KEY POINTS

ORIGINAL ESTIMATES

SHORT-TERM

- In the September quarter 1998, businesses expect operating income and selling prices to rise (by 1.1% and 0.2% respectively) and profits and full time equivalent employment to fall (by 1.0% and 0.7% respectively). All four business performance indicators are weaker than they were for the June quarter 1998.

MEDIUM-TERM

- In the year to the June quarter 1999, businesses expect operating income, selling prices and profits to rise (by 2.7%, 0.8% and 13.1% respectively). Full time equivalent employment is expected to fall by 0.5%. Expected falls in employment in both the short and medium term are the largest since late 1994.

TREND ESTIMATES

SHORT-TERM

- In trend terms, for the September quarter 1998 businesses expect operating income and selling prices to rise (by 1.1% and 0.3% respectively) and full time equivalent employment to fall by 0.4%.

MEDIUM-TERM

- In trend terms, for the year to the June quarter 1999 businesses expect operating income, selling prices and profits to rise (by 2.4%, 0.7% and 12.6% respectively) and full time equivalent employment to fall by 0.3%.

- For further information about these and related statistics, contact Jonathan Sim on 02 6252 7045, or any ABS Office.

SUMMARY OF RESULTS: Short-term Outlook

OPERATING INCOME

TIME SERIES

Operating Income is expected to rise by 1.1% in the September quarter 1998. Large businesses appear to be more insulated than other smaller businesses against the downturn in the Asian economy and expect an increase of 2.3% in their operating income. Medium sized businesses expect their operating income to increase by 1.4% and small businesses expect no change.

MAIN INDUSTRY COMPARISON

Only two industries expect Operating Income to fall (Electricity, gas and Water and Property & business Services) in the short term, each expecting a 0.2% fall. All other industries expect small increases with the manufacturing expecting an increase of 3.2% due mainly to seasonal factors and the launch of new products.

SUMMARY OF RESULTS: Short-term Outlook *continued*

SELLING PRICES

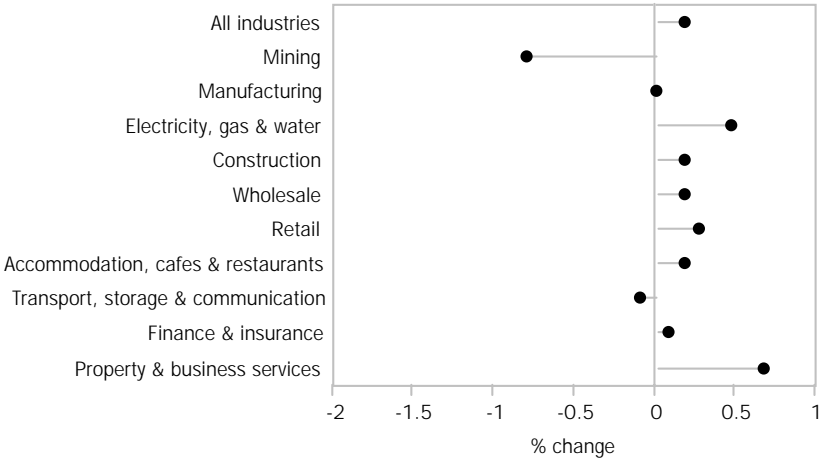

TIME SERIES

The expected rise of 0.2% in Selling Prices in the September quarter 1998 continues the series of low inflation expectations over the past two years. Businesses of all sizes expect selling prices to increase with small, medium and large businesses expecting rises of 0.2%, 0.3%, and 0.1% respectively.

MAIN INDUSTRY COMPARISON

Businesses in all industries except the Mining and Transport, Storage and Communications industries expect Selling Prices to increase in the short term. These industries expect falls of 0.8% and 0.1% respectively.

SUMMARY OF RESULTS: Short-term Outlook *continued*

PROFITS

TIME SERIES

Profits are expected to fall by 1.0% in the September quarter 1998. While small businesses expect profits to fall by 7.3%, medium and large businesses expect increases of 1.1% and 9.0% respectively. Seasonality appears to play a large part in the increase expected by large businesses. Large falls expected in the Accommodation, Cafes and Restaurants, Transport, Storage and Communication and Manufacturing industries outweigh increases expected in a number of other industries.

