CHANGES TO THIS ISSUE

- There are no significant changes to this issue.

SIGNIFICANT EVENTS

- In September quarter 2013 issue of this publication the ABS announced that there would be revisions to previously published aggregates back to June quarter 1988 as part of the quality assurance work undertaken through reviews of compilation methods and through data provided to the ABS. These changes will be published in the June quarter 2014 issue of this publication.
- During the March quarter 2014, the deposit activity of a unit has been confidentialised to maintain the anonymity of the unit. As a consequence of suppressing estimates directly impacted, other series have been consequentially suppressed in affected tables to preserve confidentiality.

REVISIONS IN THIS ISSUE

There have been revisions to previously published aggregates:

- from September quarter 2012 onwards, revisions are due to quality assurance reviews of the compilation of published estimates and through data providers to the ABS Survey of Financial Information, ABS Survey of International Investment and APRA administrative data sets.
- from June 1988 onwards, there are small revisions to the sectorial capital accounts due to updated sources and methodology.

CHANGES IN FUTURE ISSUES

- The September quarter issue of this publication will introduce an expanded set of sector accounts. An information paper will be released with the June quarter describing the upcoming changes.

EXPLANATORY NOTES

INTRODUCTION

1 The *Australian Financial Accounts* (ABS Cat. No. 5232.0) contains financial profiles of each subsector of the economy and the market for each conventional financial instrument. There are also tables showing inter-sectoral financial transactions and measures of sectoral financial surpluses and deficits.

2 Financial accounts of various types – which are also called flow of funds statistics – are published by many *Organisation for Economic Cooperation and Development* (OECD) countries, including the United States of America (from 1945), the United Kingdom (from 1952) and Canada (from 1962). In Australia, the Reserve Bank produced annual flow of funds accounts for the reference years 1953–54 to 1988–89. The final edition of these was published in the Reserve Bank Bulletin, November 1989. The Australian Bureau of Statistics (ABS) published quarterly estimates commencing with experimental estimates of inter-sectoral financial transactions for the March and June quarters 1989. From the June 1998 reference quarter, the financial accounts dataset was produced according to a revised international standard, the System of National Accounts, 1993 (1993 SNA) and from the September 2009 quarter, *Australian National Accounts, Financial Accounts* (cat. no. 5232.0) has been produced according to the *System of National Accounts, 2008* (2008 SNA) edition.

CONCEPTS, SOURCES AND METHODS

3 There are significant revisions to standards and classifications between the 1993 SNA version and the 2008 SNA version of the Australian Financial Accounts (see Information Paper: *Product changes to Financial Accounts following revisions to international standards*, 2009 (cat. no. 5232.0.55.003)). The dataset prior to September 2009 has been converted to the 2008 SNA basis and backcast to June quarter 1988 (stocks data) and September quarter 1988 (transactions data). In addition to 2008 SNA, the concepts employed include elements drawn from the classifications used in the International Monetary Fund's (IMF) sixth edition of the Balance of Payments Manual (BPM6), the IMF's Government Finance Statistics Manual 2001, and the IMF's Manual on Monetary and Financial Statistics 2001.

4 *Australian National Accounts: Concepts, Sources and Methods* (cat. no. 5216.0) provides detailed descriptions of the concepts, data sources and methodologies used in compiling the Australian national accounts including the financial accounts on an 2008 SNA basis. More detailed explanations can be obtained from this publication.

STOCK AND FLOW CONCEPTS

5 Tables 1 to 21 and 23 to 33 present balance sheet data at market prices at the end of each calendar quarter. Balance sheet data are also known as stock, level or position data. These tables also now show net inter-sectoral financial transactions during the quarters. These are flow data. In this publication, the net transactions or flows are defined as active dealing in a financial instrument.

THE CLASSIFICATION OF INSTITUTIONAL SECTORS AND SUBSECTORS

6 The institutional sectors are based on the *Standard Economic Sector Classifications of Australia, 2008* (cat.no. 1218.0) and are the same as the sectors used in national income and expenditure accounts.

7 The basic unit that is classified by sector is the institutional unit, which is defined as an economic entity that is capable, in its own right, of owning assets, incurring liabilities and engaging in economic activities and transactions with other entities.

SOURCES OF DATA

8 Most of the financial data in this publication are derived from statistical surveys conducted by the ABS and from information collected by the Australian Prudential Regulation Authority (APRA). Some other data sources are used, particularly for valuation adjustments.

EXPLANATORY NOTES *continued*

SOURCES OF DATA *continued*

9 The quarterly sectoral capital accounts in the flow of funds matrices are prepared using a variety of indicators to dissect annual estimates based on survey data. Some of the indicators used are known to be of poor quality; these are footnoted in tables to note the quality concerns and should be used with caution.

COMPILATION METHODS

10 The levels (stock) tables are prepared by gathering together balance sheet information from various sources and selecting the better estimates. A choice is often possible because different data sources provide alternative or counterpart measures of the same item. For example, borrowing by state owned non-financial corporations will be reported by the state central borrowing authorities or Treasuries as assets and by the non-financial corporations as liabilities. The subsector aggregates derived from these data do not agree because the ABS does not survey all state owned non-financial corporations. In this case, the data from the central borrowing authorities and Treasuries are therefore used to estimate both the asset and liability aspects of these borrowings.

11 In some cases, transactions data are directly collected. In other cases transactions must be derived from the difference in consecutive levels. These net financial transactions are derived by taking the difference between closing and opening levels of balance sheet items and, where possible, eliminating changes on the balance sheet caused by valuation effects such as exchange rate movements.

ACCOUNTING BASIS

12 2008 SNA states explicitly that the national accounts should record transactions on an accrual basis (as opposed to a cash or 'due for payment' basis), to reflect the time when economic value is transferred rather than when cash relating to the transaction is paid or falls due for payment. For practical reasons complete implementation of accrual accounting throughout the national accounts is not yet possible. Some areas where accrual accounting has not been adopted include:

- accrual of household income tax; and
- accrual of certain employee entitlements, including recreation and long service leave.

13 In these statistics tradeable securities, which include shares listed on the Australian Stock Exchange (ASX) and debt securities traded on organised markets, are valued at market prices.

14 Other securities are assigned estimated market values. For example, equity not listed on ASX is valued on the basis of value of total assets of the enterprise in question less the value of any repayable liabilities.

15 Deposits, loans and other accounts payable/receivable are recorded at their face value.

16 Net equity of pension funds in life office reserves are valued on the basis of market value of total assets (including non financial assets) of the funds less any repayable liabilities.
