub-national (regional/state) accounts. In the main, the national concepts are applicable to state accounts, but there remain a number of conceptual and measurement issues that either do not apply or are insignificant at the national level. These are discussed in detail in *State Accounts, Australia: Issues and Experimental Estimates*, ABS Occasional Paper 1984.4. While it is possible in some cases to derive quarterly estimates by state using the same data sources as used for the Australian estimates (or to derive the Australian estimates as the sum of the states), it is sometimes necessary to derive dissections of the Australian estimate using a variety of allocators. These allocators vary from being fairly closely related to the aggregate being measured to being only indirectly related. Information on some of the more important conceptual, methodological and data issues relating to quarterly estimates by state is provided below.

ACCURACY OF QUARTERLY ESTIMATES

3 The estimates contained in this Standard Data Service (SDS) generally represent dissections of quarterly estimates published for Australia in 5206.0. Therefore, they will reflect any inaccuracies in those estimates as well as inaccuracies introduced by the particular conceptual, methodological and data problems inherent in the allocation of Australian estimates to states and territories. As such, the degree of accuracy and reliability will necessarily be lower than that for the counterpart Australian estimates.

4 Estimates for wages, salaries and supplements, private final consumption expenditure and private gross fixed capital expenditure are based on the results of sample surveys. By their nature, survey results become less accurate as they are disaggregated (for example into states and/or industries). Generally, the ABS surveys used to derive these aggregates are designed to provide accurate estimates at the Australian total level and individual state estimates that are less accurate but still of an acceptable quality. However, it should be noted that relative standard errors are generally higher for the smaller states and territories than they are for the larger states. This may result in greater volatility in the quarterly estimates for the smaller states and the two territories.

5 Estimates of government final consumption expenditure, and general government and public enterprise gross fixed capital expenditure can be substantially affected by the indicators chosen to apportion the Commonwealth government component to states and territories. Care is required when interpreting these estimates.

REVISIONS

6 Most figures are subject to revision as more complete and accurate information becomes available. Revisions are of two types: those made to recent quarters and those made as a consequence of a redistribution across all quarters within a year following revisions to annual totals.

EXPLANATORY NOTES

TREND ESTIMATES

7 Given the qualifications regarding the accuracy and reliability of the quarterly national accounts, the ABS considers that trend estimates provide the best guide to the underlying movements, and are more suitable than either the seasonally adjusted or original data for most business decisions and policy advice.

8 A trend estimate is obtained by removing the irregular component from the seasonally adjusted series. For estimates in this publication, it is calculated using a centred 7-term Henderson moving average of the seasonally adjusted series. Estimates for the three most recent quarters cannot be calculated using this centred average method; instead an asymmetric average is used. This can lead to revisions in the trend estimates for the last three quarters when data become available for later quarters, even if none of the original data for earlier quarters has changed.

9 If a series has a high 'irregular' component, then the trend estimates will be subject to greater revision than would otherwise be the case for the latest few quarters as data become available for subsequent quarters. However, it is important to note that this does not make the trend series inferior to the seasonally adjusted or original series. In fact, in such cases the effect of the irregular component on overall movements is likely to be even more marked in the seasonally adjusted and the original estimates than in the trend series.

10 For more information about ABS procedures for deriving trend estimates and an analysis of the advantages of using them over alternative techniques for monitoring trends, refer to *A Guide to Interpreting Time Series — Monitoring 'Trends': an Overview* (1348.0) or contact the Assistant Director, Time Series Analysis on (02) 6252 6345.

Two Feature Articles which have appeared in the ABS monthly publication *Australian Economic Indicators* (1350.0) may also be of interest:

- *Picking Turning Points in the Economy* (April 1991), and
- *Smarter Data Use* (March 1992).

SEASONALLY ADJUSTED ESTIMATES

11 Data that are affected by seasonal factors are adjusted to remove the effects of these factors. The general methods for doing so are described in Appendix I of *Australian National Accounts: Concepts, Sources and Methods* (5216.0). Two important points should be noted here:

- The methods used in seasonal adjustment do not force the sum of the adjusted estimates for each quarter of a year to equal the original annual total.
- Where constant price estimates have no apparent seasonality in their implicit price deflators, the estimates are adjusted using the corresponding factors for current price estimates.

STATE AND TERRITORY VERSUS AUSTRALIAN SERIES

12 For trend and seasonally adjusted series, the sum of the states and territories generally does not equal the corresponding estimate for 'total Australia', nor are the quarter-to-quarter movements identical. On a few occasions, these differences have been significant, particularly for the seasonally adjusted series. This reflects both the relatively short span of data available for seasonal analysis at the state level and the fact that seasonal analysis was generally carried out at a more aggregated level than for the 'total Australia' series. The state and territory trend and seasonally adjusted series are less accurate than the Australian data. However, as the state and territory time series lengthen, the quarterly movements in the sum of the state estimates should more closely match those in the Australian series.