MAIN INDUSTRY COMPARISON

Manufacturing businesses expect the largest increase in Profits (11.0%) in the short term due mainly to seasonal factors and the launch of new products. Five industries expect falls in their profits in the short term with Property & Business Services expecting profits to fall by 9.8%

SUMMARY OF RESULTS: Short-term Outlook *continued*

EMPLOYMENT

TIME SERIES

Employment (full time equivalent) is expected to fall by 0.7% in the short term. Falls have been expected in six of the last seven quarters. All sized businesses expect falls in employment with small, medium and large businesses expecting falls of 1.2%, 0.2% and 0.3% respectively.

MAIN INDUSTRY COMPARISON

The fall expected in full time equivalent Employment in the September quarter 1998 is 0.7%. The largest falls expected to occur in the Mining (-1.7%), Electricity, Gas and Water (-1.5%) and Construction (-1.4%) industries.

SUMMARY OF RESULTS: Medium-term Outlook

OPERATING INCOME

TIME SERIES

Operating Income is expected to rise by 2.7% in the medium term. Businesses of all sizes expect an increase with large businesses expecting an increase of 4.2%, while medium and small businesses expect increases of 2.8% and 1.6% respectively.

MAIN INDUSTRY COMPARISON

The largest expected increase in Operating Income is in the Finance and Insurance industry (4.2%) where large businesses expect an increase of 5.7% while medium and small businesses expect an increase of 3.0% and 2.8% respectively. Operating Income in the Mining industry is expected to rise by 4.0% where an expected rise by small businesses outweighs falls expected in both medium and large businesses.

SELLING PRICES

TIME SERIES

For the second quarter in a row Selling Prices are expected to rise by 0.8% in the medium term. Medium sized businesses expect a rise of 1.0% while small and large businesses both expect rises of 0.8%.

MAIN INDUSTRY COMPARISON

All industries except Mining (-2.1%) and Transport, Storage and Communication (-0.3%) expect Selling Prices to increase by the June quarter 1999. The two largest increases are expected in the Accommodation, Cafes & Restaurants (1.6%) and Property and Business Services industries (1.6%).

SUMMARY OF RESULTS: Medium-term Outlook *continued*

PROFITS

TIME SERIES

For the second quarter in a row Profits are expected to increase by 13.1% in the medium term. Large businesses expect profits to increase by 28.8% while medium and small businesses expect increases of 19.3% and 2.9% respectively.

MAIN INDUSTRY COMPARISON

All industries expect Profits to increase in the medium term. The Mining industry expects profits to rise by 27.4% while both the Construction and property & Business Services industries expect increases of 5.7%.

SUMMARY OF RESULTS: Medium-term Outlook *continued*

EMPLOYMENT

TIME SERIES

Full time equivalent Employment is expected to fall by 0.5% in the medium term. All sized businesses expect falls in employment with small, medium and large businesses expecting falls of 0.9%, 0.1% and 0.1% respectively. The 0.5% fall is the largest fall expected over the medium term since late 1994.

MAIN INDUSTRY COMPARISON

Seven industries expect falls in Employment in the medium term with the largest falls expected in the Mining, Transport, Storage & Communication and Electricity Gas and Water industries which expect full time equivalent employment to decline by 2.6%, 2.1%, and 1.9% respectively.

EXPLANATORY NOTES

INTRODUCTION

- 1** This publication contains estimates of future economic activity based on the business expectations of senior executives, managers and proprietors of businesses operating in Australia. The estimates have been compiled from data collected by the Australian Bureau of Statistics (ABS) in its quarterly survey of business expectations.
- 2** This survey commenced with short term expectations for the December quarter 1993 and medium term expectations for the September quarter 1994. This quarter's publication contains estimates of the expected change between the June quarter 1998 and the September quarter 1998 and the June quarter 1999.
- 3** Seasonal adjustment of these data cannot take place until at least 5 years of data are available. Trend estimates are provided on pages 12 and 20.
- 4** The survey is conducted by mail each quarter. This quarter's survey was collected during May 1998.
- 5** It is based on a stratified random sample of approximately 3,000 businesses selected from the ABS annual Economic Activity Survey (EAS). EAS in turn derives its survey population from the ABS central register of business units.
- 6** The sample is stratified by industry, sector (private and government business) and size of business (measured by number of employees). Within each stratum businesses are sampled randomly, with each business in a stratum having the same probability of selection.
- 7** The sample is supplemented by a further sample of businesses which have been added to the ABS business register since the original EAS sample was selected. This ensures that the expectations of relatively new businesses are taken into account in the overall estimates.

SCOPE OF THE SURVEY

- 8** The statistics in this publication relate to employing businesses in all industries and sectors of the Australian economy except:
 - agriculture, forestry and fishing;
 - general government.
- 9** Data related to intended sheep matings are collected annually by the ABS and published in catalogue 7111.0 and 7113.0 publications from the Agricultural Census.
- 10** The Australian Bureau of Agricultural and Resource Economics (ABARE) publishes its forecasts for specific commodities and for the Agriculture industry generally, as part of the annual Outlook conference in February each year. ABARE updates these forecasts in its quarterly publication *Australian Commodities—Forecasts and Issues*.

CLASSIFICATION

- 11** Each statistical unit selected in the survey is classified to an industry according to the Australian and New Zealand Standard Industrial Classification (ANZSIC).

BUSINESS SIZE

- 12** Data presented in this publication is classified by three business sizes :
 - small (less than 20 employees, except for manufacturers where it is less than 100);
 - medium (20 to less than 100 employees, except for manufacturers where it is 100 to 599 employees); and
 - large (100 and greater employees, except for manufacturers where it is 600 or more employees).

EXPLANATORY NOTES

BUSINESS SIZE *continued*

PROPORTION OF BUSINESSES SELECTED BY SIZE WITHIN AUSTRALIA

	<i>Small</i>	<i>Medium</i>	<i>Large</i>	<i>All businesses</i>
	%	%	%	%
Manufacturing	62.2	22.4	15.4	100.0
Other industries	63.1	20.9	16.0	100.0
All industries	57.8	16.7	25.5	100.0

STATISTICAL UNIT

13 The statistical unit used in the survey of business expectations is the management unit. The management unit is the highest level accounting unit within a business for which sub-annual accounts are maintained, having regard for industry homogeneity.

14 In nearly all cases the management unit coincides with the legal entity owning the business (i.e. company, partnership, trust, sole proprietor, etc.).

15 In the case of large diversified businesses, however, there may be more than one management unit, each coinciding with a 'division' or 'line of business'.

BUSINESS PERFORMANCE INDICATORS

16 The survey uses a set of well recognised economic trading indicators in measuring future trading activity. These indicators are: Operating income, selling prices, operating expenses, employment, etc. See Glossary for details.

17 The survey asks for full-time equivalent paid persons working. This is not a usual definition of employment as used by the ABS. It would be incorrect to assume a direct comparison with labour force statistics or other ABS employment statistics for instance.

SIMPLE AND WEIGHTED NET BALANCE

18 The simple net balance for a selected indicator is estimated by subtracting the percentage of respondents predicting a 'fall' from the percentage of respondents expecting a 'rise'.

19 The net balance is a *qualitative* statistic best suited to indicating the sentiment of businesses about future business conditions, and measures the net proportion of businesses predicting a rise or fall in future business conditions.

20 The weighted net balance is estimated by weighting the surveyed direction of change for each unit by its benchmark level response for the equivalent variable in the EAS.

21 Weighting the responses enables larger businesses to have an influence upon the net balance proportional to the level of their expenditure, employment size, etc. Movements in the weighted net balance indicate the net proportion of business activity predicting a rise or fall in future business conditions.

EXPECTED AGGREGATE CHANGE

22 The expected aggregate change measures the forecasted percentage change in the level of a particular indicator. It is estimated by weighting the expected percentage change reported by respondents to the survey by their proportion of aggregate sales, expenditure, employment, etc. in the economy as measured from the benchmark estimate in the EAS.

23 The weighted aggregate estimate of a particular indicator, combined with an estimated level, can be used to quantify its expected future movement.

EXPLANATORY NOTES

COMPARISON OF RESULTS

24 The weighted net balance and expected aggregate change are complementary measures which, in combination, give a broad indication of future business conditions. It is possible to obtain estimates in opposite directions for the net balance and weighted aggregate change estimates.

25 The weighted net balance provide a *qualitative* measure of the proportion of businesses predicting the direction of change in future business conditions. The expected aggregate change, however, provides a *quantitative* measure predicting the magnitude of change in a selected variable.

26 A comparison of the various expectations measures is provided in the following table:

COMPARISON OF THREE MEASURES OF BUSINESS EXPECTATIONS

	<i>Simple net balance</i>	<i>Weighted net balance</i>	<i>Weighted aggregate</i>
	%	%	%
Operating income	20.4	25.4	1.1
Wage costs	34.7	37.2	0.8
Employment Full time equivalent	-11.1	-11.0	-0.7

27 For the September quarter 1998 a simple net balance of 20.4% of businesses expect a rise in Operating Income. The rise in the operating income weighted net balance of 25.4% indicates that the businesses expecting a rise in operating income tend to be larger than those expecting a fall.