EXPLANATORY NOTES

STATE AND TERRITORY
VERSUS AUSTRALIAN SERIES
CONTINUED

13 For private final consumption expenditure an interim means of producing closer alignment between state seasonally adjusted series and the Australian total has been adopted. It involves using the quarterly movements in the total Australian series prior to September quarter 1984 to extrapolate back each of the individual state series before analysing the seasonal pattern of the series. This process has enabled account to be taken of the effects on trading patterns of the changing incidence of Easter on the assumption that there are no significant differences between states in this effect.

PRIVATE FINAL CONSUMPTION
AND GROSS FIXED CAPITAL
EXPENDITURES

14 State estimates of private final consumption expenditure and gross fixed capital expenditure are derived largely from the same sources as used for the Australian estimates, although a higher degree of approximation is required. In the case of private final consumption expenditure, data sources for major components such as household goods, dwelling rent, purchase of motor vehicles, fares, and purchases of gas, electricity and fuel are available quarterly by state.

15 State and territory estimates of private gross fixed capital expenditure on dwellings and non-dwelling construction are derived using data from the ABS quarterly surveys of Building Activity and Engineering Construction, while expenditure on equipment is derived from the quarterly Survey of Private New Capital Expenditure. Real estate transfer expenses are derived from data supplied by the various State Stamp Duty Offices, and various other data such as the number of real estate property transfers by state and territory. Essentially, these are the same data sources used to prepare the Australian estimates.

COMMONWEALTH
GOVERNMENT FINAL
CONSUMPTION AND GROSS
FIXED CAPITAL EXPENDITURES

16 The treatment of Commonwealth government final expenditures in regional accounting is rather problematic. Alternative treatments are to attribute final expenditures to the region in which the expenditure was incurred, or to the region in which the beneficiaries reside, or even to consider the Commonwealth government consumer unit as extra-territorial and therefore to exclude it from all regions. For practical reasons the first approach has been adopted in this Standard Data Service, although it still requires extensive use of indirect indicators. An implication is that a large proportion of the consumption of Commonwealth government services is included in State final demand for the ACT. Estimates for Commonwealth government expenditures in the states on both an annual and a quarterly basis therefore have to be treated with considerable caution.

17 The wages and salaries component of Commonwealth government final consumption expenditure is directly apportioned to states using data from the ABS Survey of Employment and Earnings and information supplied by the Department of Defence. Expenditures on goods and services classified to defence are allocated according to population while non-defence purchases are allocated on the basis of Commonwealth general government employment by state and territory.

18 For Commonwealth general government gross fixed capital expenditure, Australian estimates are first subdivided into expenditure on construction and expenditure on equipment. The Australia level construction expenditure component is generally allocated to states and territories using population by state as an indicator. Expenditure on equipment is allocated using Commonwealth general government employment by state and territory.

EXPLANATORY NOTES

- COMMONWEALTH ENTERPRISES GROSS FIXED CAPITAL EXPENDITURE
- 19** Various allocators are applied at the individual enterprise level for Commonwealth public enterprise gross fixed capital expenditure. Direct allocators are used in a few cases where enterprises operated wholly in one state or territory. For Telstra, state data for construction activity are available by quarter from the ABS Building Activity and Engineering Construction Surveys. Indirect indicators derived from annual estimates are used to allocate gross fixed capital expenditure by state for the remaining Commonwealth enterprises. For example, purchases of ships and aircraft are allocated using annual state shares for general freight and passenger activity through ports and airports in each state and territory.
- OCCASIONAL PAPER
- 20** The following Occasional Paper, which discusses issues specific to state accounts, is available at ABS offices:
- *State Accounts, Australia: Issues and Experimental Estimates* — S. Burrell, J. Daniel, A. Johnson and R. Walters (1984/4)
- RELATED PUBLICATIONS
- 21** In addition to the publications already mentioned, others of interest include:
- *Australian National Accounts: National Income, Expenditure and Product* (5204.0)—annual
 - *Australian National Accounts: Capital Stock* (5221.0)—annual
 - *Australian National Accounts: Multifactor Productivity* (5234.0)—annual
 - *Australian National Accounts: Financial Accounts* (5232.0)—quarterly
 - *Australian National Accounts: National Balance Sheet* (5241.0)—annual
 - *A Guide to the Australian National Accounts* (5235.0).
- 22** Current publications produced by the ABS are listed in the *Catalogue of Publications and Products, Australia* (1101.0). The ABS also issues, on Tuesdays and Fridays, a *Release Advice* (1105.0) which lists publications to be released in the next few days. The Catalogue and Release Advice are available from any ABS office.