TREND ESTIMATES

28 The trend estimates are derived by applying a 7-term Henderson moving average to the (unpublished) seasonally adjusted series (The seasonally adjusted series will be available for publication in upcoming releases). The 7-term Henderson average (like all Henderson averages) is symmetric, but as the end of a time series is approached, asymmetric forms of the average are applied. Unlike the weights of the standard 7-term Henderson moving average, the weights employed here have been tailored to suit the particular characteristics of individual series. While the asymmetric weights enable trend estimates for recent quarters to be produced, it does result in revisions to the estimates for the most recent three quarters as additional observations become available. There may also be revisions because of changes in the original data and as a result of the re-estimation of the seasonal factors. For further Information, see *A Guide to Interpreting Time Series—Monitoring Trends: an Overview* (1348.0) or contact the Assistant Director, Time Series Analysis on (02) 6252 6345.

RELIABILITY OF ESTIMATES

29 All of the estimates in this publication are subject to:

- sampling error;
- non-sampling error; and
- benchmark bias

EXPLANATORY NOTES

SAMPLING ERROR

30 Sampling error is due to the use of a sample rather than a complete enumeration; that is, the estimates differ from the values that would have been obtained if all units were surveyed. A measure of the likely difference is given by the *standard error*, which indicates the extent to which an estimate might have varied by chance because only a sample of units was included. There are about two chances in three that the difference will be within one standard error, and about nineteen chances in twenty that the difference will be within two standard errors.

STANDARD ERRORS

31 The table below provides standard errors for some of the main estimates of this publication. As an example of how the standard errors can be interpreted, given that the short term expectation for *Operating Income* for Australia is 1.1% with a standard error of 0.2, there would be two chances in three that the true value would be within the range 0.9% and 1.3%.

STANDARD ERRORS OF KEY ESTIMATES, SHORT-TERM EXPECTATION, AUSTRALIA

<i>Business performance indicator</i>	<i>Survey estimate</i>	<i>Standard error</i>
Operating income	1.1	0.2
Selling prices	0.2	0.1
Profit	-1.0	0.4
Capital expenditure	2.8	0.7
Stocks	-0.3	0.3
Employment	-0.7	0.4
Wage costs	0.8	0.2

NON-SAMPLING ERROR

32 All other inaccuracies are referred to collectively as non-sampling error. The major areas of concern are: non-response; mis-reporting of data by respondents; and deficiency in the central register of economic units.

33 Every effort is made to reduce the non-sampling error to a minimum by careful design of questionnaires and efficient editing and operating procedures.

34 The expected aggregate change is designed to reflect business expectations for each business performance indicator, as accurately as possible. However, while the estimates should be appropriate measures of business climate, the expectations may not predict actual movements accurately. Businesses may be too optimistic or pessimistic in their predictions at different times.

35 In addition, actual movements would be partly comprised of activity of relatively recently formed businesses, and businesses which are formed during the expectations reference period which are not immediately represented in BES because they would not have been included on the ABS central register of economic units. Allowance is made in other ABS series for coverage deficiencies relating to newly formed businesses but no allowance for this is made in BES. This is important for some variables, where the contribution of new businesses to growth in that variable is relatively substantial (e.g. employment, capital expenditure or stocks).

EXPLANATORY NOTES

BENCHMARKS

- 36** Benchmark (or base level) information is obtained from the ABS annual Economic Activity Survey (EAS). It is used to weight individual business responses by their relative contribution to each business performance indicator. This enables percentage responses from different businesses to be aggregated.
- 37** In June each year a new sample is selected from units surveyed by EAS in the previous financial year. New benchmarks are introduced for the survey conducted in August each year. The benchmark data become increasingly out of date as they are used in the surveys conducted in November, February and May. In certain cases, the benchmark data may not accurately reflect the current activity of a business. It is currently not possible to measure the extent of any such inaccuracies.
- 38** Results from the EAS are published in *Business Operations and Industry Performance* (8140.0).

SYMBOLS AND OTHER USAGES

- nil or rounded to zero
- n.a. not available for publication

G L O S S A R Y

Capital expenditure	The expected change in the value of capital expenditure in new tangible assets.
Closing stocks	The expected change in the book value of closing stocks between the end of the collection quarter and the end of the reference periods.
Non-wage labour expenses	<p>The expected change in the total amount of employment related expenses not paid directly to employees.</p> <p>Some of these expenses are payroll tax, worker's compensation and superannuation.</p>
Operating income	<p>The expected change in operating income derived from the sale of goods or the provision of services by a business in terms of value.</p> <p>Financial institutions report on the expected change in gross interest income plus fees and commissions.</p> <p>Non-profit or charitable organisations report on the expected change in fees received for services, donations from the public and government grants and subsidies.</p>
Other operating expenses	<p>The expected change in the total amount of all expenses which are not classified as labour expenses.</p> <p>Some of these expenses are overheads, advertising, raw materials and packaging and handling.</p>
Paid persons working	The expected change in the number of paid persons working. Where part time or casual employees are involved employers are requested to convert to a full-time equivalent. It should be noted that most other ABS series which provide data on paid persons working do not use a full-time equivalent measure.
Profit	<p>Profit is a derived item based on the present trading performance of a business and the expected changes to the level of sales of goods and services and the sum of all expense items.</p> <p>The difference between the new benchmarks for the <i>sales of goods and services</i> and the sum of all expenses items (the sum of <i>total wage expense, non-wage labour expense and all other operating expenses</i>) as determined by the responses received, the Economic Activity Survey benchmarks for those items and an indicator of present trading performance (cost/income ratio) are used to determine the expected change for profit for the reference periods.</p> <p>Because of reporting difficulties experienced with the cost/income ratios, caution should be exercised in interpreting profit expectations.</p>
Reference periods	<p>There are two reference periods surveyed each quarter:</p> <ul style="list-style-type: none"> ▪ Short-term (if the current quarter is September 1997, then the quarter being surveyed is December 1997); and ▪ Medium-term (if the current quarter is September 1997, then the quarter being surveyed is September 1998).
Selling prices	<p>The expected change in the unit price of goods sold or services provided by the business. Where a business sells a range of products or services a representative product or service is used.</p> <p>Financial institutions report on interest rates, services and commissions charged.</p> <p>The benchmark for weighting the selling prices response is derived from associating selling prices with total expenses.</p>

GLOSSARY

State information	<p>State information has been derived for businesses in the survey which operate in more than one State.</p> <p>This has been achieved by</p> <ul style="list-style-type: none">▪ applying a weight (the proportion of a business's economic activity undertaken in each State) to the benchmarks for that business to arrive at potentially eight different benchmarks for each business performance indicator; and▪ applying the overall percentage change in the business performance indicators obtained from the survey to each of the State benchmarks for each business performance indicator.
Total operating expenses	<p>This is a derived estimate from the weighted response for the total of wage, non-wage labour and all other expenses.</p>
Total wage expenses	<p>The expected change in the total amount of direct wage and salaries paid to employees.</p>

UNPUBLISHED DATA

AVAILABLE DATA	<p>The amount of data collected from the Survey of Business Expectations is much greater than the data contained in this publication.</p> <p>Subject to the ABS provisions for maintaining the confidentiality of respondents and their information, more detailed information by industry and size of business may be made available on request.</p>
SIZE OF BUSINESS	<p>The size of business is based on employment. Additional data can be estimated for the following size ranges:</p> <ul style="list-style-type: none">▪ less than 20 employees.▪ 20 and less than 100 employees.▪ 100 and less than 600 employees.▪ 600 and greater employees.▪ small (less than 20 employees except for manufacturing, which is less than 100).▪ medium (20 to less than 100 employees except for manufacturing, which is 100 to less than 600).▪ large (100 and greater employees except for manufacturing, which is 600 and greater).
INDUSTRY	<p>Industry is classified according to ANZSIC and is available at the 1 and 2 digit level. Additional data is available for:</p> <ul style="list-style-type: none">▪ 15 industries categorised at the one digit ANZSIC level;▪ 47 industries categorised at the two digit ANZSIC level; and▪ user defined industry groups such as 'service industries'.
STATE INFORMATION	<p>State information has been derived from the business activity conducted by business in each State. Where sufficient information is available to provide satisfactory estimates, data may be made available at the same level of detail as that for Australia. State information is subject to a greater degree of variance than the Australia data.</p>
NET BALANCE	<p>A weighted net balance for industries and size of business can be produced as a special data service.</p>
MORE INFORMATION	<p>For more information please contact the officer named at the front of this publication or write to:</p> <p>The Assistant Director Business Expectations Survey Australian Bureau of Statistics PO Box 10 Belconnen ACT 2616.</p>
